seqq.) The flight of the gods into Egypt is a bung-

gling attempt at connecting the Greek mythology

with the animal worship of that country. (Keightley's

Mythology, p. 262, seq.) The giants appear to have been

nothing more than the energies of nature personified,

and the conflict between them and the gods must al-

lude to some tremendous convulsion of nature in very

close times. (Vid., Lactancia, and compare Hermann

und Creuzer, Briefe, &c., p. 164.) As regards the gen-

eral question, respecting the possible existence in

former days of a gigantic race, it need only be observed,

that, if their structure be supposed to have been simi-

lar to that of the rest of our species, they must have

been mere creatures of poetic imagination; they could

not have existed. It is found that the bones of the

human body are invariably hollow, and, consequently,

well calculated to resist external injuries. If these bones

were solid, they would have proved too heavy a bar-

rier for man to bear. But this hollowness, while it is

admirably well fitted for the purpose which has just been

mentioned, and likewise subserves many other impor-

tant ends in the animal economy, is not by any means

well adapted for supporting a heavy superincumbent

weight; on the contrary, it renders the bone weaker,

in this respect, than if the latter had been solid. The

inference from all this is very plain. Man never was

intended by his Maker for a gigantic being, since his

limbs could not, in that event, have supported him;

and, if giants ever did exist, they must necessarily

have been crushed by their own weight. Or, had their

bones been made solid, the weight of their limbs would

have been so enormous, that these lofty beings must

have remained as immovable as statues. That many

of our species have attained a very large size is indis-

putable, and that it is not an impossibility in the case

of all those cases where the bones of giants are said to

have been dug up from the earth, the remains thus dis-

covered have been found to be merely those of some

extinct species of the larger kind of animals. A sim-

ple mode of life, abundance of nutritious food, and a

salubrious atmosphere, give to all organic beings large

and graceful forms. The term giant, as used in scrip-

ture, originates in an error of translation. In our ver-

sion of the holy writ six different Hebrew words are

rendered by the same term giants, whereas they merely

mean, in general, persons of great courage, wicked-

ness, &c., and not men of enormous stature, as is

commonly supposed. Thus, too, when Nimrod is

styled in the Greek version a giant before the Lord,

nothing more is meant than that he was a man of ex-

tensive power.

Ginna, a river of Africa, which Ptolomy delineates as

equal in length to the Niger, the course of each being

probably about 1000 British miles. It ran from east

to west, until lost in the same lake, marsh, or desert

as the Niger. The Arabian geographer Edrisi seems to

indicate the Ghor when he speaks of the Nile of the

negroes as running to the west, and being lost in an

inland sea, in which was the island Ullis. Some have

supposed the Gin of Ptolomy to be the river of Bornou,
or Wad-al-Gazel, which, joining another considerable river flowing from Kuku, discharges itself into the Nubia Palus or Kangra, and it is so delineated in Renell's map; but others, seemingly with better reason, apprehend the Git of Ptolemy to be the Bah-Kulla, as stated in his annotations.

GLADIATORI LUDI, or combats originally exhibited at the grave of deceased persons at Rome. They were first introduced there by the Bruti, upon the death of their father, A.U.C. 490, and they thus formed originally a kind of funeral sacrifice, the shades of the dead being supposed to be propitiated with blood. For some time after this they were exhibited only on such occasions. Subsequently, however, the magistrates, or other public personages, adopted the custom, and they were shown at the Saturnalia and the festival of Minerva. Incredible numbers of men were destroyed in this manner. After the triumph of Trajan over the Dacians, spectacles of this kind were exhibited for 123 days, in which 10,000 gladiators fought. Gladiators were kept and maintained in schools by persons called lanistae, who purchased and trained them. The whole number under one lanista was called familia. Gladiators were at first selected from those condemned to death and sentenced to be malefactors. But afterward also freeborn citizens, induced by hire or by inclination, fought on the arena; some even of noble birth; and, what is still more wonderful, women of rank, and dwarfs. When there were to be any shows, handbills were circulated to give notice to the people, and to mention the place, number, time, and every circumstance requisite to be known. When they were first brought upon the arena, they walked round the place with great pomp and solemnity, and after that they were matched in equal pairs with great nicety. They first had a skirmish with wooden files, called rudes or arma lusoria. After this the effective weapons, such as swords, daggers, &c., called arma decretoria, were given them, and the signal for the engagement was given by the sound of a trumpet. As they had all previously bound themselves to contend till the last, the fight was bloody and obstinate; and when one signified his submission by surrendering his arms, the victor was not permitted to grant him life without the leave and approbation of the multitude. This was done by pressing down their thumbs, with the hands clenched. On the contrary, if the people wished him slain, they turned their thumbs upward. The first of these signs was called pollicem prenere; the second, pollicem vertere. The combats of gladiators were sometimes different, either in weapons or dress, whence they were generally distinguished into the following orders. The secutores were armed with a sword and buckler, to keep off the net of their antagonists, the retiarii. These last endeavoured to throw their net over the head of their opponent, and in that manner to entangle him, and prevent him from striking. If this did not succeed, they betook themselves to flight. Their dress was a short coat, with a hat tied under the chin with broad riband. They bore a trident in their left hand, and wore only one sandal on each foot, and were armed with a falchion and small round shield. The myrmillones, called also Galli, from their Gallic dress, were much the same as the secutores. They were, like them, armed with a sword, and on the top of their headpiece they wore the figure of a fish embossed, called ωώπως, whence their name. The hoplonachi were completely armed from head to foot, as their name implies. The Samnites, armed after the manner of the samnite combats, were called Samnites. They had in the top, and growing more narrow at the bottom, more conveniently to defend the upper parts of the body. The essedarii generally fought from the essedum, or chariot used by the ancient Gauls and Britons. The andabatae, ávábatai, fought on horseback, with a helmet that covered and defended their faces and eyes. Hence andabatarum more pugnare is to fight blindfolded. The meridiani engaged in the afternoon. The postulatitii were men of great skill and experience, and such as were generally produced by the emperors. The fasciae were maintained out of the emperor's treasury, fascia. The dimicarum fought with two swords in their hands, while the others fought with one.

After these cruel exhibitions had been continued for the amusement of the Roman populace, they were abolished by Constantine the Great, near 600 years from their first institution. They were, however, revived under the reign of Constantius and his two successors, but Honorius for ever put an end to these cruel barbarities.

GLAUCUS, I. a daughter of Creon, king of Corinth, called also Crauca, married to Jason after his separation from Medea.—II. A fountain at Corinth, which was said to have received its name from Glaucce, who threw herself into it in order to be freed from the enchantments of Medea. (Pausan., 2, 3.)

GLAUCUS, I. son of Hippolochus, and grandson of Bellerophon. He was, with Sarpedon, leader of the Lycaen auxiliaries of King Priam. Upon the discovery made on the field of battle by him and Diomede, of the head of their enemy; that they had fought one another, in which, the son of Creon, king of Ætolia, had been remarkable for their friendship, they mutually agreed to exchange their armour, that of Glaucus being of gold, and that of Diomede of brass. Hence arose the proverb, "It is the exchange of Glaucus and Diomeda," to denote inequality in things presented or exchanged; Glaucus was slain by Ajax. (Hom., Il., 6, 119, seqq.—Virg., Æn., 4, 483.)—II. A sea deity, probably also a name for Poseidon or Neptune, whose son he is, according to some accounts. (Euanthes, ap. Athen., 7, p. 296.) Like the marine gods in general, he had the gift of prophecy; and we find him appearing to the Argonauts (Apoll. Rh., 1, 130, seq.), and to Menelaus (Eurip., Orct., 356, seqq.), and telling them what had happened, or what was to happen. In later times, sailors were continually making reports of his soothsaying. (Pausan., 9, 22.) Some said that he dwelt with the Nereides at Delos, where he gave responses to all who sought him. (Aristot., ap. Athen., l. c.) According to others, he visited each year all the isles and coasts, with a train of monsters of the deep {kýrēa}, and, unseen, foretold in the Æolic dialect all kinds of evil. The fishermen watched for his approach, and endeavoured by festivities, prayer, and pilgrimages to aver the ruin with which his prophecy menaced the fruits and cattle. At times he was seen among the waves, and his body was covered with muscles, seaweed, and stones. He was heard evermore to lament his fate in not being able to die. (Plut., Rep., 10, 611.—Schol., ad loc.)—This last circumstance refers to the common tragic history of Glauceus. He was a fisherman, it is said (Pausan., l. c.—Ovid, Met., 13, 904, seqq.), of Anchiton, in Boetia. Observing one day the fish which he had caught and thrown on the grass to bite it, and then to jump into the sea, his curiosity extended to it also. Immediately on his doing so he followed their example, and thus became a sea-god. Another account made him to have obtained his immortality by tasting the grass, which had revived a hare he had run down in Ætolia. (Nicand., ap. Athen., l. c.) He was also said to have built and steered the Argo, and to have made a god of the sea by Jupiter during the voyage. (Pausan., ap. Athen., l. c.) An account he is, according to the latter article. (Keightley's Mythology, p. 248, seqq.)—III. A son of Sisyphus, king of Corinth, by Merope, the daughter of Atlas, born at Potine, a village of Boetia. According to one account, he restrained his mares from having intercourse with the steeds; upon which Venus inspired the former with such fury, that they tore his body to pieces as he re-
turned from the games which Adrastus had celebrated in honour of his father. Another version of the story makes them to have run mad after eating a certain part of a poppy cake. [M. Aurelius.]  

Hygin., Fab. 250.—Virg., Georg., 3, 268.—Heyne, ad Virg., l.c.—Palæroph., de Incert., c. 26.—Schol. ad Eurip., Phæn., 1141)—IV. A son of Minos and Pasiphae, who, pursuing, when a child, a mouse, fell into a vessel of honey and was smothered. His father, ignorant of his fate, consulted the oracle to know where he was, and received for answer that there was a three-coloured cow in his herd, and that he who could best tell what she was like, could restore his son to life. The soothsayers were all assembled, and Polyidus, the son of Coiranus, said that her colour was that of the berry of the brier, green, red, and, lastly, black. Minos thereupon desired him to find his son; and Polyidus, by his skill in divination, discovered where he was. Minos then ordered him to restore him to life; and, on his declaring his incapacity so to do, shut him up in a chamber with the body of his child. While here, the soothsayer saw a serpent approach the body, and he struck and killed it. Another immediately appeared, and seeing the first one dead, retired, and came back soon after with a plant in its mouth, and laid it on the dead one, which instantly came to life. Polyidus, by employing the same herb, recovered the child. Minos, before he let him depart, insisted on his communicating his art to Glauce. He did so; but, as he was taking leave, he desired his pupil to spit into his mouth. Glauce obeyed, and lost the memory of all he had learned. (Apollod., 3, 3, 1—Tzetzes, ad Lyce., 811.) Hyginus makes him to have been restored to life by Æsculapius. (Hygin., Poet. Astron., 2, 14.)

Glauce Sinus, a gulf of Lycia, at the head of which stood the city of Telmessus or Macri, whence in ancient times the gulf was sometimes also called Sinus Telmessius, and whence comes likewise its modern name.

Glota or Clota, a river of Britain, now the Clyde, falling into the Glota Æstuarium, or Frith of Clyde.

Gnatia, a town of Apulia, the same as Egnatia, the name being merely shortened by dropping the initial vowel. (Vid. Egnatia.)

Gobryas, a Persian, one of the seven noblemen who were inspired against the usurper Smerdis. (Vid. Darius.)

Gomph, a city of Thessaly, of considerable strength and importance, and the key of the country on the side of Epirus. It was situated on the borders of the Athamanes, and was occupied by that people not long before the battle of Cynoscephal. When Caesar entered Thessaly, after his joining Domitius at Ægiumt, the inhabitants of Gomph, aware of his failure at DYrach, resented his advances against them; but, however, were presently scaled, notwithstanding their great height, and the town was given up to plunder. In his account of this event, Caesar describes Gomphi as a large and opulent city. (Bell. Civ., 3, 80.—Compare Appian, B. C., 2, 64.) The Greek geographer Meletius places it on the modern site of Stigous, or Kalaebi as it is called by the Turks (Geogr., p. 358); but Pousquille was informed that its ruins were said to be the site of a temple called Cleisoura, not far from Stigous. (Vol. 3, p. 339.)

Gonatas, one of the Antigon. (Vid. Gonni.)

Gonni, a town of Thessaly, twenty miles from Larissa, according to Livy (36, 10), and close to the entrance of the gorge of Tempe. It was strongly fortified by Pseres in his first campaign against the Romans, who made no attempt to render themselves masters of this key of Macedonia. (Livy, 42, 54.)

Antigon, surnamed Gonatas, was probably born here, since Stephanus of Byzantium gives it as the ethnic derivative of Gonni. The scholiast on Lycophron (v. 904), in commenting on a passage of the poet where his town is called Ægina, reads Gontus. (Cramer's Ancient Greece, vol. 1, p. 350.)

Gordnli, mountains in Armenia, where the Tigris rises.

Gordianus, I., Marcus Antoninus Africanus, born during the reign of the first Antonine, of one of the most illustrious and wealthy families of Rome, made himself very popular during his quiescence by his munificence, and the large sums which he spent in providing games and other amusements for the people. He also cultivated literature, and wrote several poems, among others one in which he celebrated the virtues of the two Antonines. Being intrusted with the government of several provinces, he conducted himself in such a manner as to gain universal approbation. He was proconsul of Africa A.D. 237. When an insurrection broke out in that province against Maximinus, on account of his exactions, and the insurgents saluted Gordianus as emperor, he prayed earnestly to be excused, on account of his age, being then past eighty, and to be allowed to die in peace; but the insurgents threatening to kill him if he refused, he accepted the perilous dignity, naming his son Gordianus as his colleague, and both made their solemn entry into Carthage amid universal applause. The senate cheerfully confirmed the election, proclaiming the two Gordiani as emperors, and declaring Maximinus and his son to be enemies to their country. Marcus Antoninus Gordianus, governor of Mauritania, collected troops in favour of Maximinus, and marched against Carthage. The younger Gordianus came out to oppose him, but was defeated and killed, and his aged father, on learning the sad tidings, strangled himself. Their reign had not lasted two months altogether, yet they were greatly regretted, on account of their personal qualities, and the hopes which the people had founded on them. (Capitol., Vit. Gordian. Tr.)—III. M. Antonius Afric anus, son of Gordianus, was instructed by Serenus Samonicus, who left him his library, which consisted of 62,000 volumes. He was well informed, and wrote several works, but was intemperate in his pleasures, which latter circumstance seems to have recommended him to the favour of the Emperor Heliogabalus. Alexander Severus advanced him subsequently to the consulate. He afterward passed into Africa as lieutenant to his father; and, when the latter was elevated to the throne, shared that dignity with him. But, after a reign of not quite two months, he fell in battle at the age of forty-six, against Capellianus, a partisan of Maximinus. (Vid. Gordianus, I.—Capitol. , Vit. Gordian. Tr.)—III. M. Antoninus Pius, grandson, on the mother's side, of the elder Gordianus, and nephew of Gordianus the younger, was twelve years of age when he was proclaimed Caesar by general consent of the people. He was made Augustus when his father had arrived of the death of the two Gordiani in Africa. The senate named him colleague of the two new emperors Maximus and Balbinus, but in the following year (A.D. 238, according to Blair and other chronologers) a mutiny of the praetorian soldiers took place at Rome, Balbinus and Maximus were murdered, and the boy Gordianus was proclaimed emperor. His disposition was kind and amiable, but at the beginning of his reign trusted too much the advice of a certain Maurus and other freedmen of the palace, who abused his confidence, and committed many acts of injustice. In the second year of his reign a revolt broke out in Africa, where a certain Sabinius was proclaimed emperor, but the insurrection was soon put down by the governor of Mauritania. In the following year, Gordianus being consul with Claudius Punicinus, married Furia Sabina Tranquilla, daughter of Mithiheus, a man of the greatest personal merit, who
was then placed at the head of the emperor's guards. Misithæus disclosed to Gordianus the disgraceful conduct of Maurus and his friends, who were immediately deprived of their offices and driven away from court. From that moment Gordianus placed implicit trust in his father-in-law, on whom the senate conferred the title of "Guardian of the Republic." In the next year, news came to Rome that the Persians under Sapor had invaded Mesopotamia, had occupied Nisibis and Carrhæ, entered Syria, and, according to Capito- linus, had taken Antioch. Gordianus, resolving to march in person against this formidable enemy, opened the temple of Janus, according to an ancient custom which had been long disused, and, setting out from Rome, caused his troops to be debouched to the east by way of Illyricum and Moesia, where he defeated the Goths and Sarmatians, and drove them beyond the Danube. In the plains of Thrace, however, he encountered another tribe, the Alani, from whom he experienced a check; but they having also retired towards the north, Gordianus crossed the Hellespont, and landed in Asia, whence he proceeded into Syria, delivered Antioch, defeated the Persians in several battles, retook Nisibis and Carrhæ, and drove Sapor back to his own dominions. The senate voted him a triumph, and also a statue to Misithæus, to whose advice much of the success of Gordianus was attributed. Unfortunately, however, that wise counsellor died the following year, not without suspicions of foul play being raised against Philippus, an officer of the guards, who succeeded him in the command. In the year after, A.D. 244, Gordianus advanced into the Persian territory, and defeated Sapor on the banks of the Chabares; but while he was preparing to pursue him, the traitor Philippus, who had contrived to spread discontent among the soldiers by attributing their privations to the inexperience of a boyish emperor, was proclaimed by the army his colleague in the empire. Gordianus consented, but soon after was murdered by the ambitious Philippus. A monument was raised to him by the soldiers, with an inscription, at a place called Zaita, twenty miles east of the town of Cricesium, not far from the left bank of the Euphrates, which continued to be seen until it was destroyed by Licinius, who claimed to be a descendant of Philippus. Gordianus was about twenty years old when he died. His body, according to Eutropius, was carried to Rome, and he was numbered among the gods. His short reign was a prosperous one for Rome. (Capitol., Vit. Gord. Tert.—Herodian, 7, 10, seqq.—Id., 8, 6, seqq.—Eutrop. 9, 2.)

Gordiæus, a city of Galatia in Asia Minor, on the river Sangarius, a little to the east of Pessinus. Here was preserved the famous Gordian knot which Alexander cut. (Vid. Gordius.) This place changed its name in the reign of Augustus to Julopolis, which was given it by Cleo, a leader of some predatory bands in this quarter. After the battle of Actium, he declared for Augustus; and being thus left in safe possession of this city, which was his birthplace, changed its name out of compliment to the memory of Caesar. (Justin, 11, 7.—Liv., 38, 18.—Curt., 3, 1; Mannert, Geogr., vol. 6, pt. 3, p. 72.)

Gordiuæus, a Phrygian, who, though originally a peasant, was raised to the throne. During a sedition, the Phrygians consulted the oracle, and were told that all their troubles would cease as soon as they chose for their king the first man they met going to the temple of Jupiter in the condition of a charioteer. Gordius was the object of their choice, and he immediately consecrated his chariot in the temple of Jupiter. The knot which tied the yoke to the draught-tree was made in such an artful manner, that the ends of the cord could not be perceived. From this circumstance, a report was soon spread that the empire of Asia was promised by the oracle to him that could untie the Gordian knot.

Alexander, in his conquest of Asia, passed by Gordi- um; and as he wished to leave nothing undone which might inspire his soldiers with courage, and make his enemies believe that he was born to conquer Asia, he cut the knot with his sword, and from that circum- stance the empire received the name of Gordium, which was really fulfilled, and that his claims to universal empire were fully justified. (Justin, 11, 7.—Curt., 3, 1.)

Gorgias, a celebrated statesman, orator, and sophis- t, born at Leontini in Sicily, whence he was sur- named Leontinus. He flourished in the fifth century before the Christian era, during the most brilliant period of the literary activity of Greece, and has been immortalized by the dialogue of Plato which bears his name. But the two parts of that dialogue are alike un- certain, but the number of his years far outstrips the ordi- nary length of human existence, and, in the different statements, ranges between 100 and 109. Whatever may have been the speculative errors of Gorgias, his long life was remarkable for an undeviating practice of virtue and temperance, which secured to his last days the full possession of his faculties, and imparted cheer- fulness and resignation in the hour of death. Accord- ing to the Eusebian chronicle, Gorgias was thought to have been the brother of Empedocles, and was an Olim- piad, and came to Athens Olympic, 83, 2, or B.C. 427, to seek assistance for his native city, the independence of which was menaced by its powerful neighbour Syr- acuse. In this mission he justified the opinion which his townsmen had formed of his talents for business and political sagacity, and, upon its successful termin- ation, withdrew from public life and returned to Athens, which, as the centre of the mental activity of Greece, offered a wide field for the display of his intellec- tual powers and acquirements. He did not, however, take up his residence permanently in that city, but divided his time between it and Larissa in Thessaly, where he is said to have died shortly before or after the death of Socrates. To the 84th Olympiad is assigned the publication of his philosophical work entitled "Of the Non-Being, or of Nature" (περὶ τοῦ μὴ ψεῦδος, ἢ περὶ φαύσεως), in which, according to the extracts from it in the pseudo-Aristotelian work "De Xnepohne, Zemone, et Gorgia," and in Sextus Empiricus, he proposes to show: 1. that absolutely no- thing exists: 2. that even if anything subsists, it can- not be known: and, 3. that even if aught subsists and can be known, it cannot be expressed and communi- cated to others. In the arguments, however, by which he sought to establish these positions, and, generally speaking, in his physical doctrines, Gorgias deferred, in some measure, to the testimony of sense, which the stricter Eleatics rejected absolutely, as inadequate and contradictory. On this account, although the usual statement which directly styles him the disciple of Empedocles is erroneous, it is probable that he drew from the writings of that philosopher his acquaintance with the physiology of the Eleatic school. Subse- quently it would appear that Gorgias devoted himself entirely to the practice and teaching of rhetoric, and in this career his professional labours seem to have been attended with both honour and profit. Accord- ing to Cicero (de Orat. 1, 22.—Rb., 3, 32), he was the first who engaged to deliver imperplex a public dis- course upon any given subject. These oratorical dis- plays were characterized by the poetical ornament and elegance of the language, and the antithetical structure of the sentences, rather than by the depth and vigour of the thought; and the coldness of his eloquence and the coldness of his eloquence as an educator of the ancient Athenian orator and a teacher of rhetoric, Gorgias is said to have first intro- duced numbers into prose, and to have attached much importance to antitheses both in individual words and in the members of a sentence. (Consult Hardion, Dissert., 11.—Mem. de l'Acad. des. Inscr., &c., vol. 19, p. 204.) It is said, that after a display of eloquence made by him at the Olympic and Python Games, a
GOD

GOT
godden statue was erected to him at Delphi.—Besides some fragments, there are still extant two entire orations ascribed to him, entitled respectively, "The Encomium of Helen," and "The Apology of Palamedes," two tasteful poems, but written in a form which, however, was not the work of Goigias. On this point consult Foss, "De Gorgia Leonitio Commentatio," Hal., 1828, who denies their authenticity, which is maintained, on the other hand, by Schonh"orn, "De Authentia Declamationum qua Gorgia Leonitini nominextant," Bresl., 1826. (Phil., Hipp. Maj., p. 282.—Id., Gorg.—Dion, Hal., Jud. de Lyas, 3, p. 458, ed. Reiske.—Diogenes Laert., 8, 58.—Sexii, Emp. adv. Mor., 7, 65.—Cl. Post, Theol. Hell., vol. 1, p. 372.—Preller, Hist. Philos., p. 134, seqq.—Scholl, Gesch. Gr. Litt., vol. 1, p. 363.)

Gorgos, I. wife of Leonidas, king of Sparta. A fine report of hers is given by Plutarch. When a stranger female observed to her, "You Spartan women are the only ones that rule men," she replied, "True, for we are the only ones that give birth to men." (Plut., Lacon. Apophth., p. 227.)—II. The capital of the Chorasian in Bactria. It is supposed to correspond to the modern Urghez. (Bischoff und M"uller, W"arterb. der Geogr., p. 587.)

Gorg"ones, three celebrated sisters, daughters of Phorcys and Ceto, whose names were Stheno, Euryale, and Medusa, and who were all immortal except Medusa. According to the mythologists, their hairs were entwined with serpents, they had wings of gold, their hands were of brass, their body was covered with impenetrable scales, their teeth were as long as the tusks of a wild boar, and they turned to stone all those on whom they fixed their eyes. (Apollod., 2, 4, 2.—Tzetze, ad Lyce, 838.)—Homer speaks of an object of terror which he calls Gorgo, and the Gorgonian head. He places the former on the shield of Agamemnon (II., 11, 36), and, when describing Hector eager for slaughter, he says that he had "the eyes of Gorgo and of man-destruction Areas." (Il., 8, 348.)—The Gorgonian head was on the aegis of Jupiter (II., 5, 741), and the hero of the Odyssey fears to remain in Erebus, lest Persephone should send out "the Gorgonian head of the dire monster" against him. (Od., 11, 633.)—Æschylus calls the Gorgones the "three sisters of the Grama, winged, serpent-headed, hateful to man, whom no one can look on and retain the breath of existence." (Prom. V., 804, seqq.)

The Gorgons and Graiae are always mentioned together; and it was while the Graiae were housing the offspring of the Pelasgi (VIII., Phorcydes) that Perseus intercepted it; and having thus blinded the guards, was enabled to come on the Gorgons unperceived. (For an account of the legend of Perseus and Medusa, consult each of those articles.) According to R. P. Knight, the Gorgon, or Medusa, in the centre of Minerva's aegis, appears to have been a symbol of the Moon (Orph. in Clem. Alex., Strom., lib. 5, p. 679); exhibited sometimes with the character of the devouring, and sometimes with those of the generative or preserving, attributes; and the forger of which is expressed by the title of Gorgo, and the latter by that of Medusa. It is sometimes represented with serpents, and sometimes with fish, in the hair; and occasionally with almost every symbol of the passive generative or productive power; it being the female personification of the Disk, by which almost all the nations of antiquity represented the sun; and this female personification was the Numen. (Inquiry into the Symb. Lang., &c., § 179.—Clarke's Journal, vol. 26, p. 46.)—Hermann, however, with more probability, makes both the Graiae and Gorgons to be merely personifications of the terrors of the sea, the former denoting the white-crested waves that dash against the rocks on the coast; the latter, the strong billows of the wide open main. (Herm., Opusc., vol. 2, p. 179, seq.) He therefore makes Stheno equivalent to Valeria, "the powerful;" Euryale to Laideus, "the wide-rolling;" and Medusa to Gubernia, "the directress," from her ruling the course of the billows. And he adds, in farther explanation, "nam et vis undarum aequalis, et semper similia ut inter utraque gentem mutatur, ventus, annie tempestatibus mutata." (Hesiod, where, who places the Gorgons in Oceanic isles (Theog., 274, seqq.), is more consistent with the early legend than later poets, who almost all assign the Gorgons a dwelling place in some part or other of Libya. Hence there is great probability in Völcker's reading of Κόσμηον for Κοσμίον in Æschylus (Prom. V., 799.—Keightley's Mythology, p. 252, seqq.)

Gorgon, a city of Crete, next to Cnosus in splendour and importance. Strabo writes, that these two cities had in early times entered into a league, which enabled them to reduce nearly the whole of Crete under their subjection; subsequently, however, dissensions having arisen between them, they were constantly engaged in hostilities. Homer speaks of Gortys as a place of great strength (Il., 2, 546), with a territory extending to the sea. (Od., 3, 293.) From other authors we learn that it stood in a plain, and was watered by a river Lethæus, and at a distance of ninety stadia from the Libyan Sea, on which were situate its two havens, Lebena and Metallum. Formerly this city was of very considerable size, since Strabo reckons its circuit at fifty stadia; but when he wrote it was very much diminished. He adds, that Ptolemy Philopator had begun to enclose it with fresh walls; but the work was not carried on for more than eight stadia. (Strabo, 478.)—According to one of the traditions, it had been founded by Gortys, the son of Tegeates; a fact which was, however, denied by the Cretans, who affirmed that Gortys was the son of Rhadamanthus. (Pausan., 8, 1.—Compare Steph. Byz., s. v.) It was most probably a Pelasgic city, since, according to Stephans, it once bore the appellation of Larissa. Apollo was especially revered here, whence he is sometimes called Gortynius. (Anton., Lib. 25.) Jupiter was also worshipped in this place under the title of Heactomaurus. The ruins of this ancient city have been visited by Tournefort, Pococke, and still more recently by Mr. Cockrell, who observed the remains of a theatre and other considerable vestiges. He likewise explored some remarkable excavations near the town, consisting of numerous chambers and galleries, which have been supposed to belong to the celebrated Cretan labyrinth, though this is generally stated to have been at Knossus. As regards part of the ancient name, consult remarks under the article Cortona. (Cramer's Ancient Greece, vol. 3, p. 383.)—II. A town of Arcadia, near the river Gortynius, and south-east of Hermione. It was distinguished for its temple of Pentelic marble dedicated to Æsculapius. The statue of the god, as well as that of Hygieia, were by Scopas. (Pausan., 8, 28.) The site of Gortys is now called Athichlo Castro.

Goth, a powerful northern nation, who established an important part of the Roman empire. The name "Gothi," or Gots, appears first in history in the third century, and it was then used by the Roman writers as synonymous with the more ancient one of Geta, a people who lived on the banks of the lower Danube, near the shores of the Euxine. The Greek writers generally considered the Gete or Gots as a Scythian tribe. There has been much discussion on the question whether the Goths came originally from the Scythian or migratified thither from Asia. The old Scandinavian tradition in the Edda makes their chief, Odin or Woden, to have come from the banks of the Dniester to the shores of the Baltic many centuries before the Christian era (vid. Odinus), and it is to Asia, therefore, that we must look as the native country of the Gothic, or, rather, Teutonic, race. (Consult remarks under the article Germania, § 1.)
GRACCHUS.

About the middle of the third century of our era, the
Goths are recorded as having crossed the Dniester, and to have
besieged Dancio and Thrace. The Emperor
Decius lost his life in opposing them in Moesia (A.D.
251), after which his successor Gallus induced them
by money to withdraw again to their old dwellings on
the Dniester. They then seem to have spread east-
ward, and to have occupied the country about the
Cimmerian Bosporus, whence they sailed across the
Euaxine, occupied Trebisond, and ravaged Bithynia.
In the year 260 they landed in Macedonia, but were
defeated by the Emperor Constantius, and three years
after, Aurelian gave up Dacia to a tribe of Goths, who
are believed to have been the Visigoths or Western
Goths, while those who ravaged Asia Minor were the
Ostrogoths or Eastern Goths. This distinction of the
race into two grand divisions appears about this time.
Under Constantine I. the Goths from Dacia invaded
Ilyricum, but were repelled. Constantine II. after-
ward allowed a part of them to settle in Moesia, who
seem to have soon after embraced Christianity, as it
was for them that Ulphilas translated the Scriptures,
about the middle of the 4th century, into the dialect
called Masgo-Gothic. About the year 375, the Huns,
coming from the East, fell upon the Ostrogoths, and
drove them upon the Visigoths, who were living north
of the Danube. The latter, being hard pressed, im-
plored permission of the Roman commander to be al-
lowed to cross that river, and take shelter on the ter-
ritory of the Visigoths in their possessions.
A vast multitude of them were allowed to settle in
Moesia, but soon afterward they quarrelled with the
Roman authorities, invaded Thrace, and defeated and
killed Valens, who came to oppose them. From that
time they exercised great influence over the Byzantine
court, either as allies and mercenaries, or as forma-
blye enemies. Towards the end of the 4th century,
Aeric, being chosen king of the Visigoths, invaded
Northern Italy, but was defeated by Stilicho near Ve-
ronta. He came again, however, about two years af-
Aer, and took and plundered Rome. His successor
Ataulphus made peace with the empire, and repaired
to the south of Gaul, where the Visigoths founded a
kingdom, from which they afterward passed into Spain,
where a Visigothic dynasty reigned for more than two
centuries till it was conquered by the Moors. Mean-
while the Ostrogoths or Eastern Goths, who had set-
tied in Pannonia, after the destruction of the kingdom
of the Dacians, their first masters, and of the
Rhasia, and Ilyricum, and about the year 489 they in-
vaded Italy, under their king Theodic, and defeated
Odoacer, king of the Heruli, who had assumed the
title of King of Italy, a title which Theodic then
took for himself, with the consent of the Eastern
emperor. Theodic was a great prince: his reign was
a period of rest for Italy, and his wise administration
did much towards healing the wounds of that country.
But his successors degenerated, and the Gothic do-
iminion over Italy lasted only till 544, when it was
overthrown by Narses, the general of Justinian.
From this time the Goths figure no longer as a power in the
history of Western Europe, except in Spain. We
find, however, their name perpetuated long after in
Scandinavia, where a kingdom of Goths existed until
the 12th century, distinct from Sweden Proper, until
both crowns were united on the head of Charles Swerck-
res. In the title of King of Sweden, the king of the
Swedes and the Goths, which his successors bear to
this day.—On the early history of the Goths, con-
sult Jornandes, "De Getarum sive Gothorum Origine
et Rebus Gestis;" Isidorus, "Chronicon Gothorum;"
and Procopius, "De Bello Gothic." The first two,
however, are not to be trusted implicitly when we
make of the remote genealogy and origin of the Gothic
race. (Encycl. Gr. Knowl., vol. 11, p. 328, seq.)

GRACCHUS.

I. Tiberius Sempronius, the father of
the Gracchi, married Cornelia, daughter of Scipio
Africanus the Elder. He died when his sons were
young, and the post of consul was filled by an off-
court, according to Plutarch, obtained two triumphs.
After the death of her husband, Cornelia refused all offers
of marriage, and devoted herself to the charge and ed-
cation of her children, who, as Plutarch tells us,
were less the inheritors of manly virtue by being
sprung from the noblest blood in Rome, than they
were its possessors from the careful nurture of their
mother Cornelia. (Plut., Vit. Gracch.)—II. Tiberius,
who was the elder son, was born B.C. 163. His
mother was the celebrated Cornelia, daughter of the
elder Africanus. Tiberius served his first campaign
in Africa under his uncle Scipio, and having obtained
the office of consul's questor, we find him next under
Mancinus, the unfortunate commander in the Numi-
tine war. His name, which the Numantines respect-
ed from remembering his father's virtues, is said to have procured the terms under which Mancinus
obtained safety for his army; but the senate, on his re-
turn, was so much displeased at the unfavourable na-
ture of these conditions, that they resolved on giving
up all the principal offices to the Numantines.
By the good-will, however, of the popular assembly, influ-
enced, as it would seem, by the soldiers and their
connexion in the lower classes, it was decided to
send Mancinus as the real criminal, and to spare the
other officers for the sake of Gracchus. Treatment
of this kind was very common in Rome, and against
the senate, and make him the friend of the people;
acordingly, in three years afterward, we find him be-
ning his short career as a political agitator. He
was elected tribune of the commons B.C. 129, and
immediately began to attempt the revival of the Lein-
ian Rogations. (Vid. Agrar. Leges.) In so doing
he appears to have had in view the two grand princi-
iples which that law involved, namely, the employment
of freemen in cultivating the soil in preference to
slaves, and especially the more generally recognised
principle of the equitable division of the public land.
Three commissioners were appointed to superintend
the working of the new law, which Gracchus had pro-
ded, if we may trust Plutarch, with the approval of
some of the most eminent persons of the times, among
whom were Muclius Scavola and Crassus the orator.
Such general interest was excited by the question,
that crowds arrived from all parts of the country to
watch the proceedings; and though it was proposed
which way the matter would go when left to the tribes.
The aristocracy, however, secured the veto of M. Oc-
tavius, one of the tribunes, and thereby quashed the
proceedings whenever the law was brought on, which
violent mode of opposition led Gracchus to exercise
his veto on other questions, stop the supplies, and
throw the government into the most complete help-
lessness. Thus far the contest had been lawful; but
at this juncture, Gracchus, irritated by continual op-
position, invited Octavius to propose his (Gracchus')
ejection from the office of tribune; and on his refusal,
pleading the utter uselessness of two men so different
in sentiment holding the same office, he put the ques-
tion to the tribes that Octavius be ejected. When
the first seventeen out of the thirty-five tribes had
voted for it, Gracchus again implored him to resign; and,
on his entreaty proving unsuccessful, polled another
vote against him, and took a cross order to drag Octavius from the tribune's chair. The Agrarian
law was forthwith passed; and Gracchus himself, his
brother Caius, and his father-in-law Appius Claudius,
were appointed the commissioners. But the senate,
to show their opinion of the whole proceeding, with-
held from him the usual allowance of a public officer,
giving only about one shilling a day. While things
were in this state, the dominions and treasures of At-
talus, king of Pergamus, were by him bequeathed to

560
the Roman people; and, to enhance his own popularity, Gracchus proposed to divide the treasure among the recipients of the land, enable them to stock their farms; and to commit the management of the kingdom of Pergamus to the popular assembly. This brought matters to a greater pitch of distrust than ever. Gracchus was accused by one senator of aspiring to tyranny, and by another of having violated the sanctity of the tribunitian office in depositing Octavius. On this point Gracchus strove to justify himself before the people, but his opponent seemed to have gained such great success as to induce him to postpone the assembly. When at last he did make his defence, it rested, if Plutarch is correct, on false analogies, and on avoiding the question of the inviolability of a public officer. At this juncture Gracchus seems to have trembled for that popularity which alone preserved him from impeachment; and, est it should fail, endeavoured to secure his own re-election to the office of tribune. The other party had demurred as to his eligibility to the office two years in succession, and on the day of election this point occupied the assembly till nightfall. Next morning, accompanied by a crowd of partisans, he went to the Capitol; and, on hearing that the senate had determined to oppose him by force, armed his followers with staves, and prepared to clear the Capitol. At this juncture, Scipio Nasica, having in vain called on the consuls to take measures for the safety of the state, issued an appeal to the people, where the senate had assembled, followed by the whole body of Rome; awed the mob into flight, seized their weapons, and attacked all who fell in their way. About three hundred fell, and among the slain was Gracchus, who was killed by repeated blows on the head. B.C. 133. (Plut., Vit. Tib. Gracch.)—III. Caius, nine years younger than his brother Tiberius, and at his death was left with Appius Claudius as commissioner for carrying on the war. During the lifetime of Appius, and of Tiberius' successor, Licinius Crassus, the commission became composed of Fulvius Flaccus, Papirius Carbo, and himself; but he refrained from taking any part in public affairs for more than ten years after the death of Tiberius. During this time the provisions of his brother's law were being carried out by Carbo and Flaccus; but he does not seem to have begun his career as an independent political leader till B.C. 130, on his return from Sardinia, where he had been for two years, he was elected tribune of the commons. His first act was to propose two laws, one of which, directed against the degraded tribune Octavius, disqualified all who had been thus degraded from holding any magistracy; and the other, having in view Pomptillus, a prominent opponent of the popular party, denounced the banishment of a Roman citizen without trial as a violation of the Roman laws. The first was never carried through; to the latter was added a third, by which Pomptillus was banished from Italy, or, according to the technical phraseology, interdicted from fire and water. These measures of offence were followed by others, by which he aimed at establishing his own popularity. One of these was a poor-law, by which a monthly distribution of corn was made to the people at a nominal price. The effect of this law was to make him appear to the mob as the only person who could attract all Italy to partake of the bounty. Next came organic changes, as they would now be called; and of these the most important was the transference of the judicial power from the senators, wholly or in part, to the equestrian order. This measure, according to Cicero, worked well; but, in taking his opinion, we must remember his partiality to the equites, and add to this the fact that his eulogiums occur in an advocate's speech. (In Verr. Act. 1.) Gracchus now suspended unlimited power with the populace; and, at the end of the year, not more than ten candidates having started for the office of tribune, he was again elected. His second tribunateship was mostly employed in passing laws regulating the colonies, in which matter the aristocratical agent, Livius Drusus, outdied him; and, having won the confidence of the people by his apparent disinterestedness, ventured (being himself a tribune) to interpose his veto on one of Gracchus' measures. The appointment of Gracchus; soon after, to the office of commissioner for planting a colony near Carthage took him away from the scenes of his popularity; and, soon after his death, a proposal was made to repeal the very law which he had been engaged in carrying out, relative to the colony in Africa. This law was not his own measure, but that of one Rubrius, another of the tribunes, and was one of those enactments which had weaned from Gracchus the favour of the people, it having been represented by his opponents as an impious act to build again the walls of Carthage, which Scipio had solemnly devoted to perpetual desolation. Gracchus was now a private man, his second tribuneship having expired; but yet, as such, he opposed the proposition to repeal, and, unfortunately for himself, united with M. Fulvius Flaccus, one of the commissioners of the agrarian law, and a man whose character was respected by no party in the republic. The reputation of Gracchus had already suffered from his connexion with Fulvius; and now he took part with him in designs which can be considered as nothing less than attempts to restore to Gracchus, with perhaps a view to finding false reports, in order to alarm the religious scruples of the people, the two popular leaders assembled a numerous body of their partisans, armed with daggers, and, being thus prepared for violence, they proceeded to the Capitol, where the people were to meet in order to decide on the repeal of the law of Rubrius. Here, before the business of the day was yet begun, a private citizen, who happened to be engaged in offering sacrifice, was murdered by the artisans of Fulvius and Gracchus, for some words or gestures which they regarded as insulting. This outrage excited a general alarm; the assembly broke up in consternation; and the popular leaders, after trying in vain to gain a hearing from the people, while they declared the violence committed by their followers, had no other course left than to withdraw to their own homes. There they concerted plans of resistance, in which, it is believed, neither of them was justified on the plea of self-defence, were rightly considered by the bulk of the people as an open rebellion against the government of their country. The consul Opimius, exaggerating, perhaps, the alarm which he felt from the late outrage, hastily summoned the senate together; the body of the murdered man was exposed to the view of the people, and the Capitol was secured by break of day with an armed force. The senate, being informed by Opimius of the state of affairs, proceeded to invest him with absolute power to act in defence of the commonwealth, in the usual form of a resolution, "that the consul should provide for the safety of the republic." At the same time Gracchus and Fulvius were summoned to appear before the senate, to answer for the murder laid to their charge. Instead of obeying, they occupied the Aventine Hill with a body of their partisans in arms, and invited the senators, the body of regular soldiers, advanced against the rebels, who had made two fruitless attempts at negotiation, by sending to the consul the son of Fulvius. In the mean time the conduct of Caius Gracchus was that of a man irresolute in the course which he pursued, and with too much regard for his country to engage heartily in the criminal attempt into which he had suffered.
himself to be drawn. He had left his house, it is said, in his ordinary dress; he had been urgent with Fulvus to take proper provisions, but now, when the Aventine was attacked, he took personally no part in the action. The contest, indeed, was soon over; the rebels were presently dispersed; Fulvus was dragged from the place to which he had fled for refuge, and was put to death; while Gracchus, finding himself closely pursued, fled across the Tiber, and, taking shelter in a grove sacred to the Furies (more correctly, perhaps, to the goddess Furina), was killed, at his own desire, by a signal servant who accompanied his flight. His head, together with that of Fulvus, was cut off and carried to the consuls, in order to obtain the price which had been set upon both by a proclamation issued at the beginning of the engagement; and the bodies, as well as those of all who had perished on the same side, were thrown into the river. In addition to this, the houses of Gracchus and Fulvus were given up to plunder, their property was confiscated, and even the wife of Gracchus was deprived of her own justire. It is said that in this re
dition there perished altogether of the partisans of the popular leaders about 3000, partly in the action, and partly by summary executions afterward, under the consul's orders.—The career of the two Gracchi was, in many respects, so similar, and the circumstances of their death bore so much resemblance to each other, that it is not wonderful if historians should have comprehended both the brothers under one common judgment, and have pronounced in common their acquittal or their condemnation. But the conduct of Caius admits of far less excuse than that of Tiberius; and his death was the deserved punishment of rebellion, while that of his brother was an unjustifiable murder. The character of Caius is by no means as stainless as his brother's; he was more of a popular leader, and much less of a patriot than Tiberius; the one was injured by power, but the other seems from the beginning to have aimed at little else. The elder brother was head of a party which owed its existence to his principles as a politician. The younger took the lead in that party when it had been regularly formed, and, in his eagerness to obtain that post, he regulated his conduct by his wishes. The death of Tiberius may, as we have already remarked, be justly called a murder; that of Caius, or that which he would have suffered had not the slave prevented it, was nothing more than an execution under partial law. (Plut., Vit. C. Gracch. —Encycl. Metropol., div. 3, vol. 2, p. 97, seqq.—IV. Sempronius, a Roman nobleman, banished to Cere
cis, an island off the coast of Africa; for his adulterous intercourse with Julia, the daughter of Augustus. After an exile of 14 years, he was put to death by a party of soldiers sent for that purpose by Tiberius. (Tacctt. Ann., 1, 53.))

Gratianus, an appellation for Mars among the Romans, the god of war of which is quite uncertain. The common derivation is from gradior, "to ad
dvance," i.e., against the foe. There appears to be some analogy in its formation to that of the Sanscrit Mahadeva, i.e., "magnus deus." (Pott, Etymol. Forsch., p. lvii.)

Greece, the country of Greece. (Vid. Hellas.)

Graus. Mountain of Caledonia, forming one of a large range of mountains extending from east to west through almost the whole breadth of modern Scotland, from Loch Lomond to Stonehaven. The range is now called the Grampian Hills, and the name is derived from the Mons Grampius, which is mentioned by Tacitus as the spot where Galgacus wait
ed the approach of Agricola, and where was fought the battle so fatal to the brave Caledonians. The Grampian chain belong Ben Lomond, 3262 feet high; Ben Ledi, 3009; Ben More, 3903; Ben Lawers, the chief summit, 4015, &c.

Gratianus, a king of Mysia, in Asia Minor, which, according to Demetrius of Scopia, had its source in Mount Cotylus, belonging to the chain of Ida. (Strab., 602.) It flowed through the Aдрasian plain, and emptied into the Propontis, to the west of Byzantium. This stream, or, more correctly speaking, mountain torrent, is celebrated in history on account of the sig
nal victory gained on its banks by Alexander the Great over the Persian army, B.C. 334. (Arrian, Exp. Al., 18, 13, 24.) The stream is the river of Demotico mentioned by Chishull (Travels in Turkey, p. 60), and not, as some maintain, the Ousvala. (Cramer's Asia Minor, vol. 1, p. 35, seq.)

Gratianus, in Greek Charities (Xipare), are represented in classical mythology as three young and beautiful sisters, the attendants of Venus. Their names were Aglaia (Splendour), Euphrosyne (Joy), and Thalia (Pleasure). The Lacedemonians had only two, whom they called Kleta or Klyta, and Phænone, and a temple in honour of them existed in the time of Pausanias, between Sparta and Amynoca (3, 18, 9, 35). Some poets name Pasithea as one of the Graces. Nonnus gives their names as Pasithea, Peitho, and Aglaiia. (Diomys., 24, 263.)—The idea of the Graces was, according to some, a symbolical personification: Aglaia represented the harmony and splendour of the creation; Euphrosyne, cheerfulness and mirth; and Thalia, feasts and dances. In short, they were an aesthetic conception of all that is beautiful and attrac
tive in the physical as well as in the social world. Ac
tording to Hesiod (Theog., 907), the Graces were the offspring of Jupiter and Eurynome the daughter of Ocean. Antimachus, on the other hand, made them the daughters of Helius andÆgle. Some, again, called them the children of Bacchus and Venus. Their worship is said to have originated in Boetia, and Or
comenus, in this country, was its chief seat. The introduction of this worship was ascribed to Eteocles, the son of the river Cephissus. The Graces were at all times, in the creed of Greece, the goddesses presid
ing over social enjoyment, the banquet, the dance, and all that tended to inspire gayety and cheerfulness. (Pind., Ol., 14, 7, seqq.) They are represented as dancing together, or else standing with their arms en
twined. They were originally depicted as clothed, but afterward the artists represented them as nude. In this group of the Graces, two face the observer, while the central one has her look averted. This some fancifully explain as follows: on receiv
ing gifts from friends we ought to be thrice thankful; first, when the gift is conferred; secondly, when away from the party who has conferred them; and, thirdly, when returning the favour! (Millin, Gall. Mythol., s. v.—Keightley's Mythology, p. 192.)

Gratianus, I, eldest son of Valentinian I, succeede
ed, after his father's death, A. D. 375, to the Roman Empire for his portion Gaul, Spain, and Brit
in. His brother, Valentinian II, then an infant under five years of age, had Italy, Illyricum, and Africa, under the guardianship, however, of Gratianus, who was therefore, in reality, ruler of all the West. His uncle Valens had the empire of the East. Gratianus began his reign by punishing severely various pre
fects and other officers who had committed acts of op
pressiveness. But the empereur, Valens, was slain at the same time, through some insidious charges, Count Thessalus, father of Theodosius the Great, and one of the most illustrious men of his age, was beheaded at Cartilage. In the year 378 Valens perished in the battle of Adrianople against the Goths, and Gratianus, who was hastening to his assistance, was hardly able to save Constantinople from falling into the hands of the enemy. In consequence of the death of his uncle, Gratianus, finding himself ruler of the whole Roman
GREGORIUS.

Of his works there are extant, a panegyric oration on his master Origcn upon leaving his school, a canonicæ epistle, and some other treatises in Greek, the best edition of which is that of Paris, fol., 1622.—II. Surnamed Nazianzenus (of Nazianzus), a celebrated father of the Church, was born in the fourth century, at Arianzus, a village near the town of Nazianzus in Cappadocia, of which his father was bishop. He studied first at Cæsarea in Cappadocia, afterward at Alexandria, and lastly at Athens, where he became the friend and companion of Basilius, and where he also met Julian, afterward emperor. At a subsequent period he joined Basilius, who had retired to a solitude in Pontus during the reign of Julian. Having been then appointed his friend bishop of Zazime, a place of which Gregory gives a dismal account, and which he soon after left to join his father, and assist him in the administration of the church of Nazianzus. He there made himself known for his eloquence in the orations which he addressed to his father's flock. These compositions are remarkable for a certain poetical turn of imagery, and for their mild, persuasive tone. Above all things he was remarkable for his eloquence on the clergy, agitated by the spirit of controversy; peace to the people of Nazianzus, distracted by sedition; peace to the imperial governor, who had come to chastise the town, and whose wrath he endeavours to disarm by appealing to the God of mercy. In an age of sectarian intolerance he showed himself tolerant. He had suffered with his brethren from Arian persecution under the reign of Valens; and after that emperor had taken by violence all the churches of Constantinople from the orthodox or Nicans, the inhabitants, who had remained attached to that faith, looking about for a man of superior merit and of tried courage to be their bishop, applied to Gregory, who had left Nazianzus after his father's death and had retired into Isauria. Gregory came to Constantinople and took the direction of a private chapel, which he named Anastasia, and which Gregory says looked like the taking of a citadel by storm. Gregory being now recognised as metropolitan, did not relinique upon the Arians for the past persecutions, but endeavored to return after fanaticism and persecution. In the midst of the pomp of the imperial court he retained his former habits of simplicity and frugality. His conduct soon drew upon him the dislike of the courtiers and of the fanatical zealots. Theodosius convened a council of all the bishops of the East, to regulate matters concerning the vacant or disputed sees, which had been for many years in possession of the Arians. The council at first acknowledged Gregory as bishop of Constantinople, because he had lived long in the bosom of the assembly, which disputed his title to the see, and stigmatized his charity towards the now persecuted Arians as lukewarmness in the faith. Gregory, averse to strife, offered his resignation, which the emperor readily accepted. Having assembled the people and the fathers of the council, to the number of one hundred and fifty, in the church of St. Sophia, he delivered his farewell sermon, which is a fine specimen of the eloquence and eloquent character of his past life, his trials, the proofs of attachment he had given to the orthodox faith in the midst of dangers and persecution, he replies to the charge of not having avenged that persecution, upon those who were now persecuted in their turn, by offering, that to forego the opportunity of revenging ourselves upon a fallen enemy is the greatest of all tri-
unplumis. He then pleads guilty to the charge of not keeping up the splendour of his office by a luxurious table and a magnificent retinue, saying that he was not aware that the ministers of the sanctuary were to vie in pomp with the consuls and commanders of armies. After rebuking the ambition and rivalry of his colleagues, which he compares to the factions of the circus, he leaves the room and addresses all those around him, and of the places dear to his memory. This valedictory address is a touching spec-

imen of the pathetic style, dignified and unmixed with querulousness. The orator salutes for the last time the splendid temple in which he is speaking, and then turns towards his humble but beloved chapel of Anas-
tasia, to the choirs of virgins and matrons, of widows and orphans, so often gathered there to hear his voice; and he mentions the short-hand writers who used to note down his words. He next bids "farewell to kings and their palaces, and to the courtiers and serv-

ants of kings; faithful, I trust, to your master, but for the most part faithful towards God; farewell to the sovereign city, the friend of Christ, but yet open to correction and repentance; farewell to the Eastern and Western world, for whose sake I have striven, and for whose sake I am now1 slighted. He concludes with a wish that the rock of faith, the guiding light of his peace, in hopes of hearing from the place of his retirement the news that is daily growing in wisdom and virtue. (S. Gregorii Nazianzeni, Opera, Orat. 32, ed. Bily.) This oration was delivered in June, A.D. 381, and a few days after Gregory was on his way to his native Cappadocia. Arrived at Caesarea, he delivered an im-

pressive funereal oration to the memory of his friend Basilii, who had died there some time before, in which he recalls to mind their juvenile studies at Athens, their intellectual and moral lives, and of their checkered lives (Orat. 20). After paying this last tribute to the memory of his friend, he withdrew to his native Arianzus, where he spent the latter years of his life, far from the turmoil of courts and councils, busy in the cultivation of his garden and in writing poetry, a favourite occupation with him from his youth. Gregory died A.D. 389. Most of his poems are reli-
gious meditations. Occasionally the poet attempts to divest himself of his destiny, to agree, and even at times appears lost in uncertainty and doubt as to the object of human existence; but he recovers himself to do homage to the Almighty wisdom whose secrets will become revealed in another sphere. The adept in the philosophy of ancient Greece is here seen striving with the submissive Christian convert. St. Jerome and Suidas say that Gregory wrote no less than thirty thou-
sand lines of poetry. Some of his poems were pub-

lished in the edition of his works by the Abbé de Billy, Paris, 1609–11, which contains also his orations and epistles; twenty more poems, under the title of "Carmina Cygnae," were afterward published by Tol-

lius, in his "Insignia Itinerarii Italicij," 4to, Utrecht, 1696; and Muratori discovered, and published in his "Anecdota Graeca," Padua, 1709, a number of Grego-

ry's epigrams. Of his orations some few turn upon dogmas, especially on that of the Trinity, but most of them are upon morality. He is a sober writer than his successor Chrysostom, and has more of the calm, impressive eloquence of conviction. He and his friend Basilius brought the oratorical arts of ancient Greece into the service of Christian preaching, and one of Gregory's greatest complaints against Julian is, that that emperor had forbidden Christians the study of Greek literature. In his two orations against Julian he somewhat departs from his usual style, and assumed the tone of a lawyer in delivering the orographics of Libanius, Eunapius, and other admirers of that em-

peror. Gregory of Nazianzus has been styled the "Theologian of the Eastern Church." He might, with as much truth, be styled its most poetical writer. (Suidas, s. e. — Encycl. Us. Knowl., vol. 2, p. 442, seqq.)—III. A bishop of Nyssa, in Cappadocia, the brother of Basilii. He distinguished himself in the Arian controversy, and died A.D. 396.—IV. Corin-

thius, archbishop of Corinth in the twelfth century. He is chiefly known by his work on dialectics (Περὶ διαλέκτου), the best edition of which is that of Schäf-

er, Lips., fol. 1609-11, 4to. Grudii, a people of Gallia Belgica, to the northwest of, and tributary to, the Nervii. Traces of their name remain, according to D'Anville, in la terre de Groude, above l'Ecluse, towards the north, in a part of the country called Lat-Sand. Turpin de Crissé is wrong in making the country of the Grudii answer to that of Bruges. (Cez., B. G., vol. 5, 399.—Lemaire, Ind. Geogr. ad Cez., p. 272.)

Graa, the name of Xenophon, who killed Epam-
nondas, and was himself slain, at the battle of Manti-
nea, B.C. 363. His father was offering a sacrifice when he received the news of his death, and he threw down the garland which was on his head, but replaced it when he heard that the enemy's general had fallen by his hands. (Aelian, V. H., 3, 3)—Such is the common account. The variations of tradition, how-

ever, as to the hand by which Epaminondas fell, prove the importance which his contemporaries attached to the claimants, and the esteem in which he was held. Besides the son of Xenophon, were a Spartan, and a Locrian of Amphip-

olis. The Spartan's descendants became a privileged family. The Locrian's received heroic honours from the Phocians. But the Athenians, and the Thebans themselves, assigned the deed to Gryllus, and he was honoured by the Mantinæans with a public funeral and statue, and by his fellow-citizens with a conspicuous place in a painting of the battle, representing him in the midst of the action and all the soldiers following at his side. In the Athenian cavalry, it is difficult to understand how he could have encountered Epaminondas, who was at the head of the Theban infantry. (Thirteenth's Greece, vol. 5, p. 151.)

Grynæum or Grynae, one of the twelve cities of Eolus, situate on the coast of Lydia, near the northern confines, and northwest of the Umm and Cyme. It was celebrated for the worship of Apollo, who thence derives his epithet of Grynæum, (Aristoph.蛙, 372.—Euh., 4, 345.) The temple of the god was remark-

able for its size, and for the beauty of the white marble of which it was built. (Strabo, 622.) Kruse makes the site of the ancient place correspond with the modern Chissilik. (Bischof und Möller, Wörterb. der Geogr., p. 577.)

Gryphes, more correctly Gryphes (Tween), griffins, certain animals which, according to Herodotus (3, 118), guarded the gold found in the vicinity of the Arimaspians, a Scythian race, from the attempts of that people to possess themselves of it. (Vid. Ari-

maspi.) Herodotus makes only a passing allusion to the contests between the griffins and Arimaspians, because probably he attached little, if any, belief to it. Ctesias, however, is more diffuse. (Ind., § 12.—Compare Elian, N. A., 4, 27.—Pline, 7, 2.) The ques-

tion respecting the Arimaspians has already been dis-

cussed. (Vid. Arimaspi.) With regard to the grif-

fons, much diversity of opinion prevails among modern scholars. Von Veltheim thinks the story refers to the washing of gold in the desert of Cobi. He supposes this to have been done by slaves for the monarchs of northern India, and the spot to have been carefully guarded by armed men and fierce dogs, the most alarm-

ing tales having been at the same time spread concern-

ing these regions, in order to keep off invaders. (Von den goldgräbern der Morgenländischen und Griechen der Al-

ten.—Vermischte Aufs., vol. 2, p. 267, seqq.) Wahl takes the griffins to be a nation in the northeastern part of Upper Asia, and identical with the Rhipiæ. He assigns them for a habitation the range of Mount Atlas.
and regarded them as having practised medicine in Upper Asia. Hence, according to him, the gold of the griffons is nothing more than the gold obtained from mines. {Erdbeschr. von Oost, p. 498, seq.}

Brunner remarks that in the mountains with the Indus rises, and where are gold-mines, eagles and vultures of an enormous size are found, which may have given rise to the fable respecting the griffons. {Neuwi. Annal. des Voyag., vol. 2, p. 380, seq.}

Rhodes seeks to identify the griffons with the Deus, or evil genii of Persian mythology {Heilige Statge, p. 227, seq.}, for which he is justly censured by Von Hammer {Wien. Jahrh., vol. 9, p. 53}; and Wilford, with as little probability, refers the account of the griffins to that of the fabled bird of Vischunu, named Garonda. {Asiat. Researches, vol. 14, p. 378.} As regards the name grifon itself, it evidently comes from the Persian gerefen, "to seize" {compare the German greifen}, the root of which, greif, has a strong analogy to grifon. {Tychen, ap. Heeren, Ideaen, vol. 1, pt. 2, p. 386.}

Gyare, a small island of the Archipelago, classed by Stephanus of Byzantium among the Sporades, but belonging rather to the Cyclades. It lay southwest of Andros, off the coast of Attica. So wretched and poor was this barren rock, being inhabited only by a few fishermen, that they deputed one of their number to wait upon Augustus, then at Corinth, after the battle of Actium, to petition that their taxes, which amounted to 150 drachmae {about 25 dollars}, might be diminished; as they were unable to raise more than 100. {Strabo, 185.} This island became subsequently notorious, as the spot where criminals or suspected persons were banished by order of the Roman emperors. {Jan., Sat., 1, 73. — Id., Sat., 10, 70. — Tacit., 3, 68.} The modern name is Giourau. {Cramer's Anc. Greece, vol. 3, p. 412.}

Gyas, I. one of the companions of Eneas, who distinguished himself at the games exhibited after the death of Anchises in Sicily. {Virg., Aen., 5, 118.} II. A Rutulian, son of Melampus, killed by Eneas in Italy. {Id., 6, 318.}

Gyges {Vungi}, more correctly Gyes {Tung}, a son of Culus and Terra, represented as having a hundred hands. He, with his brothers, made war against the gods, and was afterward punished in Tartarus. {Vid. Cotus.}

Gyges, a Lydian, to whom Candaules, king of the country, showed him his wife Cynes in his absence. The Persian was much incensed, although she concealed her anger at the time, that, calling Gyges afterward into her presence, she gave him his choice either to submit to instant death, or to slay her husband. Gyges chose the latter alternative, married the queen, and ascended the vacant throne, about 718 years before the Christian era. He was the first of the Mermnadæ who reigned in Lydia. He reigned 38 years, and distinguished himself by the presents which he made to the gods. {Herod., 3, 80.} The wife of Candaules above mentioned was called Nysia according to Hephastion. — The story of Rosamund, queen of the Lombards, as related by Gibbon, bears an exact resemblance to this of Candaules. {Compare Schlosser, Weltgeschichte, vol. 2, pt. 1, p. 82.—Plato relates a curious legend respecting this Gyges, which differs essentially from the account given by Herodotus. Gyges, thus treated, took one of the sheepds of Candaules, and to have descended into a chasm, formed by heavy rains and an earthquake in the quarter where he was pasturing his flocks. In this chasm he discovered many wonderful things, and particularly a brazen horse having doors in it, through which he looked, and saw within a corpse of more than mortal size, having a golden ring on its finger. This ring he took off and ascended to the surface of the earth. Attending, after this, a meeting of his fellow-shepherds, who used to assemble once a month for the purpose of transmitting an account of their flocks to the king, he accidentally discovered that, while the ring of the ring inward towards himself, he became invisible, and when he turned it outward, again visible. Upon this, having caused himself to be chosen in the number of those who were sent on this occasion to the king, he murdered the monarch, with the aid of the queen, whom he previously corrupted, and ascended the throne of Lydia. {Plat. de Repub., 2, p. 559, seq. — Compare Cic. de Off., 5, 9.}

Gyipipus, a Lacedæmonian, sent, B.C. 414, by his countrymen to assist Syracuse against the Athenians, which he effectcd by the overthrow of Nicias and Demosthenes. He afterward joined Lysander off Athens, and aided him by his advice in the capture of that city. Lysander sent him to Lacedæmon with the money and spoils which had been taken, the former amounting to 1500 talents. But Gyipipus, unable to resist the temptation, seized the bottom of the bags, thus leaving the seals untouched at the top, and abstracted 300 talents. His theft, however, was discovered by means of the memorandum contained in each bag, and to avoid punishment he went into voluntary exile. {Plut., Vit. Nic. — Diod. Sic., 13, 106.}

Gymnosophistæ {Γυμνοσοφισταί}, or "naked wise men," a name given by the Greek writers to a certain class of Indian ascetics belonging to the caste of the Brahmins, and who, in accordance with the prevalent belief, thought that, by subjecting their bodies to privations, and by withdrawing from all intercourse with mankind, they could effect a reunion of the spiritual nature of man with the divine essence. Most of these ascetics dispensed almost entirely with the use of clothes, and many of them went entirely naked. Hence the name applied to them by the Greeks. It is expressly commanded in the laws of Manu {6, 2, 9}, that a Brahmin, when his children have attained maturity, should retire from the world, and take refuge in a forest. He is required to spend his time in studying the Vedas and in performing penances, for the purpose of "uniting his soul with the divine spirit." {Manu, 6, 20.} Many of these hermits appear in former times to have studied the abstract sciences with great success; and they have always been considered by the orthodox Hindus as the wisest and holiest of mankind. {Consult the Bhagavad Gita; and the philosophy of the Mahâbhârata, which has been translated into English by Wilkins, Lond., 1787, and into Latin by Schlecel, who also edited the Sanscrit text, Boni, 1823.}

The Gymnosophists often burned themselves alive, as Calanus did in the presence of Alexander. {Arrian, Exp. Al., 7, 18. — Plut., Vit. Alex., c. 65, seqq. — Diod. Sic., 17, 107.}

Gyndes, now Zindid, a river of Assyria, falling into the Tigris. When Cyrus marched against Babylonia, his army was stopped by this river, in which one of the sacred horses was drowned. This so irritated the monarch, that he ordered the river to be divided into 360 different channels by his army, so that after this division it hardly reached the knee. {Herod., 1, 189.} This portrait of Cyrus seems a little overcharged. The hatred which the Greeks bore the Persians is sufficiently known. The motive of Cyrus for this cruel purpose, such as is described by Herodotus, That which happened to the sacred horse might make him apprehend a similar fate for the rest of his army, and compel him to divert the river into a great number of canals in order to render it fordable. The Gyndes, at the present day, has reassumed its course to the Tigris, and its entrance into that river is called Fium-el-Salor, or the river of foam, in Arabic. The name given it by the Turks in the place whence it issues, is Kara-Som, or the black river.
HADRIANUS.

HADRIANUS, the port of Sparta, about 40 stadia from Las (Pausan. 3, 24), and 240 from Sparta itself. (Strabo, 363.) Pliny says it was the nearest point to embark from for the island of Crete (4, 5). Gytheum was taken by the Athenians before Tolimida, who busied the knights before the Peloponnesian war. (Diod. Sic., 11, 84.) It was also attacked by the Thebans in their first invasion of Laconia, for three days, but without success. (Xen. Hist. Gr., 6, 5, 32.)

It was afterward besieged by the Roman army under the command of T. Q. Flamminius and his brother Lucius, and compelled to surrender. Livy says it was a strong and populous town, and well provided with the means of resistance (34, 25). On the renewal of the war about 295, it was occupied by the Romans. (Liv. xxvi. 26.—Compare Polyb., 2, 69.) The Gytheots pretended that their city had been built by Hercules and Apollo, whose statues were placed in the forum. Polyeubus states (5, 19), that the port, distant 30 stadia from the city itself, was both commodious and secure. Strabo remarks, that it was an artificial haven. Gyven- ton stood a little to the north of the present town of Marathonisi. The site is now called Palaeopolis; but no habitation is left upon it. (Cramer’s Anc. Greece, vol 3, p. 192, seqq.)

HAD—HADRIANUS.

HADES (gôdëz), the place of departed spirits, according to the Grecian mythology; from a, not, and elôa, to see, as denoting the lower or invisible world. Its divisions were Elysium and Tartarus, the respective abodes of the good and bad. In the Homeric times, however, this arrangement formed no part of the popular creed. The prevalent belief was merely as follows: that the souls of the departed, with the exception of those who had personally offended against the gods, were occupied in the lower world with the unreal performance of the same actions that had formed their chief objects of pursuit in the regions of day. All the other accompaniments of the fable, the judges, the tribunal, the trials of the dead, &c., are merely posthumous additions. (Constant., de la Religion, vol. 3, p. 383.) As regards the analogy between the terms hades and our English word hell, it may be remarked, that the latter, in its primitive significance, perfectly corresponded to the former. For, at first, it denoted only what was secret or concealed; and it is found, moreover, with little variation of form, and precisely with the same meaning, in all the Teutonic dialects. (Compare Junius’s Gothic Glossary, subjoined to the Codex Argenteus, on the word herjan; and the Diversion of Parley, vol. 2, p. 377, ed. 1829.) With regard to the situation of hades, it seems always to have been conceived, by both Jews and pagans, as in the lower part of the earth, near its centre, as we should term it, or its foundation (according to the notion of the Hebrews, who knew nothing of its spheric- nal figure), and answering in depth to the visible heavens in height. (Compare, on this whole subject, Campbell’s Gospels, vol. 1, p. 272, seqq. Disc. 6, p. 2.)

HADRIANUM, a town of Sicily, near Mount Etna, having in its vicinity a river of the name of Hadrianus. (Steph. Byz., s. v.) It was founded by Dionysius. (Diod. Sic., 14, 38.—Compare Silius Italicus, 14, 250.)

HADRIANUS (Publius Iulius), 1. A Roman emperor, born at Rome A.D. 76. He lost his father when ten years of age, and had for his guardians Trajan, who was his relation, and Cornelia, the wife of the Roman knight. His parent’s name was Iulius Hadrianius Afer, and it is conjectured that the surname of Afer was given the latter because he had been governor of Africa, and that he is the same with the Hadri- anus who put the martyr Leontius to death at Tripoli, in the reign of Vespasian. (Bayle, Hist. Dict., s.

v., vol. 5, p. 670.) Hadrian’s father was Trajan’s first cousin; for he was the son of Ulpia, the sister of Marcus Ulpianus Trajanus, the Emperor Trajan’s father. (Compare Taeckelius, ad Eutrop., s. 6.) Hadrian began very early to serve in the army, and was tribune a. d. 89, before he was nineteen. The Emperor Lower Messa chose him to congratulate Trajan upon his being adopted by Nerva, and it was he that ac- quainted Trajan with the first news of Nerva’s death. He regained the emperor’s favour, which he had al- most entirely lost by his extravagant expenses and the debts which he had in consequence incurred, and married the grand niece of this prince, Sabina, chiefly through the aid of Plotina the empress. His subse- quent elevation to the first of his name, and the part he took in most of his expeditions. He particularly di- stinguished himself in the war against the Da- cians, and was successively appointed prætor, govern- or of Pannonia, and consul. The orations he com- posed for Trajan increased his credit. (Spartian., Vit. Hadr.) After the siege of Atra, in Arabia, Tra- jan left him in command of his army, and when he found his death approaching, adopted him, although still a youth (120, p. 268).—Compare Junius’s Gothic Glossary, subjoined to the Codex Argenteus, on the word herjan; and the Diversion of Parley, vol. 2, p. 377, ed. 1829.) With regard to the situation of hades, it seems always to have been conceived, by both Jews and pagans, as in the lower part of the earth, near its centre, as we should term it, or its foundation (according to the notion of the Hebrews, who knew nothing of its spheric- nal figure), and answering in depth to the visible heavens in height. (Compare, on this whole subject, Campbell’s Gospels, vol. 1, p. 272, seqq. Disc. 6, p. 2.)

HADRIANUS.

HADRIANUS, a town of Sicily, near Mount Etna, having in its vicinity a river of the name of Hadrianus. (Steph. Byz., s. v.) It was founded by Dionysius. (Diod. Sic., 14, 38.—Compare Silius Italicus, 14, 250.)

HADRIANUS (Publius Iulius), 1. A Roman emperor, born at Rome A.D. 76. He lost his father when ten years of age, and had for his guardians Trajan, who was his relation, and Cornelia, the wife of the Roman knight. His parent’s name was Iulius Hadrianius Afer, and it is conjectured that the surname of Afer was given the latter because he had been governor of Africa, and that he is the same with the Hadri- anus who put the martyr Leontius to death at Tripoli, in the reign of Vespasian. (Bayle, Hist. Dict., s.
On his return he passed the winter at Athens, and was initiated in the Eleusinian mysteries. He published no edict against the Christians, yet they nevertheless endured considerable persecution. The remonstrance of Quadratus, bishop of Athens, and Anstides, an eminent Christian, he ordered the persecution to cease; but no credit is due to the unauthorized assertion of Lampridius, that he thought of building a temple to our Saviour. His treatment of the Jews, on the other hand, was extremely severe, though ample provocation had been given by that turbulent nation. They had raised disturbances towards the end of Trajan's reign, which were not completely quelled until the second year of Hadrian. But now a more formidable insurrection broke out under Barcochebas ("Son of a Star"), who, though a robber by profession, had given himself out for the Messiah. It required a war of three years to reduce the revolted Jews to complete subjection, and after this was accomplished, there was scarcely any indignity that was not inflicted on the conquered nation. Jerusalem was rebuilt under the new title of Ælia Capitoitina, uniting the family name of the emperor with the Roman surname of Jupiter, and in the execution of his plan Hadrian studiously profaned all the places which had been most revered by both Jews and Christians, whom he sees on this occasion to have purposely confounded together. He built a temple in honour of Jupiter Capitolinus upon the mountain where had stood the temple of the gods of the temple of Apollo, and erected a statue upon the gate of the city which looked towards Bethlehem; he erected in the place where Jesus was crucified a statue of Venus; and in that where he rose from the dead one of Jupiter; in the grotto of Bethlehem, where our Saviour was born, he established the worship of Adonis. The Jews were also forbidden the very sight of Jerusalem, which they were not permitted to enter but on one day in the year, the anniversary of their first triumph, and the venerable temple was left open to the view of all. At the conclusion of the Jewish war Hadrian returned to Italy, where a lingering illness put a stop to his unsettled mode of life, and eventually terminated his existence. Having no children of his own, Hadrian first adopted for his successor L. Ceronius Commodus, more generally known by the name of Verus, to which last he prefixed that of Eliaus after his adoption by the emperor. Verus, however, who was remarkable for nothing but his good fortune, and debauched mode of life, died soon after, and Hadrian made a second selection in the person of the virtuous Antoninus. (Vid. Antoninus Pius.) Hadrian died not long after at Baiae, A.D. 136, in the 63d year of his age and 22d of his reign. His disorder was the dropsy, from which disease his sufferings were so great as apparently to affect his reason. The character of this monarch presents a strange mixture of virtues and vices. If he cultivated literature and courted the society of the learned, he yet occasionally displayed towards them a degree of jealousy and caprice altogether unworthy of his station and abilities. If he was, in general, a just and able ruler, yet there were times when he showed himself revengeful, suspicious, and cruel. His treatment of his wife Sabina does no honour to his memory, his disgraceful predilection for Antinous leads it with infamy; nor does his excessive superstition, to which he was carried in that fashion, enable him to any other than feelings of contempt. The better portion of the Romans appear to have formed a just estimate of his character long before his death, and it was with difficulty that Antoninus could obtain from the senate the usual compliment of having him ranked among the gods. Their dread of the solitary, by whom Hadrian was greatly beloved, appears to have conquered their reluctance. Hadrian wrote several works. He was fond of entering the lists against the poets, philosophers, and orators of the day, and Photius mentions several declarations of the emperor, written for such occasions, as still existing in his time, and not devoid of elegance. Hadrian composed a history of his own times, which he published under the name of his freedman Phileon, and Dorihtes the grammarian made at a subsequent period a collection of his decisions and rescripts. All that we have of his productions at the present day are, a fragment of a work on military operations, entitled Ενεργέπραπα, and an epigrammatic address to his soul, written a short time before his death, and as remarkable for its elegance as its scepticism. It is:

"Animula, vagula, blandula,
Hospes comens corporis,
Quam manus abbita in
Patidulam, rigida, nudula,
Nec ut soles, dabas jocos?"

(Procianis, 1. 18.—Id., 8, 9.—Aurél. Vict.—Capitol., Vid. Anton., c. 2.—Essæe, Chron., p. 281, seqq., edit. Maii et Zohrabi.—Id., Hist. Eccles., 4, 6.)—II. A philosopher of Tyre, who studied under Herodes, and taught eloquence after him at Athens. He was also secretary to the Emperor Commodus. (Arvtr graφeis των ἔπιστόλων.) He died at Rome after having attained the age of 80 years. We have only some fragments remaining of the works of this writer, which cause no regret for what are lost. They are preserved in the works of the emperor Antoninus, and at the end of Orellius' edition of Philo of Byzantium. (Schull. Hist. Litt. Grecque, vol. 4, p. 233.)

HADRIATICUM MARE. Vid. Adriaticum.

Hæmon, a son of Creon king of Thebes. According to Apollodorus (3, 5, 8), he was devoured by the Sphinx. The tragic writers, however, assigned him a different fate. (Vid. Antigone.)

Hæmonia, one of the earlier appellations of Phœbus, and supposed to be the derivatio of his name of zeus, a word of an ancient monarch Hæmon. (Strabo, 443.) Other writers give the name less correctly without the initial aspiration. (Stephanus Byz., s. v.—ed. Berkel, p. 63.) In Bruck's edition of Apollonius Rhodius, the true form is given in both the text and scholia. It is more than probable, that the name Hæmonia was brought in by the Pelasgi; and to this same race, no doubt, must the appellation of Hæmon, given to the northern boundary of Thrace, be in strictness attributed. (Vid. Hæmon.)

Hæmus, a chain of mountains forming the northern boundary of Thrace, and separating it from Mæsia. The ancients had an such an idea of the elevation of this chain, that Pomponius Mela (2, 2) affirms that the Euxine and Hadiatic could be seen from it at the same time. Polybius also makes the same assertion, but this Strabo (313) expressly contradicts. The historian, however, is doubtless correct in another remark of his, that the chain of Hæmus is higher than that of the Alps. Livy relates (40, 22), that Philip, king of Macedonia, having heard it reported that from the summit of Hæmus could be seen at once the Euxine, the Adriatic, the Danube, and the Alps, determined to ascend the mountain, in order to take a view, as it were, of the approaching scene of action between himself and the Romans. He was three months in it, and in that time was coming to the top of some ridge when it struck him that the weather, however, proved unfavourable for the view. Pliny (4, 2) makes Hæmus six miles high. It is remarkable that Herodotus should have taken no notice of it in his mention of the expedition of Darius against the Scythians, though it must have presented so formidable a barrier to the army of that monarch. He speaks of it, however, on another occasion (4, 49). According to Stephanus of Byzantium (p. 84, ed. Berkt.), the mountain derived its name from Hæmus, or Emus, a son of Bores and Orthynthia.

H.Æ.M.
Apollodorus, however (6, 3), says the chain was called Hæmus from αἰγα, "blood," because Typhon having been chased hither by Jupiter, waged battle in this place against the monarch of the skies, and covered that mountain with blood. (Compare the remark of Heyne, 1, 317, 3. c., where this etymology is stated to be the offspring of later ages.) The true root is found in the Sanscrit ḥem̄a, which connects together the names of Inæus, Himmalæa, Ḥæmus, Hymettus, in ancient geography, and the appellation Hammel, given to various mountains in Saxony, Jutland, and elsewhere. (Creszer, Symbolik, vol. 1, p. 536. — Creszer, Symbolik, par Guigniaut, vol. 1, p. 136. — Göt- ting, Gcil. aus., 1816, No. 36, p. 147.) This root ḥem has been written Herma, îmas, Æmas, Ímas, Íca, and it appears to carry with it the idea of height (compare the German himmel, "heaven"), and also that of a snowy or wintry elevation. (Compare the Latin hímus, and the Greek χεῖμα.—Klaproth, Memoires relatifs a l'Aisie, vol. 1, p. 432.)—The length of the chain of Haemus is not less remarkable than its height, extending for 500 miles; one end resting on the Gulf of Venice, and the other on the Black Sea. The modern name is apparently derived from the ancient, and it is properly divided into high and low, the latter advancing on each side, like outworks before the great natural rampart. (Walsh's Journey from Constanti- nople to England, p. 104, Am. ed.) The passage of the Balkan by the Russian forces, in their conflict with the Mussulman power, has excited great interest and called forth considerable applause. From the remarks, however, of a very recent traveller, it would appear that the undertaking was anything but difficult. (Kappel's Journey across the Balkan, vol. 1, p. 301.)

Hæleus, I. an Argive, who, after the murder of Agamemnon by Clytemnestra and Ægisthus, settled in Italy, in the vicinity of Monæ Massacæus, a mountain of Campania. At the head of the Aurunci and Oschi, he assisted Turnus against Æneas, but fell by the hand of Pallas. (Virgil, Æn., 7, 724.—Id. Íth., 10, 283.)

Hæmus is said by Virgil to have been the son of a soothsayer, who foretold the fate of his child; and, in order to avert this, if possible, brought him up in the woods. The epithet Agamemnonius, therefore, which Virgil applies to him (Æn., 7, 724), and which some suppose has reference to his being the son of Aga- memnon, is merely used by the poet to denote the pretended origin of his race. (Heyne, Excurs., 8, ad Æn., 7.)—II. or Hales (Ἀλές, ἕν τοῦ, a river of Asia Minor, running near the city of Colophon, and said to have the coldest water of all the streams of Asia. (Plin., 5, 28.) It took its rise in Mount Gallesus or Gallesium, and fell into the Sinus Ephraeus. (Strab., 642.—Cramer's Asia Minor, vol. 1, p. 359.)

Halicarnassus, a large and rapid stream of Macedonia, flowing into the sea a short distance below Pydna. It rises in the chain of mountains called Cambunii, or by Ptolemy Canalovii, on the northern confines of Thessaly. The modern name of this river is Indige- Carasus, or Jenicera, according to Dr. Brown, who must have crossed it in its course through the Ephesian (Travels, p. 46). So also the editors of the French Strabo, vol. 3, p. 124.) Dr. Clarke calls it Inje-Mauro. The epitomist of Strabo (7, p. 330) seems to place the Haliacarnassus soon after Diuni, as does also Ptolemy (p. 82). This is, however, an error, which apparently misled Dr. Holland, who imagined he had forced this stream about two miles beyond Katina 8 but what he speaks of is probably the Bephyrus or Haliacarnasus (vol. 2, p. 361). According to Caesar (B. C. III, 3, 86), it formed the line of demarcation between Ma- cedonias and Thessaly. (Cramer's Ancient Greece, vol. 1, p. 217.)

Haliartus, I. a son of Thersander, said to have founded the city of Haliartus in Bœotia. He was adopted by Athamas, though he did not succeed him, but gave up the throne willingly to Ptolemy, grandson of this prince. (Pausan., 9, 34.)—II. A city of Bœo- tia, situate, according to Strabo, on the lower shore of the Copia lake, and near the mouth of the Perimessus, which flows from Helicon. The epitaph of πτανία, which is attached to this lake (Hiel. II, 2, 56), is inscribed: "I, Haliartus, 243), from the numerous meadows and marshes in its vicinity, on the side of Orthemous. (Strab., 407.)

Pausanias affirms that Haliartus was the only Bœotian city which did not favour the Per- sians, for which reason its territory was ravaged with fire and sword by their army (9, 32). Haliartus, hav- ing favoured the cause of Perseus, king of Macedonia, was besieged by the Romans, under the command of the prince; the place was invested by the besiegers; it was taken by assault, sacked, and utterly destroyed, the inhabitants being sold and their territory given to the Athenians. (Liv., 45, 53.—Polyl., 30, 18.— Strab., 411.) The remains of Haliartus, according to Dodwell (vol. 1, p. 248), are situated about fifteen miles from Lebadea, and at nearly an equal distance from Thebes. The place is now called Mikrokomos. Sir W. Gell says, "The ruins of Haliartus lie just below the valley of the Maris, a road from Thebes to Leba- des." (Itinerary, p. 124.)

Haliarsa, a district of Argolis, so called apparently from the fisheries established along the coast, and lying between Hermione and Cape Scyelleus. Its territory was twice ravaged by the Athenians during the Pelo- ponnesian war. (Thucyd., 2, 56.—Id., 4, 45.) The name of Alki is still attached to a spot situated a little to the east of Castri. (Pouqueville, vol. 4, p. 255.)

Halicarnassus, the principal city of Caria, situate, on the northern shore of the Sinus Ceramicus. It was founded by a Doric colony from Tbrezene, in Ar- golis, according to Strabo (658). These were joined afterward by some Argives, headed by Melas and Are- nanias. (Vitr., 2, 8.—Compare Pausan., 2, 30.) He- rodotus, however, only recognises the former colonists (7, 99). This city, on account of its origin, had natu- rally been included in the Dorian confederation, which consisted originally of six states. But Agasicles, a citizen of Halicarnassus, having, contrary to prescribed custom, carried off the tripod assigned to him in the games celebrated in honour of the Triopian Apollo, instead of dedicating it to the god, the other five cities, in consequence of this offence, determined to exclude Halicarnassus from any participation in these festivi- ties, which amounted, in fact, to an exclusion from the Dorian confederacy, which thenceforth was named Pen- tapolis. (Herod., 1, 144.) Not long after this event, Halicarnassus may be supposed to have lost its inde- pendence, Lygdamis, one of the principal citizens, hav- ing usurped the authority. He was succeeded by his daughter Artemisia, of whom Herodotus has made such honourable mention in his history. (Vid. Arte- misia, 1.) This princess, in all probability, transmitted the sovereign power to her son, named Lygdamis, like his natural grandfather; and it was during his reign that Herodotus, unwilling to see his native city under the domination of a despot, abandoned it for Samos, where he completed his studies. Subsequent to this period we have little knowledge of what occurred in Halicarnassus; but from Thucydides (2, 9) we learn that Caria and Doris were tributary to Athens, and Halicarnassus itself is mentioned, towards the close of his history, as being in the hands of her troops (8, 42). Somewhat later we find it subject to princes of Caria, as it was again in the reign of Ptolemy, who, according to Cæsar (B. C. III, 3, 86), it formed the line of demarcation between Ma- cedonias and Thessaly. (Cramer's Ancient Greece, vol. 1, p. 217.)

Haliartus, I. a son of Thersander, said to have founded the city of Haliartus in Bœotia. He was adopted by Athamas, though he did not succeed him,
H A M

Mausoleum.) Artemisia, dying of grief for the loss of her husband, was succeeded by Hidriues, who, having no issue left, chose her crown to his wife Ada. But Pixodarus, the youngest of Hecatomnus's sons, formed a party against him, and, being attired in the robes of Orontobates, Persian satrap, succeeded in expelling her from Halicarnassus. Orontobates, having married the daughter of Pixodarus, remained, on the death of the latter, in possession of Halicarnassus. It was at this period that Alexander arrived with his forces in Caria, and laid siege to the city. It was a long and severe one, owing to the natural strength of the place, and the number and description of the troops which defended it, under the command of Memnon, the best general of the Persian service. Alexander, however, eventually took the place, razed it to the ground, and restored Ada to the sovereignty of Caria. Halicarnassus was afterward rebuilt, and, to compensate for its losses, had six towns annexed to it. (Plin., v. 6, 29.)

The citadel of this place was named Salmacia, from the fountain celebrated in Ovid (Met., iv, 11). According to Scelas, there were two ports at Halicarnassus, protected by the little island Arkeanuss. Halicarnassus could boast of having produced Herodotus, Dionysius, and Heraclitus the poet. It appears to have suffered in the Mithradatic war, and to have been restored to a great degree of its former prosperity by Cicero's brother Quintus. (Ep. ad Q. Fratr., i, 8.)

—The ruins of Halicarnassus exist at Boudrown, and Captain Beaufort has given a plan of the harbour and the Turkish town, with the adjacent coast. (Beaufort's Karamania, part ii, vol. i, 2, p. 216, seqq.)

Dr. Clarke, quoting from Walpole's MS. journal, remarks, that Boudryn is a corruption, through Petrumi, as the Turks write it, from Pietro, referring to the fort or castle of San Pietro (castellum Sancti Petri), which corresponds to the ancient citadel. (Travels, vol. iii, 2, p. 256, seqq.)

Halicya, (Alycia), a town of Sicily, between Entella and Lilybæum. The modern name is Saleme. (Stab., v. 2, p. 14, seqq.)

Halicarnassus, a son of Neptune and Euryte, who committed an outrage on Alcippe, daughter of Mars, and was, in consequence, slain by that deity. Neptune summoned Mars to trial for the murder of his son.

The cause was heard before the twelve gods, sitting as judges, on the Areopagus at Athens; which hill derived its name (Ἀρείων πάγος, "Hill of Mars") from this circumstance. The trial ended in the acquittal of Mars, and Mars, having married Agathe, became king of Thrace. (Cramer's Anc. Greece, vol. i, p. 145.)

Halymiussa. Vid. Salmydessus.

Halonneus, a small island at the opening of the Sinus Thermicus, and northeast of Scopelus. It is celebrated in history as having been a subject of contention between Philip the son of Amyntas, and the Athenians; on which occasion one of their orators composed a speech, which is preserved in the works of Demosthenes, and has been ascribed by some to that celebrated orator. (Orat. 7, Demosth., p. 75.)

—Strab., 435.—Pomp. Mel., 2, 7.) It is now called Chelidromi. (Cramer's Anc. Greece, vol. i, p. 451.)

Haly, a celebrated river of Asia Minor, rising on the confines of Pontus and Armenia Minor, and which, after flowing westwardly through Cappadocia to the borders of Phrygia, turns to the northwest, and enters the Aegean Sea opposite the town of Ancikli. The sea of Herodotus (1, 72) and Strabo (546) both speak of some of its rising in the region we have mentioned, and pursuing the route described. Pliny (5, 2, however), makes it rise in a far different quarter, viz., in the southern part of Caria, near Tyana, at the foot of the chain of Mount Taurus. Larcher (Hist. d'Hérod., vol. vi, p. 239.—Table Geogr.) and others seek to reconcile these two contradictory statements, by giving the Haly two branches, one a western and a southern one. This, however, only increases the difficulty; for why should Strabo, a native of Amasea, be ignorant of the course of a river so near his native city? and why does he make the source of the southern Haly? This, however, is a mere arbitrary derivation, and so, in fact, Eustathius et aliae, who states that the river was called Halys by those who derived its name, from salt; but others, however, Alys. (Eustath., ad Dion. Perig., v. 784.) This river formed the western boundary of the dominions of Cressus, with which was connected a famous oracle. (Vid. Cressus.)

Hamilcar (for the orthography and derivation of the name, consult remarks at the end of the article), I. a Carthaginian general, son of Mago, or, according to others, of Hanno, conquered by Gelon, in Sicily, the same day that Xerxes was defeated at Salamis. Herodotus (7, 165) states, that he never was seen either living or dead, after the battle in which his army was defeated. According to Polyænus, however (1, 27, 2), Gelon destroyed him by a stratagem while sacrificing. —II. Surnamed Rhodanus, a Carthaginian general of considerable talent. Perceiving his fellow-citizens to be greatly disquieted at the projects of Alexander of Macedon, he betook himself to that prince, in order, if possible, to penetrate his designs, and give his countrypmen timely notice of them. After the death of that monarch he returned to Carthage, where he was put to death, on false pretensions of treason, as the recompense of his devotion to his country. (Justin, 21, 5.)

III. A Carthaginian general, in the time of Agathocles, tyrant of Sicily. He came to the succour of Syracuse when besieged by this usurper. Being gained over, however, by the gold of Agathocles, he prevailed on the Syracusans to make peace, and favoured by his inaction the schemes of the tyrant. The Carthaginian senate condemned him to lose his head, but he died at Syracuse, B.C. 311, before the sentence could be made public. (Justin, 22, 2.)

IV. The son of Eurybos, a Carthaginian general, sent into Sicily about B.C. 311, to impose the peace of Agathocles. On his arrival he gained a victory, which opened to him the gates of several large cities. In attempting to make himself master of Syracuse, during the absence of Agathocles in Africa, he was taken prisoner and put to death, B.C. 309. —V. Surnamed Barcas, the leader of the popular party at Carthage, was appointed in the eighteenth year of the first Punic war (B.C. 247) to the command of the Carthaginian forces. We possess no particulars of his life or the time of his birth; but we learn from Nepos (Vit. Hamil., c. 1) that he was very young when he obtained the command. He ravaged with his fleet the coast of the Bruttii and the Epiphanian Locrians, and afterward seized upon a strong fortress in Sicily, which was situated between Eryx and Panormus. In this place he continued for some years, with very little support, the Carthaginian government; and, although the Romans were masters of almost the whole of the island, they were unable to dislodge him. He frequently ravaged the southern coasts of Italy as far as Cumæ, and defeated the Roman troops in Sicily. On one occasion he took Eryx, which he held till the conclusion of the war. The Romans at length fitted out a fleet to cut off all communication between Hamilcar and Carthage; the Carthaginian fleet sent to his
HANNIBAL

assistance was defeated by the Roman consul Latius Catulus, B.C. 241, and the Carthaginians were obliged to sue for peace. This was granted by the Romans; and Hamilcar led his troops from Eryx to Lilybaeum, whence they were conveyed to Africa. But a new bargain was made. The Carthaginian territories were exhausted; and it was proposed to the troops that they should relinquish a part of the pay which was due to them. The soldiers rejected the proposal, appointed two of their number, Spendius and Matho, commanders, and proceeded to enforce their demands. Being joined by many of the native tribes of Africa, they defeated Hannibal, the Carthaginian general sent against them, and brought Carthage to the brink of ruin. In these circumstances he was instructed by his government to return to Carthage, and at length succeeded in subduing them after the war had lasted three years and four months. After the end of this war Hamilcar was sent into Spain, B.C. 238. He remained in Spain nearly nine years, during which time he extended the dominion of Carthage over the southern and eastern parts of that country. He fell in a battle against the natives, B.C. 229. The abilities of Hamilcar were of the highest order, and he possessed, moreover, the firmness of mind to diminish the power of Rome. Polybius states his belief (lib. 3), that his administration would soon have produced another war with the Romans, if he had not been prevented by the disorders in which his country was involved through the war of the mercenaries. Hamilcar was succeeded in his command in Spain by his son-in-law Hasdrubal, who must not be confounded with Hasdrubal the brother of Hamilcar. He carried on the conquests of Hamilcar, and reduced almost the whole of the country south of the Iberus, which river was fixed by a treaty between the Carthaginians and the Romans, B.C. 226, as the frontier of the Carthaginian dominions. Hasdrubal was murdered in his tent by a Gaul, B.C. 221, after holding the command eight years. (Polyb. 1, 2.—Corn. Nep., vit. Hamil., c. 3.—Encycl. Useful Knowl., vol. 12, p. 25.)—VI. A Carthaginian general, son of Hamilcar, conquered by the Scipios (B.C. 215) when besieging Ilissites, in Hispania Bética, along with Hasdrubal and Mago. He is supposed by some to be the same with the Hamilcar who, fifteen years after, at the head of a body of Gauls, took and sacked Placentia, and was defeated and slain before Cremona. Others affirm, that he was taken prisoner three years later in a battle fought near the Mincius, and served to adorn the victory of the conqueror. (Liv. 23, 49.—Id. 23, 23.—Id. 33, 12.)—Polybius states that Hamilcar was equivalent in Punic to "(quem) domat vit Milcar." The true orthography is with the initial aspirate. Consult Heins., ad Sit. Ital., 1, 39.—Draekhs., ad Liv., 21, 1.—Gesenius, Phcen. Mon., p. 407.—The interpretation given by Hamaker (distr. 47) to the name Hamilcar is rejected by Gesenius (l. c.).

HANNIBAL (equivalent in Punic to "gratia Balbus"), son of Hamilcar Barcas (viz. Hamilcar V.), was born B.C. 227. At the age of 13, he took the command of a body of 50,000 men, which had been sent to Spain, who, previous to his departure, took his son to the altar, and, placing his hand on the victim, made him swear that he would never be a friend to the Romans. It does not appear how long Hannibal remained in Spain, but he was at a very early age associated with Hasdrubal, who succeeded his father in the command of the Carthaginian army in that country. On the death of Hasdrubal, he obtained the command of the army, and quickly conquered the Oledaes, Vacaesens, Carpesians, and other Spanish tribes that had not been subdued by Hasdrubal. The inhabitants of Saguntum, alarmed at his success, sent messengers to Rome to inform the Romans of his danger. A Roman embassy was accordingly sent to Hannibal, who was passing the winter at New Carthage, to announce to him that the independence of Saguntum was guaranteed by a treaty between the Carthaginians and Romans (concluded B.C. 226), and that they should consider any injury done to the Saguntines as a declaration of war against themselves. Hannibal, however, paid no regard to this request, and proceeded on his march. Twenty years elapsed since the termination of the first Punic war, during which period the Carthaginians had recovered their strength, and had obtained possession of the greater part of Spain; and the favourable opportunity had arrived for renewing the war with the Romans. In B.C. 219, Hannibal took Saguntum, after a siege of eight months, and employed the winter in making preparations for the invasion of Italy. He first provided for the succour of his brother Mago, who commanded an army of about 16,000 men in each country; the army in Africa consisted principally of Spanish troops, and that in Spain of Africans, under the command of his brother Hasdrubal. He had already received promise of support from the Gauls who inhabited the north of Italy, and who were anxious to deliver themselves from the Roman dominion. Having thus made every necessary preparation, he set out from New Carthage, on the 3rd of March, B.C. 218, with five columns, each consisting of 15,000 foot and 1,200 horse. In his march from the Iberus to the Pyrenees he was opposed by a great number of the native tribes, but they were quickly defeated, though with loss. Before crossing the Pyrenees, he left Hannibal to secure his recent conquests with a detachment from his own army of 11,000 men. He sent back the same number of Spanish troops to their own cities, and with an army now reduced to 50,000 foot and 9000 horse, he advanced to the Tiber. Meanwhile, two Roman armies had been levied; one, commanded by the consul P. Cornelius Scipio, was intended to oppose Hannibal in Spain; and a second, under the consul T. Sempronius, was designed for the invasion of Africa. The departure of Scipio was delayed by a revolt of the Boian and Ins ubrian Gauls, against whom the army was sent which had been intended for the invasion of Spain, under the command of one of the praetors. Scipio was therefore obliged to remain in Rome till a new army could be raised. When the forces were ready, he sailed with them to the Rhone, and anchored in the eastern mouth of the river; being persuaded that Hannibal must still be at a considerable distance from him, as the country through which he had to march was difficult, and inhabited by many warlike tribes. Hannibal, however, quickly surmounted all these obstacles, crossed the Rhone, though not without some dispute with the native Gauls; and leaving his march up the left bank of the river. Scipio did not arrive at the place where the Carthaginians had crossed the river till three days afterward; and, despairs of overtaking them, he sailed back to Italy with the intention of meeting Hannibal when he should descend from the Alps. Scipio sent his brother Cneaus into Spain, with the greater part of the troops, to oppose Hasdrubal. Hannibal continued his march up the Rhone till he came to the Isus; the Marching column of that river, not being able to cross the Alps, descended into the valley of the Dora Baltea, and followed the course of the river till he arrived in the territories of the Ins ubrian Gauls. (The particular route will be given at the close of this article.)—Hannibal completed his march from New Carthage to Italy in five months, during which he lost a great number of men, especially in his passage over the Alps. According to the old authorities, he crossed the Lacinium, in the country of the Bruttii, which Polybius says, his army was reduced to 12,000 Africans, 8000 Spaniards, and 6000 cavalry when he arrived in the territories of the Insubrian Gauls. After remaining some time in the territories of the Insubrians to recruit his army, he marched southward, and encountered P. Cornelius Scipio on the right bank of the river Ticinus. In the
battle which ensued the Romans were defeated, and Scipio, with the remainder of the army, retreated along the left bank of the Po, crossed the river before Hannibal could overtake him, and encamped near Placentia. The consul Sempronius Metellus, meantime, intrenched himself strongly on the right bank of the Trebia, where he waited for the arrival of the army under the other consul T. Sempronius. Sempronius had already crossed over into Sicily with the intention of sailing to Africa, when he was recalled to join his colleague. After the union of the two armies, Sempronius determined, against the advice of Scipio, to risk another battle. The skill and fortune of Hannibal again prevailed; the Romans were entirely defeated, and the troops which survived took refuge in the fortified cities. In consequence of these victories, the whole of Cisalpine Gaul fell into the hands of Hannibal; and the Gauls, who, on his first arrival, were prevented from joining him by the presence of Scipio's army in their country, now eagerly assisted him with men and supplies.

In the following year, B.C. 217, the Romans made great preparations to opposes their formidable enemy. Two new armies were levied; one was posted at Arretium, under the command of the consul Flaminius, and the other at Ariminum, under the consul Servilius. Hannibal determined to attack Flaminius first. In his march southward through the swamps of the basin of the Arnus, his army suffered greatly, and he himself lost the sight of one eye. After resting his troops for a short time in the neighbourhood of Fasulia, he marched past Arretium, ravaging the country as he went, with the view of drawing out Flaminius to a battle. Flaminius, who appears to have been a rash, headstrong man, hastily followed Hannibal; and, being attacked in the basin of the Lake Trasimenus, was completely defeated by the Carthaginians, who were posted on the mountains which encircled the valley. Three or four days after Hannibal cut off a detachment of Roman cavalry, amounting to 4000 men, which had been sent by Servilius to assist his colleague. Hannibal appears to have entered his own country, and to have expected that the other states of Italy would take up arms against Rome, in order to recover their independence. To conciliate the affections of the Italians, he dismissed without ransom all the prisoners whom he took in battle; and, to give them an opportunity of joining his army, he marched slowly along the eastern side of the peninsula, through Umbria, and Etruria, which he did not molest, and with that co-operation which he appears to have expected. After the defeat of Flaminius, Q. Fabius Maximus was appointed dictator, and a defensive system of warfare was adopted by the Romans till the end of the year. In the following year, B.C. 216, the Romans resolved upon another battle. An army of 80,000 foot and 6000 horse was raised, which was commanded by the consuls L. Æmilius Paulus and C. Terentius Varro. The Carthaginian army amounted to 40,000 foot and 10,000 horse. The armies were encamped in the neighbourhood of Canne in Apulia. In the battle which was fought near this place, the Romans were defeated with dreadful carnage, and with a loss which, as stated by Polybius, is quite incredible; the whole of the infantry engaged in battle, amounting to 70,000, was destroyed, with the exception of what was left in the neighbouring cities, and also all the cavalry, with the exception of 300 belonging to the allies, and 70 that escaped with Varro. A detachment of 10,000 foot, which had been sent to surprise the Carthaginian camp, was obliged to surrender as prisoners. The consuls L. Æmilius, and the two consuls of the former year, Servilius and Attilius, were also among the slain. Hannibal lost only 4000 Gauls, 1500 Africans and Spaniards, and 200 horses. The history placed the whole of Lower Italy in the power of Hannibal, but it was not followed by such important results as might have been expected. Capua and most of the cities of Campania espoused his cause, but the majority of the Roman army, feeling that their defensive system was now strictly adopted by the Romans, and Hannibal was unable to make any active exertions for the farther conquest of Italy till he received a reinforcement of troops. He was in hopes of obtaining support from Philip of Macedon and from the Syracusans, with both of whom he formed an alliance; but the Romans found means to keep Philip employed in Greece, and Syracuse was besieged and taken by Marcellus, B.C. 214-15. In addition to this, Capua was taken by the Romans, B.C. 211. Hannibal was therefore obliged to depend upon the Carthaginians for help, and Hasdrubal was accordingly ordered to march from Spain to his assistance. Capua, as already observed, was left in Spain to oppose Hannibal. He was afterward joined by P. Cornelius Scipio, and the war was carried on with various success for many years, till at length the Roman army was entirely defeated by Hasdrubal, B.C. 212. Both the Scipios fell in the battle. Hasdrubal was now preparing to join his brother, but was prevented by the arrival of young P. Cornelius Scipio in Spain, B.C. 210, who quickly recovered what the Romans had lost. In B.C. 210 he took New Carthage; and it was not till B.C. 207, when the Carthaginians had lost almost all their dominions in Spain, that Hasdrubal set out to join his brother in Italy. He crossed the Alps without meeting with any opposition, joined M. Galba, and arrived at Placentia before the Romans were aware that he had entered Italy. After besieging this town without success, he continued his march southward; but, before he could effect a junction with Hannibal, he was attacked by the consuls C. Claudius Nero and M. Livius, on the banks of the Metaurus in Umbria; his army was cut to pieces, and he himself fell in the battle. This misfortune obliged Hannibal to act on the defensive; and from this time till his departure from Italy, B.C. 203, he was confined to Bruttium; but, by his superior military skill, he maintained his army in a hostile country without any assistance from his government at home. After effecting the conquest of Spain, Scipio passed over into Africa to carry the war into the enemy's country, B.C. 204. With the assistance of Masinissa, a Numidian prince, he gained two victories over the Carthaginians, who, on the loss of his eldest brother, turned with all his power to defend his native state. Hannibal landed at Septis, and advanced near Zama, five days' journey from Carthage towards the west. Here he was entirely defeated by Scipio, B.C. 202; 20,000 Carthaginians fell in the battle, and an equal number were taken prisoners. The Carthaginians were obliged to sue for peace, and thus ended the second Punic war, B.C. 201. After the conclusion of the war, Hannibal vigorously endeavored to establish a government of his own in the Carthaginian government. He reduced the power of the perpetual judges (as Livy, 23, 46, calls them), and provided for the proper collection of the public revenue, which had been embezzled. He was supported by the people in these reforms; but he incurred the enmity of many powerful men, who represented to the Romans that he was endeavouring to persuade his countrymen to join against them. A Roman embassy was consequently sent to Carthage, to demand the punishment of Hannibal as a disturber of the public peace; but Hannibal, aware that he should not be able to resist his enemies supported by the Roman power, escaped from the city and sailed to Tyre. From Tyre he went to Ephesus to join Antiochus, B.C. 196, and contributed to fix him in his determination to make war against the Romans. If Hannibal's advice as to
the conduct of the war had been followed, the result of the contest might have been different, but he was only employed to the present, and had the opportunity for the exertion of his great military talents. At the conclusion of this war Hannibal was obliged to seek refuge at the court of Prusias, king of Bithynia, where he remained about five years, and on one occasion obtained a victory over Eumenes, king of Pergamus. But the Romans appear to have been uneasy as long as their once formidable enemy was alive. An embassy was sent to demand him of Prusias, who, being afraid of offending the Romans, agreed well to give him up. To avoid falling into the hands of his ungenerous enemies, Hannibal destroyed himself by poison at Nicomedia in Bithynia, B.C. 183, in the sixty-fifth year of his age. The personal character of Hannibal is only known to us from the events of his public life, and even these have not been commemorated by any historian of his own country; but we cannot read the history of these campaigns, of which we have here presented a mere outline, even in the narrative of his enemies, without admiring his great abilities and courage. Polybius remarks (lib. xi.), "How wonderful is it, that in a course of sixteen years, during which he maintained the war in Italy, he should never once dismiss his army from the field, and yet be able, like a good governor, to keep in subjection so great a multitude, and to confine them within the bounds of their duty, so that they never mutinied against him nor quarrelled among themselves. Though his army was composed of people of various countries, of Africans, Spaniards, Gauls, Carthaginians, Italians, and Greeks — men who had different laws, different customs, and different language, and, in a word, nothing among them that was common — yet, so dexterous was his management, that, notwithstanding this great diversity, he forced all of them to acknowledge one authority, and to yield obedience to one command. And this, too, he effected in the midst of very various fortune. How high and how just an opinion must have been made of his abilities on the public, and may be, of his power in private; to us of his ability in war. It may be affirmed with confidence, that if he had first tried his strength in the other parts of the world, and had come last to attack the Romans, he could scarcely have failed in any part of his design." (Polyb., 3. Ib., 7, 8, 9. — Ib., 14, 16. — Livy, 21. 39—Nepos, Vit. Hannib. — Enecycl. Us. Knovol., vol. 12, p. 40, seq.)

The passage of the Alps by Hannibal has already been alluded to in the course of the preceding article. Before concluding the biography of the Carthaginian general, it may not be amiss to direct the student's attention more particularly to this point. "This wonderful undertaking," observes a recent writer, "would naturally have attracted great notice, if considered only with reference to its general consequences, and to its particular effects on the great contest carried on between Rome and Carthage; for this march, which carried Hannibal at a great distance from the northern gates of the former, totally changed the character of the struggle, and compelled the Romans to fight for existence instead of territory. These events, however, are not the only causes which have thrown so much interest on the passage of the Alps by Hannibal; for the doubt and uncertainty which have existed, even from very remote times, as to the road by which the passage was effected, and the many circumstances distinguished with particular variety which have been declared themselves on different sides, are adduced as suggestive of the question; the variation between the two great historians of the transactions of those times, Polybius and Livy; all these things united have involved the subject in difficulties which have increased its importance, and which have long exercised many able writers in vain attempts to elucidate them. The relation of Polybius, who lived very soon after the transactions which he describes, and who had himself examined the country for the purpose of writing his history, would naturally appear the most authentic, on account of its early date, as well as of the internal evidence which it contains. Polybius, however, writing to Greeks, and was therefore, it is supposed, less likely to tell them, not anxious to introduce into his narrative names of places and of countries in which they were little interested, and which, if inserted, would rather have injured than assisted the unity of his story. In consequence of this, although he has been remarkably careful in giving us the distances performed by the Carthaginian army in their march from the Pyrenees to the plains of Italy within the time in which they were completed, he has been generally sparing of his proper names, and he has not positively stated in terms the name of that passage of the Alps through which Hannibal marched. Now, though the distances (which are positive), and the general description of the country, and the names of the nations (when these latter are mentioned) which the army passed through, afford sufficient data to prove beyond all doubt that Hannibal passed by the Alpis Graie, or Little St. Bernard; yet, as this is not expressly stated, Livy, who, without acknowledgment, has borrowed the greater part of his own narrative from Polybius, has asserted that he went over the Alpis Cottia, or Mont Genevre; and as Livy is much more read than Polybius, his account has obtained much more credit than it deserves, and has been considered as almost decisive of the question. It has been particularly adopted by almost all the French writers upon the subject, and though they differ from each other as to the road which the army took, they all arrive at that passage, and, farther, though the account itself is absolutely inconsistent in many parts, yet the authority of so great a name has almost set criticism at defiance, and his commentators have endeavored to reconcile his contradictions as well as they were able. It was evident, however, to those who were in the habit of looking a little deeper than the surface, that Livy's account, which, even when taken by itself, was far from satisfying the universal mind, was much strengthened by that of Polybius, with which it had been generally supposed to agree, very different in its conclusion; and this variation between the two was so decided, that it was quite impossible that both could be right. Gibbon was so much struck with this variation, as well as with the respective characters of the two authors as historians, that he would have given up Livy at once, had he not been unable, from his ignorance of the passage, to decide the question in favour of the latter. The opinion of Gibbon appears also to have been very much influenced by that of D'Anville, an authority to be respected above all others for wonderful accuracy and depth of research in matters relating to ancient topography. D'Anville, however, is guided in his opinion by the idea that the guides of Hannibal were Taurini, a mistake which is the more extraordinary as Livy himself (21, 29) states that the Carthaginian had been ordered to take the passes from amongst the Carpathian Alps, and this would have consumed much of his time and attention to subjects of this nature (Spence's Anecdotes of Men and Books), appears to have detected Livy's inconsistencies as well as Gibbon, and to have been of opinion that the army crossed the Alps to the north of the Mont Genevre; but as he was, as well as Gibbon, unacquainted with the passage of the Little St. Bernard, he was unable to fix upon the exact spot. It is to General Melville that we are indebted for the suggestion of this latter pass; and it is by this suggestion that a question so long doubtful has received a most satisfactory explanation. This gentleman, on his return from the West Indies, where he had held a high military command, turned his whole attention to the investigation of the military antiquities of the Romans, and for this purpose spent some years in traveling over France, Italy, and Germany, and examined with great attention the countries which had been the
HANNIBAL.

scenes of the most celebrated battles and events re-
corded in Roman history. From his thorough knowl-
edge of Polybius, he was early struck with the great
authority that his narrative carried with it, and he
determined, if possible, to set at rest the much agitated
question in history. It is not, indeed, meant that he
perceived that no perusal of the historian, however
close and attentive, no critical sagacity and discern-
ment, could alone enable him to arrive at the truth.
unless he verified the observations of his author on the
same ground, and compared his descriptions with the
same scenes as those which that author had himself
visited and examined, the general surveyed attentively
all the known passage of the Alps, and more particu-
larly those which were best known to the ancients.
The result of all these observations was a firm convic-
tion that the passage of the Little St. Bernard was
that by which Hannibal had crossed over into Italy,
both as being most probable in itself, and also as agree-
ing beyond all comparison more closely than any other
with the description given by Polybius. The general
must be looked upon as the first who has solved the
problem in history. It is not, indeed, meant that he
was absolutely the first who made the Carthaginian
army penetrate by that pass into Italy, since the oldest
authority on this point, that of Cælius Antipater, rep-
resents it as having taken that route; but it is affirmed
that he was the first to revive an opinion concerning
that passage, which, although existing in full force in
the traditions of the country itself, appears to have
been long laid aside as forgotten, and to have rested
at one time on arguments the most solid and plausi-
ble. General Melville never published any account of
his observations, and they would most probably have
been lost to the world, had he not found in M. De Luc,
of Geneva, nephew of the late distinguished philoso-
pher of that name, a person eminently qualified to un-
dertake the task which he himself declined, and even
materially to improve upon his labours. The very able
and learned work which that gentleman published at
Geneva in 1818, entitled Dictionnaire de Passage des
Alpes par Annibale, contains a very full and clear re-
port of the observations of General Melville, supported
by arguments and by evidence entirely original, and
which must be admitted by every candid and judicious
inquirer to be clear and conclusive. A second edition
of this work was published in 1825, considerably aug-
mented. (Dissertation on the Passage of Hannibal
over the Alps, by Wickham and Cramer, pref., p. xi.,
shows that the description of both the Roman and the
Alpine passage has been taken as stated as follows:
after crossing the Pyrenees at Bellegarde, he went to
Nismes, through Perpignan, Narbonne, Beziers, and
Montpellier, as nearly as possible in the exact track of
the great Roman road. From Nismes he marched to
the Rhone, which he crossed at Roquemaure, and then
went up the river to Vienne, or possibly a little higher.
From thence, marching across the flat country of Dau-
paine, he must have reached the Annemasse range of
mountains at Lyons, he rejoined it at St. Genis d' Aoste.
He then crossed the Mont du Chat to Chambéry, joined
the Isère at Montorebillan, ascended it as far as Scez,
crossed the Little St. Bernard, and descended upon
Aosta and Ivrea by the banks of the Doria Baltea.
After halting for some time at Ivrea, he marched upon
Turin, which he took, and then prepared himself for
units the Alps by the Romans (pref., p. xxii.,
seq.). The Alpia Graia, or Little St. Bernard, formerly
should it be remembered, the communication between
the valley of the Isere and that of Aosta. It is situa-
ted a little to the south of Mont Blanc, and is the
most northerly of the passages of that division of
the Alps which runs from north to south. In corrobora-
tion of the theory which assigns the Little St. Bernard
as the route of Hannibal, may be cited a very ab-
tire on the subject, which appeared in the Edinburgh
Review for November, 1825. This theory, however,
has been attacked in a recent publication (Hannibal's
Passage of the Alps, by a Member of the University of
Cambridge), the author of which contends for the
passage over Monte Viso, where the Maritime Alps
intersect the chain of the Pyrenees. The attempt has
failed, as is evident from the above account, which
the passage by Mont Cenis has also found many
advocates, the most distinguished of whom is Mannert.
This learned scholar, in the introductory chapter to his
Geography of Ancient Italy, in which he gives an ac-
count of the Alps and the various passes by which they
were formerly traversed, expresses his belief that Han-
nibal crossed the great chain by the route of Mont
Cenis. In forming this opinion, far from appearing
having been solely guided, and no doubt most judiciously,
by the narrative of Polybius; and he professes to have
found the distances, as given in the best modern maps,
accurately agreeing with the statement of the Greek
historian. This fact is open to dispute; for, although
the route of the Mont Cenis deviates at first very little
from that on which the theory respecting the Little
St. Bernard is founded, yet the immediate descent
upon Turin shortens the total distance very consider-
able, and it will be impossible to make up 150 miles
from the first ascent of the Alps to the descent at Su-
sa, without very much overrating the actual distances.
Moreover, it cannot be conceded to the learned
professor, that the plains of Italy can be seen from
the summit of Mont Cenis, and from thence on, it is
most certain that he has been misinformed on this point,
though it has also been maintained by others. Even
De Saussure, who ascended the line of Mont Cenis, as
above the Hospice of the Grande Croix, could not
perceive the plains from that elevated summit. The
Roche Melon is the only point in this vicinity from
which it is possible to have a view of Piedmont; but
it is not accessible from the Grande Croix, or any
point in the road of Mont Cenis. (Wickham and
Cramer, p. 173, seq., 2d ed.)—It remains to say a few
words on the opinion of Napoleon on this subject,
which is stated in his "Notice sur le Passage interdit
Considérations sur l'Art de la Guerre," in the second
volume of his Mélanges Historiques. In these notes he
gives a very concise account of the road which he
conceives Hannibal to have taken, and which is as fol-
ows: he crossed the Rhone a little below Orange,
and in four days reached either the confluence of the
Rhône and Isère, or that of the Drac and Isère, set-
tled the affairs of the two brothers, and then, after
six days, took the "route des vaches" by way of Mont
Doria, and the Refuge de la Roque-
Montreillan, and from thence, in nine days, to Susa,
by the passage of Mont Cenis; or, in the latter case,
if he arrived at Grenoble at the end of the four days,
he would reach St. Jean de Maurienne in six days,
and Susa in nine days more; from Susa he marched
up to Turin, and, after the capture of the city, he ad-
vanced to Milan. The reasoning by which Napoleon
supports his hypothesis, is principally founded on what
is known of the French campaign of 1796, when Han-
nibal did this because, as a military man, he ought
to have done it; and, if we were discussing prospective
operations, there is no doubt that the opinion of so
great a general as Napoleon would be almost conclu-
sive; but, in reasoning upon the past, the elements of
the discussion are as open to civil as to military
writers, and the former are quite as capable of doing
an argument logically as the latter. It is even granting
that in his statement, and his argument is conducted in that decided
manner which bears down all opposition, and which supposes
that whatever he says must be right. He asserts
that both Polybius and Livy state the army to have
arrived, in the first instance, at Turin, and he loses
sight altogether of the detailed narration of Polybius.
The author upon whose work he is commenting adapts
herself to the Little St. Bernard, which Napoleon
}
refuses to believe, because Hannibal must have been early acquainted with the retreat of the Romans to wards their fleet, and would not, in that case, have marched to the north. The explanation of all this may be found in Napoleon's own words: "La marche d'Amnial depuis Collioure jusqu'à Turin a été toute simple; elle a été celle d'un voyageur; il a pris la route la plus courte." Hardly so, since the road by Mont Genere was shorter than that by Mont Cenis, as he himself allows, a few pages before. In a word, if we had no historical details to guide us, Napoleon would probably be right; but as we profess to be guided by those details, and as, from his omitting to notice the greater part of them, he appears either to have been ignorant of them, or to have been unable to make them agree with his hypothesis, we must come to the conclusion, that what he says rests upon no proof, and is to be merely considered as the opinion of a great general upon an hypothetical case. (Wick- kams and Cramer, p. 188, seq.)

Hanno (meaning in Punic "merciful" or "mild"), I. a commander sent by the Carthaginians on a voyage of colonization and discovery along the Atlantic coast of Africa. This expedition is generally supposed to have taken place about 570 B.C. Gaill, however, places it between 633 and 530 B.C. (Geogr. Gr. Min., vol. 1, p. 82.) On his return to Carthage, Hanno deposited an account of his voyage in the temple of Saturn, and of the temple of the Great Ones. In the Greek tongue, has come down to us; and its authenticity, attacked by Dodwell, has been defended by Bougainville (Mem. Acad. des Insér. &c., vol. 26, 26), Falconer, and others. Gaill also declares in its favour, though he admits that the narrative may, and probably does, contain many willful deviations from the truth, in accordance with the jealous policy of the Carthaginians in misleading other nations by erroneous statements. A notice of Hanno's voyage was followed by a successful voyage of the Greek vessel "L'Amoros." Αγορασίων, Καρχηδονίων βασιλέως, Περίπλου τῶν ὑπὸ τῆς Ἡρακλίου στῆλας Λατικῶν τῆς γῆς μερῶν, ὅν καὶ ἀνέθεσαν ἐν τῷ τοῦ Κρόνου τεμένει. "The Voyage of Hanno, commander of the Carthaginians, round the parts of Libya beyond the Pillars of Hercules, which he deposited in the temple of Saturn." With regard to the extent of coast actually explored by this expedition, some remarks have been offered in some of the recent works, and it is not intended to give an English version of the Periplous itself. —"It was decreed by the Carthaginians," begins the narrative, "that Hanno should undertake a voyage beyond the Pillars of Hercules, and found Libyphoenician cities. He sailed accordingly with sixty ships of fifty oars each, and a body of men and women to the number of thirty thousand, and provisions and other necessaries. When we had passed the Pillars on our voyage, and had sailed beyond them for two days, we founded the first city, which we named Themistaeum. Below it lay an extensive plain. Proceeding thence towards the west, we came to Solos, a promontory of Libya, a place thickly covered with trees, where we erected a temple to Neptune; and again proceeded for the space of half a day towards the coast, until we arrived at a lake lying not far from the sea, and filled with abundance of large reeds. Here elephants, and a great number of other wild beasts were feeding. Having passed the lake about a day's sail, we founded cities near the sea, called Cariconticos, and Gynte, and Acra, and Melitta, and Arambys. Thence we came to the great river Lixus, which flows from Libya. On its banks the Lixites, a shepherd tribe, were feeding flocks, among whom we continued some time on friendly terms. Beyond the Lixites dwelt the inhospitable Libyans, who inhabited part of the country intersected by large mountains, from which they say the river Lixus flows. In the neighbourhood of the mountains lived the Troglytids, men of various appearances, whom the Lixites described as swifter in running than horses. Having procured interpreters from them, we coasted along a desert country towards the south two days. Thence we proceeded towards the east the course of a day. Here we found, in a recess of a certain bay, a small island, containing a circle of five stadia, where we settled a colony, and called it Carthe. We judged from our voyage that this place lay in a direct line with Carthage; for the length of our voyage from Carthage to the pillars was equal to that from the Pillars to Carthe. We then came to a lake, which we reached by sailing up a large river called Chretes. This lake had three islands, larger than Carthe; from which, proceeding a day's sail, we came to the extremity of the lake, that was overhung by large mountains, inhabited by savage men, clothed in skins of wild beasts, who drove us away by throwing stones, and hindered us from landing. Sailing thence, we came to another river, that was large and broad, and full of crocodiles and river horses; whence returning back we came again to Carthe. Thence we sailed towards the south twelve days, coasting the shore, the whole of which is inhabited by Ethiopians, who would not wait our approach, but fled from us. Their language was not intelligible even to the Lixites who were with us. Towards the last day we approached some large mountains covered with trees, the wood of which was sweet-scented and variegated. Having sailed by these mountains and the sea, we arrived at the island of Thera, that is, of the sea; on each side of which, towards the continent, was a plain; from which we saw by night fire arising at intervals in all directions, either more or less. Having taken in water there, we sailed forward five days near the land, until we came to a large bay, which our interpreters informed us was called the Western Horn. In this was a large island, and in the island a salt-water lake, and in this another island, where, when we had landed, we found trees of all sorts, except some of thorn, and thorn except trees; but in the night we saw many fires burning, and heard the sound of pipes, cymbals, drums, and confused shouts. We were then afraid, and our d'viners ordered us to abandon the island. Sailing quickly away thence, we passed a country burning with fires and perfumes, and streams of fire supplied from it fell into the sea. The country was impassable on account of the heat. We sailed quickly thence, being men and women, we were obliged not to rest during the night, but to sleep in the open air, and the air was filled with the pleasant odours of the perfume from the country. Thence we came to a hot island, there not far from the sea, that was filled with a great quantity of fire, and there we saw three women, whose bodies were hairy, and whom our interpreters called Gellies. Though we pursued the men, we could not seize any of them; but all fled from us, escaping over the precipices, and defending themselves with stones. Three women were however taken; but they attacked their conductors with their teeth and hands, and could not be prevailed upon to accompany us. Having killed them, we flayed them, and brought their skins with us to Carthage. We did not sail farther on, our provisions having failed us."—The streams of fire alluded to by Hanno are conjectured to have been nothing more than the burning of the dry herbage; a practice which takes place, more or less, in every country situated in the warm climates, and where vegetation is also rank. Its taking the appearance of a river of fire, running into the sea, is accounted for by the burning of the valleys or ravines; which, as Bruce observes, are shaded by their depth, and remain green the long est. Consequently, being the last burned, the first
well, at that period, he confined to the hollow parts of the country only; and, when fired from above, will have the appearance of rivers of fire running towards the sea. The adventure of the hairy women presents much less difficulty than did the others; since it is well known that a species of ape or baboon, agreeing in description with those of Hanno, is found in the quarter referred to, which appears to have been near Sierra Leone. Nor did the interpreters call them wom-
can, but gordes: meaning no doubt to describe apes, and a human creature by means of the gushing of speech. (Rennell, Geogr. of Herodotus, p. 720, seqq.)—II. A Carthaginian commander, who aspired to the sovereignty in his native city. His design was discovered, and he thereupon retired to a fortress, with 20,000 armed slaves, but was taken and put to death, with his son and all his relations. (Justin, 21, 4.)—III. A commander of the Carthaginian forces in Sicily along with Barcidile (B.C. 910). He was defeated by Agathocles, although he had 45,000 men under his command and his opponent only about 14,000. (Justin, 22, 6.)—IV. A Carthaginian commander, defeated by the Romans near the Ægades Insuls (B.C. 242). On his return home he was put to death,—V. A leader of the faction at Carthage, opposed to the Barca family. He voted for surrendering Hannibal to the foe, after the ruin of Saguntum, and also for refusing succours to the Romans. He was killed in battle. (Liv. 21, 3.—Id., 23, 12.)—VI. A Carthaginian, who wished to pass as a god, trained up some birds, who were taught by him to repeat the words, "Hanno is a god." He only succeeded in rendering himself ridiculous. (Aelian, Var. Hist., 15, 32.)

Harmodius, an Athenian, who, together with Aristogiton, became the cause of the overthrow of the Pisistratids. The names of Harmodius and Aristogiton have been immortalized by the ignorant exaggerated gratitude of the Athenians; in any other history they would perhaps have been consigned to oblivion, and would certainly never have become the themes of panegyric. Aristogiton was a citizen of the middle rank; Harmodius a youth distinguished by the comeliness of his person. They were both sprung from a house supposed to have been of Phoenician origin, who were perhaps remotely allied to one another by blood; but their dispositions were diametrically opposite.

The youth had received an outrage from Hipparchus, which, in a better state of society, would have been deemed the grossest that could have been offered him: it roused, however, not so much the resentment as the fears of his friend, lest Hipparchus should abuse his power, to repeat and aggravate the insult. But Hipparchus, whose pride had been wounded by the conduct of Harmodius, contented himself with a less direct mode of revenge, an effort almost aimed not at his person, but at the honour of his family. By his orders, the sister of Harmodius was invited to take part in a procession, as bearer of one of the sacred vessels. When, however, she presented herself in her festal dress, she was publicly rejected, and dismissed as unworthy of the honour. This insult stung Harmodius to the quick, and kindled the indignation of Aristogiton, who wondered after, not only to wash it out with the blood of the offender, but to engage in the desperate enterprise, which had already been suggested by different motives to the thoughts of Aristogiton, of overthrowing the ruling dynasty. They communicated their plan to a few friends, who promised their assistance; but they hoped that, as soon as the first blow should be struck, they would be joined by numbers, who would joyfully seize the opportunity of recovering their freedom. They fixed on the festival of the Panathenaea as the most convenient season for effecting their purpose. This festival was celebrated with a procession, in which the citizens marched armed with spears and shields, and was the only occasion on which, in time of peace, they could assemble under arms without exciting suspicion. It was agreed that Harmodius and Aristogiton should give the signal by stabbing Hipparchus, while their friends kept off his guards, and that they should trust to the general disposition in favour of liberty for the farther success of their undertaking.

When the day came, the conspirators armed themselves with daggers, which they concealed in the myrtle-boughs that were carried on this occasion. But while Hipparchus, surrounded by his guards, was in the suburb called the Gereon, bringing them to the place on which the procession was to pass, one of the conspirators was observed to go up to him, for he was easy of access to all, and to enter into familiar conversation with him. The two friends, on seeing this, concluded that they were betrayed, and that they had no hope left but of revenge. They instantly rushed into the city, and, meeting Hipparchus, killed him before his guards could come up to his assistance. They however arrived in time to prevent Harmodius: Aristogiton escaped for the moment through the crowd, but was afterward taken. When the news was brought to Hipparchus, instead of proceeding to the scene of his brother's murder, he advanced with a composed countenance towards the armed procession, which was yet ignorant of the event, and, as if he had some grave discourse to address to them, desired them to lay aside their weapons, and meet him at an appointed place for the better hearing of his guards. The guards instantly and to search every one for those which he might have concealed upon his person. All who were found with daggers were arrested, together with those whom, on any other grounds, he suspected of disaffection. The fate of Aristogiton may be easily imagined: he was put to death, according to some authors, after torture had been applied, to wring from him the names of his accomplices. It is said that he avenged himself by accusing the trusting friends of Hipparchus, and that a girl of low condition, named Leana, whose only crime was to have been the object of his affection, underwent the like treatment. She was afterward celebrated for the constancy with which she endured the most cruel torments. (Herod., 5, 56.—Id., 7, 123.—Thucyd., 1, 20.—Schol., ad loc. —Id., 6, 54, seqq.)—After the expulsion of Hipparchus, the fortunate tyrannies received almost heroic honors. Menas and Cydippus continued in office. Their names never ceased to be repeated with affectionate admiration in the convivial songs of Athens, which assigned them a place in the islands of the Blessed, by the side of Achilles and Tyndides (Athenaeus, 15, p. 695); and when an orator wished to suggest the idea of the highest merit and of the noblest services to the cause of liberty, he never failed to remind his hearers of Harmodius and Aristogiton. No slave was ever called by their names. Plutarch has preserved a smart reply of Antipho, the orator, to Dionysius the elder, of Syracuse. The latter had put the question, which was the finest kind of brass! "That," replied Antipho, "of which the statues of Harmodius and Aristogiton were made." He lost his life in consequence. (Plut. Vit. X., Orat., p. 533.) It is probable enough, that much of this enthusiasm was spurious and artificial, as well as misplaced. (Thirwall's Greece, vol. 2, p. 67, seqq.)

Harmonia, a daughter of Mars and Venus, who married Cadmus. (Hesiod, Theog., 937.) The genealogy of Harmonia has evidently all the appearance of a physical myth; for, from Love and Strife (i. e., attraction and repulsion) arises the order or harmony of the universe. (Plut., De Is. et Os., 48.—Arist., Pol., 2, 6.—Welcker, Krit. Cod., p. 40.)

Harphius, a general of Cyrus. He revolted from Cyrus, and actually caused him, without knowing it, to eat the flesh of his son, because he had disobeyed his orders in not putting to death the infant Cyrus. (Vid. remarks under the article Cyrus.)
Harpalus, I. an early and favoured friend of Alexander the Great. Having been left at Babylon as satrap of the province, and treasurer of a more considerable portion of the empire, he abused his trust so grossly, that, on the king's return, he was compelled to flee through fear of punishment. He was accompanied by six thousand soldiers, and with these he landed in Laconia, in the hope, it may be supposed, of engaging the Lacedaemonians to renew their opposition to Alexander. Failing there of support, he left his army and set out to find a new suppliant, but carrying with him money to a large amount. His cause was taken up by many eminent orators hostile to Alexander; and Demosthenes himself, who had at first held back, was prevailed upon to espouse it. It failed, however; the Athenians adhered to the existing treaties; and Harpalus, being obliged to quit Athens, carried his troops into Creté, where he perished by assassination. It was said that his gold had been largely distributed among his Athenian supporters, and a prosecution was instituted against Demosthenes and his associates, as having been bribed to miscounsel the people. They were convicted before the Areopagus; and Demosthenes, being fined in the sum of 50 talents (about 53,000 dollars), withdrew to Eginæ. (Vid. Demosthenes.—Diod. Sic., 17, 108, seqq.—II. An astronomer of Greece, who flourished about 400 B.C. He composed a book of thirty books, in which the moderation of the two previous astronomers, from a revolution of eight to one of nine years, was, in the fourth year of the eighty-second Olympiad, again improved by Meton, who increased the cycle to a period of nineteen years. (Vid. Meton.—L'Art de vérifier les Dates, vol. 3, p. 133.)

Harpalyce, the daughter of Harpalucus, king of Thrace. Her mother died when she was but a child, and her father fed her with the milk of cows and mares, and inured her to martial exercises, intending her for his successor in the kingdom. This kingdom was invaded by Neoptolemus, the son of Achilles, he repelled and defeated the enemy with many courage. The death of her father, which happened in a sedition, rendered her disconsolate; she fled the society of mankind, and lived in the forests upon plunder and rapine. Every attempt to secure her vexed fruitless, till her great swiftness was overthrown by intercepting her with a net. After her death the people of Thrace, in respect of the right to the possessions she had acquired by rapine, and games were subsequently instituted as an expiation for her death. (Hygin., fab. 193.—Virg., Æn., 1, 321.)

Harpocrates, an Egyptian deity, represented as holding one finger on the lips, and thence commonly denominated the God of Silence. The name Harpocrates is said to designate the infant Horus, and to mean "Horus with soft or delicate food." (Har-pho-krates, Har-phoch-rat, Har- pokrat.) The god who bore this appellation was confounded, at a later period probably, with another earlier and superior deity, Ptah-Sokari, the infant Ptah, equally surnamed Po- krat. (Compare Jablonski, Panth., 1, p. 245, seqq.—Creuzer's Symbolik, par Guigninaud, vol. 1, pt. 2, p. 608.) Porphyrhy (de antro Nymph.) informs us, that the Egyptians worshipped, under the names of Harpocrates, the source of all things, and that hence came the mystery statue of Harpocrates, with the finger on the mouth. (Plut., de Is. et Os., p. 378.—Constant, de la Religion, vol. 3, p. 78.)

Harpocrates, Valerius, a grammarian of Alexan- dria, supposed by some to be the same with the one that instructed L. Verus in Greek; while others take him to be identical with the Harpocrates of whom mention is made in a letter of Lianthus to Aristarchus. He was the author of a Lexicon, derived principally from the ten Attic orators, and entitled, on that account, Λεξικόν τῶν δέκα ἰστρόμων. It is a very useful work. Harpocrates composed also another work, entitled "A collection of flowers," or Anthology, Ἀνθο- ςς συγγεργα, which has not reached us. The latest edition of the Lexicon is that published at Leipsic in 1824, 2 vols. 8vo, by an anonymous editor. Many places in Harpocrates are corrected by Toup (Emenda- tiones in Suidam, etc., vol. 4, ed. Burgess), and by Schleusner (Observ. in Harp. Lex.—Friedemann and Seebode's Miscell. Crit., vol. 2, pt. 4, p. 744, seqq.).

Harpax, winged monster, having feathers and claws of birds. They were three in number, Aêlelo, Ocyptê, and Celana, daughters of Neptune and Terra. They were sent by Juno to plunder the tables of Phineus, whence they were driven to the islands called Strophades by Zethes and Calais. (Vid. Phineus.) They emitted a noisome stench, and polluted whatever they touched. Virgil introduces them into the Æneid, as plundering the table of Æneas and his companions, when that hero touched at the Strophades; and makes Celana, one of their number, predict to the Trojan leader the calamities that await him. (Æn., 3, 210, seqq.—) The Harpies are nothing more, in fact, than personifications of the storm-winds, and they appear clearly as such in the poems of Homer and Hesiod. The former says nothing of their shape or parentage; the latter says that they were sisters of Iris, daughters of Thaumas and Electra, swift as birds or as the blasts of wind. (Theog., 327, seqq.) They are represented by names, Aêlelo and Ocyptê. Homer says, that Xanths and Balus, the steeds of Achilles, were the offspring of Zephyrus by the harpy Podarge (Swift-foot). Virgil gives Celana as the name of the third of these monsters.—To the vivid imagination of the Greeks, the terrors of the storm were intimately associated with the idea of powerful and active demons directing its blasts. Hence the names bestowed on these fabulous creatures. Harpax, which maybe derived from ὄραξ, in allusion to the storm-winds seizing a vessel and hurrying it away from its course: so also the individual appellations of the three, Aêlelo, "a tempest," Òcypetê, "swift-flyer," and Celana, "gloom." The mixed form commonly assigned them was the addition of a later age. (On the subject of the Harpies, compare Salmon, ad dedic. Stat. Regul., p. 96, 241. Spenkenh., de usu et præsa, num. 1, p. 260, seqq. Huoch, sv. Poetae, p. 172. Seebode, sv. Harpocrates, p. 17.—Creuzer, Comment. Herodot., p. 346, seqq.) M. Le Clerc has a curious though unfounded theory respecting the Harpies. He supposes them to have been a swarm of locusts, which, after they had laid waste Bithynia and Paphлагo- nia, produced a famine there. According to him, the word arba, of which he maintains that of harpy is formed, signifies a locust; and as the north wind rid the country of them, having driven them as far as the Ionian Sea, where they perished, it was fancied that the sons of Boreas had put them to flight. Among many other objections to this explanation, it may suffice to urge but one here, namely, that the scene of the adventure of King Phineus is placed by the poets in Thrace, never in Asia. (Vid. Argonautæ.)

Harpocrates, called also Existceans, a class of priests at Rome, who examined the victims and their entrails (extra), and thence deduced an auspice for respecting the future. They divined also from the flame, smoke, and other circumstances attending the sacrifice. If the victim came to the altar without resistance, stood there quietly, fell by one stroke, bled freely, &c., these were favourable signs. If, on the other hand, the victim struggled, or broke away from those who were leading it; if any part of the entrails were wanting, or if they fell from the hand of the officiating priest, if the liver was double, if the hepatic gland was &c., all these were ominous of evil. It will easily be perceived from this how wide a door was left for imposition; and hence probably one reason why the
H A S

haruspices were not esteemed so honourable as the augurs. When Julius Caesar admitted one of them, Ruspina, into the senate, Cicero represents it as an indignity to the order. Their art was called Harus-
picia, or Haruspicum disciplina, and was derived from Etruria, whence haruspices were often sent for to Rome during the earlier periods of her history. They sometimes also came from the East: thus we have in Juvenal, "Armenius vel Commagenus haruspex." (6, 549). The college of the haruspices was instituted by Romulus, according to the popular belief. Of what number it consisted is uncertain. The ordinary duties of the terms haruspex and aetrespeces makes the former come from ara, "an altar," and specio, "to examine" or "observe;" and the latter from exa, "the entrails" of the victim, and specio. Donatus, however (ad Terenc., Phorm., 4, 28), gives a different etymology for Haruspace, namely, from haruga (the name of hostia, a victim) and specio. That the name itself is not an Etrurian one, appears very evidently from the Inscription Bilingua, found at Pisaorun, in which the words haruspe fulliguraria are rendered into Tuscan by net infinito fruuntur. (Müller, Etrusker, vol. 2, p. 13, in note.) A critic in the Halle Alg. Lat. Zeit., 1824 (vol. 3, p. 45), condemns the derivation from haruga, and deduces the name harus-
pex from a Tuscan word here, which he makes equiva-
lent to Isacra, or the Greek term telest. In inscrip-
tions, aetrespeces and aetrespeces also occur. (Compare Ov. N. A. E., p. 467, speci pro specio.)

Handebul (meaning in Punic "whose (help is) Bad") I. a Carthaginian general, son of Mago, who succeeded to the titles and glory of his father. He was under his conduct that the Carthaginians carried the war into Sardinia. He received a wound in that island which caused his death, B.C. 420. (Justin, 19, 1.)—II. Son of the preceding, made war upon the Num-
idians, and freed Carthage from the tribute she had been compelled to pay for being permitted to establish herself on the coast of Africa. (Justin, 19, 2.)—III. A son of Hanno, sent into Sicily at the head of a pow-
 erful army to oppose the Romans. He was defeated by Metellus, the Roman proconsul, B.C. 251. Has-
drubal fled to Lilyboum, but was condemned to death by his countrymen at home. (Id. ibid.)—IV. Son-
 in-law of Hamilcar, distinguished himself under the orders of that general in the war with Numidia. On the death of this chief, he was appointed his successor as com-
mander, and carried on military operations in Spain during eight years. He reduced the greater part of this country, and governed it with wisdom and pru-
dence. He founded Carthago Nova (Carthagena), the Romans, wishing to put a stop to his successes, made a treaty with Carthage, by which the latter bound herself not to carry her arms beyond the Iberus. Has-
drubal faithfully observed the terms of this compact. He was defeated, B.C. 229, by a small army of the Spaniards who had put to death. (Liv., 21, 2.—Polyb., 2, 1.—Id., 3, 12.—Id., 2, 13.—Id., 10, 10.)—V. Son of Hamil-
car, brought from Spain large reinforcements for his brother Hannibal. He crossed the barrier of the Alps, and arrived in Italy, but the consuls Livius Salinator and Claudius Nero, having intercepted the letters which he had written to Hannibal, aspiring him of his arrival, attacked him near Mantua, and gave him a complete defeat, B.C. 208. Hasdrubal fell in the battle, with 56,000 of his troops. The Romans lost about 8000 men, and made 6400 prisoners. The head of Hasdrubal was severed from his body, and was thrown a few days after into the camp of Hannibal. Before attempting to enter Italy by land, Hasdrubal at-
tempted to cross the sea from Spain, but was defeat-
ed by the Roman governor of Sardinia. (Liv., 21, 29. —Polyb., 11, 1.)—VI. A Carthaginian commander,

H E B

son of Gisco, who commanded the forces of his coun-
try in Spain during the time of Hannibal. Being sec-
conded by Syphax, he afterward carried on the war against Africa, and fell before Scipio. He died B.C. 206. (Liv., 24, 41.—Id., 29, 35.—Id., 30, 5.)—VII. A Carthaginian, surnamed "Kid" (Lat. Hezdius), an opponent of the Barca fac-
tion. He advised his countrymen to make peace with the Romans, and censured the ironical laugh of Han-
 nibal in the Carthaginian senate, after the peace was concluded.—VIII. A Carthaginian general, who, dur-
ing the siege of Carthage by the Romans, commanded an army of 20,000 men without the walls, with-
which he kept constantly harassing the besiegers. Be-
ing compelled at last to take refuge with his forces
within the city, he took command of the place, and for a long time bravely withstood the attacks of the Romans. After the capture of the city, he retired with the Roman deserTERS, who had no quarters to ex-
pect, into the temple of Esculapius in the citadel, re-
solved to bury himself under its ruins, taking with him, at the same time, his wife and two young sons. At length, however, having secretly left the temple, he threw himself at the feet of Scipio, and supplicated for life. Scipio granted his request, and showed him as a suppliant to the deserters in the temple. These
desperate men, after venting against him a torrent of reproaches, set fire to the temple, and perished amid the flames. His wife, when the fire was kindling, dis-
played herself on the walls of the building in the rich-
est attire she was at the moment wearing, having upbraided her husband for his cowardice, slew her two sons, and threw herself, with them, into the burning pile. (Appian, Bell. Pun., 131.)

Hebe, the goddess of Youth (H67p), a daughter of Jupi-
er and Juno. Her parentage is not mentioned in the Ilid. Ovid calls her the step-daughter of Ju-
pi, in allusion to the fable which made Juno to have conceived her after eating of lettuce. (Ov., Met., 9, 416.) In Olympus she appears as a kind of maid-ser-
vant; she hands round the nectar at the banquets of the gods (II., 4, 2.—Heyne, ad loc.) she makes ready the chariot of Juno (II., 5, 722), and she bathes and dresses Mars, when his wound has been cured. (II., 5, 905.) This last, however, was not a servile office, since the daughter of Nestor renders it to Telemachus. (Od., 3, 464.) When Hercules was translated to the skies, Hebe was given to him in marriage; a beautiful young girl, who in her place was to be the immortal bride of his immortality. According to the vulgar fable, Hebe was dismissed from her office of cup-bearer in the skies, and superseded by Ganymedes, because she had fallen in an awkward and unbecoming manner while handing around, on one occasion, the nectar to the gods. Homer, however, merely says that Ganymedes was carried off by the gods to be their cup-bearer (II., 20, 234), while in another part (4, 2) he represents Hebe as the admiringly beautiful lady in the Peloponnesus, a goddess was worshipped, whom the ancient Phliasians, according to Pausanias, call Ganymédé (Tarypédé), but in his time she was named Hebe. (Pausan., 2, 13.) Strabo says, that Hebe was worshipped at Phlius and Sicyon under the name of Dia. In the arts, Hebe is represented with the cup in which she presents the nectar, under the figure of a charming young girl, her dress adorned with flowers, and wreaths of flowers on her head. An eagle often stands by her, as at the side of Ganymedes, which she is caressing. (Keightley's Mythology, p. 111.—Mül-
er, Archael. der Kunst, p. 625.)

Hebrus, a large river of Thrace, and one of the most considerable in Europe. It rises in the central
chain that separates the plains of Thrace from the great valley of the Danube. Thucydides says (4, 96), that it takes its source in Mount Scymnus, and Plini,
HECAT.EUS.

(4, 11) in Mount Rhodope. After receiving several tributary streams, it falls into the Ἱέγην, near the city of Ἑκατόν. An estuary, which it forms at its mouth, was known to Herodotus by the name of Stenitores Palus (Στενιτώρος Πάλος, p. 58. — Compare Plin., 4, 11). The Hebrus is now called the Maritsa. Dr. Clarke found the Maritsa a broad and muddy stream, marked only by its trees (94, in Travels, ed. Rend). Plutarch (de flere) states, that this river once bore the name of Rhombus; and there grew upon its banks, perhaps the identical plant now constituting a principal part of the commerce of the country; being then used, as it is now, for its intoxicating qualities. It is, moreover, related of the Hebrus by Pliny (39, 4), that its sands were aurifero; and Belon has confirmed this observation, by stating that the inhabitants annually collected the sand for the gold it contained. (Observat in Græce, p. 63, Paris, 1555.)

According to the ancient mythologists, after Orpheus had been torn in pieces by the Thracian Bacchantes, his head and lyre were cast into the Hebrus, and, being carried down that river to the sea, were borne by the waves to M ethymna, in the island of Lesbos. The Methymneans buried the head of the unfortunate bard, and set up a column in the lyre in the temple of Apollo. (Ovid, Met., 11, 65.—Plin., 39, 4.) The estuary of the Hebrus and Arus, Orestes is said to have purified himself from his mother’s blood. (Vid. Orestias.)

HECATEIA, a festival at Athens, in honour of Jupiter Hecateius. It was instituted by Theseus, in commemoration of the kindness of Hecale towards him, when he was going on his enterprise against the Macedonian bull. This Hecale was an aged female, accustomed to compose from time to time the name to one of the boroughs of the Leonian tribe in Attica. (Steph Byz., s. v.—Plut., Vit. Theas.—Castellanus, de Fest. Græc., p. 108.)

HECATEUS I., a native of Miletus. We learn from Suidas, s. v. Εκατεύς, that his father’s name was Hesandeser; that he flourished about the sixty-fifth Olympiad, during the reign of Darius, who succeeded Cambyses; that he was a scholar of Protagoras, and the first who composed a history in prose; and that Herodotus was much indebted to his writings. Under the word Εὐλάμος, Suidas says that Hecateus flourished during the Persian wars. This account is in part confirmed by Herodotus, who tells us that, when Aristagoras planned the revolt of the Ionian cities from Darius, Hecateus, in the first instance, condemned the enterprise; and afterward (5, 125), when the unfortunate events of the war had demonstrated the wisdom of his former opinion, he recommended Aristagoras, in case he found himself under the necessity of quitting Ionia, to fortify some strong position in the island of Leros, and to remain quiet until a favourable opportunity occurred of recov-. ering Miletus. We learn also from Herodotus (2, 163), that Hecateus had visited Egypt; according to Diogenes Laertius, Protagoras flourished in the eighty-fourth Olympiad; consequently Hecateus could not have been his scholar, as Suidas supposes. The Abbé Sevin (Mem. de l’Acad. des Insér., vol. 6, p. 472) has two conjectures on this point; he suggests that we should either read Pythagoras instead of Protagoras, or that Suidas has, by mistake, said of the Milesian Hecateus what was true of another Hecateus, a native of Teos. Yoppus, from misunderstanding a passage in Diogenes, erroneously conceives our Hecateus to have been a scholar of Heracleitius. (De Hist. Græc., p. 439.) As regards the assertion of Suidas, alluded to above, that Hecateus was the first prose-writer, it is probable (Tev., 5) that the word μέθος of Diogenes (of which Aristophan. rhaps. is not altogether consistent on this point) He asserts, in another place, that, in the opinion of some persons, Cadmus was the first that wrote in Greek prose. Under the word Ἐρεχθιόνη, he divides the honour of being the first prose-writer between Cadmus and Pherecydes. Pline (2, 59,) makes Cadmus the first who wrote in prose; but in another passage (7, 56) he finds the following: "Prosa amorationem conterere Pherecydise Syrius instituit. Cyri rege historiam Cadmus Milesius." Cadmus, after all, appears best entitled to the honour of having been the earliest Greek prose-writer. — But to return to Hecateus; the references to his works are numerous, and show that he was a very voluminous writer. Suidas tells us that he wrote a history; Strabo (17) mentions it. It is also referred to by Stephanus under the words Ἱλίαν and Φερεκραν, and by the scholar on pollution (7, 56). It is also supposed (7, 56) that Hecateus corrected a genealogical work; it contained several books, the first and second of which are mentioned by Stephanus (s. v. Μέλαιa.—s. v. Ἀμφανα.— s. v. Χαλκίτας); the second by Harpocratus (s. v. ἀνδρολιθες); the third by Athenæus (2, p. 148); the fourth by Stephanus (s. v. Μέγας,— s. v. Τριμπλα). We have the testimony of Strabo, that Hecateus was one of the earliest writers on geographical subjects. Agathemus (2, ed. Hufeland, 7) says, that the head of the city had also published a geographical work; it contained several books, the first and second of which are mentioned by Stephanus (s. v. Μέλαια.—s. v. Χαλκίτας); the second by Harpocratus (s. v. ἀνδρολιθες); the third by Athenæus (2, p. 148); the fourth by Stephanus (s. v. Μέγας,— s. v. Τριμπλα). We have the testimony of Strabo, that Hecateus was one of the earliest writers on geographical subjects. (Mus. Crit., vol. 1, p. 88, seqq.) Whether the treatises which we find quoted in various writers, under the titles of Εὔροπος ἐροδος, Ἀλος περιήγησις, Ἀλος περιήγησις, Λεγίπτον περιήγης, were distinct works, or parts of his larger geographical work, cannot now be ascertained. The name of this treatise has been cited at the commencement of this article, that Herodotus was much indebted to the writings of Hecateus, and it has been supposed that the very particular account which the latter gave, in his work on Egypt, of the history of Thebes, was the reason that Herodotus says comparatively so little on this interesting topic. (Creezzer, Symbolol, vol. 1, p. 240.) Dio. of Alexandria praises the simplicity and clearness which distinguished the style of Hecateus. The fragments of this writer that have reached our times were collected by Creuzer, and published in his Historiorum Græcorum Antiquitiae, Fragmenta, 8vo, Heidelberg, 1806. A separate edition of them, to which is appended the Periplus of Scylax, was given in 1831, 8vo, by Klauser, from the Berlin press. (Hoffmann, Lex. Bibl., vol. 2, p. 334.)—H. a native of Abdera, who accompanied Alexander the Great to Asia. He was a disciple of Apollodorus, head of the Scoura school. He wrote a work on the Antiquities of the Jews, cited, under the title Περι τῶν θεουλών ἥσισθεν, by Origen (Contra Cels., 1, p. 13), and under that of ιονιαίων λαοποίοις by Eusebius. (Prop. Ev., lib. 3, p. 239, ed. R. Steph.) It is from this work that Photius has preserved for us an interesting extract, with which, however, he credits Hecateus of Miletus. Clemens Alexandrinus (Alexandr., 5, p. 717, ed. Potter) speaks of a work of Hecateus's on Abraham and Egypt, which is probably the same with the one just mentioned. Scaliger (Epin. 115th), Eichhorn (Bibl. der Bibelnicn. Lit., vol. 5, pt. 3, p. 431), and others, have thought that this work or these works, of which Josephus and Photius (after Diodorus) have preserved an extract,
must be referred to the Hellenistic Jews, as a fabrication of theirs. Sainte-Croix, on the other hand, undertakes to support their authenticity. (Examen des Historien d'Alexandre-le-Grand, p. 558.) It appears, however, that Hecateus of Abdera actually wrote a work on Egypt, for Diodorus Siculus (1, 47) and Plutarch (De Is. et Os., p. 143, ed. Wyttenbo.—ed. Reiske, vol. 7, p. 392) both cite it. The fragments of Hecateus of Abdera were published by Zahn, Altona, 1730, 8vo, and are given in part also by Creuzer, in his Hist. Grec. Antiquiss. Fragm., p. 28, seqq.—III. A native of Teos, supposed to have flourished about the nineteenth Olympiad. Compare the remarks of Creuzer, (Hist. Gr. Ant. Fragm., p. 6, seqq.—IV. A native of Eretria, who wrote Ἱππίος Ἱστορία (On the wanderings of the Grecian chieftains returning from Troy). He is mentioned also by Plutarch among the heroes of Alexander. (Schull, Hist. Litt. Gr., vol. 4, p. 138.)

Hecate (Ἑκάτη), the name of a goddess in the Grecian mythology. In the Theogony of Hesiod (v. 411), this deity is made the daughter of Perses and Asteria. Bacchylides speaks of her as the daughter of Night, while Musaeus gave her Jupiter as a sire in place of Perses. (Schol. ad Apoll. Rh., 3, 467.) Others again made her the offspring of the Olympian king Jupiter and the daughter of the Earth (Ἑκάτη). (Tzet., Lyc., 1180), or by Ceres (Schol. ad Theocrit., 2, 12). According to Pherecydes, her sire was Aristaeus. (Schol. ad Apoll. Rh., l. c.) It is said in the Theogony (412, seqq.), that Hecate was highly honoured by Jupiter, who allowed her to exercise extensive power over land and sea, and to share in all the honours enjoyed by the children of Heaven and Earth. She rewards sacrifice and prayer to her with prosperity. She also has a share in the deliberations of the popular assembly, over war, and the administration of justice. She gives success in wrestling and horse-racing. The fisherman prays to her and Neptune; the herdsmen to her and Hermes; for she can increase and diminish at her will. Though an only child (in contrast to Apollo and Diana, who have similar power), she is honoured with all power among the immortal and, is, by the appointment of Jupiter, the protector of children, whom she has brought to see the light of day. This passage, however, is plainly an interpolation in the Theogony, with which it is not in harmony. It has all the appearance of being an Orphic composition, and is, perhaps, the work of the notorious forger Onomacritus. (Göttling, ad loc.—Thiersch, über Hesiodus, p. 24.—Keightley's Mythology, p. 66.)—Hecate is evidently a stranger-divinity in the mythology of the Greeks. It would appear that she was one of the hurtful class of deities, transported by Hesiod, or his interpolator, into the Grecian mythology, and placed behind the popular divinities of the day, as a being of earlier existence. Hence the remark of the bard, that Jupiter respected all the prerequisites which Hecate had enjoyed previous to his ascending the throne of his father. Indeed, the sphere which the poet assigns her, places her out of the reach of all contact with the acting divinities of the day, and her demiformal nature is that of a pygmis, in the Iliad nor Odyssey, and the attributes assigned her in the more recent poem of the Argonauts are the same with those of Proserpina in Homer. (Creuzer, Symbolik, vol. 1, p. 158.—Id., 2, 130.—Glorieux, Mytheng., vol. 1, p. 254.—Hermann, Handb. der Myth., vol. 2, p. 45.) Jablonski (Panth. Egypt.) regards Hecate as the same with the Egyptian Thoth-rambo. Her action, nature, her divined attributes, her innumerable functions, are a mixture of physical, allegorical, and philosophical traditions respecting the fusion of the elements and the generation of beings. Hecate was the night, and, by an extension of this idea, the primitive night, the primary cause or parent of all things. She was the moon, and hence were connected with her all those accessory ideas which are grouped around that of the moon; she is the goddess that troubles the reason of men, the goddess that presides over nocturnal ceremonies, and, consequently, over magic; hence her identity with Diana for the Grecian mythology, with Isis for the Egyptian; and hence also her cosmogonical attributes, assigned to Isis in Egypt. (Constant, de la Religion, vol. 4, p. 139, in not.)—As regards the etymology of her name, it may be remarked, that the most probable one seems to be that which deduces it from the Greek ἔκατη, the feminine of ἔκατος, denoting either "her that operates at afar," or "her that removes or drives off." (Creuzer, Symbolik, vol. 2, p. 124.)—Expatriatory sacrifices were offered to this goddess on the thirtieth of every month, in which eggs and young dogs formed the principal objects. And the festival distributed and of the public offices, together with a large quantity of all sorts of necessibles, were exposed in the cross-roads, and called the "Supper of Hecate" (Ἑκάτης δείπνον). The poorer class and the Cyneis seized upon these viands with an eagerness that passed among the ancients as a mark of extreme indigence, or the lowest degree of baseness. (Compare the note of Hemsterhuis, ad Lucian. Dia. Mort., 1.—Op., ed. Bip., vol. 2, p. 397; seqq. Her Hecate is a Thor—Norse god, who were set up at Athens and elsewhere, in the market-places and at cross-roads. It is probable, indeed, that the dog-headed form was the ancient and mystic one of Hecate, and that under which she was worshipped in the mysteries of Samothrace, where dogs were immolated in her honour. Hecate had also her mysteries, celebrated at Ἐγίνα, and the establishment of which was ascribed to Orpheus. The name of this goddess was Brimo (from ἔβριμος, "to roar"). This seems to have been chiefly employed to denote her terrific appearance, especially when she came summoned by magic arts. Apollonius of Rhodes (Arg., 3, 1214, seqq.) describes her as having her head surrounded by serpents, twining through branches of oak, while torches flamed in her hands, and the infernal dogs howled around. Lucian's " liar of the first magnitude," Euprates, gives a most terrific description of her appearance. (Philostr., de Vit., 22, seqq.) In this character she was also sometimes called Empusa. (Eudocia, 147.) These, however, were evidently late ideas and fictions. (Keightley's Mythology, p. 67.)

Hecatombia, a festival celebrated in honour of Juno by the Argives and people of Ἐγίνα. It received its name from ἕκατος and ἄρης, being a sacrifice of a hundred oxen, which were always offered to the goddes and the fifty distributed and of the poorer officiants. There were also public games, first instituted by Archinus, a king of Argos, in which the prize was a shield of brass with a crown of myrtle.—There was also an anniversary sacrifice called by this name in Laconia, and offered for the preservation of the 100 cities which once flourished in that country.

Hecatompōnia (from ἕκατος, a hundred, and ἄρης, "to kill"), a solemn sacrifice offered the Messenians to Jupiter when any of them had killed a hundred enemies. Aristomenes is said to have offered up this sacrifice three times in the course of the Messenian wars against Sparta. (Pausan., 4, 19.)

Hecatompōlion, an epithet given to Crete, from the hundred cities which it once contained. (Hom., II., 2, 649.) The same epithet was also applied to Laconia. (Strabo, 369.—Steph. Byz., s. v. Argo, etc.) The greater part of these cities, however, were probably, like the cities of Attica, not larger than villages. (Vid. Laconia.)

Hecatopōlēs, I. An epithet applied to Thbes in Egypt, on account of its hundred gates. (Vid. remarks under the article Thebes, I.)—II. The metropolis of Parthis, and royal residence of the Arsacides, situated
in the district of Cosimene, and southwest part of the province of Parthiene. The name is of Grecian origin, probably a translation of the native term, and has a figurative allusion to the numerous routes which diverge from this place to the adjacent country. D'Anville makes it correspond with the modern Demegran. (Plin., 6, 15.—Curt., 6, 2.—App. Marcell., 23, 24.—Polyb., 10, 25.—Diod. Sic., 17, 25.)

HECATONNIES, small islands between Lesbos and Asia. They derived their names, according to Strabo (13), from Ekaros, an epithet of Apollo, that deity being particularly worshiped along the continent of Asia, off which they lay. It seems more probable, however, that they had their name from ekaros, a hundred, and so from the number of great islands, which is about forty or over. And Hesiod, in fact, writes the name Ekarov Niktov (1, 151). The modern appellation is Musco-Nisi. (Cramer's Asia Minor, vol. 1, p. 165.)

HECTOR, son of Priam and Hecuba, was the most valiant of all the Trojan chiefs that fought against the Greeks. He married Andromache, daughter of Eetion, by whom he became the father of Astyanax. Hector was appointed commander of all the Trojan forces, and for a long time was the only one who fought bravely. He was not only the bravest and most powerful, but also the most amiable of his countrymen, and particularly distinguished himself in his conflicts with Ajax, Diomede, and many other of the most formidable enemies. The fates had decreed that Troy should never be destroyed as long as Hector lived. The Greeks, therefore, after the death of Patroclus, who had fallen by Hector's hand, made a powerful effort under the command of Achilles; and, by the intervention of Minerva, who assumed the form of Deiphobus, and urged Hector to encounter the Grecian chief, contrary to the remonstrances of Priam and Hecuba, their effort was crowned with success. Hector fell, and his death accomplished the overthrow of his father's kingdom. The dead body of the Trojan warrior was attached to the chariot of Achilles, and ins streamingly dragged away to the Grecian fleet; and thence every day, for the space of twelve days, it was also dragged by the victor around the tomb of Patroclus. (Il., 22, 399, seqq.—Io., 24, 14, seqq.) During all this time, the corpse of Hector was shielded from dogs and birds, and preserved from corruption, by the united care of Venus and Apollo. (Il., 23, 185, seqq.) The body was at last ransomed by Priam, who went in person, for this purpose, to the tent of Achilles. Splendid obeisances were rendered to the deceased, and with these the action of the Iliad terminates.—Virgil makes Achilles to have dragged the corpse of Hector thrice round the walls of Troy. (En., 1, 483.) Homer, however, is silent on this point. According to the latter, Hector fled thrice round the city-wall before engaging with Achilles; and, after he was slain, his body was immediately attached to the car of the victor, and dragged away to the ships. (Il., 22, 399.) The incident, therefore, alluded to by Virgil must have been borrowed from some one of the Cycbic bards, or some tragic poet, for these, it is well known, allowed themselves a great license in diversifying and altering the features of the ancient heroic legends. (Heyne, Escura., 18, ad Virg., En., 1.—Wernsdorff, ad Epit. II. in Poet. Lat. Min., vol. 4, p. 742.)

HECUBA (Ekalos), daughter of Dymas, a Phrygian prince, or, according to others, of Osseus, a Thracian king, while others, again, made her the daughter of the rimed Polymnestor and Medea. She was the second wife of Priam, king of Troy. (Apollod., 3, 12, 6.) She bore him nineteen children (II., 24, 496), of whom the chief were Hector, Paris, Deiphobus, Helenus, Troilus, Polites, Polydorus, Cassandra, Creuss, and Polynora. When she was pregnant of Paris, she dreamed that she brought into the world a burning torch, which re duced her husband's palace and all Troy to ashes. On her telling this dream to Priam, he sent for his son Æneas, by a former wife Arise, the daughter of Merops, who had been reared and taught to interpret dreams by his grandfather. Æneas declared, that the child would be the ruin of his country, and recommended to his father that he should not be given to a servant to be left on Ida to perish; but the attempt proved a fruitless one, and the prediction of the soothsayer was fulfilled. (Vid. Paris.) After the ruin of Troy and the death of Priam, Hecuba fell to the lot of Ulysses, and she embarked with the conquerors for Greece. The fleet, however, was detained off the coast of the Thracian Chersonese by the appearance of the spectre of Achilles on the summit of his tomb, demanding from his father a new offering. Poly xena was, in consequence, torn from Hecuba and immolated by Neoptolem us on the grave of his sire. The grief of the mother was increased by the sight of the dead body of her son Polydorus, washed upon the shore, who had been cruelly slain by Polydemos, king of Thrace, to whose care Priam had consigned him. Bent on revenge, Hecuba managed, by artifice, to get Polydemos and his two children in her power, and, by the help of her fellow-countrymen, the murderers of his sons, and then put out the eyes of the father. (Vid. Polydorus, Polydemos.) This act drew upon her the vengeance of the Thracians: they assailed her with darts and showers of stones; and, in the act of biting a stone with impotent rage, she was suddenly metamorphosed into a dog. (Ovid, Met., 13, 429, seqq.) Hyginus says, that she threw herself into the sea (Fab. 111), while Servius states, that she was changed into a dog when on the point of casting herself into the waters. (ad En., 3, 6.—Consult Schol. ad Eurip., Hec., 1259.—Teetz., Chil., 111, 74.—Schol. ad Iun., Sat., 10, 271.—Plaut., Menach., 1.—Heyne, ad Apollod., 3, 12, 5.)

HERESYN, a native of Thasos, and author of satyric dramas in the age of Alcibiades. This distinguished individual was his friend, and managed to get him freed from an accusation that had been brought against him. A piece of this poet, entitled Giganthomachia, was getting represented when the news arrived of the defeat of Nicias in Sicily. This Hegesyn bore the appellation of Phace (Phaxi, "a lentil"), conferred on him as a nickname. He wrote also a comedy entitled Philinna. (Böckh, Staatsb. d. Athen, vol. 1, p. 435.—Schöll, Gesch. Griech. Lit., vol. 1, p. 269, 290.)

HERSÆNAX, a Greek writer, a native of Alexandria Troas, and contemporary with Aristobulus the Great, by whom he was patronised. He was the author of an historical work; and indulged also in poetical composition, having written a poem entitled τραγολογία, "Troyan Affairs." Some ascribed to him the "Cyprian Epic." He was likewise a writer of tragedies; and, according to Athenæus, from whom all these particulars are obtained, was also a tragic actor, having improved and strengthened his voice, which was naturally weak, by abstaining for eighteen years from taking fishes. (Athen., 3, p. 80, d.—Id., 4, p. 155, b.—Id., 9, p. 393, d.)

HERESIAS, ι. A cyclic poet, born at Salamin, in the island of Cyprus, and, according to some, the author of the Cyprian Epic. (Vid. Staurus.)—II. A native of Magnesia, who wrote an historical work on the companions in arms of Alexander the Great. His style was loaded with puerile ornaments, and betrayed a total want of taste. (Dion. Hal., de Pomp. 14, 5, 15, Orat. c. 18.) He wrote also some discourses, which are lost. The ancients regarded him as the parent of that species of eloquence denominated the Asiatic, which had taken the place of the simple and elegant Attic. (Compare Quintil., Inst. Or., 12, 10.)—III. A philosopher, surnamed Ἱεροσιάνατος, or "Advocate of Death." He pushed the principles of the Cyrenaic sect, to
HELENA.

which he belonged, even to absurdity, and, by the force of consequences, came to a result directly opposite to that of the founder of the school. From the position that pleasure is the sovereign good, he deduced the inference that man cannot be truly happy, since, as his body is exposed to too many evils, of which the soul also partakes; he cannot attain to any, even to sovereign good, because the latter can be only attended with those evils. Hegesippus upheld this doctrine with so much ability and success, that many of his auditors, on leaving his lectures, put an end to their existence. Ptolomy I. judged it necessary to send him into exile. (Scholl, Hist. Litt. Gr., vol. 3, p. 249.)

Hegesippus, I. an historian, mentioned by Dionysius of Halicarnassus (Ant. Rom., 1, 49 et 72). He wrote on the antiquities of Pallene, a peninsula of Thrace, where Helen was supposed to have taken refuge after the capture of Troy. He made the Trojan chief to have ended his days here. —II. A comic poet, a native of Tarentum, named Crobulus (Krho-buloς), or "Toupee," from his peculiar manner of wearing his hair. His pieces have not reached us: we have eight epigrams ascribed to him, which are remarkable for their simplicity. —III. An ecclesiastical historian, by birth a Jew, and educated in the religion of his fathers. He was afterward converted to Christianity, and became bishop of Rome about the year 177, where he died in the reign of the Emperor Commodus, about the year 180. He was the author of an ecclesiastical history, from the period of our Saviour's death down to his own time, which, according to Eusebius, contained a faithful relation of the apostolic preaching, written in a very simple style. The principal value of the existing fragments, which have been preserved for us by Eusebius and Philæmon, consists in the testimony which may be deduced from scriptural passages quoted in them in favour of the genuineness of the books of the New Testament. There has been ascribed to Hegesippus a history of the destruction of Jerusalem, written in Latin, under the title of "De Bello Judaico et urbis Hierosolymitanct excidito historia." It is not, however, by Hegesippus; and appears, indeed, to be nothing more than a somewhat enlarged translation of Josephus. A Milan manuscript (one of the most beautiful in the city of Milan) is written in a magnificent hand, and contains the whole work of Hegesippus, from the beginning of the Jewish war to the death of Herod the Great. It is accompanied by a very interesting and elaborate copious commentary, written by an inscrutable person, who wrote at the end of the 10th century (vide Edition of the Mechitarist. Paris, 1840, vol. 2, p. 59). HELENA, the most beautiful woman of her age. There are different accounts of her birth and parentage. The common, and probably the most ancient, one is, that she was the daughter of Leda by Jupiter, who took the form of a white swan. According to the Cyprian Epic, she was the offspring of Jupiter and Nemesis, who had long fled the pursuit of the god, and, to elude him, had taken the form of all kinds of animals. (Athm. 8, p. 234.) At length, while she was under the influence of a god, the goose became a swan, and she laid an egg, which was found by a shepherd in the woods. He brought it to Leda, who laid it up in a cofier, and in due time Helena was produced from it. (Apolod., 3, 10, 4.) Hesiod, on the other hand, calls Helena the daughter of Oceanus and Theithys. (Schol. ad Pind., Nem. 16, 150.) In the Iliad, Helena is termed the "big-bosomed daughter of Jupiter" (II., 4, 418); and she calls Castor and Pollux "her own brothers, whom one mother bore with her." (Il., 3, 238.) In the Odyssey these are expressly called the sons of Tyndarus. This, however, does not prove that Helena was held to be his daughter.—The beauty of Helena was proverbial. She was so renowned, indeed, for her personal attractions, even in her infancy, that Theseus, in company with his friend Pirithous, carried her off, when only a child, from a festival at which they saw her dancing in the temple of Diana Orthia. It was agreed, during their flight, that he who should, by lot, become possessor of the prize, should assist in procuring a wife for the other. The lot fell to Theseus and he continued to take her; however, he afterwards placed her under the care of his mother Amphitrite till she should have attained to years of maturity. From this retreat, however, his brothers, Castor and Pollux, recovered her by force of arms, and restored her to her family. According to Pausanias, however, she was of noble birth when carried off by Theseus, and became by him the mother of a daughter, who was given to Clytemnestra to rear. (Pausan., 2, 22.)—Among the most celebrated of the young princes that were born from the reputation of her personal charms, subsequently became her suitors, were, Ulysses, son of Lar- ertes; Antilochus, son of Nestor; Sthenelus, son of Capaneus; Diomedes, son of Tydeus; Amphilochus, son of Cteatus; Meges, son of Phileus; Aganenor, son of Anchus; Thalipus, son of Eurytion; Menethus, son of Petes; Schedius, son of Epistropheus; Polyzenes, son of Agathoscius; Amphicleus, son of Eurystheus; Mars; Ajax, son of Oileus; Eumelus, son of Admetus; Polyxetes, son of Pirithous; Elenor, son of Chalcodon; Pisdalirius and Machaon, sons of Asclepius; Leontus, son of Coronus; Philoctetes, son of Pean; Protasilus, son of Iphicles; Euryphylus, son of Eevemon; Ajax and Teucer, sons of Telamon; Patroclus, son of Menestetus; Menelaus, son of Atreus; Thoas, Iomedones, and Merion. Tyndarus was rather alarmed than pleased at the sight of so great a number of illustrious princes, who eagerly solicited each to become his son-in-law. He knew that he could not prefer one without displeasing all the rest, and from this perplexity he was at last extricated by the artifice of Ulysses, who began to be already known in Greece by his prudence and sagacity. This prince, who clearly saw that his pretensions to Helen would not probably meet with success in opposition to so many suiters, aspired to win her by the surest and easiest way, that is, by marriage. He accordingly set to work to gain her with his address, and to lead her from her husband to his. The advances he was beforehand prepared to make were such as to make her follow him of her own accord. He had, indeed, persuaded her, as soon as he had succeeded in winning her, to send her to his father, the king of Troy, durst not so much as look at her, without perceiving that she was very beautiful, for there were surely many nobler women in Troy. When Theseus had been slain, in the ninth year of the war, Helen married Deiphobus, son of Pir,; but, on the capture of the city, she returned into the hands of Menelaus, through a wish of ingratiating herself into the favour of her former husband. On her return to Greece, Helen lived many
HELLENA.

years with Menelaus, who forbade her infidelity; but, upon his death, she was driven from the Peloponnesus by Megarenses and Nicorastrus, the illegitimate sons of Menelaus and Clytemnestra. She is supposed to have remained at Argos, and that time Polyx, a native of Argos, reigned over the country. Polyx remembered that her widowhood originated in Helen, and that her husband, Telephus, had been killed in the Trojan war, and she therefore resolved upon revenge. While Helen one day retired to bathe in the river, Polyx disguised her attendants in the habits of Furies, and sent them with orders to murder her enemy. Helen was tied to a tree and slain, and her misfortunes were afterward commemorated, and the crime of Polyx expiated by the temple which the Rhodians raised to Helena Dendritis, or Helena "tied to a tree."—There is a tradition mentioned by Herodotus, which says that Paris was driven, as he returned from Sparta, upon the coast of Egypt, where Proteus, king of the country, expelled him from his dominions for his ingratitude to Menelaus, and confined Helen. From that circumstance, therefore, Pria2 informed the Grecian ambassadors that neither Helen nor her possessions were in Troy, but in the hands of the King of Egypt. In spite of this assertion, the Greeks besieged the city, and took it after ten years' siege; and Menelaus, visiting Egypt as he returned home, recovered Helen at the court of Proteus, and was convinced that the Trojan war had been undertaken upon unjust grounds. Herodotus adds, that, in his opinion, Homer was acquainted with these circumstances, but did not think them so worth commemorating as the legend of the Trojan war, which was esteemed as the popular legend for the basis of an epic poem. (Herod., 2, 112, 116, seqq.)—It was said, that, after death, Helen was united in marriage with Achilles, in the island of Leuce, in the Euxine, where she bore him a son named Euphorion. (Pausanias, 3, 19.—Conon, 18.—Plut., Her. Ph. 4, 3.) Nothing, however, can be more uncertain than the whole history of Helen. The account of Herodotus has been altogether disbelieved by the learned. According to Eupides (Helena, 25, seqq.), Juno, piqued at beholding Venus bear away the prize of beauty, caused Mercury to carry away the true Helen from Greece to Egypt, and gave Paris a phantom in her stead. After the destruction of Troy, the phantom bears witness to the innocence of Helen, a storm carries Menelaus to the coast of Egypt, and he there regains possession of his bride. Others pretend that Helen never married Menelaus, but lived with Paris to the end of her days, that she was restored to her husband in Egypt, and that Patroclus contend for her, and were driven by Paris from Ajax. These, and other circumstances equal in importance, make the Grecian princes to have followed Agamemnon to the field as their liege lord, and as standing at the head of the Achsean race, to whom therefore they, as commanding the several divisions and tribes of that race, were bound to render service. But the mere we consider the history of Helen, the greater will be the difficulties that arise. It seems strange indeed, that the Achseae themselves should not have been able to recover Helen, that many cities and states should combine to regret her when she went away voluntarily with Paris, and that not a single hamlet should rise in her favour when she was forcibly carried away by Theseus. Again, the beauty of Helen is often mentioned by the poet. The very elders of Troy, when they saw her pass by, could not help expressing their admiration. (Il, 3, 158.) Agamemnon promises to Achilles the choice of twenty female captives, the fairest after Helen. (Il. 9, 140.) By this he strongly intimates the superiority of her charms. But if there were the least truth in the history of this personage and in the chronology of the times, she must have been at this period a very old woman, if not beyond the age of marriage, and doomed to that singular voyage, on a punitive expedition, and in a state of complete manhood. One of them is mentioned as contending in fight with Amycus, the Bebrycian, a person of an uncommon stature and strength: his opponent, therefore, could not have been a stripling. We cannot well allow less than twenty-five years for his time of life. Now, from the Argonautic expedition to the taking of Troy, there were, according to Scaliger (Annales ad Euseb. p. 46), seventy-nine years. If, then, we add to these her age at the time of the Argonauts, which we have presumed to have been twenty-five years, it makes her no less than a hundred and four in the last year of the siege. Or if we allow her to have been only twenty at the time of the expedition, still she will prove sufficiently old to have been Hecuba's mother. Hence Seneus says very truly (Epist., 384), when he is treating of the priority of Hesiod and Homer, "Utrum major autale fuerit Homer us an Hesiodus, non magis ad rem pertinent quam scire, an minor Hecuba futurum quam Helena; et quare iam male tulerint atatem." Petavius makes the interval between this celebrated expedition and the fall of Troy of the same extent as Scaliger. (Rationale Temp., p. 290, seqq.) The former he places in the year 3451 of the Julian period, and the latter in 3500. The difference in both is 79. To these, if we add 25 for her age at that era, it will amount to 104. After this, as the Argonauts say, Troy is, the Grecians are said to have been ten years in preparing for the war, and ten years in carrying it on. This agrees with the account given by Helen of herself in the last year of the siege, which was the twentieth from her first arrival from Sparta. (Il., 24, 75.) If we then add these twenty years to the seventy-nine, and likewise twenty-five for her age at the time of the Argonautic expedition, it will make her still older than Pausanias, who says she was 140. Telemachus, the son of Ulysses, is said to have seen her at Sparta ten years afterward, and she is represented even then to have been as beautiful as Diana (Od., 4, 122), though at that time, if these computations are true, she must have been 134 years old. These things are past all belief. Another difficulty will be found in the history of those princes, who, according to the common account, formed the grand con- vention at Aulis to take their expedition, and increase her years to 124. But the contrary is evinced in every part of the poem, wherever these heroes are introduced. Still farther; it has been mentioned, that, before the seduction of Helen by Paris, she was said to have been stolen from her father's house by Theseus; and we are told by some writers that she was then but seven years old. But the arrival of the leaders of the Grecians at the siege of Troy must have been 100 years old. But the contrary is evinced in every part of the poem, wherever these heroes are introduced. The very elders of Troy, when they saw her pass by, could not help expressing their admiration. (Il. 3, 158.) Agamemnon promises to Achilles the choice of twenty female captives, the fairest after Helen. (Il. 9, 140.) By this he strongly intimates the superiority of her

582
By the same age; for one, if not both, was hatched from the same egg. Yet these children, so little past that they were liable to be concealed, and to have regained their sister. They must have been sturdy urchins, and little short of the children of Aloeus. [Consult, on this whole subject, Satan. Dissertation on the War of Troy, p. 9, seqq.]—It is more than probable, indeed, that the whole legend relative to Helen was originally a religious and allegorical myth. The remarkable circumstance of her two brothers living and dying alternately, was a hint of the relations of natural powers and objects. This is confirmed by the names in the myth, all of which seem to refer to light or its opposite. Thus Leda differs little from Leto, and may therefore be regarded as darkness. She is married to Tyndarus, a name which seems to belong to a family of words relating to light, flame, or heat (Vid. Tyndarus); her children by him or Jupiter, that is, by Jupiter-Tyndarus, the bright god, are Helen, Brightness (Vla. "light"), Castor, Adonner, (κόσινον, to adorn); and Polydeuces, Desful (δίσω, δισκοῦ). In Helen, therefore, we have only another form of Selene; the Adonner is a very appropriate term for the day, the light of which adorns all nature; and nothing can be more apparent than the suitableness of Desful to the night. (Keightley's Mythology, p. 432.)—II. (commonly known in ecclesiastical history by the name of St. Helen of Constantinople), was born of obscure parents, in a village called DREPAM, in Bithynia, which was afterward raised by her son Constantine to the rank of a city, under the name of Helenopolis. Her husband Constantius, on being made Cæsar by Dioclesian and Maximian (A.D. 292), repudiated Helena, and married Theodora, daughter of Maximian. Helena withdrew into retirement until her son Constantine, having become emperor, called her home and made her his chief consort. He also supplied her with large sums of money, which she employed in building and endowing churches, and in relieving the poor. About A.D. 325 she set out on a pilgrimage to Palestine, and, having explored the site of Jerusalem, she thought that she had discovered the sepulchre of Jesus, and also the cross on which he died. The identity of the cross which she found has been, of course, much doubted: she, however, built a temple on the spot; and it was supposed that the Sepulchre, which has continued to be venerated by that name to the present day. She also built a church at Bethlehem, in honour of the nativity of our Saviour. From Palestine she rejoined her son at Nicomedia, in Bithynia, where she expired, in the year 327, at a very advanced age. She is numbered by the Roman church among the saints. (Euseb., Vit. Constant. —Hünter, de Cruces Domini per Helenam invenit, Helmstädt, 1724.)—III. A. deserted and rugged island in the Ægean, opposite to Thorikos, and extending from that parallel to Sunium. It received its name from the circumstance of Paris's having landed on it, as was said, in company with Helen, when they were fleeing from Sparta. (Plin., 4, 12.—Metz, 2, 7.) Strabo, who follows Artemidorus, conceived it to be the Crame of Homer. (I., 3, 444.) Pliny calls it Menelaia. The modern name is Macron. [HELXÉN, an eminent soothsayer, son of Priam and Hecuba, and the only one of his sons who survived the siege of Troy. He was so chagrined, according to some, at having failed to obtain Helen in marriage after the death of Paris, that he retired to Mount Ida, and was there, by the advice of Calchas, surprised and carried away to the Grecian camp by Ulysses. Among other predictions, Helenus declared that Troy could not be taken, and that the Grecians would omit to quit their retreat and repair to the siege. After the destruction of Troy, he, together with Andromache, fell to the share of Pyrrhus, whose favour he conciliated by deterring him from sailing with the rest of the Greeks, who (he foretold) would be exposed to a severe defeat by Chrysoroea, to which Helenus not only manifested his gratitude by giving him Andromache in marriage, but nominated him his successor in the kingdom of Epirus, to the exclusion of his son Molossus, who did not ascend the throne until after the death of Helenus. A son named Cestrinus was the offspring of the union of Helenus with Andromache. (Virg., Æn., 3, 294, seqq.—Consult the authorities quoted by Heyne, Etzlar, 10, ad Ann., 3.) HELÉIΩN, I. the daughters of the Sun and Clymene. They were three in number, Lampeitia, Phœtusa, and Lampethusa; or seven, according to Hyginus, Merope, Helie, Egle, Lampeitia, Phœbe, Aëtheria, and Dioxippe. They were so afflicted at the death of their brother Phœthon (Vid. Phœthon), that they were changed by the gods into poplars, and their tears into amber, on the banks of the river Po. (Ovid, Met., 2, 340.—Hygin, fab. 154.) II. Children of the Sun and the nymph Rhodos. They were seven in number, and were fabled to have been the first inhabitants of the island of Rhodes. (Vid. Rhodos.) HELIÆSTÆ, a name given to the judges of the most numerous tribunal at Athens. (Harpoc., p. 138.—Bekkt., Anced. Gr., p. 310, 32.) Of all the courts which took cognizance of civil affairs, the Heliaia was the most celebrated and frequented. It derived its name from the Heliaia, or hall, where the judges of the people; or, according to others, ἀπὸ τοῦ φῶς, from the sun, because it was in an open place, and exposed to the sun's rays. (Dorn., ad Charit., p. 242.) The judges, or, rather, juries of the Heliaia, amounted in all to 6000, being citizens of above thirty years of age, selected annually by the nine archons and their secretary; probably 600 from each tribe. The Heliaias, however, seldom all met, being formed into ten divisions, or decemviri, each composed of 60 members, 500, although it varied according to circumstances; sometimes diminishing to 200 or 400, while on other occasions it appears to have been raised to 1000 or 1500, by the union of two or three divisions. The 1000, therefore, to make up the full 6000, must have acted as supernumeraries. (Wachsmuth, Helen. Alterthumsk., vol. 2, pt. 1, p. 314.) Every one to whose lot it fell to serve as juryman, received, after taking the oath, the number of drachmae, or drachmas, corresponding to the number of the division to which he was to belong during the year. On the morning of every court day, recourse was again had to lots, to decide in which court the divisions should respectively sit for that day.—For other particulars, consult Hermann, Polit. Antiq., p. 265.—Tittmann, Darstell. der Gr. Staatsverw., p. 213, seqq. HELICLÉ, I. another name for the Ursa Major, or "Greater Bear." (Vid. Arctos.)—II. One of the chief cities of Achaia, situate on the shore of the Sinus Corinthiacus, near Bura. (Herod., 1, 46.) It was celebrated for the temple and worship of Neptune, hence called Heliconius. Here also the general meeting of the Ionians was convened, while yet in the possession of Ægialus, and the festival which then took place is supposed to have resembled that of the Panionia, which they instituted afterward in Asia Minor. (Pausan., 7, 24.—Strab., 384.) A prodigious influx of the sea, caused by a violent earthquake, overwhelmed and completely destroyed Helice two years before the battle of Leuctra, B.C. 373. The details of this catastrophe will be found in Pausanias (7, 24) and Ælian (Hist. Anim., 11, 19). It was said, that some vessels of the submerged city were to be seen long after the terrible event had taken place (Ovid., Met., 15, 393.) Eratosthenes, however, in his revivals, beheld the site of this ancient city, and he was assured by mariners that the bronze statue of Neptune was still visible beneath the waters, holding an hippocampe, or sea-horse.
in his hand, and that it formed a dangerous shoal for their vessels. Heraclides, of Pontus, relates that this disaster, which took place in his time, occurred during the night; the town, and all that lay between it and the sea, in a distance of twenty stadia, being inundated in an instant. Two thousand workmen were afterward sent by the Achaemen to recover the dead bodies, but without success. The same writer affirmed, that this inundation was commonly attributed to divine vengeance, in consequence of the inhabitants of Helice having obstinately refused to deliver up the statute of Neptune and a model of the Temple to the Ionians after they had settled in Asia Minor. (ap. Strab., 355—Cassius Dio, 76.7.—Bernhardi, Eratosthenes, 396.12—Diod. Sic., 15, 59—Pausan., 7, 24—Eliot, Hist. Ant., 11, 19.) Seneca affirms, that Callithecnes the philosopher, who was put to death by Alexander the Great, wrote a voluminous work on the destruction of Helice. (9, 23.—Compare Aristot., de Mundi, c. 6—Pol., 2, 41.) Pausanias informs us, that there was still a small village of the same name close to the sea, and forty stadia from Agium. (Cramer's Anc. Greece, vol. 2, p. 61.) The town was a mountain in Boetia, near the Gulf of Corinth. It was sacred to Apollo and the Muses, who were thence called Heliconiades. This mountain was famed for the purity of its air, the abundance of its waters, its fertile valleys, the goodness of its shades, and the beauty of the venerable trees which clothed its sides. Strabo (409) affirms, that Helicon nearly equals in height Mount Parnassus, and retains its snow during a great part of the year. Pausanias observes (9, 28) that the mountain of Greece produces such a variety of plants and shrubs, though none of a poisonous nature; on the contrary, several have the property of counteracting the effects produced by the sting or bite of venomous reptiles. On the summit was the grove of the Muses, where these divinities had their abode, and where also were statues of Apollo and Mercury, of Bacchus by Lysippus, of Orpheus, and of famous poets and musicians. (Pausan., 9, 38.) A little below the grove was the fountain of Aganippe. The source Hippocrene was about twenty stadia above the grove; it is said to have burst forth when Pegasus struck his foot into the ground. (Pausan., 9, 31.—Strab., 9, 410.) These two springs supplied two small rivers named Olmius and Permessus, which, after uniting their waters, flowed into the lake Copias, near Halattus. Herodot makes mention of these his favorite haunts in the opening of his Historia. The moderns, after the name of Helicon, a distance from Palai-rommi or Zagora. The latter is the more general application, name of Palaouomi is more correctly applied to that part of the mountain which is near the modern village Kakoia, that stands on the site of ancient Thisbe. (Cramer's Anc. Greece, vol. 2, p. 204.—Compare Dobell, Tour, vol. 1, p. 260.)—II. A river of Macedonia, near Diim, the same, according to Pausanias (9, 50), with the Baphyris. The same author states (9, 28) that after the space of seventy-five stadia, it loses itself under ground for the space of twenty-two stadia; it is navigable on its reappearance, and is then called Baphyris. According to Dr. Clarke, it is now known as the Maro- nero. (Cramer's Anc. Greece, vol. 1, p. 209.)

**HELICONIADÆ.** A name given to the Muses, from their fabled residence on Mount Helicon, which was sacred to them. (Lukrt., 3, 107.)

**PACIIFOLIUM** is a fallow, sixteen hexameters of which are cited by Stobæus (Serm., 98), containing a description of that part of Campania situated between the Lucrinæ Lake and Puteoli, and where Cicerio had a country residence. The verses in question make particular mention of certain mineral waters at the foot of Mount Gyaurus, reputed to have a salutary effect in cases of ophthalmitis. Now, as these waters were discovered a short time after the death of Cicero, when the villa of the orator had come into the possession of Anistius Vetus (Plin., 31, 1), the poet Heliodorus must have been subsequent to Cicero's time, while, on the other hand, the elegance of his scenes forbids his being placed lower than the first or second century of our era. Some suppose him to have been the same with the rhetorician Heliodorus mentioned by Horace (Sat., 1, 5, 2), as one of the companions of his journey to Brundisium. (Schöll, Hist. Lit. Gr., vol. 4, p. 65, seqq.)—II. An Athenian physician, of whom Galen makes mention (De Antid., 2, 77, Ed. Al.), and who also wrote a didactic poem, under the title of Αρο-λογικά, "the justification," of which Galen gives seven hexameters. The fragment preserved by Stobæus, and alluded to in the preceding article, might have belonged, perhaps, to this Heliodorus, and not to the individual mentioned under No. I. (Compare Meineke, Comment. misc. fasc., 1, Halé, 1822, p. 36, and also the addenda to that work.)—III. A native of Larissa, who has left us a treatise on optics, under the title of Κύ-άλσα τῶν Οπτικῶν, which is scarcely anything more than an abridgment of the optical work ascribed to Euclid. His treatise on "astronomy" has been mentioned, and there are a few scattered notices in pagan authors, when he flourished is uncertain; from the manner, however, in which he speaks of Tiberius, it is probable that he lived a long time after that emperor. Oribia- sius has preserved for us a fragment of another work of Heliodorus's, entitled Peri διαφορὰς καταρασίων. This fragment treats of the κυ&algr;λας, a machine for drawing water furnished with a screw. Some MSS. called this writer Damianus Heliodorus. The best edition is that of Bartoli, 1534. The work also appears in the Opuscula Mythologica, Ethica et Physica, of Gale, Cantabr., 1670, 12mo.—IV. A Greek romance-writer, who was born at Emea in Phoenicia, and flourished under the Emperors Theodo- sius and Arcadius at the close of the fourth century. He was raised to the dignity of a bishop of Tricca in Tessaialy (Socrates, Hist. Eccles.), and is supposed to have written an Iambic poem on Alchemy, entitled, Peri τῆς τῶν φαινομένων μνημηκής τέχνης, "On the occult science of the philosophers." It contains 169 verses. The authorship of this poem is assigned to Heliodorus by Georgius Cedrenus (compare Ámyot's remarks in his French translation of the Α&ecirc;thiopica); but, notwithstanding the testimony of Cedrenus, this point has never been clearly ascertained. Heliodorus is better known as the author of a Greek romance, entitled, Λιθουργία, being the history of Theagnes and Chariclea, and the latter a sister of Anges. It is in ten books. This work was unknown in the West until a soldier of Anspach, under the Margrave Casimir of Brandenburg, assisting at the pillage of the library of Matthias Corvinus, at Buda, in 1526, being attracted by the rich binding of a manuscript, carried it off. He sold the prize afterward to Vincent Obsopoeus, who published it at Basle in 1534. This was the celebrated romance of Heliodorus. "Until that period," says Hesiod, "in literature the birth of romances, "nothing has been seen better conceived, or better executed, than these adventures of Theagnes and Chariclea. Nothing can be more chaste than their loves, in which the author's own virtuous mind assists the religion of Christianity, which he professed, in diffusing over the whole work that air of hom&ēt&ē, in which almost all the earlier romances are deficient. The incidents are numerous, novel, and improbable, and the conclusion is admirable; it is natural; it grows out of the subject, and is in the highest degree touching and pathetic," Schöll (Hist. Litt. Gr., vol. 6, p. 229) remarks, that "the romance of Heliodorus is well conceived, and wrought up with great power; the episodes are to the purpose, and the characters and manners of the persons skilfully sustained." —No one can doubt,
HELIOGABALUS.

observes Villermain, "that Heliodorus, when he wrote the work, was at least initiated in Christian sentiments. This is felt by a kind of moral purity which contrasts strongly with the habitual license of the Greek fables; and the style even, as the learned Commentators remark, contains many expressions familiar to the ecclesiastical writers. This style is pure, polished, symmetrical; and the language of love receives a character of delicacy and reserve, which is very rare among the writers of antiquity." It must not be disguised, however, that Huet, a courtier of Louis XIV., and the contemporary and admirer of Mademoiselle de Scudery, judged after the models of romance which were fashionable in his own century. Poetry, battles, captivities, all books whose tendency it might be to inflame the picture of the mind, no history of the character carried on with the development of the action. The incidents point to no particular era of society, although the learned in history may perceive, from the tone of sentiment throughout, that the struggle had commenced between the pure and lofty spirit of Christianity and the grossness of pagan idolatry. Egypt, as Villermain remarks, is neither ancient Egypt, nor the Egypt of the Ptolemaic kings. all books whose tendency it might be to inflame the Athenes free nor Athens conquered; in short, there is no individuality either in the places or persons; and the vague pictures of the French romances of the seventeenth century give scarcely a caricatured idea of the model from which they were drawn.—It may not be amiss to mention here an incident relative to the poet Racine and the work of Heliodorus which we have been considering. When Racine was at Port Royal learning Greek, his imagination almost smothered to death by the dry erudition of the pious fathers, he laid hold instinctively on the romance of Heliodorus, as the only prop by which he might be preserved for his high destiny, even then, perhaps, shadowed dimly forth in his youthful mind. A tale of love, however, surprised in the hands of a Christian boy, filled his instructors with horror, and the book was seized and thrown to the fire. Neither another nor another copy met the same fate; and poor Racine, thus excluded from the benefits of the common typographical art, printed the romance on his memory. A first love, wooed by stealth, and won in difficulty and danger, is always among the last to loose her hold on the affections; and Racine, in riper age, often fondly recurried to his forbidden studies at Port Royal. From early youth, his son tells us, he had conceived an extraordinary passion for this story. That there is no wonder of the wonderful art with which the fable is conducted.

—in the ecclesiastical history of Nicephorus Callistus, a story is told of Heliodorus, which, if true, would exhibit, on the part of the Thessalian church, somewhat of the fanatical spirit which in Scotland expelled Hume from the administration of the altar. Some young persons having fallen into peril through the reading of such works, it was ordered by the provincial council, the model of the altar of the Assumption, that there should be no rising generation to love, should be burned, and their authors, if ecclesiastics, deprived of their dignities. Heliodorus, rejecting the alternative which was offered him of suppressing his romance, lost his bishopric. This story, however, is nothing more than a mere romance itself, as Bayle has shown, by proving that the requisition to suppress it could neither have been given nor refused at a time when the work was spread over all Europe. (Hist. de la Litt., vols. 125, seqq.)—Various editions have been published of the romance of Heliodorus. The best is that of Coray, Paris, 1804, 2 vols. 8vo. The edition of Mitscherlich, Argent, 1798, 2 vols. 8vo, forming part of his Erotici Graeci, is not held in much estimation.

HELIOGABALUS, I. a deity among the Phoenicians. This deity, according to Capitoines (Vit. Marcell. c. 9) and Aurelius Victor, was the Sun. Lampridius, however (Vit. Helio., c. 1), fluctuates between the Sun and Jupiter, while Suidas (Vit. Caracall., c. 11) leaves it uncertain. The orthography of the name is also disputed, some writing it Elagabalus, others Elagabalus and Elagabalus. Gellius (25. 16, n. 218), makes the name of the sun-god of Emesa, and its etymology equivalent to the Hebrew Elah—Gebal, i. e., "Gebalitum Dea." (Consult, for other etymologies of the term, the remarks of Hamaker, Miscell. Phaen., p. 119, seqq.) Herodias gives us an accurate description of the form under which this deity was worshipped (6, 3, 10, seqq.); he also informs us that by this appellation the Sun was meant, and that the worship of the deity in question was not only by the Syrians, but that the native superstition and barbarian kings were accustomed to send splendid presents to his shrine. According to Herodian, the god Heligabalus was worshipped under the form of a large black stone, round below, and terminating above in a point; in other words, of a conical shape. This description is confirmed by the medals of Emesa, the principal seat of his worship, on which the conical stone is represented. So also, on the medals of Antoninus Pius, struck in the city of Emesa, which are of the same sort and on a cone. (Monn. Rec. de Méd., vol. 5, p. 227, seqq.) The same thing appears on medals of Caracalla (Id., p. 229, n. 608), and on one (n. 607), an eagle with expanded wings stands before a conical stone in the middle of a hexastyle temple.—II. M. Aurelius Antoninus, a Roman emperor. He was the grandson of Massa, sister to the Empress Julia, the wife of Septimius Severus. Aulus Antoninus, son of Soemias or Semaemias, the mother of the subject of this article, and Mammea, mother of Alexander Severus. The true name of Heligabalus was Varus Avitus Bassianus, and he was reported to have been the illegitimate son of Caracalla. He was born at Antioch, A.D. 204. Massa took care of his infancy, and placed him, when five years of age, in the temple of the Sun at Emesa, to be educated as a priest; and through her influence he was made, while yet a boy, highest priest of the Sun. That divinity was called in Syria Helagabal or Elagabal, whereas the young Varus assumed the name of Heligabalus or Elagabalus. After the death of Caracalla and the elevation of Macrinus, the latter having incurred by his severity the dislike of the soldiers, Massa availed herself of this feeling to induce the officers to rise in favour of her grandson, whom she presented to them as the son of the murdered Caracalla. Heligabalus, who was twenty-five years of age, was proclaimed emperor by the legion stationed at Emesa. Having put himself at their head, he was attacked by Macrinus, who at first had the advantage; but he and his mother Soemias, with great spirit, brought the soldiers again to the charge, and defeated Macrinus, who was overtaken in his flight and put to death, A.D. 218. Heligabalus, having entered Antioch, wrote a letter to the senate, professing to take for his model Caesar Augustus, and to be the restored M. Aurelius, and to Rome; and he also presumed that emperor's name. The senate acknowledged him, and he set out for Rome, but tarried several months on his way amid festivities and amusements, and at last stopped at Nicomedia for the winter. In the following year he arrived at Rome, and began a career of debauchery, extravagance, and cruelty, which lasted the remaining three years of his reign, and the disgusting details of which are given by Zonaras (Hist. XV., 25), and Dio Cassius. Some critics have imagined, especially from the shortness of his reign, that there must be some exaggeration in these accounts, for he could hardly have done, in so short a time, all the mischief that is attributed to him. That he was extremely dissolute, and totally unfit for reigning, is certain; and this is not to be wondered at, from his previous Eastern education, his extreme youth, the corrupt example of his mother, his
sudden elevation, and the general prodigality of the times. He surrounded himself with gladators, actors, and other base favourites, who made an unworthy use of their influence. He married several wives, among others a Vestal. The imperial palace became a scene of some of the most excessively licentious and monstrous constitutions. Heliopolis, being attached to the superstitions of the East, raised a temple on the Palantine Hill to the Syrian god whose name he bore, and plundered the temples of the Roman gods to enrich his own. He put to death many senators; he established a senate of women, under the presidency of his mother Soanis, which body decided all questions relative to female dresses, visits, precedences, amusements, &c. He wore his pontifical vest as high-priest of the Sun, which he professed on inscriptions. His grandson, Massa, seeing his folly, thought of concealing the Romans by associating with him, as Caesar, his younger cousin, Alexander Severus, who soon became a favourite with the people. Heliopolitanus, who had consented to the association, became afterward jealous of his cousin, and wished to deprive him of his honours, but he could not obtain the consent of the senate. His next measure was to spread the report of Alexander’s death, which was then an inexpensive instruction. And Heliopolitanus, having repaired to the camp to quell the mutiny, was murdered, together with his mother and favourites, and his body was thrown into the Tiber, A.D. 222. He was succeeded by Alexander Severus. Heliopolitanus was eighteen years of age at the time of his death, and had reigned three years, nine months, and four days. (Lamprid. Vit. Heliopolitan.—Herodian, 5, 3, seqq.—Dio Cassius, 78, 30, seqq.—Id., 79, 1, seqq.)

**Heliopolis**, a famous city of Egypt, situate a little to the east of the apex of the Delta, not far from modern Cairo. (Strab., 805.) In Hebrew it is styled On or Onn. (Well’s Sacred Geography, s. v.—Excurs., 560.—Compare the remarks of Cellarius, Geogr. Antiq., vol. 1, p. 802.) In the Septuagint it is called Heliopolitan (Heliopolis), or the city of the Sun. (Schlusner, Lex. Vit. Text., vol. 2, p. 50, ed. Glasc.—In Jeremiah, xlix., 13, “Beth Shemum,” i. e. Domus Sola.) Herodotus also mentions it by this name, and speaks of its inhabitants as being the wisest and most ingenious of all the Egyptians (2, 3.—Compare Nic. Damascenus, in Euseb., Prap. Evang., 9, 16). According to Berosus, this was the city of Moses. It was, in fact, a place of resort for all the Greeks who visited Egypt for instruction. Hither came Herodotus, Plato, Eudoxus, and others, and imbibed much of the learning which they afterward disseminated among their own countrymen. Plato, in particular, resided here three years. The city was built, according to Strabo (l. c.), on a long, artificial mound of earth, so as to be out of reach of the inundations of the Nile. It had an oracle of Apollo, and a famous temple of the Sun. In this temple was fed and adored the sacred ox Mnevis, as Apis was at Memphis. This city was taken with fire and sword by Cambyses, and its magazine of provisions was set on fire, and all that was afterward slain in it starved itself in a deserted state, and shorn of all its splendour. Heliopolis was famed also for its fountain of excellent water, which still remains, and gave rise to the subsequent Arabic name of the place, Ain Shems, or the fountain of the sun. The modern name is Matareia, or cool water. For some valuable remarks on the site of the ancient Heliopolis, in opposition to Larcher and Bryant, consult Clarke’s Travels, vol. 3, pref. &c., seqq., and p. 140, in notis. Larcher erroneously pretends that Heliopolis was situated within the Delta, and that Matareia stands on the site of an insignificant town of the same name, which has been confounded with the more ancient city. A solitary obelisk is all that remains at the present day of this once celebrated place. Other monuments, however, exist no doubt around this pillar, concealed only by a thin superstructure of soil. For a description of this obelisk, consult the work of the learned traveller just mentioned, vol. 5, p. 143.—II. A celebrated city of Syria, southwest of Emesa, on the opposite side of the Orontes. Its Gre- cian name, Heliopolis (Heliopaís), "City of the Sun," is one who occupied a main- beck, which appellation the ruins at the present day retain. Heliopolis was famed for its temple of the Sun, erected by Antoninus Pius (Malala, Chron., 11, p. 119), and the ruins of this celebrated pile still attest its former magnificence. Venus was also revered in this city, and its maidens were therefore said to be the fairest in the land. (Expositio Mundi, &c., Ge- ner., p. 14.)

**Helius (Ἠλίως),** the Greek name of the Sun or Apollo.

**Hellenicus, a Greek historian, a native of Myti- lene, who flourished about 460 B.C. He wrote an ac- count of various countries, both Grecian and Bar- barian, in which he vivified himself of the labours of He- cateus and Hippys. Various productions of his are referred to in references to the history of the Creta- nians.**

**Heliopolis, one given to the mouth of the Maease in Germany. (Plin., 4, 15.)

**Helius (Ἡλιος),** the Greek name of the Sun or Apollo.

**Hellenicus, a Greek historian, a native of Myti- lene, who flourished about 460 B.C. HELLAS.

Theseus, of Greece, and his Pelasgic allies, also the Thracian tribes, and Thucydides, a historian, whose age is disputed, but of whom we may safely affirm that he wrote about the time of the Peloponnesian war, is under Hellas all the country situated south of the Ambracian gulf and the Peneus. (Peripl., p. 12, ed. 26.) Herodotus extends its limits still farther north, by taking in Thesprotia (2, 56), or, at least, that part of it which is south of the river Acheron (8, 47). But it is more usual to exclude Epirus from Graecia Propria, and to place its northwestern extremity at Ambraic, on the Ionian Sea, while Mount Hymettus, near the mouth of the Peneus, was looked upon as forming its boundary on the opposite side. This coincides with the statement of Scylax, and also with that of Dicaearchus in his descriptions of Greece (v. 31, seqq.). The name Graecia, whence that of Greece has descended unto us, was given to this country by the Romans. It comes from the Greci, one of the ancient tribes of Epirus (Aristot., Meteor., 1, 14), who never became of any historical importance, but whose name must at some period have been extensively spread on the western coast, since the inhabitants of Italy appear to have known the country at first under this name.

1. History of Greece from the earliest times to the Trojan War.

The people whom we call Greeks (the Hellenes) were not the earliest inhabitants of the country. Among the names of the many tribes which are said to have occupied the land previous to the Hellenes, the most celebrated is that of the Pelasges, who appear to have been driven from their country by some, or perhaps all, of the Ionian tribes, from whom a considerable part of the Greek population was probably descended. The Caunones, Leleges, and other barbarous races, who also inhabited Greece, are all regarded by a modern writer (Thirlwall, History of Greece, vol. 1, p. 32-61) as parts of the Pelasgic nation. He remarks, "that the name Pelasgians was a general one, like that of Saxons, Franks, or Alemanni; and that each of the Pelasgic tribes had also a peculiar name which we know not from whom the Hellenes are represented as descended from Helen, who had three sons, Dorus, Xuthus, and Aeolus. Acheus and Ion are represented as the sons of Xuthus; and from these four, Doris, Aeolus, Acheus, and Ion, the Dorians, Aelians, Achaeans, and Ionians were descended, who formed the four tribes into which the Hellenic nation was for many centuries divided, and who were distinguished from each other by many peculiarities in language and institutions. At the same time that the Hellenic race was spreading itself over the whole land, numerous colonies from the East are said to have settled in Greece, and to their influence many writers have attributed the civilization of the inhabitants. Thus we read of Egyptian colonies in Argos and Attica, of a Phoenician colony at Thesbes in Boiotia, and of a Mycean colony led by Pelops, from whom the southern part of Greece derived its name of Peloponnesus. The very existence of these colonies has been doubted by some writers; but, though the evidence of each one individually is perhaps not sufficient to satisfy a critical inquirer, yet the uniform tradition of the Greeks authorizes us in the belief, that Greece in early times from the East received a rude civilization; a supposition which is not in itself improbable, considering the proximity of the Asiatic coast. The time which elapsed from the appearance of the Hellenes in Thessaly to the siege of Troy is usually known by the name of the Heroic Age. Whatever opinion we may form of the Homeric poems, it can hardly be doubted that they present a correct picture of the manners and customs of the age in which the poet lived, which, in all probability, differed little from the manners and customs of the Heroic Age. The state of society described by Homer very much resembled that which existed in Europe during the feudal ages. No great power had yet arisen in Greece; it was divided into a number of small states, governed by hereditary chiefs, whose power was limited by a martial aristocracy. Piracy was an honourable occupation, and war the delight of noble souls. Thucydides informs us (1, 4), that the commencement of Greek civilization is to be dated from the reign of Minos of Crete, who acquired a naval power and cleared the Aegean Sea of pirates. Among the most celebrated heroes of this period were Bellerophon and Perseus, whose adventures were laid in the East; Theseus, the king of Athens, and Hercules. Tradition also preserved the account of expeditions undertaken by several chiefs united together, such as that of the Argonauts, of the Seven against Thebes, and of the Siege of Troy, B.C. 1184.

2. From the Siege of Troy to the Commencement of the Persian wars, B.C. 500.

We learn from Thucydides (1, 12), that the population of Greece was in a very unsettled state for some time after the Trojan war. Of the various migrations which appear to have taken place, the most important of their consequences were those of the Beotians from Thessaly into the Peloponnesus, and of the Dorians into Peloponnesus, the former in the sixtieth and the latter in the eightieth year after the Trojan war. About the same period the western coast of Asia Minor was colonized by the Greeks. The ancient inhabitants of Beotia, who had been driven out of their homes by the invasion of the Beotians, together with some Aelians, whence it has acquired the name of the Aelian migration, left Boitia B.C. 1024, and settled in Lydia on the coast of Asia Minor. They were followed by the Ionians in B.C. 1040, who, having been driven from their abode on the Corinthian Gulf, had taken refuge in Attica, whence they emigrated to Asia Minor and settled on the Lydian coast. The southwestern part of the coast of Asia Minor was also colonized about the same period by Dorians. The number of Greek colonies, considering the extent of the mother country, was very great; and the readiness with which the Greeks left their homes to settle in foreign parts forms a characteristic feature in their national character. In the seventh century before Christ the Greek colonies took another direction: Cyrene, in Africa, was founded by the inhabitants of Thera, and the coasts of Sicily and the southern part of Italy became studied with so many Greek cities, that it acquired the surname of the Greek in the seventh century B.C. Greece which attained the greatest historical celebrity were Sparta and Athens. The power of Athens was of later growth; but Sparta, had, from the time of the Dorian conquest, taken the lead among the Peloponnesian states, a position which she maintained by the conquest of the fertile country of Messenia, B.C. 688. Her superiority was probably owing to the nature of her political institutions, which had been fixed on a firm basis by her celebrated legislator Lycurgus, B.C. 884. At the head of the polity were two hereditary chiefs, but their power was greatly lim-
The command of Cimon, carried on the war vigorously, defeated the Persian fleets, and plundered the maritime provinces of the Persian empire. During this period the power of Athens rapidly increased; she asserted a succession of distinguished statesmen, Thucydides, Charles, and Thrasylus. Cimon himself contributed to the advancement of her power, though differing in their political views. Her maritime greatness was founded by Themistocles, her revenues were increased by Pericles, and her general prosperity, in connexion with other causes, tended to produce a greater degree of refinement than existed in any other part of Greece.

Literature was cultivated, and the art of architecture and sculpture, which were employed to adorn the ancient states, were carried to a degree of excellence that has never since been surpassed. While Athens was advancing in power, Sparta had to maintain a war against the Messenians, who again revolted, and were joined by a great number of the Spartan slaves (B.C. 464-455). But, though Sparta made no efforts during this period to restrain the Athenian power, it was not because she wanted the will, but the means. These, however, were soon furnished by the Athenians themselves. The Spartans endeavoured to throw off the Athenian dominion, entreated the assistance of Sparta, and thus, in conjunction with other causes, arose the war between Sparta and Athens, which lasted for twenty-seven years (B.C. 431-404), and is usually known as the Peloponnesian war. It terminated by again placing Sparta at the head of the Greek states. Soon after the conclusion of this war, Sparta engaged in a contest with the Persian empire, which lasted from B.C. 400 to 394. The splendid successes which Agesilaus, the Spartan king, obtained over the Persian troops in Asia Minor, and the manifest weakness of the Persian empire, which had been already shown by the retreat of the ten thousand Greeks from the heart of the Persian empire, appear to have induced Agesilaus to entertain the design of overthrowing the Persian monarchy; but he was obliged to return to his native country to defend it against a powerful confederacy, which had been formed by the Corinthians and Thessalians, for the purpose of throwing off the Spartan dominion. The confederates were not, however, successful in their attempt; and the Spartan supremacy was again secured for a brief period by a general peace, made B.C. 357, usually known by the name of the peace of Antalcidas.

Ten years afterward the rupture between Thebes and Sparta began, which led to a general war in Greece, and for a short time placed Thebes at the head of the Greek states. B.C. 362, Thebes was principally owing to the wisdom and valour of two of her citizens, Pelopidas and Epaminondas. After the death of Epaminondas at the battle of Mantinea, B.C. 362, Thebes again sunk to its former obscurity. The Spartan supremacy was however destroyed by this war, and her power still more humbled by the restoration of Messenia to independence, B.C. 369.

From this time Greece was divided into three parts. Macedon Greece remained without any ruling power. It is only necessary here to mention the part which Philip took in the sacred war, which lasted ten years (B.C. 356-346), in which he appeared as the defender of the Amphictyonic council, and which terminated by the conquest of the Phocians. The Athenians, urged on by Demosthenes, made an
liance with the Thicans for the purpose of resisting Philip; but their defeat at Chaonnes, B.C. 388, secured for the Macedonians the supremacy of Greece. In the same year a congress of Grecian states was held at Corinth, in which Philip was chosen generalissimo of the Greeks in a projected war against the Persian empire; but his assassination in B.C. 336 caused this enterprise to devolve on his son Alexander.

4. From the Accession of Alexander the Great to the Roman Conquest, B.C. 146.

The conquests of Alexander extended the Grecian influence over the greater part of Asia west of the Indus. After his death the dominion of the East was contested by his generals, and two powerful empires were permanently established: that of the Ptolemies in Egypt and the Seleucids in Syria. The dominions of the early Syrian kings embraced the greater part of western Asia; but their empire was soon divided into various independent kingdoms, such as that of Bactria, Parthia, etc., in all of which the Greek language was spoken, not merely at court, but to a considerable extent in the cities. From the death of Alexander to the Roman conquest, Macedonia remained the ruling power in Greece. The Aetolian and Achæan leagues were formed, the former B.C. 294, the latter B.C. 291, for the purpose of resisting the Macedonian kings. Macedonia was conquered by the Romans B.C. 177, 167, and when the son of Alexander fell, however, it was merely nominal; they only exchanged the rule of the Macedonian kings for that of the Roman people; and in B.C. 146 Greece was reduced to the form of a Roman province, called Achæia, though certain cities, such as Athens, Delphi, &c., were allowed to have the rank of free towns. The history of Greece, from this period, forms part of the Roman empire. It was overrun by the Goths in A.D. 235, and was visited by Huns and Vandals after being occupied by the Crusaders and Venetians, at last fallen into the hands of the Turks, on the conquest of Constantinople; from whom, with the exception of Macedonia, Thessaly, and Epirus, it is now again liberated. (Encycl. Us. Knowl., vol. 12, p. 426, seq.)

Helle, a daughter of Athamas and Nephele, sister to Heracles, and daughter of Phrixus, in order to avoid the cruel persecution of their stepmother Io- nida, fled from Thessaly on the back of a golden fleeced ram, which transported them through the air. They proceeded safely till they came to the sea between the promontory of Sigeanum and the Chersonese, into which Helle fell, and it was named her Helle'spontus (Helle's Sea). Phrixus proceeded on his way to Colchis. (Vid. Athamas, Argonauta, Phrixus.)

The tomb of Helle was placed, according to Herodotus, on the shores of the Chersonese, near Cardia. (Herod., 7, 58.)

Hellen, the fabled son of Deucalion and Pyrrha, and progenitor of the Hellenic race. (Vid. Hellenes, § 1, History of Greece, from the earliest times to the Trojan war.)

Hellenes (Ἑλλήνες), the general name of the Grecian race. It was first borne by the tribes that came in from Illyria and the Greek states early period, and eventually spread themselves over the whole of Greece. Their original seat was, according to Aristotle (Meteor., 1, 14), near Dodona, in Epirus; but they first appeared in the south of Thessaly, about B.C. 1384, according to the common chronology. (Vid. Hellenes, § 1, History of Greece, from the earliest times to the Trojan war.)

Helle'spontus, the modern Dardanelles, a narrow strait between Asia and Europe, near the Propontis, which received its name, it is said, from Helle, who was drowned there in her voyage to Colchis. (Vid. Helle.) Its modern name of Dardanelles is supposed to come from the ancient Dardania in its vicinity. Homer's epithet of παρίσις, "broad," applied to so narrow a strait (II., 17, 46; Od., 24, 136, chyl., Pers., 880), has given rise to much discussion, and is one of those points which have a bearing on the long-agitated question respecting the site of Troy. Hobhouse undertakes to explain the seeming inconsistency of Homer's term, by showing that the Hellespont should be considered as extending down to the promontory of Lectum, the northern boundary of Asia, and that the whole line of the coast from Abydos, was considered by Strabo as consisting of the shores of the Hellespont, not of the Ægean. (Journey, Let. 42.—Vol. 2, p. 206, seqq, Am. ed.) The same writer observes, with regard to the breadth of the Hellespont, that it nowhere seems to be less than a mile across; and yet the ancient measurements give only seven stadia, or eight hundred and seventy-five paces. Walpole, on the other hand, as cited by Clarke (Travel., vol. 3, p. 91, in notis, Eng. ed.), assigns to the epithet παρίσις the meaning of "salt," or "brackish," referring, in support of this conjecture, to Aristotle (Meteorology, 2, 3.—Op., ed. DufaU, vol. 1, p. 556, D. et E.), who uses it three times in this sense, and to Hesychius. (Compare Herod., 2, 108, and Schweigh., ad loc.) This, however, is at best a very forced explanation. Homer appears to consider the Hellespont rather as a mighty river than a widening arm of the sea; and it rather," he observes, "as the general term, more especially if we take into the connection the analogous epithets of ἀλύφος ("rapidly-floating"), and ἀντίφων ("bawdless"), which are else where applied by him to the same Hellespont. (Il., 2, 845.—II., 24, 545.)

Casaubon, in his commentary on Athenæus, adduces the passage quoted above above by Walpole, together with one or two others, likewise from Aristotle, in favour of παρίσις meaning "salt," as applied by the poet to a river, whose Blomfield quaintly designates as " censor guidam semiductus," seeks to advocate the same opinion. It has few if any advocates, however, at the present day. (Consult Blomf., Gloss. ad Echol., Pers., 880.)

Some scholars suppose, that when Homer speaks of the "broad Hellespont," he actually means the northern part of the Ægean. Thus, Heyne observes, "Homer always places the camp the Hellespont, in the more extended sense of that term as meaning the northern part of the Ægean Sea (Il., 18, 150; 24, 340.—Od., 24, 82.—II., 7, 86, &c.), and hence should be derived the explanation of the epithets παρίσις and ἀντίφων." (Beschreib, der Eb. von Troya, p. 250.)

Whether the denomination Hellespont was derived from Ελλάς, Greece at large (Pind., Pyth., 7, 7—Id. ibid., 10, 29), or from Ελλάς, the province or city (Strab., 431), or from Helle, according to the popular legend, cannot now be ascertained.—Stephanus of Byzantium (p. 232, ed. Berkel) says the earlier name of the Hellespont was the Borysthenes (Βορυσθένης). (Compare Ritter, Vorhalle, p. 174.) Perhaps a careful investigation of the subject would lead to the conclusion, that Homer gives the name of Hellespont to the whole Propontis. (Classical Journal, vol. 16, p. 64.)—The Hellespont is celebrated for the love and death of Leuctra. (See remarks under the latter article.) It is famed also for the bridge of boats which Xerxes built over it when he invaded Greece. (Vid. remarks under the article Abydos, I.)

Hellopedia, a district of Euboea, in which Histiaeus was situated. (Strab., 445.—Compare Herodot., 8, 23.)

Helôcôs, 1. A river of Sicily, near the southern extremity of the island, now the Alcôs. It is mentioned by several authors, not only on account of the remarkably fertile country through which it flows. (Verg., En., 3, 659.—Orid. Fast., 4, 487, &c.) Silius Italicus (14, 270) gives it the epithet of clamoros.
referring either to the noise of its waters in the numerous caverns found along its banks, or to the laments occasioned by its inhabitants and their neighbors. (Mannert, Geogr., vol. 10, pt. 2, p. 340.)—II. A town of Sicily, near the mouth of the river Helorus. (Steph. Byz., s. v. "Eliwrigs"). Pliny speaks of it, however, as a mere castle or fortified post, with a good fishery attached to it. But it was, in truth, a very ancient city, and very probably a place of some importance before the arrival of the Greeks. The adjacent country was very fertile and beautiful. Hence Òvid (l. c.) speaks of the "Eliwrigs" as "a surprising place, and a very fine plain." (Helors, 19) of the "Helors, the Helorians."

HELOTES. (Elíl'oras), and HELOTES (Elíl'orcs), the Helots or bondsmen of the Spartans. The common ancestor of both is "Helors," (Dor. Helors, 5, p. 90, Etruscan). —Vol. 2, p. 33, German work), of the origin of this class is, that the inhabitants of the maritime town of Helos were reduced by Sparta to this state of degradation, after an insurrection against the Dorians already established in power. This explanation, however, rests merely on an etymology, and that by no means probable, since such a Gentile name as "Elíl'oras" (which seems to be the most ancient form) cannot by any method of formation have been derived from "Elíl'oras." The word "Elíl'oras" is probably a derivative from "Elíl'ora in a passive sense, and consequently means "a prisoner." This derivation was known in ancient times. (Compare Schol., Plat., Alcib., 1, p. 78, and Lennec, Ety- mol., p. 257.) Perhaps the word signifies those who were taken after having resisted to the uttermost. It appears to me, however, that they were an aboriginal race, which was subdued at a very early period, and which were never distinctly passed over as slaves to the Doric conquerors. In speaking of the condition of the Helots, we will consider their political rights and their personal treatment under different heads, though in fact the two subjects are very nearly connected.

The first were doubtless exactly defined by law and custom, though the expressions made use of by ancient authors are frequently vague and ambiguous. "They were," says Ephorus (esp. Strab., 366), "in a certain point of view, public slaves. Their possessor could neither liberate them, nor sell them beyond the borders."

From this it is evident that they were considered as belonging to the exactions of the land, and that, when a certain degree of tithe was possessed by, or attributed to, them, they were placed to individuals, reserving to itself the power of enfranchising them. "But to sell them out of the country was not in the power even of the state; and, to the best of our knowledge, such an event never occurred. It is, upon the whole, most probable, that individuals had no power to sell them at all, as they belonged chiefly to the landed property, and this was understood by the Spartans. In these Siennic freeholdings of their own, and particular services and payments were prescribed to them. They paid as rent a fixed measure of corn; not, however, like the Periegi, to the state, but to their masters. As this quantity had been definitively settled at a very early period (to raise the amount being forbidden under heavy impositions), the Helots were the persons who profited by a good, and lost by a bad, harvest, which must have been to them an encouragement to industry and good husbandry; a motive which would have been wanting if the profit and loss had merely affected the landlords. And by this means, as is proved by the accounts respecting the Spartan agriculture, a careful management of the cultivation of the soil was kept up. By means of the rich produce of the lands, and in part plunder obtained in war, they collected a considerable property, to the attainment of which almost every access was closed to the Spartans. The cultivation of the land, however, was not only the duty of the Helots, but also attended upon their masters at the public meals, who, according to the Lacedaemonian principle of a community of property, mutually lent them to one another. (Xen., Rep. Lac., 6, 3.—Aristot., Pol., 2, 2, 5.) A large number of them was also employed by the state in public works. In the field the Helots never served as Hoplites, except in extraordinary cases; and then it was the general practice afterward to give them their liberty. (Compare Thucyd., 7, 19, and 80.) On other occasions they attended the regular army as light-armed troops (ψιλοί); and that their numbers were very considerable may be seen from the battle of Platea, in which 5000 Spartans were attended by 35,000 Helots. Although they did not share the honour of the heavy-armed soldiers, they were in turn exposed to a less degree of danger. For, while the former, in close rank, received the onset of the enemy; the latter, who were only with their sling and javelin, were in a moment either before or behind the ranks, as Tyrtaeus accurately describes the relative duties of the light-armed soldier (χύμιος) and the Hoplite. Sparta, in her better days, is never recorded to have unmercifully sacrificed the lives of her Helots. A certain number of them was allotted to each Spartan (Herodot., 9, 98.—Thucy- dyd., 3, 8); at the battle of Platea this number was 10. Those who were assigned to a single master were probably called ἑπτάγερμος. Of these, however, one in particular was the servant (δουλός) of his master, as in the story of the blind Spartan, who was conducted by his Helot into the thickest of the battle of Thermopylae, and, while the latter fled, fell with the other heroes. (Herod., 7, 229.) It appears that the other Helots were in the field placed more immediately under the command of the king than the rest. Colophonians wrote that the Helots composed the large mass of the sailors (Xen., Hist. Gr., 7, 1, 13), in which service at Athens the inferior citizens and slaves were employed. It is a matter of much greater difficulty to form a clear notion of the treatment of the Helots, and of their manner of life; for the rhetorical spirit with which later historians have embellished their philanthropic views, joined to our own ignorance, has been productive of much confusion and misconception. Myron of Priene, in his romance
on the Messenian war, drew a very dark picture of Sparta, and endeavoured at the end torouse the feelings of his readers by a description of the life of the Helots. "The Helots," says he, (ap. Athen., 14, p. 657, D.), "perform for the Spartans every ignominious service. They are compelled to wear a cap of dog's skin (κυνηθη), to have a covering of sheep's skin (διπέθη), and are severely beaten every year without having committed any fault, in order that they may never forget they are slaves. In addition to this, those among them who, either by their stature or the conditions under which conditions of a slave, are condemned to death, and the masters who do not destroy the most manly of them are liable to punishment." The partiality and ignorance of this writer are evident from his very first statement. The Helots wore the leathern cap with a broad band, and the covering of sheep's skin, simply because it was the original dress of the natives, which, moreover, the Arcadians had retained from ancient usage. (Sophoedoes. Inachus ap. Schol., Aristoph., ad 1293—Valek, ad Theorit. Adonim., p. 345.) Laertes, the father of Ulysses, when he assumed the character of a peasant, is also represented as wearing a cap of goat's skin. (Od., 24, 230.) The truth is, that the ancients made a distinction between town and country costume. Hence, when the tyrants of Sicily wished to accentuate the unemployed people, whose numbers they dreaded, to a country life, they forced them to wear the country costume. It is evident, therefore, that Heraclides, Polybius (7, 4, 68.), Thus also Thoegnus describes the countrymen of Megara as clothed with dressed skins, and dwelling around the town like frightened deer. The diphthera of the Helots, therefore, signified nothing more humiliating and degrading than their employment in agricultural labour. Now, since Myron purposely misrepresented this circumstance, it is very probable that there are no ancient sources in which can be found such specific and stringent misrepresentations of this political state, which was unknown to the later Greeks, and particularly to writers, have been uncommon. Plutarch, for example, relates that the Helots were compelled to intoxicate themselves, and to perform indelent dances, as a warning to the Spartan youth; but common sense is opposed to so absurd a mode of education. Is it possible that the Spartans should have so degraded the morals on the forefathers of the Spartan people? Female Helots also discharged the office of nurse in the royal palaces, and doubtless obtained all the affection with which the attendants of early youth were honoured in ancient times. It is, however, certain that the Doric laws did not bind servants to strict temperance; and hence examples of drunkenness among them might have served as means of recommending sobriety. It was also an established regulation, that the national songs and dances of Sparta were forbidden to the Helots, who, on the other hand, had some extravagant and lascivious dances peculiar to themselves, which may have given rise to the above report. But are we not labouring in vain to soften the bad impression of Myron's account, since the fearful word crypteia is of itself sufficient to show the unhappy fate of the Helots and the cruelty of their masters? Myron's word is generally understood a chase of the Helots, annually undertaken at a fixed time by the youth of Sparta, who either assassinated them by night, or massacred them formally in open day, in order to lessen their numbers and weaken their power. Isocrates speaks of this institution in a very confused manner, and from mere report. Aristotle, however, as well as Heraclides of Pontus, attribute it to Lycurgus, and represent it as a war which the Ephori themselves, which has been generally understood a massacre against the Helots. Thus it was a regularly legalized massacre, and the more barbarous as its periodical renewal could be foreseen by its unhappy victims. And yet were not these Helots, who in many districts lived entirely alone, united by despair for the sake of common protection, and did they not, within a year or two, exterminate a whole people throughout the whole of Laconia! Such are the inextricable difficulties in which we are involved by giving credit to the received accounts: the solution of which is, in my opinion, to be found in the speech of Megillus the Spartan, in the laws of Plato, who is there celebrating the manner of inuring their countrymen to hardships. "There is also among us," he says, "what is called the crypteia, which is annually repeated among well-to-do families of Laconia. It consists in going barefoot on stones, in enduring the privations of the camp, performing menial offices without a servant, and wandering night and day throughout the whole country." The same is more clearly expressed in another passage (6, p. 763, B.), where the philosopher settles, that in his state sixty agronomi or phylarchs should each choose twelve young men from the age of twenty-five to thirty, and send them as guards in succession through the several districts, in order to inspect the fortresses, roads, and public buildings in the country; for which purpose they should have power to make free use of the slaves. During this time they were to live sparingly, to minister to their own wants, and range through the whole country in arms without intermission, both in winter and summer. These persons were to be called πρωτοτροποι or ἀγορασμοὶ. Can it be supposed that Plato, who left an account of crypteia, if it signified a secret murder of the Helots, or, rather, if there were not an exact agreement in essentials between the institution which he proposed and that in existence at Sparta, although the latter was perhaps one of greater hardship and severity? The youth of Sparta were also sent out under certain officers, partly for the purpose of training them to hardships, partly of inspecting the territories of Sparta. The although they were provided for, for the purpose of insuring a considerable number, and who kept, we may suppose, a strict watch upon the Helots, who, living by themselves, and entirely separated from their masters, must have been for that reason more formidable to Sparta. We must allow that oppression and severity were not sufficiently provided against; only the aim of the custom was wholly different; though perhaps it was reckoned by Thucydides (4, 80) among those institutions which, from necessity and fear, might be necessary, though keeping a watch over the Helots. It is hardly necessary to remark, that this established institution of the crypteia was in no way connected with those measures to which Sparta thought herself compelled in hazardous circumstances to resort. Thucydides leaves us to guess the fate of the 2000 Helots, who, after having been destined for the field, suddenly disappeared. It was the curse of this bondage (which Plato terms the hardest in Greece), that the slaves abandoned their masters when they stood in greatest need of their assistance; and hence the Spartans were even compelled to stipulate in treaties for aid against their own subjects. (Thucyd., 1, 118.—Id., 5, 14.—Compare Aristot., Pol., 2, 6, 2.)—A more favourable side of the Spartan system of bondage is, that a legal way to liberty and citizenship stood open to the Helots. The many intermediate steps seem to prove the existence of a regular mode of transition from the one rank to the other. The Helots who were esteemed worthy of an especial confidence were called ἄφιγοι; the ἀπόστρατοι were probably released from all service. The δισσοαυτέραι, who served in the fleets, resembled probably the freedmen of Attica, who were called the outdwellers (οἱ ὄξικοι οἰκονόμαι). When they received their liberty, they also obtained permission to dwell where they wished (Thucyd., 6, 34.—Id., 4, 80), and probably, at the same time, a portion of land was granted them without the lot of their former masters. After they had been in possession of liberty for some
time, they appear to have been called Neodamotes (Thucyd., i, 58), the number of whom was calculated at 10,000 men on the eve of the campaign by the Spartan citizen. (Plut., Vit. Ages., 6.) The Mothones or Mothaces were Helots, who, being brought together with the young Spartans, obtained freedom without the rights of citizenship. (Athenaenus, 6, p. 271 E.)—The number of the Helots may be determined with sufficient accuracy from the account of the army at Plataea. We find that there were present in this battle 5000 Spartans, 35,000 Helots, and 10,000 Perioeci. The whole number of Spartans that were numbered on another occasion to 8000, which, according to the same proportion, would give 56,000 for the number of Helots capable of bearing arms, and for the whole population about 224,000. If, then, the state of Sparta possessed 9000Lots (κληρον) there were twenty male Helots to each, and there remained 44,000 for the service of the state and of individuals. (Müller, Dorians, vol. 2, p. 30, seqq., Eng. trans.—vol. 2, p. 33, German work.)

Helmholtz, a nation of Gaul, conquered by Caesar. Their country is generally supposed to have answered to modern Switzerland; but ancient Helvetia was of less extent than modern Switzerland, being bounded on the north by the Rhenus and Lacus Brigantinus, or Lake of Constance; on the south by the Rhodanus and the Lacus Lemnus, or Lake of Geneva; and on the west by Mons Jura. (Cas., B. G., 1, &c.—Tactit., Hist., 1, 6, 108.)

Herd, a people of Gaul, north of the Aecocomici, on the western bank of the Rhodanus. The mountain range of Cebenna (Cesennus) separated them from the Arverni. Their territory answers to what is now the Diocese of Vienne, and some traces of their capital, Alba Augusta, exist at the present day in the village of Alps. (Cas., B. G., 7, 7, seqq.—Lemaire, Ind. Geogr., ad Cas., s. v.)

Heneti, a people of Phrygia, Paphlagonia, along the coast of the Aegean Sea, of whom there was an old tradition that they had migrated to the north of Italy, near the mouths of the Padus or Po, where they became the forefathers of the Veneti. (Scymn., Ch. v. 388, seqq.—Strab., 543.—Id., 608.) Virgil makes Antenor have led the colony from Asia, after the destruction of Troy, and to have settled near the little river Timavus, which flows into the head waters of the Adriatic. The whole legend, however, is purely fabulous. The Helveti, who invaded Italy in 759 b.c., and the Helvetic country were of northern, perhaps German, descent. (Vid. Veneti.) The whole question respecting the Heneti is discussed by Heyne. (Excurs., ad En., 1, 242.—Excurs., vii, de Timav. finis.)

Henciochi, a people of Asiaic Sarmatia, near Colchis, who were said to have been descended from Amphytius and Telchius, the charioteers (ἱππόχωροι) of Castor and Pollux. (Mel. 1, 19.—Id., 6, 5.—Strab., 490.) This account is, of course, a mere fable, arising out of some accidental resemblance between the true name of this people and the Greek term ἱππόχωροι. The Henchici are mentioned by the ancient writers as bold and skilful pirates. (Plin., 6, 4.—Mel. l.c.—Vell. Patr., 2, 40.—Amm. Marcell., 22, 15.—Solin., c. 15.)

Heplestia, I. one of the two principal towns in the island of Lemnos, the other being Myrina. (Hecrod., 7, 140.—Steph. Byz., s. v. Ἡπελεστια.)—II. A festival at Athens, celebrated annually, in honour of Vulcan (Ἡπελεστιας). On this occasion there was a race with torches, called ἀγῶν λαμπρατοχόρος, from the altar of Prometheus in the Academia to the city gates. The competitors were young men, three in number, one of whom being chosen by lot to take his turn first, took a lighten torch in his hand and began his course. If the torch was extinguished before he arrived at the goal, he made way for the second competitor, and gave up the torch to him. If the second in like manner failed, he made way for the third. If none performed the race, a new race on the part of new competitors was held. If one of the competitors, through fear of extinguishing the torch by too violent a motion, relaxed his pace, the spectators used to strike him with the palms of their hands, in order to urge him on. (Passan., 1, 30.—Schol. ad Aristoph., Ran., 131.) There are several beautiful allusions to this torch-race in the ancient writers, who usually compare it to the changing scenes and vicissitudes of life, the generations of men succeeding one another, and the passage from life to death. The most striking of these occurs in Lucretius (2, 75, seqq.—Compare Plato, Leg., 6, p. 776.).

Heplestides, a name applied to the Lipari Islands, from the Volcanic character of the group. The appellation is a Greek one, and comes from Ἡπελεστις (Hepelustes), the Greek name for Vulcan, the god of fire. (Plin., 3, 9.—Vid. Lipara, Streugny, and Eœlin Insula.)

Hephestion, I. a grammarian of Alexandria, one of the preceptors of the Emperor Verus (Caps., Vit. Ver., c. 2), and who consequently flourished about the middle of the second century. He has left us a Treatise on Greek metres, entitled Ἐγκυρισμὸν περὶ μέτρων, containing a large portion of all that we are acquainted with on this subject. The best edition is that of Gaisford, Oxon., 1810, 8vo. The English edit. has just appeared, it is the Chrystomastion of Proclus.—II. The name of Thebais, whose arms are uncertain. He wrote on astrological subjects. We have some parts of a work of his on the names and powers of the signs of the Zodiac (Ἀπολογεματικά περὶ τῶν ἵππων ὁμολογίας καὶ νόμων). We have also some hexameters by him on the signs under which certain countries or certain cities are situated. They are part of a work entitled Περὶ τῶν κατάρρηων. The fragments on the signs of the zodiac are given by Camerarius in his astrological works. (M. T. Cod. M.S. Gr. Bibl. Matrixt., vol. 1, p. 244. (Schöll, Hist. Lit. Gr., vol. 7, p. 47, seqq.—) III. A native of Macedonia, and intimate friend of Alexander the Great. He accompanied the latter in his eastern expedition, and held an important command under him. Alexander, in speaking of the intimacy that subsisted between them, used to say that Craterus was the friend of the king, but Hephestion the friend of Alexander. After the succession of faithful and ardent services, Hephestion was seized with a fever at Ecbatana, B.C. 324, and died on the seventh day of his illness. His malady has been ascribed by some writers to excessive drinking; but the hardships which he had undergone only a short time previous, and the continual change of climate, would be sufficient of themselves to break down his strength. Alexander was presiding at the games on the seventh day of Hephestion's illness, and the stadium was full of spectators, when a messenger brought intelligence that Hephestion's malady had assumed a very alarming character. The monarch hurried away, but his friend was dead before he arrived. The following passage from Arrian affords some curious information on this subject, and shows also from what a mass of contradictory matter the historian had to select his facts. —Various writers have given a second account of the occasion on which the family of Hephestion's death. All agree that it was excessive; but his actions are differently described, as the writers were biased by affection or hostility to Hephestion, or even to Alexander. Some, who have described his conduct as frantic and outrageous, regard all his extravagant deeds and words on the loss of his dearest friend as honourable to his feelings, while others deem them degrading, and unworthy of a king and of Alexander. Some write, that for the remainder of that day he lay lamenting upon the body of his friend, which he would not quit until he was...
Hercules, however, again arose from its ruins, and became a flourishing city under the Ætolians, who sometimes held their general council within its walls. (Livy, 25, 5.) It was taken by the Roman consul, Acius Glabrio, after a long and obstinate siege. (Livy, 37, 24.)

2. In Italy, Gaul, &c.

VII. A city of Lucania in Italy, and situate between the Aciria and Siris. It was founded by the Tarontini after the destruction of the ancient city of Siris, which stood at the mouth of the latter river (B.C. 428). This city is rendered remarkable in history, as having been the seat of the general council of the Greek states. Antiquaries seem agreed in fixing its site at Policoro. (Strabo, 263.—Diod. Sic., 12, 36.)—VIII. A city of Campania, more commonly known by the name of Herculanum.—IX. Caccabana, a city on the confines of Italy and Gaul, in Narbonensis Secunda. It was situated on the coast, to the south of Forum Julii.—X. Minos, a city of Sicily on the southern coast, northeast of Agrigentum, and at a distance of forty miles from the town of Hecale. (Ptol.)—XI. Heraclea was founded by Minos when he pursued Dedalus hither, and was subsequently called Heraclea from Hercules, after his victory over Erýx: so at least said the fables of the day. Some authorities make the original name to have been Macara, and Minos to have been not the founder, but the conqueror of the place. (Melas, 2, 7, vol. 34, 35.—Cic. de Jur. Sic., c. 50.—Polib., 1, 25.—Diod. Sic., 16, 11.) Among the ruins of the present day stands a tower called Torre de Capo Bianco, a portion of which fell recently into the sea.

3. In Asia, Egypt, &c.

XI. Pontica (Πόντικα), a city on the coast of Bithynia, about twelve stadia from the river Lykus. It was founded by a colony of Megare ans, strengthened by some Targareans from Boeotia—the numbers of the former, however, so predominated, that the city was in general considered as Doric. (Arrian, Peripl., p. 14.—Müller, Doriens, vol. 1, p. 140, Eng. trans.) This place was famed for its naval power and its consequence among the Asiatic states, and a sketch of its history is presented to us in the Fragments of Memnon, collected by Photius. (Cod., 241.) Memnon composed a history of the tyrants who reigned at Heraclea during a space of eighty-four years: but we have only now the beginning of this, which is confirmed by incidental notices contained in Aristotle. (Polit., 6, 5.) Some traces of the ancient name are still apparent in the modern Eréki. (Cramer’s Asia Minor, vol. 1, p. 205.)—XII. A city of Æolis, at the entrance of the Gulf of Adramyttium, opposite Mytilene.—XIII. A city in southern Æolis, on the seacoast, near Cumæ.—XIV. A city of Caria, on the seacoast, near the mouth of the river Latmus, between Miletus and Priene. (Ptol.)—XV. Its favour with Philip is evident from other places of the same name, Heraclea Latini. The site corresponds nearly with the village of Ouafa Baja. (Cramer’s Asia Minor, vol. 1, p. 393.)—XV. A city of Syria, in the district of Cyrrhestica, northwest of Hierapolis, and northeast of Beraea, near the confines of Cappadocia. (Xen., Hist. Gr., 6, 4, 27.) Héra}

HERACLEA.
HERACLIDES, a name given in ancient history to a powerful Achaean race or family, the fabled descendents of Hercules. According to the unanimous account of the ancient writers, the children of Hercules, after the death of that hero, being persecuted by Eurystheus, took refuge in Attica, and there defeated and slew the tyrant. When their enemy had fallen, they resumed possession of their birthright in the Peloponnesus, not long after their victory, before a pestilence, in which they recognized the finger of Heaven, drove them again into exile. Attica again afforded them a retreat. When their hopes had revived, an ambiguous oracle encouraged them to believe that, after they had reaped their third harvest, they should find a prosperous passage through the isthmus into the land of their fathers. But, at the entrance of the Peloponnesus, they were met by the united forces of the Achaens, Ionians, and Arcadians. Their leader Hylus, the eldest son of Hercules, proposed to decide the quarrel by single combat; and Echaeus, king of Tegea, was selected by the Peloponnesian confederates as their champion. Hylus fell; and the Heracliai were bound by the terms of the agreement to abandon their enterprise for a hundred years. Yet both Cleodaus, son of Hylus, and his grandson Aristomachus, renewed their attempt with no better fortune. After Aristomachus had fallen in battle, the ambiguous oracle was again vouchsafed to his sons Aristodamus, Temenus, and Cresphontes; and they were assured, that the time, the third generation, had now come, when they should accomplish their return; not, however, as they had expected, over the guarded isthmus, but across the mouth of the western gulf, where the opposite shores are parted by a channel only a few furlongs broad. Thus encouraged, with the aid of the Dorians, Alcalains, and Locrians, they crossed the straits, vanquished Tisamenus, son of Orestes, and divided the fairest portion of the Peloponnesus among them. (Vid. Doris.)—The belief that the Dorians were led to the conquest of the Peloponnesus by princes of Achaean blood, the rightful heirs of its ancient kings, has the authority of all antiquity on its side. It had become current so early as the days of Hesiod; and it was received not only among the Dorians themselves, but among foreign nations. The protection afforded by the Athenians to the Heracliai against Eurystheus, continued to the latest times to be one of the favourite themes of the Attic poets and orators; and the precise district that had been assigned for the abode of the exiles was pointed out by tradition. The weak and unsettled state of the Dorians, in the earliest periods of their history, renders it probable that they were always willing to receive new kings. Dionysus, the son of Zeus, is said to have resided among the Locrians, who were recommended by illustrious birth, wealth, or merit. Nevertheless, possible as this is, the truth of the story has been questioned, on grounds that are certainly not light or arbitrary, if they do not outweigh all that has been alleged in its support. What is said to have happened might have been invented; and the occasion and motives for the fabrication may be conceived still more easily than the truth of the fact; for such facts in the early history of Greece were undoubtedly much less common than such fictions. It is much less probable, that the origin of the Dorian tribes, as of all similar political forms which a nation has assumed in the course of its history, was one of which the Heracliai is only remembered, than that it should have been forgotten, and have been then attributed to imaginary persons. (Thirlwall's History of Greece, vol. 1, p. 255, seqq.)

The theory of Müller, which is referred to in the preceding remarks, makes the Heracliai to have been hereditary princes of the Doric race, descended from a Dorian Hercules; and it attempts to show, that the story of the Heracliai being descended from the Argive Heracles, and performing the commands of Eurystheus, was not invented until after the conquest of the Peloponnesus. (Müller's Dorians vol. 1, p. 57, Engl. transl.—But consult remarks under the article Doris.)

HERACLIDES, a name common to numerous individuals:

1. *Magistrates, &c.*

1. A Greek, minister of Seuthes, king of Thrace, who promised, and afterward refused, succours to the ten thousand during their retreat. (Xen., Anab. 7, 3. 15.)—II. A governor of Delphi, B. C. 260. The temple was pillaged by the Phocians during his magistracy. (Pausan., 10, 2.)—III. A Syracusan of high birth, who united himself to Dion for the purpose of overthrowing the younger Dionysius. He was appointed admiral through the influence of Dion, but abused his power in corrupting the people, and in encouraging a spirit of mutiny and dissatisfaction. After various instances of lenity and forgiveness on the part of Dion towards this individual, the friends of the former, finding that, as long as Heracides existed, his turbulent and factious spirit would produce disorder in the state, broke into his house and put him to death. (Plut., Vit. Dion.)—IV. An individual who governed Syracuse along with Agathocles and Sosicles, B.C. 317. —V. A son of Agathocles, slain by his father's soldiers. (Justin, 22, 5.)—VI. The murderer of Cotys, I. (Demosth., contr. Arist.)—VII. Commander of the garrison sent to Athens by Demetrius, after his capture of that city.—VIII. A native of Tarentum, minister of Philip V. of Macedon. He drew down upon himself the hatred of the people by his wicked conduct, and was finally disgraced.—IX. A young Syracusan of high birth, who brought on the naval conflict in which the Syracusans were completely victorious over the Athenians, B. C. 414. (Plut., Vit. Nic.)

2. *Philosophers, Authors, &c.*

X. Surnamed Ponticus, a native of Heracles Pontica, and not, as some maintain, of Sinope, was of rich parentage. Having travelled into Greece for the purpose of devoting himself to the study of philosophy, he became one of the auditors of Socrates; and, according to Suidas, of Plato himself. He afterward attached himself to Aristotle, and Diogenes Laertius ranks him among the Peripatetics. Following the example of this last-mentioned school, he piqued himself on a great variety of knowledge; he wrote on subjects of all kinds, and even composed a tragedy, which he published under the name of Thespis. He was always attired with much elegance, which made the Athenians change his name, in sport, from *Heraclides* to *Heraclidus* "Detestable"; and Laertius informs us, that he had reared a domestic serpent in secret, and, when about to die, besought his friends to conceal his body, and let the serpent occupy its place. The articule, however, was discovered; the serpent, having become alarmed at some noise made in the house, fled from it; before the philosopher had breathed his last.
This story, however, is entitled to little, if any credit, as well as another related by the same Suidas, of the Pythia's having been bribed by Heraclides, and having, in consequence, directed the people of Heraclea, during a period of famine, to present a crown of gold to him, and to decree him funeral honours after death. We have remaining of this writer some portions of a work of various subject (περὶ Πολιτείων), which Coray thinks is an abridgment of Aristotle's latter work on this subject. These extracts, which have several times been appended to editions of various history and to other collections, were given separately with a Latin translation, another in German, and with notes, by Köhler, Hage, 1804, 8vo. The best edition, however, is that of Coray, which follows Aelian in the first volume of the Bibliotheca Graeca, Paris, 1805, 8vo. We have also, under the name of Heraclides, a treatise on the Allegories of Homer (Ἀλληγορίαι Ὅμηρος). It is not, however, by the individual of whom we have just been speaking; but is merely an extract from the Stoic doctrines on this subject. The latest edition of this work is that of Scholof, Göttting, 1782, 8vo. A new and more correct edition was expected from Hase, based on a MS. more complete than any preceding one, and which he had discovered in the Royal Library at Paris; but none has yet appeared. (Bügr. Univ., vol. 20, p. 214.)—XL

A native of Tarentum, celebrated for his medical knowledge. He wrote on the Materia Medica, on poisons, and on the virtues of plants. His works are lost. (Febr., Bibli. Gr., vol. 13, p. 77.—Compare Schweigh., ad Athen. Ind. Auct., vol. 9, p. 121, seqq.)

He appears to have flourished about the 126th Olympiad, or B.C. 276. We have a dissertation on this writer by Kohler, (Opusc. Acad. Lopen., 8vo, vol. 2, p. 150, seqq.).—XII. A native of Cyme in Ἑλλ, whose work on the Persians (Περσικα) is mentioned in Athenaeus (2, p. 48, c.—Id., 4, p. 145, a.—Consult Schweb., ad Athen. Ind. Auct., vol. 9, p. 120.)—XIII. Surnamed Ponticus Junior, a writer who flourished during the first century of our era. (Athen., 14, p. 649, c.—Schweigh., ad loc.)—XIV. A Macedonian painter, who lived at the time of the overthrow of the Macedonian dynasty in 168 B.C., and who he is supposed to have been painting at the time. On the defeat and captivity of Perse he retired to Athens, according to Pliny, which would be 168 B.C. The same writer also states, that he attained to a degree of reputation, but was yet entitled to only a cursory mention. (Plin., 35, 11.)—XV. An Ephesian sculptor, son of Agasias, who made, in conjunction with Harnatius, the statue of Mars now in the Paris Museum. His age is uncertain. (Clarac, Descri. des Anciens du Musée Royal, nr. 411, p. 173.)

Heraclitus, a native of Ephesus, was surnamed "the Naturalista" (ὁ φυσικὸς), and belongs to the dynamical school of the Ionian philosophers. He is said to have been born about 500 B.C., and, according to Aristotle, died in the sixteenth year of his age. The title he assumed of "self-taught" (αὐτοδόξων), refutes at once the claims of the various masters whom he is said to have had, and the distinguished position that he held in political life attests the wealth and lustre of his descent. The gloomy haughtiness and melancholy of his temperament led him to despise all human pursuits, and he expressed unqualified contempt as well for the political sagacity of his fellow-citizens as for the speculations of all other philosophers, which had mere learning, and not wisdom, for their object. It is utterly untrue, therefore, though commonly related of him, that he was continually shedding tears on account of his surroundings and the circumstances of his life. The story is as little entitled to sober belief as that of the perpetually-laughing Democritus. Of the work of Heraclitus "On Nature" (περὶ φύσεως), many fragments are still extant, and exhibit a broken and concise style, hinting rather than explaining his opinions, which are often conveyed in mythical and half oracular images. On this account he well compares himself to the Sibyl, "who," he says, "speaking with inspired mouth, smileless, in- ornate, and unperfuncted, pierces through centuries by the power of the god." According to Heraclitus, the power of the world and the soul are the same, in their mutual union and interdependence, and in all phenomena, he called ἡρακλ. By this term, however, Heraclitus understood, not the elemental fire or flame, which he held to be the very excess of fire, but a warm and dry vapour; which, therefore, as air, is not distinct from the soul or vital energy, and which, as guiding and directing every sensation, it animates and inspires with wisdom and intelligence. This supreme and perfect force of life is obviously without limit to its activity; consequently, nothing that it forms can remain fixed; all is constantly in a process of formation. This he has thus figuratively expressed: "No one has ever been twice on the same stream." Nay, the passenger himself is without identity: "On the same stream we do and we do not embark; for we are different from our ancestors, and we are different from our posterity; there is a tendency to contraries, whereby it is made to pass from gratification to want, and from want to gratification, and in fixed periods it alternates between a swifter and a slower flux. Now these opposite tendencies meet together in determinate order, and, by the inequality or equality of the forces, occasion the phenomena of life and death. The quietude of death, however, is a mere semblance, which exists only for the senses of man. For man, in his folly, forms a truth of his own, whereas it is only the universal reason that is really cognizant of the truth. Lastly, the rational principle, which governs the whole moral and physical world, is also the law of the individual; whatever, therefore, is, is the wisest and the best—and "it is not for man's welfare that his wishes should be fulfilled—sickness makes health pleasant, as hunger does gratification, and labour rest."—The physical doctrines of Heraclitus form no inconsiderable portion of the collection of the later Stoics; and, in times still more recent, there is much in the theories of Schelling and Hegel that presents a striking though general resemblance thereto.—According to the ancient writers, neither critics nor philosophers were able to explain his productions, on account of their extreme obscurity; and they remained in the temple of Diana at Ephesus, where he himself had deposited them, for the use of the learned, until they were made public by Grimm, in a manner that was a mountainous retreat, and his food the produce of the earth. This diet and mode of life at length occasioned a dropsey, for which he could obtain no relief by medical advice. It seems that the philosopher, who was always fond of enigmatical language, proposed the following question to the physicians: "Is it possible to bring dryness out of moisture?" and upon their stating in the negative, in place of this statement, in case more plainly to effect a cure by placing himself in the sun, and causing a slave to cover his body with the dung of cattle. The experiment proved, as may easily be imagined, to be anything but a successful one.—The fragments of Heraclitus have been collected from Plutarch, Sti-

HEREA, I. a city of Arcadia, on the slope of a hill rising gently above the right bank of the Alpheus, and near the frontiers of Elis, which frequently disputed its possession with Arcadia. (Xen., Hist. Gr., 6, 5, 22.) Before the Cleomenic war, this town had joined the Achaean league, but was then taken by the Aetolians. It was recovered by Antigonus Doson, who restored it to the Achaeans. (Polyb., 2, 54.—Id., 4, 77.—Liv., 28, 7.) In Strabo's time Horea was greatly reduced; but when Pausanias visited Arcadia it appears to have recovered from this state of decay. (Pausan., 8, 26.—Compare Thucyd., 5, 67.) Stephanus remarks, that this place was also known by the name of Sologorgus (σολόγορχοσ). Its site is now occupied by the village of Agrimi. (Gell., Itin., p. 113—114.) A festival at Argos in honour of Juno, who was the patroness of that city, was also observed by the colonies of the Argives, which had been planted at Samos and Eginia. There were always two processions to the temple of the goddess without the city walls. The first was of the men in armour, the second of the women, among whom the priestess, a woman of the first rank, was drawn in a chariot by white oxen. The Argives always reckoned their year from her priestesshood, as the Athenians reckoned from their archons, or the Romans from their consuls. When they came to the temple of the goddess, they offered a hecatomb of oxen. Hence the sacrifice is often called ἱερατικὸς, and sometimes λέχρωνις, from λέχρος, a bed, because Juno presided over marriage, births, &c. There was a festival of the same name in Elis, celebrated every fifth year, at which sixteen matrons wore a garment for the goddess.

HERCULANEUM. I. a temple and grove of Juno, situate about forty stadia from Argos, and ten from Mycenae. The structure was embellished with a lofty statue of Juno, made of ivory and gold; a golden peacock, enriched with precious stones, and other equally splendid ornaments.—II. A large and magnificent temple of Juno in the island of Samos, built by the architect Rhocus, who is said to have invented the art of casting in brass. (Pausan., 8, 14.—Herod., 5, 60.—Plin., 36, 12.)

HERCULANEUM, a city of Campania, on the coast, and not far from Neapolis. Cicero writes the name Herculaneum (ad Att., 7, 3). The situation of this place is no longer doubtful since the discovery of its ruins. Cluverius was right in his correction of the Tabula Theodosiana, which reckoned twelve miles between this place and Neapolis instead of six, though he removed it too far from Portici when he assigned to it the position of *Torr del Greco*. Nothing is known of the origination of the name, or of the reason of the fabulous accounts ascribed its foundation to Heracles on his return from Spain. (Dion. Hal., 4, 44.) It may be inferred, however, from a passage in Strabo, that this town was of great antiquity. It may be reasonably conjectured, too, that Herculaneum was a Greek city, but that its name was altered to suit the Latin or Oscan pronunciation. At first it was only a fortress, which was successively occupied by the Oeci, Etrurheni, Pelasgi, Etruscans, and lastly by the Romans. By being situated close to the sea, on elevated ground, it was exposed to the southwest wind, and from that circumstance was reckoned particularly healthy. (Strabo, 247.) We learn from Velleius Paternecus, that Herculaneum suffered considerably during the civil wars. (Compare Florus, 1, 15.)

This place is mentioned also by Meta (2, 4), and by Sce- na, a more ancient writer than any of the former; he is quoted by Nonius Marcellus (De Indiscer. Gen., v. Flavia). Ovid likewise notices it under the name of *Urbe Herculeam.* (Met., 15, 711.) Herculaneum, however, was overwhelmed by an eruption of Vesuvius in the first year of the reign of Titus, A.D. 79. Pompeii, which stood near, shared the same fate. It is probable, however, that the subversion of Herculaneum was not so sudden, but progressive, since Seneca mentions a partial demolition which it sustained from an earthquake. (Nat. Qveat., 6, 1.) After being buried for more than sixteen hundred years, these cities were accidentally discovered by laborious and persevering workmen who were digging for a well; and Pompeii forty years after. It appears that Herculaneum is in no part less than seventy feet, and in some parts one hundred and twelve feet below the surface of the ground, while Pompeii is buried ten or twelve feet deep, more or less. Sir W. Hamilton thinks, that the matter which covers the city of Herculaneum is not the produce of a single eruption, but that the matter of six eruptions has taken its place, and that in consequence the house could not have been found which was the cause of its destruction. Many valuable remains of antiquity, such as busts, manuscripts, &c., have been recovered from the ruins of this ancient city, and form the most curious museum in the world. They are all preserved at Portici, and the engravings taken from them have been sufficiently presented to the different learned bodies of Europe. The plan also of many of the public buildings has been laid out, and especially that of the theatre. Sir W. Hamilton thinks, that the matter which first issued from Vesuvius and covered Herculaneum was in the state of liquid mud, and that this has been the means of preserving the pictures, busts, and other relics, which otherwise must have been either entirely destroyed by the red-hot lava, or else have become one solid body along with it when cooled. In illustration of this remark, we may cite the following from a periodical work. (Edinburgh Revie., vol. 45, p. 304.) "An enormous quantity of aqueous vapour is exhaled in every volcanic eruption, which, being condensed by the cold in the regions of the atmosphere beyond the reach of the volcano's heat, falls down again in the form of rain, and, when it mixes with the clouds of ashes, it forms that compound which has been sometimes mistaken for an actual eruption of mud from the crater. It was such a compound as this that overwhelmed Herculaneum, and it is found to consolidate very speedily into a hard, compact substance." Amongst the excavations at Herculaneum, in the remains of a house supposed to have belonged to L. Piso, was found a great number of volumes of burned *Papyri.* Many of these papyri, as they have since been generally termed, were destroyed by the workmen; but as soon as it was known that they were the remnants of ancient manuscripts, their development became an object of no common interest to the learned world. Father Piaggi invented a machine for unrolling them, which has been described by several writers. When we reflect on the number of valuable works which have been lost since the period when Herculaneum was destroyed, we ought not to be surprised at the sanguine expectations which, upon the first discovery of the MSS., were entertained, of adding some important acquisitions to the treasures of ancient literature which we already possess. The lost books of Livy, and the comedies of Menander, are in the imagination of almost every scholar. Each, indeed, anticipated, according to his taste, the mental pleasures and the literary labours which awaited him. These enthusiastic hopes were perhaps too suddenly repressed, as they had been too easily excited. The first papyrus which was opened contained a treatise
HERCULES.

As Hercules, by the will of Jupiter, was subjected to the power of Eurystheus (vid. Eurystheus), and obliged to obey him in every respect, Eurystheus, acquainted with his strength, and pleased with the sight of his head, ordered him to appear at Mycenae and perform the labours which, by priority of birth, he was empowered to impose upon him. Hercules refused; and Juno, to punish his disobedience, rendered him delirious, so that he killed his own children, by Megara, healing them to the offspring of Eurystheus.

When he recovered his senses, he was so struck with the misfortunes which had proceeded from his insanity, that he concealed himself and retired for some time from the society of men. He afterward consulted the oracle of Apollo, and was told that he must be subservient for twelve years to the will of Eurystheus, in compliance with the commands of Jupiter; and that, after he had achieved the most celebrated labours, he should be translated to the gods. So plain and expressive an answer determined him to go to Mycenae, and to bear with fortitude whatever gods or men imposed upon him. Eurystheus, seeing the hero totally subjected to him, and apprehensive of so powerful an enemy, commanded him to achieve a number of enterprises the most difficult and arduous ever known, generally called the twelve labours of Hercules. The favour of the gods had completely armed him when he undertook his labours. He had received a sword from Mercury, a bow from Apollo, a golden breastplate from Vulcan, horses from Neptune, a robe from Minerva. He himself cut his club in the Nemean wood. The first labour imposed upon Hercules by Eurystheus was to kill the lion of Nemea, which ravaged the country near Mycenae. The hero, unable to destroy him with his arrows, boldly attacked him with his club, pursued him to the very mouth of his cave, and, by his unceasing and unyielding attack, chocked him to death. He carried the dead beast on his shoulders to Mycenae, and ever after clothed himself with the skin. Eurystheus was so astonished at the sight of the beast and at the courage of Hercules, that he ordered him never to enter the gates of the city when he returned from his expeditions, but to wait for his orders without the walls. He even made himself a brazen subterranean apartment, in which he retired when he wished to escape from Hercules. (vid. Eurystheus.)—The second labour of Hercules was to destroy the Lernaean hydra, which abode in the marsh of Lerna, whence it used to come out on the land, and kill the cattle and ravage the country. This hydra had a huge body, with nine heads, eight of them mortal, and one in the middle immortal. Hercules mounted his chariot, which was driven by Iolaus, son of Iphiclus, and, on coming to Lerna, he entered the marsh, and was attacked by the hydra, which he found on a rising ground, near the springs of Amymone, where its hole was. He shot at the animal with fiery darts till he made it come out; and he then grasped and held it, while it twisted itself about his legs. The hero crushed its heads with his club, but to no purpose; for, when one was crushed, two sprang up in its stead. A huge crab also aided the hydra, and bit the feet of Hercules. He killed the crab, and then called upon Iolaus to come to his assistance. Iolaus immediately set fire to the neighbouring wood, and with the flaming brands tearing the necks of the hydra as the heads were cut off, effectually checked their growth. Having thus got rid of the mortal heads, Hercules cut off the immortal one and buried it, setting a heavy stone on the top of it, in the road leading from Lerna to Eleusis. He cut the body of the hydra into pieces, and dipped his arrows in its gall, which made them doubly efficacious. Eurystheus, however, denied that this was to be reckoned among the twelve labours, since he had not destroyed the hydra alone, but with the assistance of Iolaus. He was ordered, in his third labour, to bring, alive and unhurt, into the presence of Eurystheus, a stag, famous for its incredible swiftness and golden horns. This celebrated animal frequented the neighbourhood of Chenoe, and Hercules was employed for a whole year in pursuing and finding it. When at last the animal was tired with the chase, she took refuge in Mount Artemisium, then fled to the river Ladon, and, as she was about to cross the stream, Hercules struck
HERCULES.

her with an arrow, caught her, put her on his shoulder, and was going with his burden through Arcadia, when he met Diana and Apollo. The goddess took the hind from him, and reproached him for violating her sacred animal. But the hero excusing himself on the plea of necessity, and laying the blame on Eurystheus, Diana was mollified, and allowed him to take the hind alive to Mycenae.—The fourth labour was to bring alive to Eurystheus a wild boar which ravaged the neighbourhood of Erymanthus. In this expedition he destroyed the Centaurs (vid. Centaurs and Chiron), and then caught the boar by driving him from his lair with loud cries, and chasing him into a snow-drift, where he seized and bound him, and then took him to Mycenae. Eurystheus was so frightened at the sight of the boar, that, according to Diodorus, he hid himself in his brazen apartment for several days. In his fifth labour Hercules was ordered to cleanse the stables of Augeas, where numerous oxen had been confined for many years. (Vid. Augeas.)—For his sixth labour he was ordered to kill the carnivorous birds which ravaged the country near the Lake Styphnus in Arcadia. While Hercules was deliberating how he should scare them, Minerva brought him brazen rattlest from Vulcan. He took his station on a neighbouring hill, and sounded the rattles: the birds, terrified, rose in the air, and he then shot them with his arrows.—In his seventh labour he brought alive into Peloponnesus a prodigious wild boar, the size of a hundred oxen. Hercules drove it along the coast, then let him go, and the bull roved over Sparta and Arcadia, and, crossing the isthmus, came to Marathon, where he did infinite mischief to the inhabitants.—In his eighth labour he was employed in obtaining the mares of Diomedes, the Thracian king, which fed on human flesh. (Vid. Diomedes II.)—For his ninth labour he was commanded to obtain the girdle of the queen of the Amazons. (Vid. Hippolyta.)—In his tenth labour he killed Echidna, the queen of the Hesperides, and brought his oxen to Eurystheus, who sacrificed them to Juno. (Vid. Geryon.)—The eleventh labour was to obtain the apples from the garden of the Hesperides. (Vid. Hesperides.)—The twelfth, and last, and most dangerous of his labours, was to bring upon earth the three-headed dog Cerberus. When preparing for this expedition, Hercules went to Eumolpus at Eleusis, desirous of being initia-
ted, and of securing admission. He had, however, been purified of the blood of the centaurs Eumolpus, however, purified him, and he then saw the mysteries; after which he proceeded to the Taurian promontory in Laconia, where was the entrance to the lower world, and went down to it, accompanied by Mercury and Minerva. The moment the shades saw him they fled away in terror, all but Meleager and Medusa the Gorgon. (Oid., 11, 603.) He was drawing his sword on the latter, when Mercury reminded him that she was a mere phantom. Near the gates of the palace of Hades he found Theseus and Pirithous, who had attempted to carry off Proserpina, and had, in consequence, been fixed on an enchanted rock by the offended monarch of Erebus. When they saw Hercules, they stretched forth their hands, hoping to be relieved by his might. He took Theseus by the hand and raised him up; but when he would do the same for Pirithous, the earth quaked, and he left him. He then, after several other acts of prowess, asked Pluto to give him Cerberus; and the god consented, provided he would take him without using any weapons. He found him at the gates of Acheron; and protected only by his corselet and lion's skin, he flung his arms about his head, and, grasping him by the neck, made him submit, though the dragon in his tail bit severely. He brought him through Troizen, and when he had shown him, took him back to the lower world.—Besides these arduous labours, which the jealousy of Eurystheus imposed upon him, he also achieved others of his own accord, equally great and celebrated (Vid. Cacus, Antaeus, Bussiris, Eryx, &c.), and he had also, according to some, accompanied the Argonauts to Colchis before he delivered himself up to the King of Mycenae. Wishing after this to marry again, having given Megara to Iolaus, and hearing that Eurysteus, king of Oechalia, had declared, that he would give his daughter Iole to him who should overcome himself and his sons in shooting with the bow, he went thither and won the victory, but did not obtain the promised prize. Iphitus, the eldest son, was for giving his sister to Hercu-
les, but Eurysteus and his other sons refused, lest he should destroy her children, if she had any, as he had done those of Megara. Shortly afterward, the oxen of Eurystheus being stolen by Autolycus, his suspicions fell on Hercules. Iphitus, who gave no credit to the charge, betook himself to that hero, and besought him to join in the search for the lost oxen. Hercules promised to do so, and entertained him; but, falling into madness, he precipitated Iphitus from the walls of Tiryns. In order to be purified of this murder, he went to Nemeus, who, being a friend of Eurystheus, refused to comply with his desire. Hercules then proceeded to Amycyes, where he was purified by Deiphobus, the son of Hippolytus. But he fell, notwithstanding, into a severe madness on account of the murder of Iphitus; and, going to Delphi to seek relief, he was refused a response by the Pythia. In his rage at her denial he went to Tiryns, seized the oxen of Eurystheus, and, in establishing an oracle for himself, when Apollo came to oppose him; but Jupiter hurled a thunderbolt between the combatants, and put an end to the contest. Hercules now received a response, that his madness would be removed if he let himself be sold for three years as a slave, and gave the purchase-money to Eurystheus as a compensation for the loss of his son. Accor-
dingly, in obedience to the oracle, he was conducted by an old man to Eurytus, the ruler of Geryon, in the region of the queen of the country. (Vid. Omphale.) The purchase-money (three talents, it is said) was offered to Eurystheus, but he refused to accept it. When the term of this servitude had expired, he prepared, being now relieved of his disease, to take vengeance on La-
omedon, for having refused the promised reward for de-
delivering Hesione. (Vid. Hippolyta and Laomedon.) After succeeding in this enterprise, and slaying La-
omedon, Hercules gathered an army and marched against and slew Augeas and Iphitus. Eurystheus, leader of this warfare, and here, when victory had declared for him, he established the Olympic games, raised an altar to Pepsa, and built altars also to the twelve great deities. After the conquest of Elia he marched against Pylos, took the city, and killed Neleus and all his sons, except Nestor, who was living with the Cretans. (U., 11, 689.) He is said also to have wounded Pluto and Juno, as they were riding the Pylae. Some time after this, Hercules went to Calydon, where he sought the band of Deianira, the daughter of Oeneus. He had to contend for her with the river-god Acheolus, who turned himself into a bull, in which form one of his horns was broken off by the victorious hero. (Vid. Acheolus.)—One day, at the table of Oeneus, as Euo-
nomus, son of Archites, was, according to custom, pouring water on the hands of the guests, Hercules happening unawares to swing his hand suddenly, struck the boy, and killed him. A great murder, and an acci-
dent, the father forgave the death of his son; but Her-
acles resolved to banish himself, agreeable to the law in such cases, and he set out with his wife for Trachis, the realm of his friend Ceyx. On his journey to this quarter the affair of Nessus took place. (Vid. Deianira and Nessus) While residing with Ceyx, he aided Erimnus, king of the Dorians, against whom the Lapithai, under the command of Coroebus, had made war, on account of a dispute respecting boundaries. As he was passing, on a subsequent occasion, by
the temple of Apollo at Paphus, he was opposed by Ceyx, the son of Mars, who was in the habit of plundering the country. In flight to Delphi, Ceyx fell in the combat; and when Mars, who had witnessed the fate of his son, would avenge him, he received a wound in the thigh from the spear of the hero. Returning to Trachis, Hercules collected an army, and made war on Eurytus, king of Oechalia, whom he killed, together with his sons, and, plundering the town, led away Iole as a captive. At the entrance of the town, his heart was melted with compassion, and he wished to offer a sacrifice, sent to Ceyx for a splendid robe to wear. Deianira, hearing about Iole from the messenger, and fearing the effect of her charms on the heart of her husband, resolved to try the efficacy of the philtre of Nessus (vid. Deianira), and tinged with it the tunic that was sent. Hercules, suspecting nothing, put on the fatal garment, and prepared to offer sacrifice. At first he felt no effect from it; but when it warmed, the vipers of the Hydra began to consume his flesh. In his fury, he caught Lichas, the ill-fated bearer of the tunic, by the foot, and hurled him into the sea. He attempted to tear off the tunic, but it adhered closely to his skin, and the flesh came away with it. In this wretched state he got on shipboard, where Deianira, on hearing the consequences of what she had done, herself, and Hercules, charging Hyllus, his eldest son by her, to marry Iole when he was of age, went, as has been related, to the Pyre of Iphicles, in the island of Oeta, and there causing a pyre to be erected, ascended it, and directed his followers to set it on fire. But no one would venture to obey; till Peas, happening to arrive there in search of his stray cattle, compelled with the desire of the hero, and received his bow and arrows as his reward. While the pyre was blazing, a thunder-cloud conveyed the sufferer to heaven, where he was endowed with immortality, or, as he was, according to an ancient legend, the daughter Hebe, by whom he had two children, Alex- ires (Aider-in-war) and Anicetus (Unsubdued). The legend of Hercules is given in full detail by Apollodorus (2, 4, 8, seqq.). Other authorities on the subject are as follows: Diod. Sic. 4, 9, seqq.—Theocrit., Idyll., 25. — Pind. OI., 3, 55. — Theocrit., Idyll., 7, 149. — Pherecydes, ap. Schol. ad Apoll. Rhod., 5, 1054. — Il., 8, 87. — Pherecydes, ap. Schol. ad OD., 21, 23. — Herod. Hist., 1, 5. — Herod. Opit. Etch. 21. — Schol. ad Trachin. Homer arms Hercules with a bow and arrows. (Il., 5, 393. — Od., 8, 224.) Hesiod describes him with shield and spear. Pisander and Stesichorus were the first who gave him the club and lion's skin. (Atheneus, 12, p. 513.) The mythology of Hercules is of a very mixed character in the form in which it has come down to us. There is in it the identification of one or more Grecian heroes with Mel- earth, the sun-god of the Phoenicians. Hence we find Hercules so frequently represented as the sun-god, and his twelve labours regarded as the passage of the sun through the twelve signs of the zodiac: He is the powerful planet which animates and imparts fecundity to the universe, whose divinity has been honoured in every quarter by temples and altars, and consecrated in the religious strains of all nations. From Meröe in Ethiopia, and Thebes in Upper Egypt, even to Thessaly, sunny regions of Scythia; from the ancient Taprobana and Palibothra in India, to Cadiz and the shores of the Atlantic; from the forests of Germany to the burning sands of Africa; everywhere, in short, where the benefits of the luminary of day are experienced, there we find established the name and worship of a Hercules. Many ages before the period when Aeneas is said to have lived, and the pretended Tyrynthian hero to have performed his wonderful exploits, Egypt and Phoenicia, which certainly did not bestow their divinities from Greece, had raised temples to the Sun, under a name analogous to that of Hercules, and had carried his worship to the isle of Thasus and to Gaede. Here was consecrated a temple to him, in which, up to three months, which divided into twelve parts, that is, to the twelve labours or vic- tories which conducted Hercules to immortality. It is under the name of Hercules Astrocython (Aerot- irwv), or the god clothed with a mantle of stars, that the poet Nonnus designates the Sun, adored by the Tyrians. (Dionys. 40. 415. — Ibid., 375.) He is the same god," observes the poet, "whom different nations adore under a multitude of different names: Belus on the banks of the Euphrates, Ammon in Lib- ya, Apis at Memphis, Saturn in Arabia, Jupiter in As- syria, Serapis in Egypt, Helios among the Babylonians, Apollo at Delphi, Æsculapius throughout Greece," &c. Martianus Capella, in his hymn to the Sun, as also Ausonius (Epigr., 2, 4) and Macrobius (Sat., 1, 20), confirm the fact of this multiplicity of names given to a single star. The Egyptians, according to Plu- tarch (De Is. et Os., p. 367.—Op., ed. Reiske, vol. 7, p. 449), thought that Hercules had his seat in the Sun, and that he travelled with it around the moon. The author of the hymns ascribed to Orpheus, fixes still more strongly the identity of Hercules with the Sun. He calls Hercules "the god who produced time, whose forms vary, the father of all things, and de- stroyer of all." He is the god who brings back by turns Aurora and the night, and who, moving onward from east to west, runs through the career of his life, by which he wields and overthrows the planets and the maladies, and delivers man from the evils which afflict him." (Orph., Hymn., 12.—ed. Herm., p. 272, seq.) The Phoenicians, it is said, preserved a tradition among them, that Hercules was the Sun, and that his twelve labours indicated the sun's passage through the twelve signs. Porphyry, who was born in Phoenicia, assures us that they there gave the name of Hercules to the sun, and that the fate of the latter was that of the solstices in the heavens (ap. Euseb. Prag. Ev., 3, 11) In like manner the scholast on Hesiod remarks, "the zodiac, in which the sun performs his annual course, is the true career which Hercules trav- erses in the fable of the twelve labours; and his mar- rriage with Hebe, the goddess of youth, whom he es- poused after he had ended his labours, denotes the re- newal of the year at the end of each solar revolution." (J. Dccamus, Schol. ad Hes., Theog., p. 185.) Among the Egyptians it is said that the god, in which Hercules commenced among different nations, that of the sum- mer solstice was one of the most remarkable. It was at this period that the Greeks fixed the celebration of their Olympic game, the establishment of which is attrib- uted to Hercules. (Corssini, Fast. Att., vol. 2, p. 255.) It was the origin of the most ancient era of the Greeks. "If we fix from this point the departure of the sun on his annual career, and compare the progress of that luminary through the signs of the zodiac with the twelve labours of Hercules, altering somewhat the or- der in which they are handed down to us, a very striking coincidence is instantly observed. A few examples will be added. In the first month the sun passes into the sign Leo; and in his first labour Hercules slew the Nemean lion. Hence, too, the legend, that the Nemean lion had fallen from the skies, and that it was produced in the region and sign of the Nemean lion. (Thucyd., Contr. Genti, p. 164.)" In the second month the sun enters the sign Virgo, when the constellation of the Hydra sets; and in his second labour Hercules destroyed the Lernaean Hydra. It should also be remarked, that the head of the celestial Hydra rises with the constellation Cancer, or the Crab, and hence the fable that Hercules was annoyed by a crab in his conflict with the Hydra (Callimachus Car. 64.) The Hydra, moreover, is remarkable among the constellations for its great length; its head rising, as has just been remarked, with Cancer; its body be-
HERCULES.

ing extended under the sign Leo, and only ending at the later degrees of the sign Virgo. On this is based the fable of the continual reappearance of the monster's heads; the constellation being of so great a length, that the stars of one part reappear after the sun has passed onward to another part, and while the stars of this latter part are merged in the solar fires. In the third month the sun enters the sign Libra, at the beginning of autumn, when the constellation of the centaur rising is represented as bearing a wine-skin full of liquor, and a thyrsus adorned with vine-leaves and grapes. Bayer represents him in his tables with a thyrsus in one hand and a flask of wine in the other. (Uran., tabl., 41.) The Alphonsine tables depict him with a cup or goblet in his hand. (Tab. Alph., p. 209.) At this same period, what is termed by some astronomers the constellation of the boar rises in the evening; and in his third labour Hercules, after being hospitably entertained by a centaur, encountered and slew the other centaurs who fought for a cask of wine: he slew also in this labour the Erymanthian boar. In the fourth month the sun enters the sign Scorpio, when Cassiopeia rises, a constellation in which anciently a stag was represented; and in his fourth labour Hercules caught the famous stag with golden horns and brazen feet. It is said also to have breathed fire from its nostrils. (Quint. Smyr., vii. 6.) The same constellation is called Aquarius, and this creature emerging from the waters is a trait that harmonize well with a constellation studded with blazing stars, and which, in the summer season, unites itself to the solstitial fires of the sun, by rising in the evening with its spouse Cepheus. In the fifth month the sun enters the sign Sagittarius, consecrated to Diana, who had a temple at Symphium, in which were seen the birds called Stymphalides. At this same time rise the three birds; namely, the constellations of the crow, the eagle pierced with the arrows of Hercules; and in his fifth labour Hercules destroys the birds near Lake Symphium, which are represented as three in number on the medals of Perinthus. (Med. du Cardin. Alban., vol. 2, p. 70, n. 1.) In the sixth month the sun passes into the sign Capricornus, who was, according to some, a grandson of the luminary. At this period the stream which flows from Aquarius sets; its source is between the constellations of the centaurs Chiron and Phineus. In his sixth labour Hercules cleansed, by means of the Peneus, the stables of Augaeas, son of Phocbus. Augaeas is made by some to have been a son of Nycteus, a name which bears an evident reference to the night (νύκτα), and which contains, therefore, in the present instance, an allusion to the long nights of the winter solstice. In the seventh month the sun passes into the sign Aquarius. The constellation of the Lyre, or celestial vulture, now sets, which is placed on the side of the constellation called Prometheus, and at this same period the celestial bull, called the bull of Pasiphaë, the bull of Marathon, in fine, the bull of Europa, passes the meridian. In his seventh labour, Hercules brings alive into the Peloponnesus a wild bull, which laid waste the island of Crete. He slays also the vulture that preyed upon the liver of Prometheus. It is to be remarked that, as the constellation sets at this period, Hercules is said to have killed that bird; whereas the bull, which crosses the meridian merely, is made to have been brought alive into Greece. The bull in question was also failed to have vomited flames (Aet. Gell., 1, 1), an evident allusion to the celestial bull which glitters with a thousand fires. It is at the close of this seventh labour, and under the same title with it, that Hercules is supposed to have arrived in Elis, mounted on the steed Arion, and taking the grapes of the Alpheus. Now, when the sun passes into the sign Aquarius, he comes into that quarter of the heavens which is marked by the full moon from year to year, the full moon of the summer-solstice was the period for celebrating the Olympic Games; and hence the poets, observing the phenomenon of the full moon during every year in the sign of Aquarius, ascribed to Hercules the institution of those games, of which Aquarius, by its union with the full moon, was every year the symbol. In the immediate vicinity of Aquarius, however, we find the constellation Pegasus identical with the fabled steed Arion. Hence the fable of Hercules having come on this latter animal to the island of Elis. In the eighth month the sun enters into the sign Pisces, when the celestial horse rises in the morning, known by the name of Pegasus and Arion, as we have just remarked; and in his eighth labour Hercules overcame and carried off the horse of Diomedes. Eurystheus consecrated these steeds to Juno, to whom, in the division of the Zodiac among the twelve great gods, the sign Aquarius was given as her peculiar domain; and it is worthy of remark, that the Thracian Diomedes is said to have been the son of Cyrene, who was also the mother of Aristaeus, and that this last personage is supposed by many to have been the same with Aquarius. In the ninth month the sun passes into the sign Aries, sacred to Mars, which all the ancient authors who have written on astronomy make to be the same with the ram of the golden fleece. When the sun enters into this sign, the celestial ship, or the constellation of the ram, the signs of which in the Alphonsine tables are Cassiopeia and Andromeda set. Andromeda is remarkable for many beautiful stars, one of which is called her girdle. Hyginus makes this girdle consist of three stars. Aratus designates it particularly by the name of Gorgyn. Now, in his ninth labour, Hercules, according to one version of the legend, embarked on board the Argo in quest of the golden fleece; he contends with the female warriors, and takes from Hippol- yta, the daughter of the king of Thessaly, the beautiful girdle. He also rescues Hesione from a sea-monster, as Peresius did Andromeda. In the tenth month the sun enters into the sign Taurus. The constellation of Orion, who was fabled to have pursued, through love, the Pleiades, or daughters of Atlas, now sets: the herdsman, or conductor of the oxen of Icarus, also sets, as does likewise the river Eridanus. At this period, too, the Pleiades rise, and the she-goat fabled to have been the mother of Dionysus and the inventor of wine, being restored to their father the seven Pleiades, whose beauty and wisdom had inspired with love Busiris, king of Egypt, and who, wishing to become master of their persons, had sent pirates to carry them off. He slew also Busiris, who is here identical with Orion. In this same labour he bore away from Spain the oxen of Geryon, and arrived in Italy, where he overcame Caecus, and was hospitably received by Faunus. In the eleventh month the sun passes into the sign Gemini. This period is marked by the setting of Procyon, and the comaslic rising of the dog-star. The constellation of the Swan also rises in the evening. In his eleventh labour, Hercules conquers Cerberus, the dog of Hades. He triumphs also over Cynus (Swan), and at the very time, too, according to Hesiod (Sci., Herc., 393), when the dog-star begins to parch the fields, and the cicada announces the summer by its song. It is to be remarked, that the constellation of the Swan gave rise, in a different legend, to the fable of the amours of Leda and Jove, and the birth of the twin-brothers Castor and Pollux. (Eratosth., c. 25.) In the twelfth month the sun enters the sign Cancer, the last of the twelve commencing with Leo. The constellations of the river and the centaur set, that of Hercules Iceniencius also descends towards the western regions, or those of Hesperia, followed by the stars of the pole, the guardian of the golden apples of the Hesperides, on his head he crushes with his foot. In his twelfth labour, Hercules travelled to Hesperia in quest of the golden fruit, guarded by the dragon. After this he prepares
HERCULES.

to offer up a solemn sacrifice, and clothes himself in a robe dipped in the blood of the Centaur, whom he had slain in crossing a river. The robe takes fire, and the hero perishes amid the flames in the house of his youth, and becomes a pariah of immortality. The Centaur thus terminates the mortal career of Hercules; and in like manner the new annual period commences with the passage of the sun into Leo, marked by a group of stars in the morning, which glitter like the flames that issued from the vestment of Nessus.—If Hercules be regarded as having actually existed, nothing can be more monstrous, nothing more at variance with every principle of chronology, nothing more remote with contradictions, than the adventures of such an individual as poetry makes him to have been. But, considered as the luminaries that give light and life to the world, as the god who impregnates all nature with his fertilizing rays, every part of the legend teems with animation and beauty, and is marked by a pleasing and perfect harmony. The sun of the summer solstice is here represented with all the attributes of that strength which he has acquired at this season of the year. He enters proudly on his course, in obedience to the eternal order of nature. It is no longer the sign Leo that he traverses; he combats a fearful lion which ravages the plains. The Hydra is the second monster that opposes the hero, and the constellation in the heavens becomes a fearful animal on earth, to which the language of poetry assigns a hundred heads, with the power of reproducing them as they are severed by the weapon of the hero. All the obstacles that array themselves against the illustrious champion are gifted with some quality or attribute that exceeds the bounds of nature: the horses of Diomede feed on human flesh; the females rise above the timidity of their sex, and become formidable heroines; the apples of the Hesperides are of gold; the stag has brazen hoofs; the dog of Hades bites with serpents; everything, even down to the very crab, is formidable; for everything in the nature of an obstacle there is to be equally so in the various symbols that are used to designate her various powers. (Consult, on this whole subject, the remarks of Dupuis, Origine de tous les Cultes, vol. 2, p. 168, seqq.—Abrégé, p. 116, seqq.) The conclusion to which we have here arrived, will appear still plainer if we take a hasty sketch of the Oriental origin of the fable of Hercules, and its passage from the East into the countries of the West. And it will be seen that the Greeks, in conformity with their national character, appropriated to themselves, and gave a human form to, an Oriental deity; and that, metamorphosing the stranger-god into a Grecian hero, they took delight in making him an ideal type of that heroic courage and might which triumphs over every obstacle. Hercules, the invincible Hercules, has strong analogies with the Persian Mithras, the type of the unconquered sun. (Creuzer, Symbolik, par Guigniaut, vol. 1, p. 376, &c.) Mithras, the son and descendant of Perseus, connect together the two families of Belus, that of Asia and that of Egypt. According to the Greek genealogies, the son of Amphitryon and Alcmena was of Egyptian blood both on the father's and mother's side, while he was descended by Perseus from Belus, the solar god. (Consult the tables of genealogy, X, Xa, and Xb, at the end of Heyne's Apology, 4th ed.) In this tradition, the figure of Amphitryon only served as a mask to cover the young men when he wished to give birth to Hercules. The origin of the latter, then, was mediately and immediately divine, and we have a son of Jupiter in the Hellenic Hercules, as well as in the Semi-Hercules of Egypt. But, in every other respect, what a difference between the two. Herodotus, full of the ideas imbodied from the national poems on Hercules, the illustrious chief of the heroic races of Greece, arrives in Egypt. There he finds a Hercules quite different from the one with which he is familiar. In vain does he endeavour to reconcile the mythic legends of Greece with the foreign dogmas that he encounters. After a scrupulous examination, and in emulating the favours of the gods of his country, he declares that the Hercules is originally from Egypt, not from Greece. Hercules with the Egyptians was the sun of the spring in all his force, an idea to which his very name alluded, which was in the Egyptian tongue Sem, Som, or Djom, "the Strong." Sem-Herakles passed for a god of the second class in Egypt. He was the type of the divine power, appearing with glory at the period of the spring, after having conquered the gloomy winter. He was the sun traversing his celestial career, contending against the numerous obstacles with which his path is supposed to be strewn, and obtaining by his immortal vigour a prize worthy of his numerous triumphs. On the monuments of Egypt he was seen traversing the fields of air in the bark of the star of day (Flut., de Is. et Os., p. 506, ed Wyttenb.); at other times the phoenix was placed in his hand, as a pledge of eternal victory, and a symbol of the great year, to which the renewal of each solar year was supposed to allude.—From the Egyptian let us pass to the Phenician Hercules. Here he was denominated Melkarth, and belonged to the line of Bel or Baal, called Cronos by the Greeks. (Creuzer, Symbolik, par Guigniaut, vol. 3, p. 15.) Melkarth was the tutelary divinity of the powerful city of Tyre, and the Tyrian navigators spread his worship from island to island, and from shore to shore, even to the very coasts of the Persian Gulf, and cast his image, a flame burned continually in his temple, as at Olympia on the altar of Jupiter. (Heeren, Ideen, vol. 1, p. 2, seqq.) His name signified, according to some, "the king of the city;" according to others, and with greater probability, "the powerful king"—the powerful king! (Creuzer, Geogr. Sac., 2, 2.—Selden, de D. S., 1, 6), an idea closely analogous to that intended to be conveyed by the Egyptian appellation Sem. The King of the City, or the powerful king, was a true incarnation of the sun. He was the sun of spring, growing gradually more and more powerful as it mounts to the skies, sending rains upon the earth, and causing the seed to shoot forth from the ground. Hence the Phenicians regarded him as the god of harvests and of the table, the god who brings joy in his train. (Nonnus, Dionys., 40, 418.) A mercantile and commercial people, they also made him (in a still more special sense, perhaps) the god of commerce and commerce, and it is to this idea that many seek to refer the etymology of the Greek and Latin names Herakles and Hercules. Thus, some assign as the root the Phenician or Hebrew term Harkel, "circuitor," "mercator" (Munter, Relig. der Carthag., p. 41, ed. 2), but which applies equally well to the sun moving along in his celestial career (éxpanav). Others write the name Archel, which recalls the old Latin or Etrurian Ercole, Herocte. (Bellerophon). As for the true Sem of the Sem, the sun in the heavens may, in fact, have passed for a natural type of those adventurous courses by land and sea which enriched the hardy navigators of Phenicia; and beyond a doubt the myths of Hercules borrowed more than one incident from their distant expeditions. The ancient nations had a custom of loading with chains the statues of their gods, when the state was menaced with danger, in order to call down the wrath of the gods. The statue of the idol Melkarth was almost constantly chained. In the same manner, the nations of Italy chained their Saturn every year until the tenth month, and at his festival in December they gave him his freedom. (Macrobi., Sat. 1, 8.) The fundamental idea of this symbolic usage was originally the same among all these nations, though afterward differently expressed, and variously modified in various terms of religion. In the infantine conceptions of the earliest times, it was believed that the course of the
sun could be retarded by chaining his image, and accelerated by removing the fetters. Hence, in this way, they wished to represent his strength and his weakness.—The worship of Hercules prevailed also in Phrygia. Hercules, according to Eusebius (Chron., 1, p. 26.—Bochart, Geogr. Sac., p. 472), here bore the name of Diodas, or, as the Latin version gives it, Desanaus, which last Vossius makes equivalent to "strong," "powerful," an idea conveyed also by the Tyrian appellation of Melkarth. (Voss, de Idolol., 1, 22.)—As a colony from Tyre had carried the worship of Hercules into Briton by the way of Thasus, so another colony conveyed it to the Ionians of lower Asia. At Ephryne, on the coast of Ionia, was to be seen a statue of Hercules, of an aspect completely Egyptian. The worship of the god was here celebrated by certain Thracian females, because the females of the country were said to have refused to make to the god an offering of their locks on his arrival at Ephryne. (Pausan., 7, 5.) The females of Byblis sacrificed to Adonis their locks and their chastity at one and the same time, and it is probable that the worship of Hercules was not more exempt, in various parts of the ancient world, from the same disolute offerings. In Lydia, particularly, it seems to have been marked by an almost delirious sensuality. Married and unmarried females prostituted themselves at the festival of the god. (Herodot., 1, 93.—Compare Crézzer, par Guigniaut, vol. 3, p. 179.) This Sandon appears in the Cilician Sandaccus, subjected to his male companion Pharnaces, as the Lydian Hercules was to Omphale. (Crüezer, Fragm. Hist. Antig., p. 187.) The Lydian Hercules was named Sandon, after the robe dyed with sandyx, in which Omphale had arrayed him, and which the females of the country wore until the time of Atys. (L. Laurent. Lydus, de Mag. Rom., 3, 64, p. 268.) This Sandon reappears in the Cilician Sandaccus, subjected to his male companion Pharnaces, as the Lydian Hercules was to Omphale. (Crüezer, Symbolik, par Guigniaut, vol. 3, p. 179.) We find here, as in the religion of Phœnicia, the same opposition, the same alternation of strength and weakness, of voluptuousness and courage. "Hercules with Omphale, is the solace of the world, amid the signs of the southern hemisphere; and it was the festival of this powerful star, enervated in some degree at the period of the winter solstice, which the Lydian people celebrated by the changing of the vestments of the weaker and the stronger sex. —The fable of Hercules Melampyges and the Cercopes has a similar reference. According to Diodorus Siculo (4, 31), the Cercopes dwelt in the vicinity of Ephesus, and ravaged the country far and wide, while Hercules led a life of pleasure and servitude in the arms of Omphale. In vain had their mother warned them to beware of the powerful hero: they contaminated her exhortations, and Melampyges, in consequence, was sent to chastise them. He soon brought them to the queen, loaded with chains. A different tradition places the Cercopes in the islands that face the coast of Campania. Jupiter, says the legend, being involved in war with the Titans, came to these islands to demand aid from the people called Arimi. But the Arimi, after having promised him assistance, refused to fulfil that promise, and trifled with the god. As a punishment for this conduct, Jove changed them into monkeys, or, according to others, into stones, and from this period the isles of Inarime and Prochytta have taken the name of Pithonos, or "Monkey Islands." (Πιθονος, from πίθος, "a monkey.") We have here the Cercopes, both in Asia Minor and in the volcanic islands of Campania. The meaning of the fable is evident. The Lydian Hercules is the sun, pale and feeble at the period of the winter solstice, which in some sense turns his back upon the earth, and shows his obscure parts. (Compare the literal meaning of Μελαντυς, and the note of Guigniaut, vol. 3, p. 182.) As long as the solar god abandons himself to an inglorious life, and diverts his attention between the pleasures and the servile employments of women, that is, during the entire winter solstice, the Cercopes, who are the divisions of this period of languor, crowd around and insult him with impunity. But no sooner does the approach of the vernal equinox reinvigorate the solar luminary, than Hercules, coming forth from degrading repose, attacks and subjugates his revilers. Jupiter, placed in opposition to the same creatures, so full of artifice and so fair a symbol of it, may equally be explained in an astronomical and calendrical sense. This god was the sun of suns; the supreme force that combats, subdues, and dissipates whatever tends to obscure the light and disturb the harmony of the universe. The Cercopes are here opposed to him in the same manner, as in other legends the Titans.—It may be as well, before leaving this part of the subject, to remark, that the monkey, and also various other animals or natural objects, consecrated in public worship both among the Egyptians and elsewhere, were regarded as having a direct and permanent relation to the stars, their revolutions, and the periods of the year. Apes appear to have been honoured with a species of votive offerings, as related by Diodorus, who alludes to the northern coast of Africa, perhaps even at Carthage itself. (Guigniaut, vol. 3, p. 183.)—Hercules, according to the traditions of Lydia, became the father, in this country, by a female slave, perhaps the same with Omphale, of the chief of a new dynasty of kings. The dynasty preceding this had in like manner for its founder a chieftain of the name of Atys, homonymous with the solar god of Phrygia and Lydia. The southern hemisphere, according to the opinion of the Candaules: for, according to some, the Lydian Hercules was named Candaules. (Hesych., s. v. Kavdlav÷a.) This name recalls to mind the last monarch of the race, who, like his divine progenitor, fell into the snare laid for him by an artful woman, and, still more unfortunate than he, lost at one and the same time his throne and his life. (Herodot., 1, 12.) Without outing the marvellous incidents with which the latter account is embellished, this example of the magic ring of Gyges, the narrative of Herodotus alone evidently shows a mythic side in the whole history of the kings of Lydia: the very fall of the monarchy is related with accompanying circumstances that bear the imprint of old religious symbols. If King Meles, said the legend, had carried the lion, which one of his concubines brought forth, all around the walls of Sardis, that city never would have fallen into the hands of Cyrus. (Herodot., 1, 84.) We have here a royal lion, born of a young female, in the family of the Heraclidæ; and the lion was always a symbol of the valiant and victorious Hercules, an emblem of the sun in its protecting force. It remained the sacred attribute of the monarchs of Lydia. Among the rich offerings which Cresus sent to the temple of Apollo at Delphi, the principal one was a golden lion. (Herodot., 1, 60.) Even Sardis itself was, as the very name denotes, the city of the year, and, under this appellation, consecrated to the god who directed the movements of the year. (Xanthus, ap. I. Lyd. de Mens., p. 42.) It was the city of Hercules, as the Egyptian Thebes was the city of Ammon; Babylon, the city of Belus; Ecbatana, with its walls of seven different colours, the city of the planets. India had also her Hercules, if we credit the ancient writers, though the accounts are of a date comparatively late. He was named Dorsones or Dossenes (Hesychius, s. v. Δορος.—Alberti, ad loc.), an appellation which recalls the Desanaus of Phrygia. The account
HERCULES.

given by Megasthenes (ap. Arrian, Ind., c. 8, 99.), is in many respects so very similar to that which has already been stated with regard to the Lydian Hercules, as to lead to the belief that the legends of Lower Asia had emanated in some degree from the plains of the Indian peninsula. The Rama of Hindustan, with his warlike apes, reminds us, under various striking aspects, of Hercules and the Cercopes.—The religion of Hercules, passing from the East like the god whom it was intended to commemorate, made its way to the farthest limits of the then known West. The Phenicians, and after them the Carthaginians, extended on every side the worship of Melkarth, the divine protector of their colonies. It was from them that the nations of Spain, after those of Africa, learned to revere his name; and, not content with placing his columns at the entrance of the Atlantic, the Phenician Hercules undertook, on this vast extent of ocean, long and perilous expeditions. Pursuing also another direction, he crossed the barrier of the Pillars of Hercules and the Alps: he and his descendants founded numerous cities, both in Gaul and in the countries adjacent to it. He was here styled Deuconsienius, an appellation which again recalls that of Desanuas. Indeed, the occident

mental mythology seems here to correspond in every particular with that of the East. The cup of the sun, in which Hercules traverses the ocean for the purpose of reaching the isle of Erythea, represents the marvellous cup of the sun, which has long been held in remembrance by the hero of the latter, no corruption or decay of any kind previled; and the columns of wood in the temple of Hercules at Gades were never curious. The Dachemisch of Persia and the Sem of Egypt gave health to their votaries; the Romans recognised the same power in their victorious Hercules. (I. Lyd. de Mons., p. 92.) Rome herself counted among her citizens certain inanimate objects, which were believed to be the descendants of the hero of the Fabi, for example, traced their origin to the son of Alcmena. (Plut., Vit. Fab. Max., c. 1.) The Latins, as well as the Lydians, assigned various consecubines to this powerful deity, among whom are mentioned Fauna, and Acca Larentia, the nurse of Romulus. (Macer, ap. Macrobi., Sat., i, 10.—Auguat., de Civ. Dei, 6, 7.) Thus, then, at the same time that we find even in the West the tradition of a myth already rendered in other countries, we see reproduced that peculiar tendency, so prevalent in the East, of making heroes and kings the descendants of the divine sun; the children of that victorious and beneficent star, which continually brings us both the day and the year as the prizes of his glorious combats. And, indeed, what idea can be more natural than this! Is not the sun himself a powerful king, a hero, placed in a situation of continual combat with the shades of darkness and with the evil spirits to which they give birth? His numerous adversaries, in the career of the zodiac which he traverses, are principally the signs of winter. The solemn rites offered to him, such as the games celebrated at Chemnias and Olympia; the chains with which the statue of the Tyrian Hercules was loaded; the circle of female figures surrounding his statue at Sardis, were intended to represent the alternation of the arts of strength and weakness, of victory and defeat, which mark the course of this courageous wrestler of the year, whose very death is a triumph. Hence, among the numerous incarnations of the star of day, the warlike spirit of the earlier nations of antiquity would, in order to propose it as an example to chiefs and monarchs, give a preference to that one which represented the sun under the character that we have just been considering. Nor could the heads of conquering individuals have a nobler model than that which was regarded as divine, it imposed upon them the obligation of a continual struggle, in order to render manifest to all eyes the principle of light, of strength, and of goodness, which they were supposed to have within them. Besides, it was on the solar year, and its several subdivisions and periods, that the ordinances of the earliest social state were based. In maintaining this sacred order, they only imitated the god of the year, at once the author of it and of their race. It is for these reasons that we find, throughout all antiquity, a solar hero at the head of royal dynasties. This solar hero is Hercules, who is everywhere found to be the same personage, though under different appellations. In Greece, the painful and protracted delivery of Alcmena, the mother of Hercules, made the god of light, destined to struggle painfully against the powers of darkness. Ilithyia herself, the light coming forth from the bosom of night, sits with folded arms before the door of Amphitryon, and the courageous mother is a prey to cruel pangs until the cause of her anguish is removed by the artifice of Galanthis. (Vid. Alcmena.) Long did June, according to the early traditions, put every obstacle in the way of this mortal hero. (II., 19, 119.) This hostile power persecutes the son after the mother, and her obstinate hatred becomes the means that enable him to develop in all its splendour the divine power with which he is endowed. Thus the oracle gave him the name of Herakles (Hraklik), because by means of June (Hipsa) he was destined to gain immortal glory (eipos), and live in the praise of posterity. (Diod. Sic., 4, 10. Schol. ad Pind., vi, 7. Arn.),—Cic. (Misc., vi, 17).—Some authors make Hercules the glory of Hera, or the lower air, the native darkness of which is illuminated by the sun.) False as this etymology undoubtedly is, it still proves that the Greeks themselves attached to their Hercules the fundamental idea of a hero constantly at variance with a contrary power. As regards the name itself, it may be remarked, that it is most probably of Oriental origin, though various attempts have been made by different authors to connect it with a Grecian source. The Latin Hercules, (Hercule, Erelc) is, to all appearance, a more ancient form than the Greek Hraklik. (Lemene, Etymol. L. G., p. 245.—Lanzi, Saggio di Ling. Etruca, vol. 2, p. 206. seqq.) Hermann considers Hercules as virtue personified, and carrying off glory and praise (Hraklik, de ipso clyceo. Breve libri Homer et Hesiod, p. 20), while Knight gives to the following description of the Oriental Hercules, Lampsacus or Leukabates, the worship of the sun ("the gloriplier of the earth," from ipso and clycleo.—Enquiry into Symb. Lang., § 130). For other theories relative to Hercules, consult Muler, Dorians, b. 2, c. 11, seq., and Buttmann, Mythologus, vol. 1, p. 246, seqq.

HERCULEUS, I. Promontorium, a promontory in the Bruttiorum Ager, forming the most southern angle of Italy to the east, now Caupo Spartanento. (Strabo, 259.—Cluver, the Lat. Antig., 2, p. 1300.—Romaneili, vol. 1, p. 140)—II. Fretum, the strait which forms the communication between the Atlantic and Mediterranea. (Vid. Abila, Calpe, and Hercules Columnum.)

HERCULIS, I. Columnarum, or Columnae of Hercules, a name given to Calpe and Abila, or Gibraltar on the Spanish, and Cape Serra on the African, shore of the straits. Hercules was said to have placed them there as monuments of his progress, and after which no mortal could pass. (Vid. Calpe, Abila, and Mediterranean, Mare.)—II. Monacensis Portus, or Arx Herculis Monacens, a town and harbour of Liguria, near Nicea. The surname of Monacens, given to Hercules, who was worshipped here, shows, as Strabo observes, the Greek origin of this place. Fabulous accounts attributed its foundation to Hercules himself. (Am. Marc., 15.) The harbour is well defended by Lucard, and was regarded as divine, it imposed upon them the obligation of a continual struggle, in order to render manifest to all eyes the principle of light, of strength, and of goodness, which they were supposed to have within them.
between Arminia and Incitaria, and served as a port to the city of Cosa. It was one of the principal stations for the Etruscan fleets on the lower sea. (Livy, 28, 11, 6; Id., 30, 39.)

Hercynia, a very extensive forest of Germany, the breadth of which, according to Caesar, was nine days' journey, while its length exceeded sixty. It extended from the territories of the Helvetii, Nemetes, and Rauraci, along the Danube to the country of the Daci and Anartes. Then turning to the north, it spread over many large tracts of land, and is said to have contained many animals unknown in other countries, of which Caesar describes two or three kinds. Caesar, following the Greek geographers (Arist., Meteor., 1, 13.—Compare Apoll. Rhod., 4, 140), confounds all the forests and all the mountains of Central Germany under the name of Hercynia Silva. This vague tradition was propagated among the Roman geographical writers, nor could either Pliny or Tacitus form a more exact idea of its extent. (Plin., 4, 12.—Tac., Germ., 29 and 30.) Pliny had obtained more positive information on the subject: besides his Mont Abnobs, he distinguished the Hartz Forest under the name of Melibocus, &c. On the country's becoming more inhabited, the grounds were gradually cleared, and but few vestiges of the ancient forest remain in modern times. These now go by particular names, as the Black Forest, which separates Alsace from Swabia; the Steiger in Franconia; the Spisard on the Merienne; the Geres or the Geresse, a mountain range in the duchy of Cleves; the Bohemwald, which compasses Bohemia, and was in the middle ages called Hercynia Silva; and the Hartz Forest in Lennburgh. Some of the German writers at the present day derive the ancient name from the term horti; high; others suppose it to come from hartz, resin, and consider the old name as remaining in the present Hartz Forest. (Malte-Brun, Precis., &c., vol. 1, p. 198, Brussels ed. Malte-Brun, 1823, p. 410.)

Herrnndis, I. Senecio, a native of Spain, and a senator and questor at Rome under Domitian. His contempt for public honours, his virtuous character, and his admiration of Helvidius Priscus, whose life he wrote, rendered him odious to the emperor, and caused him to be accused of high treason. He was condemned to death, and his work burned by the public executioner. (Tac., Nat. Hist., 3, 61. Plin., Ep. 4, 93.)—II. Josephus, the Jewish historian, who advised his son either to give freedom to the Romans ensnared at the Caudine Pass, or to exterminate them all. (Livy, 9, 1, seqq.)—III. Caius, a Roman, to whom the treatise on rhetoric, ascribed by some to Cicero, is addressed. The treatise in question is generally regarded as not having been written by the Roman orator, but either by Antonius Quinctio or Q. Cornificius. (Consult on this point the remarks of Schultze, in his edition of Cicero, vol. 1, p. lv., seqq.; and those of Le Clerc, in his more recent edition, Paris, 1827, vol. 1, pt. 2, p. 1 seqq.)

Herm, statues of Mercury, which the Athenians had in the vestibules of their dwelling. They were made like terminal figures of stones, of a cubical form, and surmounted with a head of Mercury. (Vid. Mercurius.)

Hermæa, a festival celebrated at Cydoria, in the island of Crete, at which the slaves enjoyed complete freedom, and were waited upon by their masters. (Ephorus, ap. Athen., 6, p. 263, f.—Carystius, ap. candid., 14, p. 639.—Höck, Kreta, vol. 3, p. 39.)

Hermæum, I. Promontorium, or Promontory of Mercury (Ephius, Mercurius), on the southern shore of Crete, between the Promontory Cru Metopou and Phenix. —II. A promontory of Sardinia, on the western shore, a little to the north of Cosa, now Cape Avela. (Vid. Hermæum.)—III. A promontory of Africa, in the district Zeugitana, now Cape Bon. (Polyb., 1, 29.—Plin., 5, 4.—Mela, 1, 7.—Liv., 29, 27.)

Hermaphroditus, a son of Mercury (Ephius) and Venus (Aphrodita), the fable relates to whom and the nymph of the same name whom he was joined to be found in Ovid (Met., 2, 399; 10, 286; seqq.). It is evidently copied after some Eastern legend, although the Grecian spirit has moulded it into a more pleasing form, perhaps, than was possessed by its original. The doctrine of androgynous divinities lies at the very foundation of the earliest pagan worship. The union of the two sexes was regarded by the early priesthoods as a symbol of the generation of the universe, and hence originated those strange types and still stranger ceremonies, which, conceived at first in a pure and simple spirit, became eventually the source of so much licentiousness and indecency. The early believer was taught by his religious instructor, that, before the creation, the productive power existed alone in the immensity of space. When the process of creation commenced, this power divided itself into two portions, and discharged the functions of an active and a passive being: a male and a female. Hence arose the beautiful frame of the universe. This is the doctrine, in particular, of the Hindu Vedas, and it is explicitly established in the Manara-Dharna-Satra, and also in the laws of Menou. The Adonis of Syria (Creuzer, Symbolik, vol. 2, p. 12); the Adaogis of Phrygia (Herodotus, 1, 105. —Creuzer, 1, 95); the Pthia and Neith of Egypt; the Mithras of Persia (Jul. Firmaeus, p. 1 seqq. —Goers, vol, 2, p. 254); the Freys of Scandinavia (Goers, p. 2, 574); the Sons of the Sun of Thuringia, etc. The country extends from the Schiva, Vishnou, and Krishna, of India (Roger, Pagan., 9, 2, pp. 2, 20. —Sautin., Syst. Bruxman., p. 195.—Porpyr., in Stob. Eclog. Phys., 1, 4.—Bogazadam, Wagner, p. 167.—Bhagavat Geta, &c.); the Moon among various nations of Asia (Sparrman, Vit. Caracall., c. 7.—Casabon., ad loc.); all these objects of adoration reunited the two sexes, and, by consequence of this symbolical idea, the priests changed their ordinary vestments, and assumed those of the other sex, while the ceremonies instituted in honour of these gods, for the purpose of expressing their double nature. How different from all this is the Grecian legend! and yet its origin is one and the same.

Hermathena, a sort of statue, raised on a square pedestal, in which the attributes of Mercury (Ephius) and Minerva (Athena) were blended. (Consult the remarks under the preceding article; and Creuzer, Symbolik, vol. 2, p. 58.)—II. A volume of the Sacrae Scripturae, of which Schott published a new edition, 1784, in 8vo. (Recherch. Curieuses de l'Antiq., p. 93.)

Hermes (Ephius), I. The name of Mercury among the Greeks. (Vid. Mercurius I.)—II. Trismegistus. (Vid. Mercurius II.)

Hermesnak, a poet of Colophon, who flourished in the time of Philip and his son Alexander. He composed three books of elegies, and entitled the collection Leonium (Adiutus), in honour of his mistress, who is the same, perhaps, with the one connected with the history of Epicurus and his disciple Metrodorus. Athenaeus has preserved for us a fragment of nearly a hundred verses of this poet, which makes us regret what we have lost. This fragment was published in 1782, by Ruhnken, in an appendix to his Epistolica Critica, 2, p. 283. It was also edited by Weston, Lond., 1784, 8vo. and by Ilgen, in his Oppuscula Varia, Erfurt, 1781, in 8vo. This, however, is not the first edition, however, that is of Hermesnak, 1728, 4to, in his Program. Acad. in memoriam I. A. Ernstei, Lips. (Consult Hoffmann, Lex. Bibliogr., vol. 2, p. 353.)

Hermes, a Christian writer towards the close of the second century, and a native of Galatia, who has left us a short but elegant discourse in ridicule of the pagan philosophers, entitled Διασειατε των των εκ φιλοσοφων. It appears to be an imitation of a discourse of Tatian's, but it is an imitation by a man of spirit and ability. He ridicules the want of harmony that prevails among the systems of the Greek philosophers, which is the
cause of all their speculations being crowned with no positive result. He is accused by some critics of putting nothing in the place of the edifice which he has destroyed by his sacrifices. Such, however, was not the end he had proposed to himself. It was sufficient for him to show that the systems of ancient philosophy were untenable. The one which was to occupy its place they had only to seek for, and Hermes points it out to them without naming it. This treatise was published by Sebire, Basel, 1533, 8vo, and with the works of Wolf in Morell’s Compend. de Orig. Vet. Phil., Basel, 1580, 8vo. It is found also in the Auct. Bibloth. Patrum, Paris, 1634; and in the Oxford edition of Tatian, 8vo, 1700. The best edition, however, is that of Dommerich, Hal., 1774, 8vo. (Schöll, Hist. Lit. Gr., vol. v, p. 213.—Lardner, Credibility of Gospel History, pt. 2, vol. 2, p. 555.)

Hermione, I. more correctly Harmonia, daughter of Mars and Venus, and wife of Calmus. (Vid. Harmonia.)—II. Daughter of Menelaus and Helen. She was privately engaged to her cousin Orestes, the son of Agamennon; but her father, on his return from Troy, being ignorant of this, gave her in marriage to Pyrrhus, otherwise called Neoptolemus. After the murder of that prince (vid. Pyrrhus), she married Orestes, and received the kingdom of Sparta as her dowry. (Virg., Æn., 3, 327, seqq.—Huyse, Excurs., 12, ad Æn., 3, 327.) It was in the city of Argos, on the southern coast, opposite Hydrae. It was founded, according to Herodotus, by the Dryopes, whom Hercules and the Melians had expelled from the banks of the Sperchius and the valley of Ceta. Pausanias describes this city as situated on a hill of moderate height, and surrounded by walls. It contained, among others, a temple of Ceres, the sanctuary of which afforded an inviolable refuge to suppliants, whose asylum the prophet of Delphi, according to Pausanias, “as safe an asylum as that of Hermione.” Not far from this structure was a cave, supposed to communicate with the infernal regions. It was probably owing to this speedy descent to Orcus, that the Hermioneans, as Strabo informs us, omitted to put a piece of money in the mouths of their dead. (Strab., 373.—Callim., ap. Elyn. Mag., s. v. Δαναίς.) Lasus, an early poet of some note, said he had been the instructor of Findicus, the father of Hermioneus, W. C. (Hermodorus, 1.) Sir W. Gell, that the ruins of this place are to be seen on the promontory below Kastri, a town inhabited by Albanians, nearly opposite to the island of Hydra. (Itin. of the Morea, p. 198.) Pausanias affirms (2, 34), that Hermione originally stood at the distance of four stadia from the site it occupied in his day, and, though the inhabitants had long removed to the new city, there yet remained several edifices to mark the spot. (Cramer’s Anc. Greece, vol. 3, p. 258, seq.)

Hermiones, one of the three great divisions of the Germanic tribes, according to Tacitus (Germ., c. 2), and occupying the central parts of the country. Mannert is of opinion, that a tribe or division of the name Hermioneus never in fact existed, but that this appellation originated from the early legend of Greece respecting the fabulous land Hermione, remarkable for its productions, and placed by the ancients in the distast regions of the north. The Romans, borrowing this fable from the Greeks, imagined that they had found Hermione in the regions of Germany. (Compare Mela, 3, 3.—Mannert, Geog., vol. 3, p. 146.)

Hermionicus Sinus, a bay on the coast of Argolis, near Hermione. (Strab., 335.) It is now the Gulf of Castro.

Hermodorus, a philosopher of Ephesus, who is said to have been an interpreter, the Roman decemvirs in the composition of the ten tables of laws which had been collected in Greece. (Cic., Tusc., 5, 36.) “An ancient tradition mentions,” observes Niebuhr, “as an auxiliary to the Decemvirs in this code, Hermodorus, an Ephesian, the friend of the sage Heraclitus, whom his fellow-citizens had banished because he filled them with shame, and they desired to be all on an equality in profligacy of conduct. (Menag., ad Diog. Laert., 9, c. 2.) It cannot, indeed, be well explained, how this story could have been invented, for which nothing but a celebrated name could have given occasion, while that of Hermodorus appears to have been known to the Greeks themselves only by the saying of his friend. On this ground, the naming of the statue, which was inscribed as the works of the Ephesian, appears for genuine. But if ever he lived there, honoured by, and useful to, his contemporaries, the legislators, it does not therefore follow, that, by his council, many of the Greek laws were transferred to the Twelve Tables, which are lost to us. The Romans adhered too tenaciously to their own hereditary laws, to exchange them for any foreign institution; and the difference between them and the Greeks was so great, that the sage Hermodorus could not have suggested an imitation.” (Niebuhr’s Roman History, vol. 2, p. 111, Walter’s transl.)

Hermogènes, a celebrated sophist, a native of Tar- sus, who flourished under M. Aurelius Antoninus. He was remarkable for the precocity of his intellect. At the age of fifteen he openly professed his art in the presence of the emperor, and excited his astonishment by the manner in which he displayed it. This rapid growth, however, of the mental powers, was succeeded by as rapid a decline, and, at the age of twenty-five, he lost his memory to such a degree as to be incapable of pursuing his usual avocations. In this sad condition he lingered to an advanced age. It is said that, on opening his body after death, his heart was found of an enormous size, and covered with hair. He left a work on Rhetoric, which was introduced into the Greek code of the Christians, and became a text-book in the rhetorical art until the decline of the latter. Two editions of the entire work were published, one in 1614, 8vo, by Laurentius, Colon. Allobrog.; the other in 1799, 4to, by an anonymous editor (2. B. D.). There have been several editions of parts of the work, for which consult Hoffmann (Lex. Bibliogr., vol. 2, p. 355, seqq.)—II. A lawyer in the age of Constantine, who, together with Gregorius or Gregorianus, made collections of the laws in the name of the emperor. Gregorius comprehended in his collection the laws published from Hadrian to Constantine; Hermogenes compiled a supplement to the work. This collection, though made without public authority, was yet cited in courts of law. (Schöll, Hist. Lit. Gr., vol. 7, p. 215, seq.)

Hermolaus, a young Macedonian nobleman, and one of the royal pages of Alexander the Great. In the heat of a boar-hunt on one occasion, he forgot his duty and slew the animal, perhaps unfairly (for the laws of the chase have in all ages and climes been very arbitrary), certainly in such a way as to interfere with the royal sport. The page was, in consequence, deprived of his horse, and ordered to be flogged. Incensed at the indignity thus offered him, he resolved to efface it in the blood of his sovereign, and for this purpose formed a conspiracy with some of his brother pages, as well as other individuals. The plot, however, was discovered, and the culprits were stoned to death. Hermolaus, in his defence, insisted that the tyranny and drunken revelries of Alexander were more than could be tolerated by freemen. (Artian, Exp. Al., 4, 13, seqq.)

Hermopolis, or the city of Hermes (Meropolis), the name of two towns of Egypt. The first was in the Delta, the capital of the ancient colony of Hermopolis Magna. For distinction’ sake, the epithet Μαγνή (Parsa) was added to its name. Ptolemy makes it the chief city of the nome in which Alexander was situated. (Mannert, Geog., vol. 10, pt. 1, p. 605.)
608. Its position corresponds with that of the modern Danube. The island was termed Meyden (Magna), or the great, and was situate in the Heptanomia, on the western bank of the Nile, opposite Antinoopolis. It is spoken of as a large city by Ammianus Marcellinus (22, 16). The inhabitants worshipped the Cynocephalus, or dog-headed deity Anubis. (Man- cert, Geogr., vol. 10, pt. 2, p. 397.) The name of the place is now Ashmunein.

Hermunduri, the first of the Hermionic tribes in Germany. They were a great and powerful nation, and lay to the east and northeast of the Alamanni. Tacitus says, that in process of time they became allies to the Romans, who distinguished them above the other Germans by peculiar privileges. (Germ., c. 41.) Mannert makes them a branch of the great Suevic race (Geogr., vol. 3, p. 201.)

Hermes, a considerable river of Asia Minor, rising, according to Strabo (626), in Mount Dindymus, in Phrygia, and flowing through the northern part of Lydia until it falls into the Égean. Pliny, however, makes its source to have been near Dorylaum in Phrygia. (Plin., 5, 31.) It received in its course the rivers Pactolus, Hylus, called also Phyrygus, and other less celebrated streams, and discharged itself into the sea between Phocaea and Smyrna. (Strab., l.c.—Herod., 1, 80.—Arrian, Exp. Al., 5, 5.) The plains which this river watered were termed the plains of the Ægean. The name of the river was derived from Hermes, who was anciently called the Hermian Gulf; but when Theseus, according to some accounts, a person of distinction in Thesei, migrated thither, and founded a town on this gulf called Smyrna after his wife (Vit. Hom., c. 2), the gulf was termed Smyrnaeus Sinus, or Gulf of Smyrna, a name which it still retains.

The sands of the Hermus were said to be barren, a circumstance for which it was probably indebted to the Pactolus, (Geogr., vol. 2, 180.) The modern name of this fine river in the Sarabat (Cramer's Asia Minor, vol. 1, p. 336.)

Hernic, a people of New Latium, bordering on the Équi and Marsi. (Strabo, 231.) It was maintained by some authors, that they derived their name from the rocky nature of their country; herna, in the Sabine language, signifying a rock. (Serr., ad Am., 7, 682.) Others were of opinion, that they were so called from Hermaeus, a king of the Êturi, and Macrobius (Sat., 6, 18) thinks that Virgil alluded to that origin when he described this people as going to battle with one leg bare. The former etymology, however, is more probable, and would also lead us to infer that the Hernici, as well as the Équi and Marsi, were descended from the Sabines, or generally from the Ocean race. There is nothing in the history of this petty nation which possesses any peculiar interest, or distinguishes them from their equally hardy and warlike neighbours. It is merely an account of the same ineffectual struggle to resist the systematic and overwhelming preponderance of Rome, and of the same final submission to her transcendent genius and fortune. It may be remarked, that it was upon the occasion of a debate on the division of some lands conquered from the Hernici, that the celebrated agrarian law was first brought forward (A.U.C. 288.—Liv., 2, 41. Dion. Hal., 8, 13.) This first effort made by this people to assert their independence was about the year 447 A.U.C.; but it was neither long nor vigorous, though resolved upon unanimously by a general council of all their cities. (Liv., 9, 43.—Cramer's Ancient Italy, vol. 2, p. 78, seq.)

Heró, I. a beautiful priestess of Venus at Sestus, attached to Leander, a youth of Abyssos, who every night escaped from the vigilance of his family, and swam across the Hellepont, while Heró, in Sestus, decorated his course by holding a burning torch on the top of a high tower. Leander, however, was at last drowned in a tempestuous night, as he attempted his usual course, and Heró, in despair, threw herself down from her tower, and perished in the sea. Musæus, a Greek poet of the fifth century of our era, made his story the subject of a pleasing little poem that has come down to us. (Vid. Musæus III.) Ovid devotes two of his Heroïdes to this same theme. (Her., Ep., 18 et 19.) As regards the feast of Leander in swimming across the Hellepont nightly, consult remarks under the article Leander.—II. The name of two writers on mechanical subjects. (Vid. Hero.)

Heracl那次, I. summed the Great and Ascaloniana, second son of Antipater the Idumaean, was born B.C. 71, at Ascalon, in Judæa. At the age of twenty-five he was made by his father governor of Galilee, and distinguished himself by the suppression of a band of robbers, and the execution of their leader, with several of his comrades. He was summoned before the Sanhedrin for having done this by his own authority, and having put these men to death without a trial; but, through the strength of his party and the zeal of his friends, he escaped censure. He at first embraced the party of Brutus and Cassius; but, after their death, reconciled himself to Antony, who appointed him and Phassell tetrarchs of Judæa. In B.C. 40 the Parthians invaded Judæa, and placed Antigonus on the throne, making Hyrcanus and Phassell prisoners. Herod escaped to Rome, where, by the influence of Antony, he was appointed King of the Jews. But the Roman Senate, on account of previous promises, made to Antony, and it was not till the end of the year 38 B.C. that Jerusalem was taken by Sossius. The commencement of Herod's reign dates from the following year. In the year 38 he had married Mariamme, the granddaughter of Hyrcanus, hoping to strengthen his power by this match with the Æsmonian family, which was very popular in Judæa. On ascending the throne Herod appointed Ananæl of Babylon high-priest, to the exclusion of Aschanæl, nearly related to the family of Mariamme. But he soon found himself compelled, by the entreaties of Mariamme and the artifices of her mother Alexandra, to depose Ananæl, and appoint Aristobulus in his place. Not long after, however, Aristobulus was secretly put to death by the command of Herod. Alexandra having informed Cleopatra of the murder, Herod was summoned to answer the accusation before Antony, whom he pacified by liberal bribes. When Antony, at the close of his last campaign, reproached his brother Joseph to put Mariamme to death in case he should be condemned, that she might not fall into Antony's power. Finding, on his return, that his brother had revealed this order to Mariamme, Herod put him to death. In the civil war between Octavius and Antony, Herod joined the latter, and undertook, at his command, a campaign against the Africans, whom he defeated. After the battle of Actium, he went to Messia at Rhodes, having first put to death Hyrcanus, who had been released by the Parthians, and had placed himself under Herod's protection some years before. He also imprisoned Mariamme and Alexandra, commanding their keepers to kill them upon receiving intelligence of his death. Octavius, however, received him kindly, and reinstated him in his kingdom. On his return, Mariamme reproached him with his intentions towards her, which she had again discovered. This led to an estrangement between Herod and his queen, which was artfully increased by his sister Salome; till, on one occasion, enraged at a new affront he had received from Mariamme, Herod assembled some of his friends and accused her of adultery. She was condemned and executed. After her death Herod suffered the deepest remorse, and shut himself up in Samaria, where he was found dead. (Vid. Herod.) In the year 26 B.C. he put to death the sons of Babas, the last princes of the Ascanonian family. He now openly disregarded the Jewish law, and introduced Roman cus-
toms, a conduct which increased the hatred of the people towards him, and he particularly shocked their prejudices by receiving a Stanton. and an anointed theodotus, as the chief of the Jerusalem, in the latter of which he celebrated games in honour of Augustus. Ten men conspired against his life, but were detected and executed with the greatest cruelty. To secure himself against rebellion, he fortified Samaria, which he named Sebastus (equivalent to the Latin Augustus), and he built Caesarea and other cities and fortresses. In the year 17 B.C. he began to rebuild the temple at Jerusalem. The work was completed in eight years, but the decorations were not finished for many years after. (John, 2, 20.) Herod’s power and territories continued to increase, but the latter part of his reign was disturbed by the most violent dissensions in his family, of which a minute account is given by Josephus. He died in March, B.C. 4, in the thirty-fourth year of his reign, and the seventieth of his age. Josephus relates, that, shortly before his death, he shut up many of the principal men of the Jewish nation in the Hippodrome, commanding his sister Salome to put them to death as soon as he expired, that he might not want mourners.

They were released, however, by Salome upon Herod’s death. The birth of our Saviour took place in the last year of Herod’s reign, four years earlier than the era from which the common system of chronology dates the years A.D. (Joseph., Ant. Jud., 14, 17, seqq.—Id. ib., 15, 1, seqq.—Id. ib., 16, 1, seqq.—Id., Bell. Jud., 1, 17, &c.—Noldius, de Vita et Gestis Herodiam, § 7.) It was Herod of whom Augustus said, after he had heard of the former’s having put to death his own sons, Alexander and Aristobulus, that he would rather be Herod’s hog (νιόν) than his son (νιόν), putting upon the similarity of the two terms, and alluding at the same time to the aversion with which the hog was regarded by the Jews. (Macrobius, Sat., 2, 4.)—II. Antipas, a son of Herod the Great, whom his father, in his first will, declared his successor in the office of tetrarch over Galilee and Peraea, while he appointed his other son Archelaus king of Judea. Antipas, after being confirmed in these territories by Augustus, married the daughter of Aractas, king of Arabia. He divorced her, however, A.D. 33, that he might marry his sister-in-law Herodias, the wife of his brother Philip, who was still living. John the Baptist, exclaiming against this incest, was seized, and subsequently beheaded. A.D. 32. After Augustus died, Herodias, being jealous of the prosperity of her brother Agrippa, who, from a private person, had become King of Judea, persuaded his husband Herod Antipas to visit Rome, and to desire the same dignity from Tiberius. Agrippa, being apprised of his design, wrote to the emperor, accusing Antipas of being implicated in the affair of Sejanus, upon which he was banished to Lucdunum, in Gaul. This is that Antipas who, being at this time of his brother’s sufferings, ridiculed Jesus, whom Pilate had sent to him, dressed him in mock attire, and sent him back to the Roman governor as a king whose ambition gave him no umbrage. The year of his death is unknown, though it is certain that he and Herodias ended their days in exile, according to Josephus, in Spain. (Noldius, de Vita et Gestis Herodiam, § 37.— III. Aristobulus, son of Aristobulus, and grandson of Herod the Great. (Vid. Agrippa VI., IV. Agrippa, II. sons of the preceding. (Vid. Agrippa VI.) V. Atticus. (Vid. Atticus II.)

HERODIUS. I. A Greek historian, who flourished during the first part of the third century of our era, and died about A.D. 240, at the age of seventy years. Few particulars of his life are known, and even his native place has not been clearly ascertained, though generally supposed to have been Alexandria. He filled various honourable stations, both in the service of the emperors and in that of the state. (Compare b. 1, c. 4 of his history.) The tone of moderation which everywhere shows itself in his writings, would seem to decide as to his life and character; and we may conjecture, from a remark which he makes at the commencement of his work, that it was at an advanced age, and in the bosom of a pleasing retreat, that, collecting together the reminiscences of a long life, and the valuable fruits of his experience, he wrote the history of those emperors whose reigns he had seen and whose persons he had approached. This history, divided into eight books, commences with the death of Marcus Aurelius, and is carried down to the accession of Gordian III., embarking, from A.D. 180 to 238, a period of fifty-eight years, under seventeen princes who reigned either successively or conjointly. This period, though short, was a most eventful one in the annals of the empire, on account of the numerous and violent changes in the persons who held the sovereign power, and also with respect to the domestic and foreign wars, the depravity of manners, and the public calamities which characterized the age. The series of emperors which the history of Herodian embraces, comprises Commodus, Pertinax, Julian, Niger and Albinus, Severus, Caracalla and Geta, Macrinus, Heliogabalus, Alexander Severus, Maximinus the two Gordiani, and Balbinus. We perceive from this the importance of Herodian’s work, forming, as it does, a grave and almost solitary chronicle of this portion of Roman history; for the writers of the Augustan history, who lived long after our cities had been more than copy his narrative, and, when they deviate from him, merit, in general, a far less degree of confidence. This is a testimony rendered in his favour even by Julius Capitolinus himself, who (Vit. Albin., c. 12) invites his readers, if desirous of more lengthened details, to seek for them in Marius Maximus or Herodian, who, adds he, are equally distinguished by their accuracy and fidelity. And yet it is on the authority of the same Capitolinus that many modern writers have grounded their charge against Herodian, of having been too partial to Maximinus, and too severe on Alexander Severus. (Jul. Cap., Vit. Max., c. 13.) From this charge, however, Herodian has been successfully defended by Isaac Casaubon and the Abbé de Mongault.—The style of Herodian is plain and unadorned, and his narrative in general seems written in a spirit of sincerity, but it has no claims to philosophy or critical acuteness. The work is a mere narrative, and is more graceful and elegant, than they want simplicity. His greatest fault is having neglected chronology. Among the editions of Herodian may be mentioned that of Rimsch., Lips., 1739, 5 vols. 8vo, and that of Bekker, Berol., 1826, 8vo. The former is remarkable for its excessive load of commentary; the latter, which contains merely the text and various readings, presents the latest and best text of the historian. Politian gave to the world in 1490, a Latin translation of Herodian’s imperial and was considered an original and elegant version. The work has been confounded with the historian above mentioned. He was a son of the celebrated Apollonius Deyolus, and flourished in the second century of the Christian era. He dedicated to the Emperor Marcus Aurelius his general grammar, of which we have only some unpublished and abridged extracts remaining. We have also some fragments of other works; and Pison has given in his edition of Moris a treatise of the same writer on the choice of
words, entitled Philetærus. The treatise published by Valckenaer, at the end of his Ammonius, on barba-
risms and solemcinisms, and the name of the author of which that scholar did not know, was discovered by
Villioz to have been written by this same Herodian. Other minor productions of his are given by the last-
mentioned scholar, in his Anecdota, and by Hermann in his treatise De Emendanda ratione G. G.—Consult
the remarks of Hase, as given by Schöll (Hist. Litt. Gr. vol. 5, p. 565). A traveller and observer of an
Herodotus, 1. a celebrated Greek historian, born at Halicarnassus, B.C. 484. (Larcher, Vie d'Herod.,
p. 1.—Clinten, Fasti Hellenici, vol. 1, p. 29, 2d ed.)
He was of Dorian extraction, and of a distinguished
family. (Suidas, s. v. Ἡρώδ.)
Panysian, an eminent poet, whom some ranked next to Homer (Suidas, s. v. ἰάρωδ.), while others placed him after Hesiód and Antimachus, was his uncle either by the mother's or father's side.
Herodotus is regarded by many as the father of profane history, and Cicero (Leg., 1, 1) calls him "historia paetem" by this, however, nothing more must be meant, than that he is the first profane historian whose work is distinguished for its finished form, and has come down to us entire. Thus Cicero himself, on another occasion, speaks of him as the first "qua princeps genus hoc (scribendi) ornavit" (De Orat., 2, 19); while Dionysius of Halicarnassus has left us for us extant the remains of a historical treatise who succeeded him. (Consult Creuzer, Fragm. Hist. Antiq. Heidel., 1826, 8vo.) The facts of his life are few and doubtful, except so far as we can collect them from his own works. Not liking the government of Ly-
damis, who was tyrant of Halicarnassus, Herodotus retired for a season to the island of Samos, where he is said to have cultivated the Ionic dialect of the Greek, which was the language there prevalent. Before he came to his neighbours, he had spent part of his time, and so proved successful, to excel Lydamis. But the ban-
ishment of the tyrant did not give tranquillity to Hal-
carnassus, and Herodotus, who himself had become an object of dislike, again left his native country, and
joined, as it is said, a colony which the Athenians sent to Thurium in Southern Italy, B.C. 443. He is said to have died in Thurium, and to have been buried in the Agora.—Herodotus presents himself to our con-
sciousness, not as a scholar in the true half-scholar, and as an historian. The extent of his travels may be ascertained pretty clearly from his History; but the order in which he visited each place, and the time of visiting, cannot be determined. The story of his read-
ing his work at the Olympic games, on which occasion he is said to have received universal applause, and to have had the names of the nine Muses given to the nine books of his History, has been well discussed by Dahalmann, and we may perhaps say disproved. (He-
rodot., aus seinem Büch, sein Leben, Altona, 1823.)
The story is founded upon a small piece by Lucian, entitled "Herodotus οἰκείος," which apparently was not intended by the writer himself as an historical truth; and, in addition to this, Herodotus was only about twenty-eight years old (Suid., s. v. Θωμοδολόγ.) when he is said to have read to the assembled Greeks at Olympia a work which was the result of most ex-
tensive travelling and research, and which bears in every part of it evident marks of the hand of a man of mature age. The Olympic recitation is not even alluded to by Plutarch, in his treatise on the "Malignty of Herodotus." At a later period Herodotus read his History, as we are informed by Plutarch and Eusebius, at the Panathenian festival at Athens, and the Athe-
niens are said to have presented him with the sum of ten talents for the manner in which he had spoken, the deeds of which date of recitation. The account of this sec-
ond recitation may be true.—With a simplicity which characterizes his whole work, Herodotus makes no dis-
play of the great extent of his travels. He frequently
avoids saying in express terms that he was at a place, but he uses words which are as conclusive as any posi-
tive statement. He describes a thing as standing be-
hind the door (2, 182), or on the right hand as you en-
ter a temple (1, 51); or he was told something by a person in a particular place (2, 28); or he uses other words equally significant. In Africa he visited Egypt, from the coast of the Mediterranean to Elephantine, the southern extremity of the country (2, 29); and he travelled westward as far as Cyrene (2, 32, 181), probably farther. In Asia he visited Tyre, Babylon, Ecbatana (1, 98), and probably Susa (5, 52, seqq.; 6, 119). He also travelled to various parts of Asia Mi-
nor, and probably went as far as Colchis (2, 104). In
Europe he visited a large part of the country along the
Black Sea, between the mouths of the Danube and the
Crimea, and went some distance into the interior. He
seems to have examined the line of the march of Xerxes
from the Hellespont to Attica, and certainly had seen
numerous places on this route. He was well ac-
quainted with Athens (1, 98; 5, 77), and also with Delphi, Dodona, Olympia, Delos, and many other
places in Greece. That he had visited some places of
Southern Italy is clear from his work (4, 99; 5, 44).
The mention of these places is sufficient to show
that he must have seen many more. So wide and
varied a field of observation has rarely been present-
ted to a single man, and to a single historian, who is
such an, either of ancient or modern times; and, if we
cannot affirm that the author undertook his travels with a view to collect materials for his great work, a
supposition which is far from improbable, it is certain that, without such advantages, he could never have written it, and that his travels must have suggested much in-
quiry, and supplied many valuable facts, which after-
ward found a place in his History. The nine books of
his History were written between the years 440 and 430 B.C., and some of which is not perceived till the whole work has been thoroughly examined; and for this reason, on a first pe-
usal, the History is seldom well understood. But
the subject of his History was conceived by the author both
clearly and comprehensively. His aim was to com-
bine a general history of the Greeks and the barbari-
s (that is, those not Greeks) with the history of the wars between the Greeks and Persians. According to
them, in this he had a great share of success, and the
course of events from the time when the Lydian king-
dom of Cresus fell before the arms of Cyrus, the found-
er of the Persian monarchy (B.C. 545), to the capture of
Sestus (B.C. 478), an event which crowned the tri-
umph of the Greeks over the Persians. The great sub-
ject of his work, which is comprised within the space of 88 years, not more than the ordinary term of
human life, advances, with a regular progress and tru-
ely dramatic development, from the first weak and di-
vided efforts of the Greeks to resist Asiatic numbers,
to their union as a nation, and their final triumph in the
memorable battles of Thermopylae, Salamis, and
Platea. But with this subject, which has a complete
unity, well maintained from its commencement to its
close, the author has interwoven, conformably to his
general purpose, and by way of occasional digression,
sketches of the various people and countries which he
had visited in his wide-extended travels. The more
we contemplate the difficulty of thus combining a kind
of universal history with a substantial and distinct nar-
rative, the more we admire, not the art of the historian
(for such, in the proper sense of the term, he could not
well possess), but that happy power of bringing togeth-
er and arranging his materials, which was the result of
the fulness of his information, the distinctness of his
knowledge and the clear conception of his subject.
These numerous digressions are among the most valu-
able parts of his work; and, if they had been omitted or
lost, barren indeed would have been our investigation
into the field of ancient history, over which the late
of one man now throws a clear and steady light.—The story of Herodotus is simple, pleasing, and generally perspicuous; often highly poetical both in expression and sentiment. But it bears evident marks of belonging to a period when prose composition had not yet become a subject of art. His sentences are often ill-constructed and hang loosely together; but his clear comprehension of his own meaning, and the sterling worth of his matter, have saved him from the reproach of diffuseness and incoherence. His acquirements were apparently the result of his own experience. In physical knowledge he was certainly behind the science of his day. He had, no doubt, reflected on political questions; but he seems to have formed his opinions mainly from what he himself had observed. To pure philosophical speculations he had no inclination, and there is not a trace of such in his writings. He had a strong religious feeling—bordering on superstition, though even here he could clearly distinguish the gross and absurd. In all that was decorative, of a Churchman, he has been able to have viewed the manners and customs of all nations in a more truly philosophical way than many so-called philosophers, considering them as various forms of social existence under which happiness might be found. He treats with decent respect the religious observances of every nation; a decisive proof, if any were wanting, of his great good sense.—That Herodotus had noLocal knowledge of any sort in the South is manifest, and that in modern times his wonderful stories have been the subject of merriment to the half-learned, who measure his experience by their own ignorance, we merely notice, without thinking it necessary to say more. The incidental confirmations of his veracity, which have been accumulating of late years on all sides, and our more exact knowledge of the countries which he visited, enable us to appreciate him better than we have done; but it cannot now be denied, that a sound and comprehensive study of antiquity must be based upon a thorough knowledge of the work of Herodotus.—Plutarch accused Herodotus of partiality, and composed a treatise on what he termed the "malignity" of this writer (πρὸς τὸν Ἡροδότον καταθέσας), taxing him with injustice towards the Thbeans, Corinthians, and Greeks in general; but the whole affair is a weak and frivolous one, and was probably only on account of Herodotus' statements in the story of Tomyris and Cyrus. The ^S'ylsie," drawn from Oriental manuscripts in the "Bibliothèque du Roi" (Paris, 1806), opposed to him the testimony of Mar-Isbas-Cadina, a Syrian, and the secretary of Valar-saces, king of Armenia. This writer pretends to have found in the archives of Nineveh a Greek translation, made by order of Cyrus, of the whole of the work of very remote antiquity. The history of Mar-Isbas-Cadina no longer exists, but it was the source whence Moses of Chorene in the fifth century, and John Cahthofles in the tenth, drew the materials for their respective works. This attack, however, on the credibility of the Greek writer, is undeserving of any serious consideration, more especially as the French editors themselves, just mentioned, confess that Mar-Isbas-Cadina deals largely in fable.—A life of Homer is commonly ascribed to Herodotus, and appears in most editions of his history; but it is now deemed supposi-titious. The three best editions of Herodotus are, that of Wesseling, Annt., 1703, fol.; that of Schweig- haeuser, Argent., 1816, 6 vols. 8vo; and that of Bähr, Lips., 1830-35, 4 vols. 8vo. The edition of Schweighaeuser has a "Lexicon Herodotoi," forming a series of critical notes useful both to students, though far from being complete. Solomon after the appearance of Schweighaeuser's Herodotus, Gaisford collated anew the Sancrof MS. (one of the best manuscripts of the historian), and published an edition from the Oxford press, in 1834; but the result of the collation, has added nothing of any value to Schweighaeuser's text. The edition of Bähr is, perhaps, the most useful of the three. It contains an ex cellent body of notes, many of them selected from the writings of Croziner, especially from his "Commenta tiones Herodotae," and refers constantly to the most recent speculations of the German scholars on the different topics discussed by Herodotus. There is also a French translation of the history by Larcher, Paris, in 12 vols, 9 vols. 8vo, and a Latin translation executed for its very valuable commentary. Very important aid may likewise be obtained by the student from Ren nell's and Niebuhr's respective dissertations on the geography of Herodotus. A reprint of the former appeared from the London press in 1830, 2 vols. 8vo; and a translation of the latter from the German was published at Oxford, 1830, 8vo. (Encyc. U. N. Know l., vol. 32, p. 163, saepp.—Schorr, Hist. Lat. Gr., vol. 2, 140, seqq.—II. The author of an ancient Glossary on Hippocrates, supposed by some to have been the same with Herodotus of Tarsus (No. III.). Others think that the glossary in question is merely intended as a collection of words found in the history of Herodotus of Halicarnassus, and that it has been incorpo rated with the works of Hippocrates for no other reason than because this physician wrote in the Ionic dialect, which was the common language of the Tarsians and many 
famous doctors of the period of Herodotus. (Schorr, Hist. Lat. Gr., vol. 5, p. 6.)—III. A Physician of Tarsus, of the em pire school, and successor to Menodotus of Nicomedia. A work of his, entitled "The Physician," is mentioned by Galen (Sect. 2, Comment. in loc. Epid. Hippocr. text., 42). Heros (Ἡρός), the plural of Heros (Ἡρος), a name given by the Greeks to a class of persons supposed to be of divine descent, and usually of divine descent on at least one side. Such were worshipped with divine honours by those cities and races of men which claimed them as their fathers or ancestors. This divine origin, however, was not essential: thus Philippos of Crotona, who fell in the battle against the Phoenicians and Egyptians, was made a hero for his beauty; a hero or shrine was built on the spot where he was buried, and sacrifices were offered there. The stories of Theseus, Aratus and Brasidas were worshipped as heroes at Sicyon and Amphipolis respectively; and the Athenians slain at Marathon received similar honours. Concerning these last, legends were current, which show that a supernatural and mythological character was really ascribed to them, and they, probably, were the latest of the Greeks to whom such a character was attributed. The Heroic Age, properly so called, appears, however, to have terminated with the immediate decendants of the Greeks who returned from Troy, and to have extended backward for an uncertain length of time, estimated by Thirlwall at six generations, or about 200 years. This is the fourth or Heroic Age of Hesiod, in which Jupiter "made the divine brood of heroes, better and braver than the third or brazen race." (Op., et D., 157.) These were the princes and war ris of mythological history, such as Theseus, Perseus, and those who fought at the sides of Theseus and Troy. In Homer, the word Hero occurs frequently, but in quite a different sense; it is applied collectively to the whole body of fighters, Argieii, Danai, and Achaei, without reference to individuals of peculiar merit; and, indeed, often appears to be used for little more than an expetive, when he, or the man, or the warrior, would have done equally well. Indeed, the application of the word is not even limited to warriors, but to men and women who were heros, or heroes, &c. It has been suggested, with considerable plausibility, that the word originally denoted the members of those roving bands who in the earliest times rovedra Greece, issuing from
the south of Thessaly, and giving extension to the name, first of Achaeans, and afterward of Hellenes, as we learn from the legends in Pausanias and Thucydides, to what we should now call the Sicilians, Greeks who conquered Italy, or the Saxons who settled in England, might justly be called heroes. The root of the word seems to be *her*, whence come the Latin and German forms of *herus* and *here* ("master"); *vir*, *viris*, &c. The Sanscrit word *āra* appears to contain the same element as *heroes*.—The promiscuous (or Homeric) use of the word "hero" disappeared in the age succeeding the Homeric poems. It seems probable that the Hellenic invasion, commonly called the return of the Heraclids, put an end to it. The new conquerors of Southern Greece do not seem themselves to have borne or used the title; and afterward, when they or their descendants looked back to the warlike legends of the earlier race who had borne the title, the lays, exploits, and legends were called heroic; and from the combined effect of poetical exaggeration, reverence for antiquity, and traditions of national descent, the more modern use of the word arose, carrying with it notions of mythical dignity, and of superiority to the later races of mankind. The custom of showing respect or affection by making precious offerings, and celebrating costly sacrifices at the tombs of the dead; the imaginative temper of the Greeks, which, as it loved to ascribe a divine genealogy to the great, was equally willing to admit them to a share of the divine nature and enjoyments after death; and the love of magnifying past ages, common to all nations, may explain the change of earthly leaders into protecting genii or demons, who were believed to be immortal, invisable, though frequenting the earth, powerful to bestow good or evil, and therefore to be appeased or propitiated like the gods themselves. In the age of Hesiod, as is evident from the passage above referred to, the day of heroes was past, and they were already investit with their mythological character, which appears to furnish good reasons for believing that the heroes have lived after the Homeric age. (Thirnould's Greece, vol. 1, p. 123, seqq.—Philotog Museum, No. 4, p. 72, seqq.—Encycl. U. S. Knowel., vol. 12, p. 160, seq.)

HERON or HERO, I. a native of Alexandria, and disciple of Oesius flourished about 217 B.C. He was celebrated as a mechanician, and invented the hydraulie clock, and the machine called "the fountain of Hero." He must have enjoyed a high reputation, since he was frequently mentioned by Ctesibius, Euclid, Ptolemy, and others. He is, however, principally known by some fragments of his writings on mechanics, which are to be found in the "Mathematici Veteres," published at Paris in 1693. His extant writings are: 1. On the Machine called the "Chiroballistra" (Χιεροβάλλιστρα κατασκευή καί συμμετρία). This is found in the "Mathematici Veteres" already cited.

2. Barulcaus (Βαρούλχαος), a treatise on the raising of heavy weights, which is mentioned by Ctesibius, and was found by Golius in Arabic. A translation of it into German, by Burgman, was published in the Comment. Geot., 7, 77. 3. Belopoecia (Βελοποΐκη), a treatise on the manufacture of darts, published by Baidi, with an account of Hero, at Augsburg, in 1616, and also in the Math. Vet. 4. On Pneumatic Machines (Πνευματικαί). In this work is the first and only account of Hero's ancient invention of steam as a moving power. (Stuart's History of the Steam-Engine, &to.) It was published by Commandine at Urbino in 1575, and at Amsterdam in 1680, and also in the Math. Vet., with the additions of Aleotti, who had previously published an Italian version at Bologna in 1542, and at Ferrara in 1589. 5. On the Construction of Automata (μηχ Ατομωστοποιητικοί), contained in the Math. Vet. 6. On Dioptres, from which Heliodorus, a mathematician who flourished after the commencement of the Christian era, has left an extract, and of which a MS. exists in the Strasburg library. Other works of Hero, now lost, are mentioned by Pappus, Euclides, Heliodorus of Gortis, and others. (Scripta et quadam inventa, Helmat., 1714, &to.)—II. Commonly called the Younger, is supposed to have flourished during the reign of the Emperor Horacius, which commenced A.D. 610. He also wrote on mechanical and mathematical subjects. His native country is uncertain. In a work attributed to him (On Geodesy), he states, that the procession of the equinoxes had produced seven degrees of effect since the time of Ptolemy, so that he must have been about 500 years later than Ptolemy. He is generally placed, however, as already remarked, under the reign of Horacius. The writings of Hero the Younger are, 1. A book "On Machines of War" (Πολιορκητικά), edited in Latin by Baroccius, Venice, 1572, together with 2. A book of "Geodesy," a term then meaning practical geometry.—3. "On the Attack and Defence of Towns," printed in the Math. Vet.—4. A book "On Military Tactics," said by Lambecius to exist in MS. in the library at Vienna.—5. On the Terms in Geometry, printed at Strasbourg, 1571, and also edited by Hasenbalg, Strasvand, 1826, &to, with notes.—6. Geometrical Extracts, printed by the Benedictines, in the first volume of the Analecta Graece, Paris, 1688, from a copious MS. in the royal library at Paris.—7. A geometrical manuscript, stated by Lambecius to be in the library at Vienna.—III. A mathematician, who flourished about the middle of the 5th century, and was the teacher of Proclus. None of his works has reached us.

HERODOTUS, a city of Egypt, about equidistant from Pelusium, the apex of the Delta, and the city of Arisnoë, on the extremity of the western branch of the Sinus Arabicus. It gave to that branch the name of Sinus Heropoliotites, now Bahri-Assuz. It was a city of comparatively recent origin, founded by the Greeks—there are not sufficient reasons for believing that the city was founded before the time of the Carthaginian war. Ptolemy—Pliny translates by Heroum Oppidum, shows the Grecian origin of the place. Stephanus of Byzantium, however, asserts, that the previous name of the city was Heamos (Αιμός), because Typhon was here wounded by lightning, and his blood "gushed forth upon the ground." Heamos is a Grecian name as well as Heropolis, and the Egyptian fable must therefore have been invented after the foundation of the place by the Greeks. Herodotus states, that Heraclides made a canal there, as long as the canal of Ptolemy formed one of the channels of communication in this quarter. It belonged, however, to no nome, but, like Arisnoë, was a separate establishment. It sunk with the canal, and the ruins are said to be no longer visible, being buried probably beneath the sand. (Mannert, Geogr., vol. 10, pt. 2, p. 516, seqq.)

HEROPhilUS, a celebrated physician, a native of Chalcedon, to the family of the Asclepiads, and a disciple of Prazagoras. Galen, indeed, has called him a Carthaginian; but in the book entitled "Introducution," which is ascribed to Galen, he is said to be of Chalcedon. Herophilus lived under Ptolemy Soter, and was contemporary with the philosopher Diodorus, and with the celebrated physician Erasistratus, with whose name his own is commonly associated in the Christian writers. He lived about the middle of the 1st century B.C., and is applied to the invention of steam as a moving power. (Stuart's History of the Steam-Engine, &to.) It was published by Commandine at Urbino in 1575, and at Amsterdam in 1680, and also in the Math. Vet., with the additions of Aleotti, who had previously published an Italian version at Bologna in 1542, and at Ferrara in 1589. 5. On the Construction of Automata (μηχ Ατομωστοποιητικοί), contained in the Math. Vet. 6. On Dioptres, from which Heliodorus, a mathematician who flourished after the commencement of the Christian era, has left an extract, and of which a MS. exists in the Strasburg library. Other works of Here, now lost, are mentioned by Pappus, Euclides, Heliodorus and others. (Scripta et quadam inventa, Helmat., 1714, &to.)—II. Commonly called the Younger, is supposed to have flourished during the reign of the Emperor Horacius, which commenced A.D. 610. He also wrote on mechanical and mathematical subjects. His native country is uncertain. In a work attributed to him (On Geodesy), he states, that the procession of the equinoxes had produced seven degrees of effect since the time of Ptolemy, so that he must have been about 500 years later than Ptolemy. He is generally placed, however, as already remarked, under the reign of Horacius. The writings of Hero the Younger are, 1. A book "On Machines of War" (Πολιορκητικά), edited in Latin by Baroccius, Venice, 1572, together with 2. A book of "Geodesy," a term then meaning practical geometry.—3. "On the Attack and Defence of Towns," printed in the Math. Vet.—4. A book "On Military Tactics," said by Lambecius to exist in MS. in the library at Vienna.—5. On the Terms in Geometry, printed at Strasbourg, 1571, and also edited by Hasenbalg, Strasvand, 1826, &to, with notes.—6. Geometrical Extracts, printed by the Benedictines, in the first volume of the Analecta Graece, Paris, 1688, from a copious MS. in the royal library at Paris.—7. A geometrical manuscript, stated by Lambecius to be in the library at Vienna.—III. A mathematician, who flourished about the middle of the 5th century, and was the teacher of Proclus. None of his works has reached us.
might discover the secret springs of life. (Celsius, Pref.) From the peculiar advantages which the school of Alexandria presented by this authorized discovery of the human brain, it gained, and for many centuries preserved, the first reputation for medical education, so that Ammianus Marcellinus, who lived about 650 years after its establishment, says, that it was sufficient to secure credit to any physician if he could say that he had studied at Alexandria. (Amm. Marc., 22, 16.) Herophilus made great discoveries in anatomy, and Galen calls him the evangelist of anatomists. (Fallon, Observ., p. 395.) He is to be regarded as the inventor of pathological anatomy, having been the first that thought of opening the bodies of men after death, in order to ascertain the nature of the malady which had caused their dissolution. His principal discoveries have reference to the nervous system, which he called the seat of the sensations. (Galen, de loc. affec., lib. 3, p. 282. — Ruffus, de appetit part. corp. hum., lib. 2, p. 65.) He first determined that the nerves are not connected with the membranes that cover the brain, but with the brain itself, though as yet the distinction of the nerves from the tendons and other white tissues had not been made out. The description which Herophilus gave of the brain itself was far superior to those of previous authors. He discovered the arachnoid membrane, and showed that it lined the ventricles, which he supposed were the seat of the soul; and the chief meeting of the sinuses, into which the veins of the brain pour their blood, still bears the name of tectorial Herophil. He noticed the lacteals, though he was not aware of their use. He pointed out that the first division of the intestinal canal is never more than the breadth of twelve fingers in length, and from this fact proposed for it a name, the Latin form of which (duodenum) is still applied to it. He described with great exactness the organ of sight, and gave to its various membranes the names which have still, in a great measure, remained to this day. He operated on the cataract by extracting the crystalline humour. The ancient physicians or others have preserved his descriptions of the os hyoïdes, which he called παπαστόρια, of the liver, and of the parts of generation. (Ruffus, l. c., p. 37. — Galen, de Administr. Anat., lib. 6, p. 172.) Herophilus was the first, also, that had just notions respecting the pulse, of which his master, Praxagoras, had taught him some of the value, as a means of discriminating diseases. (Galen, de dif. plex., lib. 2, p. 249 vol. 11, 374 vol. 4, 29, 1.) He does not appear to have drawn many particular conclusions from his knowledge of the healthy structure. It was he, however, who first showed that paralysis is the result, not of a vitiated state of the humours, as was previously imagined, but of an affection of the nervous system. Herophilus seems to have founded a school which took its name from him. He is supposed to have been the first that commented on the appearances of the brain. His observations exist in manuscript in the Ambrosian library, Milan, de Genitaliis, and in his other works, among which was one on respiration, are lost. (Sprengel, Hist. de la Med., vol. 1, p. 439, seqq.)

HEROSTRATUS, less correctly Erostratus, the incendiary who set fire to the famous temple of Diana at Ephesus. When put to the torture, he confessed that his only object was to gain himself a name among philosophers. That so endeavoured, very foolishly, to prevent this, by ordering a reproachful name should never be mentioned; but the natural consequence was, that it is mentioned by all contemporary historians, and has reached even our own time, in full accordance with the wishes of the man who bore it. (Plut., Alex., c. 3. — Cic. N. D. 2, 27. — Val. Max., 8, 14. — Strab., 640. — Ibid. Ephesus.)

Herae, a daughter of Ccerops, king of Athens, beloved by Mercury. The god disclosed himself to Per-
HESIODUS.

HESIODUS.

The brothers divided the inheritance; but Perses, by means of bribes to the judges, contrived to de.

fraud his elder brother. Hesiod thereupon migrated to Orebomin, as Götting supposes, and the harsh

epithet which he applies to his native village (Op. et Dynth. 261), indicates the singular probability imposed on the wrong at which he had suffered from the 

Ascanian judges, in relation to the division of his patrimony. (Götting, Pref. ad Hes., p. iv.) From a 

passage in the proem to the Theogony, it has been in.

ferred that Hesiod was literally a shepherd, and tended his flocks on the side of Helicon; and this supposition, 

though directly at variance with the statement of Paus.

anias, who makes him a priest of the Muses on Mount Helicon (Fab. 57), is probably the most reasonable. 

As a poet, Hesiod was evidently born in an humble station, and was 

himself engaged in rural pursuits; and this perfectly accords 

with the subject of the poem which was unanimously ascribed to him, namely, the Works and Days, which 

is a collection of reflections and precepts relating to 

husbandry, and the regulation of a rural household.

The only additional fact that can be gathered from 

Hesiod's writings, is, that he passed into the island of 

Euboea, where he was a vizier (or vice-king) at Chalcis, 

which formed part of the funeral games instituted in 

honour of Amphidamas: that he obtained a tripod as 

the prize, and consecrated it to the Muses of Helicon. 

This latter passage, however, is suspected by Gieten and Wolf; but it seems to have formed a part of 

the poem from time immemorial; and it may not be un-

reasonable to infer its authenticity from the tradition 

respecting an imaginary contest between Homer and 

Hesiod. That the passage should have been raised 

on the basis of the tradition is impossible, because, in 

that case, it is obvious that the name of Homer would 

have appeared in the verses; but it is highly probable 

that the tradition was built on the passage. If 

the passage be a forgery, it is a forgery without any 

tenable purpose; it is a mere gratuitous imposture 

which tends to nothing; and it seems impossible that 

any person should take the trouble of foisting supposi-

tions lines into Hesiod's poem, for the barren object 

of inducing a belief that he had won a poetic prize 

from somebody. This nullity of purpose could not but 

strike those who, being themselves willing to believe 

that Homer was the competitor at Chalcis, were anx-

ious for proofs to convince others: and hence an in-

terpolation of this very passage has been practised: 

which alone shows that, if a forgery, it was an un-

meaning and useless forgery. For the verse, "Victor 

in song o'er Homer the divine." Connected with the same design of making Homer and 

Hesiod contemporaries, is an imposture on a large 

scale, which professes to be an historical account of 

the contest between Homer and Hesiod, and which 

appears to be erected on the above tradition as related 

by Plutarch; for it is evident, from a passage in the 

work itself, that it was not composed till the time of 

the Emperor Antoninus Pius (A.D. 153). As to the 

tradition of this im-

postory meeting, for which not a shadow of evidence 

appears in Hesiod's own writings, Robinson offers a 

very probable conjecture: that it originated in a coin-

cidence between this passage of the work and a pas-

sage in one of Homer's hymns, where the writer sup-

plies Venus to grant him the victory in some 

approaching contest.—The following account is given as 

to the manner of Hesiod's death: Hesiod is said to 

have spoken an oracle of his future notorious 

destinies, and the Pythia directed him, in reply, to shun 

the grove of Nemean Jupiter, since there death 

awaited him. There were at Argos a temple and a brazen 

statue of Nemean Jove; and Hesiod, believing this to 

be the fatal spot, directed his course to Óeinoë, a town of the 

Locri; but the ambiguity of the oracle had de-

cided him. for this place also, by obscure report, was 

sacred to Nemean Jupiter. He was here the guest of 

two brothers. It happened that their sister Õeména 

was violated in the night time by the person who had 

accompanied Hesiod, and hung herself in consequence of 

the outrage. This man they accordingly slew; and 

afterwards Hesiod, with him also, and threw his body into the sea. The murder is said to have been detected by the sagacity of 

Hesiod's dog; by some it is related that his corpse was 

brought to the shore by a company of dolphins, at the 

moment that the people were celebrating the festival of 

Neptune. The body of Hesiod was recognised, the 

houses of the murderers were razed to the founda-

tion, and the murderers themselves cast into the sea. 

Homer has indeed mentioned it, but with much less 

truth. A second lightning; a third, to have been overtaken by a tem-

pest while escaping to Crete in a fishing-boat, and to have 

perished in the wreck. In truth, the summary justice which these brothers executed on the man 

whom they honestly supposed to be the accomplice of 

their sister's dishonour, was not of a nature to call for 

miraculous interference; but the false duly displays 

the credence attached by Grecian enthusiasm to the poet's 

words. The name of Hesiod's dog, is, no doubt, 

taken from the Greek, Pýrphos, which is a dog. The 

name of Hesiod are, 1. 'Ogya kai Pýrphos ("Works and 

Days"); 2. Theooyia (A "Theogony"); 3. 'Aocis 

Páxewcos ("The Shield of Heracles"). The "Works 

and Days" (which, according to Pausanias, the Boe-

tians regarded as the only genuine production of He-

siod), is so entirely occupied with the events of com-

mon life, that the author would not seem to have been 

a poet by profession, as Homer was described by the 

ancients, but some Boeotian husbandman, whose mind 

had been so forcibly moved by peculiar circumstances 

as to give a poetical tone to the whole course of his 

thoughts and feelings. The poem consists of advice 

given by Hesiod to his brother Perses, on subjects re-

lating for the most part to agriculture and the general 

conduct of life. The object of the first portion of the 

poem is to improve the character and habits of Perses, 

to deter him from seeking riches by litigation, and to 

incite him to a life of labour, as the only source of 

permanent prosperity. Mythical narratives, fables, de-

scriptions, and moral aphorisms, partly of a prover-

bial kind, are ingeniously chosen and combined, so as 

to illustrate and enforce the principal idea.—In the 

second part Hesiod shows Perses the succession in 

which his labours must follow, if he determines to lead 

a life of industry. But as the poet's object was not to 

describe the charms of a country life, but to teach all 

the ancients of his time the duties of husbandry, and the duties of the Ascanian countryman, he next proceeds, after having 

completed the subject of husbandry, to treat with 

equal detail that of navigation. Here we perceive 

how, in the time of Hesiod, the Boeotian farmer him-

self shipped the overplus of his corn and wine, and 

transported it to countries where these products were 

less abundant. All these precepts relating to the 

works of industry interrupt somewhat suddenly the 

succession of homonous maxims, before he returns to the 

family. The poet now speaks of the time of life when 

a man should marry, and how he should look out for 

a wife. He then especially recommends to all to bear 

in mind that the immortal gods watch over the actions 

of men; all intercourse with others to keep the 
tongue from idle and provoking words, and to preserve 

a certain purity and care in the commonest occurrences 

of every-day life. At last he describes certain precepts, which resemble sacerdotal rules, with respect to the decorum to be observed in acts of 

worship, and which, moreover, have much in common 

with the symbolic rules of the Pythagoreans, that 

ascribed a deep and spiritual import to many unimport-

ant acts of ordinary life. Of a very similar nature is 

the last part of the poem, which treats of the days on 

which it is expedient or inexpedient to do this or that.
business. These precepts, which do not relate to particular seasons of the year but to the course of each month, he describes as the result of his agricultural pursuits, and are in great part connected with the different worshipes which were celebrated upon these days: but our knowledge is far too insufficient to explain them all.—One thing must be very evident to all who read the "Works and Days," that in its present state it shows a want of purpose and of unity too great to be accounted for otherwise than on the supposition of its fragmentary nature. Ulrici considers the moral and the agricultural instruction as genuine; the story of Prometheus, and that of the Five Ages, as much altered from their original Hesiodic form; and the description of Winter as latest of all. (Ulrici, Gesichte der Hellen. Dichtkunst, vol. 1, p. 360.)—The "Theogony" is perhaps the work which, whether genuine or not, most emphatically expresses the feeling which is supposed to have given rise to the Hieratic school. It consists, as its name expresses, of an account of the origin of the world, including the birth of the gods, and makes use of numerous personifications. This has given rise to a theory, that the old histories of creation, from which Hesiod drew without understanding them, were in fact philosophical, and not mythological, speculations; so that the names which in after times were applied to persons, had originally belonged only to qualities, attributes, &c., and that the inventor had carefully excluded all personal agency from the course of things. This was the first step respecting the "Theogony," that it points out one important feature in the Greek character, and one which, when that character arrived at maturity, produced results, of which the Theogony is at best but a feeble promise; we mean that speculative tendency which lies at the root of Greek philosophy.—Even as early as the time of Pausanias (8, 18, and 9, 31), it was doubted whether the composer of the poem was the author of any other work. According to a learned German critic, the species of mélange, formed by the union of several poems on the same subject, and which has been effected by the same copyists or grammarians. Such is the theory of Hermann, who has advanced this hypothesis in a letter addressed to Ilgen, and which the latter has placed at the head of his edition of Homer's Hymns. Hermann thinks that he has discovered seven different expiations, composed of the following verses: the first, of verses 1, 22, 24, 26, 52; the second, of verses 1-4, 11, 21; the third, of verses 1, 2, 5, 21, 75-93; the fourth, of verses 1, 53-64, 68-74; the fifth, of verses 1, 53-61, 65, 66; in the sixth, the 60th and 61st verses were immediately followed by the 67th; the seventh, of verses 1, 94-103.—The Theogony is interesting as being the most ancient monument that we have of the Greek mythology. When we consider it as a poem, we find no composition of ancient times so stained with a rude simplicity of character as it is without luminous order of arrangement, abounds with dry and insipid details, and only by snatches, as it were, rises to any extraordinary elevation of fancy. It exhibits that crude irregularity, and that mixture of meanness and grandeur, which characterize a strong but uncultivated genius. The censure of Quintilian, that "Hesiod rarely rises, and a great part of him is occupied in mere names," is confessedly just. Considered, however, as a general critique, the judgment which Quintilian pronounces on Hesiod is liable to objection. The sentence just quoted refers plainly to the Theogony alone: while the following seems exclusively applicable to the Works and Days: "yet he is distinguished by useful sentences of morality, and a commendable sweetness of diction and expression, and he describes the style of writing," The Battle of the Gods, however, cannot surely be classed among the specimens of the middle style. This passage, together with the combat of Jupiter and Typhon, astonishes the reader by sudden bursts of enthusiasm, for which the prolix and nerveless style of the preceding narrative seems singularly ill adapted. Milton has borrowed some images from these descriptions: and the arming of the Messiah for battle is obviously imitated from the magnificent picture of Jupiter summoning all the terrors of his omnipotence for the extirpation of the Titans. (Elton's Hesiod, p. 16.)—We have also, under the name of Hesiod, a fragment of a poem entitled the Heroogony, or the genealogy and history of the demi-gods. To this poem some unknown rhapode has attached a piece on the combat between Hercules and Cynus, containing a description of the hero's shield. It is from this part that the fragment in question bears the title of the "Shield of Hercules" (Αστηρ Παραλληλος). Modern critics think that to the Heroogony of Hesiod belonged two works which are cited by the ancients, the one under the title of "Catalogue of Women" (Καταλογος γυναικων), giving the history of those mortal females who had become the mothers of demi-gods; and the other under the title of the "Great Eoes" (Μεγαλα Ήοςα), so named because the history of each female or heroine mentioned therein commenced with the words η, οιν (or, such as). Any inquiry into the character and extent of the Eoes is rendered very difficult by the obscurity which rests upon the relation of this poem to the Catalogue of Women. For this latter poem is sometimes stated to be the work of that Simon of Naucratis to whom Pausanias refers a work on Alcmena, which, from its beginning, manifestly belongs to the Eoes, is in the scholia to Hesiod placed in the fourth book of the Catalogue: sometimes, again, the two poems are distinguished, and the statements of the Eoes and the Catalogue are opposed to each other. (Schol. ad Apoll. Rhod., 2, 181.) We are compelled to suppose, therefore, that originally the Eoes and Catalogue were different in plan and subject, only that which was more ancient the celebration of women of the heroic age, and that this then caused the compilation of a version, in which both poems were moulded together into one whole.—Hesiod wrote in the Ionic dialect, with some Æolisms intermingled. We have scholia on his poems by Proclus, John Tzetzes, Moschopulus, and John Proteopotharius. We have to regret the loss of the commentary upon him by Aristophanes of Byzantium. The lines of inscriptions, that of Didymopolis, Eph., 2886, 2877, and that of Göttting (in the Bibliotheca Graeca, Guérin et Efrond, 1831, 8vo. (Müller's Hist. Lit. Gr.—Liber. Us. Knovel, p. 77, seqq.) HESIÔNE, a daughter of Laomedon, king of Troy, by Strymonno (called also Piacia or Leucippe), daughter of the river-god Scamander. When Apollo and Neptune, after having erected the walls of Troy, had been refused by Laomedon the stipulated remuneration, Apollo wreaked his vengeance by the infliction of a pestilence; and Neptune sent a sea-monster which ravaged the coasts of the country, making its appearance with every full tide. The oracle being consulted, declared that there would be no deliverance from these calamities, until Laomedon should expose his own daughter Hesione as a prey to the monster. The monarch accordingly exposed her, having attached her person to the rocks on the seashore. Hesione, in his vengeance, went to Exuim, with the girdle of the Amazon, saw the princess in this situation, and offered to deliver her if Laomedon would give him the mares which Jupiter had presented to These in exchange for his son Ganymedes. Laomedon assented, and Hesione slew the monster and delivered Hesione; but the faithless Trojan refused to keep his word, and the hero sailed away, threatening to return with the whole war on Troy. Some time after this, when Hercules had accomplished all his labours, and had also completed the term of his servitude with Omphale, he resolved to
HESPERIDES.

Hesione, according to the Collect a fleet of eighty-five-oared vessels (Homer, Il. 5, 641, says six), manned by a valiant band of volunteer warriors, and, sailing to Libya, took the city, having been powerfully aided by his friend and follower Telamon. Hercules slew with his arrows Laomedon and all his sons except Podarces, who had advised his father to give the stipulated reward to the hero for the destruction of the monster. He then gave Hesione to Telamon as a reward of his valour, and allowed her to choose one among the captives to be set at liberty. When she had fixed upon her brother Podarces, Hercules replied that he must first be made a slave, and then she might give something for him and redeem him. She took her golden veil off her head, and with it bought him, and hence he was afterward named Prismus (Purchased) instead of Podarces (Swift-foot). Hesione was taken to Greece by Telamon, where she became the mother of Teucer. (Apollod., 2, 5, 9, seqq.—Id., 2, 6, 4.—Keightley's Mythol.ogy, p. 359, 365.)

HESPERIA, a name applied by the poets to Italy, as lying to the west of Greece. It is of Greek origin (Ἑσπερία), and is derived from ἑσπέρα, “evening,” so that Hesperia properly means “the evening-land,” i.e. the western region. (Virg., Æn., 1, 330.—Id. ib., 569.—Ovid., Met., 2, 458.—Lucan, 1, 224.) It is also, though less frequently, applied to Spain, as lying west of Italy. (Horat., Od., 1, 36, 4.—Lucan, 4, 14.)

HESPERIDES, or “the Western Maidens,” three celebrated nymphs, whose genealogy is differently given by various writers. According to Hesiod (Theog., 215), they were the daughters of Night, without a father. Dodorus, on the other hand, makes them to have had for their parents Atlas and Hesperis daughter of Hesperus (Diod. Sic., 4, 27), an account which is followed by the Virgin in his Cosmog. (v. 281.). Others, however, to assimilate them to their neighbours the Graia and Gorgons, call the Hesperides the offspring of Phorcys and Ceto. (Schol. ad Apoll. Rh., 4, 1399.)

Apollonius gives their names as Εἰγέλη, Hespera, and Erytheis (4, 1427), while Apollodoros, who increases the number to four, calls them Εἰγέλη, Erythea, Hestia, and Arethusa. (Apollod., 2, 5, 11.) Hesiod makes them to have dwell "beyond the bright ocean," opposite to the island of Erythea, when Atlas stood guard (Theog., 518), and when Atlas had been fixed as a mountain in the extremity of Libya, the dwelling of the Hesperides was usually placed in his vicinity, though some set it in the country of the Hyperboreans. (Apollod., l. c.)—According to the legend, when the bridal of Jupiter and Juno took place, the different deities came with nuptial presents for the latter, and among them the goddess of Earth, with branches having golden apples crowning them (Τερρας πυκνυμένας, κερατεῖα ένιοί δέκα, και ένιοί δέκα καταφθοράς) Hygin., Poet. Astron., 2, 3.) Juno, greatly admiring these, begged of Earth to plant them in her gardens, which extended as far as Mount Atlas ("qui erant usque ad Atlantem montem") Hygin., l. c.) The Hesperides, or daughters of Atlas, were directed to watch these trees; but, as they were somewhat remiss in discharging this duty, and frequently placed the crowning on them (Τερρας πυκνυμένας, κερατεῖα ένιοί δέκα, και ένιοί δέκα καταφθοράς) Hygin., l. c.) According to Pisaner, the name of the reptile was Ladon. (Schol. ad Apoll. Rh., 4, 1396.)—One of the tasks imposed upon Hercules by Eurystheus was to bring him some of this golden fruit. On the way in quest of it, Hercules came to the garden of Erythea, and to the nymphs, the daughters of Jupiter and Themis, and inquired of them where the apples were to be obtained. They directed him to Nereus, whom he found asleep; and, in spite of his numerous changes of form, he bound and held him fast until he had mentioned where the golden apples were. Having obtained this information, Hercules went on to Tartessus, and, crossing over to Libya, proceeded on his way until he came to Iassus, near the lake Tritonis, where Antaeus reigned. After destroying this opponent (vid. Antaeus) he visited Egypt, and slew Busiris, the monarch of that land. (Vid. Busiris.) He then roamed through Arabia, and after this over the mountains of Libya, which he cleared of savage beasts. Reaching then the eastern coast of the ocean, he was accommodated, as in the adventure against Geryon, with the radiant cup of the Sun-god, in which he crossed to the opposite side. He now came to where Prometheus lay chained, and, moved by his entreaties, shot the bird that preyed upon his liver. Prometheus, out of gratitude, warned him not to go himself to take the golden apples, but to send Atlas for them, and, in the mean time, to support the heavens in his stead. The hero did as desired, and Atlas, at his request, went and obtained three apples from the Hesperides; but he said he would take them himself to Eurystheus, and that Hercules might continue to support the heavens. At the suggestion of Prometheus, the hero feigned assent, but begged Atlas to hold the heavens again until he had made a pad (ανεπάπα) to put on his head. Atlas threw down the apples and resumed his burden, and Hercules picked them up, and went his way. (Schol., l. c.—Apollod., l. c.) Another account, however, made Hercules to have killed the serpent, and to have taken the apples himself. (Eurip., Herc. Parr., 394, seqq.—Apollod., l. c.) The hero brought the apples to Eurystheus, who returned them to him, and he then gave them to Minerva. The goddess carried them back to the garden of the Hesperides. (Apollod., l. c.—Keightley's Mythology, p. 251, 391, seqq.) The explanation given by several of the pragmatisers is dull enough: the Hesperides, say they, were the daughters of Hesperus, a Milesian, who dwelt in Caria. This Hesperus had sheep with very fine fleeces, and so remarkably beautiful in every respect that they were called, by a figure of speech, "golden." Hercules, having chanced to espoy these valuable animals, as they were feeding on one occasion near the shore, under the care of a shepherd named Podarces, the hero determined to carry off the heart of his ship, along with their keeper, Hercules being dead at the time, and his daughters inheriting his possessions. Now, continue these expounders, since the same word in Greek (μῆλα) means both "sheep" and "apples," the fable of the golden fruit eventually took its rise! (Palaphat., c. 19.—Compare Varro, R. R., 2, 1, 6.—Diod. Sic., 4, 27.) Dupuis, who makes Hercules to have been the Sun, and refers his twelve labours to the passage of that luminary through the signs of the zodiac, explains the fable of the Hesperides as follows. In the twelfth month, making the first coincide with Leo, the sun enters the sign Cancer. At this period the constellation of Hercules Ingeniculus descends to the western regions, called Hesperia, followed by the polar dragon, the guardian of the apples of the Hesperides. On the celestial sphere Hercules rises himself towards the western regions, the two signs of the zodiac, towards him as it sets. Hence the fable. (Compare remarks under the article Hercules.)—The gardens of the Hesperides are placed by those geographical writers who seek to convert a fable into reality, in the neighbourhood of the ancient Berenice, now Bengazi, in Cyrenaica, on the Mediterranean coast of Africa. A modern traveller, Captain Beechy, has given us some curious information on this point. He remarks (p. 316, seqq.), that some very singular pits or chasms, of natural formation, were discovered by him in the neighbourhood of Bengazi. "They consist of a level surface of excellent soil, several hundred feet in ex—

tent, enclosed within steep, and, for the most part, perpendicular, sides of solid rock, rising sometimes to a height of sixty or seventy feet, or more, before they reach the level of the plain in which they are situated. The soil at the bottom of these chasms appears to have been washed down from the plain above by the heavy rains, and is frequently cultivated by the Arabs; so that a person, in walking over the country where they exist, comes suddenly upon a beautiful orange or lemon garden, blooming in Accent, or secret, as the most luxuriating, at a considerable depth beneath his feet, and defended on all sides by walls of solid rock, so as to be at first sight apparently inaccessible. The effect of these secluded little spots, protected, as it were, from the intrusion of mankind, by the steepness and depth of the barriers which enclose them, is singular and pleasing in the extreme; they reminded us of some of those secluded retreats which we read of in fairy legends, as impossible to walk along the edge of these precipes, looking everywhere for some part less abrupt than the rest, by which we might descend into the gardens beneath, without calling to mind the description given by Scylax of the far-famed gardens of the Hesperides. It has been supposed by many, and among the rest by Gossellin and Pachho, that the Hesperian gardens of the ancients were nothing more than those of the gardens which stretch the Libyan desert, and which, from their concealed and inaccessible position, their unknown origin, and their striking contrast to the surrounding waste, might well suggest the idea of a terrestrial paradise, and become the types of the still fairer creations of poetical fable. Possibly, therefore, supposing the fable to rest on a real basis, the first of these Elysian groves may have been at the extremity of Cyrenaica mentioned by Beechey, and from this original idea of the legend may have been transplanted to a subterranean garden of the above description. The garden of the Hesperides is stated by Scylax (p. 46) to have been an enclosed spot of ten stadia each way, filled with thickly-fruiting trees of various kinds, and inaccessible on all sides. It was situated at six hundred and twenty stadia (fifty geographical miles) from the port of Barce; and this agrees precisely with that of the place described by Cyprian Beechey as Cephalus, and from which the name of Pliny (5, 5) is very decided in fixing the site of the Hesperides in the neighbourhood of Berenice. "Not far from the city" (Berenice), "is the river Lethon, and the sacred grove where the gardens of the Hesperides are said to be situated. We do not mean," remarks Captain B., "to point out any one of these subterranean gardens as that which is described in the passage above quoted from Scylax; for we know of no gardens which will correspond, in point of extent, to the garden which that author has mentioned. All those which we saw were considerably less than the fifth of a mile in diameter (the measurement given by Scylax); and the places of this nature which would best agree with the dimensions, are now filled with water sufficiently fresh to be drinkable, and take the form of romantic little lakes. Scarcely any two of the gardens we met with were, however, of the same depth or extent; and we have no reason to conclude that, because we saw none which were large enough to be fixed upon for the garden of the Hesperides, there is therefore no place of the dimensions required; particularly as the singular formation alluded to continues to the foot of the Cyrenaic chain, which is fourteen miles distant in the nearest parts from Berenice." (Compare Edinb. Rev., n. 95, p. 223.)

Hesperius Lusor is generally thought to correspond with Cephalus do Verdadars; but, as these are too far from the coast, they may possibly have been rather the small islands called Bissagos, lying a little above Sierra Leone. In these, some place the gardens of the Hesperides, which others will have to be on the Continent. Consult remarks under the preceding article.

Hesperias, I. daughter of Hesperus. She married Atlas, her father's brother, and became mother of the Hesperides, according to one legend. (Diod. Sic., 4, 27.)—II. a city of Cyrenaica. (Vid. Berenice IX.)

Hesperium Coeno (Berenieon kēpan), a promontory on the western coast of Africa; according to Mannert, the place where the present city of Hensel, or Hensel, is situated, beyond the mouth of the river Hanno. Rennell, however, makes the Western Horn to have been a bay and not a promontory, and identifies it with the modern bay or gulf of Bisagio. (Mannert, Geogr., Vol. 10, pt. 2, p. 531. — Rennell, Geogr. of Herod., Vol. 2, p. 424.)

Hesperius Sinus, a bay on the western coast of Africa, and now the bay or gulf of Bisagio. Consult preceding article.

Hesperus, I. son of Iapetus and Asia, and brother of Atlas. He became the father of Hesperis, who married her uncle Atlas, from which union, according to one account, sprang the Hesperides. Hesperus, like Atlas, was fabled by some to have been a great astronomer, and when ascending Mount Atlas, on one occasion, for the purpose of making his observations, was blown away by a tempest and no more seen. Divine honours were accordingly rendered to him, and the exordium of the name is given (Diod. Sic., 3, 59.) By some he is termed the son of Atlas as, for example, by Diodorus in the passage just cited; and yet the same writer, with the contradiction that usually marks ancient fables, elsewhere calls him the brother of Atlas (4, 27.).—Consult Wesseling, ad Diod. Sic., 3, 59. — Another version of the story makes Hesperus to have been the son of Aurora and Cepheus, and so remarkable for beauty as to have been named from that circumstance. It was considered the beautiful star of evening was called after him, and the name of Venus was also given to the same planet. (Hygin., Poet. Astr., 2, 42. — Eratoth. Catast., c. 44.) II. A name given to the star of evening. (Consult preceding article.) The same planet, when it appeared as the morning star, was called Phosphorus (φώσφορος) and Lucifer, both appellations meaning "the bearer of light." (Hygin., l. c., Catull., 65, ad Virg., Aen., 1, 250. Id., ad Virg., Aen., 8, 590. — Muncker, ad Hygin., fab. 65. — Van Staveren, ad eund. loc.). Pythagoras is said to have first pointed out the identity of Hesperus and Lucifer. (Menag., ad Dion. Laert., 8, 14.) — Radloff has written a curious work on the planets Hesperus and Phaethon, and on their having been respectively shatter'd by coming in collision with some comet or other heavenly body. He makes the present planet Venus to be but a portion of the original star, and among other learned and curious arguments in support of his singular position, refers to the well-known passage of Scripture as illustrating the tradition of the great event: "How art thou fallen, Lucifer, star of the morning!" (Radloff, Zerrümmerung der grossen Planeten Hesperus und Phaethon, Berlin, 1823.)

Hesæus, a deity among the Gauls, the same as the Mars of the Romans. (Lacan, 1, 46; Lactantius, Hist. Nat., 1, 21.) writes the name Hesus. Compare the Hu-Cadarn ("Hu the powerful") in the traditions and ballads of the Welsh. The god Hesus or Heusus, in the polytheism of Gaul, was probably an intercalation of the Druids. (Consult remarks under the article Galia, p. 534, col. 2.)

Hesychius, I. An Egyptian bishop, mentioned by St. Jerome as having published a critical edition of the Coptic Gospels in the third century. He introduced into the churches of this country; and Jerome usually cites it under the title of Exemplar Alexandrinum. II. A lexicographer of Alexandria, who lived, according to the common opinion, towards the close of the fourth century. The question still remains undecided.
whether the glossary which has reached us under the name of this writer be really his, or whether it be not merely an abridgment of his work. What has inclined some to the former supposition is the freshness of the citations being omitted. Others think, and with some appearance of reason, that this lexicon was originally a small volume, and that the numerous bibliographical glosses which are at present found in it have been intercalated by the copyists, who have taken the remarks made in the margin by the possessors of manuscripts for portions of the text itself. However this may be, the work of Hesychius is very important towards acquiring a full knowledge of the Greek language. It has preserved for us a large number of passages from poets, orators, historians, and physicians, whose works are lost. Hesychius explains, moreover, various words that depart from the ordinary usage of the Greek tongue, as well as terms used in sacrifices, gymnastic encounters, &c. And yet it must be acknowledged that his text is in a most corrupt state, and that when he is a solitary witness his testimony ought to be received with caution. (Mus. Crit., vol. I, p. 503.)

The work, in fact, has all the appearance of rough notes, put down in the course of reading, rather than of a finished production. It was not known until the sixteenth century. Only one MS., in the library of St. Mark, at Venice, is said to be preserved, and that is full of abbreviations, and has many erasures; which accounts for the great corruption of the text, in spite of the labours of many able editors. It appears, however, that it is closely followed by a second manuscript in the Florence library (Eber's Bibliogr. Lexicon, vol. I, p. 772.)—The best edition of Hesychius is that of Alberti, completed by Ruhnken, Lugd. Bat., 1746-1776, 2 vols. fol. It is to be regretted, however, that Alberti could not avoid himself of the valuable MS. notes of Bentley on this lexicographer.—The editio princeps of Hesychius was published in his lifetime in the Polybius, Venice, 1514, fol., under the care of Marcus Musurus. The manuscript from which this is copied is the Venice one. This, however, being, as we have already remarked, very difficult to decipher, and in other respects extremely inaccurate, Musurus took great pains to correct and restore it. This is often done with intelligence and success; but often also he deceives himself in his corrections, and in general treats his original in too arbitrary a manner. Schol. of Co- pom. and the MSS. which contain the manuscript with the edition of Alberti, and took note of all the variations. He published this collation at Leipsic, 1792, 8vo, under the title, "Hesychi Lexicon ex cod. Ms. bibl. sec. S. Marci restitutum, et ab omnibus Mss. Hesychii correctionibus repurgatum." By the help of this volume, the possessor of any edition of Hesychius, for they are all based upon this manuscript, can make the necessary corrections. The glosses, taken from the Scaliger MSS., are of great importance in fixing the date of the various authors and events mentioned in the latter period of Hesychius, as well as in the building of Rome. 3. From the building of Rome to the abolition of royalty in that city. 4. From the latter period to the death of Julius Caesar. 5. From the death of Caesar to the reign of Constantine the Great. 6. From the latter period to the death of Anastasius I. The last section, of which we have a valuable fragment remaining, entitled Πιερία Κωσταντί νοπόλεις ("Of the origin of Constantine"), served as an aid to George Codinus in his description of this city. Hesychius also composed Memoirs on the reign of Justinian the elder (Επίγραφα Βιογρ., η τοί ιστορίη του Τουτσίαν πραγμάτων.) This work has entirely perished. The fragment of Hesychius, mentioned above, has been published under the name of Codinus by Douza, Heidelberg, 1596, 8vo. Hesychius also wrote an Onomasticon, or Table of Men distinguished in the various branches of knowledge (Hippoc των εν πατεία έμεροκεφαλίων, of which Suidas professes to have had access himself. We have likewise, under the name of Hesychius, a small work entitled Περί των πατεία δεαλγήσταν σηφαν, "Of Philosophers celebrated for their learning." It is nothing more than a very careless compilation either from Diogenes Laertius, or from the lost Onomasticon of the writer whom we are at present considering. It contains, however, some things which are not found elsewhere, and this serves to stamp a certain independence of the one from the other. The juxtaposition of these two works is that of Orellius, Lips., 1820, 8vo.—IV. A native of Jerusalem, who died about 428 A.D. He was a priest, and wrote an ecclesiastical history, which is lost.—V. This name was also borne by many other ecclesiastics, among whom are reckoned several martyrs. (Consult Fabricius, Bibli. Græc., lib. 5, c. 5, and the Prolegomena to Alberti's edition of the Lexicon of Hesychius.)

Hesperia (more commonly Etruria), a celebrated country of Italy, lying to the west and north of the Tiber. Of all the nations of Italy, none appear to have such claims on our notice as that of the Etrurians. The origin of this nation, however, was involved in a degree of uncertainty at the time when the earliest of our ancient historians wrote, which was hardly to have been expected, considering their extended dominion, their immense number of cities, and the importance of them as a sacerdotal caste, and their acknowledged superiority in civilization to all their European contemporaries except the Greeks. Their subsequent history is chiefly known from their connexion with other nations; for, never having cultivated their language or so as to attain to the possession of a literature, their writings have long since perished; and what they recorded on brass or marble is far less intelligible than the hieroglyphics of Egypt. Moreover, at this early period of the country, it was a disputed question whether the Etrurians were Pelasgi from Greece, or Lydians from Asia, or indigenous in Italy. According to Herodotus (1, 91), the Lydians ought to be considered as the parent stock of the Etruscan nation. The former had a tradition among them, that a great famine arose in Lydia during the reign of Atys, one of their earliest kings, when for several years it happened that there was no grain. At last determined that the nation should divide itself into two parts, under the respective command of Lydus and Tyrrenhus, the two sons of Atys, one of which was to migrate, and the other to remain in Lydia. It fell to the lot of Tyrrenhus to abandon Lydia with the people under his charge. He accordingly equipped a fleet at Smyrna, and set sail in quest of a country in which he might, after passing by various countries and nations, finally arrived among the Umbri, in Italy, where he founded several cities, which the people, who,
HETRURIA.

...were called Tyrrhenians, occupied up to the time of HCHRUS. If we divest the Lydian tradition of some marvellous circumstances which are attached to it, particularly those that relate to the famine, which may be fairly charged to Oriental hyperbole, there still remains the record of an important event, which, concerning the character of the historian who has handed it down to us, and the geographical information he possesses, is certainly entitled to our attention if it does not recommend itself to our belief. The greatest argument, however, in favour of this tradition, must be allowed to consist in the weight of testimony which can be collected in support of it from the writers of antiquity, especially those of Rome, who, with few exceptions, seem to concur in admitting the fact of the Lydian colony. (Consult Virg., Æn. 8, 479, et pass. — Catull., 31, 13. — Horat., Sat., I, 6. — Stat. Silv., I, 2. — Id., 4, 4. — Senec., ad Helv. — Jussin, 20, 1. — Val. Max., 2, 4, 2. — Plat., Vit. Rom. — Pinyg, 3, 6.) — Strabo, who has entered more fully than any other into the discussion of the Tyrrhenian origin, does not seem to entertain any doubt of the event which we are now considering, and he quotes Anticleides, an historian of some authority, who reports that the first Pelasги settled in the islands of Imbros and Lemnos, and that some of them sailed with Tyrrhenians, the son of Atys, to Italy. (Strabo, 219.) In short, the presumption would appear so strong in favour of this popular account, that it is not surprising that among the Tyrrhenian controversy, if the question to be decided, were not our attention called to the opposite side by some weighty objections, advanced long since by Dionysius of Halicarnassus, and farther strongly urged by some modern critics of great reputation and learning. Dionysius seems to stand alone among the writers of antiquity as invalidating the facts recorded by Herodotus; and though the exact position of the origin of the Tyrrhenians is evidently inconsistent with the supposition, still it must be owned that his arguments tend greatly to discredit the colony of the Lydian Tyrrhenus. He maintains, in the first place, that it is fabulous, from the silence on so important an event of Xanthus the historian of Lydia, a writer of great research and authority, and more ancient than Herodotus. Xanthus acknowledges no Lydian prince of the name of Tyrrhenus, according to whom were Lyricus and Topyrus, who both remained in Asia. Again, Dionysius asserts that there was no resemblance to be discovered either in the religion, customs, or language of the Lydians and Tuscans; and, lastly, from the discrepancy to be observed in the various statements of the genealogy of Tyrrhenus and the period of his migration, he feels justified in rejecting that event as a mere fiction. (Ael. Rom., I, 30.) The advocates of Herodotus, however, have not been intimidated by these arguments, but have endeavoured to prove their insufficiency. Among these may be reckoned Ryckius (de primis Ital. colonis, c. 6); Bishop Cumberland (Connexion of the Greek and Roman Antiquities. Tract. 7, c. 2); Dempster (Etrur. Regal., 1, 4); Larcher (Hist. d'His. Rom.; vol. I., p. 1); and Lanzi (Saggio, &c., vol. 2, p. 102). On the other hand, the reasons advanced by the Greek historians have appeared convincing to some eminent critics, such as Cluverius (Jnt. Antig., vol. 1, lib. 1, c. 1); Freret (Mem. de l'Acad., vol. 18, p. 97); and Heyne (Comment., &c., Nov. Soc. Grott., vol. 3, p. 39); who have, besides, added other objections to those already started. At length, in 1826, the Academy of Sciences at Berlin, by proposing the Etruscans as the subject of a prize essay, showed their opinion that the time was come when the scattered notices of the ancient writers should be combined with the discoveries of modern antiquities which the last century brought to light, and the historical truth separated from the mass of contradictory theories beneath which successive writers had buried it. Professor K. O. Müller, whose essay obtained the prize, had already distinguished himself by his Orbœnumus und die Minyer ("Orbœnumus and the Minyes"), and Dorier ("The Dorians"), two works in which an extraordinary extent of reading in anatomy and ancient literature is united to great sagacity in reconstructing from its fragments the ruined edifice of early Greek history. The dissertation on the Etruscans forms in every respect a suitable accomplishment to these, and we have already remarked, that even in this ancient times, for a proposed question, whether the Etruscans were Pelasgi from Greece, or Lydians from Asia, or indigenous in Italy; and that the moderns had added more than an equal number to the hypotheses of the ancients. Thus some have supposed that the Etruscans might be descended from the Egyptians (Bonaroti, &c.); others, from the Cynanes (Maffei, Ragion. dell. Itali primitivi, p. 218, sqq. — Macocchi, Comment. in Tab. Herac., p. 15, &c.); some, from the Phœnicians (Steen, Denk. v. vetr. Etruria regalis Vernacola, Oxon., 1738); others again contended for their Celtic origin (Pellottier, Hist. des Celtes, lib. 1, p. 178. — Bardetti, dei primi abit. d'Ital., vol. 1). Freret ascribed it to the Retai (Mem. de l'Acad., &c., vol. 18); Hervás to the ancient Cantàbri (Idea del Universo, vol. 17, c. 4); while some again gave up all hope of arriving at any certain conclusion in this puzzling question, and seemed to consider it as a riddle of the millennium, which may never remain without a solution. Müller's theory appears ingenious and plausible. He admits a primitive population of Etruria, whom he calls, after Dionysius, the Rascens, on whose origin he does not decide, but thinks there are grounds for assuming, that these were mingled with a body of Pelasgian colonists from the coast of Lydia. We find in Greece a people bearing the name of Pelegains, Tyrrheni, or the name of the Dorians; in Egypt was the Tyrrhenian, appearing as fugitives in Athens, and thence betaking themselves to Lemnos, Imbros, and Samothrace, where, as well as on Mount Athos, they remained in the historic times. The name Tyrrhenian is applied to the Etruscans in Hesiód. (Theog., 1015), and, in the Homeric hymn to Bacchus, to this people of the Ægean. That they were not the Tyrrhenians of Italy by whom the god was carried off to Tuscany, is very clear, for that Tyrrhenus, who landed in Egypt, or to Cyprus, not to Italy; and from other sources it appears that the mythus was a Naxian legend. Ovid (Met, 3, 577, sqq.) relates it at great length, and represents the Tyrrhenians as Mæonia. Now, on the coast of Mæonia or Lydia there was a name placed Stygos, from which Müller deduces the name Tyrrhenian; in all probability radically the same with Tór- rheimian, the name borne by the southern district of Lydias. He is inclined at last to consider the people, to whom, from their occupation of Stygos, the name Tyrrhenian was given, not as Lydians, but as Pelasgians, who settled for a time on this part of the coast, and having thence acquired their name, and made it notorious by their piracies in the Ægean, migrated first to the Maenal promontory, and then to Etruria. In deriving them, however, immediately from the Pelasgians who came from Attica to Lemnos and Imbros, and thence to Lydia, he seems to embarrass his hypothesis with an unnecessary difficulty. He himself makes the worship of the phallic Hermes to be characteristic of the Pelasgi in Attica and the islands; yet of this he admits that hardly a trace is to be found in the Etrurian religion. It is remarkable how late is the application of the name Pelasgian to the Tyrrhenians. Herodotus not only never calls them so, but even by referring to the Corinthians, for a part of what the Pelasgian language was, he seems to imply that the Tyrrhenians themselves were, in his view, not Pelasgians; else why not take them at once for his illustration! No
ancient author describes the Tyrrhenians of Lydia as Pelasgians from Attica and the islands. The genealogy of Herodotus from the Lydian authors makes Tyrrhenus a son of Atys, king of Lydia; in that given in Dionysius without the author's name, Lydus and Tyrrhenus are brothers; in that of Xanthis the brothers are called Lydus and Tityrus or Tychthucus, i.e., according to the Ionian division of months, it seems that in the second mile of the word we argue from, it appears very improbable that the lineage of a band of Pelasgian pirates, who had settled on the coasts of Lydia, should have been carried up to the ancient kings or gods of the country; and that, too, not by the Greeks, but by the Lydians themselves. We cannot, therefore, avoid the conclusion, that the Tyrrhenians were much more intimately connected with the Lydian population than Muller's account of them seems to show. Moreover, it makes the Meconians (who Homer for the Lydians) to be Pelasgians, arguing from the name of their stronghold, Larissa, which is found in all countries occupied by Pelasgians; Muller represents them as wholly different, alleging that no ancient author calls the Meconians Pelasgians. This is true; but they make the Tyrrhenians Meconians and also Pelasgians, and therefore imply, though they do not assert, the identity of the people who bore these names of the Lydians of the same stock, it appears to have been occupied by the Pelasgi, or nations differing from them only in name. Menecrates (ap. Strab., 571) related, that the Pelasgi had occupied the whole of Ionia, from Mycale northward, and the adjacent islands; the Carians, the Leleges, and the Caucunes, the Trojans, and Mysians, were of the same race, and also allied to the Lydians, as appears from the genealogy given by Herodotus (1, 171). The Greeks themselves attribute the Pelasgic population of Asia Minor to colonies sent from Greece or from the islands; but their accounts of colonies before the Homeric age, being founded on no contemporary authority, must generally be regarded as historical hypotheses, chiefly grounded upon similarity of names, which may often be more rationally explained from other causes. It is, however, by no means probable that the Lydians were wholly a Pelasgic people. The phenomena of the history of Asia Minor are most easily solved by the supposition that a nation of Syrian origin was mingled in its two principal districts, Lydia and Phrygia, with another nearly allied to the Greeks. The Mosaic genealogy of nations (Gen. 10, 22) assigns a Semitic origin to the Lydians; while it refers most of the tribes of Asia Minor, along with the Greeks, to the stock of Japheth. The mythology of Lydia, the basis, as usual, of the myths of the Tyrrhenians, is the same as well as a Grecian affinities. Their deities Αττις or Ατρις (the same as Πάρνας, Ηε.), and Μα, father and mother, have probably given their name to the Atyades and the Meconians; and their worship is clearly the same with that of the Syrian goddess, who was variously denominated Atargatis, Derceto, Semiramis, Rhea, Juno, and Venus. The chief seat of her worship at Hierapolis, was the resort of numbers of the most famous persons. At the temple of Hierapolis, appears to have been considered as a colony of the Lydians (Steph. Byz., s. v.) for no other reason than that the traditions of the great goddess were in a peculiar manner connected with this place. In the list of the kings of Troy, whose names are generally of Grecian etymology, the Oriental name of Assaracus points to a mixture of Oriental mythology; and this remark is still more applicable to the name of the Hellenic kings of Lydia, in which Greek and Assyrian personages are so strongly mixed, Hercules, Aleuas, Belus, Ninus, Agron. (Herod., 1, 7.) If, then, the Lydians were a people partly Asiatic, partly allied to the Greeks, there is really no contradiction between those historians who call the Tyrrhenians Lydians, and those who speak of Tyrrhenian Pelasgians. The settlement of the Tyrrhenians at Mates, on their progress from Lydia to Italy, rests on very slight grounds. A passage, namely, in the commentator Lactantius or Lutatius on Stasinus (Theb., 4, 224), who calls the inventor of the Tyrrhenian trumpet Males; but the resemblance between the Tuscan and the Lydian or Phrygian music, really adds considerations more weighty for the people who were the first to employ the flute in Italy. The Oriental colonization of Etruria. The musical instrument of the Greeks, in the heroic and Homeric age, was the lyre; the flute was unknown, or, at least, not in use. It has been long since remarked that Homer mentions the αρδός only in two passages (II., 10, 13; 18, 495). In the first of these he is describing the nightly noise of the Trojan camp, and the Villison scholar observes, that these instruments were known to the Trojans only to the Orientals. This observation, though limited, is not contradicted by the other passage, in which youths are represented as dancing at a wedding to the sound of lyres and flutes. To say nothing of the suspicions which have been entertained, that the description of the shield of Achilles, of which this is a part, is not of the same age with the rest of the Iliad, it is very possible that the Greeks of Ionia may have employed the flute-players of Lydia or Phrygia at their entertainments. In the earlier days of Homer the use of the flute was familiar to the Ionians themselves, the entire absence of all mention of it in the Odyssey shows that in Greece itself it had not yet been introduced. It came in there along with the worship of Bacchus, which, whatever may have been its remoter origin, certainly passed from Lydia and Phrygia to Thrace, and thence into southern Greece, devouring with its stormy music the feebler notes of the lyre. The double flute, of which the left hand played a treble to the bass of the right hand, is mentioned by Herodotus (1, 7) under the name of αρδός andρεκός and γνωκτός, as used by the Lydians in war. Now the double flute, as we know both from ancient authors and from monuments (Inghirami, Monumenti Etruschi, pt. 3, pl. 20; pt. 2, pl. 90), was in use among the Etrurians; and the Romans not only borrowed their flute-music from them, but generally employed at sacrifices and festive dances a Tuscan flute-player. (Compare Verg., Georg., 2, 193. — Ovid, A. A., 1, 111.) It is very improbable that such a coincidence between the Etruscan and Asiatic customs should be accidental; and no more probable explanation of it can be given than that the Tyrrhenians were really a colony of Pelasgi from Lydia. They were probably not numerous, compared with the Assaracus, for the Tyrrhenians, as we shall see, were the true settlers of the country; and hence, though some of their arts were communicated to the nation among whom they settled, they were soon so completely absorbed in it, that the language of Etruria bore no traces either of a Greek or a Lydian mixture. The adoption of a story of a Lydian origin by no means requires that we should reject the accounts of migrations of Pelasgi from Thessaly, and from the opposite shore of the Adriatic to Italy, in the time of Homer (see Petrie, on Etruscan history). Professor Müller thus sums up this part of his researches: "It remains to be said, that we regard the Tuscan nation as an original and peculiar people of Italy; their language is widely different from the Greek; the names of their gods are not those which we find among the earliest Greeks whom we call Pelasgi, and which passed from them to the Hellenes; and we consider them as the founders entirely foreign to the Greek theology. But it appears to have been the fate of this nation, which never displayed any independent civilization, but only adopted that of the Greeks, to have been indebted for its first impulse towards improvement to a Greek, or, at best, half-Greek tribe. The Tuscan themselves, in their native legends, referred their polity and civiliz-
to the maritime town Tarquinia, and the hero Tarchon, both probably only variations of the name Tyrheni. Here it was that the much-dreaded Pelasgians of Lydia landed and settled, bringing with them the arts they had acquired at home or on their way. For the first time the barbarous land saw men covered with brass arrayed themselves for battle to the sound of the trumpet; here first they heard the loud sound of the Lydian-Phygrian flote accompanying the sacrifice, and perhaps witnessed for the first time the rapid course of the fifty-oared ship. As the legend, in its propagation from mouth to mouth, swells beyond all bounds, the whole glory of the Tuscan name, even that which did not properly belong to the colonists, attached itself to the name of Tarchon, the disciple of Tages, as the author of a new and better era in the history of Etruria. The neighbouring Umbrians and Latins named the nation, which from this time began to increase and diffuse itself, not with the primitive inhabitants, but from these new settlers. For since, in the Eugubine tables, Tuscum occurs along with Tuscom and Tuscer, it is impossible not to conclude, that from the root TUR have been formed Truscum, Tuscentius, Tuscius; as from the root OP, Opusiac and Oscus; so that Testrippoi or Testroppoi, and Tusci, are only the Asiatic and Ionic forms of one and the same name." (Etrusker, vol. 1, p. 100.) The time of such a colonization can be fixed, however, only by an approximation. Müller supposes it to have coincided with the Ionic migration, and to have been occasioned by it. The Umbrians were powerful in the land of which the new colonists took possession, and long wars must have been carried on with them before they were dispossessed of the three hundred towns which Pliny (3, 19) says they once held in the country afterward called Etruria. To the south the Etrurians penetrated far into Apulia, and even beyond it into Latium, as the name of Tusculum proves. According to their own traditions, the same Tarchon who founded the twelve cities of Etruria led a colony across the Apennines and founded twelve other cities. Of such a tradition, the historian can receive no more than the fact, that Etruria, in the valley of the Po, was colonized from the southern Etruria. Bologna, anciently Felinae, which stands where the Po descends from the Apennines to the plains, to which border the Po, was probably the first of these colonies, as it is called by Pliny (3, 20), "princeps quondam Etruria:" the names of most of the others are uncertain. A stone, with an Etruscan inscription, has been found (Lanci, vol. 2, p. 649) as far to the westward as Alessandria. Atria and Spina, near the mouth of the Po, were certainly Tuscan cities, and very important from their rapid increase, but the foundation of both was claimed for the Pelasgians of T tessaly or the followers of Diomed. The same story of twelve colonies is repeated in reference to the settlement of the Etruscans in Campania. Müller supposes these to be really colonies from Etruria, in opposition to the opinion of Niebuhr, who thinks they were founded by Pelasgian Tyrhenians, confounded with the Etruscans from identity of name. If such a colonization can be supposed, as by Campania cannot have been great, since the Ocean language, not the Etruscan, prevailed there; and not a single Etruscan inscription has been found in this whole district. This land of luxurious indulgence appears to have exerted its usual influence on the Etruscans, and they yielded the possession of it with little resistance to the Samnites, who poured down from the hills on the fertile plains of Campania. In the last of the Etruscan wars, the Tyrrhenian part of the Tuscan had retained the long practice of piracy, which had made their name notorious in the Greek seas; indeed, it is sometimes difficult to decide whether the imputation falls on the Etruscans or the Tyrrhenians of the Egean. Possessing harbours on both seas, they maintained the command of both, and made themselves formidable not only to merchant ships by their corsairs, but to the naval powers by their armaments. To their predominance in the lower sea, Müller attributes the circumstance, that the Greeks, while they had numerous colonies on the eastern and southern coasts of Sicily, had only one, Himera, on the north, as late as the age of Thucydides. Indeed, the dread of the Etruscans long prevented the Greeks from passing the straits of Rhium with their ships; and it was not till the rise of the naval power of the Phocian that either the Adriatic or Tyrrenian seas were well explored by them. Rivalry soon followed; both nations endeavoured to possess themselves of Corsica; and the Etruscans, being joined by the Carthaginians, fought a desperate battle with their Phocian antagonists, in which victory ultimately sided with the latter. They were equally unsuccessful in their naval wars with the Dorians of Cnidos and Rhodes, who had made a settlement on the island of Lipara. In the time of Pausanius, a consecrated offering of the Liprians was seen at Delphi, made from the spoils of the Tyrrenians. Another trophy of the victory of the Greeks over them has been brought to light in our own times. In the year 474 B.C., the people of Cumae, in Campania, being engaged in war with the Tyrrenian, hurled on the Etruscans a fleet of three triremes, by which they were totally defeated; and Greece, as Findar says (Pyth., 1, 79), was delivered from slavery. In 1817, a brazen helmet was discovered among the ruins of Olympia, with an inscription to the following effect: "Hiero, son of Dinomeus, and the Syracusans (consecrate) to Jupiter, Tyrhenian (arms) from Cumae." Two other helments without inscriptions, but no doubt part of the same votive offering, were found at this time on the island of Lipari, which was, as Anc. heralds, one of the most famous places of Sicily, from which they were entirely expelled; and, as Müller, it will be remembered, considered the Romans to have formed the primitive population of the land, and to have been conquered by the Tyrrenians. In reply to the question that very naturally presents itself, why, if the Etruscans were a foreign and distinct race, the Greek writers, nevertheless, invariably called them Tyrreni, and Etruria Tyrrenia, Niebuhr remarks, that the Etruscans had no more title to the name of Tyrrenians, than any other nation, Greeks, Britons, or the Spanish Croeoles to that of Mexicans or Peruvians; the strange name was acquired in all these cases, according to him, in precisely the same way. The whole theory is undoubtedly a very plausible one; but the difficulties with which it is encumbered are so numerous, that we cannot hesitate to yield an assent to the more rational view taken by Müller of this insecure but difficult subject. (Note: Niebuhr, Rom. Hist., vol. 1, p. 85, seqq., and 89, ed. 2, p. 38 and 108, ed. 3.—Hist. of Rome, p. 78, Libr. Us. Knol.)

Domestic Manners, National Character, &c., of the Etruscans.

It is not an easy task to paint the domestic manners and national character of a people who have transmitted their traditions, and are preserved to posterity in literary compositions. The basis of the national prosperity of the Etruscans was agriculture, to which their soil and climate were well adapted, and which has always flourished in Tuscany, when the beneficence of
nature has not been counteracted by misgovernment and absurd legislation. But Etruria was not, like Campania, a land of spontaneous fertility; the industry and ingenuity of man were required to adapt cultivation to the various qualities of the land, and to curb the inundations of the Po in the provinces on the Adriatic. Their primitive manners were simple; the distaff of Tuscany was sometimes changed for the distaff of Capua; and a passage of Juvenal (6, 288) seems to imply, that in domestic industry and virtue there was a close resemblance between the Tuscan and the Roman nations in early times. Their extensive conquests, and bold and skilful navigation, are a sufficient proof of the energy of their national character. But when commerce and conquests in Southern Italy had placed in their reach the means of indulgence, they seized it with a vigour and address which was not interfered with by the rude manners of a barbarous people; and luxury, instead of being the handmaid of refinement and elegance, ministered to vain splendour and sensual voluptuousness. Diodorus (5, 40) describes, from Posidonius, their tables loaded twice a day (which, to abstemious Greeks, seemed the excess of gluttony), their embroidered draperies, their drinking-vessels of gold and silver, and their hosts of slaves.

Athenaeus gives much darker shades to his picture of the Etruscans. The description of the multiplicity of artificers is softened wholly in the gratification of the senses. That the epithets of pinguis and obscus, which the Romans applied to the Etruscans, were not wholly suggested by national malice, is evident from the recumbent figures on the covers of the sarcophagi. From the Etruscans the Romans borrowed their combats of gladiators. It should seem, however, that the horrible practice of introducing them at banquets belonged chiefly to the Etruscans of Campania, and especially to Capua; the fact of all the vices which spring from luxury, woman are softened by humanity or refined by taste. Of the Etrurian music we have spoken in mentioning the proofs of their Lydian origin. It was almost the only branch of art in which invention is attributed to them by the ancients; and even here the invention related only to the instrument; we read of no mode ascribed to them. Their celebrity, both in this and the plastic art, was owing, in a great measure, to their being the neighbours of a people who were wise and averse from both as that of the Romans; who, till they became acquainted with the Greeks, derived all the decorative part of their system of public and private life from the Etruscans. We have no historical means of determining whether the Etruscans borrowed from the Greeks their successive improvements in sculpture and statuary, or proceeded in an independent track: the fact which we shall have to produce respecting their alphabet, renders the former supposition more probable. If this communication existed, it was only to a certain point: the Tuscan style in art always bore a resemblance to that of Egypt, and their most perfect works had that rigidity, and want of varied and living expression, which characterized Grecian sculpture before Phidias had fired his imagination with Homer's description of Jupiter and Minerva, or Praxiteles had imbibed in marble his vision of the Olympian Beaumarchais. In that department of art, or the contrary, in which mechanism without mind may attain perfection, the Etruscans were little inferior to the Greeks themselves. An Athenian poet (ap. Athen., 1, 28) celebrated their works in metal as the best of their kind; alluding probably to their drinking-vessels and lamps, candelabra and tripods. The religion of the Greeks lent a powerful aid in perfecting the plastic art; that of the Etruscans, as far as any resemblance there is between the native fancy of the artist, or to exalt his conceptions to sublimity. They appear to have held an opinion, which we find both in the Northern and Hindu theology, that the gods themselves were like the system over which they presided, the effects of a power exerted only at long intervals in the production of being, and absorbing into itself all that it had produced, to create again. The symbols of this power were the Dii inviolati of Etrurian theology, whose names were unknown, and who were not objects of popular worship; of them Jupiter himself asked counsel: the Dii Consantes, twelve in number, that of each divinity with the name, some home, some things, and received homage and sacrifice. Their intervention in human affairs was chiefly manifested in omens of impending evil, to be averted by gloomy, and often cruel expiations. If morality may have gained something by the Etrurian religion's having furnished nothing answering to the sportive, but licentious mythology of the Greeks, poetry and art undoubtedly suffered. The same want of lively and cheerful imagination characterized their domestic domestic, as of the soul; their subterranean world was a Tartarus without an Elysium. Nowhere was superstition reduced so completely to system. The regions of the heavens were divided and subdivided according to the Etrurian discipline, that every portent might have its accurate interpretation; the phenomena of the atmosphere, especially thunder and lightning, were observed and classed with a minuteness which might have furnished the foundation of a science. If, in fact, it has been philosophers instead of priests; but which, in fact, only augmented the subservience of the multitude to those who claimed the exclusive knowledge of the methods by which the gods might be propitiated. It is unnecessary to say that philosophy, in the Grecian sense of the word, free speculation on man, nature, and providence, combining its results into a system, was unknown in Etruria. Some practical knowledge of the laws of nature can, and should be communicated. The works in architecture and hydraulics as the Etruscans; but we are not aware that the discovery or demonstration of a single scientific truth can be claimed for them. The form of the Etrurian government, in which the same order were both aristocracy and priesthood, effectually prevented the mind of the nation from expending itself in its natural growth. To the Lucumones, an hereditary nobility, Tages revealed the religious usages which the people were to adopt, but kept them to themselves. The knowledge of this system, with the power of applying it as they thought best for perpetuating their own monopopy. In their civil capacity, the Lucumones formed the ruling body in all the cities of Etruria. In earlier times we read of kings, not of the whole country, but of separate states, whose power, no doubt, was greatly narrowed by that of the aristocracy; but they disappear after a time altogether, as from the Greeks to the Etruscans, when no body corresponding to the plebes arose to represent the popular element of the constitution. It is difficult to fix the exact relation of the great body of the ruling caste. Muller inclines to the opinion, that the cultivators of the soil were chiefly bondsmen to the land-owners, as the Peasants in Thessaly, and the Helots in Sparta. That such a class existed in Etruria is certain; that it includes so large a proportion of the people, is not probable; and the only argument adduced in support of it is the very doubtful assumption that the clients at Rome were bondsmen of the patricians. Unquestionably the Etrurian aristocracy kept the lower orders in political subjection, and the nation was thus prevented from rising to that eminence to which it might have attained; but its general prosperity is a proof that the government was not tyrannically exercised. The spirit of democracy appears to have been prevailing so as to awaken the fears of the ruling caste, and lead them to severity. The insurrections of which we read are especially attributed to the slaves. Etruria was fertile in corn, especially in spelt the far or ador of the Romans; of which the meal furnished the pulse,
HETRURIA.

which was the ancient food of the inhabitants of all this part of Italy; and agriculture formed the most
honourable occupation. The iron-mines of Tulla, Vul
turnum, and others on the mainland of Etruria connected
with them, furnished a richer supply, and of a purer
quality than any other in the ancient world; the same
island produced the copper for their coinage, and for
their works in brass.

Works of Art, Antiquities, &c. of the Etrurians.

Enough remains of Etruscan art to justify what an
cient authors have said of the population, wealth,
and luxury of this people. The walls of their cities rarely
exhibit that gigantic species of dice-building which has
been called the Cyclopean architecture, and which is
found in Asia Minor, in the Peloponnesus, and the re-
main of the ancient towns of Latium and Samnium.
Micali considers the walls of Cosa as the only specimen
in Etruria of the Cyclopean manner; but if the cri-
teron be the use of polygonal masses of stone without
ceast, instead of parallelopipedal, the plate (pl. 12)
which he has given of the gate and wall of Signium
(Segni) shows that it partakes of the character of this
class. But, in general, they built their walls, as may
be seen at Volterra, Populonia, and Ruselle, of vast
blocks of parallelopipedal form, which their own weight
retained in their places, without the use of mortar.
The gate of Segni, before mentioned, shows something
of the earliest attempts at constructing an arch, by the
imperfect approximation of the stones which form
the sides. Etruria does not exhibit any specimens of
the mode of building practised in the treasuries of
Atreus and Minyas, in which the walls of a circular
building converge so as to meet at the top in the form
of a beehive. A recent traveller, Della Marmora, has
discovered several of this kind in the island of Sar-
dinia. We are indebted for by far the most numerous
of Etruscan antiquities to those parts of the city
which the people provided themselves with durable places
of sepulture, and their custom of interring with the body
various articles of metal and of clay. To the opening of
the hypogeæ of Volterra, we owe the revival of this
branch of antiquarian lore. Some of these repositories
belonged to ancient towns, whose existence might have
been unknown but for the necropolis which marks
their vicinity. Inghirami has given an interesting ac-
count of some of these; not far from Viterbo, the other at Orchia, about four-
teen miles to the southwest of that city. Castellaccio
was the Castellum Axium mentioned by Cicero in his
oration for Cæcina (c. 7), the site of which Chuevrer
declared to be unknown. The traces of the walls
themselves are very visible in the large oblong blocks
of peperino joined without cement, and convex out-
ward, in the usual style of the old Etruscan fortifica-
tions. The steep banks of the stream, being composed
of a tufa easily wrought, have been hewn out for
nearly a mile into grotto-sepulcres, the face of the
rock being cut into the representation of a doorway,
while the real entrance to the hypogeum is below, and
closed with large stones. Examples of this kind of
sepulchre are found in Persia, in Palestine, and in
Asia Minor (Walpole's Memoirs, vol. 1, p. 231;
vol. 2, p. 206, 584); but in these the entrance is by
the sculptured portal, which in the Etruscan pulse-
chres served only as an ornament. The architecture
of these tombs is evidently of an age when the Greek
embellishments had become known in Etruria; but
the shortness of the pillars, the length of the inter-
columnation, and the heaviness of the upper parts,
agree very well with the character which Vitruvius
(3, 3) gives to the Tuscan buildings, " Variae, bari-
cephaled et humiles et latae." As time has not spared
a single public edifice of the Etrurians, it is only by
means of their sepulchres, or the representations of
their buildings in paintings and bas-reliefs, that we can
judge what their architecture really was; and even here
we find very few traces of it. (Müller, Etrusker,
3, 3; Müller, Etrusker, 3, 4, 5.)

The sepulchres are of two principal sorts. There
is a species of sepulchres for the rich, and another for
the poor. The one is a square of stone, with a recess
properly a distinct order; whether so allied in con-
sequence of the affinity of the Etrurians and Greeks, or
borrowed by the former, and varied to adapt it to edifices
of wood, as theirs commonly were, appears doubtful.
Within these sepulchral chambers were disposed cin-
erary urns of stone, sometimes ranged around the sides
on the ground; sometimes on an amphitheatere of steps;
and sometimes in niches, like the Roman columbaria.
In the sepulchres of Volterra, urns of baked earth are
very rare, stone being there abundant; in those of Chusium and Montepulciano they are com-
mon. The urns of baked clay were meant to contain
ashes, and must not be confounded with the fictile
vases which are very commonly found in the Etrurian
sepulchres. As they were first discovered in Etruria,
the name of Etruscan was given to them, and contin-
ued to be used after it was known that they were
more abundantly in the sepulchres of Magna Graecia,
and even in Attica and the islands of the Ægean.

That the custom of depositing them in sepulchres, for
whatever purpose it may have been, is common to the
Greeks and Romans, is certain; but there is no reason to
suppose that it originated in Etruria, or that those
which are found in Campanian or Sicilian sepulchres
are of Etrurian manufacture. On the contrary, it is
probable that those found in Etruria are the production
of Greek artists; their subject, their style of painting
and design, are completely Greek; and though the
Etruscans have inscribed every other work of art with
some name or other, they never give their place of
origin, if any other than a Greek inscription. The
single exception found probably at Volterra, and men-
tioned by Inghirami (Ser. 5, Tab. 55, N. 8), is Greek
both in its style and its words. The ancients fre-
cently celebrate the pottery of the Etrurians, but do
not attribute to them any particular skill in painting
them. The vases of Arretium, so frequently men-
tioned in the classics, are of quite a different kind
from those of Etruria, and have an appearance which
abound in the neighbourhood of Arezzo, and Inghira-
mì has engraved some of them. They are of very
fine clay, of a bright red colour, and with figures in
relief, modelled after Greek patterns probably, but
with Latin inscriptions. Statues of the gods in clay,
of Tuscan fabric, were the chief ornaments of the Ro-
man temples in the earliest times. (Juv., 11, 115.)

Every collection of antiquities contains specimens of
what are called Etruscan vases; very generally found
with the urns and vases in the sepulchral chambers.
They are shallow disks of brass, frequently without
any concavity, but bordered by a rim slightly raised,
and having a handle of the same metal. On the disk
are generally engraved scenes of mythological and
heroic history, with legends in the heroic character; a
circumstance which has rendered them peculiarly im-
portant to the antiquary for comparing the Etruscan
mythology with the Greek. It seems singular that
the Etruscans should ever have been applied to them;
far from being suitable for drinking-vessels, they
could not even hold the small quantity of wine
necessary for a libation; and, wherever a libation is
represented on ancient monuments, it is performed
with a vessel, comparatively shallow, indeed, as its
name implies, but very different from an Etruscan pa-
ter, and always without a handle. We should in some
eminent cases, like the Vices, be much better pleased if
some ancient examples; with the vases proper for
flasks. Inghirami, who has published two series of these antiquities, contends at great length
against the common name, and calls them specchi mis-

HETRURIA.
HETRURIA.

And Inghirami the improvement two derived have been to improve; that is, they were a real part of the toilet of the deceased, consigned to the same grave with her; on the principle that what was most used and valued in life should be the companion in death. Yet to this supposition it is an objection, that the slight convexity which some of them have is on the polished side, a circumstance which, as it would interfere with their use as real mirrors, suggests that they may have been emblematical of the sacerdotal office borne by the female with whom they were interred.

**Etrurian Language and Literature.**

The literature of the Etruscans presents the singular phenomenon of an alphabet perfectly deciphered, along with a language completely unintelligible. Such a combination is so strange, that we find more than one writer alleging that the language is Greek, and appealing in proof to the alphabet, without suspecting the want of connexion between premises and conclusions.

When the Eugubine tables were discovered in 1444, they were supposed to be in the Egyptian character; Reinesius suspected them to be Punic; and, though they gradually acquired the name of Etruscan, the real force of the letters was not discovered till 1732, when Bourguet ascertained it by comparing the two tables which are in the Latin character with one in the Etruscan, which he had happily divined to be nearly equivalent in sense. Gori, a few years later, published his alphabet, which, in all important points, has been confirmed by subsequent inquiries; the great improvement made in it by Lanzi was, that he detected a Σ in the letter M, which till then had been taken for an n. The principles of Greek paleography have been lately established, on a more solid basis than before; by the help of these and the labours of his predecessors, Müllner has come to the conclusion, that the Etruscan alphabet has not been derived immediately from the Phoenicians, but from the Greeks. Very few forms occur in it which are not found in the early Greek inscriptions: while, on the other hand, it does not contain some of those which the Greeks retained a considerable time after they received them from the Phoenicians; and, again, the Etruscans have some letters which the Greeks added to their Phoenician alphabet. Other Etruscan letters have never yet been found in any Greek inscription, so that it is impossible to point out any specific age or form of the Greek alphabet which the Etruscans may be supposed to have adopted once for all. The Phrygian inscription from the tomb of Midias (Walpole, vol. 2, p. 207) bears no closer resemblance to the Etruscan than other very old Greek inscriptions: in the Carian inscription, the letters θ and γ are used, which differ from the Etruscan. The letters B, Γ, Δ do not appear to have had any corresponding sounds in the Etruscan language, and the first and last never occur. Π is found in the form C, in which it appears on the coins of Magna Græcia. The digamma F occurs both in this form and in that of η, which is found in Greek inscriptions and on coins; they had also for the same sound the character Σ, for which a circular square with crossing lines is also used, as in the oldest Greek inscriptions. It is remarkable that the Etruscan F, in proper names, always answers to the Latin V, as Figi to Vibus, Felethri to Volaterra, Menare to Minerva; whence Müller (vol. 2, p. 301) takes occasion to dispute the latter correspondence. Müller has also represented the digamma, observing that it is only before R that the digamma becomes F. The same character was also used for H and Th. So that there seems in fact to have been one letter for the labial, dental, and guttural aspirate. The vowel O appears to have been unknown to the Tuscan language; for O they used chf and cf. Of the Greek forms Υ and Ω, which both occur on early monuments, they have chiefly used the former, but not exclusively. For Χ they have the form which is frequent in Etruscan inscriptions, resembling an inverted anchor; for Σ a double cross; Τ, Ζ, and the long vowels Η and Ω, are unknown to their alphabet. With very few exceptions, their writing is from right to left; and as this mode had been departed from by the Greeks in their earliest extant inscriptions, which may, perhaps, ascend to the thirtieth Olympiad (620 B.C.), it seems reasonable to admit that the former introduction of writing into Etruria was something earlier. Demaratus, who is said to have brought both painting and letters from Corinth, if really expelled by Cypselus, must have lived about the thirtieth Olympiad.

A more recent character, which is commonly found in sepulchral inscriptions, seems to have been introduced about the end of the third century after the building of Rome; at which time, according to Müller (vol. 2, p. 301), the Latin alphabet was also formed; but from the Greek, not from the Etruscan. The Umbrians appear to have adopted the Etruscan alphabet, though their language was essentially different, and more resembling the Oscan than the Latin. The Oscan alphabet also appears to have been borrowed from the Etruscan, not immediately from the Greek. It is difficult to say when the Etruscan character fell into entire disuse; the style of ornament on some of the urns on which it is found refers them to the times of the Roman empire. The language of Etruria never having been polished by the influence of literature (for its histories were probably mere chronicles, and its theological writings, liturgies and manuals of a gloomy superstition), remained harsh to the ear and uncouth to the eye. Such combinations of letters as apic, ranaset, thwunthalthl (Müller, vol. 2, p. 288), can scarcely have been pronounced at all without the intervention of a short vowel, after the manner of the Oriental languages.

In an address to the first Roman consul, it must be acknowledged, that all the labour which has hitherto been bestowed upon it, though valuable for its collateral results, has been nearly fruitless in respect to its direct object. When Lanzi, abandoning the former method of Oriental and Northern etymology, endeavoured to explain the Etruscan from the Pelasgic, it was natural to expect a more favourable issue: a close affinity, if not identity, of the two languages was maintained; the alphabet of the one and the other, and the alphabets were visibly the same. For many years after the appearance of his Saggio di Lingua Etrusca (3 vols. 8vo, 1789), his explanations were generally acquiesced in, and made the basis of other etymological speculations. But, when time had been given for examination, it could not but be perceived that his modes of proceeding were too arbitrary to warrant confidence; and it is remarkable that on every occasion that he has attempted the solution of many of the words and forms which he supposed to be Greek, in order to identify them with the Etruscan; and that other monuments, discovered since his time, could not be in any way explained by his system. Niebuhr, in his Roman history, averred that, among all the Etruscan words of which explanations have been pretended, only two, avil rid ("vivist annos"), seem to have been really explained; and of these Müller assures us (vol. 3, p. 64), and apparently with good rea-
son, that aedil ("aedum") signifies, not vixit, but atatis. Müller's observations on this subject are particularly deserving of attention at the present moment, when our extravagant and singular expedient appears to have furnished the enlargement of our historical knowledge by the comparison of languages. "We might give much more ample information, if, after Lanzl's method, we sought in the monuments of the Etruscan language for single sounds resembling the Greek and Latin; and, persuaded that similar sounds must have a similar meaning, endeavoured to explain all that could not be brought to agree by an arbitrary phonetic improvement in the single language, and similar expedients. Without blaming the learned Italian, in whose time the most eminent literati had very confused ideas of the formation of language, we may maintain that his leading principle, that analogy is the character only of cultivated languages, and that the ruder any language is, the greater liberty might be taken in the use of it, is entirely false. This may justify us for having paid so little regard to etymologies, which, as they are arbitrary in themselves, suppose an arbitrary character in the language to which they are applied. If we use only genuine monuments, and require a certain evidence for every explanation of a root or a grammatical form, our apparent knowledge of the Etruscan language shrinks almost to nothing. It is not probable that the application of the still existing remains of the languages of the north and northwest of Italy could have been beneficial results for our knowledge of the Etruscan which our attention can anticipate. The Germans and Celts are originally divided from the nations on the Mediterranean by their locality in a very marked manner; they only gradually approach these and come into collision with them; and, even though the languages of both nations may belong to that great family which, from time immemorial, has diffused itself throughout Europe and Asia, yet there are a few peculiarities, which we have no reason to believe are found in those of Italy. The fundamental and indelible characteristic of the Celtic languages seems to be, that they mark grammatical forms by aspirations and other changes of the initial consonants; a thing not practised in any other European language, but found in all branches of the Celtic, Welsh, Cornish, Gaelic, Irish, and Bas Breton. This mutability of the consonants is a circumstance which must be preserved in a vocabulary of written remains, and which could not well have escaped us had the Etruscan been the Celtic. The Iberian family, once widely diffused on the shores of the Mediterranean, may have dwelt in close vicinity to the Etruscans; but the remains of its language in the Basque are completely different from those of the rest of Europe, and its grammar shows so little affinity with what we know of the Etruscan as to afford very slight support to the opinion of the affinity of the two nations. What may have been the relation of the Tuscan to the extinct Ligurian, or to the language of those Alpine tribes whose names alone are preserved in history, is a question respecting which we have not even a glimmering of knowledge." (Muller, Etrusken, vol. 1, p. 64, seqq.—Edinburgh Review, vol. 50, p. 372-396.)

Hibernia. Vid. Ierne.

Hierapolis, I. a city of Syria near the Euphrates, so named by Zenodotus, who derived its Greek name (Holy City) from the circumstance of the Syrian goddess Astartes being worshipped there. By the Syrians it was called Bambyle or Mabog. With the introduction of Christianity, its reputation and prosperity of course declined. Constantine, it is true, made it the capital of the newly-erected province of Euphrates: but this proved of little avail. It suffered much during subsequent reigns from the inroads of the Persians. It is now Nambedseh or Bambigi, a deserted place, with many parts of the ancient wall standing.

(Manneri, Geogr., vol. 3, pt. 1, p. 510.)—II. A city on the western south-west of Phrygia, near the confines of Lydia, and northwest of Laodicea in Phrygia, celebrated for its springs. (Strabo, 629.—Dio Cass., 68, 27.—Pliny, 5, 32.) The waters of Hierapolis were remarkable for their petrifying or stalactital properties, and Chandler affirms, that a cliff near the ancient town was one entire incrustation. (Travels in Asia Minor, p. 287.) Besides this singular property, the waters of this town possessed, in a remarkable degree, that of serving for the purposes of distillation. (Strabo, 629.) This is now called the Turks Pambuk-Kalazzi, or the Castle of Cotton, because the neighbouring rocks resemble that substance in their whiteness, a colour produced by the stalactital incrustations already alluded to. (Chandler, p. 290.)

Hiero, I. succeeded his brother Gelon, as tyrant or ruler of Syracuse, B.C. 478. He committed many acts of violence, encouraged spies, and kept a mercenary guard around his person. He was ambitious of extending his dominion, and his attempts proved successful. After the death of Theron, prince of Agrigentum, Hiero defeated his son Thrasydaws, who was soon after expelled by his countrymen. He took Naxus and Catana, and, having driven away the inhabitants from both towns, he replaced them by Syracusans and Peloponnesian colonists. The name of Catana to Etne and he himself assumed the title of Ετναύς (Altαιος). Having joined his fleet to that of the people of Cumes, he succeeded in clearing the Tyrrhenian Sea of the Etruscan and other pirates who infested it. His chariots repeatedly won the prize at the Olympic games, and his success on those occasions formed the theme of some of the odes of Pindar, who was his guest and friend. Α篾̈ulus, Simonides, Bacchylides, and others, applied their talents to the description of Hiero, who was fond of the society of learned men. Hiero died at Catana, B.C. 476, and was succeeded by his brother Thrasybulus, who had all his faults without any of his good qualities, and was at last driven away by the Syracusans, who restored the government to the commonwealth. (Diod. Sic., 11, 49, seqq.) Elian gives Hiero credit for a much better character than Diodorus; probably because he, who had firmly established his authority, was better than the commencement. (Elian, 9, 1.)—II. The second of the name, son of Hierocles, a wealthy citizen of Syracuse, and a descendant of Gelon, distinguished himself in early life by his brilliant qualities, and served with distinction also under Pyrrhus in his Sicilian campaigns. After Pyrrhus had suddenly abandoned Sicily, the Syracusans found themselves threatened on one side by the Carthaginians, and on the other by the Mamertines, a band of Campanian mercenaries, who had treacherously taken possession of Messana. The Syracusan troops, being in want of a trusty leader, chose Hiero by acclamation, and the senate and citizens, after some demur, ratified the choice, B.C. 275. After various successful operations against the Mamertines, Hiero returned to Syracuse, where, through the influence of Leptines, and the senatorial law, a leading man among the democratic party, he was elected B.C. 270. Shortly after, the Mamertines at Messana quarrelled with the Carthaginians, and the Carthaginians invited Hiero to join his forces to theirs, in order to drive the Mamertines out of Sicily. Hiero having assented, encamped under the walls of Messana on one side, and the Carthaginians fixed their camp on the other, while their squadron guarded the strait. The Mamertines, meanwhile, had applied to the Romans
for assistance, claiming a common origin with them, as being descended from Mars, called Manner or Man-
ners. The language was not language, but a language that was used by the Carthaginians. The consuls seized this opportunity of obtaining a footing in Sicily. The consul Appius Claudius marched to Rhegium, and, having contrived to pass the strait in the night unobscured by the Carthaginian cruisers, he surprised Hiero's camp, routed the soldiers, and obliged the monarch himself to seek safety in flight. The consul next attacked the Carthaginian camp with the same success, and this was the beginning of the first Punic War, 265 B.C. In the following year the Romans took Taormina and Catana, and advanced to the walls of Syracuse, when Hiero sued for peace, which he obtained on condition of paying 100 talents of silver, and supplying the Roman army with provisions. He punctually fulfilled his engagements, remaining faithful to Rome during the whole of the war, and by his supplies was of great service to the Roman armies, especially during the long sieges of Agrigentum and Lilybœum. Hiero was included in the peace between Rome and Carthage, by which his territories were secured to him, and he remained in friendship with both states. He even assisted Carthage at a very critical moment, by sending her supplies of provisions during the war which she had to sustain against her mercenaries. The period of peace which elapsed between the end of the first and the beginning of the second Punic wars, from 241 to 218 B.C., was most glorious for Hiero, and in the year 218 he routed the Syracusan army, and agriculture flourished, and wealth and population increased to an extraordinary degree. Hiero paid particular attention to the administration of the finances, and made wise regulations for the collection of the tithe or tax on land, which remained in force throughout Sicily long after his time, and are mentioned with praise by Cicero as the Lex Hieromana. (Cic. in Verr., 2 et 3.) Hiero introduced the custom of letting the tax to farm every year by auction, which was estab-
lished and strengthened Syracuse, and built large ships, one of which, if we are to trust the account of Athenæus (5, p. 206), was of most extra-
ordinary dimensions and magnificence. This ship he sent as a present to Ptolemy Philadæus. Archim-
edes lived under Hiero's reign. When the second Punic war broke out, Hiero continued true to his Ro-
man alliance, and, after the Trasymenian defeat, he sent a able general to oppose that general, and a body of light troops to the assistance of Rome. He lived to see the battle of Cannæ, after which his son Gelon embraced the part of the Carthaginians. Gelon, however, died, not without suspicion of vio-
ence, and Hiero himself, being past ninety years of age, ended his days soon after (B.C. 216), leaving the crown to his grandson Hieronymus. With Hiero the prosperity and independence of Syracuse may be said to have expired. (Lxi. lib. 7.—Encycl. Us. Knovel, vol. 125.)
Hierocles, I. a rhetorician of Alabanda, in Caria, who lived in the beginning of the first century before the Christian era. He excelled in what Cicero termed the Asiatic style of eloquence. (Cic., de Orat., 235.—Id., Brut., c. 91.)—II. A lawyer, who wrote a work on veterinary medicine, addressed to Cæcianus Bassus, of which three treatises are preserved in the sixtysix volumes of Geoponica. (Vid. Geopon. ca.—III. Surnamed the grammarian, for distinction' sake from the philosopher of the same name, a Greek writer who had been contemporary with Justinian, but of whom one thing at least is certain, that he was anterior to the tenth century. He composed, under the title of Εὐγένοδος ("Travelling Compan-
ion"), a description of the sixty-four provinces that formed the Byzantine empire, and of the nine hundred and thirty-five cities situate in them. The best edi-
tion is that of Wesseling, in the Itineraire Veterum

Rom., Amst., 1735, 4to.—IV. A new Platonist, who flourished at Alexandria about the middle of the fifth century, and who transcribed the lost "Apostolic Constitu-

ences of Pythagoras," and a treatise "On Prov-

idence, Destiny, and Free-will." The end of Hiero-
cles is to show the agreement which exists in respect of these doctrines between Plato and Aristotle; to re-

fute the systems of Epicurus and the Stoics; to con-

found those who pretend to read the decrees of destiny in the natures of men, or who believe that the deter-

minations of Providence may be influenced by en-

chantments or mystical ceremonies; those, in fine, who have the misfortune to deny an existing Providence. We have only extracts from this latter work made by Photius, and an abridgement by an unknown hand.

Stobæus has preserved for us some fragments of a work of Hierocles on the worship of the gods (Πάγος τοῦ Θεοῦ χρήσας), or, rather, a chapter belonging to some large work which treated of various points of ethics. The same Stobæus has preserved fragments of other productions of Hierocles, "On Justice," "On the Conduct due towards Parents," "On Marriage," "On Fraternal Love," &c. There exists also, un-
der the name of Hierocles, a collection of insipid Facetiae (Ἀστεῖα), containing an account of the ridicu-

lous actions and sayings of book-learned men and pedants. In all likelihood, however, it was written by some other individual of the same name, and not by the philosopher.—The best edition of the Commentary of Hierocles on this collection is that of Needham, Lond., 1709, 8vo. The editor, however, has made some rash emendations, which di-
nish the value of the work. The edition of Pearson, Lond., 1654, 8vo, is also a very good one. The best separate edition of the Commentary is that of Ashton and Warren, Lond., 1743, 8vo, and of the Facetiae, that of Schier, Lips., 1756-1765, 8vo.—V. A prefect of Dithynia, and afterward of Alexandria, who is said to have written a work on the inhuman treatment of the Christians in the reign of Diocle-

sian. (Lauctant. Inst. Dis., 5. 2.—Id., de Morte Per-

sec., c. 17.) He also wrote two works against Chris-
tianity, entitled Δόγμα παφλαγιάς πρὸς τοῦ Χριστια-

νοῦς ("Truth-loving words to the Christians"), in which, according to Lauctantius, he endeavoured to show that the Scriptures overtrew themselves by the contradic-

tions with which they abound. He also re-
minded the pagans of the love of his philosophy, and the agitators of falsehood. He endeavoured to destroy the effect of our Saviour's miracles, though he did not deny the truth of them; and he aimed to show, that like things, or even greater, had been done by Apollo-

nus of Tyana. (Lauctant. Inst. Dis., 5. 2, seq.)

Hieronicus LEX. Vid. Hiero II.

Hieronymus, I. grandson of Hiero II., monarch of Syracuse, succeeded him on the throne at the age of fifteen (B.C. 216). He was left by Hiero under the guardianship of several individuals, among whom was Andronorus, his aunt's husband, who, seconded by other courtiers, and with the view of monopolizing the confidence of the young king, indulged him in all his caprices and follies. The court of Syracuse, which, under Hiero, was orderly and respectable, soon became as profligate as it had been under the younger Dionysus. Andronorus persuaded Hieronymus, against the protest of the Christian luminaries, to forsake the Roman alliance for that of Carthage, and messengers for that purpose were sent to Hannibal in Italy, and also to the senate of Carthage, which gladly agreed to an alliance with Syracuse, in order to effect a diversion against the Romans. War being at length declared by Rome, Hieronymus took the field with 15,000 men; but a conspiracy broke out among the soldiers, and he was murdered after a reign of about thirteen months. On the news of this, a popular in-
surrection took place at Syracuse; the daughters and
grand-daughters of Hiero were murdered, and royalty was abolished. But the people were distracted by factional wars and revolutions that succeeded revolution, until two adventurers of Syracusan extraction, but natives of Carthage, who had been sent by Hannibal to keep in countenance the Carthaginian party in Syracuse, became possessed of the chief power, and so provoked the Roman commander Marcellus that he laid siege to and took Syracuse. (Vid. Syracuse.—Diod. Sic., fragm., lib. 26, p. 365, ed. Bis. Litt. Sac., 4, Id., 26, 7, seqq.) II. A native of Carthage, in the Christian apoca-

sonese. He was one of the companions of Alexander the Great, and after his death attached himself to Eumenes. Made prisoner in the battle in which that chief was betrayed by his own followers, he was kindly treated by Antigonus, and entered into his service. This prince intrusted him with the government of Ciesarea and Phoenicia, and charged him with an expedition, the object of which was to seize upon the country around the Lake Asphaltites. The expedition did not succeed, owing to the opposition of the neighbouring Arabs, who supported themselves by vending the bitumen obtained from the lake. After the defeat of Antigonus at the battle of Ipsus, and his death, Hieronymus remained faithful to his son Demetrius. At a later period he entered into the service of Pyr-

hus, king of Epirus, and accompanied him in his Italian expedition, and it is said that this event attached the age of 104 years. The principal work of Hiero-

nymus, and that on which his reputation was founded, was entitled Ιστορία Τρογμηματα ("Historic Memoirs"). In this production he developed the moves-

which followed the death of Alexander, the ca-

bals and jealousies of the principal officers, the bloody wars to which their ambitious views gave rise, the de-

struction of the royal house of Macedonia, and the birth of the Hellenic states that formed the new empire of Alexander. The ancients, however, ac-

cused him of having been influenced too much by the hatred he bore to Seleucus, Cassander, Ptolemy, but above all to Lysimachus, by whose orders Cardia, his native city, had been destroyed. They charge him also with partiality towards Eumenes, Antigonus, and Pyrrhus. A particular worthy of remark, and one which makes us regret more earnestly the loss of Hier-

onymus, was his relation to the people who entered into any details on the origin and antiqui-
ties of Rome; the war of Pyrrhus with the republic afforded him probably an occasion for this. Diodorus Sikulus derived considerable aid from the commenta-
tories of Hieronymus, as did Plutarch also in his life of Eumenes. (Consult Recueeh la vie sur et les ouvrages de Jerome de Carthie, par l'Abbe Bevin.—Mm. de l'Aead. des Inst., &c., vol. 18, p. 20. — Scholl, Hist. Lit. Gen. vol. 3, p. 204, seqq.)—III. A peripatetic philosopher, born in the island of Rhodes, towards the close of the third century B.C. Cicero praises his ability, but doubts the propriety of his being ranked under the peripatetic sect, since he placed the sumnum bonum in freedom from painful emotion, a doctrine belonging to the Epicurean school. (Cic., de Fis., 5, 5.)—IV. A celebrated father of the church, more known by the English form of his name, St. Jerome, and accounted the most learned of all the Latin fathers. He was born of Christian parents, A.D. 331, on the confines of Pannonia and Dalmatia, at the town of Stridon or Stridonium. His father, who was a man of rank and property, sent him to Rome for education, where he was placed under the grammian Donatus, known for his commentaries upon Virgil and Terence. He had also masters in rhetoric, Hebrew, and divinity, in which he made a great pro-

gress. After travelling through France and Italy, he gave up friends and worldly pursuits to seek retirement in the East, and eventually reached Jerusalem, whence he proceeded to Antioch. Here he endured a severe attack of illness, on his recovery from which he wan-
tioned a prodigious exertion and resolution to re-

clude chosen, he took a retreat to his mind, which he found in a deserted part of Syria, scarcely inhabited by anything but wild beasts, and a few human beings little less ferocious. He was in his thirty-first year when he entered on this life, in which he spent fourteen years, occupied in an intense study of the Scriptures, until his health began to be affected by this application and ascetic disci-

pline. He then repaired to Antioch, where he was ordained a presbyter in 378 by Paulinus. He soon after visited Constantinople, in order to avail himself of the advice and instruction of Gregory Nazianzen; and, on his return, accompanied Paulinus to Rome, where his merit and learning soon made him known to Pope Damasus, who appointed him his secretary, and also director to the Roman ladies who had devoted themselves to a religious life. During his residence at Rome he lodged at the house of a matron of the name of Paula, a woman of rank and fortune, who after-

ward followed him with her daughters into the East. This event exposed him to some scandal from his op-

ponents the Origenists, and to more merited censure from the relations and friends of the many weak females with whom he thus encouraged in their desertion of their proper duties, and in the misapplication of their wealth to the support of useless or pernicious institutions. On the death of Damasus, finding his situation at Rome in untenable, Hieronymus, the ascetic of thirty years, not having the same esteem for him that Damasus had, he determined to return to the East, and accord-

ingly embarked, in 385, with a great number of monks and females whom he had induced to embrace the monastic life. He touched at Cyprus, where he vis-

ited Ephiphanus, and, arriving at Antioch, proceeded thence to Jerusalem, and afterward to Egypt, where, to his great grief, he found himself in a universal calamity. He at length settled at Bethlehem, where the wealthy and devout Paula founded four monasteries, three for females, and one for males under Jerome. Here he pursued his studies with great ardour, and wrote many of his best treatises; and in these occupa-
tions he might have peaceably closed his days, but for his detestation of the opinions of Origen, which involved him in the most acrimonious controversy for more years with Jerome, bishop of Jerusalem, his former friend Rufinus, Ambrose, and Jerome, the Christian monk. In the year 410, when Rome was besieged by the Goths, he afforded an asylum to many who fled from that city to Jerusalem, but was very careful to exclude all whom he deemed tinctured with heresy. He died A.D. 422, in the ninety-first year of his age.

—Many of the works of Jerome have come down to us. Several of them are merely controversial; but there are others of a more lasting and lasting value. These are, his Treatise on the Latin Versions of the Old Testament, on the trans-

lations of the Church, of the New Testament into Latin, which translation has been always highly valued in the Latin Church, and is that known by the name of the Vulgate. It is a question, whether among the learned, how far, and whether at all, he im-

bodied an older Latin version in its translation. It was the first effort at bringing the Scriptures within the reach of the great multitude, who knew no other language but the Latin. It was a great and noble work, which ought to place its author high among the benefactors of mankind. Bishop Warburton says of Jerome, that he is the only Father who can be called a critic of the sacred writings, or who followed a just or reason-

able method of criticism."—The first printed edition of the entire works of Jerome, as far as these have
reached us, appeared at Basle, from the press of Froben, under the care of Erasmus, 1516, 9 vols. fol. Many subsequent editions have been published at Lyons, Rome, Paris, and Antwerp, but the best is that of Vallarsi, Verona, 1731-1742, 11 vols. fol., and Ve netiis, sero, 1781, 11 vols. 4to. (Bähr, Gesch. Röm. Lit. Die Christlich-Römische Theologie, p. 165, seqq.) Hierosolyma (neut. plur.) (Jerusalem), a celebrated city of Palestine, the capital of Judea. The history of Abraham mentions, that Melchizedek, king of Salem, came forth to meet him when he returned from the slaughter of the kings (Gen. 14, 18), and it has been generally supposed, that this Salem was the original of the Jebusites. This city now is, however, uncertain; that, when the Israelites entered Canaan, they found the place in the occupation of the Jebusites, a tribe descended from Jebus, a son of Canaan, and the city then bore the name of Jebus or Jebusi.(Josh. 15, 63.—Id., 18, 25.—Consult Reland, Palast., p. 834.) The lower city was taken and burned by the children of Judah (Jud. 1, 8) after the death of Joshua; but the Jebusites had so strongly fortified themselves, that they were not dislodged, and the city, which had remained unfortified till that time of David. This monarch, after his seven years' rule over Judah in Hebron, became king of all Israel, on which he expelled the Jebusites from Mount Zion, and established here the metropolis of his kingdom. The city took now the name of Jerusalem, a term which denotes the abode, or (according to another derivation), the people, of peace. (Consult Reland, p. 862.) The name, Jerusalem, Heb. Zer, Lxx., in the Septuagint version gives 'ItpovffoAjJ/i as the form of the name, while by the Greek and Roman writers the place is called Hierosolyma. At present this city is known throughout Western Asia by the Arabic name of El-Kuds, which signifies 'holiness.' (Vid. Caditys)—Jerusalem was built on several hills, the largest of which was Mount Zion, which formed the southern part of the city. A valley towards the north separated this from Acra, the second or lower city, on the east of which was Mount Moriah, the site of the temple of Solomon. Northeast of Mount Moriah was the Mount of Olives, on the south was the valley of Hinnom, and at the north Mount Calvary, the scene of our Lord's crucifixion. Passing over the history of this celebrated city, so fully detailed in the sacred volume, we come to the memorable period of its capture and destruction by Titus. The date of this event was the 8th of September, A.D. 70. During this siege and capture, 1,100,000 persons are said to have perished, and 97,000 to have been made prisoners, and afterward either sold for slaves, or wantonly exposed for the sport of their insolent victors to the fury of wild beasts. In fact, the population, not of Jerusalem alone, but that of the adjacent districts, many who had taken refuge in the city, more who had assembled for the feast of unleavened bread, had been shut up by the Soldiery in the fortress of the city. The ardent zeal of the Jewish nation for their holy city and temple soon caused both to be again rebuilt; but fresh commotions compelled the Emperor Hadrian to interfere, and ordain that no Jew should remain in, or even approach near Jerusalem, on pain of death. On the ruins of their temple the same emperor caused a temple in honour of Jupiter Capitolinus to be erected, and the image of a hog to be cut in stone over the gate leading to Jerusalem, as a standing insult to the religious feelings of this unfortunate people. The name of the city was also changed to E/ia Capitolina, the first part of the name alluding to the family of the Roman emperor. The more peaceful Christians were permitted, however, to establish themselves within the walls, and E/ia became the seat of a flourishing church and bishopric. This latter name became afterward the ordinary name of the city, and Jerusalem became nearly obsolete. Upon the ascension to the throne, however, of the Christian emperors, the name revived. Jerusalem, thus restored, was much less in compass than the ancient city, Mount Sion and Bezetha being excluded.—The following description of Jerusalem, as it stood after the appearance of the siege by Titus, is given by Milman. (History of the Jews, vol. 3, p. 17, seqq.) "Jerusalem, at this period, was fortified by three walls, in all those parts where it was not surrounded by abrupt and impassable ravines; there it had but one. Not that these walls stood one within the other, each in a narrower circle running round the whole city but each of the inner walls defended one of the several quarters into which the city was divided, or, it might be said, parts of the several cities into which the city had been divided at different times. On these several days in which David had built his capital on the rugged heights of Sion, great alterations had taken place at Jerusalem. That eminence was still occupied by the upper city; but, in addition, first the hill of Moriah was taken in, on which the temple stood then Acra, which was originally, although a part of the same ridge, separated by a deep chasm from Moriah, and which, after its capture by Titus, was entirely filled up, and the top of Acra levelled by the Assasins, so that Acra and Moriah were united, though on the side of Acra the temple presented a formidable front, connected by several bridges or causeways with the lower city. To the south the height of Sion, the upper city, was separated from the lower by a ravine, which ran right through Jerusalem, called the Tyropeon, or the valley of the cheesemongers; at the edge of this ravine, on both sides, the surrounding wall had been suddenly broken off, though the walls in some places must have crossed it, and it was bridged in more than one place. To the north extended a considerable suburb called Bezetha, or the new city. The first or outer wall encompassed Bezetha. Agrippa the First had intended to make this wall of extraordinary strength; but he had desisted from the work on the interference of the Romans, who seem to have foreseen that this refractory city would hereafter force them to take up arms against it. Had this wall been built according to the plan of Agrippa, the city, in the opinion of Josephus, would have been impregnable. This wall began at the tower of Hippicus, which stood, it seems, on a point at the extreme corner of Mount Sion: it must have crossed the western mouth of the valley of Tyropeon, and run directly north to the tower of Psephina, proved clearly by D'Anville to have been what was called during the crusades Castel Pisano. The wall then bore towards the monument of Helenus, ran by the royal cypress to the Fuller's monument, and was carried into the valley of Kidron or Jehoshaphat, where it joined the old or inner wall under the temple. The wall, however it fell short of Agrippa's design, was of considerable strength. The stones were thirty-five feet long, so solid as not easily to be shaken by battering engines, or undermined. The wall was seventeen and a half feet broad. It had only been carried to the same height by Agrippa, but it had been hastily run up, so that the Jews to thirty-five feet: on its top stood battlements three and a half feet high, and pinnacles five and three fourths; so the whole was nearly forty five feet high. The second wall began at a gate in the old or inner one, called Gennath, the gate of the gardens; it intersected the lower city, and, having struck northward for some distance, turned to the east and joined the northwestern corner of the temple. The Antonia stood at the northwest corner of the temple, and was separated from Bezetha by a deep ditch, which probably protected the whole northern front of the temple as well as of the Antonia. The old or inner wall was that of Sion. Starting from the southwestern porticoes of the temple to which it was united, it ran along the edge of the Tyropeon, passed first the Ysys-
HIEROSOLYMA.

The old wall then ran southward through Betho to the gate of the Essenes, all along the ridge of the Valley of Hinnom, along the ridge of Siloam, then eastward again to the Pool of Solomon, so on through Ophs, probably a deep glen: it then joined the eastern portico of the temple. Thus there were, it might seem, four distinct towns, each requiring a separate siege. The capture of the first wall only opened Bezeba; the fortifications of the northern part of the temple, the Antonia, and the second wall, still defended the other quarters. The second wall was only a part of the lower city was won; the strong rock-built citadel of Antonia and the temple on one hand, and Sion on the other, were not the least weakened. The whole circuit of these walls was guarded with towers, built of the same solid masonry with the rest of the walls. They were thirty-five feet broad and thirty-five high; but above this height were lofty chambers, and above those again upper rooms, and large tanks to receive the rain-water. Broad flights of steps led up to them. Ninety of these towers stood in the first wall, fourteen in the second, and sixty in the third. The intervals between the towers were about three hundred and fifty feet. The whole circuit of the city, according to Josephus, was thirty-three stadia, rather more than four miles. The most magnificent of all these towers was that of Paphphama, opposite to which Titus encamped. It was one hundred and twenty-two and a half feet high, and commanded a noble view of the whole country of Judaea, to the border of Arabia, and to the sea: it was an octagon. Answering to this was the tower Hippicus, and following the old wall stood those of Phasalas and Mariamme, built by Herod, and named after his wife, and his brother, and friend. These were stupendous even as works of Herod. Hippicus was square; forty-three and three fourths feet each way. The whole height of the tower was one hundred and sixty feet. It was adorned with battlements, so that its whole height was above one hundred and sixty-seven feet. It looked from a distance like the tall pharos of Alexandria. Mariamme, though not equal in elevation, was more luxuriously fitted up; it was built of solid wall thirty-five feet high, and of the same width: on the whole, with the upper chambers, it was about seventy-six and three fourths feet high. These lofty towers appeared still higher from their situation. They were built on the old wall, which ran along the steep brow of Sion. The masonry was perfect: they were built of white marble, cut in blocks thirty-five feet long, seventeen and a half wide, and eight and one fourth high, so fitted that the towers seemed hewn out of the solid quarry. A description of the fortress Antonia is given under that article. 

"High above the whole city rose the temple, uniting the commanding strength of a citadel with the sanctity of the place consecrated with the blood of Josephus, the esplanade on which it stood had been considerably enlarged by the accumulation of fresh soil since the days of Solomon, particularly on the north side. It now covered a square of a furlong on each side. Solomon had faced the precipitous sides of the rock on the east, and perhaps the south, with huge blocks of stone; the other sides likewise had been built up with perpendicular walls to an equal height. These walls in no part were lower than three hundred cubits, five hundred and twenty-five feet, but their whole height was not seen excepting on the eastern and perhaps the southern sides, as the earth was heaped up to the level of the streets of the city. Some of the stones employed in this work were seventy feet square. On the north side, the disposition ran a great front, a street, and lofty wall without, within a spacious double portico or cloister 524 feet broad, supported by 162 columns, which upheld a ceiling of cedar, of the most exquisite workmanship. The pillars were entire blocks hewn out of solid marble, of dazzling whiteness, 433 feet high. On the south side the portico or cloister was triple. This quadrangle had but one gate to the west, due to the north, two to the south, four to the west; one of these led to the palace, one to the city, one at the corner to the Antonia, one down towards the gardens. The open courts were paved with various inlaid marbles. Between this outer court of the Gentiles and the second court of the Israelites ran rails of stone, but of beautiful workmanship, rather more than five feet high. Along these, at regular intervals, stood pillars, with inscriptions in Hebrew, Greek, and Latin, warning all strangers, and Jews who were unclean, from entering into the Holy Court beyond. An ascent of fourteen steps led to a terrace 174 feet wide, beyond which rose the wall of the inner court. This wall appeared on the outside 70 feet, on the inside 432; for, besides the ascent of 14 steps to the terrace, there were five more up to the gates. The inner court had no gate or opening to the west, but four on the north, and four on the south, two to the east, one of which was for the temple, and a portion of the inner court was set apart, and beyond which they might not advance; to this they had access likewise by one of the northern and one of the southern gates, which were set apart for their use. Around this court ran another splendid range of porticoes or cloisters; the columns were quite equal in beauty and workmanship, though not in size, to those of the outer portico. Nine of these gates, or, rather, gateway towers were newly added: they stood on the walls, the doors, the door-posts, and the lintels. The doors of each of the nine gates were 521 feet high, and half that breadth. Within, the gateways were 522 feet wide and deep, with rooms on each side, so that the whole looked like lofty towers: the height from the base to the summit was 70 feet. Each gateway had two lofty pillars 21 feet in circumference. But what excited the greatest admiration was the tenth, usually called the temple gate. It had three stories, and was upheld by Corinthian brass of the finest workmanship. The height of the beautiful gate was 874, its doors 70 feet. The father of Tiberius Alexander had sheeted these gates with gold and silver; his apostate son was to witness their ruin by the plundering hands and fiery torches of his Roman friends. Within this quadrangle there was a farther separation, a low wall which divided the priests from the Israelites: near this stood the greatest temple of all, the temple of Solomon. Beyond, it gave rise to the porch or propylon, according to the design of the last, or Herod's temple, extended to a much greater width than the temple itself: in addition to the former width of 105 feet, it had two wings of 35 each, making in the whole 175. The great gate of this last quadrangle, to which there was an ascent of twelve steps, was called that of Nicander. This gateway to the temple was 543 wide; it had no doors, but the frontispiece was covered with gold, and through its spacious arch was seen the golden gate of the temple, glistening with the same precious metal, with large plates of which it was sheeted all over. Over this gate hung the celebrated golden vine. This extraordinary piece of workmanship had bunches, according to Josephus, as large as a man. The Rabbins add, that, "like a true natural vine, it grows greater and greater; men would be offering some gold to make a leaf; some, a grape; some,
HIEROSOLYMA.  H I M

a bunch: and these were hung up upon it; and so it was increasing continually. The temple itself, excepting in the extension of the wings of the propylon, was probably the same in its dimensions and distribution as in the time of Herod. It contained the same holy treasures, if not of equal magnificence, yet, by the zeal of successive ages, the frequent plunder to which it had been exposed was constantly replaced; and within, the golden candlestick spread out its flowering branches, the golden table supported the shew-bread, and the altar of incense flamed with its costly perfume. The roof of the temple had been set all over, on the outside, with sharp golden spikes, to prevent the birds from settling on and defiling the roof" (vid., however, remarks under the article Elicius), "and the gates were still sheathed with plates of the same splendid metal. At a distance the whole temple looked literally as much a mount of snow, fretted with golden pinnacle.

(Milman, History of the Jews, vol. 3, p. 22, seqq.)—Jerusalem, in more modern times, has not ceased to be an object of inviting interest to the traveller. About the year 705 of our era, it was visited by Arculfus, from whose report Adamnan composed a narrative, which was received with considerable approbation. Eighty years later, Willibald, a Saxon, undertook the same journey. In Jerusalem he saw all that Arculfus had seen; but he previously visited the tomb of the seven sleepers, and the cave in which St. John wrote the Apocalypse. Bernard proceeded to Palestine in the year 878. The crusades, however, threw open the holy places to the eyes of all Europe; and, accordingly, so long as a Christian king swayed the sceptre in the capital of Judæa, the merit of individual pilgrimage was greatly diminished. But no sooner had the warlike Saracens recovered possession of Jerusalem, than the wonted difficulty and danger returned. In 1331, William de Bousdessel ventured on an expedition into Arabia and Palestine, of which some account has been published. A hundred years afterward, Bertrand de la Broquiere sailed from Venice to Jaffa. At Jerusalem he found, the Christians reduced to a state of the most cruel thraldom. At Damascus they were treated with equal severity. The beginning of the 17th century witnessed a higher order of travellers, who, from such a mixture of motives as might actuate either a pilgrim or an antiquary, undertook the perilous tour of the Holy Land. Among these, one of the most distinguished was George Sandys, who commenced his peregrinations in the year 1628. In those days, when Heron, Thevenot, Gonzales, Morison, Maundrell, and cocke, of the more recent travellers, however, the most interesting and intelligent is Dr. Clarke. "We had not been prepared," remarks this writer, describing his approach to the ancient capital of Judæa, "for the grandeur of the spectacle which the city alone exhibited. Instead of a wrecked and ruined town, by some marvel it seemed as if a residuum of the most illustrious parts of Jerusalem, we beheld, as it were, a fantastic and stately metropolis; presenting a magnificent assemblage of domes, towers, palaces, churches, and monasteries; all of which, glittering in the sun's rays, shone with inconceivable splendour." Dr. Clarke entered, however, by the Damascus gate. He confesses that there is no other point of view in which the city is seen to so much advantage, as the one from which he beheld it, standing out in bold relief, as it were, about the earth. In the celebrated prospect from the Mount of Olives, the city lies too low, and has too much the character of a bird's-eye view, with the formality of a topographical plan. Travellers of a still later date consider Dr. Clarke's description as overcharged. But it must be remembered that he was fortunate in catching his first view of Jerusalem under the illusion of a brilliant evening sunshine. Jerusalem is said to be of an irregular shape, approaching to a square, and to be surrounded by a high, embattled wall, built, for the most part, of the common stone of the country, which is a compact limestone. The site of the ancient city is so unequivocally marked by its natural boundaries on the three sides, where there are ravines, that there can be no difficulty, except with regard to its extent in a northern direction; and this may be ascertained with sufficient accuracy from the minute description given by Josephus. (Bell. Jud., 5, 4.)

HILLEVINGE, a people of Scandinavia. According to Pliny (4, 13), they occupied the only known part of this country. Among the various names of countries and people reported by Jornandes, we still find, observed D'Anville, Hallow; and that which is contiguous to the province of Skane is still called Halland. Some erroneously place the Hilevings in the country answering, at the present day, to Blekingen and Scolen. (Bischoff und Miller, Wörterb. der Geog., p. 615.)

HIMERA. I. A river of Sicily, falling into the upper or Tuscan Sea, to the east of Panormus; now, according to Mannert, Fiume di St. Leonardo; but, according to others, Fiume Grande. The city of Himera stood a short distance to the west of its mouth.—II. Another river of Sicily, larger than the former. It rises in the same quarter with it, but pursues an opposite course, to the south, and falls into the Mediterranean near Phintia, and to the west of Gela. The modern name is Fiume Salso. This river separated, at one time, the Carthaginian from the Syracusan dependancies in Sicily.—III. A city of Sicily, near the mouth of a river of the same name, on the northern coast. It was founded, according to Thucydides (6, 5) and Scymnus of Chios (p. 285, seqq.), by a colony of Chalcidians from Zankle. Strabo, however, ascribes its origin to the Zankleans at Myra. (Strab., 272.) In this he is wrong, as Myra was not an independent place, but entirely under the control of Zankle as its parent city, and therefore not allowed to trade and colonize at pleasure. Strabo's error appears to have arisen from a misapprehension of a passage in Thucydi-
des. That historian informs us (6, 5) that Himera had some Dorian inhabitants also from Syracuse, consisting of some of the expelled party of the Mylætides (Μυλητίδαι): Strabo, very probably, mistakes these, from their name, for inhabitants of Mylae.—Himera came, we know not under what circumstances, into the power of Theron of Agrigentum. Subsequently, however, it attempted to shake off this yoke, and offered resistance to the forces of Himera, the latter apprized Theron of the fact, and the enraged tyrant caused many of the citizens to be executed. To prevent; however, the city's suffering from this loss of the inhabitants, he established in it a number of Dorians and other Greeks, and from this time the remark of Thucydides applies, who informs us that the inhabitants of Himera spoke a middle dialect between the Dorian and Chalcidian, and that the city had been constituted the capital of a dialect distinct from both. Himera was destroyed by the Carthaginians, 240 years after its founding, and never recovered from the blow. (Diod. Sic., 11, 48.) The Carthaginians subsequently established a number of the old inhabitants in the new city of Therma, in the immediate vicinity of Himera. This spot was remarkable for its warm baths. The ruins of Therma are now called Termini. (Mannert, Geography, p. 40, 40.)

HIMILCO (equivalent in Punic to gratia Milcaris, "the favour of Milcar"); the name of several Cartha-
ginians. I. A Carthaginian commander, who is said by Pliny (2, 67) to have been contemporary with Han, the navigator. He was sent by his government to explore the northwestern coast of Europe. A few fragments of this voyage are preserved by Avienus (Ora Marit., 1, 98), in which the Hiberni and Albiones are mentioned, and also a promontory, Ostrymnia,
and islands called Oestrymides, which are usually considered to be Cornwall and the Scilly Islands. (Gossellin, Recherches, vol. 4, p. 162, seqq. — II. A Carthaginian, who commanded the expedition against Syracuse, B.C. 405-308. Himilco was an able and successful general. He took Gela, Messana, and many other cities in Sicily, and at length besieged Syracuse by sea and land, but he was defeated by Dionysius, who burned most of the Carthaginian vessels. (Diod. Sic., lib. 13 et 14. — III. A supporter of the Barca party at Carthage. (Lit., 13, 12.)—He was sent by the Carthaginian government to oppose Marcellus in Sicily. (Lit., 24, 35, seqq. — Lib. 25, 26, seqq. — HIPPARCHUS, I. a son of Pistraturus, who, together with his brother Hippasus, succeeded his father as tyrant of Athens. An account of their government will be found under the article Hippasus. Hipparchus was assassinated by Harmodius and Aristogiton, for an account of which affair, consult remarks under the article Harmodius.—II. The first astronomer on record who really made systematic observations, and left before him a body of astronomical science. He was a native of Nicaea in Bithynia, and flourished between the 154th and 163d Olympiads, or between 160 and 125 B.C., as appears from his having made astronomical observations during that interval. He resided some time in the island of Rhodes, where he continued the astronomical observations which he had probably commenced in Bithynia; and hence he has been called by some authors the Bithynian, and others the Rhodian, and some even suppose two astronomers of the same name, which is certainly incorrect. Hipparchus is also supposed to have made observations at Alexandria; but Delambre, comparing together such passages as Ptolemy has preserved on the subject, is of opinion that Hipparchus never speaks of Alexandria as of the place in which he resided, and this conclusion of the French astronomer is probably correct. Tyrant of Syracuse is not known of Hipparchus. He was the author of a commentary on the Phenomena of Aratus, published by Peter Victorius at Florence, in 1567; and also by Petavius, with a Latin version and notes, in his Uranologia. He also wrote treatises on the nature of the fixed stars; on the motion of the moon; and others no longer extant. Hipparchus has been highly praised both by the ancients and moderns. Pliny the Elder styles him "the confidant of nature," and Cicero, in his letter to Atticus, "the first of all astronomers." M. Bailly has bestowed on him the title of the "patriarch of astronomy." He treated that science with a philosophical spirit, of which there are no traces before his time. He considered the subject in a general point of view; examined the received opinions; passed in review the truths previously ascertained, and exhibited the method of reducing them so far into a system as to connect them with each other. He was the first who perceived the importance of his discoveries; and so rapid was his progress that a new constellation of the fixed stars from west to east, by which they perform an apparent revolution in a great number of years. He observed and calculated eclipses; discovered the equation of time, the parallax, and the geometrical measurement of distances; and he laid the solid foundations of geographical and trigonometrical science. The result of his labours in the theory of the fixed stars may be seen in his catalogue of stars, composed by Ptolemy, who has interpolated the catalogue of Hipparchus in his Almagest. As regards the general merits of Hipparchus, consult the work of Marcoz, Astronomie Solaire d'Hipparchus, Paris, 1828, 8vo; the account given by Delambre, in the Biographie Universelle (vol. 20, p. 398, seqq.), and the preface of the same writer to his "History of Ancient Astronomy," in which work will be found the most complete account of the labours of Hipparchus. (Histoire de l'Astronomie Ancienne, par M. Delambre, Paris, 1817, 2 tom. 4to.) The bias of Delambre appears to be, to add to Hipparchus some of the fame which has been generally considered due to Ptolemy, and in support of the opinion that he was the first real astronomer. The titles of the writings attributed to Hipparchus, on whom Ptolemy has fixed the epithets of filoaponeon and filoalgidos ("a lover of labour and of truth"), have been collected by Fabricius, and are to be found in Weidler, as follows: 1. peri tons aplonon anagorapha; 2. peri megenon kai apostamata; 3. De XII. signorum ascensione; 4. peri tov kata platos moniainos tis plhronas kinsewos; 5. peri moniainos charwos; 6. peri enunyvnon megenon; 7. peri ton metapaltwvnon ton protovon kai laumervn onsewv; 8. Aesopos Erotosthenos Geographiam, 9. Tovn Arponov kai Edidovn filonwvnon ezeugonon biblia g'—
The only one of these which has come down to us, is the latest and least important, of which we have already spoken. Hipparchus also wrote a work, according to Achilles Tatius, on eclipses of the sun; and there is also recorded a work with the following title: Η των επισκαλατολον προμαχαρεια. (Encycl. Us. Kornel., vol. 12, p. 240, seqq.—Schill, Hist. Lit. Gr., vol. 3, p. 376, seqq.—III. A Pythagorean philosopher, an extract from a work of whose on "T tranquillity of Soul" (peri evmphlalow) has been preserved for us by Stobaeus. It may be found in the Opuscula Mythologica, Ethica, et Physica, edited by Gale, Cantab., 1670, 12mo. HIPPIAS, a native of Mountopontium, and follower of the Pythagorean doctrine. He is said to have excelled in the application of mathematics to the study of the statics, and mensuration. In common with others of the same sect, he held that fire was the originating cause of all things. He taught also that the universe is finite, is always changing, and undergoes a periodical conflagration. (Diog. Laert., 8.) HIPPIAS, a son of Pistraturus, who, together with his two brothers, Hipparchus and Thessalus, succeeded their father, without any opposition, in the government of Athens. (Lit., 14.)—It is sufficient to prove, that Hippias was the eldest, though his reasons are not of themselves convincing, and the current opinion, in his own day, gave the priority to Hipparchus. As the eldest, Hippias would take his father's place at the head of affairs; but the three brothers appear to have lived in great unanimity together, and to have co-operated with little outward distinction in the administration of the state. Their opinions and characters are not of such importance as to require any separate notice. The eldest, Hippias seems to have possessed the largest share of the qualities of a statesman. Hipparchus inherited his father's literary taste; but he was addicted to pleasure, and perhaps to amusements not becoming the dignity of his station. (Athenaeus, 12, p. 533.) Indeed, Hippias also would seem to have been open to the same charge. (Athen., l. c.) Thessalus, the youngest brother, is said to have been a high-spirited youth, with a mind very different from that of his brothers. His opinions and character seem to have been opposed to those of his brothers; and his political plans did not agree with the general views entertained by the brothers. His political plans did not agree with the general views entertained by the brothers. The brothers imitated the sage policy of their father, in dropping the show of power as much as was
consistent with a prudent regard to securing the
substance. They kept up a standing force of foreign
mercenaries, but they made no change in the laws or the
forms of the constitution, only taking care to fill the
positions of the most important offices with their own friends.
They even reduced the tax imposed by Pisistratus to
a twentieth, and, without laying on any fresh burdens,
provided for the exigences of the state, and continued
the great works which their father had begun.

The language of a later writer (the author of the
_Hipparchus_, p. 229), who speaks of their dominion as hav-
ing recalled the happiness of the golden age, seems
almost justified by the sober praise of Thucydides, who
says that these tyrants most diligently culti-
vated virtue and wisdom. The country was flourish-
ing, the people, if not perfectly contented, were cer-
tainly not impatient of the yoke, and their rule seemed
likely to last for at least another generation, when an
event occurred which changed at once the whole as-
pect of the government, and led to its premature over-
throw. This was the affair of Harmodius and Aristog-
itos, in which Hipparchus lost his life, and the par-
ticulars of which have been given under a different
article (Vid. Harmodius). Previous to this occur-
rence, Hippias had shown himself a mild, affable, and
beneficent ruler, but he now became a suspicious,
ster, and cruel tyrant, who regarded all his subjects
as secret enemies, and, instead of attempting to con-
ciliate them, aimed only at cowering them by rigour.
He was now threatened not only by the discontent of
the people at home, but by the machinations of power-
ful enemies, not only in Greece, but in the
Aegean which, with the aid of the oracle at Delphi, induced the
Lacedaemonians to espouse their cause, and Hippias was
compelled to leave Attica in the fourth year after his
brother's death. Having set sail for Asia, he fixed his
residence for a time in his hereditary principality of
Sigeum. The Spartans, subsequently repenting of
what they had done, sent for Hippias, and, on his ar-
ival, summoned a congress of deputies from their Pelo-
ponnesian allies, and proposed, as the only means of
curbing the growing insolence of the Athenian people,
to unite their forces and compel Athens to receive
her former ruler. All, however, with one accord,
loudly exclaimed against the proposition of Sparta,
and Hippias soon after returned to Sigeum, whence he
proceeded to the court of Darius Hystaspis. Here he
remained for many years; and when the expedition of
Datis and Artaphernes took place, an expedition which he
had himself definitely repudiated, he was sent by the
Persian fleet, by his advice, came to anchor in the bay of
Marathon.—The subsequent history of Hippias is in-
volved in uncertainty. Thucydides (6, 59) merely says
that he was present at the battle of Marathon, without
informing us whether he lost his life there or not. (Compare _Herodotus_, 6, 107.) Justin (2, 9) states
that it is believed that he died with his forces, and Cicero (Ep. ad Att.,
9, 10) confirms this. Suited himself, however, the
Hippias fled to Lemnos, where, falling sick, he died,
the blood issuing from his eyes. (Consult Larcher,
ad Herod., 6, 117.)

**HIPPO**. _I. REIGU.S (Περίων Βασιλικά), a city of Af-
rica, in that part of Numidia called the western prov-
ce. It was situated near the sea, on a bay in the vi-
cinity of the promontory of Hippi. It was called _Hipp-
opolis_, as it was the birthplace of Hipponax; _Hipparkos_,
by which the Romans knew him; _Hippocrates_, as he
mentioned below, but also from its having been one of
the royal cities of the Numidian kings. The place was
of Tyrian origin. Of this city St. Augustine was
bishop. The ruins are spread at the present day over
the neck of land that lies between the rivers _Boojomah_
and _Seibous_. Near the ancient site is a town named
_Bona._ II. Zaryus, a town of Africa, on the coast to
the west of Utica. It was thus termed to distinguish
it from the above mentioned, and the name is said
to have reference to its situation among artificial ca-
nals, which afforded the sea an entrance to a navigable
lagoon adjacent. Some of the Greek writers corrupt-
red the appellation _Zaryus_ into _Διασφιρο_, in which
the same author, who was once reputed to be a doctor
of medicine, has his modern name in _Beni-Zret_, which, according to Shaw,
signifies "the son of the canal." (Mannert, Geogr.,
vol. 10, pt. 2, p. 298.)

**HIPPOCENTAURI** (Πτηνοκτραπατοι), fabulous animals,
partly human, partly resembling the horse. They are the
same with the _Centauri_. (Vid. Centauri.)

**HIPPOCRATES**, a celebrated physician, born in
the island of Cos. The particulars of his life, as far as
they have reached us, are few in number. His con-
temporaries have commended him in the highest terms
for his consummate skill and his profound acquaint-
ance with the medical art; but they have left us little
information relative to the man himself. Hippocrates,
too, in those of his writings, the authenticity of which
no one contests, enters into very few details respect-
ing his long and honourable career. The Greek
writer, who, under the name of Soranus, has transmitted
to us some biographical information concerning this
eminent physician, relates, that the father of Hippoc-
rates was named Heraclides, and deduced his descent,
through a long line of progenitors, from _Esclapius_
himself. On the side of his mother, who was named
Praxite, he was fabled to be a descendant of Hercules.
In other words, he belonged to the race or family of
the Asclepiads, who, from time immemorial, had devoted
themselves exclusively to the service of the gods of med-
dicine. In this capacity of the chief of the Phr
icians and their forerunners, from Meibomius (_Comment., in Hipp.
_fujur._), it is said that he was the seventeenth in order of the
pretended descendants of _Esclapius_, his uncle Hip-
ocrates I. being the fifteenth. The birth of Hippoc-
rates II., or the Great, is fixed by Soranus in the first
year of the eighteenth Olympiad, B.C. 460: conse-
quently, he was contemporary with Socrates and Plato,
a little younger than the former, and a little older than
the latter. His name began to be illustrious during
the Peloponnesian war.—After having received at Cos
his first professional instruction from his father Her-
clides, Hippocrates went to study at Athens under
Herodicus of Selymbria. He had also for one of his
masters the sophist Gorgias. Some authors pretend
that he was also a disciple of Democritus; it is even
said that he conceived so high an esteem for this phi-
losopher, as to show it by writing in the _mongoose_
interpreters, as if he himself was a Dorian. It
would seem, however, from an examination of his
writings, that Hippocrates preferred the doctrines of He-
racitus to those of Democritus.—After the death of
his father he travelled over many countries, accord-
ing to the custom of the physicians and philosophers of his
time; and finally established himself in Thessaly,
whence some have called him "the Thessalian." Soranus infor-
s us, that Hippocrates lived at the court of Antiochus the
Great, a favourite of Socrates, that he had cured
this prince of a consumption caused by a violent
passion which he had conceived for his mother-in-law
Phila. This fact is not, indeed, in contradiction of
chronology; but what gives it a suspicious appearance
is, that a story almost similar is related by the ancient
writers as having happened at the court of Seleucus
Nicator. (Vid. Erasistratus.) It is possible, how-
ever, that such a time was spent with Perdiccas; for he
states that he had observed many maladies in the cities of Pella, Olynthus, and
Acanthus, situate in Macedonia. He appears also to
have sojourned for a while in Thrace, for he frequen-
tly mentions, in his accounts of epidemic disorders,
the Thracian cities of Abdara, Datus, Doriscus, _Xenos_,
Cardia, and the isle of Thasos. It is equally probable
that he travelled in Scythia and the countries imme-
diately contiguous to the kingdom of Pontus and
the

630
HIPPOCRATES.

Pals Moæta, because the description he gives of the manners and mode of life of the Scythians is extremely exact and faithful. According to Soranus, the cities of Athens and Abdera owed to Hippocrates the benefit of having been delivered from a plague which had caused great ravages. It is uncertain whether the frightful epidemic is here meant which desolated Athens during the Peloponnesian war, and which Thucydides has so faithfully described, or some other malady; for that historian, who was an eyewitness of the ravages of the disease, makes no mention of Hippocrates. However this may be, the Athenians, grateful for the services which this distinguished physician had rendered, either in delivering them from a pestilential scourge, or in publishing valuable works on the art of preserving life, or in refusing the solicitations of the enemies of Greece, decreed that he should be initiated into the mysteries of Ceres, should be gifted with a golden crown, should enjoy the rights of citizenship, and should be supported all his days at the public expense in the Prytanæum, and, finally, that all the children born in Cos, the native island of Hippocrates, might come and pass their youth at Athens, where they would be treated as if offspring of Athenian citizens. According to Galen, it was by kindling large fires, and burning everywhere aromatic substances, that Hippocrates succeeded in arresting the pestilence at Athens. The large surface of the city and the neighboring region was immense and wide, and Artaxerxes Longimanus even sent for him to stop the progress of a malady which was committing great ravages among the forces of that monarch. Hippocrates declined the offer and the splendid presents that accompanied it; and Artaxerxes endeavored to accomplish his object by menacing the inhabitants of Cos, but in vain. Though the correspondence which took place on this point between Hippocrates and Artaxerxes as to the sick to whom his medicine, during his years, was to be regarded as altogether unauthentic, yet it appears that credit was given to the story by ancient writers, two of whom, Galen and Plutarch, relate the circumstance. Stobæus also makes mention of it, but commits, at the same time, an anachronism in giving the name of the monarch as Xerxes, and not Artaxerxes. Certain Arabians authors affirm, that, in the course of his travels, Hippocrates spent some time under Artaxerxes, and that there is no reason for this, and the assertion is altogether destitute of probability. An individual named Andreas or Andron, who lived under Ptolemy Philopator, and who was a disciple of Herophilus, undertook, nearly three centuries after the death of Hippocrates, to assign a very disgraceful motive for the travels of this physician. He says that Hippocrates was compelled to flee for having set fire to the library at Cnidus, after having convicted the worst medical works contained in it. Tzetzes, agreeing in this accusation, states that it was the library at Cos which became a prey to the flames; and Pliny, without charging Hippocrates with the deed, and without speaking of any library, reduces the loss to that of a few votive tablets, which were consumed together with the temple of Æsculapius. The discrepancy of these statements alone furnishes an obvious proof of the falsity of the accusation. Besides, all contemporaneous history is silent on the subject; nor would Plato have shown so much esteem for the physician of Cos, nor Athens and Greece, in general, have rendered him so many and so high honours, had he been guilty of the disgraceful crime alleged against him. The name of Hippocrates is still held in veneration by the natives of Cos (Staan-Co), and they show a small building which they pretend was the abode that he inhabited. He passed the latter years of his life in Thessaly, at Larissa in particular, as well as at Cranon, Phæra, Tricca, and Melibæa, as appears from many observations made by him relative to the maladies of these different cities. The period of his death is unknown. Soranus affirms, that he ended his long and brilliant career in his 85th or 90th year, according to some; in his hundredth year, according to others: and some even give 109 years as the extent of his existence. The number of works ascribed to Hippocrates is very considerable; they are made by some to amount to eighty: those, however, about the authenticity of which there is no doubt, reduce themselves to a very few. Pallaclius, physician of the 6th century of the present era, who wrote scholia on the treatise of Hippocrates respecting fractures, points out eleven works of this physician as alone authentic. One thousand years after, two learned men turned their attention to a critical review of the works of Hippocrates; these were Hieronymus Mercurialis, a celebrated physician and philologist of the 16th century, and a native of Portugal, Louis de Lemos. These two scholars conceived the idea, at the same period, of classifying the works of Hippocrates. The Padian professor established four categories of them: 1. Works in which the doctrine and style of this distinguished physician plainly present themselves, and which are therefore manifestly authentic. 2. Works written by Hippocrates, but published by his sons and disciples. 3. Works composed by the sons and disciples of Hippocrates, but which are in conformity with his doctrine. 4. Works, the very content of which is attributed to Hippocrates. (Censurae Operum Hippocratis, Venet., 1553, 4to.) Lemos, after having critically examined all the works ascribed to Hippocrates, acknowledges only nineteen as authentic. (De Optima præstanci ratione item judicii operum magni Hippocratis liber unus, Salamanctae, 1585, 12mo.) When, in the 19th century, the critical art, long neglected, was at last made to rest on sure principles, the works of Hippocrates were again times, and the new discoveries in anatomy restored him to his former dignity. The celebrated Haller, on re-printing a Latin translation of these works, discussed their authenticity, and allowed only fifteen treaties to be genuine. Two other German physicians, MM. Groner and Grimm (Hippocrateae Werke, aus dem Gr.—Censura librorum Hippocrateensium, Fratissat, 1773, 8vo), of distinguished reputation, employed themselves in researches, the object of which was to distinguish the genuine from the spurious works of the father of medicine. In pursuing this examination, they combined the testimonies of ancient writers with the internal characters of the works themselves. The result is, that, according to Groner, there exist but ten authentic works of Hippocrates, while Grimm makes the number still less. Linck, a professor at Berlin, comes to a bolder conclusion. He maintains, that the works of Hippocrates, as they are called, are a mere collection of pieces by different authors, who all lived before the period when the medical art flourished at Alexandria. A full list of the works of Hippocrates is given by Schöll (Hist. Lit. Gr., vol. 3, p. 19, seqq.). The best edition of all the works is that of Poesius, Francof., 1595, fol., reprinted at several subsequent periods, and, with the glossaries, at Geneva, in 1657, fol. The edition of Kühn, in the Collection of the Greek Medical Writers (Leips., 1805—1827, 3 vols. 8vo), is also a good one. In 1815 M. de Mercy commenced a valuable edition of select works of Hippocrates, with a French translation and commentary. The learned Coray also published a translation in French of the treatise on Airs, Waters, and Places, at Paris, 1801, in 2 vols. 8vo, enriched with critical, historical, and medical notes—"All of the medical authors," observes Dr. Adams, "of ancient, and, I believe I may add, of modern, physicians, are so to a certain extent, hands of the student of medicine as Hippocrates; for his works not only contain an invaluable treasure of practical facts, but likewise abound in precepts inculcating propriety of conduct.
and purity of morals. In his Oath, he exacts from those who enter on the profession a solemn promise never to indulge in libertinism, nor to degrade their art by applying it to any criminal purposes. In his other works he is at great pains to inculcate the necessity of attention to address and apparel; and gives particular directions to assist in forming a correct prognostic. With regard to his descriptions of the phenomena of disease, one may venture to affirm, that even at the present day they are perfectly unrivalled. As a guide to practice, he may be followed with great confidence; for his indications are always derived from personal observation, and his principles are never founded on vague hypothesis. Indeed, as an intelligent American author, Dr. Hosack, remarks, his professional researches were conducted according to the true principles of the Baconian philosophy; and his late editor, Kühn, relates, that a zealot for the Brunonian theory of medicine was convinced of its being untenable by an attentive perusal of the works of Hippocrates. His treatment of acute diseases may be instanced as being so complete that the experience of more than two thousand years has scarcely improved upon it. Nay, in some instances, the correctness of his views outstripped those of succeeding ages, and we now only begin to recognise the propriety of them. Thus, in acute attacks of anasarca, he approved of bloodletting, which is a mode of practice now ascen- tantly discredited; and in the recent introduction of which great and unfounded prejudices have existed, not only in modern times, but even as far back as the days of Galen, who found great difficulty in enforcing the treatment recommended by Hippocrates. In his work on Airs, Places, and Waters, he has treated of the effects of the seasons and of situation on the human form, with a degree of accuracy which has never been equalled. His Epidemics contain circumstantial records of natural disasters, for the purpose of illustrating the causes, symptoms, and treatments of these diseases. Though he has not treated of the capital operations of Surgery, which, if practised at all in his day, most probably did not come within his province, he has given an account of Fractures and Dislocations, to which little has been added by the experience of after ages. He has also left many important remarks upon the treatment of wounds and ulcers, and the Amazon, for which he recommends the Aesculapian mode of treatment, the high, or lacerated, that the surgeons of the present day might derive an important lesson from him on the use of the Actual Cautery. The following aphorism points out the class of diseases to which he considered this mode of prac- tice applicable. 'Those complaints which medicines will not cure, iron will cure; what iron will not cure, fire will cure; what fire will not cure are utterly incurable.' In his treatise on the Sacred Disease, he has shown himself superior to the superstition of his age; for he maintains that the epilepsy is not occasioned by demonical influence, but by actual disease of the brain; and he mentions, what is now well known to be the fact, that when the brains of sheep or goats that are affected with this complaint are opened, they are found to contain water. Of the anatomical treatises attributed to him it is unnecessary to say anything, as it appears highly probable that all, or most of them, at least, are not genuine. Dr. Alston contends, in his Materia Medica, 36 mineral, 300 vegetable, and 150 animal substances; in all 658, and he could not pretend to have overlooked none. Hippocrates ap- pears to have been profoundly skilled in the principles of the Ionian philosophy, of which he has left several curious samples. He has treated likewise both of animal and vegetable physiology; and Aristotle and Theo- phrastus are said to have profited by his labours in this department of natural science."

Hippodamia, a daughter of Echione, on Mount Helicon, sacred to the Muses. It was fabled to have burst forth from the ground when Pegasus struck its hoof against the side of the mountain; and hence the name applied to it, Ἱπποδαμία or Ἱπποδάμωρη, i. e., "the horse's fountain," from Ἱππός (genitive Ἱππό), "a horse," and κρήνη, "a fountain." (Strab. 410.—Pausan., 9, 31.)

Hippodamia, I. a daughter of Echione, king of Pisæ, in Elis, who married Pelops, son of Tantalus. (Vid. Pelops, where the full legend is given.)—II. A daughter of Adrastus, king of Argos, who married Pithasius, king of the Lapiths. The festivities which prevailed on the day of her marriage was interrupted by the violent conduct of the Centaurs, which led to their conflict with the Lapiths. (Vid. Centauri, Lapithae.)

Hippolytē, I. a queen of the Amazons. She was mistress of the belt of Mars, as a token of her exceeding all the Amazons in valor. This belt Eurystheus coveted for his daughter Admeta, and he ordered Her- cules to bring it to him. The hero, having drawn together some volunteers, among whom were Theseus, Castor, and Pollux, reached, after some incidental adventures, the haven of Themiscyra, where Hippolytē came to inquire the cause of his arrival; and, on hearing it, promised to give him her girdle. But Juno, taking the form of an Amazon, went and persuaded the rest that the strangers were carrying off their queen. They instantly armed, mounted their horses, and came down to the ship. Hercules, thinking that Hippolytē had acted treacherously, slew her, and, taking her belt, made sail homeward. (Apollo., 2, 5, 9.—Diod. Sic., 4, 16.) Another account made Theseus to have received Hippolytē in marriage from Her- cules, and to have become, by her, the father of Hippolytus (Compare Heyne, ad Apollo., l. c.).—II. The wife of Acætus, who falsely accused Peleus, while at her husband's court, of dishonourable conduct. (Vid. Acætus, Hippolytus.)

Hippolytus, I. a son of Theseus and Hippolytē, or, according to others, of Theseus and Antiope. The- seus, after the death of his first wife, married Phaedra, the daughter of Minos, and sister of Ariadne. This princess was seized with a violent affection for the son of the Amazon, an affection produced by the wrath of Venus against Hippolytus, for neglecting her divinity, and for devoting himself solely to the service of Diana; and, in order to entice Hippolytus away, seized the daughter of Pasiphaeus. During the absence of Theseus, the queen made ad- vances to her step-son, which were indignantly rej ected by the virtuous youth. Filled with fear and hate, on the return of her husband she accused his inno cent son of an attempt on her honour. Without giving the youth an opportunity of clearing himself, the blinded monarch, calling to mind that Neptune had promised him the accomplishment of any three wishes that he might form, cursed and implied destruction on his son from the god. As Hippolytus, leaving Tro- zene, was driving his chariot along the seashore, a monster, sent by Neptune from the deep, terrified his horses; they burst away in fury, heedless of their dri ver, dashed the chariot to pieces, and dragged along Hippolytus, entangled in the reins, till life abandoned him. Phaedra ended her days by her own hand; and Theseus, who too late, learned the innocence of his son, Euripides has founded a tragedy on this subject, but the legend assumes a somewhat different shape with him. According to the plot of the piece, Phae dra hangs herself in despair when she finds that she is slighted by her step-son, and Theseus, on his return from abroad, finds, when taking down her corpse, a writing attached to it, in which Phaedra accused Hip polytus of having attempted her honour. According to another legend, Ixchileus, fostered Hippolytus, and Diana transported him, under the name of Vibius, to Italy, where he was worshipped in the grove of Aricia. (Vid. Vibius.—Apollo., 3, 10, 3, 632.
HiPPONAX, a Greek poet, who flourished about the 60th Olympiad, or 540 B.C. He was born at Ephesus, and was compelled by the tyrants Athenagoras and Comas to quit his home, and to establish himself in another Ionian city, Clazomenae. This political persecution (which affords a presumption of his vehement love of liberty) probably laid the foundation for some of the bitterness and disgust with which he regarded mankind. Precisely the same fierce and indignant scorn, which found an utterance in the iambics of Archilochus, is ascribed to Hipponax. What the family of Lycurges was to Archilochus, Bupalus (a sculptor belonging to a family of Chios, which had produced several generations of artists) was to Hipponax. He had made his small, meager, and ugly person the subject of caricature; an insult which Hipponax avenged in the bitterest and most pungent iambics, of which some remains are extant. In this instance, also, the satirist is said to have caused his enemy to hang himself. The satire of Hipponax, however, was never enshrined so entirely on certain individuals. From existing fragments it appears rather to have been founded on a general view of life, taken, however, on its ridiculous and grotesque side. His language is filled with words taken from common life, such as the names of articles of food and clothing, and of ordinary utensils, current among the working people. He evidently strives to make his iambics local pictures, full of freshness, nature, and homely truth. For this purpose the change which Hipponax devised in the iambic metre was so felicitous as it was bold. He crippled the rapid, agile gait of the iambus, by transforming the last foot from an iambic into a spondee, contrary to the fundamental principle of the whole mode of versification. The metre, thus maimed and stripped of its beauty and regularity, was a perfectly appropriate rhythmical form for the delineation of such pictures of intellectual deformity as Hipponax delighted in. In a word of this kind (called the harass or trimeron scasones) are still more cumbrous and halting when the fifth foot is also a spondee; which, indeed, according to the original structure, is not forbidden. These were called broken-backed (ischiorrhagic) iambics, and a grammarian (ap. Tyrwhitt, Dissert, de Bario, p. 17) settles the dispute (which, according to ancient testimony, was so hard to decide), how far the iambus, or kind of verse ought to be ascribed to Hipponax, and how far to another literaryasiapher, Ananius, by pronouncing, that Ananius invented the ischiorrhagic variety, and Hipponax the common scason. It appears, however, from the fragments attributed to him, that Hipponax sometimes used the spondee in the fifth place. In the same manner, and with the same effect, these poets also changed the trochaic tetrameter by regularly lengthening the penultimate short syllable. Some remains of this kind are extant. Hipponax likewise composed pure trime-
ters in the style of Archilochus; but there is no conclusive evidence that he mixed them with scasones. Ananius has hardly any individual character in literary history, except that from that of Hipponax. In Alexander's poetical schools it seems to have been regarded as forming one collection; and thus the criterion by which to determine whether a particular passage belonged to the one or the other, was often lost or never existed. Hence, in the uncertainty which is the true author, the same verse is occasionally ascribed to both (as in Athenaeus, 14, p. 625, c.) The few fragments which are attributed with certainty to Ananius are so completely in the tone of Hipponax, that it would be a vain labour to attempt to point out any characteristic difference. The fragments of Hipponax and Ananius were edited by Welcker, Gotting, 1817, 4to. (Muller, Hist. Gr tee Lit., p. 141, seqq.—Philological Museum, vol. 1, p. 281.)

HiPPONIUM, called also Vibo Valenti, a town of Italy, on the western coast of the territory of the Bruiti, southwest of Scylacium. According to Strabo (56) it was founded by the Epizephyrian Locri. We learn from Diodorus (14, 197: 15, 24), that not long afterward it was destroyed by Dionysius the elder, who transplanted the inhabitants to Syracuse. It was restored, however, by the Carthaginians, who were then at war with that prince. Subsequently it fell into the hands of the Bruttii, together with all the Greek settlements on the coast. (Strab., l. c.) About 327 B.C., Agathocles, tyrant of Sicily, seized upon the harbour of Hipponium, which he fortified, and even began in obtaining possession of the town for a short period. He was soon, however, compelled by the Bruttii to relinquish it, together with the port. (Diod. Sic., Excerpt., 21, 8.—Strab., l. c.) This city became a colony of the Romans, A.U.C. 560, and took the name of Vibo Valenti. (Liv., 35, 40.) Antiquaries and topographers are generally of opinion that the modern town of Monte Leone represents the ancient Hipponium, and that its site is now in the vicinity of Bivona. (Cramer's Anc. Italy, vol. 2, p. 420.)

HiPPONeS, a people of Scythia, who were fabled to have horses' feet (μεταμομοθηκή), whence their name. The Hippopedes are mentioned by Dionysius Perigeetes, Mela, Pliny, and St. Augustine. The truth appears to be, that they had this appellation given them on account of their swiftness of foot. (Dionys. Perieget., 310.—Mela, 3, 6, 93.)

HiPPRIS, now Mesjed-ali, or Meham-ali, a town of Asia in Babylonia, situated on a lake, a short distance from the western bank of the Euphrates. It was the residence of a dynasty of princes who aided the Persians and Parthians against the Romans. They are called in history by the general name of Alamundari, after the term Al-Mondar, common to many of these princes at the fall of their dynasty under the Mohammedan power. The body of Ali was here interred; and the sepulchre of the caliph, came the modern name. (Blessich und Muller, Wurterb. der Geogr., p. 615.)

HiRFINI, a people of Italy, who formed a part of the Samnites, and were situate to the south of Samnium Proper. As the term Hirpus signified in the Samnite dialect a wolf, they are said to have been thus called from their having followed the tracks of these animals in migrating to this quarter. Towards the end of the 7th century B.C. it is said to have been distinguished from the rest of the Samnites. Their territory comprehended the towns of Beneventum, Cauldium, Abellinium, and Compasa. (Cramer's Anc. Italy, vol. 2, p. 248.)

HiRITUS AULUS, a Roman of a distinguished family. He applied himself in early life to the study of rhetoric, and spoke on several occasions with great success. He followed Caesar in the war against the Gauls, and merited the esteem of that great captain. On his re-
turn from this expedition, he eagerly courted the friendship of Cicero, and accompanied him in his retreat to Tusculum. Here he exercised himself in declamation, under the eyes of this illustrious orator, who speaks highly of his talents in many of his letters, and particularly in that addressed to Volumnius (8, 32). Cicero sent Hirtius to Caesar, on the return of the latter from Africa, with the view of bringing about a reconciliation with the dictator, whom the orator had offended by the freedom of some of his discourses. Hirtius, either from affection or gratitude, was always attached to the party of Caesar; but after the death of the dictator, he declared against Antony. Being created consul elect along with C. Vibius Pansa, he fell sick soon after his election, and Cicero informs us (Phil., 37), that the people testified the warmest concern in his recovery. Hirtius was scarcely restored to health, when he set out with his colleague to attack Antony, who was besieging Brutus in Mutina, now Modena. They gained a victory over Antony, near the city, B.C. 43; but Hirtius fell in the battle, and Pansa died a few days after of his wounds. The report was spread abroad, that Octavius had caused the two consuls to be poisoned in order to appropriate to himself all the glory of the day. (Sueton., Vit. Aug., 11.)—It cannot be affirmed with any degree of certainty that Hirtius was the author of the continuation of Arrian's history which bears his name and is ascribed by many. Even as far back as the time of Sueto- nius, great difference of opinion prevailed on this point; some, according to that writer, attributing the continuation in question to Oppius, and others to Hirtius: the latter opinion, however, has, in general, gained the ascendancy. This continuation forms the eighth book of the Gallic war. The author addresses himself, in a letter, to Balbus, in which he apologizes for having proceeded to terminate a work so perfect in its nature, that Caesar seems to have had in view, in composing it, not so much the collecting together of materials, as the leaving a model of composition to historical writers. We learn by the same letter, that the book on the Alexandrine War, and that on the African War, proceeded from the same pen; and these three works, in a style at once simple and elegant, do not appear unworthy of the friend of Caesar and Cicero. We have no knowledge of the fate of Hirtius, the year of the Spanish War, so inferior to the preceding that judi- cious critics regard it as the mere journal of a soldier, who was an eyewitness of the events which he relates. (Biogr. Univ., vol. 20, p. 423, seqq.—Bähr, Gesch. Röm. Lit., vol. 1, p. 360.)

Hispalis, a famous city of Spain, situate on the Batis, and corresponding to the modern Seville. Mannert thinks that it was the same as the ancient Tartessus. (Geogr., vol. 1, p. 312.) The name is supposed to be of Phoenician origin, and, according to Isidorus, has reference to the city's being founded on piles or stakes of wood, on account of the insecurity of the ground where it stood. (Isidor., lib. etymol., 15, 1.) Some ascribe the origin of the place to Her- cules; probably, however, it was a Phoenician colony. It was a place of great commerce, the Batis being navigable on the ancient Continents for the largest ships up to the city. Now, however, vessels drawing more than ten feet of water are compelled to unload eight miles below the town, and the largest vessels stop at the mouth of the river. When Hispalis became a Roman colony, the name was changed to Julia Romulensis. (Cass., B.C., 2, 18.—Id., Bell. Hisp., 27, 35, seqq.; Isidor., Chron. Goth., p. 168.—Id., Chron. Vandal., p. 176.—Id., Hist. Suev., p. 180.—Plin., 6, 1.)

HISPANIA. Bochart (Geogr. Sacr.—Phaleg., 3, 7) derives its name from the Phoenician or (Hebrew) saphan, "a rabbit," from the vast numbers of those animals which the country was found by the early Phoenician colo- nists to contain. (Compare Catullus, 37, 18.—Varro, R. R., 3, 12.—Pliny, de As., 13, 15.—Plin., 8, 29, seq.—Bochart, Geogr. Sacr. Canaan., 1, 35.)

Therefore, we may deduce the name in question from the Phoenician saphan, "concealed," and consider it as referring to the circum- stance of the country's being little known at an early period to the Phoenician traders. Neither of these etymologies is of much value, though the former is certainly the better of the two. It would seem to have been adopted by the Romans, as appears from a medal of Hadrían, on which Spain is represented by the figure of a woman with a rabbit at her side. (Fl ores, Medallas de España, vol. 1, p. 109.) The Romans borrowed the name Hispania, applying their own termination to it, from the Phoenicians, through whom they first became acquainted with the country. The Greeks called it Iberia, but attached at different periods different ideas to the name. Up to the time of the Achaean league and their more intimate ac- quaintance with the Romans, they understood by this word the whole peninsula, south of the mouth of the Rhodanus or Rhône in Gaul. (Scylax, p. 1, seqq.—Scymnuus Chius, v. 198.—Polybius, 3, 37.—Strabo, 116.—Mannert, Geogr., vol. 1, p. 233.) The coast of Spain on the Atlantic they called Tartessis. (Scymnuus Chius, v. 164, v. 198.—Herod., 1, 163.) The interior of the country they termed Celtice (Kéteis), a name which they applied, in fact, to the whole northwestern part of Europe. (Aristot, de Munda, 7, 15, 1.) It is clear that the name gives rise to a misconception, as the Greeks in after ages understood by Iberia the whole of Spain. The name Iberia is derived from the Iberi, of whom the Greeks had heard as one of the most powerful nations of the country. The origin of the ancient population of Spain is altogether uncertain. Some suppose that a colony first settled on the shores of this country from the island of Atlantis; an as- sumption as probable as the opinion supported by several modern writers, that the modern Spaniards were descended from Tubal, a son of Noah, who landed in Spain twenty-two centuries before the Christian era. The Iberi, according to the ancient writers, were di- vided into six tribes; the Cynetes, Gletes, Tartessii, Elbsynii, Mastieni, and Calpianii. (Herodot, fragm. ap. Const. Porphyrog. de adm. Imp., 2, 23.—Compare Steph. Byz., ed. Berkel, p. 408.—Ubert, Geogr., vol. 2, pt. 1, p. 352.) Diódoros Siculis (5, 91, seqq.) mentions the invasion of Spain by the Celts. The Iberi made war against them for a long time, but, after an obstinate resistance on the part of the natives, the two people entered into an agreement, according to which they were to possess the country in common, bear the same name, and remain for ever united; such, says the same historian, was the origin of the Celtiberi in Spain. These warlike people, continues Diódoros, were equally formidable as cavalry and infantry; for, when the horse had broken the enemy's ranks, the men dismounted and fought on foot. Their dress consisted of a sagum, or coarse woollen mantle; they wore greaves made of hair, an iron helmet adorned with a red feather, a round buckler, and a broad two-edged sword, of so fine a temper as to pierce through the enemy's armour. Although they boasted of cleanliness both in their nourishment and their dress, it was not unusual for them to wash their teeth and beds with urine, a custom which they considered favourable to health. Their habitual drink was a sort of hydromel; wine was brought into the country by foreign merchants. The land was equally distributed, and the harvests were divided
among all the citizens; the law punished with death the citizen who superintended more than his just share. They were hospitable; nay, they considered it a special favour to entertain a stranger, being convinced that the presence of a foreigner called down the protection of the gods on the family that received him. They sacrificed human victims to their divinities, and the priests pretended to read future events in the palpitating entrails. At every full moon, according to Strabo, they celebrated the festival of a god without a name; from this circumstance, their religion has been considered a corrupt deism.—The Phcenicians were the first people who established colonies on the coast of Spain; Tartessus was perhaps the most ancient; at a later period they founded Gades, now Cadiz, on the isle of Leon. They carried on there a very lucrative trade, inasmuch as it was unknown to other nations; but, in time, the Rhodians, the Samians, the Phoceans, and other Greeks, established factories on different parts of the coast. Carthage, which was founded by the Phcenicians; but the inhabitants, regardless of their connexion with that people, took possession of the Phcenian stations, and conquered the whole of maritime Spain. The government of these republicans was still less supportable: the Carthaginians were unable to form any friendly intercourse with the Spaniards in the interior; their rapine and cruelty excited the indignation of the natives. The soil of Carthage paves the face of Spain. The vast range of the country has been considered a Roman province two centuries before the Christian era. Those who had been the allies became masters of the Spaniards, and the manners, customs, and even language of the conquerors were introduced into the peninsula. But Rome paid dearly for her conquest; the north, or the present Old Castile, Aragon, and Catalonia, were constantly in a state of revolt; the Constantines, the Turduli inhabitants, who were not before the reign of Augustus that the country was wholly subdued. The peninsula was then divided into Hispania Citerior and Ulterior. Hispania Citerior was also called Tarraco, from Tarraco, its capital, and extended from the foot of the Pyrenees to the mouth of the Durius or Douro, on the Atlantic shore; comprehending all the north of Spain, together with the south as far as a line drawn below Carthago Nova or Gades on the south, and Gaudium on the north, and Salamantica or Salamanca, on the Durus. Hispania Ulterior was divided into two provinces; Bética, on the south of Spain, between the Anas or Gaudium, and Citerior, and above it Lusitania, corresponding in a great degree, though not entirely, to modern Portugal. In the age of Dioclesian and Constantine, Tarraconensis was subdivided into a province towards the limits of Bética, and adjacent to the Mediterranean, called Carthaginensis, from its being next to Carthago Nova, and another, north of Lusitania, called Gallacia from the Callica. The province of Lusitania was partly peopled by the Cynetes or Cynesi, the earliest inhabitants of Algarve. The Celtici possessed the land between the Guadiana (Anas) and the Tagus. The country round the mountains of Gredos belonged to the Vettones, a people that passed from a state of inactivity and repose to the vicissitudes and hardships of war. The Lusitani, a nation of freebooters, were settled in the middle of Extremadura; they were distinguished by their activity and patience of fatigue; their food was flour and sweet acorns; beer was their common beverage. They were swift in the race; they had a martial dance, which the men danced while they advanced to battle.—The part of Bética near the Mediterranean was peopled by the Bastuli, Penutae, and others, who inhabited the shores of the ocean, near the mouth of the Bastia. The Betic dwelt on the Montes Mariani, and the Turdetani inhabited the southern declivities of the Sierra d’Arcacna. The last people, more enlightened than any other in Bética, were skilled in different kinds of industry long before their neighbours. When the Phcenicians arrived on their coasts, silver was so common among them that their ordinary utensils were made of it. What was afterward done by the Spaniards in America was then done by the Phcenicians in Spain; they exchanged iron and other articles of little value for silver; nay, if ancient authors can be credited, they not only loaded their ships with the same metal, but if their anchors at any time gave way, others of silver were used in their places. The people in Gallacia, a subdivision of Tarraconensis, were, the Artabri, who derived their name from the promontory of Aratrum, now Cape Finisterre; the Bracari, whose chief town was Bracara, the present Braga; and, lastly, the Lucences, the capital of whose country was Lucus Augusti now Lugo. These tribes and some others formed the nation of the Caulla or Caullci, who, according to the ancients, had no religious notions. The Astures, a people of great courage, inhabited the banks of the Asturias, or the country on the east of the Galilean mountains. Their capital was Asturica Augusta, now Astorga. The Vascones, the least barbarous of the Celtiberians, cultivated the country on the east of the Astures. The fierce Cantabri occupied Bisacay and part of Asturias: it was customary for two to mount on the same horse when they went to battle. The Vascones, the ancestors of the present Gascons, were driven into the Pyrenean declivities of Aragon by the Tartan. The brave Illegreti resided in the country round Lerida. As to the country on the east of these tribes, the whole of Catalonia was peopled by the Celti, Carbeto, Auseti, Cosetani, and others. The lands on the south of the Eburo were inhabited by the Arevacæ and Pelendonæsæ; the former were so called from the river Areva; the latter in the neighbourhod of the present Segura. The Tartanies were divided into two tribes; the latter possessed the high plains of Soria and Moncayo. The space between the mountains of Albaracino and the river was peopled by the Edetani, one of the most powerful tribes of Spain. The Ilercenses, who were not less formidable, inhabited an extensive district between the upper Jucar and the lower Eburo. The country of the Carpetani, or the space from the Segura to the banks of the Mediterranean, was possessed by the archiepiscopal see of Toledo. The people on the south of the last were the Oretani, between the Guadiana and the Montes Mariani; and the Oclades, a small tribe near the confluence of the Gabriel and Jucar. Carthaginensis, a subdivision of Tarracoensis, was inhabited by two tribes: the Bastitani, in the centre of Murcia, who often made incursions into Bética; and the Contestani, who possessed the two banks of the Segura near the forum of the Medrítman, now Cape Palos, to the Jucar.—In time of peace, says Di- odorus Siculus, the Iberi and Lusitanians amused themselves in a lively and light dance, which required much activity. The ancient writer alludes, perhaps, to the fandango, a dance of which the origin is unknown. An assembly, composed of old Celtiberians, was held every year; it was part of their duty to examine what the women had made with their own hands within the twelvemonth, and to her whose work the assembly thought the best a reward was given. An ancient au- thor mentions that singular custom, and adds, that copulency was considered a reproach by the same people; for, in order to preserve their bodies light and active, the men were measured every year by a cincture of a certain breadth, and some sort of punishment was inflicted on those who had become too large. (Nic. Damasc. frag. ap. Consl. Porphyry.) The law for marriage was fixed by law; the girls chose their husbands from among the young warriors, and the best means of obtaining the preference was to present the fair one with the head of an enemy slain in battle.
Strabo enters into some details concerning the dress of the ancient Spaniards. The Lusitani covered themselves with black mantles, because their sheep were mostly of that colour. The Celtiberian women wore iron collars, with rods of the same metal rising behind, and bent in front; to these rods was attached the veil, their usual ornament. Others wore a sort of broad turban, and some twisted their hair round a small ring about a foot above the head, and from the ring was appended a black veil. Lastly, a shining forehead was considered a great beauty; on that point they pulled out their hair and rubbed their brows with oil.

The different tribes were confounded while the Romans oppressed the country; but, in the beginning of the fifth century, the Suevi, Vandals, and Visigoths invaded the Peninsula, and, mixing with the Celts and Iberians, produced the different races which the physiologist still observes in Spain. The first-mentioned people, or Suevi, descended the Darius or Duro during the conduct of Ermerc, and chose Braga for the capital of their kingdom. Geneeric led his Vandals to the centre of the peninsula, and fixed his residence at Teletum or Toledo; but fifteen years had not elapsed after the settlement of the barbarous horde, when Theodor, conquered by Clovis, abandoned Tolesos or Toulouse, penetrated into Spain, and compelled the Vandals to fly into Africa. During the short period that the Goths lingered in the country, the ancient province of Bastic was called Valengia and divided the country, from the Ebro to the Straits of Gibraltar, submitted to them. The ancient Celtiberians, who had so long resisted the Romans, made then no struggle for liberty or independence; they yielded without resistance to their new masters. Powers and privileges were the portion of the Gothic race, and the title of hijo del Goda, or the son of the God, which the Spaniards changed into hidalgos, became the title of a noble or a warrior, and a badge of honor among a people of slaves. A number of petty and almost independent states were formed by the chiefs of the conquering tribes; but the barons or freemen acknowledged a liege lord. Spain and Portugal were thus divided, and the feudal system was thus established. Among the Visigoths, however, the crown was not hereditary, or, at least, the law of regular succession was often set at defiance by usurpers. The sovereign authority was limited by the custom and the consent of what were considered the great and ancient races, who were very powerful; indeed, the Count Julian, to avenge himself on King Roderic for an outrage committed on his daughter, delivered Spain to the Mohammedan yoke. (Miele-Brun, Geogr., vol. 8, p. 18, seqq.; Am. ed.)

HIST.LEA. Vid. Oreus.
HIST.ROTI. Vid. Estioteotis.
HIST.ROTI, a tyrant of Mileutis, who, when the Scytians had almost persuaded the Ionian princes to destroy the bridge over the Ister, in order that the Persian army might perish, opposed the plan, and induced them to abandon the design. His argument was, that if the Persian army were destroyed, and the power of Darius brought to an end, a popular government would be established in every Ionian city, and the tyrants expelled. He was held in high estimation on this account by Darius, and rewarded with a grant of land in Thrace. But Megabyzus having convinced the king that it was bad policy to permit a Grecian settlement in Thrace, Darius induced Histiaeus, who was already founding a city there, to come to Susa, having allured him by magnificent promises. Here he was detained under various pretences, the king being afraid of his influence and turbulent spirit at home. Histiaeus, tired of this restraint, urged, by means of several messengers, his nephew Aristagoras to effect a revolt of the Ionians. This was done, and Histiaeus was sent by Darius to stop the revolt. Availing himself of the earliest opportunity of escape, he passed over to the side of the Greeks, and eventually obtained the command of a small squadron of eight triremes, with which he sailed to Byzantium. But the subjugation of Ionia by the arms of Persia was soon effected, and Histiaeus himself did not long survive the misery he had brought upon his countrymen. Having made a descent on the Persian territory, for the purpose of reaping the harvest in the vale of the Caicus, he was surprised and routed by Harpagus, a Persian commander, who had happened to be at hand with a considerable force; and, being taken prisoner, was led to Artaphernes, the king's satrap in that quarter, who ordered him to be crucified, and sent his head to Sussa. (Herodot., 4, 137. — Id., 5, 11, seqq. — Thirgwall's Greece, vol. 2, p. 222, seq.)

HOMERUS, a celebrated Greek poet, whose life is involved in great obscurity. The only accounts which have been preserved on this subject are a few popular traditions, together with conjectures of the grammarians founded on inferences from different passages of his poems; yet even these, if examined with patience and censure, furnish some materials for arriving at probable results. With regard to the native country of Homer, the traditions do not differ so much as might at first view appear to be the case. Although seven cities contended for the honour of having given birth to the great poet, the claims of many of them were only indirect. Thus the Athenians only laid claim to his birth there having been the founders of Smyrna, as is clearly expressed in the epigram on Pisistratus contained in Bekker's Anecdota (vol. 2, p. 769), and the opinion of Aristarchus, the Alexandrian critic, which admitted their claim, was probably qualified with the same explanation. This opinion is briefly stated by the pseudo-Plutarch (Vit. Hom., 2, 2). Even Chios cannot establish its right to be considered as the original source of the Homeric poetry, although the two following traditions are based on the high authority of the lyric poet Simonides (ap. Pseu- do-Plutarch, 2, 2, 2). It is true that in Chios lived the race of the Homeride, who, from the analogy of other Ævén or races, are to be considered not as a family, but as a society of persons, who followed the same art, and therefore worshipped the same gods, and placed at their head a hero, from whom they derived their name. (Niebuhr, Rom. Hist., vol. 1, note 747.) In a manner similar to that of the Ævén, the so-called "the blind poet," who, in the Homeric hymn to Apollo, relates of himself, that he dwelt on the rocky Chios, whence he crossed to Delos for the festival of the Ionians and the contests of the poets, and whom Thucydides (3, 104) took for Homer himself; a supposition which at least shows that this great historian considered Chios as the dwelling-place of Homer. But, notwithstanding the ascertained existence of this clan of Homerids at Chios; nay, if even, with a Thucy- dides, take the blind man of the hymn for Homer himself, it would not follow that Chios was the birthplace of Homer; indeed, the ancient writers have reconciled these accounts by representing Homer as having, in his wanderings, touched at Chios, and afterward fixed his residence there. A notion of this kind is evidently implied in Pindar's statements, who in one place called Homer a Sicyonian, and in another a Chian; by which is probably meant "the blind man, the poet of Homer._" (Bökck, Pind., Fragmen. inc., 86.) The same idea is also indicated in the passage of an orator incidentally cited by Aristotle; which says, that the Chians greatly honoured Homer, although he was not a citizen. ( Aristotle, Rhet., 2, 23.) On the other hand, the opinion that Homer was a Smyrnian not only appears to have been the prevalent belief in the flourishing times of Greece, but is supported by the following two circumstances: First, the celebrated fact that it appears in the form of a popular legend, a mythus, the divine poet being called a son of a nymph, Cirtheis, and the Smyrnan river Meles; secondly,
that, by assuming Smyrna as the central point of Homer's life and celebrity, the claims of all the other cities which rest on good authority, may be explained and reconciled in a simple and natural manner.—If one may venture to follow the faint light afforded by the dawning of tradition, and by the memorials that have come down to us relative to the origin of the bard, the following may be considered as the sum of our inquiries. Homer was an Ionian, belonging to one of the families which yields from Cumae, Sycia, and Ithaca, a son of the great poet when the Ionians and Achaeans composed the chief part of the population of the city, and when, moreover, their hereditary traditions respecting the expedition of the Greeks against Troy excited the greatest interest; whence he reconciles, in his poetical capacity, the conflict of the contending races, inasmuch as he treats an Achaean subject with the elegance and geniality of an Ionian. But when Smyrna drove out the Ionians, it deprived itself of this poetical renown, and the settlement of the Homeric in Chios was, in all probability, a consequence of the expulsion of the Ionians from Smyrna. It may, moreover, be observed, that, according to this account, founded on the history of the colonies of Asia Minor, the time of Homer would fall a few generations after the Ionic migration to Asia; and with this determination the best testimonies of antiquity agree. Such are the computations placed by Herodotus (Hist., ii. 94) 400 years before his time (Herod., 2, 53), and that of the Alexandrian chronologists, who place him 100 years after the Ionic migration, 60 years before the legislation of Lycurgus (Apollod., Fragm., i. p. 410, ed. Heyne); although the variety of opinions on this subject, which prevailed among the learned writers of antiquity, cannot be reduced within these limits.—It is said by Titian (Fabr., Bibl. Gr., 2, 1, 3), that Theogenes of Rhegium, in the time of Herodotus, Stesimbrotus the Thasian, Antimachus the Colophonian, Herodotus of Halicarnassus, Dionysius the Olynthian, Ephorus of Cyme, Philochon of Athens, the Athenians, Metaclides and Chamaeleon the Periætikos, and Zenodotus, Aristophanes, Callimachus, Crates, Eratosthenes, Aristarchus, and Apollodoros, the grammarians, all wrote concerning the poetry, the birth, and the age of Homer. Of the works of all these authors nothing remains, but some of them in their names and titles, the name of Homer attributed to Herodotus, but which, according to the account of his minute and fabulous details, as of the inconsistency of a statement in it with the undoubted language of Herodotus, is now almost universally considered as spurious. Such as it is, however, the life of Homer is a very ancient compilation, and the text from which all subsequent stories have been taken or altered. There is a short life of Homer, also, bearing the name of Plutarch, but which, as the former, generally condemned as a forgery; a forgery, however, of this unusual nature, that there is reason to believe it more ancient than its supposed author. Thus Quintilian (10, 1) and Seneca (Ep., 88), both more ancient than Plutarch, seem clearly aware of this life of Homer. Some account of the common traditions about Homer will probably be looked for here, and the story will explain the origin of several epithets which are frequently applied to him, and the meaning of many allusions to be met with in the Greek and Latin writers. — There is, then, a general agreement that the name of Homer's mother was Critheis; but the accounts differ a good deal as to his father. Ephorus says (pseud-Plutarch, Vit. Hom.) that there were three brothers, natives of Cyme, Atelles, Maen, and Dius; that Dius, being in debt, migrated to Ascro in Beotia, and there became the father of Hesiod by his wife Py-cimbelia, his wife, who, it is said, joined his brother Maen guardian of his daughter Critheis; that Critheis, becoming with child by her uncle, was given in marriage to Phemius, a native of Smyrna, and a schoolmaster in that city, and that, in due time afterward, while she was in or near the baths on the river Meles, she gave birth to a child who was called Meleisigenes from this circumstance. Aristotle relates (pseud-Plut., V., H.) that a young woman of the island of Ios, being with child by a daemon or genius, a familiar of the Muse, fled to the coast, where she was seized by pirates, who presented her as a gift to Maen, king of the Lydians, at that time resident in, and ruler over, the city of Smyrna, and a she, Critheis, gave birth to Meleisigenes, as before stated, and, soon after her death, soon after Maen brought up the child as his own. Here we have an origin of the two epithets or appellations Meleisigenes and Maenides. Ephorus says (pseud-Plut., V., H.) he was called Homer (ὤμηρος) when he became blind, the Ionians so styling blind men, because they were followers of a guide (ὤμηρος). Aristotle's account is, that the Lydians being pressed by the Ionians, and resolved to abandon Smyrna, made a proclamation, that whoever wished to follow them should go out of the city, and that Theronupon Meleisigenes said he would follow or accompany them (ὤμηρος) upon which he acquired the name of Homer. Another derivation of the name is from ὦμηρος, one not seeing; as to which notion of blindness, Paterculus says, that whoever thinks Homer was born blind must needs be blind himself in all his writings, and says that the proper names which Homer gives to his personages, as ὦμηρος (the thigh), because he had some marks on his thigh to denote his illegitimacy. In the life of Homer by Proclus, it is said, that the poet was delivered up by the people of Smyrna to those of Chios as a pledge or hostage (ὤμηρος) on the conclusion of a truce. The derivation that favours the theories both of Wolfe and Heyne is from ὄμηρος, one to speak together, or from ὄμηρος, to assemble together. Ilgen derives the name from ὄμης, together, and the name Homer from ὄμης, assembly, and hence ὀμηρος means, according to him, a poet who accompanies the lyre with his voice, cantor qui citharum pulsans ut καλὸν ἀιδέα. The stories proceed in general to state that Homer himself became a schoolmaster and poet of great celebrity at Smyrna, and remained till Mentes, a foreign merchant, induced him to travel. That the author or authors of the Iliad and Odyssey must have travelled pretty extensively for those travels, these authors say, atonicall: it is indeed the knowledge of Greece proper displayed in the Catalogue, it is clear that the poet had a familiar acquaintance with the islands both in the Ægean and Ionian seas, the coast of Asia Minor from the Hellespont indefinitely southward, Crete, Cyprus, and Egypt; and possessed also distinct information with respect to Libya, Caria, and Phrygia. In his travels Homer visited Ithaca, and there became subject to a disease of the eye, which afterward terminated in total blindness. From this island he is said to have gone to Italy and even to Spain; but there is no sign in either of the two poems of any knowledge westward of the Ionian Sea. Wherever he went, Homer recited his verses, which were universally admired except at Smyrna, where he was a prophet in his own country. At Phocaea, a schoolmaster of the name of Theseorides obtained from Homer a copy of his poetry, and then stole it, as Plutarch tells, and recited the Homeric verses as his own. Homer followed, was rescued by Glaucus, a goatherd, from the attack of his dogs, and brought by him to Boliissus, a town in Chios, where he resided a long time in possession of wealth and a splendid reputation. Theseorides left the island upon Homer's arrival. According to Herodotus, he died at Ios, on his way to Athens, and was buried near the seashore. Proclus says he died in consequence of falling into the sea, and recited the Homeric verses as his own. Plutarch tells he preserves two responses of an oracle to Homer, in both of which he was cautioned to beware of the young men's riddle, and re
notes that the poet, being on his voyage to Thbes, to attend a musical or poetical contest at the feast of Sat- 
turn in that city, landed in the island of Io, and, while sitting on a rock by the seaside, observed some young 
fishermen in a boat; that Homer asked them if they had 
had anything (ε ὑπέρ εἰς τοὺς ξυνοι), and that the young wags, 
who, having had no sport, had been diligently catch- 
ing, and killing as many as they could catch, of cer-
tain personal companions of a race not even yet ex-
isting; answered as we can (as we left them) that many 
as we could not catch we carry with us." 

The catastrophe is, that Homer, being utterly unable to 
guess the meaning of this riddle, broke his heart out 
of pure vexation, and that the inhabitants of the is- 
land buried him with great magnificence.—There has been 
as much doubt and controversy about the age of Ho-
mer as about himself and his poems. According to 
the argument of Woold (Essays on the Original Ge-
mitis, &c., of Homer), Haller (Heyne, Exzer. 4, ad Il., 
24), and Mitford (History of Greece, c. 1), he lived 
after the middle of the ninth century before Christ; 
which date agrees exactly with the conjecture of He-
rodotus, who wrote B.C. 444, and is founded on the 
assumption that Homer must have lived before the re-
turn of the Heraclides into Peloponnesus, an event 
which took place within eighty years after the Trojan 
war. The great Alexandrian scholar, Eratosthenes, 
fixes the capture of Troy as low as B.C. 1004. 
The argument is based upon the great improbability 
that Homer, so minute as he is, is a description of 
Greece, and so full of the histories of the reigning 
dynasties in its various districts, should never notice 
such very remarkable an occurrence as the almost total 
abolition of the kingly government throughout Greece, 
and the substitution of the republican form in its stead. 
Now this national revolution was coincident with, or 
immediately subsequent to the capture of Parnassus, 
that is, the first place, a poet who was celebrating heroes 
rendering the Pelopid race had no occasion to notice a revolu-
tion by which their families were expatriated and their 
kingdoms abolished; and next, which seems an 
surmountable objection, that the Ionic migration took 
place sixty years later, the return of the Heraclides; 
that Homer was an Ionian, and a resident in, or at least perfectly conversant with, Ionian Asia, is 
admired on all hands, and is indeed incontestable; 
and he never notices this migration, though it was 
certainly a remarkable event, and one which he 
must have known, he may just as well, for other or 
the same reasons, have been silent on the subject of a 
revolution by which that migration was caused. 

The Arundelian maniple Homer B.C. 907, the Ionnian 
migration B.C. 1044, the return of the Heraclides B.C. 
1104, and the capture of Troy B.C. 1184. Heyne 
approves of this calculation, as, upon the whole, the 
most consistent with all the authorities; but it is at 
variance with Newton's Chronology, and is therefore 
a calculation, of the exactness of which we can never 
feel confident.—The vicissitudes to which Homer's 
reputation and influence have been subject, deserve 
notice. From the first known collection of the Iliad 
and Odyssey in the time of the Pisistratid in the pro-
motion of Christianity, and the loss of the Iliad and 
Odyssey which were in the use of Homer was regarded on 
stantly increasing, till at last public games were instit-
tuted in his honour, statues dedicated, temples erected, 
and sacrifices offered to him as a divinity. There 
were such temples at Smyrna, Chios, and Alexandria; 
and, according to Eian (V. H., 9, 15), the Argives 
sacrificed to, and invoked the names and presence of 
Apollo and Homer together. But about the begin-
ing of the second century of the Christian era, when 
the struggle between the old and new religion was warm 
and active, the tide turned. "Heathenism," says 
the Old Testament, was then to be destroyed, and 
Homer sacrificed to the faith, the belief of the pagan 
religion, and the objections of Christianity against it. He became, 
therefore, deeply involved in the question, and not 
with that honour which hitherto attended him, but as 
a criminal who had drawn the world into folly. He 
was, on the one hand (Just. Mart. ad gentes), 
accused of having formed fables upon the works of 
Moses; as the rebellion of the Giants from the 
mountain of Ida, and the casting of Ate of Heaven 
from the fall of Lucifer. He was exposed, on 
the other hand, for those to whom he is said to have 
invent, as when Rornious (adv. gentes, lib. 7) cries out, 
"This is the man who wounded your Venus, 
impersonated your Mars, who freed even your Jupiter by 
Briareus, and who finds authority for all your vives, 
and Mankind were derided (Tertull., Apollod., c. 14) for 
whatever he had hitherto made them believe and 
Plato (Arnobius, i b, 9, 10, 12, c. 21, 24), who 
has been accused of having conscripted the power of 
his Commonwealth, has, as to all the philosophers, 
found the best quarter from the fathers 
for passing that sentence. His finest 
beauties began to take a new appearance of 
pernicous qualities; and 

because they might be considered as allurements to 
fancy, or supports to those errors with which 
they were mingled, they were to be deprecated while 
the contest of faith was in being. It was hence 
that the reading of them was discouraged, that the 
Ronn of the Greek and Latin authors. 

and that St. Augustus 
(Confess., 1, 14) rejects him as the grand master of 
false; though indeed the dulcisimae vanus which he 
applies to Homer, looks but as a fondling manner 
of parting with him. Those days are past; and, happily 
for us, the ombrous poems have weathered the storms 
of zeal which might have destroyed them. Homer will 
have no temples, nor games, nor sacrifices in Chris-
tendom; but his statue is yet to be seen in the palaces 
of the kings of Persia, and the temples of the 
Greeks. The story of the Iliad is told, not in the 
and the nations of the world's end. He stands, by pre-
scription, alone and aloof on Parnassus, where it is not 
possible now that any human genius should stand with 
him, the father and the prince of all heroic poets, the 
boast and the glory of his own Greece, and the love 
and the admiration of all mankind." (Müller, Hist. Greek 
Lit., p. 41, seqq.—Clerke, Introduction to the Study of the Greek Classics, pt. 1, p. 57, seqq.)—This 
Homer, then (of the circumstances of whose life we 
know so little that may be relied upon), was the person 
who gave epic poetry its first great impulse. 
Before his time, in general, only single actions 
and adventures were celebrated in short lays. The heroic mythology 
prepared the way for the poets by grouping 
the deeds of the principal heroes into large masses, so 
that they had a natural connexion with each other, and re-
ferred to some common fundamental notion. Now, 
however, we have the special characteristics of the 
most considerable legendary collections were the poet before the 
time of Homer had the advantage of being able to 
narrate any one action of Hercules, or one of the 
Argive champions against Thbes, or of the 
Achaeans against Troy; and, at the same time, of being certain 
that the scope and purport of the action (namely, the 
mention of Hercules to the gods, and the fate 
consequences to the minds of his hearers, and that the individual 
venture would thus be viewed in its proper connexion. 
Thus, doubtless, for a long time, the bards were satis-
fied with illustrating single points of the heroic mythol-

638
HOMERUS.

The Homeric poems were in reality the work of a single bard or not, their intrinsic merit, and, consequently, their rank in Greek literature, must remain the same, and be equally a worthy object of studious inquiry. The decision of that question cannot in the slightest degree affect our estimate of their quality. Whether all the poems that are now attributed to Homer were his production; whether the Iliad and the Odyssey, both, or one of them only, can lay claim to such parentage; whether, lastly, any such person as Homer, or, indeed, any individual author of the poem ever existed, whichever of these propositions be true, it seems to be a matter of little importance to those whose object it is not to spell the inscriptions on mouldering monuments, but to inhale the breath of ancient grandeur and beauty amid the undoubtèd ruins of the great. The Iliad and the Odyssey exist; we have them in our hands; and we should not set them the sooner aside, though we were to doubt the impress of any Homer's hand, any more than we should cease to reverence the genius or the ruins of Rome, because shepherds or worse may have laid the first stone of her walls. It is this very excellence, however, of the Homeric poetry, and the apparent peculiarity of the instance, together with the celebrity of the controversy, to which the scepticism of some modern scholars has given birth, that compels us to devote a portion of this article to a notice of the points in question. No trace appears of any doubt having ever been entertained of the personal existence of Homer, as the author of the Iliad, till the close of the 17th and beginning of the 18th century, when two French writers, Helédelin and Perrault, first suggested the outlines of a theory respecting the composition of that poem, which has since been developed with so much learning and talent by Heyne, Wolfe, and others, that its original authors are now almost forgotten. The substance of this theory is, that, whether any such person as Homer lived or not, the Iliad was not composed entirely by him or by any other individual, but is a compilation, methodized indeed and arranged by successive editors, but still a compilation of minstrelays, the works of various poets in the heroic age, all having one common theme and direction, the wars of Troy, and the exploits of the several Grecian chiefs engaged in them, and written down, as it were, in the natural languages or dialects of the several authors, who were now constituting the Iliad, were written (we should rather say made or invented) by one Homer, but in short rhapsodies, unconnected purposely with each other, and that they were put together as after mentioned. Much of his argument, however, of the impossibility of one man having composed the Iliad in form as we now have it, applies to the theory just stated. Bentley expressed an opinion similar to Wolfe's on the history and compilation of the Iliad. "Homer wrote a sequel of songs and rhapsodies to be sung by himself, for small earnings and good cheer, at festivals and other days of merriment: the Iliad he made for the men, and the Odyssey for the other sex. These songs were not collected together in the form of an Epic poem till about 500 years after." (Letter to N. N., by Phileolus. Lipsiens., § 7.) One of the main arguments insisted upon by those who deny the existence of a Homer, and the unity, consequently, of the Iliad and Odyssey, is the question of writing. It is said that the art of writing, and the use of manageable writing materials, were entirely, or all but entirely, unknown in Greece and the islands at the supposed date of the composition of the Iliad; that, if so, this poem could not have been committed to writing during the time of such its composition; that, in a question of comparative probabilities like this, it is a much greater improbability that even the single Iliad, amounting, after all curtailments and expurgings, to upward of 15,000 lines, should have been actually conceived and perfected in the brain of one man, with no other help but his memory, than that the result, the Iliad and Odyssey, should be the result of the labours of several distinct authors; that, if the Odyssey be counted, the improbability is doubled; that if we add, upon the authority of Thucydides and Aristotle, the Hymns and Margites, to say the Batrachomyomachia, that which was improbable becomes absolutely impossible; that all that has been so often said as to the fact of as many lines or more having been committed to memory, is beside the point in question, which is not whether 15,000 or 30,000 lines may not be learned by heart from a book or manuscript, but whether one man can compose a poem of that length, which, rightly or not, shall be thought to be a perfect model of symmetry and consistence of parts, without the aid of writing materials; that, admitting the superior probability of such a thing in a primitive age, we know nothing analogous to such a case, and that it so transcends the common human powers that its representation is impossible; and that, with as much justice as the opposite opinion, the character of improbability.—When it is considered that throughout the Homeric Poems, though they appear to embrace the whole circle of the knowledge then possessed by the Greeks, and enter into so many details on the arts of life, only one ambiguous allusion occurs to any kind of writing (II., 6, 169), it is scarcely possible to avoid the conclusion, that the art, though known, was still in its infancy, and was very rarely practised. But the very poems from which this conclusion has been drawn would seem to overthrow it, if it should be admitted that they were originally committed to writing; for they would then seem to afford the strongest proof, that, at the time of their composition, the art had made—very considerable progress, and that there was no want, either of materials or of skill, to prevent it from coming into common use. Hence the original form of these poems becomes a question of great historical as well as literary importance. The Greeks themselves almost universally, and the earliest writers the most unanimously, believed them both to have been the work of the same author, who, though nothing was known of his life, or even his birthplace, was commonly held to have been an Asiatic Greek. The doubt whether his poems were written from the first, seems hardly to have been entertained by the ancients, and in modern times it has been grounded chiefly on the difficulty of reconciling such a fact with the very low degree in which the art of writing is supposed to have been cul-
HOMERUS.

This they adopted, not wanting part of the works now appear so slightly as it does from that of the Greek literature, if it really belonged to the early period in which they were first recited. These difficulties are, it must be owned, in a great measure removed by the hypothesis that each poem is an aggregate of parts composed by different authors; for then the poet's memory might not be too severely taxed in retaining his work during its progress, and might be renewed from time to time. But this hypothesis has been met by a number of objections, some of which are not very easily satisfied. The original unity of each poem is maintained by arguments derived partly from the uniformity of the poetical character, and partly from the apparent singleness of plan which each of them exhibits. Even those who do not think it necessary to suppose an original unity of design in the Iliad, still conceive that all its parts are stagnant, and that we have only to conceive that some of the Iliad had been written by different hands, the various parts, and those inserted as the result of the invention of some new plot, had been put together by an editor. Yet, though the most perfect of these editor's inventions may have been a work of genius, it is still acknowledged, that the intimate coherence of the parts is such as to exclude the hypothesis of a multiplicity of authors. (Vid. Illus.) If the parts out of which the Iliad or the Odyssey was formed are supposed to have been at first wholly independent of each other, the supposition that they could have been so pieced together as to assume their present arrangement is involved in almost insurmountable difficulties. For how, it may be asked, did the different poets in each instance happen to confine themselves to the same circle of subjects, as to the battles before Troy, and the return of Ulysses! Must we suppose, with a modern critic (Hermann, Wiener-Jahrbücher, vol. 54), that in the Iliad and Odyssey we see the joint labours of several bards, who drew their subjects from an earlier Iliad and earlier Odyssey, and that many more than short narratives of the same events, but yet had gained such celebrity for their author, that the greatest poets of the succeeding period were forced to adopt his name, and to content themselves with filling up his outline? This would be an expedient only to be resorted to in the last emergency. Or must we adopt the form in which this hypothesis, by giving it a different turn, has been made by others to assume, that the Iliad and Odyssey are the main event in each of the subject of a shorter poem, grew under the hands of successive poets, who, guided in part by popular tradition, supplied what had been left wanting by their predecessors, until in each case the curiosity of their hearers had been gratified by a finished whole! (Thirlwall's Greece, vol. I, p. 246.) This supposition is involved in still greater difficulty than the former, for we have here no bards of barbarous, though living at different periods, and though the language was, during all this time, undergoing changes of some kind or other, yet write all of them in a manner so similar, and display so few, if any, discrepancies, that their various productions, when collected together, wear all the appearance of a poem by a single bard.—According to every hypothesis, the origin of the Homeric poetry is wrapped in mystery; as it was handed down by oral tradition, and we have not the history of the period, when that which preceded it is very obscure. And it would certainly be, if unparalleled or surprising coincidence, if the production of a great work, which formed the most momentous epoch in the history of Greek literature, should have concurred with either the first introduction, or a new application of the most important of all inventions. Still, however, we are not driven to the necessity of adopting such a view of the subject. It is true, we are perpetually met with difficulties in endeavouring to form a notion of the manner in which these great epic poems were composed, at a time anterior to the use of writing. But these difficulties cannot be regarded as greater than those to which the whole period, and our own incapability of conceiving a creation of the mind without those appliances of which the use has become to us a second nature, than in the general laws of the human intellect. Who can determine how many thousands verses a person, thoroughly imprecated with his subject, and absorbed in the contemplation of it, might produce in a year, and confide to the faithful memory of disciples, devoted to their master and his art! Where a cranium has appeared, it has met with persons of congenial taste, and has found assistants, by whose means it has completed astonishing works in a comparatively short period of time. Thus the old bard may have been followed by a number of younger minstrels, to whom it was both a pleasure and a duty to collect and diffuse the honey which flowed from his lips. But it is at least certain, that it would be unintelligible how these great compositions could have been produced, if we cannot conceive a continuance of the speculations on which they actually appeared in their integrity, and could demand an attentive hearer with the full force and effect of a complete poem. Without a connected and continuous recitation, they were not finished works; they were mere disjointed fragments, which, might, by possibility, form a whole. But where were there meals or festivals long enough for such recitations! What attention, it has been asked, could be sufficiently sustained, in order to follow so many long periods of time, that the Athenians could at one festival hear in succession about nine tragedies, three satyric dramas, and as many comedies, without ever thinking that it might be better to distribute this enjoyment over the whole year, why should not the Greeks of earlier times have been able to listen to the Iliad and Odyssey, and perhaps other poems, at the same festival? At a later date, indeed, when the rhapsodist was rivalling by the player, the poet himself, the Iliad and Odyssey contained no other kinds of poetry and music, these latter necessarily abridged the time allowed to the epic reciter; but, in early times, when the epic style reigned without a competitor, it would have received an undivided attention. Let us beware of measuring, by our loose and desultory reading, the intensity of mind with which a people enthusiastically devoted to such enjoyments, hung with delight on the flowing strains of the minstrel. In short, there was a time (and the Iliad and Odyssey are the records of it) when the Greek people, not indeed at meals, but at festivals, and under the patronage of their hereditary princes, heard and enjoyed these and other less excellent poems as they were intended to be heard and enjoyed, namely, as complete wholes. Whether they were at this early period ever recited for a prize, and in competition with others, is doubtful, though there is nothing improbable in the supposition. But when the conflux of rhapsodists to the contests became perpetually greater; when, at the same time, more weight was laid on the art of the reciter than on the beauty of the well-known poem which he recited; and when, lastly, in addition to the rhapsodizing, a number of other musical and poetical performances claimed a place, then the rhapsodists were permitted to repeat separate parts of poems, in which they hoped (as they had not yet been reduced to writing) existed for a time only as scattered and unconnected fragments. (Wolf's "Prolegomena," p. cxiii.) And we are still indebted to the regulator of the contest of rhapsodists at the Pana- thenea (whether it was Solon or Pisistratus) for having
compelled the rhapsodists to follow one another, according to the order of the poem, and for having thus restored these great works, which were falling into fragments, to their pristine integrity. It is indeed true, that some arbitrary additions may have been made to them at this period; which, however, we can only hope to be able to distinguish from the rest of the poem, by first coming to some general agreement as to the original form and subsequent destiny of the Hомерин compositions. (Müller, Hist. Gr. Lit., p. 62, seq.)

**Introduction of the Homeric Poems into Greece.**

Two different accounts are given on this head. 1. First, it is said, that Lycurgus, the Spartan legislator, met with the poems of Homer during his travels in Asia, and, being charmed with them, carried them with him by some means, and in some shape or other, back to his native city. The authority for this is a passage of a fragment of Heraclides Ponticus, in which he says that Lycurgus, "having procured the poetry of Homer from the descendants of Creophylus, first introduced it into the Peloponnesus." Εἰλίαν (V. H., 13, 14) repeats this with advantage: "Lycurgus the Spartan first carried the poetry of Homer in a mass into Greece." Plutarch (Vit. Lycurg.) finishes off the story in his usual manner. There (in Asia) Lycurgus had met with these poems, and it is probable, that in the keeping of the descendants of Creophylus; he *tertO* them out eagerly, and collected them together for the purpose of bringing them hither into Greece; for there was already at that time an obscure rumour of these verses among the Greeks, but some few only possessed some scattered fragments of this poetry, which were circulated in a chance manner. Lycurgus had the principal hand in making it known. This Creophylus or Creophylus, a Samian, is supposed to have been Homer's poet in Samos, and a poet himself. The nucleus of fact in this story may probably consist in this; that Lycurgus became more acquainted with the Homeric verses among the Ionian rhapsodists, and succeeded in introducing, by means of his own or others' memory, some connected portions of them into Western Greece. That he wrote them all out as, we may see, so far as the original authority goes, due to the ingenious biographer alone. But the better founded account of the introduction, or, at least, of the formal collection of the Homeric verses, though not inconsistent with the other, is, that, after Solon had directed that the rhapsodists should, upon public occasions, recite in a certain order of poetical narration, and not confusedly, the end before the beginning, as had been the previous practice, Pisistratus, with the help of a large body of the most celebrated poets of his age, made a regular collection of the different rhapsodies which passed under Homer's name, committed them all to writing, and arranged them very much in the *series* in which we now possess them. The division of the rhapsodies into books corresponding with the letters of the Greek alphabet, was probably the work of the Alexandria critics many centuries afterward. Now the authorities for attributing this primary reduction into form to Pisistratus, are numerous and express, and a few quotations from them will be the most satisfactory way of putting the student in possession of the opinions of the ancients upon this subject. —"Who," says Cicero, "was more learned in that age, or whose eloquence is reported to have been more refined by literature than that of Pisistratus, who is said first to have disposed the books of Homer, which were before confused, in the order in which we now have them?" (Cic. de Orat., 3, 94.).—"Pis- istratus was the first to arrange the verses of Homer, which were dispersed, and retained in different places by memory." (Pausanias, 7, 26, 26.)—"Afterward," remarks Εἰλίαν, "Pisistratus, having collected the verses, set out the Iliad and Odyssey." (Εἰλίαν, V. H., 13, 14.)—"We praise Pisistratus," observes Λιβανίου, "for his collection of the verses made by Homer." (Λιβαν., Pan. in Iul., vol. 1, p. 170, ed. Reiske.)—"The poetry of the Iliad," says Εὐσταθιου, "is one continuous body throughout, and well fitted together; but they who put it together, under the direction, as is said, of Pisistratus," &c. (Wulf. Prolegom., p. exalt., in not.)—That this collection was not composed by Pisistratus, and proved, by the principal operation of the contemporary poets, rest also upon good authority. Pausanias, in speaking of v. 573, in the second book of the Iliad, says that Pisis- tratus, or some one of his associates, had changed the name through ignorance. "Afterward," remarks Συιδας, "this poetry was put together and set in order by many persons, and in particular by Pisistratus." (Συιδας, s. v. "Ουποποι.) The great poets with whom Pisistratus lived in friendship, and of whose aid he is supposed to have availed himself on this occasion, were Ομηρος of Crotone, said to be the author of the Aragonautics, Ομηροκλίτος the Athenian, Σελώμης, and Ανακριν. In the dialogue called Hipparchus, attributed to Plato, it is said, indeed, of the younger son of Pisistratus of that name, "that he executed many other excellent works, and particularly he brought the verses of Homer into this country, and compiled into a certain system" the whole of them, and put them all in order, one taking up the other, in the same manner that they do now." There seems, however, no great inconsistency in these statements. They may very reasonably be reconciled, by supposing that this great work of collecting and arranging the scattered verses of the Homeric rhapsodists was begun in an imperfect manner by Solon, principally executed by Pisistratus and his friends, and finished under Hipparchus, and that Hipparchus, without doubt of it, put together all in order, the verses of Homer, in the manner that they do now. This seems, however, that, although the Homeric rhapsodies were undoubtedly committed to writing, and reduced into a certain form and order of composition, in the age of the Pisistratic, the ancient and national practice of recitation still continued in honour, and for a considerable time afterward was, perhaps, the only mode by which the ancient Homeric poems were heard and retained. It may readily be believed, that, in proportion as written copies became multiplied, a power of, and taste for, reading generated, and a literature, in the narrow sense of the word, created, this practice of publicly reciting national poetry, which was as congenial as it was indispensable to a primitive and unlettered people, would gradually sink in estimation, become degraded in character, and finally fall into complete disuse. This we find to have been precisely the case from about the year B. C. 490, till the age of the Alexandria critics, under the polite and civilized government of the Ptolemies. The old manner of reciting was no doubt very histrionic; but after the formation of a regular theatre, and the composition of formal dramas in the time of Ἀσκυλύς, the heroic verses of the Homeric age must have seemed very unfit vehicles of, or accompaniments to, scenic effect of any kind. In this interval, therefore, are to be placed the first and last race of rhapsodists, now no longer the fallow-poets and congenial interpreters of their originals; but, in general, a low and ignorant sort of men, who were acceptable only to the meanest of the people. Xenophon (Sympos., 3) and Plato (Ioum. passim) bear abundant testimony to the contempt with which they were regarded, though the object of the latter in the Ion or Cretan was probably to sketch a true and pictorial picture of the duty and greatness of the genuine rhapsodist. There were many editions, or διαφόροις, as they were called, of the Iliad, after this primary one by the Pisistratides. We read of one by Antimachus, 4 M
HOMERUS.

A poet of Colophon; and of another very celebrated one by Aristotle, which edition Alexander is said to have himself corrected and kept in a very precious casket, taken among the spoils of the camp of Darius. This edition was called η ἐκ τοῦ ναυπήγης. The editions by any known individual were called αἱ κατὰ ἄντρα, to distinguish them from several editions existing in different cities, but not attributed to any particular editors. These latter were called αἱ κατὰ πόλεις, or αἱ ἐκ πόλεων. The Massiliotic, Chian, Argive, Sino- 

cic, Cyprian, and Cretan are mentioned. There are three other names very conspicuous among the multitude of critics, and commentators, and editors of the Iliad in subsequent times; these are Zenodotus, Aristophanes, the inventor of accents, and Aristarchus. This last celebrated man lived in the reign of Ptolemy Philometor, B.C. 160, and, after a collation of all the copies then existing, he published a new edition, or Διάβολος, of the Iliad, divided into books, the text of which, according to the general opinion of critics, has finally prevailed as the genuine diction of Homer. (Corderidge, Introduction, &c., p. 37-55.) In the preface to Gronovius' Thesaurus (vol. 5), there is a particular and curious account of the manner in which Pisostratus put together the poems of Homer. It is taken from the Commentary of Diomedes Scholasticus on the grammar of Dionysius the Thraxian, and was first published in the original Greek by Bekker, in the second vol. of his Anecdota Graeca (p. 767, seqq.). It is in substance as follows:—The poems of Homer were in a fragmentary state, in different hands. One man had a hundred verses; another two hundred; a third a thousand, &c. Thereupon Pisostratus, not being able to find the poems entire, proclaimed all over Greece, that whoever brought to him verses of Homer, should receive so much for each line. All who brought any received the promised reward, even those who brought lines which he had already obtained from others. Sometimes people brought him verses of their own for those of Homer, now marked with an obelus (τοὺς νῦν ὅδελμοιν). After having thus made a collection, he employed 72 grammarians to put together the verses of Homer in the manner they thought best. After each had separately arranged the verses, he brought them all together, and made each show to the whole his own particular work. Having all in a body examined carefully and impartially, they wrote by the preference of Aristarchus and Zenodotus, and determined still farther, that the former had made the better one of the two. (Bekker, Anecd. Graec., 1. c.)

Iliad and Odyssey.

For an account of these two poems, and the discussions connected with them, consult the articles Ilias and Odysseus. The following are our remarks on the present occasion will be confined to a brief consideration of a few minor productions that are commonly attributed to Homer.

1. Margites.

This poem, which was a satire upon some strenuous blockhead, as the name implies, does not now exist; but it was so famous in former times that it seems proper to select it for a slight notice from among the score of lost works attributed to the hand of Homer. It is said by Harpocrates that Callimachus admired the Margites, and Dio Chrysostom says (Diss. 53) that Zeno the philosopher wrote a commentary on it. A genuine verse, taken from this poem, is well known:

Πάλιν ἐπιστάτου ἐργα, κακὸς ὁπίσιτα πάντα.

"For much he knew, but everything knew ill."

Two other lines in the same strain are preserved by Aristotle, and one less peculiar is found in the scholast to the Birds of Aristophanes (v. 914). By others, however, the Margites was attributed to Phrages. Knight, of opinion, from the case of the augments in a few lines still preserved, that this was the work of an Athenian earlier than the time of Xerxes, but long after the lowest time of the composition of the Iliad. (Corderidge, Introduction, &c., p. 180.)

2. Batrachomyomachia.

"The Battle of the Frogs and Mice" is a short mock-heroic poem of ancient date. The text was in different editions, and is obviously disturbed and corrupt to a great degree. It is commonly said to have been a juvenile essay of Homer's genius; but others have attributed it to the same Pigres mentioned above, whose reputation for humour seems to have invited the appropriation of any piece of ancient wit, the author of which was uncertain. So little did the Greeks, before the era of the Ptolemies, know or care about that department of criticism which is employed in determining the genuineness of ancient writings. As to this little poem being a youthful pro- lusion of Homer's, it seems sufficient to say, that from the beginning to the end it is a plain and palpable parody, not only of the general spirit, but of numerous passages of the Iliad itself; and, even if no such intention to parody were discoverable in it, the objection would still remain, that, to suppose a work of mere burlesque to be the primary effort of poetry in a simple age, seems to reverse the order of all Homeric national taste, which the history of every other people in Europe and of many in Asia has almost ascer- tained to be a law of the human mind. It is in a state of society much more refined and permanent than that described in the Iliad, that any popularity would at- tend such a ridicule of war and the gods as is contained in this poem; and the fact of there having ex- isted three other poems of the same kind, attributed, for want we can see, with as much reason to Homer, is a strong inducement to believe that none of them were in reality of the Homeric age. Knight infers, from the usage of the word ἔλθωρ, as a writing tablet, instead of δέωμα or a skin, which, according to Her- dotus (5. 58), was the material employed by the Asi- atic Greeks for that purpose, that this poem was another offspring of Attic ingenuity; and, generally, that the familiar mention of the cock (v. 191) is a strong argument against so ancient a date for its composition.

3. Hymns.

The Homeric Hymns, including the hymn to Ceres and the fragment to Bacchus, were discovered in the last century at Moscow, and edited by Ruhn- ken, amount to thirty-three; but with the exception of those to Apollo, Mercury, Venus, and Ceres, they are so short as not to consist of more than about thirty odd and fifty lines in all. Almost all modern critics, with the eminent exception of Hermann, deny that any of these hymns belong to Homer. Nevertheless, it is certain that they are of high antiquity, and were commonly attributed by the ancients to Homer with almost as much confidence as the Iliad and Odys- sey. Thucydides (3. 104) quotes a passage from the Hymn to Apollo, and alleges the authority of Homer, whom he expressly takes to be the writer, to prove an historical remark; and Diodorus Siculus (3. 66: 4; 2), Pausanias (2. 4), and many other ancient authors, cite different verses from these hymns, and always treat them as genuine Homeric remains. On the other hand, in the Life under the name of Plutarch, nothing is allowed to be genuine but the Iliad and Odyssey; Athenaeus (1, 19) holds that Homer wrote, or Homer rhapso- dists to be the author of the Hymn to Apollo; and the scholiast to Pindar (Nem. 2) testifies, that one Cynethus, a Chian rhapso- 

Digitized by Microsoft®
in great reputation at Syracuse about 500 B.C., was supposed by many to be the real Homer of this particular poem. One thing, however, is certain, these hymns are extremely ancient, and it is probable that some of them only yield to the Iliad and Odyssey in remoteness of date. They vary in character and poetical merit; but there is scarcely one among them that has not something to interest us, and they have all of them, in a greater or less degree, that simple Homeric liveliness which never fails to charm us wherever we meet with it.

4. Epigrams.

Under the title of Epigrams are classed a few verses on different subjects, chiefly addresses to cities or private individuals. There is one short hymn to Neptune which seems out of its place here. In the fourth epigram, Homer is represented as speaking of his blindness and his itinerant life. As regards the general character of the Greek Epigram, it may here be remarked, that it is so far from being the same with, or even like to, the Epigram of modern times, that sometimes it is completely the reverse. In general, the songs in Shakspeare, Ben Jonson, Waller, and, where he writes with simplicity, in Moore, give a better notion of the Greek Epigrams than any other species of modern composition.

5. Fragments.

The Fragments, as they are called, consist of a few scattered lines which are said to have been formerly found in the Iliad, the Odyssey, and the other supposed works of Homer, and to have been omitted as spurious or dropped by chance from their ostensible context. Besides these, there are some passages from the Little Iliad, and a string of verses taken from Homer's answers in the old work, called the Contest of Homer and Hesiod. (Coleridge, Introduction, &c., p. 293.)

Conclusion.

Since the Homeric question was first agitated by Wolf and Heyne, it has been placed on a very different footing by the labours of many recent scholars. The student may consult with advantage the following works: Nitzsch, de Historia Homeri Meletatena.— Kreusser, 8 Fragen der Homer.— Id., Homerische Rhapsoden.— Müller, Homerische Vorschule.— Heinecke, Homer und Lyceurg.— Knight, Prolegomena ad Homerum.— London Quarterly Review, No. 87.— Müller's Review of Nitzsch's work, in the Göttingen, Gel. Anzeigen, for Feb. 1831.— Hermann's remarks in the Wiener Jahrbücher, vol. 54.— Hug, Erfindung der Buchstäbenchrift.— An argument which confines itself to the writings of Wolf and Heyne, can now add but little to our means of forming a judgment on the Homeric question, and must keep some of its most important elements out of sight. (Thirlwall's Greece, vol. 1, p. 248, in notes.)—The best edition of the Iliad is that of Heyne, Lips. 1802-1822, 9 vols. 8vo. The most popular edition of the entire works is that of Clarke, improved by Ernesti, Lips., 1759, 1824, Glass., 1814, 5 vols. 8vo. The most critical one, however, is that of Wolf, Lips., 1804-1807, 4 vols. 12mo. A good edition of the Odyssey is still needed, though the attempt may in a great measure be supplied by the excellent commentary of Nitzsch, Harmdn., 1825-1831, 2 vols. 8vo.—II. A poet, surnamed, for distinction sake, the Younger. He was a native of Hierapolis in Caria, and flourished under Ptolemy Philadephus. Homer the Younger formed one of the Tragic Pleiades. (Schyll., Gesch. Gr. Lit., vol. 2, Pp. 355-356.)

Homondes were a wild and plundering people, and greatly infested the neighbouring country. They had certainly not been subdued by Alaric or Roman commander Quirinus, who blocked up the passages of the mountains, and reduced them by famine. D'Anville was of opinion, that Homondada was represented by the fortress of Ermenak, situated near the sources of the Gisk-sow; and this locality has been adopted by Gossellin and others. (French Strabo, vol. 4, pt. 2, p. 100.) But Col. Leake, in his map, supposes Ermenak to be Philadelphia. (Cramer's Asia Minor, vol. 2, pp. 330. HONORIUS, son of Theodosius the Great, and younger brother of Arcadius, was born at Constantinople A.D. 384. After the death of his father in 395, Honorius had for his share the Empire of the West, under the guardianship of Stilicho, a distinguished general of the imperial armies, and fixed his residence at Milan. For several years after, Stilicho was the real sovereign of the West; and he also endeavoured to extend his sway over the territories of Arcadius in the East, under the pretence of defending them against the Goths. He gave his daughter Maria in marriage to Honorius, and recovered the province of Africa, which had revolted. About A.D. 400, the Goths and the Huns, under Alaric and Radagaisus, invaded Italy, but were repelled by Stilicho. In the year 402, Alaric came again into Italy, and spread alarm as far as Rome, when Stilicho hastily collected an army, with which he met the hill Alaric near Ravenna. The latter was completely defeated, and compelled him to re-cross the Noric Alps. After this victory Honorius repaired to Rome with Stilicho, where they were both received with great applause. On that occasion Honorius abolished by a decree the fights of gladiators, and he also forbade, under penalty of death, all sacrifices and offerings to the pagan gods, and ordered their statues to be destroyed. In the year 404 Honorius left Rome for Ravenna, where he established his court, making it the seat of his empire, like another Rome, in consequence of which, the province in which Ravenna is situated assumed the name of Romania, Romaniola, and afterward Romagna, which last it retains to this day. In the following year Radagaisus again invaded Italy with a large force of barbarians, but was completely defeated, and put to death by Stilicho, in the mountains near Fasulia in Etruria. In the year 405, the Visigoths, the Vandals, the Alani, the Alemanni, and other barbarians, crossed the Rhine and invaded Gaul. A soldier, named Constantine, revolted in Britain, usurped the imperial power, and, having passed over into Gaul, established his dominion over part of it, and was acknowledged by Honorius as his colleague, with the title of Augustus. Stilicho now began to be suspected of having an understanding with the barbarians, and especially with Alaric, to whom he advised the emperor to pay a tribute of 300,000 pounds' weight of gold. Honorius, in consequence, gave an order for his death, which was executed at Ravenna, in August of the year 408. Historians are divided concerning the fact of Stilicho's treason. Zosimus and the poet Claudian consider it a calumny. His death, however, was fatal to the empire, of which he was the only remaining support. Alaric again invaded Italy, besieged Rome, and at last took it. The empire of Honorius meantime remained inactive, and shut up within Ravenna. The continued indecision and bad faith of Honorius, or, rather, of his favourites, brought Alaric again before Rome, which was this time plundered by the invader (A.D. 410). After Alaric's death, his son Ataulphus married Placidia, sister of Honorius, and took possession of Spain. The empire of Honorius was a succession of calamities. The Empire of the West was now falling to pieces on every side; and in the midst of the universal ruin, Hono-
HORATIUS.

Horatius died of the dropsy at Ravenna, in August, 423, leaving no issue. (Gibbon, Decline and Fall, c. 29, seqq.—Encyc. Us. Knowl., vol. 12, p. 281.)

HORAPPOLO, or HORUS APOLLO, a grammarian of Alexandria, was the author of a play called by Suidas, in the time of the Roman emperor Theodosius. He taught, first in his native city, and afterward in Constantinople, and wrote, under the title of Τετευμεμένοι, a work on consecrated places. Several other writers of this name are mentioned by Suidas, by Stephanus of Byzantium (s. v. Θεοφγίτης), by Photius (p. 536, ed. Bekker), and by Eustathius (ad Od. 4). It is doubtful to which one of the whole number of treatise which has come down to us on Egyptian Hieroglyphics is to be ascribed. According to the inscription that is found in most MSS., the work was originally written in Egyptian, and translated into Greek by a person named Philip. But, whatever opinion we may form respecting the author, it is evident that the work could not have been written before the Christian era, since it contains allusions to the philosophical tenets of the Gnostics. Its merits are differently estimated. The object of the writer appears to have been, not to furnish a key to the Hieroglyphic system, but to explain the emblems and attributes of the gods. Champollion, and Lee- mans in his edition of the work, are disposed to attribute greater importance to it than former critics had been willing to allow. The best edition is that of Lee- mans, Annot., 1834, Svo. Previous to the appearance of this, the best edition was that of De Pauw, Traj. ad Rhen., 1727, 4to.

Horace ("Horatius") the Seasons or Hours, who had charge of the gates of Heaven. He said that they were the daughters of Jupiter and Themis; and he names them Eunomia (Order), Dike (Justice), and Eirene (Peace). "They watch," adds the poet, "over the works of mortal man" (ὑπ’ ὑποκλίσεως κατηκροτητος βιοποιητος.—Theog., 903). By an unknown poet (ap. Stobaeum.—Lobbeck, Aglaoph., p. 600), the Hors are called the daughters of Time; and by late poets they were named the children of the year, and their number was increased to twelve. (Nonnas, 11, 486.—Id., 12, 17.) Some made them seven or ten in number. (Hygin., fab. 183.)—The Hors seem to have been originally regarded as presiding over the three seasons into which the ancient Greeks divided the year. (Welcker, Tril., p. 500, not.) As the day was similarly divided (II., 21, 111), they came to be regarded as presiding over its parts also; and when it was far- ther subdivided into twelve hours, they were placed under their charge, and were named from them. (Quint., Smyrn., 2, 595.—Nonnas, I. c.) Order and regularity being their prevailing attributes, the transition was easy from the natural to the moral world; and the guardian goddesses of the seasons were regarded as presiding over law, justice, and peace, the great producers of order and harmony among men. (Keightley's Mythology, p. 190, seq.)

Horace, the sister of the Horatii, killed by her surviving brother for depopulating the death of her betrothed, one of the Curialii, and for reproaching him with the deed by which she had lost her lover. (Vid. Horatius II.)

HORATIUS. I. QUINTUS FLACCUS, a celebrated Roman poet, born at Venusia or Venusium, December 8th, B.C. 65, during the consulate of L. Aurelius Cotta and L. Manlius Torquatus. (Od., 8, 21, 1.) Epist., 1, 22, 49.—Theocritus, the father of the Horatian family, had gained considerable property as a coætor, a name applied to the servant of the money-brokers, who attended at sales at auction, and collected the money from the purchasers. (Serm., 1, 6, 6.) With these gains he purchased a farm in the neighbourhood of Venusia, on the banks of the Auf- dus. In this place Horace appears to have lived until his eleventh or twelfth year, when his father, dissatis- fied with the country school of Flavius (Serm., 1, 6, 72), removed with his son to Rome, where he was placed under the care of a celebrated teacher, Orblinus Papillus, of Beneventum, whose life has been written by Nonnus. Afterwards he was sent to Athens by his father, who was studying the ancient Latin poets (Epist., 1, 7, 70, seqq.), Horace acquired the Greek language. (Epist., 2, 2, 41, seqq.) He also enjoyed, during the course of his education, the advice and assistance of his father, who appears to have been a sensible man, and who is mentioned by his son with the greatest esteem and respect. (Serm., 1, 4, 105, seqq.; 1, 6, 76, seqq.) It is probable that, soon after he had assumed the toga virilis, at the age of seventeen, he went to Athens to pursue his studies (Epist., 2, 2, 49), where he appears to have remained till the breaking out of the civil war during the second triumvirate. In this contest he joined the army of Brutus, was promoted to the rank of military tribune (Serm., 1, 6, 48), and was present at the battle of Philippi, his flight from which he compares to a similar act on the part of the Greek poet Aeschylus. (Od., 2, 7, 9.) Though the life of Horace was spared, his paternal property at Venusia was confiscated (Epist., 2, 2, 49), and he repaired to Rome, with the hope of obtaining a living by his literary exertions. Some of his poems attracted the notice of Virgil and Varus, who introduced him to Maecenas, and the liberality of the minister quickly relieved the poet from all pecuniary difficulties. From this eventful epoch for our bard, the current of his life flowed on in smooth and gentle course. Satisfied with the competency which the kind- ness of his patron had bestowed, Horace declined the offers made him by Augustus, to take him into his ser- vice as private secretary, and steadily resisted the temptation thus held out of rising to opulence and political consideration; advantages which, to one of his philosophical temperaments, would have been dearly purchased by the sacrifice of his independence. For that he was independent in the noblest sense of the word, in freedom of thought and action, is evidenced by that beautiful epistle to Maecenas, in which he states, that if the favour of his patron is to be secured by a slavish renunciation of his own habits and feelings, he will at once say, Farewell to fortune, and welcome pov- erty! (Epist., 1, 7.)—Not long after his introduc- tion to Maecenas the journey to Brundisium took place, and the gift of his Sabine estate soon followed. Rendered independent by the bounty of Maecenas, high in the favour of Augustus, courted by the proudest pa- triarchs in the land, and beloved of all the poets of his brother poets, Virgil, Tibullus, and Varus, it is diffi- cult to conceive a state of more perfect temporal felici- ty than Horace must have enjoyed. This happiness was first sensibly interrupted by the death of Virgil, which was shortly succeeded by that of Tibullus. These losses must have sunk deeply into his mind. The solemn thoughts and grave studies which, in the first epistle of his first book, he declares shall hence- forth be his study, he commenced with earnestness in the second epistle of the second book, addressed to Julius Florus, confirmed by those sad warnings of the frail tenure of existence. The severest blow, however, which Horace had to encounter, was inflicted by the dissolution of his early friend and best patron Maec- enas. He had declared that he could never survive the loss of one who was "part of his soul" (Od., 2, 17, 9), and the son of his patron was the first person that the poet met after only a few weeks after that of his friend, on the 27th of November, B.C. S, when he had nearly completed his 55th year, and his remains were de- posited next to those of Maecenas, at the extremity of the Esquiline Hill.—When at Rome, Horace resided in a small and plainly-furnished mansion on the Esqui- line. When he left the capital, he either betook him- self to his Sabine farm or his villa at Tibur, the mod- ern Tivoli. When in the country, as the whim seized
HORATIUS.

HOR.

Hiu, he would either study hard or be luxurious idle. The country was the place where his heart abode, and here he displayed all the kindness of his disposition. At times reclining under the shade of a spreading tree, he would rouse the little genii of nature, that by the side of some "bubbling runnel," he would temper his Maccic with the cooling liquor; at others he would handle the spade and mattock, and delight in the good-humoured jokes of his country neighbours when they laughed at him, with his little punchy figure, puffing and blowing at the unwonted work. But his sippers here were the chief scene of his enjoyment. He would then sit around him the patriots of the neighbourhood, listen to their homely but practical wisdom, and participate in the Merriment of his slaves seated around the blazing fire. Well and truly might he exclaim, "Notce consuenque Delum!"

The character of Horace is as clearly developed in his writings, as the manner in which he passed his time, or the locality of his favourite haunts. Good sense was the distinguishing characteristic of his intellect; tenderness that of his heart. He acknowledged no master in philosophy, and his boast was not a vain one. Although leaning to the tenets of Epicurus, the "sumnum bonum" of Horace soared far above selfishness. His happiness centred not in self, but was reflected from that of others. Culling what was best from each sect, he ridiculed unapprizingly the vague theories of all; and, notwithstanding his shafts were chiefy directed against the Stoics, he assented to the loquor and better peace of the Epicureans, and the supremacy of the divinity over the ways of man. Like the best of every other mortal, the sterility qualities of Horace were mixed with baser alloy. His philosophy could not preserve him, even at the age of fifty, from the weaknesses of a boy, and he did not escape unsullied by the vices of the time. These frailties apart, we recognise in Horace all the amenities, and most of the virtues, which adorn humanity. The productions of Horace are divided into two periods: the first, the Poetry of the Odes, which for the most part are little more than translations or imitations of the Greek poets, are generally written in a very artificial manner, and seldom depict the stronger and more powerful feelings of human nature. The best are those in which the poet describes the pleasures of a country life, or touches on the beauties of nature, for which he had the most lively perception and the most exquisite relish: nor yet, at the same time, his lyric poetry is superior, without those touches which excite our warmer sympathies. But if we were to name those qualities in which Horace most excels, we should mention his strong good sense, his clear judgment, and the purity of his taste. The best edition of Horace is that of Döring, Lips., 1803, 1815, 1828, 2 vols. 8vo, reprinted at the London press, and also at Oxford, 1828, in one vol. 8vo. Many critics have maintained that each ode, each satire, &c., was written separately by the poet. But Bentley, in the preface to his edition of the poet's works, argues, from the words of Suetonius, the practice of other Latin poets, and the expressions of Horace himself, that his works were originally published in books, in the order in which they now appear. Consult on this subject the "Horatius Restitutas" of Tate, Camb., 1832; 24 ed., 1837. (Bärk, Gesell. Römis. Lit., vol. 1, p. 230, seqq. — Quarterly Review, N. 124, of Köote, vol. 12, p. 290.)—II. The name of three brave Roman twin-brothers, who fought, according to the old Roman legends, against the Curiiati, three Alban twin-brothers, about 667 years before the commencement of our era. Mutual acts of violence committed by the citizens of Rome and Alba had given rise to a war. The Curiiati were drawn up against each other at the Fossa Cluvia, where it was agreed to aver a battle by a combat of three brothers on either side, namely, the Horatii and Curiiati, whose mothers were sisters. Every one will perceive that we have here types of the two nations regarded as sisters, and of the three tribes in each. In the first onset, two of the Horatii were slain by the third brother, but the tribunder, and dress to valour, obtained a victory over all his antagonists. Cunning to fly from the field of battle, he separated the three Curiiati, and then, attacking them one by one, slew them successively. As he returned triumphant to the city, his sister Horatia, who had been betrothed to one of the Curiiati, met and reproached her brother bitterly for having slain her intended husband. Horatius, incensed at this, stabbed her to the heart. He was tried and acquitted. (Liv., 1, 26.)

HORESTI, a people of SCOTLAND, mentioned by Tacitus. In Agricola's time, they seem to have been the inhabitants of what is now Angus. They were probably incorporated with, or subdued by, the Vaco-magi, before Ptolemy wrote his geography. Mannert places them near the Frith of Tay. (Tacit., Vit Agric., 38.)

Hortensia, daughter of the orator Hortensius, and who would seem to have inherited a portion of her father's eloquence. When the members of the second triumvirate had imposed a heavy tax upon the Roman matrons, and no one of the other sex dared to espouse their cause, Hortensia appeared as their advocate, and made so able a speech that a large portion of the burden was removed. (Val. Max., 8, 3, 3.) This harangue was extant in quintilian's time, which speaks of it with encomium. It is quoted by Quintilian from Apian's in his Supplement to Livy. (Quintil., 1, 1, 6.—Fréizsh., Suppl. Liv., 122, 44, seq.)

Hortensius, Quintus, a celebrated orator, who began to distinguish himself by his eloquence in the Roman forum at the age of nineteen. He was born of a plebeian family, A.U.C. 640, eight years before Cicero. He served at first as a common soldier, and afterward as military tribune, in the Social war. In the contest between Marius and Sulla, he espoused the latter, and was one of the twenty quastors established by Sylla, A.U.C. 674. He afterward obtained in succession the offices of aedile, pretor, and consul, the last of these A.U.C. 685. As an orator he for a long time balanced the reputation of Cicero; but, as his orations are lost, we can only judge of him by the account which his rival gives of his abilities. "Nature had given him," says Cicero, in his Brutus (c. 88), "so happy a memory, that he could repeat by hearting any discourse which he had meditated, while, after his opponent had finished speaking, he could recall, word by word, not only what the other had said, but also the authorities which had been cited against himself. His industry was indefatigable. He never let a day pass without speaking in the forum, or preparing himself to appear on the morrow; oftentimes he did both. He excelled particularly in the art of dividing his subject, and in then reuniting it in a luminous manner, calling in, at the same time, even some of the arguments which had been urged against him. His diction was noble, elegant, and rich; his voice strong and pleasing; his gestures carefully studied." The eloquence of Hortensius would seem, in fact, to have been of that showy species called Asiatic, which flourished in the Greek colonies of Asia Minor, and was infinitely more florid and ornamental than the Latin oratory of Cicero. He was full of brilliant thoughts and of sparkling expressions. This glowing style of rhetoric, though deficient in solidity and weight, was not unsuitable to a young man; and, being farther recommended by a beautiful cadence of periods, met with the utmost applause. But Hortensius, as he advanced in life, did not correct this exaggeration, nor adopt a chastier eloquence; and the luxury and matter of phraseology, which, even in his earliest years, had occasionally excited ridicule or disgust among the praver fathers of the senatorial order, being totally in
Hortensius is, from A.U.C. 666 till 679, a space of thirteen years, at the head of the Roman bar; and being, in consequence, engaged during that long period on one side or other in every cause of the first moment, he gained a prodigious fortune. He lived, too, with a magnificence corresponding to his wealth. His house at Rome, which was splendidly furnished, formed the centre of the chief imperial palace, which increased from the time of Augustus to that of Nero, till it nearly covered the whole Palatine Mount, and branched over other hills. Besides his mansion in the capital, he possessed sumptuous villas at Tusculum, Bautil, and Laurentum, where he was accustomed to give the most elegant and expensive entertainments. His olive plantations he is said to have regularly moistened and bedewed with wine; and, on one occasion, during the hearing of an important cause in which he was engaged along with Cicero, he begged the latter to change with him the previously arranged order of pleading, as he was obliged to go to the country to pour wine on a favourite platanae, which grew near his Tusculan villa. (Macrobi., Sat., 3, 13.) Notwithstanding this profusion, his heir found not less than 10,000 casks of wine in his cellar after his death. (Plin., 14, 14.) Besides his taste for wine and fondness for plantations, he indulged in a passion for pictures and fish-ponds. At his Tusculan villa he built a hall for the reception of a painting of the expedition of the Argonauts, by the painter Cydias, which cost the enormous sum of 144,000 sesterces. At his country seat near Bautil, on the seashore, he vied with Lucullus and Philippon in the extent of his fish-ponds, which were constructed at immense cost, and so formed that the tide flowed into them. (Varro, R. R., 3, 3.) Yet such was his luxury, and reluctance to diminish his supply, that, when he gave entertainments at Bautil, he generally sent to the neighbouring town of Puteoli to buy fish for supper. (Id., 3, 17.) He had a vast number of fishermen in his service, and paid so much attention to the feeding of his fish, that a large stock of small fish to be devoured by the great ones. It was with the utmost difficulty he could be prevailed upon to part with any of them; and Varro declares that a friend could more easily get his chariots mules out of his stable than a mullet from his ponds. He was more anxious about the welfare of his fish than the health of his slaves, and less solicitous that a sick servant might not take what was unfit for him, than that his fish might not take what was fit for him. He was a great fish-eater. (Plin., 9, 55) that he was so passionately fond of a particular lamprey as to shed tears for its untimely death. At his Laurentian villa Hortensius had a wooded park of fifty acres, encompassed with a wall. This enclosure he called a nursery of wild beasts, all of which came for their provender at a certain hour on the blowing of a horn: an exhibition with which he was accustomed to amuse the guests who visited him. The guests were invited supped on an eminence, called a Triclinium, in this sylvan park. During the repast, Hortensius summoned his Orpheus, who, having come with his musical instruments, and being ordered to display his talents, blew a trumpet, when such a multitude of deer, boars, and other quadrupeds rushed to the spot from all quarters, that the sight appeared to the delighted spectators as beautiful as that of the game in the woods of the Ediles. (Dunlop, Hist. Rom. Lit., vol. 2, p. 222, seqq.)

Horus, a son of Isis and Osiris, and one of the deities of Egypt. Horus is the sun at the summer solstice. From the month of April until this season of the year, Typhon was said to bear sway, with his attendant band of heats and maladies: the earth was parched, gloomy, and desolate. Horus thereupon recalls his father Osiris from the lower world, he revives the parent
in the sun, he avenges him on Typhon: the solstitial sun brings back to the Nile from the bottom of Egypt, where it had appeared to be sleeping the sleep of death; the waters spread themselves over the land, everything receives new life; contagious maladies, hurtful reptiles, parching heats which had engendered them, all disappear before the conqueror of Typhon; through him nature revives, and Egypt resumes her fertility.—Horus was the deity of Apollinopolis Magna (Edfu), where he had a magnificent temple. The Greeks compared him to their Apollo. He is the conqueror of Typhon, as Apollo is of Python, and Crisana of the serpent Calyia. (Creuzer, Symbolik, vol. 2, p. 270. Creuzer, par Guigniaut, vol. 1, p. 400. Compare the remarks of Jomard, in the “Description de l’Egypte—Antiqu.”, vol. 1, p. 27 seqq.)

Hostiél, a village on the Padus, or Po, now Osiggia, in the vicinity of Cremona. (Tact., Ann., 2, 40.)

Hostius, a Roman poet, contemporary with Lucilius the satirist. He wrote a poem on the Istrian war, which took place 576 A.U.C., or B.C. 178. Some fragments of this have reached our time. Hostius wrote also metrical annals, after the manner of Ennius. (Wichert, de Hostio poeto, ejusque carm. reliquis, Commentatio, p. 1–18.) Some make him to have been the father, others the grandfather, of the Cynthia of Propertius. (Consult Brouchoux, ad Propertius.)

Hunni, one of the barbarian nations that invaded the Roman empire. The first ancient author who makes mention of the Huns is Dionysius Periegetes. This geographer, who wrote probably about 30 years before our era, names four nations, which, in the order of his narrative, followed from north to south along the western shores of the Caspian Sea, viz., the Scythians, the Huns (Osvvo), the Caspians, and the Albarium, or Caspian Sea. These nations were the Tuareg, the Batarnae, and the Roxelani, consequently on the two banks of the Borysthenes. The Armenian historians know this people under the denomination of Hounk, and place their first seat on the north of the Caspian Sea, between the Olga and the Don. Hence, they call the defile of Derbend the “Rampart of the Huns.” In the geographical work falsely attributed to Moses of Chorene, the following passage occurs: “The Massagetae dwell as far as the Caspian Sea, where is the branch of Mount Caucasus that contains the rampart of Tarspet (Derbend) and a wonderful tower built in the sea: to the north are the Huns within the city of Verkachan, and others besides.” Moses of Chorene relates, in his Armenian history, the wars which Tiridates the Great, who reigned from 259 to 312, sustained against certain northern nations that had made an irruption into Armenia. This prince attacked and defeated them, slew their king, and pursued them into the country of the Hounk (Huns). Zonaras states, that, according to some, the Emperor Carus was slain (A.D. 288) in an expedition against the Huns. From all that has been stated, we see clearly that these people were already known before their invasion of Europe, and that, when Ammianus Marcellinus speaks of them as a nation “little known to the ancients,” he is not to be considered as meaning that there was no knowledge of them prior to A.D. 376. “They live,” remarks the same writer, “beyond the Palus Moatitis, on the borders of the Icy Sea. They are marked by extreme ferocity of manners. As soon as they appear, nature seems to consent to their wishes, in order that the scars thus formed may prevent, at a later period, the first growth of the beard from appearing. They reach an advanced age without having any beard, and they are as deformed as onuchs. They are of squat figures, and have strong limbs and large heads. Their figure is a remarkable one; they are bent to such a degree that one would almost fancy them to be brute beasts moving on two legs, or those rudely carved pillars which are used to support bridges, and which are cut into some resemblance to a human form.” Zosimus, who wrote about a century after the first irruption of the Huns into Europe, supposes them to be identical with the royal Scythians of Herodotus. Hefendes gives a full account of their origin from some sorceresses who had united themselves with the impure spirits of the desert. He describes them as a race which showed no other resemblance to the human species than what the use of the faculty of speech afforded. The portrait of these barbarians will be complete, if we add to it the description given by Sidonius Apollinarius, in 472 (2, 245, seqq.). The terror which these barbarians occasioned, contributed, no doubt, in a very great degree, to heighten the picture which the ancient writers just mentioned have given us of their personal deformity. We must also take into consideration the following circumstance: The various hordes of barbarians, such as the Lombards, Goths, Vandals, and others, which made inroads into the Roman empire before the invasion of the Huns, were of the Indo-Germanic race; their physiognomy, therefore, did not differ essentially from that of the Eastern Huns, which was known to the Greeks and Romans. On a sudden the Huns presented themselves, belonging clearly to a different race, and whose figures and personal appearance generally, in themselves far from pleasing, were rendered still more disagreeable to the eye by artificial means. The sudden presence of such a race could not but produce an alarming impression; and hence the writers of that day can hardly find expression capable of conveying the impression which by which they were surrounded, the repulsive deformity of this new swarm of conquerors; they endeavour to improve, the one upon the other, in placing before their readers the most frightful traits of savage portraiture. As regards the origin of the Hunnic race, it must be confessed that great uncertainty has for a long time prevailed. Some have seen in them the progenitors of the Mogul and Czeck Tartars of the present day, and others have supposed them to be of the same stock as the Tapu, of which, according to this opinion than vague descriptions of the forms of the Huns. These writers ought to have reflected that the descriptions in question would apply equally well to a large number of the races of northern Asia, to the Vogoules, the Samoiedes, the Toungous, and others. De Guignes, on the other hand, traces up the Huns to a nomadic and powerful race which infested the borders of China, and who are called by the historians of this country Hounk now, in its more important features, is as follows: In 374 they quitted their settlements on the Wolga and Palus Moatitis, under the conduct of their monarch Balamir, and subjected the Akatsires, who, according to the statement of Priscus, had a common origin with them. Reunited to this people, they attacked the Alani, called Tanaites from their dwelling on the banks of the Tanais or Don. The Alani, being a conquering, made a great push, and in 376 the united hordes invaded the country of the Ostrogoths. Hermannich, the king of this latter people, met with a total defeat, and killed himself in despair. His suc-
HYACINTH, a festival, celebrated for three days in the summer of each year, at Amyclae, in honour of Apollo and his unhappy favourite Hyacinthus. (Vid. Hyacinthinus.) Müller gives strong reasons for supposing that the Hyacinthia were originally a festival of Ceres. (Doriania, vol. 1, p. 373.)

HYACINTHUS, a beautiful youth of Amycle, beloved by Apollo. He was playing one day on discus-throwing with the god, when the latter made a great cast, and Hyacinthus running too eagerly to take up the discus, it rebounded and struck him in the face. The god, unable to save his beloved, changed him into the flower with which his name is identified, and on whose petals a Grecian fancy saw traced φις, φις, the notes of grief. (Ovid, Met., 10, 162, seq. — Apollod. 1, 3, 3. — Id. 3, 10, 3. — Eurip., H. L., 1499, seq.) Other versions of the legend say that Zephyrus (the West Wind), enraged at Hyacinthus' having preferred Apollo to himself, blew the discus, when flung by Apollo, against the head of the youth, and so killed him. (Eudorica, 408. — Id. 2, 253, seq. — Id. 29, 95, seq. — Lusiaca, D. D., 14. — Knightley's Mythology, p. 120.)

HYADES, according to some, the daughters of Atlas and sisters of the Pleiades. The best accounts, however, make them to have been the nymphs of Dodona, unto whom Jupiter confided the nurture of Bacchus. (Consult Guignaut, vol. 3, p. 68.) Pherecydes gives their names as Ambrosia, Coronis, Eudora, Dione, Eseula, and Polyxo. (Pherecyd., ap. Schol., I., 18, 486.) Hesiod, on the other hand, calls them Phasae, Coronis, Cleea, Phaeo, and Eudora. (Ap. Schol. ad Arat., Phan., 172.) The Hyades went about with their divine charge, communicating his discovery to mankind, until, being chased with him into the sea by Lycurgus, Jupiter, in compassion, raised them to the skies and transformed them into stars. (Pherecyd., l. c.) According to the more common legend, however, the Hyades, having lost their brother Hyas, who was killed by a bear or lion, or, as Timaeus says, by an asp, were so disconsolate at his death, that they pined away and died; and after death they were changed into stars. (Hygin., fab., 192.—Muncker, ad loc.)—The stars called Hyades (Tádēς) derived their name from θαυ, "to make wet," "to rain." because their setting, at both the evening and morning twilight, was for the Greeks and Romans a sure presage of wet and stormy weather, these two periods falling respectively in the latter half of April and November. (Ideler, Sternnamen, p. 139.) On this basis, therefore, both the above legends respecting the Hyades were erected by the poets.

In the case of the nymphs of Dodona, the Hyades become the type of the humid præcipitá, the morn- ing frost, the rain-drops that accompany the setting of the Hyades are the tears of the dying daughters of Atlas. Hence Horace, with a double allusion to both fable and physical phénomena, calls the stars in question "tristes Hyades." (Od., 1, 3, 14.)—The Roman writers sometimes call these stars by the name of Saceda, "little swimers," for which singularly inexplicable epithet Pliny assigns as singular a derivation. According to this writer, the Romans derived the name from "saccula," an earthen vessel for holding rain, from which the word is derived, and which Pliny says was a name common in many modern languages. Some grammarians, again, sought to derive the name Hyades from the Greek Θάδαι ("Tadai"), or "the swimmers," i.e., "the sailors." This etymology was disputed by various authorities, and was never received by the ancients. However, there are those who derive the name from a word meaning "to make wet," "to rain," and others from an ancient word for "sea." (Plin., 18, 26.) The reason for this amusing derivation appears to have been, because the continual rains at the setting of the Hyades made the roads so miry, that these stars seemed to delight in dirt like swine! Isidorus derives the term Saceda from succus, in the sense of "moisture" or "wet" ("a suet et pluvias.").—Irid., Orig., 8, 70,) but which was the real derivation? The Hyades were, to say the least, not a popular constellation. The cluster of stars bears to that letter. (Schol. ad Arat., l. c.)—The Hyades, in the celestial sphere, are at the head of the Bull (κτίς τοῦ βουκράσχος). The number of the stars composing the constellation are variously given. Thales comprehended under this name only the two stars α and ι; Euclid, in his Phæsion, made the number to be three; Achaeus gave four; Hesiod five; and Pherecydes, who must have included the horns of the Bull, numbered seven. (Schol. ad Arat., l. c.) The scholar on the Iliad, however, gives only the names of six Hyades, when quoting from the same Pherecydes, the name of one having probably been dropped by him; for the Atlantides were commonly reckoned as amounting nominally, seven Pleiades and seven Hyades. The names of the Hyades, as given by Hyginus, are evidently in some degree corrupted, and in emending the text we ought to employ the scholia on Homer (I., 18, 480), especially those from the Venetian MS., together with the remarks of Valckenier (ad Ammon., p. 207, seq.—Buttmann, Bemerk. zu Ideler, p. 315.)

HYANHEIA, one of the two leopards with rae percutia which were sent by Bellerophont Delphi, and obtained for Parnassus the epithet of ὁ σαλφικός, or the two-headed. (Eurip., Phæm., 234. — Herodot., 8, 39.) The other was called Nauplea. It was from these elevated crags that culprits and sacrilegious criminals were
HYD

hurled by the Delphians, and in this manner the unfortunate Aesp was barbarously murdered. (Plut., de Ser. Num. Veda.—Diod. Sic., 16, 523.—Cramer's Anc. Greece, vol. 2, p. 170.)

HYAMPOLIS, a town in the northern extremity of Phocis, and one of the most ancient places in that territory. It was said to have been founded by the Hyantes, one of the earliest tribes of Greece. (Strabo, 433.) Herodotus places Hyampolis near a defile leading towards Thermopylae, where, as he reports, the Phocians gained a victory over the Thessalians, who had invaded their territory. (Herod., 8, 28.) He informs us elsewhere that it was afterward taken and destroyed by the Persians. (Herodot., 8, 33.) Dio-dorus states, that the Boeotians defeated the Phocians on one occasion near Hyampolis, and Xenophon affirms that its citadel was taken by Jason of Phœre. (Diod. Sic., 6, 4.) The whole town was afterward destroyed by Philip and the Amphictyons. (Pausan., 16, 37.) Both Pliny (4, 7) and Poliany (p. 87) erroneously ascribe this ancient city to Boetia. The ruins of Hyampolis may be seen near the village of Bogdrama, upon a little eminence at the junction of three valleys. (Gell's Itin., p. 223.—Cramer's Anc. Greece, vol. 2, p. 184, seqq.)

HYANTES, the name of an ancient people of Boeotia, who succeeded the Eetenes in the possession of that country when the latter were exterminated by a plague. (Strabo, 401.—Pausan., 9, 5.) Ovid applies the epithet Hyantes to Acteon, as equivalent to Boatus. (Met., 3, 147.)

HYANTS, an ancient name of Boeotia, from the Hyantes. (Vid. Hyantes.)

HYAS, the son of Atlas, and brother of the Atlantides. He was extremely fond of hunting, and lost his life in an encounter with a bear or lion, or, as Timeus relates, from the bite of an asp. (Hygin., fab., 192.—Munck, ad loc.—Vid. Hyades.)

HYBIA, the name of three towns in Sicily; Hybela, or Ambracia, and Panarea. The first was situated near the south of Mount Ætna, on a hill of the same name with the city; near it ran the river Simathus. This was the Hybla so famous in antiquity for its honey and bees. (Steph. Byz., s. v.—Pausan., 5, 23.)—II. The second place was called also Heraea; it was situate in the southern part of Sicily, and is placed in the itinerary of Antonine on the route from Agrigentum to Syracuse. On D'Anville's map it is now named Camarina. This is now Calata Cerone. (Liv., 24, 30.—Steph. Byz., s. v.)—III. The last place was a maritime one on the eastern coast of Sicily, above Syracuse. It was also denominated Galatac, but more frequently Megara, whence the gulf to the south of it was called Megarensis Sinus. (Plin., 3, 8.—Diod. Sic., 4, 80.)

HYDRAPES, a river of India, and one of the tributaries of the Indus. D'Anville makes it to be the modern Shanim; Mammert is in favour of the Behut. The true name appears to be Haund or Hydraspis. As regards the variety of appellations given to this stream in both ancient and modern writers (no less than twelve in number), consult Vincent, Voyage of Nearchus, p. 91. seq.—Ancient Commerce, vol. 1, p. 91.

HYDRA, a celebrated monster, which infested the Lernean marsh and its vicinity. It was destroyed by Hercules in his second labour. (Vid. Hercules, where a full account is given.)

HYDRAOTES, a tributary to the Indus, now the Raw-ee. Strabo and Quinot Curtius call it the Hyairotes, while Ptolemy styles it the Rhadua. The Sanscrit name is Irawutti. (Consult Vincent, Voyage of Nearchus, p. 98.—Ancient Commerce, vol. 1, p. 98.)

HYDRONITIA, a festival observed at Athens, so called όντων φόρον πλοῦς, from carrying water. It was celebrated in commemoration of those who perished in the deluge. (Plut., Vit. Syll., 8, 7.—Theopomp., ap. Schol. ad Arist., Achaim., 1075.) There was another festival of the same name, which is said to have originated in the island of Ægina, when the Delphians expelled there was driven away. A literary contest took place between the crews of the different vessels, as to who should display the most speed in carrying water to the ships. (Apollod., 1, 9, 26.—Apoll. Rh., 4, 1766.—Müller, Àgæticina, p. 24, n. v.)

HYDRONUM AND HYDRUS (Týperos, gen. Týperos-τος), a port and city of Calabria, 50 miles south of Brindisium. It was a place of some note as early as the time of Sclayx, who names it in his Periplius (p. 6). It was deemed the nearest point of Italy to Greece, the distance being only 50 miles, and the passage might be effected in five hours. (Cic., Ep. ad Att., 15, 2.) This circumstance led Pyrrhus, as it is said, to form the project of uniting the two coasts by a bridge thrown across from Hydruntum to Apollonia. (Plin., 3, 11.) In Strabo's time, Hydruntum was only a small town, though its harbour was still frequented. (Strabo, 281.) Stephanus Byzantinus records a tradition, from which it would appear that Hydruntum was founded by some Cretaeans. The modern name is Otranto. (Cramer's Anc. Italy, vol. 2, p. 309.)—II. A small river running close to Hydruntum. It is now the Idrò. (Lucan, 5, 374.)

HYGRIA, the goddess of health, daughter of Æsculapius, held in great veneration among the ancients. She was commonly worshipped in the same temple with Æsculapius. Her statue, moreover, was often placed by the side of that of Apollo, whom she was said to have been named from a surname. So also, on the Acropolis at Athens, her statue stood near that of Minerva, who was hence called Minerva-Hygria. (Pausan., 1, 23.)—Hygia was usually represented holding a cup in one hand, and a serpent in the other, which twines round her arm and drinks from the cup. The long robe in which she is attired, as well as the serpent which she holds, sufficiently distinguish her from Hebe, who is also represented holding a cup. (Vollmer, Wörterb. der Mythol., p. 899.)

HYGINUS CAIUS JULIUS (written also Higinus, Hygianus, Yginus, or Iginus), a celebrated grammarian. He is mentioned by Suetonius as a native of Spain, though some have supposed him an Alexandrian, and to have been brought to Rome after the capture of that city by Caesar. Hyginus was a freedman of Augustus Caesar's, and was placed by that emperor over the libraries of all the nine cities. He wrote a great number of books, and was the founder of the school of Alexandria. He wrote a grammar for instruction to numerous pupils. Hyginus was intimately acquainted with Ovid and other literary characters of the day, and was said to be the imitator of Cornelius Alexander, a Greek grammarian. Some suppose him to have been the faithless friend of whom Ovid complains in his Ibis. His works, which were numerous, are frequently quoted by the ancients with great respect. The principal ones appear to have been: 1. De Nati'bus. 2. De Nominibus Natorum vel Hygianis Fami'lis: 3. De Claris Viris: 4. De Proprietatis Deorum: 5. De Dies Penitibus: 6. A Commentary on Virgil: 7. A Treatise on Agriculture.—These works are all lost. Those which are extant, and are ascribed to Hyginus, were probably written by another individual of the same name. These are: 1. Fabul'arum Liber, a collection of 277 fables, taken for the most part from Greek sources, and embracing all the most important of the fables; written in a very inferior style, but still is of great importance for the mythologist. 2. Poc'tion Astron'omicon. This, like the previous work, is in prose, and consists of four books, being partly astronomical and mathematical, partly mythological and philosophical in its character, since it gives the origin of the Catasterisms according to the legends of the poets. The proem of the work is addressed to a certain Quintus Fabius, in whom some, without any sufficient reason whatsoever, pre

HYG
tend to recognize Q. Fabius Quintilianus. This work also is written in a careless and inferior manner, and yet is very important for obtaining a knowledge of ancient astronomy, and for a correct understanding of the poets. The principal source, whence the writer obtained his materials, was, according to Salmassius (de Ann. Climact., p. 594), the Greek Sphaera (Σφαίρα) of Nigidius; but, according to Scaliger (Jor. Scal. ad Mant., 1. p. 33.—Id., ad Ebuse, p. 10), he drew them from Eratosthenes and others.—An examination of the style and character of these two works will leave no doubt on our mind that the author of them was not the celebrated grammarian of the Augustan age; but that these were written at a later period. Many regard the Fables as a selection made from several earlier works, by a grammarian of a later day, probably Avianus, whose name Barth thought he had discovered in one of the MSS. (Barth, Advers., 10, 12.—Id., 10, 20.) Scheffer places the writer, about whose name, Hyginus, there cannot well be any doubt, in the age of the Antonines. (De Hyiginis Script. fabul. atque atque stylo.) Muncker thinks that many parts are taken from the earlier Hyginus, and that the rest is the production of a very inferior writer. (Munck., Pref. ad Hygin., f. f., seqq.) N. Heinsius makes the compiler of the work to have lived under Theodosius the younger; and Van Staveren regards the collection as having been made at a late period, with the name of an ancient and grammatical writer (P. Hygii, in ed. Miiller, Mythogr., sub fn.). Niebuhr, finally, thinks that a mythological fragment found by him (Fragmentum de rébus Thebanis mythologicis) formed part of the work out of which, by the aid of numerous additions, the two productions that now go by the name of Hyginus appear to have originated. (Cic. Orat. pro Rarb., &c., Fragm., p. 105, seqq., Rom., 1820, 8vo.) The best editions of Hyginus are: that of Muncker, Amst., 1693, 4to.; and that of Van Staveren, Lugd. Bat., et Amst., 1742, 4to. (Bähr, Gesch. Rom. Lit., vol. 1, p. 712, seqq.) Hylactor, one of Actaeon’s dogs, named from his barking (ιαλακτόν, “to bark”). Hylas, I. a son of Theodamas, king of Mysea, and of Menodice, who accompanied Hercules in the Argon. On the coast of Mysea the Argonauts stopped a supply of water, and Hylas having gone to seek it, was caught by the stream into which he dipped his urn. Hercules went in quest of him, and in the midst of his unavailing search was led by the Argo. (Apollod., 1, 9, 19.—Apoll. Rh., 1, 1207, seq.—Munck., ad Anton. Lab., 26.—Sturz, ad Hellenic. fragm., p. 111.) It was an ancient custom of the Bithynians to lament in the burning days of midsummer, and call out of the well, into which they had failed, a god named Hylas. The Myrmidons lamed and sought Hylas, and the Phrygians Lityorces, with dirges, in a similar manner. This usage of the Bithynians was adopted into their mythology by the Greek inhabitants of Cius, near which the scene of the fable was laid, and it was connected in the manner just narrated with the Argonautic expeditions, and the history of Hercules. (Müller, Orchom., p. 295.—Id., Dorians, vol. 1, p. 384.) I. a son of Hercules and Deianira, who, after his father’s death, married Iole. According to the common legend, he was persecuted, as his father had been, by Eurytheus, and obliged to fly from the Peloponnesus. The Athenians gave a kind reception to Hylus and the rest of the Heracleida, and marched against Eurytheus. Hylus obtained a victory over his enemies, killed with his own hand Eurytheus, and sent his head to Alcmena, his grandmother. Some time after he attempted to recover the Peloponnesus with the other Heracleida, but was killed in single combat by Echemus, king of Arcadia. (Vid. Heracleida, Heracles.—Herodot., 7, 504, &c.—Ovid, Met., 9, 379.—II. A river of Lydia, which falls into the Hermus. It is mentioned by Hom. (IL, 20, 392). Strabo states that it was named in his time at the Phrygians. Pliny, however, distinguishes between the Hylus and the Phryx or Phrygius (5, 29); and, if he is correct, it is probable that, in his opinion, the Hylus was the river of Thyatira; but the Phrygus, the larger branch, which comes from the northeast, and rises in the hills of the ancient Phrygia Epictetus. (Cramer’s Asia Minor, vol. 1, p. 426.) Hymenæus and Hymen, the god of marriage, was said to be the offspring of the muse Urania, but the name of his sire was unknown. (Catullus, 61, 2.—Nomius, 33, 67.) Those who take a less sublime view of the sanctity of marriage, give him Bacchus and Venus for parents. (Servius, ad Aen., 4, 127.) He was invoked at marriage festivals. (Eurip., Troed., 310.—Catull., 1, c.) By the Latin poets he is presented as a young man, with a rove robe, his temples covered with the flowers of the violet, with the drops of perfume, and the nuptial torch in his hand. (Catull., 1, c.—Ovid, Her., 20, 157, seqq.—Id., Met., 10, 1, seq.) Hymettus, a mountain of Attica, southeast of Athens, and celebrated for its excellent honey. According to Hobhouse, Hymettus approaches to within three miles of Athens, and is divided into two ranges; the first running from east-northeast to southwest, and the second from north-northeast to east-southwest. One of these summits was named Hymettus, the other Anydros, or the dry Hymettus. (Theophr., de Sign. Pl., p. 419, Heins.) The first is now called Trelo Vouni, the second Lambra Vouni. The modern name of Hymettus (Trelo Vouni) means “the Mad Mountain.” This singular appellation is accounted for, from the circumstance of its having been the scene of the Ionian Mount Metis, which is nothing else than an unmeaning corruption of Mons Hy- mettus. The same writer states, that Hymettus is neither a high nor a picturesque mountain, but a flat ridge of bare rocks. The sides about half way up are covered with brown shrubs and heath, whose flowers scent the air with delicious perfume. The honey of Hymettus is still held in high repute at Athens, being distinguished by a superior flavour and a peculiar aromatic odour, which plants hardly exist in any other part of Greece. (Hobhouse’s Journey, vol. 1, p. 320.) Herodotus affirms that the Pelasgi, who, in the course of their wanderings, had settled in Attica, occupied a district situated under Mount Hymettus: from this, however, they were expelled in consequence, as Hecateus affirmed, of the jealousy entertained by the Athenians of the superior skill exhibited by these strangers in the culture of plants. Some ruins, indicative of the site of an ancient town near the monastery of Syriani, at the foot of Trelo Vouni, have been thought to correspond with this old settlement of the Pelasgi, apparently called Larissa. (Strabo, p. 440.—Gell’s Itinerary, p. 94.—Kruse, Hellas, vol. 1, p. 324.—Cramer’s Anc. Greece, vol. 2, p. 391.) Hýpánis, I. a river of European Scythia, now called Bog, which falls into the Borysthenes, after a south-southwest course of about 400 miles, and with it into the Euxine. (Herod., 4, 52.)—II. A river of Asia, rising in Mount Caucasus, and falling into the Palus Mae- tis. (Vid. Varanlus.)
HYPATIA, the principal town of the Ænianes, in Thessaly, on the river Speurches. Livy mentions it as published by Lucretius. Hypatia was a celebrated place where their national council was frequently convened (36, 14). Its women were celebrated for their skill in magic. (Apul., Met., 1, p. 104.—Theophr., Hist. Plant., 9, 2.) Hypatia was still a city of note in the time of Hierocles (p. 642). Its ruins are to be seen on the site called Castriza, near the modern Patrachik, which represents probably the Neo-Parthenium of the Byzantine historians. (Nicephorus Gregoras, Hist. Palaioth., 4, p. 67.—Cramer’s Ancient Greece, vol. 1, p. 447.)

HYPATIA, a female mathematician of Alexandria, daughter of Theon, and still more celebrated than her father. She was born about the end of the fourth century. Endowed with a rare penetration of mind, she joined to this so great a degree of arbour in the path of self-instruction, as to consecrate to study her entire days and a large portion of the night. She applied herself in particular to the philosophy of Plato, whose sentiments she preferred to those of Aristotle. Following the example of these great men, she resolved to add to her information by travelling; and, having reached Athens, attended there the lectures of the ablest instructors. On her return to her native city, she was invited by the magistrates to give lessons in philosophy, and Alexandria beheld a female succeed to that long line of illustrious teachers which had rendered its glory to the highest eminence in the world. She was an Ecclectic; but the exact sciences formed the basis of all her instructions, and she applied their demonstrations to the principles of the speculative sciences. Hence she was the first who introduced a rigorous method into the teaching of philosophy. She numbered among her disciples many celebrated men, among others Synesius, afterward bishop at Cyzicus; Ptolemy, preserved during his whole life the most friendly feelings towards her, although she constantly refused to become a convert to Christianity. Hypatia united to the endowments of mind many of the attractions and all the virtues of her sex. Her dress was remarkable for its extreme simplicity; her conduct was always above suspicion; and she knew well how to restrain within the bounds of respect those of her auditors who felt the influence of her personal charms. All ideas of marriage was constantly rejected by her as threatening to interrupt her devotion to her favourite studies. Merit so rare, and qualities of so high an order, could not fail to excite jealousy. Orestes, governor of Alexandria, admired the talents of Hypatia, and frequently had recourse to her for advice. He was desirous of repressing the too ardent zeal of St. Cyril, who saw in Hypatia one of the principal supports of paganism. The partisans of the bishop, on their side, beheld in the measures of the governor the result of the counsels of Hypatia; the most sedulous of their number, having at their head an ecclesiastic named Peter, seized upon Hypatia as she was proceeding to her school, forced her to descend from her chariot, and dragged her into a neighbouring church, where, stripped of her vestments, she was put to death by her brutal foes. Her body was then torn to pieces, and the palpitating members were dragged through the streets and finally consigned to the flames. This deplorable event took place in the month of March, A.D. 415.—The works of Hypatia were lost in the burning of the Alexandrian library. In the number of these were, a Commentary on Diophantus, an Astronomical Canon, and a Commentary on the Conics of Apollonius of Perga. The very names of her other productions are lost. The letters addressed to her by her pupil P Proclus, the Var. Epist., is evidently supposititious, since it contains mention of the condemnation of Nestorius, which was posterior to the death of Hypatia. In the works of Synesius, published by Petavins (1653, fol.), are found seven of the letters written by that prelate to Hypatia; but we have no reason to suppose that the whole were not forgeries, which would have thrown much light on the subject matter of the epistles in question. The Greek Anthology contains an epigram in praise of Hypatia, attributed to Paulus Silentiarius. For further information relative to this celebrated female, consult Menage, Hist. Muter. Philosop., p. 52, seqq.; a Dissertation of Descigones, in the Bibl. German., vol. 3; and a Letter of the Abbe Goujet, in the fifth and sixth volumes of the Continuation des Memoires de Litterature, by Deamole. Socrates Scholasticus also gives us some account of her method of instruction. (Hist. Eccles., 7, 15.)

Hyperborei, a name given by the ancient writers to a nation supposed to dwell in a remote quarter of the world, beyond the wind Boreas, or the region where, in the popular belief, this wind was supposed to begin to blow. Hence they were thought to live in a delightful climate, and in the enjoyment of every blessing, and to attain also to an incredible age, even to a thousand years. (Pind., Ol., 3, 55.—Pherecius, ap. Schol. ad Pind., l. c.)—The term Hyperborean has given rise to various opinions. Pelloutier makes the people in question to have been the Celtic tribes near the Alps and Danube. Pliny places them beyond the Rhipean mountains and the northeast wind, "ultra aquilominis initia." Mention is made of them in several passages of Pindar; and the scholiasts at the Olympic Hymn, "officium Hyperboreum," relate 'Iao-ros tòv πατέρα ἄτεκτη, to the Hyperbores, where the Is-ter has its rise." Protarchus, who is quoted by Stephans of Byzantium under the word ῥυτρήδρον, states, that the Alps and Rhipean mountains were the same, and that all the nations dwelling at the foot of this chain were called Hyperboereans. It would appear from these and other authorities (an enumeration of most of which is made of him by Goujet, Dissertations, 1581), that the term Hyperborean was applied by the ancient writers to every nation situated much to the north. But whence arise the highly coloured descriptions which the ancients have left us of these same Hyperboereans? It surely could not be, that rude and barbarous tribes gave occasion to those beautiful pictures of human felicity on which the poets of former days delighted to dwell. On sweet and fragrant herbs they fed, amid vegetarian and grassy pastures, and frequent streams, divesting all resplendent alike in coeval youth, a placid serenity for ever smiles on their brows, and lightens in their eyes; the consequence of a just temperament of mind and disposition, both in the parents and in the sons, dispensing to them what is just and to speak what is wise. Neither diseases nor wasting old age infest this holy people; but, without labour, without war, they continue to live happily, and to escape the vengeance of the cruel Nemesis." Thus sang Orpheus and Pindar. If an opinion might be ventured, it would be this, that all the traditions respecting the Hyperborean race which are found scattered among the works of the ancient writers, point to an early and central seat of civilization, whence learning and the arts of social life diverged over the world. Shall we place this seat of primitive refinement in the north? But, it may be replied, the earliest historical accounts which we have of those races represent them as plunged in the deepest barbarism. The answer is an easy one. Ages of refinement may have rolled away, and been succeeded by ages of ignorance. Who will venture to say, that the northern regions of Europe must not, at an early period, have enjoyed a milder climate, when the vast quantities of amber found in the environs of the Baltic can easily show that the forests, now so bare, were, in the earth, in which amber is produced, could not have yielded this substance if a very elevated temperature had not prevailed there. We will abandon, however, this argu-
ment, strong as it is, and pursue the inquiry on other and clearer grounds. The term Hyperboreans is a misnomer, well beyond the boreal zone. The name Boreas is properly applied by the Greeks to the wind which blows from the north-northeast (Pass., Lex., s. v.), and is the same with the Aquilo of the Latins. Of this latter wind Pliny remarks, "futur inter Septentrionem et Or tum solstitialium:" and Forscellini (Lex. Tot. Lat.) observes, that it is often confused with, and mistaken for, the north. The term Hyperborei, then, if we consider its true meaning, refers to a people dwelling far to the north-east of the Greeks, and will lead us at once to the plains of central Asia, the cradle of our race. Here it was that man existed in primeval virtue and happiness, and here were enjoyed those blessings of existence, the remembrance of which was carried, by the various tribes that successively migrated from this common home, into every quarter of the earth. Hence it is that, even among the Oriental nations, so many traces are found of their origin being derived from some country to the north. Adelung has adopted the opinion which assigns central Asia as the original seat of the human species, and has mentioned a variety of considerations in support of it. He observes, that the central plains of Asia being the highest region in the globe, must have been the first to emerge from the universal ocean, and, therefore, first became capable of affording a habitable dwelling place to the animal species in general, as the subsiding waters gradually gave up the upper regions to be the abode of life, they may have descendated, and spread themselves successively over their new acquisitions. The desert of Kobi, which is the summit of the central steppes, is the most elevated ridge in the globe. From its vicinity the great rivers of Asia take their rise, and flow towards the four cardinal points. The Selinga, the Ob, the Irriash, the Lena, and the Jenissei, flow eastward to the frozen Ocean; the Iak flows towards the setting sun; the Amu and Hoang-ho, and the Indus, Ganges, and Burraproutto, towards the east and south. On the declivities of these high lands are the plains of Thibet, lower than the frozen region of Kobi, where many fertile tracts are well fitted to become the early seat of animated nature. Here are found not only the vine, the olive, rice, the legumina, and other plants, on which man has in all ages depended, in a great measure for his sustenance, but all those animals run wild upon these mountains, which he has tamed and led with him over the whole earth; as the ox, the horse, the ass, the sheep, the goat, the camel, the hog, the dog, the cat, and even the gentle reindeer, which accompanies him to the icy polar tracts. In Cashmere, plants, animals, and men exist in the greatest physical perfection. A number of arguments are suggested in favour of this opinion. Bailey has referred the origin of the arts and sciences, of astronomy and of the old lunar zodiac, as well as of the discovery of the planets, to the most northerly tract of Asia. His attachment to Boffin's hypothesis of the central fire, and the gradual refrigeration of the earth, has driven him, indeed, to the banks of the Frozen Ocean; but his arguments apply more naturally to the centre of Asia. In our Scriptures, moreover, the second origin of mankind is referred to a mountainsous region eastward of Shinar, and the ancient books of the Hindoos fix the cradle of our race in the same quarter. The Hindu paradise is on Mount Meru, which is on the confines of Cashmere and Thibet. (Muller, Univ. Hist., vol. 4, p. 19, not.)

HYPEREIA, a fountain of Thessaly, placed by some in the vicinity of Argos Pelasgicum, while others think that it was near Phere. (Strabo, 432., Hyt. ouw. Hom., ii., 6, 457. —Cramer's Anc. Greece, vol. 1, p. 395.)

HYPEREIA, the more ancient name of Aegina in Achaia. Pausanias (7, 26) relates a story which accounts for the subsequent change of name. The Ionians, who first peopled these parts, bore a superior number of Sicyonians, collected a great many goats, and, having tied fagots to their horns, set them on fire, when the enemy, conceiving the besieged to have received re-enforcements, hastily withdrew. From these goats, and τῶν αὐλῶν, Hyperesia took the name of Aegira, though its former appellation, as Pausanias remarks, never fell into total disuse. (Pausan., i., c. 17.)

Hypereides, a celebrated Athenian orator, contemporary with Demosthenes. After having completed his education, he employed himself in writing orations and pleadings for others, until he was of an age that qualified him for the practice of the bar. In entering on his political career, he attached himself, like Demosthenes, to the party opposed to Philip, king of Macedon; and was sent, along with Ephialtes, on a secret mission to the court of Persia, the territories of which were equally threatened by Philip, to procure aid against that ambitious and powerful prince. When Eubena was in fear of an invasion by Philip, and while the Athenians were wasting their time in idle deliberations, Hyperides prevailed upon the richer citizens to unite with him in immediately equipping forty vessels, two of which were armed at his own expense. He was engaged also in the expedition which the Athenians sent to the aid of Byzantium, under the orator, Phocion. His orations against the mad, disastrous battle of Chaeronea, Hyperides mounted the tribune, and proposed that their wives, children, and gods should be placed for safe keeping in the Piræus; that the exiles should be recalled; that their rights should be restored to those citizens who had been deprived of them; that the sojourners should be admitted to the rank of citizens; that liberty should be granted to the slaves; and that after Death, the state of their country. These measures were adopted, and to them the republic owed the honourable peace which it subsequently obtained. When this danger was passed, Hyperides was attacked by Aristogiton, who accused him of having violated, by the decree just mentioned, all the fundamental laws of the republic. Hyperides defended himself in a celebrated speech, in which he declared, that, dazzled by the Macedonian arms, he had been unequal to the task. He was one of the two orators whom Alexander wished to have delivered into his hands after the destruction of Thebes; but the anger of the monarch was appeased by Demades, and Hyperides remained in his country. He was one of the small number whom the gold of Harpalus could not gain over; and hence it is that he became the accuser of Demosthenes, who had suffered himself to be corrupted. We find Hyperides subsequently pronounced by Cicero, among the first ten men of Cicero, among the first ten men of

Hypsipyle alone saved her father, whom she kept concealed. About a twelvemonth after this event, the Argonauts touched at Lemnos. The women, taking them for their enemies the Thracians, came down in arms to oppose their landing; but, on ascertaining who they were, they retired and held a council, in which, on the advice of Hypsipyle's nurse, it was decided that they should invite them to land, and take this occasion of having a parley. The Argonauts accepted the invitation. Hercules alone was going to the vessel. They gave themselves up to joy and festivity, till, on the remonstrance of that hero, they tore themselves away from the Lemnian fair ones, and once more handled their oars. When her countrywomen subsequently found that Hypsipyle had saved the life of her father, they sold her into slavery, and she fell into the hands of Lycurgus, king of Nemea, who made her nurse to his infant son Opheltes. As the army of Adrastus was on its march against Thebes, it came to Nemea, and, being in want of water, Hypsipyle undertook to guide them to a spring. She left the child Opheltes lying on the grass, where a serpent found and killed him. Amphiarous augured ill-luck from this event, and called the child Archemorus (Fate-Beginner), as indicative of the evils which were to befall the chiefs. They then celebrated funeral games in his honour. Lycurgus endeavoured to avenge the death of his child Hypsipyle, and, in the midst of his resentment by Adrastus and the other chieftains.

**Hycrania, a large country of Asia, situate to the south of the eastern part of the Caspian Sea. This country was mountaneous, covered with forests, and inaccessible to cavalry. Under Alexander's successors, Hycrania was restricted to narrow limits; Nisaes and Margiana, which were previously portions of it, being converted into a separate province; during the Parthian rule, these two became an appendage to Parthia; for, under the feeble Seleuco-Syrian kings, the northern nomads, called the Parthians, had pressed on-ward and founded a large kingdom. Hycrania, now restricted, contained the north of Comis, the east of Massanderus, the country now called Corcan or Jordan (Dahirdakan), and the west of the province of Chorasmia. Hycrania is said to denote a waste and uncultivated country. (Wahl, Vorder und Mittel Asien, p. 551.)**

**Hycroteme, the southeastern part of the Caspian, lying along the shores of Hycrania. (Vid. Caspium Mare.)**

**Hycranus, I. John, high-priest and prince of the Jewish nation, succeeded his father Simon Maccaebaeus, who had been treacherously slain by the order of Ptolemaus, his son-in-law. Hycranus commenced his reign by punishing the assassins, whereupon Ptolemaus applied for aid to Antiochus, king of Syria, who laid siege to Jerusalem and compelled Hycranus to pay him tribute. At the death of Antiochus, however, he profited by the troubles of Syria to effect the deliverance of his country from this foreign yoke. He took several cities in Judæa, subdued the Idumeans, demolished the temple at Gerizim, and made himself master of Samaria. He died not long after, B.C. 106.**

II. The eldest son of Alexander I., succeeded his father in the high-priesthood, B.C. 78. Aristobulus, his brother, disputed the crown with him, on the death of Alexander, their mother, and proved victorious, B.C. 66. Hycranus, reduced to the simple office of the priesthood, had recourse to Aretas, king of Arabia, who besieged Aristobulus in the temple. Seearus, the lieutenant of Pompey, however, whom Aretobulus had engaged in his interests, compelled Aretas to raise the siege, and Hycranus was forced to content himself with the office of high-priest. He was put to death by Herod, at the age of 80 years, B.C. 30, on his at-

---

649) Dio Chrysostom appears to have given him the preference over all orators with the exception of Aeschines. (Or., 15, ed. Ritske, p. 372.) Unfortunately, there exists no oration which we can with certainty ascribe to Hyperides, and by which we might be enabled to form for ourselves some idea of his merits and style. Libanius believes him to have been the author of a harangue which is found among those of Demosthenes, and entitled Περὶ τῶν μηδὲν Ἀλέξανδρον συνθένον. On the inventions with Alexander, Ritske is incorrect in assigning to him one of the two orations against Aristogiton, found among the works of Demosthenes. (Schoell, Histoire de la Litterature Gr., vol. 3, p. 220.)

**Hyperion, a son of Colus and Terra, who married Thea, by whom he had Auroras, the sun and moon. (Theog., 371, seq.)** In Homer, Hyperion is identical with the Sun. (II., 19, 339.—Compare, however, II., 6, 513.) It is very probable that Ἱππόρωιος was the contraction of Ἱππόρωιος. (Passow, Lex., s. v. Vulk-\_er, Hom. Geogr., p. 26.) The interpretation given by the ancients to the name, as denoting "that which moves above," seems liable to little objection. Hermann renders it Tollo, as a substantive: "Post hoc videamus, Ἱππόρωιος et Ἰαππός, Tollennium et Meri-\_um." (Opusc., vol. 2, p. 175.—Keightley's Mythology, p. 52, seq.)

Edward, one of the fifty daughters of Danaus, who married Lykeus, son of Egyptus. She disobeyed her father's bloody commands, who had ordered her to murder her husband the first night of her nuptials, and suffered Lykeus to escape unhurt. Her father, at first, in his anger at her disobedience, put her into close confinement. Relenting, however, after some time, he gave his consent to her union with Lykeus. (Vid. Danaides.)

**Hypsipyle, a tributary of the Indus, now the Beypu-\_she, or, as it is more commonly written, Bypuch. The ancient name is variously given. In Arrian it is Τηρω-\_αις and Τηρω-\_αις; in Diodorus (17, 93) and in Strabo, Τηρω-\_αις (Hypanis). Pliny (6, 17) gives the form Hypas-\_is. This river was the limit of Alexander's conquests, and he erected altars on its banks in memory of his expedition. Some writers erroneously give the modern name of the Hyphasis as the Selendje. (Vin-\_cenz, op. cit., vol. 3, p. 1001.)**

Hycra, now Belici, a river of Sicily falling into the Crinibus. (Sil. Ital., 14, 228.)

**Hypsiclides, an astronomer of Alexandria, who flourished under Ptolemy Phuscon, about 146 B.C. He is considered by some to have been the author of the 14th and 15th books which are appended to Euclid's Elements; though others strenuously deny this. No one, however, disputes his claim to a small work entitled Αναφοράς, in which he gives a method, far from exact, of calculating the risings of each sign or portion of the ecliptic. Hypsiclides was nearly contemporary with Hipparchus, who was the first that gave an exact solution to this problem. He may have been ignorant of the discoveries of Hipparchus, and this may serve to excuse him; but it is hard to conceive why his treatise called Αναφοράς, to which we have just alluded, should have been included in the collection entitled the "Little Astronomer," which formed a text-book in the Alexandrian schools preparatory to the reading of the astronomy of Ptolemy. It was idle to show the pupil a very vicious solution of an easy problem, which they would subsequently find solved in the work itself of Ptolemy. (Biographie Unive., vol. 21, p. 137.)**

**Hypsipyle, daughter of Thoes and queen of Lemn-\_is. The Lemnian women, it is said, having offended Hyperides, found them to be personally disagreeable to their husbands, so that the latter preferred the society of their female captives. Inceded at this neglect, the Lemnian women murdered their husbands. Hypsipyle alone saved her father, whom she kept concealed. About a twelvemonth after this event, the Argonauts touched at Lemnos. The women, taking them for their enemies the Thracians, came down in arms to oppose their landing; but, on ascertaining who they were, they retired and held a council, in which, on the advice of Hypsipyle's nurse, it was decided that they should invite them to land, and take this occasion of having a parley. The Argonauts accepted the invitation. Hercules alone was going to the vessel. They gave themselves up to joy and festivity, till, on the remonstrance of that hero, they tore themselves away from the Lemnian fair ones, and once more handled their oars. When her countrywomen subsequently found that Hypsipyle had saved the life of her father, they sold her into slavery, and she fell into the hands of Lycurgus, king of Nemea, who made her nurse to his infant son Opheltes. As the army of Adrastus was on its march against Thebes, it came to Nemea, and, being in want of water, Hypsipyle undertook to guide them to a spring. She left the child Opheltes lying on the grass, where a serpent found and killed him. Amphiarous augured ill-luck from this event, and called the child Archemorus (Fate-Beginner), as indicative of the evils which were to befall the chiefs. They then celebrated funeral games in his honour. Lycurgus endeavoured to avenge the death of his child Hypsipyle, and, in the midst of his resentment by Adrastus and the other chieftains.**
tempting to take refuge once more among the Arabians. (John's Hist. Hebrew Cont., p. 307 and 345.)

HYKSOS, a town of Apulia, also called Uria. (Vid. Uria.)

Hybla, I. a city of Apulia, in the more northern part of the Iapygian peninsula, between Brundisium and Tarentum. It is now Oria, and would seem to have been a place of great antiquity, since its foundation is ascribed by Herodotus to some Cretans, that formed part of an expedition to avenge the death of Mineos, who had perished in Sicily, whither he went in pursuit of Dadalus. (Herod., 7, 171.) Strabo, in his description of Iapygia, does not fail to cite this passage of Herodotus, but he seems undetermined whether to recognise the town founded by the Cretans in that of Thyreoi or in that of Veretum. By the first, which he mentions as placed in the centre of the isthmus, and formerly the capital of the counties, he seems to designate Oria (Strab., 282). It is probable the word Thyreoi is corrupt; for elsewhere Strabo calls it Uria, and describes it as standing on the Appian Way, between Brundisium and Tarentum, as above remarked. (Cramer's Ancient Italy, vol. 2, p. 810.)—II. A town of Bocotia, in the vicinity of Aulis. (Hom., II., 2, 496.—Strab., 404.)

HYRIEDES, I. an Arcadian monarch, for whom Agamemnon, Lysander, and Callicrates were named. (Vid. Agamemnes.)—II. A descendant of Hyria in Bocotia, whose name is connected with the legend of the birth of Orlo. (Vid. Orion.)

HYRAX, a Trojan, father to Nisus, one of the companions of Theseus. (Verg., Aen., 9, 177, 406.) Hence the patronymic of Hyrtacides applied to Nisus. (Aen., 9, 176.—Compare Hom., II., 2, 837, seq.)—The same patronymic form is applied by Virgil to Hippocoon. (Aen., 5, 492.)

Hyria, I. a town of Bocotia, at the foot of Cithernon, and to the east of Plataea. It was in ruins in the time of Pausanias (9, 2). The vestiges of this place should be looked for near the village of Platonia, said to be one mile from Plataea, according to Sir W. Gell. Itin., p. 112.—II. A small town of Argolis, not far from the village of Chenchrea, and on the road from Argos to Tegea in Arcadia. It was destroyed by the Lacedaemonians in the Peloponnesian war. (Thucyd., 5, 83.)

HYSTASPES, a noble Persian, of the family of the Achemenides. His son Darius reigned in Persia after the murder of the usurper Smerdis. As regards the meaning of the name Hystaspes, consult remarks under the article Darius, page 416, col. 2, line 20.

I.

ICACHUS, a surname of Dionysus or the Grecian Bacchus, as indicative of his being the son of Ceres, and not, according to the common legend, of Semele. In accordance with this idea, Bochart makes it of Phocian origin, and signifying an infant at the breast. (Geogr. Sac., 1, 18.) A similar definition is found in Suidas (s. v. Ιαϋας). Sophocles represents the young god on the breast of the Eleusinian Ceres. (Antig., 132.) Lucretius (4, 1162) gives Ceres the epithet of Manmossa. Orpheus, cited by Clemens Alexandrinus (Admon. ad Gent.—Op., ed. Morel., p. 13), also speaks of Iacchus as a child at the breast of Ceres. According to the Athenian traditions, Ceres was nursing Bacchus when she came to Attica in search of Proserpina. A great number of ancient monuments represent Ceres with Iacchus or Bacchus at her breast. (Winckelmann, Mon. Ined., vol. 1, p. 29, 68, 71.) Incredibly also called σενοχή, a name which the Greeks gave to infant deities. (Salmas., ad Inscr. Her. Attic. et Reg. de Anim. climact., p. 556, seqq.—Sainte-Croix, Mystères du Paganisme, vol. I, p. 199.) Demetrius (Αμητὴρ) was also a surname of Bacchus.

(Sainte-Croix, ib., p. 200.) Ceres was called κομοῦθροφος, "nourisher of the young." She has been represented with two children, one at each breast, and holding a horn of plenty. Bochart cites the mystic van of Iacchus as a proof of the correctness of this interpretation. This van is called in Greek Δίκαιος, a word which not only denotes a van, but also the swaddling clothes of children. According to Hesychius (s. v. Ναυςτριτος), the epithet Likites, given to Bacchus, names the swaddling clothes of the infant Minos, who had perished in Sicily, whither he went in pursuit of Dadalus. In the hymn to Jupiter by Callimachus (v. 48), Adras- tea envelops him in swaddling clothes of gold after his birth, and to denote this the word λίκανος is employed. An old glossary renders λίκανος by Πενακαμένεμου. It would seem also that there is a close analogy between the name Iacchus and the Oriental Iao, the great appellation for the deity; from which both Je-hovah and Jehovah have sprung. Iacchus, moreover, is the parent form of the Greek Bacchus, the difference being merely a variation in dialect. Moor, in his Inndo Pantheon (Ato, Lond., 1810), assigns the name Iacchus to the Hindu Iswara or Bac- chus, and makes it equivalent to "lord of the Iacchus," or followers of that god. (Edinb. Rev., vol. 17, p. 317.)

IALYSOS, a town of the island of Rhodes, 80 stadia from the city of Rhodes. Its vicinity to the capital proves its importance, as does also in the time of Ramses III. the importance of its temple, which at a later period was turned into a palace. In the reign of Thales and Pythagoras Ialysus became celebrated as the place of the Ialynae, a name connected with the tradition of the Ialynae as a poetry, and the first Ialynae as a poetry, and the first—...
Iamblichus.

name of a performer of miracles and a divine personage. His merit as a writer is entitled to little if any notice. He compiled, he copied, he mingled the ideas of others with his own conceptions; nor was he always capable of imparting clearness or method to his compositions. But he declared himself the protector of mythology and paganism; he strove to preserve them by working miracles in their behalf; he overturned the sacred books and made the philosophy of the ancients placed between religion and superstition; he amalgamated into one system all that various nations had imagined, in popular belief, of demons, angels, and spirits; and, in order to give this work of folly a philosophical appearance, he attached it to the doctrine of Plato. The intuitive perception of the divine nature, by means of ecstasy, had appeared to Plotinus and Porphry the most sublime point to which the mind of man could elevate itself; this, however, was not sufficient for Iamblichus; he must have a theory, or that species of direct communication with gods and spirits, which takes place, not from man's raising himself to the level of these supernatural intelligences, but because, yielding to the power of certain formulas and ceremonies, they are compelled to descend unto mortals and execute their commands.—We have no edition of the entire works of Iamblichus, and must therefore omit this most industrious and indefatigable compiler of Pythagoras.

(Περὶ τοῦ Πυθαγορικοῦ βίου, or, as it is named in some manuscripts, Λόγος πρώτους, περὶ τῆς Πυθαγορικῆς αἱρέσεως. Book First: Of the Pythagorean Sect.) It was, in fact, the commencement of a work in ten books. Although a most wretched compilation, and most clumsily put together, it is nevertheless instructive, from the information it affords respecting the opinions of Pythagoras, and because the source, whence Iamblichus and Porphry drew, no longer exist for us. The best edition of this work, including the life of Pythagoras by Porphry, and that preserved by Plotinus, is Kiesling's, Lips., 1815, 2 vols. 8vo.—Second Book, Of Pythagorean explanations, including an exposition to Philosophy. (Πυθαγορείου ἐπιφάνειας λόγος δεύτερος, περὶ τῶν προτεραιτοῖς λόγων εἰς φιλοσοφίαν.) This work formed a continuation of the preceding; and is the less trustworthy, as Iamblichus and Porphry reach no longer for Pythagoras. In it we find many passages from Plato; or, rather, one third of the work is made up of extracts taken from the dialogues of that writer; and Iamblichus has reunited them with so little skill and with so much negligence, that he often forgets to make the necessary changes in the tenses of verbs, in order to adapt one passage to another. Sometimes traces of that Platonic dialogue are even allowed to remain. The most interesting part is the last chapter, which gives an explanation of thirty-nine symbols of Pythagoras. This work is also contained in Kiesling's edition of the life. —3. Of common Mathematical Science (Περὶ κοινῆς μαθηματικῆς ἐπιστήμης), or, third book of the great work on the philosophy of Pythagoras. It is important, by reason of the fragments from the ancient Pythagoreans, such as Philolaus and Archytas, which it contains. These fragments are written in the Doric dialect, which furnishes an argument in favour of their authenticity. This work, of which fragments were only known at an early period, was published entire for the first time by Villoison, in his Anecdotas Graecae, vol. 2, p. 150, seqq., and reprinted by Friis, with a translation, at Copenhagen, 1790, 4to. A future editor will find various readings, from a manuscript of Zeits, as given by Kiesling in his edition of the life of Pythagoras. —4. On the Arithmetic of Nicomachus (Περὶ τῆς ἀριθμητικῆς ἐλαχύσεως). We have only one edition of this work, that of Tennusui, Darm., 1687-8, 2 vols 4to. Kiesling's life of Pythagoras contains manuscript readings for this work also.—5. Theory of Numbers. (Περὶ ἀριθμολογίας τῆς ἀριθμητικῆς.) On the different speculations in which the ancient philosophical and religious writers indulged relative to the force of numbers. This work does not bear the name of Iamblichus in the manuscripts, but Gale (ad Iambi de Myst. Egypt., p. 201) and Fabricius (Bibli. Gr., vol. 5, p. 639, ed. Harler.) agree in ascribing it to him. It is certain that Iamblichus wrote a work which contains the very same fragments of numbers in a compendium respecting Pythagoras. This work has only been twice printed, once at Paris, 1543, 4to, and again by Wechel, at Leipsig, 1817, 8vo, with the notes of Ast.—6. Porphry had addressed a letter to an Egyptian name Anabo, full of questions relative to the nature of gods and demons. We have an answer to this epistle, written by Abammon Magister (Ἀβαμμών Διδασακός); and, according to a scholium found in many manuscripts, Proclus declared that it was Iamblichus who disguised himself under this name. The title of the work is as follows: "Αβαμμώνος Διδασακὸς πρὸς τὸν Πορφύριον πρὸς ἀνέδωκτον ἀνόητον καί τῶν ἐν αὐτῷ ἀπορημάτων λόγων, &c., "Answer of Abammon the Master to the letter of Porphry addressed to Anabo, and the solution of the questions which it contained." It is often, however, cited under the shorter title of "Mysteries of the Egyptians." There are also two works on the ideas, and Egyptian theology. Meiners thinks that this work was not written by Iamblichus; but his reasons for this opinion, drawn from the inequality of the style and the contradictions contained in the work, have been refuted by Tennenmann. (Comment. Soc. Scient. Göting., vol. 4, p. 59.—Tennenmann, Gesch. der Phil., vol. 6, p. 248.) There is only one complete edition of this work, by Gale, Oxon., 1870, fol.—Iamblichus wrote also a work on the ideals or statues (προτεραιτοῖς), to prove that idols were filled with the presence of the divinities whom they represented. We only know it through the refutation of John Philoponus, and what we do know of it is very limited. Iamblichus composed also a treatise on the soul (περὶ ψυχῆς), of which Stobaeus has preserved very copious extracts. These are the more valuable, as Iamblichus gives in them the opinions of various philosophers, and is the only writer who speaks of the ideals or statues (προτεραιτοῖς). The compiler has preserved several fragments of the letters of Iamblichus. (Scholl, Hist. Lit. Gr., vol. 5, p. 144, seqq.) Iamblichus, certain prophets among the Greeks, descended from Iamus, a son of Apollo, who received the gift of prophecy from his father, and which remained among his posterity. (Pausan., 6, 2.)

Janus, a hill of Rome, across the Tiber, and connected with the city by means of the Sublianic bridge. It was the most favourable place for taking a view of the Roman capital; and from its sparkling sands it obtained the name of Mons Aureus, now by corruption Montorio. There was an ancient tradition, that Janus, king of the Aborigines, contemporary with Saturn, who then inhabited the Capitoline Hill, founded a city opposite to the residence of Saturn, and, dying, left his name to the hill on which he had built. (Virg., Ec., 8, 355, seqq.—Sen., de loc. 2.) The hill, which once comprised the site of the church of S. Pietro in Montorio, and the present Corsini gardens. As Ancus Marcius joined it to the Aventine by a bridge and a wall, lest an enemy should make it a citadel for attack, it is natural to conclude that the first wall would enclose the bridge, and run up to the summit, which it was desirable to preserve from the possession of an enemy; on the other hand, when nothing more was to be effected than to defend the city, the wall would only enclose a narrow space of territory, extending from near the Pons Subliacus, or Ponte Orazio, to the Montorio, and descending again to the river at the Ponte Rotto; for the island did not exist in those days. (Dion. Hal., 655)
Such a circuit of wall would at once defend the passage of the Tiber, and cover the three important hills of the city. — The summit of the Janiculum was seen from the Comitium, and also from the place of popular assemblies in the Campus Martius. At the end of the building a small odeum surrounded by fces, and feared lest, while they held these assemblies, the enemy might come upon them unwares, they placed some of their citizens upon the Janiculum to guard the spot, and to watch for the safety of the state; a standard was erected upon the top of the hill, and the removal thereof was a signal for the assembly immediately to dissolve, for that the enemy was near. (Dio Cassius, 37, 25.) This act, which their originator in this, according to the ancient historians, was, however, made subservient to the designs of factional citizens in those times when there was no danger to the city but from its intestine discord; and the taking down of the standard on the Janiculum more than once put a stop to public proceedings at the Comitium. (Burgess, Topography and Antiquities of Rome, vol. 1, p. 67, seq.)

Janus, an ancient Italian deity, usually represented with two faces, one before and one behind, and hence called Bifrons and Biceps. Sometimes he is represented with four faces, and is thence denominated Quadrifrons. Janus was invoked at the commencement of most actions; even in the worship of the other gods, the votary began by offering wine and incense to him. (Ovid, Fast., 1, 171.) The first month in the year was named after him, and under the title of Matutinus he was regarded as the opener of the day. (Horat., Serm. 2, 6, 20, seq.) Hence he had charge of the gates of heaven, and hence, too, all gates (janua) on earth were called after him, and supposed to be under his care. In this way some explain his double visage, because every door looks two ways; and thus he, the heavenly porter, can watch the east and west without turning. (Ovid, Fast., 1, 140.) His four visages, on the other hand, when he is so represented, indicate the four seasons of the year. — His temples at Rome were numerous. In war time, the gates of the principal one, that of Janus Quirinus, were always open; in peace they were closed, to retain wars within (Ovid, Fast., 1, 124); but they were shut only once between the reign of Numa and that of Augustus, namely, at the close of the first Punic war. Augustus closed them after he had given repose to the Roman world. The temples of Janus Quadrifrons were erected in war; and those of Janus Matutinus, at the opening of the year. (Pausan., Great. i. 16, 9; 2, 23, 11; 3, 14, 5; 4, 6, 2; 6, 14, 11, 13; 8, 11, 4; 14, 10, 8; 15, 4, 192.)—The following remarks, though in part anticipate, may serve to throw some light upon the mythological history of Janus. Janus occupies a place among the first class of Etrurian divinities, and is in many respects identified with the Tina of that nation. (Varro, ap. Augustin. de Civ. Dei, 7, 10.—Proc. Hymn. in Hec. et Janum.) His origin is to be traced back to the mythology of India. Janus, with his wife and sister Camassane, half fish and half human being, as sometimes represented, can only be explained by a comparison with the avatars, the descents or incarnations of the Hindu deities. (Compare the incarnation of Osiris and the sun-god, and the legend of Ahas and Seth.)—Viewed in another way, the name Janus or Dyus assimilates itself very closely to that of Diana. These two appellations resolve themselves into the simple form Dia, or the goddess by way of excellence; and this Dia belongs in common to the religions of Samothrace and Attica. She is the Pelasgic Ceres, frequently found under this denomination in the songs of the Frutes Arnautes. (Varro, ibid., p. 146, ed. Schol.)—These representations of Janus, and that of Samothrace, the Latin system and that of the Etrurians, based on ideas mutually analogous, united, but did not become completely blended, with each other. — On the soil of Italy Janus appears at one time as a king of ancient days, at another as a hero who had rendered his name conspicuous by great labours and by religious institutions (Arnob., adv. Gen., 3, p. 147.—Lygd., de Mens., p. 57, ed. Schow 1), at another, again, as a god of nature. At first he is called the Hemeneus, according to the Etruscan doctrine. (Lygd., ibid., p. 146, ed. Rockth.) He is the year personified, and his symbols contain an allusion either to the number of the months or to that of the days of the year. The month, called after him January, formed from the time of Numa the commencement of the religious year of the Romans. On the first day of this month was presented to Janus what was called the Januam, an offering consisting of wine and fruits. On this same day the image of the god was crowned with laurel, the consul ascended in solemn procession to the Capitol, and small presents were made to one another by friends. By virtue of his title of god of nature, Janus is represented as holding a key: he holds this as the god who presides over gates and openings. He opens the course of the year in the heavens; and every gate upon earth, even to those of private dwellings, is under his superintending care. (Spanheim, Fast, and Calendarium Divi Januæ, de Mens., p. 55, 144.) This attribute, indeed, is given him as a sense of a more or less elevated nature. It designates him at one time as the genius who presides over the goods of the year, and who dispenses them to mortals; who holds the key of fertilizing sources, of refreshing streams; at another time it typifies him as the master and sovereign of nature in general, the guardian of the whole universe, of the heaven, the earth, and the seas. (Ov., Fast., 1, 124.) Janus took the name of Clusius; as charged with the care of the world, he is styled Curiatius. (Lygd., de Mens., p. 55, 144.) Thus, under these and similar points of view, Janus reveals himself to us as exactly similar to the gods of the year in the Egyptian, Persian, and Phoenician mythologies. Like Osiris, Semheracies, Dachemischaid, and others, he represents the year personified in its development through the four seasons, and in the signs of the zodiac, where each of its twelve parts is exalted, and with all the plenitude of its gifts. And as the career of the year is also that of the souls which traverse in their migrations the constellations of the zodiac, Janus, as well as the other great gods of nature, becomes the guide of souls. Similar in every respect to Osiris, Serapis, he is called, like him, the Sun; and the gate of the east, as well as that of the west, becomes at once
his peculiar care. (Lusat, ap. Lyd., p. 57.) Identifying Janus with the Sun, we ought not to be surprised at finding the Moon called Jane in Varro. (R. R., 1, 37, 3, ed. Schneid.—Compare Scaliger, de vet. ann. Rom. in Grev. Thes., p. 311.) In like manner, as the lunar goddess is styled Deiva Jane (Deicina, Diana), so the Salian hymns invoke the solar god under the name of Deivos Janus, contracted into Dianus or Dianus. Nigidius (ap. Macrobi, Sat., 1, 9) says expressly, "Apollinem Janum esse, Dianam Jane praebet. Haec opus est uttiusque Janus et Jane as the solar and lunar deities respectively, discover in these ancient Italian appellations the Zac and Zauvio of the Greeks, or, rather, the ancient and originally Oriental name of the Divinity, Jah, Jao, Jova, Jonis, whence Jom or Yum, "the day." (Mythologus, vol. 2, p. 73.) Janus also assimilates himself to the Persian Mithras, and becomes the mediator between mortals and immortals. He bears the key of the doors of the dead and immortal. He appears as the mentor of the men to the gods and a god to the men. (Cains Bassus, ap. Lyd., p. 57, 146.) It is in reference to this that some explain his double visage, turned at one and the same time towards both heaven and earth. Others, however, give to the representation of Janus with two faces an explanation purely historical, and consider it as alluding either to the emigration of Saturn or Janus, come by sea from Greece into Italy; or to the settling of the latter among the Greeks, or to the religious institutions of the two nations. It is at all events so represented. It is certainly most rational to suppose, that this mode of representing was purely allegorical in every case. It recalls to mind the figures, not less strange and significant, of the Hindoo divinities: Janus, with four faces (Quadrifrons.—Serv., ad Virg., En., 8, 607—Augustin. de Civ. Dei, 7, 4), is identical in appearance with the four-faced Zeus of the Greeks; and so much the more likely, as the light of the Sun, and the year, in the Oriental systems, raise themselves to the higher office of gods of time, eternity, and infinity, so also it seems to have happened with the western Janus. He is called the inspector of time, and then Time itself; in a cosmogonical sense he passes for Chaos. (Lyd., de Mens., p. 57.) Under these two points of view he is distinct from Jupiter, the supreme ruler and the universal regulator of things, in that Janus had specially under his care the beginning and the end. (Cic., de N. D., 2, 27.) In the higher doctrine, however, all distinction between the two disappears. As Clusius or bearer of the key, Janus was the monarch of the universe, and Greece had no divinity that could be at all compared with him. (Op., Fast., i, 90.) In the solemn ceremonies and religious songs of the old Romans, he figured as inauguratur, and even bore the name. (Initiator.—Augustin. de Civ. Dei, 4, 11.) At the festivals of the great gods he had the first sacrifice offered to him. (Cic., de N. D., 2, 27.) He was called the Father (Brisson, de Formul., p. 45.—Marini, Atti, p. 365), and the Salii invoked him in their hymns as the god of gods. ("Deorum Dea."—Macrobi, Sat., 1, 9.—Compare Gutberleth, de Salisii, c. 20.) This god of gods they named also Janus or Euanus, while they themselves assumed the name of Jane or Eani, in accordance with the fashion of Italy, and the Roman custom of simulating the priests to their divinities. (Vossius, Inst. Ort., 4, 1, 7.) These appellations, Jane and Euanus, remind us of Cicero's derivation from eunus, i.e., from the old Greek and Latin verb io. (N. D., 2, 27.) The Romans also invoked Janus when they made a lustration or consecration of their fields. (Cato, R. R., p. 92, ed. Schneider.)—But why multiply proofs to show that the Etrurian priesthood conceived and taught its dogmas in the true spirit, and under the very forms of Oriental mythology? In Etruria, as in the East, a series of gods spring from a supreme being, and are reflected in their turn in a dynasty of kings or chiefs, their children, their heirs, and the imitations of their actions. Janus, the first monarch, founds cities, rears ramparts, erects gates; become a hero, he consecrates sanctuaries, institutes religious worship, fixes the sacred year, and arranges all civil ordinances. This son of the gods is no less the Sun moving through his annual career, opening with his powerful key the reservoirs of the empire of waters, giving drink to men and animals, drying up the earth, and ripening the fruit by his vivifying rays, and guarding the two gates of heaven as the chief of the army of the stars.—He was invoked also in war; and when the gate of his temple on earth was opened, it was the signal for battles; when closed, it became the pledge of peace. For Janus is the god that opens the new year in the spring, the period when warlike movements and campaigns begin: it is he that opens at this season the career of battles, to which he summons his ancient inferiors to join the tumult. To Janus, however, was appointed the office of presiding over the rising and setting of the Sun, and guarding the two gates of heaven as the chief of the army of the stars. He was invoked also in war; and when the gate of his temple on earth was opened, it was the signal for battles; when closed, it became the pledge of peace. For Janus is the god that opens the new year in the spring, the period when warlike movements and campaigns begin: it is he that opens at this season the career of battles, to which he summons his ancient inferiors to join the tumult. To Janus, however, was appointed the office of presiding over the rising and setting of the Sun, and guarding the two gates of heaven as the chief of the army of the stars. He was invoked also in war; and when the gate of his temple on earth was opened, it was the signal for battles; when closed, it became the pledge of peace.
I A P

par of the present Mortlaeia. In the interior, their territory was spread along Mount Alibus, which forms the left-hand peak of the great Apennines, the Apennines being considered elevated. On the other side of this mountain it stretched towards the Danube, on the confines of Pannonia. The Iapyges were a people of war-like spirit, and were not reduced until the time of Augustus. (Strab., 315.—App., Ili. 18.) Their principal town was Metulicum, which was taken by that emperor after an obstinate defence. (App., Ili. 19.) Its site remains at present unknown. (Cramer's Anc. Geography, vol. i., p. 325.)

Iaptygta, a division of Italy, forming what is called the heel. It was also called Messapia, and contained two nations, the Calabri on the northeast, and the Sa- lentini on the southwest side. The name of Iaptygta was not known to the Romans, except as an appellation borrowed from the Greeks, to whom it was familiar. Among the many traditions current with the latter people may be reckoned their derivation of this name from Iaptyx, the son of Dadasus. (Strab., 279.—Plin., 3, 11.) This story, however, belongs rather to fable than to history. We have no positive evidence regarding the origin of the Iapyges, but their existence on these shores prior to the arrival of any Greek colony is recognised by the earliest writers of that nation, such as Herodotus (7, 170) and Hellanicus of Lesbos (ap. Dion. Hal., 1, 22). Thucydides evidently considered them as barbarians (7, 38), as well as Scylax, in his description of the Iapygian coast (401); and though this, in fact, is the idea which we must form of this people, whether we look upon them as descended from an Umbrian, Oscan, or Ilyrian race, or from an intermixture of these earliest Italian tribes—very little is known of the language of this people; but, from a curious old inscription found near Otranto, and first published by Galetio, in his history of Iaptygta, it appears to have been a mixture of Greek and Oscan. (Lanzi, vol. 3, p. 491.—Romani, vol. 2, p. 61.) It may also be noticed, that the name of the Iapyges appears in one of the Eugubian tables under the form Iapycus-com; which might lead us to suppose that some connection once existed between this people and the Um- bri. (Lanzi, vol. 3, p. 663.—Cramer's Anc. Italy, vol. 2, p. 302.)

Iaptygium, or Sallentinium, Promontorium (Sal- lust, ap. Serv. ad En., 3, 400), a famous promontory of Italy. At some time or other in the infancy of Iaptygta, now Cape di Lucca. When the art of navigation was yet in its infancy, this great headland presented a conspicuous landmark to mariners bound from the ports of Greece to Sicily, of which they always availed themselves. The fleets of Athens, after having circumnavigated the Peloponnesus, are represented on this passage as usually making for Coreya, whence they steered straight across to the promontory, and then coasted along the south of Italy, for the remainder of their voyage. (Thucyd., 6, 30.) There seems, indeed, to have been a sort of haven here, capable of affording shelter to ves- sels in tempestuous weather. (Thucyd., 6, 44.) Strabo describes this promontory as defining, together with the Cerannian Mountains, the line of separation between the Adriatic and Ionian Seas, while it formed, with the opposite Cape of Lacinium, the entrance to the Tarentine Gulf, and the distance in its best cases being 700 stadia. (Strab., 281.—Cramer's Anc. Italy, vol. 2, p. 315.)

Iapygia, Tria Promontorii, three capes on the coast of Magna Graecia, to the south of the Lacrimian promontory. They are now called Cape della Castelio, Cupo Rizzato, and Cupo della Nace. (Cramer's Anc. Italy, vol. 2, p. 397.)

Iapyx, I. a son of Dadasus, who was fabled to have given name to Iaptygta in Lower Italy. (Consult re- marks under the article Iaptygta.) II. A name given to the west-northwest wind. It was so called from Iaptygta, in Lower Italy, which country lay partly in the line of its direction. It is the same with the Ap- pyx. (Vid. above.)

Isabir, a son of Jupiter and Garamantus, king of Gustulia. (Vid. Did.)

Isides, a patronymic given to Palinusus, as descended from a person of the name of Iasis. (Virg., Æn., 5, 843.)

Iasion or Iesus, a son of Jupiter and Electra, one of the Atlantides (Hellenica, ap. Schol. ad Od., 5, 129), while others made him a son of Minos or Kratos and the nymph Phronia. (Schol. ad Od., 1. c.—Schol. ad Theocr., Id., 3, 50.) He is said to have had by Ceres a son named Plutus (Wealth), whereupon Ju- piter, offended at the connexion, struck the mortal lover with his thunder. (Hom., Od., 5, 125.) He- niod makes Crete the scene of this event. (Theog., 969.) Iasion is also named as the father of the swift- footed Atalanta. (Vid. Atalanta.)—We have here an agricultural legend. Iasion is made the offspring of Force and Prudence. (Kôr Ioskop, par Guigniau, vol. 3, p. 325.) In other words, strength, or courage in enduring labour, and prudence, or skill in the application of that strength, excite the instinctive powers of the earth, causing famine to disappear, nourishing the human race, and render- ing them healthy and vigorous. Hence the name Iasion was made to suggest the effectiveness of the fraternity. (Compare remarks under the article Trophonius.)

Ixis, a name given to Atlanta, daughter of Ia- sus. Jason, I. a celebrated hero, son of Alcimede, daughter of Phylacus, by Æson, the son of Cretheus, and Tyro, the daughter of Salomeus. Tyro, before her union with Cretheus, the son of Eolus, had two sons, Pelias and Neleus, by Neptune. After the death of Pelias, but was delivered by Pelias. The latter also sought the life of Jason; and, to save him, his par- ents gave out that he was dead, and, meantime, conveyed him by night to the cave of the centaur Chiron, to whose care they committed him. (Apol- tol., 1, 9, 16.—Apoll. Rh., 1, 10.—Hygin., fab., 12, 13.) An oracle had told Pelias to beware of the "one- sandaled man," but during many years none such appeared to disturb his repose. At length, when Ja- son had attained the age of twenty, he proceeded, unknown to Chiron, to Iolcos, in order to claim the rights of his family. He bore, says the Theban po- et, two spears; he wore the close-fitting Magnesian dress, and a parr skin to throw off the rain, and his long unshorn locks waved on his back. In his jour- ney he was stopped by the inundation of the river Évenus or Enipeus, over which he was carried by Ju- no, who had changed herself into an old woman. In crossing the stream he lost one of his sandals, and on his arrival at Iolcos, the singularity of his dress and the fairness of his complexion attracted the notice of the people, and drew a crowd around him in the market-place. Pelias came to see him with the rest, and as he had been warned by the oracle to beware of a man who should appear at Iolcos with one foot bare and the other shod, the appearance of Jason, who had lost one of his sandals, alarmed him. He asked him who he was; Jason mildly answered his question, telling him he was come to demand the kingdom of his fathers. He then went into the house of his parent Æson, by whom he was joyously recognised. On the intelligence of the arrival of Jason, his uncles Phereus and Amythaon, with their sons Admetus and Melamp- us, hastened to Iolcos. Five days they feasted and enjoyed themselves; during the sixth Jason answered them his wishes, and went, accompanied by them, to the dwelling of Pelias, who at once proposed to resign the kingdom, retaining the herds and pastures, at the
same time stimulating Jason to the expedition of the golden fleece. (Pind., Pyth., 4, 193, seqq.)—Another account is, that Pelias, being about to offer a sacrifice on the seashore to his father Neptune, invited all his subjects. Jason, who was ploughing on the other side of the Anaurus, crossed that stream to come to it, and in the course of his sacred office, of his sandal, no, out of enmity to Pelias, who had neglected to sacrifice to her, took the form of an old woman, and asked Jason to carry her over, which caused him to leave one of his sandals in the mud. Her object was to give occasion for Medea's coming to Iolcos and destroying Pelias. When Pelias perceived Jason with but one sandal, he saw the accomplishment of the oracle, and, sending for him next day, asked him what he would do; if Pelias, of the power bestowed on him to be slain by one of his citizens. Jason replied, that he would order him to go and fetch the golden fleece. Pelias took him at his word, and imposed the task upon Jason himself. (Pherecydes, ap. Schol. ad Pind., Pyth., 4, 133.)—An account of the celebrated expedition which Jason in consequence undertook, will be found under a different article. (Vid. Argonauta)—During the absence of Jason, Pelias had driven his subjects to the uttermost, had put to death their oldest daughter, and had put to death their remaining child. Desirous of revenge, Jason, after he had delivered the fleece to Pelias, entreated Medea to exercise her art in his behalf. He sailed with his companions to the Isthmus of Corinth, and there dedicated the Argo to Neptune; and Medea, shortly afterward, ingratiated herself with the daughters of Pelias, and, by squirting her art of restoring youth, and proving it by cutting up an old ram, and putting the pieces into a pot, whence issued a bleating lamb, she persuaded them to treat her father in the same manner, and then refused to restore him to youth. Acastus, son of Pelias, thereupon drove Jason and Medea from Iolcos, and they retired to Corinth, where they lived happily for ten years, till Jason, wishing to marry Glauce or Creusa, the daughter of Creon, king of that place, put away Medea. The Colchian princess, enraged at the ingratitude of her husband, sent a poisoned robe and crown as gifts to the bride, by which the latter, together with her father Creon, miserably perished. Medea then killed her own children, mounted a chariot drawn by winged serpents, and fled to Athens, where she married King Ægeus, by whom she had a son named Medus. But, being detected in an attempt to destroy Theseus, she fled from Athens with her son. Medus crossed from several barbarous tribes, and also the country which had named Medea after himself, and finally fell in battle against the Indians. Medea, returning unknown to Colchis, found that her father Æetes had been robbed of his throne by her brother Peres. She restored him, and deprived the usurper of life.—The narrative here given is taken from Apollodorus, who seems to have adhered closely to the versions of the legend found in the Attic tragedies. The accounts of them are generally the same. In Iphigenia, of Tarentum, Medea is classed with the goddesses who honoured mortal men with their love. Jason made her his spouse, and she bore to "the shepherd of the people" a son named Medus, whom Chiron reared in the mountains, and "the will of great Jove was accomplished." (Theog., 992, seqq.)—It is evident, therefore, that this poet supposed Jason to have reigned at Iolcos after his return from his great adventure.—The word Jason is popularly derived from the name of the Nostoi, Medea restored Æson to youth. (Argus Eurip., Medea.—Ovid, Met., 7, 159, seqq.)—While Simonides and Pherecydes say that she effected this change in Jason himself. (Arg. Eur. Med.); and Æschylus, that she thus renewed the Hyades, the nurses of Bacchus, and their husbands. (Arg. Eur. Med.—Ovid, Met., 7, 294, seqq.)—Jason is said to have put an end to his life after the tragic fate of his children, or, as another account has it, when the Argo was failing to pieces with time, Medea persuaded him to sleep under the prow, and it fell on him and killed him. (Arg. Eur. Med.) Medea herself, we are told, became the bride of Achilles in the Elysian fields. (Ibys et Simonides, ap. Schol. ad Apoll. Rh., 4, 815. Hist. Gr.—Kretzer, Hist. der Kultur, p. 370, seqq.—On the whole, Argonautic legend, consult the article Argonauta.)—II. A tyrant of Thessaly, born at Pherese, and descended from one of the richest and most distinguished families of that city. He usurped the supreme power in his native place while still quite young, about 375 B.C.; reduced nearly all Thessaly under his sway; and caused himself to be invested with the title of generalissimo, which soon became, in his hands, only another name for monarch of the country. The success which attended his other expeditions also, against the Dolopes, the Phocians, &c.; his alliances with Athens, Macedon, and Thebes; in fine, his rare military talents, imbodied him to think of undertaking some enterprise against Persia; but, before he could put these schemes into operation, he was assassinated while celebrating some public games at Pherese, in the third year of his reign. Jason was a popular tyrant in all his relations, and only another name for monarch of the territory. He cultivated letters and the oratorical art, and was intimate with Isocrates, and Gorgias of Leontini. He had contracted a friendship also with Timotheus, the son of Conon, and went himself to Athens to save him from a capital accusation. 11. A native of Cyrene, an abridgment of a work of whose, on the exploits of the Maccabees, is given in the second section of the book of Maccabees. St. Augustine, in one of this abridgment as of a work, which the Church had placed in the Canon, by reason of the histories of the martyrs which it contains. St. Jerome, however, says the contrary. The councils of Carthage in 397, and of Trent, have declared it canonical. (Schöfll, Hist. Lit. Gr., vol. 3, p. 431.)—IV. A native of Argos, who flourished during the second century. He wrote a work on Greece, in four books, comprehending the earlier times of the nation, the wars against the Persians, the exploits of Alexander, the actions of Antipater, and ending with the capture of Athens. He composed also a treatise on the Temples (or, as others render it, Sacrifices) of Alexander, Πίπα των Ἀλέξανδρου λεπών. (Schöfll, Hist. Lit. Gr., vol. 4, p. 172.—Vossa., Hist. Gr., 1, 16, p. 62.—Athenei Op. ed. Schweich., vol. 9, p. 195, Ind. Auct.)—V. A Rhodian, grandson of Posidippus, who succeeded his grandfather in the Stoa Poikile of his native island. His works have not reached us.

JASONUM POMONIUM, a promontory of Pontus, northeast of Polemonium. It was so called from the ship Argo having anchored in its vicinity. (Xen., Anab., 6, 2, 1.) It is also mentioned by Strabo (548), and it preserves evident vestiges of the ancient appellation in that of Jasonum. (Cramer's Asia Minor, vol. 1, p. 19.)

Inasium Sinus, a gulf of Caria, deriving its name from the city of Iassus, situate at its head. It is now called Assem-Kalesisi. (Thucyd., 8, 26.)

Iassus, a city of Asia Minor, situate on a small island very near the coast of Caria, and giving to the adjacent bay the name of Sinus Iassicus. It was a rich and flourishing city, and the inhabitants were chiefly occupied with fisheries along the adjacent coast. The Greeks also鍋tained a rich supply of shellfish from its ruins, which constituted the main of it. The name of the place is Assem. (Plin., 5, 28—Liv., 32, 33, 37, 17.)

Iaxartes, a large river of Asia, rising in the chain of Monis Inaus, and flowing into the Sea of Aral, after a course of 1652 English miles. It is now the Sir, or Sir Darjah. It forms itself into the Caspian, when he was unacquainted with the existence of the Sea of Aral. Herodotus, long before, had called the Iax-
Iberia, a country of Asia, bounded on the west by Colchis, on the north by Mount Caucasian, on the east by the Ocean, and on the south by the Persian Gulf. It answers now to Imerit, Georgia, the country of the Gurians, &c. The name of Imeriti is an evident derivation from the ancient one. The Cyrus, or Kur, flowed through Iberia. Ptolemy enumerates several towns of this country, such as Agiana, Vasseda, Vatica, &c. The Iberians were allies of Mithradates, and were therefore attacked by Pompey, who defeated them in a great battle, and took many prisoners. Plutarch says the number of slain to have been not less than nine thousand, and that of the prisoners ten thousand. (Vit. Pomp.) The same writer states, that the Iberians had never been subject to the Medes or to the Persians; they had escaped even the Macedonian yoke, because Alexander was obliged to quit Hyrcania in haste. (Plin., 6, 4.—Id., 10, 3. —Strab., 499.—Plut., 5, 11.—Socrat., Hist., 1, 28.—Soc., 2, 7.) II. One of the ancient names of Spain, derived from the river Iberus. Consult remarks under the article Hispania.

Ibrius, I. one of the largest rivers in Spain. It rises in what was once the country of the Cantabri, from the ancient Fors Iberus, in the valley of Reynosa. It runs nearly due north, at the same time descending an eastern course into the Mediterranean Sea, a little distance above the Tenebrium Promontorium, passing, not far from its mouth, the city of Dertosa, now Tortosa. The chain of Mons Idubeda, by which it runs for a great part of its course, prevents it from taking a western course along with the other rivers of Spain. It is now the Ebro, and is in general very rapid and unfit for navigation, being full of rocks and shoals, and hence the Spanish government have been compelled to cut a canal parallel to the river from Tudela to Sastago. The depositories which the river carries to the Mediterranean have formed a considerable delta at its embouchure, and it has been necessary to cut a canal, in order that vessels may ascend to the small town of Amposta, below Tortosa. (Malte-Brun, vol. 8, p. 10, Am. ed.) This river was made the boundary between the Carchaginian and Roman possessions in Spain of and after the Roman war. (Lus., 4, 335.—Plin., 3, 3.—Mela, 2, 6.—Liv., 21, 5.) II. A river of Iberia in Asia, flowing from Mount Caucasian into the Cyrus, probably the modern Iora. Ibis, a lost poem of the poet Callimachus, in which he bitterly satirizes the ingratitude of his pupil the poet Apollonius. (Vid. Callimachus.) Ovid also wrote a poem under the same title, in imitation of Callimachus. This latter has come down to us, and is thought to be directed against Hyginus, a false friend of the poet's (Vid. Ovidius.)

Ibycus, a lyric poet, a native of Rhigium, who flourished about B.C. 528. Rhigium was peopled partly by Ionians from Chalcis, partly by Dorians from the Peloponnesus, the latter of whom were a superior class. The peculiar dialect formed in Rhigium had some influence on the poems of Ibycus; although these were reared in an epic dialect with a Doric tinge, like the poems of Stesichorus. Ibycus was a wandering poet, as is intimated by the story of his death, which will be given below; but his travels were not, like those of Stesichorus, confined to Sicily. He passed a part of his time in Samos with Polycrates, whence the flourishing period of this bard may be fixed as we have already given it. In consequence of the poet's generosity, the Assembly of the people of the court of Polycrates, Ibycus could not here compose solemn hymns to the gods, but had to accommodate his Dorian cithara, as he was best able, to the strains

artes by the name of Araxes, and confounded it with the Oxus (1, 294, seqq.). Rennell, after quoting the passages of Strabo, and others, who have expressed the same opinion, affirms that this description the Iaxartes and Oxus appear to be confounded together (Herodotus had perhaps heard certain particulars of both rivers, but might refer them to one only), for there are circumstances that may be applied to each respectively, although most of them are applicable only to the former. It may be observed, that Herodotus mentions only one large river in this part of the empire of Cyrus; that is, the river which separates it from the Massagetae, and which was undoubtedly the Iaxartes; for there is no question that Sogdia was included in the empire of Cyrus, and it lay between the Oxus and Iaxartes. The Oxus, therefore, has no distinct place in the geography of our author, although a river of much greater bulk and importance than the Iaxartes. But that the Oxus was intended, when he says that the larger stream continued its even course to the Caspian, appears probable; although the numerous branches that formed the large islands, and were afterward lost in bogs and marshes, agrees rather with the description of the Aral lake, and lower part of the Sir. (Geography of Herodotus, vol. 1, p. 270, seqq., ed. 1800.)—With regard to the tribe of the Iaxartes, and the origin of the name Iaxartes, the same writer observes as follows: "Ptolomy mentions the Iaxartes: placing them along the northern bank of the Iaxartes, throughout the lower half of the Oxus, and assigning the flattering name of the Massagetae of Herodotus and Arrian, and of the Sac of Strabo. Ptolomy may possibly have named them arbitrarily; but as there is a remnant of a tribe named Sartes, now existing between the Oxus and Iaxartes, and which are reported to be the remnants of the ancient inhabitants of the country, it is possible that this was one of the tribes of the Massagetae of Sartes; while Iaxartes may have been the true name in the country itself, and very probably gave name to the river Iaxartes at that period; of which Sir and Sirt, which are in use at present, may be the remains. Ammianus speaks of the Iaxartes as a tribe, and of good account, in lib. xxii." (Geogr. of Herodotus, vol. 2, p. 295, seqq.)—It is generally supposed that the Greeks in the time of Alexander were guilty of an error in confounding this river with the Tanais. Kinnamos holds, that the name Tanais was common to both the Iaxartes and the Oxus; the Don, people of the same race occupying at that time the banks of both streams, and using for both as appellation, the root of which (dan, tan, or don) has a general reference to water. (Consult remarks under the article Tanais.—Klaproth, Tableaux Historiques de l'Asie, p. 181.)

Iaxares, a people of Scythia. Of these there were the Iaxares Mesota, who occupied the northern coast of the Pallas Mootis; the Iaxares Metanasta (Ptol.—Compare Cellarius, Geogr., vol. 2, p. 83), who inhabited the angular territory formed by the Tibiscus, the Danube, and Dacia; they lived in the vicinity of Dacia, and are called by Pliny Sarmatae. The Iaxares Basilli, or Royal (Ovid, Ed. ex. Pont., 1, 2, 79.—Id., Trist., 2, 191), were a people of Sarmatia, joined by Strabo to the Iaxares on the boundaries of the Euxine, between the Tyrsus and the Borysthenes. Ptolomy speaks only of the Metanasta, who were probably the most considerable of the three. The territory of this latter people was, towards the decline of the empire, occupied by the Vandals, and afterward became a part of the empire of the Goths. About the year 350 they were expelled by the Huns. It has since formed a part of Hungary, and of the Bannai of Temeswar. According to the ancients, the Iaxares were the ancestors of the Iatrignes, whom the Polish authors call also Polleziani. (Balbi, Introduction a l'Atlas Ethnogr., &c., vol. 1, p. 188.)
of Anacreon. Accordingly, it is probable that the poetry of Ibycus was first turned mainly to erotic subjects during his residence in the court of the tyrant of Samos, and this love-song, which formed his chief title to fame in antiquity, were composed at this period. But that the poetical style of Ibycus resembled that of Stesichorus, is proved by the fact that the ancient critic often doubted to which of the two a particular idea or expression belonged. (Compare Athenaeus, 4, p. 172, d.—Schol. Ven. ad ii., 24, 259. — Hesych., s. v. βραδλικαρ. — Schol. ad Aristoph. A.C. 1302. Schol. Vratislav. ad Pind. Ol. 9, 138. — Elymus. Schol. C. 258. p. 98, 31.) The metres of Ibycus also resemble those of Stesichorus being in general dactylic series, connected together into verses of different lengths, but sometimes so long that they are to be called systems rather than verses. Besides these, Ibycus frequently used logaeic verses of a soft or languid character; and, in general, his rhythms are less stately and dignified, and more suited to the expression of passion, than those of Stesichorus. Hence the effeminate poet Agathon is represented by Aristophanes as appealing to Ibycus with Anacreon and Alcaeus, who had made music more sweet, and had worn many-coloured files (in the Oriental fashion), and led the Iodic dance. The subjects of the poems of Ibycus appear also to have had a strong affinity with those of Stesichorus; and so many particular accounts of mythological stories, especially relating to the heroic period, are repeated from his poems that it might be supposed he too had written long poems on the Trojan war, the expedition of the Argonauts, and other similar subjects. The erotic poetry, however, of Ibycus is most celebrated, and those productions breathed a fervour of passion far exceeding that expressed in any similar pieces throughout the whole range of Grecian literature. The death of the poet is said to have been as follows: he was assaulted and murdered by robbers, and at the moment of his death, he implored some cranes that were flying overhead to avenge his fate. Some time after, as the murderers were in the market-place, one of them observed some cranes in the air, and remarked to his companions, αϊτιον κινδυνον πάτρε τιναν! "Here are the avengers of Ibycus!" These words and the recent murder of Ibycus excited suspicion; the assassins were seized, and, being put to the torture, confessed their guilt. (Müller, Hist. Gr. Lit., p. 205. ed. 1855.)

Icarus, an island of the Ægean, near Samos, and, according to Strabo, eighty stadia due west from Ampelos, the western promontory of the latter. Pliny (4, 12) makes the distance greater, but he probably measures from the harbour at the western extremity. Mythology deduced the name of this island from Ica- rus, son of Dedalus, whose body was washed upon its shores after the unfortunate termination of his flight. Bochart, however, inclines towards a Phænician derivation, and assigns, as the etymology of the name, I-caurus, i. e., "insula piscium," the island of fish. In support of this explanation, he refers to Athenaeus (1, 24), Stephanus Byzantinus, and others, according to whom one of the early Greek names of the island was Ichthyoessa (Ἰχθυοεσσα), i.e., "abounding in fish." (Geogr. Sacr., 1, 8, sub fin.)—Icaria was of such a coast, and on its right hand, but at a time it was thinly inhabited, and the Samians used it principally for the pasturage of their cattle. The modern name is Nicaria. The island at the present day is said to abound in timber, but to be otherwise sterile; and to be inhabited by a few Greeks, very poor, and very proud of their pretended descent from the imperial line of Constantine. (Geographicae, Descrip. de Isolos, Nicaria, &c., p. 304.)

Icarus and Icaria, a name given to Penelope, as daughter of Icarius.

Icarium Maris, a part of the Ægean Sea near the islands of Myconus and Gyarus. The ancient mythologists deduce the name from Icarus, who fell into it and was drowned. But compare remarks under the article Icaria.

Icarus, I. an Athenian, father of Erigone. Having been taught by Bacchus the culture of the vine, he gave some of the juice of the grape to certain shepherds, who, thinking themselves poisoned, killed him. When they came to their senses they buried him; and his daughter Erigone, being shown the spot by his faithful dog, buried herself through grief. (Apolod. 3, 14, 7. — Hygin., fab. 240.) Icarus was failed to have been changed after death into the constellation Boötes, Erigone into Virgo, while Mara became the star Canis. (Vid. Erigone.)—II. A son of Æolus of Lacedaemon. He gave his daughter Penelope in marriage to Ulysses, king of Ithaca, but he was so tenderly attached to her that he wished her husband to settle at Lacedaemon. Ulysses refused; and when he saw the earnest petitions of Icarus, he told Penelope, as they were going to embark, that she might choose freely either to follow him to Ithaca or to remain with her father. Penelope blushed in silence, and covered her head with her veil. Icarus, upon this, permitted his daughter to go to Ithaca, and immediately erected a temple to the goddess of modesty, on the spot where Penelope had covered her blushes with her veil. Compare Boeot. Hist. B. 1. 1, 12. Dedealus, who, with his father, fled with wings from Crete to escape the resentment of Minos. His flight being too high proved fatal to him; for the sun melted the wax which cemented his wings, and he fell into that part of the Ægean Sea which was called after his name. (Vid. Icarum Maris; and consult also remarks under the article Dedealus.)

Iceni, a people of Britain, north of the Trinobantes. They inhabited what answers now to the counties of Suffolk and Huntingdon. This nation is called by several different names, as Symeni by Ptolemy, Cenimagni by Caesar, &c. They at first submitted to the Roman power, but afterward revolting in the reign of Claudius, were defeated in a great battle by Ostorius Scapula, the second Roman governor of Britain, A.D. 50, and reduced to a state of subjection. They again revolted under the command of the famous Boudicca, but were entirely defeated with great slaughter by Suetonius Paulinus in the year 61. (Vid. Brit., ii. 32.) The Iceni was totally subdued. Their capital was Venta Icenorum, now Caister, about three miles from Yortschea. (Tit. cit., 12, 31. — Cass. B. G., 5, 21. — Cellarius, Geogr. Ant., vol. 2, p. 393.)

Ichnies, I. a town of Macedonia, placed by Herodotus in Botsia, and situated probably at the mouth of the Ladias. (Herod., 7, 123.—Compare Meta, 2, 3. — Plin., 4, 10.) From other authors, cited by Stephanus, it appears that the name was sometimes written Achne.—II. A city of Thessaly, near Phyllus, and in the district of Phthiotis. The goddess Themis was especially revered here. (Strab., 438. — Hom., Hymn, in Apoll., 94.)

Ichnusa, an ancient name of Sardinia, which it received from its likeness to a human foot, ἰκνοῦθασα, from ἰκνοῦς, vetus. (Pausan., 10, 17.—Plin., 3, 7.—Sil. Italc., 12, 881.) It was also called Ratis, in Strabo, 12, 1. 19 (ῥατισ). It is probable in some very learned and curious speculations to prove that the name Ichnusa refers, not to the shape of the island, but to the establishment in it, at an early period, of the religion of the Sun. And, in support of this position, he avails himself very skilfully of the various accounts of the prints of human footsteps as found in different parts of the ancient world. (Vorkall, p. 561, sqq.)

Icthyophagi, a name given by the Greek geographers to several tribes of barbarians in different parts
IDA of the ancient world, and which indicates a people "living on fels." I. A people of Cedoras, on the coast of the Mare Erythraeum. (Plin., 6, 23.—Arrian, 6, 23.—Iblas, 26). II. A people in the northeastern part of Arabia Felix, along the coast of the Sinus Persicus. III. A people of Trogloditica, according to Strabo, southwest of the island Tapozos; probably near the straits of Dire or Bab-el-Mandeb. According to the Peuterling Table, they dwelt between Albus Portus and Berenice.

Iconium, a very ancient city of Asia Minor, and during the Persian dominion the easternmost city of Phrygia.
to the promontory of Lectum, diminishing in altitude as it proceeds towards the latter. Mr. Hawkins says that this ridge is not inferior in height to which faces the plain of Troy. Herodotus, Xenophon, and Strabo evidently design by Ida the ridge towards Troy; or at least they exclude Gargarus. The former, in describing the march of Xerxes northward from Pergamus, Thbes, and Antandros, to Ilium, makes the Persian monarch leave Ida "on his left hand" (7, 42), that is, to the west. Now the summit of Gargarus being little short of an English mile in altitude, what should have induced Xerxes to lead his army over such a ridge, when he might have gone a straighter and smoother road by avoiding it, and when, after all, he must of necessity have crossed the western ridge also in order to arrive at Ilium!—Again, Xenophon says (Anab., 7), that in his campaign (southward) from Ilium through Antandros to Adramyttium, he crossed Mount Ida. Of course it must have been the western and southern ranges, as is done at present by those who travel from the Dardanelles to Adramytt or Adramyttium. Strabo unquestionably refers the ideas of Demetrius respecting the mountains of Cotylus (i.e., Gargarus) and its views to the "Trojan Ida; never supposing that the lofty mountain over Antandros and the right, and of the Illyrian, the highest point of Ida," whence Demetrius derives the fountain of the Scamander, the AEsopus, and the Granicus. Strabo concluded that all these rivers sprang from that chain of Ida bordering on the Trojan plain which he had in view from the seacoast; and which, it appears, was the only Ida known to him. (Rennell's Observations on the Topography of Troy, p. 17, seqq.)—Ida was remarkable for its thick forests and excellent timber. Its name is thought to be derived from the circumstance of its being covered with woods, ἰδαῖα κατρεφός, as Herodotus says of a part of Media (1, 110). It was the source of many streams (Hom., II., 12, 19), and on Ida also Paris adjudged to Venus the prize of beauty.—II. The highest and most celebrated mountain of Crete, rising nearly in the centre of the island. According to Strabo, it was 600 stadia in circuit, and around its base were many large and flourishing cities. (Strab., 475. — Compare Dionys. Perieg., v. 501.) The summit, named Panacra, was especially sacred to Jove. (Callim., Hymn. in Jov., 50.) Here Jove was said to have been educated by the Curebantes, by whom he was afterwards called Idai. The modern name of the mountain is Psiloritis. (Cranev. Anc. Greece, vol. 3, p. 381.)

Ida, the surname of Cybele, because she was worshiped on Mount Ida. (Lace., 2, 611.)

Idai Daedyls, priests of Cybele, who, according to Ephorus (ap. Diood. Soc., 6, 64. — Fragm. ed. Marx, p. 176), were so called from Ida, the mountain of Phrygia, where they had their abode. The poets and mythologists vary much in their accounts of this class of individuals. Some make them to have been the sons of Jupiter and the nymph Ida; others confound them with the Curebantes or Curebantes; while others say they are the Curebantes. The same diversity of opinion exists as to their number. Some make them to have been only five (Pausan., ed. 5, 7), and hence they suppose they have been called Daetyli, from the analogy between their number and that of the fingers (δάκτυλοι) on each hand. Others make the number much larger. Pherecydes, one of the early Greek historians, spoke of 20 Idai Daetyli placed on the left and of 12 on the right. The guards on the left, all workers in iron, and, moreover, expert in sorcery. (Schol. ap. Apoll. Rh., 1, 1192. — Pherecyd., fragm., ed. Sturtz, p. 146.) Hellenicus pretended that the Daetyli on the right were occupied with breaking the charm formed by those on the left. In one thing all the ancient authorities agree, namely, that the Idai Daetyli first taught mankind the art of working iron and copper. (Clem. Alex., Strom., 1, p. 420.) The Chronicle of Paros places the date of this discovery under the reign of Pandion, king of Athens, that is to say, 1432 years before the Christian era. (Marm., Oxon. Epoch., 11.) Strabo informs us, that, according to some ancient writers, the Curetes and the Corybantes were the offspring of the Idai Daetyli; that 100 men, the first inhabitants of Crete, were called by this latter name; that these begat nine Curetes, and that each one of these nine begat in his turn ten sons, named Idai Daetyli like their grandfathers. (Strabo, 473, seqq.) Strabo remarks on this occasion, with great good sense, that early antiquity was accustomed to throw the garb of fable around many notions based in reality on the nature of things. An ingenious antiquity of modern times, struck by the truth of this remark, and the same story in the Cretan annals as an etymology of ἄξις (finger), and then adds, with every appearance of reason, that the numbers 100, 9, and 10, applied to the Daetyli and the Curetes, belong probably to some arithmetical or physical theory. As to the name Daetyli itself, whether we must seek its etymology in the number of fingers on each hand, or else in the latter idea of measure, and, consequently, of cadence, equally derived from the movement of the fingers, and identical, besides, with the name of the mountain, it is thought that, in forging iron by the aid of their hands and fingers, the Daetyli observed first a species of dactylic rhythm, and that these forgers were the first that applied the dance to this same rhythm; from all which arose their peculiar name. (Jomard, sur le Système Métrique des anciens Egyptiens.—Descript. de l'Egypte, Antiquités, Mémoires, vol. 1, p. 744, seqq.)

Idaia, a height and grove of Cyprus, near the promontory of Pedalium. It was the favourite abode of Venus, hence called Idalia, and here, too, Adonis was killed by the tooth of the boar. Virgil speaks of this hill or mountain under the name of Idadium (En., 1, 681), and shortly after makes mention of the groves of Idalia (1, 693). By this last is meant the entire region (Ἰδαία χώρα. — Heyne, ad Virg., i. c.). On another occasion (En., 10, 86), he speaks of a city named Idalium. (Compare Theocritus, 15, 101. Φολογρος τε και Ιδαλιον. — Steph. Byz., s. v.) The city or town of Idalium is passed over in silence by the ancient geographical writers. It is first referred to by the later scholars. (Serv., ad Virg., En., 1, 681. Schol. ad Theocr., 16, 101.) It no doubt existed from an early period, but was too insignificant to excite attention. D'Anville is inclined to make the modern Dailin correspond to the ancient grove and city; and he is led to sign the name "Idas and the goddess," in the Pharnician tongue. (Bochart, Geogr. Sac., lib. 1, c. 3, p. 356. — Compare Gale's Court of the Gentiles, as cited by Clarke, Travels, vol. 4, p. 36, Lond. ed., 1817.)

Idas, a son of Aphaeae, famous for his valour. He was among the Argonauts, and married Marpesa, the daughter of Euneus, king of Aetolia. Marpesa was carried away by Apollo, and Idas pursued him and killed him. (Marpes. — Pherecyd., fragm.) According to Apollodorus, Idas, with his brother Lynceus, associated with PolLux and Castor to carry away some flocks; but, when they had obtained a sufficient quantity of plunder, they refused to divide it into equal shares. This provoked the sons of Leda: Lynceus was killed by Castor, and Idas, to revenge his brother's death, immediately slew Castor, and, in his terror to avoid the same fate, killed PolLus, according to Pausanias, the quarrel between the sons of Leda and those of Aphaea arose from a different cause. Idas and Lynceus, as they say, were going to celebrate their nuptials with Phoebe and Hilara, the two daughters of Leucippus; but Castor and PolLux, who had been invited to partake the common festivities, carried off the brides, and Idas and Lynceus
fall in the attempt to recover their wives. (Hygin., fab., 14, 100, &c.—Orid. Fast., 5, 700.—Pausan., 4, 2; 5, 18.—Apollod., 3, 11, 2.)

Idastevus, a plain of Germany, where Germanicus defeated Arminius. The name appears to have some affinity to the German word *weise*, signifying "a meadow." Mannert supposes the field of battle to have been on the east of the Wazer, south of the city of Middelburg. (Mannert, Anc. Geogr., vol. 3, p. 85.—Tazett., Anm., 9, 16.)

Idmon, I., son of Apollo and Asteria, was the prophet of the Argonauts. He was killed in hunting a wild boar in Bithynia, and received a magnificent funeral. He had predicted the time and manner of his death. (Apollod., 1, 9.—II. A dyer of Colophon, father to Arachne. (Orid., Met., 6, 8.)

Idomeus (four syllables). I. succeeded his father Deucalion on the throne of Crete, and accompanied the Greeks in their expedition against Troy. (Hesychius.) He promised his daughter Idomeneus, that he would leave Crete, and go abroad in quest of a settlement. He came to Italy, and founded a city on the coast of Calabria, which he called Sallentia. (Vid. Sallentini.) He died at an advanced age, after he had the satisfaction of seeing his new kingdom flourish and his subjects happy. According to the Greek scholar on Lycophron (v. 1218), Idomeneus, during his absence in Italy, refused the management of his kingdom to Leucos, to whom he promised his daughter Clisithere in marriage at his return. Leucos at first governed with moderation; but he was persuaded by Nauplius, king of Euboea, to put to death Meda, the wife of his master, with her daughter Clisithere, and to seize the kingdom. After these violent measures, he strengthened himself on the throne of Crete; and Idomeneus, at his return, found it impossible to expel him. (Hesychius.)—Orid., Hygin., fab., 92.—Hom., II., 11, &c.—Pausan., 5, 25.—Vig., En., 3, 122.)—II. A Greek historian of Lampsacus, in the age of Epicurus. He wrote a history of Samothrace.

Ióthéea, a daughter of Priestus, king of Argos. She was cured of insanity, along with her sisters, by Melampus. (Vid. Priérides.)

Iovma, a range of mountains in Spain, commencing among the Cantabri, and extending nearly in a southeastern direction through Spain until it terminates on the Mediterranean coast, near Saguntum, which lay at its foot. Such, at least, is its extent, according to Strabo. Ptolemy, however, gives merely a part of it, from Casar Augusta, or Saragossa, to Saguntum. (Strab., 161.—Mannert, Geogr., vol. 1, p. 406.)

Iuduma, a country of Asia, on the confines of Palestine and Arabia, or, rather, comprehending parts of each, having Egypt on the west, and Arabia Petraea on the south and east. It extends varied at different periods of time. Esau or Edom, from whom it derived its name, and his descendants, settled along the mountains of Scin, on the east and south of the Dead Sea, whence they spread themselves by degrees through the western part of Arabia Petraea, and quite to the Mediterranean. In the time of Manasseh and even of the Jewish kings, they were hemmed in by the Dead Sea on one side, and the Sinus Ælanitis on the other. But the Iuduma of the New Testament applies only to a small part adjoining Judæa on the south, and including even a portion of that country, which was taken possession of by the Edomites or Idu- means, while the land lay unoccupied during the Babylonian captivity. The capital of this country was Hec- bron, which had formerly been the metropolis of the tribe of Judah. These Idumeans were so reduced by the Macabees, that, in order to retain their possessions, they consented to embrace Judaism, and their territory became incorporated with Judæa; although, in the time of our Saviour, it still retained its former name of Iuduma. Strabo divides it into Eastern and Southern Iuduma, with reference to its situation from Palestine. The capital of the former was Bozra or Bosara, and of the latter, Petra or Jacobae. Iuduma was famous for its palm-trees. (Vig., Geogr., 3, 12.) The country in general was hot, dry, mountainous, and in some parts barren. It is now inhabited by some tribes of wild Arabs. (Plin., 5, 13.—Jude., 8, 160.—Stat., Stil., 5, 2.—Mart., 10, 50.—Josephus, Ant. Jud., 2, 1—Id., Bell. Jud., 4, 30.)

Iynysus, a city of Syria, not far from Gaza. The modern village of Kan-Jones marks the ancient site. (Herod., 3, 5.—Rennell, Geogr. Herod., vol. 1, p. 342, ed. 1830.)

Jericho (in Greek Ἰεριχως, gen. ἱερίχων), a city of Judæa, in the tribe of Benjamin, about seven leagues to the northeast of Jerusalem, and two from the river Jordan. Jericho was captured by the Israelites under Joshua, who destroyed it. A new city was afterward built by Hiel of Bethel, but it would seem that before the time of Hiel there was another Jericho built near the site of the old. The situation of this city is said (2 Kings, 2, 19) to have been very pleasant, but "the water naught and the ground barren;" when Elisha, at the entreaty of the inhabitants, "healed the water," and rendered it wholesome and abundant. It is urged as probable by some of our Saviour, it still retained its former site of ancient Jericho may be proved to have been about four miles higher up the valley, on the west of Eiraha, and not far from its commencement on this side, at the foot of the mountains. Here Mr. Buckingham found a large square area, enclosed by long and regular mounds, uniform in their height, breadth, and angle of slope, which seemed to mark the place of encircling walls, now only in mounds. Besides which, the foundations of other walls in detached pieces, portions of ruined buildings of an indefinable nature, shafts of columns, &c., were seen scattered about over the widely-extended heaps of this ruined city, which seemed to cover a surface of square miles. These remains, nothing of which kind is to be found at Eiraha, may be considered as sufficient to determine the position of ancient Jericho; besides which, to re- move all Jericho was the subject, they agree exactly with the required distance from Jerusalem on one side, and the Jordan on the other, as given by Josephus, who makes it 150 furlongs from the former, and 60 from the latter. The plain of Jericho extends eastward to the Jordan, and is nearly enclosed on all sides by barren and rugged mountains. This circumstance, with the lowness of its level, renders it extremely hot; so much so as to enable the palm-tree to flourish, which is not the case in any other part of Judea. Jericho itself was indeed always celebrated for the abundant growth of this tree, which obtained for it the name of "the city of palm-trees." (Deut., 34, 3—Judges, 1, 16; 3, 13.) Josephus says, that in his time the
neighbouring country abounded in thick groves of these trees, together with the tree which afforded the balm or balsam of Gilead. At present, however, there is no trace of any kind, either palm or balsam, nor are any verdure or bushes, to be seen about the site of this desolate city. But the desolation with which its ruins are surrounded is rather to be ascribed, according to Mr. Buckingham, to the cessation of the usual agricultural labours on the soil, and the want of a distribution of water over it by the aqueducts, the remains of which evince that they were constructed chiefly for that purpose, than to any change in the climate; an observation which may be explicable in its tendency to many parts of the Holy Land. (Mansford’s Scripture Gazetteer, p. 208, seqq.)

Isreal, one of the ancient names of Ireland. Pythecas, who, to his own personal acquaintance with this quarter of the globe, added much information respecting it, which he had obtained from the early inhabitants of Gades in Spain, is the first who calls Ireland by the name of Isreal (ἔρημος). From Aristotle, a contemporary of his, we learn that what are now England and Ireland were then denominated Βρατασκαί ἱμηροί. (De Mundo, c. 3.) In Caesar’s commentaries a change of appellation appears. England is there styled Britannia, and Ireland, Hibernia. (B. G., 5, 12, &c.)

The idea very naturally suggests itself, that Caesar may have given this name to the latter island of his own accord, for the purpose of denoting the severity of its climate, and that the meaning of the term is not derived from any modern country. This supposition, however, although it may wear a plausible appearance, seems to have no foundation whatever in fact. It is more than probable that Caesar gives the name as he heard it from others, without associating with it any idea of cold. He merely places the island to the west of Britain. It was Strabo who made it lie far to the north, and, in consequence of this error, first gave rise to the opinion, that the island itself was entirely uninhabited; that the climate of Ireland was cold and rigorous. But a question here presents itself, whether Euris or Hibernia be the true appellation of this island. The latter, we believe, will, on examination, appear entitled to the preference. It is more than probable that Pytheas received the name Isreal from the mouths of the neighbouring nations, contracted from Hibernia. This supposition would approach to certainty, if we postulate a substantial fact, the supposition, that the appellation Hiberni, which is given to the inhabitants of the island, was used in the old accounts respecting it, and not first introduced by so late a writer as Avienus. A strong argument may be deduced, however, from what appears to have been the ancient pronunciation of the word Hibernia. The consonant b may have been softened down so as to resemble b in sound, a change far from uncommon; and hence Hibernia would be pronounced as if written Ierou, whence Isreal may very easily have been formed. (Consult remarks under the article Ierou.)

The modern name Erin, which is sometimes applied to Ireland, is an evident derivation from Isreal, if not itself the ancient Erse root of that term. Ireland was known at a very early period to the ancient mariners of southern Europe, by the appellation of the Holy Island. This remarkable title leads to the suspicion that the Druidical system of worship may have been in Ireland. Caesar, it is true, found Druids in Gaul, but he states, at the same time, that they were always sent to complete their religious education in Britain; and we shall perceive, if we compare later authorities, that the sanctuary of the Druids was not in Britain itself, but in the island of Anglesea; between which and the adjacent coast of Ireland the distance across is only 86 miles. Had the Romans extended their inquiries on this subject to Ireland itself, we should evidently have received such accounts from them as would have substantiated what has just been advanced. As regards the early population of this island, it may, we believe, be safely asserted, that it was inhabited by the same people, that the northern half of the country was peopled by the Scoti; not only because in later years we find Scoti in this quarter as well as on the Isle of Man, but because even at the present day the Erse language is not completely obliterated in some of the northern provinces. The southern half of the island seems to have had a Celtic population. It is a very curious fact, however, that the names of many places in ancient Ireland, as given by Ptolemy, bear no resemblance whatever to either to Scottish or Celtic appellations. This has given rise to various theories, and, in particular, to one which favours the idea of migrations from the Spanish peninsula. Tacitus considers the Situles in Britain as of Spanish origin; but this supposition is merely grounded on an accidental resemblance in some national customs. Inquiries have been made in modern days into the Basque language, which is supposed to contain traces of the ancient Iberian, but no analogy has been discovered between it and the modern Irish. The Roman arms never reached Ireland, although merchants of that nation often visited its coasts. From the accounts of the latter, Ptolemy obtained materials for his map of this island. It is worthy of remark, that this geographer does not name a single place in northern Scotland, whereas, in the same quarter of the sister island, he mentions as many as 10 cities, all capable of making doubt of the number situate on the coast. Is not this a proof that Ireland, at this early period, had attained a considerable degree of civilization? A barbarous people never found cities on the coast. In addition to what has thus far been remarked, it may be stated that Herodotus was equally ignorant of Ireland and Britain. Eratosthenes gives a general and rude outline of the latter, but knew nothing of the former. Caesar was driven, in the same knowledge, to form a very imperfect, of both. Pliny’s information, with regard to both Britain and Ireland, greatly surpasses that of his predecessors. Diodorus Siculus calls the latter Iris or Irin, and copies a foolish story of the natives being cannibals. (Mannert, Geogr., vol. 2, p. 33, seqq.)

Jerusalem, the capital of Judea. (Vid. Hierosoly- mæ.)

Igualdina, a town of Mauretania Cesariensis, west of the mouth of the river Ampsagas, and near of Citra. It is now Gigeri or Jigel. (Phryn, 2, 2.—Amm. Mar- cell., 29, 5.)

Igltum, now Giglio, an island of Italy, near the coast of Etruria, off the promontory of Argentarius. The thick woods of this island served as a place of refuge for a great number of Romans, who fled from the sack of Rome by Attila. (Mela, 2, 7.—Rutilius, R., I, 20.)

Ignatius, a martyr who suffered at Rome during the third persecution of the Christians. He was a Syrian by birth, and an immediate disciple of St. John the Evangelist, who, in the 67th year of the Christian era, committed the church at Antioch to his pastoral superintendence, as successor to Evodius. Over this bishopric he presided for upward of 40 years, when Emperor Trajan, after his triumph over the Dacians, ex- cepting some severities exercised many severities towards those who professed the Christian faith, and summoned the prelate himself before him, on which occasion Ignatius conducted himself with such boldness in the imperial presence, that he was forthwith sent to Rome, and ordered to be exposed in the amphitheatre to the fury of wild beasts. This dreadful death he underwent with great fortitude, having availed himself of the interval between his sentence and its execution to strengthen, by his exhortations, the faith of the Roman converts. Af- ter his decease, which took place A.D. 107, or—
ing to some accounts, A.D. 1116, his remains were carried to Antioch for interment. — If, as some suppose, Ignatius was not one of the little children whom Jesus took up in his arms and blessed, it is certain that he conversed familiarly with the apostles, and was perfectly acquainted with their doctrine. Of his works there remain seven epistles, edited in 1845 by Archbishop Usher, republished by Cotelerius in 1672, in his collection of the writings of the apostolical fathers; and again printed in 1697 at Amsterdam, with notes, and the commentaries of Usher and Pearson. An English translation of them, from the pen of Archbishop Wake, is, to be found among the works of that prelate. There are some other letters of minor importance, which, though the question of their authenticity has met with supporters, are generally considered to have been attributed to him on insufficient authority. — II. A patriarch of Constantinople, about the middle of the ninth century. He was son to the Emperor Michael Copapala-
tas, and on the deposition of his father assumed the ecclesiastical habit. The uncompromising firmness which he displayed after his elevation to the patriarchal chair in 847, in subjecting Bardas, a court-favour-
ite, to the censure of the church, on account of an inc-
estuous connexion, caused him to undergo a temporary deprivation of office. Under Basil, however, he was restored to his former dignity, and presided in his capacity of metropolitan at the eighth general council. His death took place about the year 788. (Gorton’s Biogr. Dict., vol. 2, p. 162.)

Iguvium, a city of Umbria, on the Via Flaminia, to the south of Tiferurn, and at the foot of the main chain of the Apennines. It is now Eugiubbo, or, as it is more commonly called, Gubbio. Iguvium was a municipal town; and, as it would seem from the importance attached to its possession by Caesar when he invaded Italy, a place of some consequence in earlier times. (Cass. Bell. Civ., 1, 2.—Compare Cæd. ad Att., 7, 13.—Plinein, 3, 14.) This city has acquired great celebrity in mod-
er times, from the discovery of some interesting monuments in its vicinity, in the year 1440. These consist of several bronze tablets covered with inscrip-
tions, some of which are in Umbrian, others in Latin characters. They have been made the subject of many a learned dissertation by modern literati. The most curious work on the subject is by Grotenfelt, enti-
titled Rudimenta Linguae Umbriaca, 4to, Hanovri, 1835-39.

Ilba or Ilva, an island of the Tyrrhenian Sea, off the coast of Etruria, and about ten miles from the prom-
ontory of Populonium. It was early celebrated for its rich iron mines; but by whom they were first discover-
ed and worked is uncertain, as they are said to ex-
hbit the marks of labours carried on for an incalculable time. (Pinti, Osserv. Maj. sulla miniera de ferro di Rio, &c., 1777, 8vo.—Lettre sur l’histoire naturelle de l’île d’Elbe, par Koestlin, Vienna, 1780, 8vo.) It even seems to have been a popular belief among the ancients, that the metallic substance was constantly renewed. (Aristot., de Min., p. 1158.—Strabo, 223. —Plinein, 34, 14.) It is probable that the Phoencians were the first to make known the mineral riches of this island, and that it was from them the Tyrrheni learned to estimate its value, which may be said to have held out to them no small inducement for settling on a coast otherwise deficient in natural advantages. It is to the latter people that we ought to trace the name of Æthalia, given to this island by the Greeks, and which the latter derived from ἀθάλος (to burn), in allusion to the number of forges on the island. According to Polybius (ap. Steph. Byz.), the same appellation was given to Æthalia, a Tyrrhenian settlement in early times. Ilva is now Elba. (Cramer’s Anc. Italy, vol. 1, p. 210.)

ILERCAÑES, a Spanish tribe, east of the Edetani, on both sides of the Iberus, near its mouth. Dertosa (now Tartosa) and Tarraco (now Tarragona) were two of their towns. (Ubert, Geogr., vol. 2, p. 418.)

ILERDA, the capital city of the Ilergetes in Spain, situate on the Sicoris or Segre, a tributary of the Iber-
us. (Strabo, 161.) The situation of this place, near the foot of the Pyrenees, exposed it incessantly to the horrors of war, from the time that the Romans be-
gan to penetrate into Spain. It was celebrated for the resistance it made against Caesar, under the lieutenant of Pompey, Afranius and Petreius, who were, how-
ever, finally defeated. (Caes., B. Civ., 1, 61.—Flor.

Ilergetes. Vid. Ilerda.

A.D., 4, 12.—Appian, B. Civ., 2, 42.) In the reign of Gallienus it was almost entirely destroyed by the bar-
barians, who, migrating from Germany, ravaged the western parts of the empire. It is now Lerida in Catalonia. (Asaun., Epist. ad Paulin., 26, 59.—Id., Profess., 23, 4.—Ubert, Geogr., vol. 2, p. 461.)

Ili Company. — See CHALCIDEUM.

Ili, otherwise called Rhea Silvia, daughter of Nu-
imor, king of Alba, was appointed one of the vestal virgins by Amulius, after the latter had wrested from his brother Numitor the kingdom of Alba. Amulius made his niece a vestal to prevent her having any off-
spring, the vestals being bound to perpetual chastity. Mars, however, according to the old legend, overpow-
ered the timid maiden in the sacred grove, whither she had gone to draw water from a spring for the ser-
vice of his worship. Thus was the chief source of the bountiful rainfall. His death took place about the year 2788.
not till the age of the grammarians that its primitive integrity was called in question; nor is it injustice to assert, that the minute and analytical spirit of a grammarian is not the best qualification, for the profound feeling, the comprehensive conception of an harmonious whole. The most exquisite anatomist may be no judge of the symmetry of the human frame, and we would take the opinion of Chantrey or Westmacott on the proportions and general beauty of a form rather than that of Mr. Brodie or Sir Asley Cooper. There is some truth, though some malicious exaggeration, in the lines of Pope:

'The critic, that, micro scope of wit,
Sees hairs and pores, examines bit by bit:
How parts relate to parts, or they to whole;
The body's harmony, the beaming soul;
Are things, which Kuster, Burnman, Wasse, shall see,
When man's whole frame is obvious to a flea.'

We would not comprehend, under this sweeping denunciation, men of genius as well as critical sagacity, such as Heyne and Wolf, still less those of the highest poetical feeling, who, both in this and other countries, are converts to their system. Yet there is a sort of contagion in literary as well as religious scepticism; we like, in scholarship, to be on the stronger side, and the theory of the ancient world is that of the Wolf, and Heyne would swamp a host of followers into their train. In the authors of a paradox, criticism, like jealousy, furnishes the food which it grows on; and it is astonishing, when once possessed with a favourite opinion, how it draws from trifles confirmation strong, and overlooks the most glaring objections; while, if the new doctrine once forces its way into general notice, ardent proselytes crowd in from all quarters, until that which was at first a timid and doubtful heresy, becomes a standard article of the scholar's creed, from which it requires courage to dissent. Such to us appears to have been the fate of the hypotheses before us.

For, in the first place, it seems that many of the objections to the original unity of the poem apply with equal force to the Pisistratid compilation. It is, for instance, quite as likely, that in the heat of composition the bard should have forgotten something; that, for example, reference to his own character, his poetical claims, the Pythian names, whom he had slain outright in the fifth book, should revive, gallantly fighting, in the thirteenth; and thus, in a different way from the warrior of the Italian poet:

'Andare combattende, ed esser morto.'

The slow and cautious compiler is even less likely to have made such an oversight than the rapid and inventive poet; and, by-the-way, Sancho Panza's wife's name is changed, through Cervantes' forgetfulness of such trifles, in the second part of Don Quixote; but no such lapsus can be alleged against the spurious continuator of the romance, Avellenada. Nor, secondly, will any critical reader of Homer pretend that we possess the Homeric poems entire and uninterpolated. That they were, at one period of their history, reckoned broken fragments; that the wandering rhap- sodists would not scruple to insert occasionally verses of their own; that certain long and irrelevant passages of coarser texture may have thus been interwoven into the rich tissue of the work—all these points will readily be conceded; but while these admissions explain almost every discrepancy of composition and anomaly of language and versification, they leave the main question, the unity of the original design, entirely untouched. We will hazard one more observation before we venture to throw down our glove in defence of the suspected unity of the Iliad. If, on Heyne's supposition (for the objection does not strictly apply to that of Wolf), the Iliad was compiled from scattered fragments of ancient poetry in the age of the Pisistratid, it is surely unaccountable that, considering the whole of the Trojan war must have been a favourite subject with these wandering bards, all the more valuable part of this poetry should easily combine into a plan, embracing only so short a period of these ten years of splendid Grecian enterprise. Had not one of these numerous Homers touched with Homeric life and truth any of the other great poetical events which preceded, or the still more striking incidents which succeeded? In such a case, the object—the destruction of the city, for instance—the midnight devastation of ancient Ilium! We are far from asserting that many passages of the Iliad—as the adventures of Diomed, the night enterprise of Diomed and Ulysses, with the death of Rhesus—necessarily belong to that period of the war; it is possible that they may have been inlaid into the work by a later and a foreign hand; but it is somewhat incredible that the compilers should have been able to condense the whole of the nobler Homeric poetry into the plan of the Iliad and Odyssey; and if they rejected any passages of equal merit, what became of them? Did they form the poems of Arctinus, Stasinus, and Leschis? were they left to be moulded up in the Cyclic poems? But how immeasurably inferior, by the general consent of Greece, was all the rest of their epic poetry to the Iliad and the Odyssey! Is it probable they rejected better passages in the poem of Quintus Calaber, or but slightly modified, from the Cyclic poets; but how rarely do we recognise the clear, the free, the Homeric life and energy of the two great poems! But we must go farther. To us, we boldly confess, the fable of the Iliad is, if not its greatest, among its greatest perfections: the more we study it, like a vast and various yet still uniform being, the more it assumes a distinct relation of parts, a more admirable consonance in its general effect: it is not the simple unity of the single figure, as in the Odyssey, but it is the more daring complexity of the historical design, the grouping of a multitude of figures, subordinate to the principal, which appears the more lofty from the comparative height of those around him. The greatness of Achilles in the Iliad is not that of Tencrifice, rising alone from the level surface of the other, but that of the loftiest peak of a gradually ascending chain; he is surrounded by giants, yet still collo superfeminat omnes. Much of the difficulty has arisen from seeking in the Iliad a kind of technical unity, foreign to the character and at variance with the object of the primitive epic: it is a unity, as a French critic, La Motte, long ago remarked, of interest. Mr. Coleridge has sensibly observed, 'it may well, indeed, be doubted whether the alleged difficulty is not entirely the critic's own creation; whether the presumption of the necessity for a pre-arranged plan, exactly commensurate with the extent of the poem, is not founded on a misconception of the history and character of early heroic poetry.' The question is not, whether the whole fable is strictly comprised within the brief proposition of the subject, in the simple exordium, but whether the hero's mind is carried on, constant and unchanging excitement; whether, if the bard had stopped short of the termination of his poem, he would not have left a feeling of dissatisfaction on the mind; at least, whether every event, even to the lamentations over the body of Hector, does not flow so naturally from the main design, and seem so completely to carry us on in an unbroken state of suspense and intense curiosity, that even to the last page we are almost inclined to regret that the strain breaks off too soon:

"The angel ended, and in Adam's ear
So charming left his voice, that he a while
Thought him still speaking."
dividers of the Iliad, have zealously sought out every apparent discrepancy and contradiction in the several parts of the poem, some diligent student, on the other side, would examine into all the fine and delicate allusions between the most remote parts—the preparations in one book for events which are developed in another—the slight prophetic anticipations of what is to come, and the equally evanescent references to the past—those artificial and undesigned touches which indisputably indicate that the same mind has been perpetually at work in a subtle manner than is conceivable in a more recent compiler. This has been done in a few instances by M. Lange, in his fervent vindication of the unity of the Iliad, addressed to the celebrated Goethe; in more by Mr. Knight, who has applied himself to obviating the objections of Heyne, but still not so fully or so perfectly as, we are persuaded, might be done. It is obviously impossible for us, in our limited space, to attempt an investigation at once so minute and so extensive, nor can we find room for more than a brief and rapid outline of that unity of interest which appears to us to combine the several books of the Iliad, if not into one preconceived and predistributed whole, yet into one continuous story; in which, however, the main object be at times suspended, and apparently almost lost sight of, it rises again before us, and asserts its predominant importance, while all the other parts of the design, however preeminent, are bound up in and acknowledge their due subordination to that which is the central, the great leading figure of the majestic group. The general design of the Iliad, then, was to celebrate the glory of the Grecian chieftains at the most eventful period of the war before Troy; the especial object, the pre-eminent glory of the great Thessalian chieftain, during this at the same time the most important crisis of his life. The first book shows us his absence from the action; a fact which is well known to be a necessary part of the poem: Achilles stands forth as the assertor of the power of the gods—the avenger of the injured priesthood—taking the lead with the acknowledged superiority due to his valor, bearding the sovereign of men, the great monarch, who commands the expedition. Wronged by Agamemnon, so as to enlist the generous sympathies on his side, yet without any disparagement to the dignity of his character, he recedes into inaction, but yet preserves that power which more properly is his. In another respect, nothing shows the good fortune, or, rather, the excellent judgment of the poet, so much as this dignified secession through so large a part of this poem. Had Achilles been brought more frequently forward, he must have been successfully resisted, and thus his pre-eminent valour have been disparaged; or the poet must have constantly raised antagonists more and more valiant and formidable, in the same manner as the romancers with tigers, in order to keep up the fame of their Amadis or Esplandian, to go on creating more tall, and monstrous, and many-headed giants, till they have exhausted all imaginative dimensions, and all calculable multiplication of heads and arms. The endless diversity of his adventures permits Ulysses, in the Odyssey, to be constantly on the scene. His character rises with the dangers to which he is exposed and in bold relief; the element which makes him now, and the gods. Achilles could scarcely be in danger, for his antagonists must almost always be men. It is surprising how much the sameness of war is varied in the Iliad, but this chiefly arises from its fluctuations, which could scarcely have taken place in the presence of Achilles, without lowering his transcendent powers. Yet, though he recedes, Achilles is not lost to our sight; like the image of Brutus in the Roman procession, his absence is a part of his preparations and in bold relief, under the influence of the moment; some allusion is made to his superior valour, power, or even beauty and swiftness, rivets our attention. In the mean time, the occasion is seized for displaying the prowess of the other great chieftains; they are led forth in succession, exhibiting splendid valour and enterprise, but still are found wanting in the hour of trial; the gallantry of Diomed, the spirit of Memelias, the heavy brute force of Ajax, the obstinate courage of Idomeneus—even the power and craft of the deities, are employed in vain to arrest the still advancing, still conquering forces of Hector and the Trojans, till at last they are thundering before the outworks of the camp, and forcing their way into its precincts. Not that the progress of Trojan success is rapid and continuous; the war fluctuates with the utmost variety of fortune; the hope and fear of the hearer is in a constant state of excitement, lest Hector should fall by a meaner hand, and, notwithstanding the proud ascension of Achilles, Greece maintain her uninterrupted superiority. Still, on the whole, Jove is inexorable; the tide of Trojan success swells onward to its height; Patroclus, in the arms of Achilles, arrests it for a time, but in vain; it recoils with redoubled fury; up to the instant, the turning point of the poem, the tremendous crisis for which the whole Iliad has hitherto been, as it were, a skilful prelude; when, unarmed and naked, Achilles, with his voice alone, and by the majesty of his appearance, blazing with the manifest terrors of the deity, arrests at once and throws back the tide of victory; and from that moment the safety, the triumph of Greece, are secure, the fate of Hector and of Troy is decided; the tide of war, of battle, of opportunity, mingled with the mysterious awe attendant on a being envioned by the gods, is the most sublime in the whole range of poetry. (I., 18, 245.) 'The only parallel to this unrivalled passage is the crisis or turning point in the fortunes of the Odyssey, when Ulysses throws off at once his base disguise, leaps on the threshold, and rains his terrible arrows among the covering suitors. There is the same mingling of the supernatural with the natural, the poetical with the epic. He who has never read and compared, without feeling, however from all other reasons sceptics as to the single authorship of the two great poems, an inward and almost irresistible conviction of the identity of mind from which they spring—that convergence, as it were, of the whole interest to a single point, and that point—that τετηρησμα, as the Greek critics would call it—brought out with such intense and transcendent energy, the whole poem is the production of one mind, one heart, one soul, one unceasing preparation. Each seems too original to be an imitation, and though apparently of the same master, of that master by no means servilely copying himself. On no part of the Iliad has so much been written as on the armour framed by Vulcan, more especially on the shield of Achilles. We would only point out the singular felicity of its position, as a quiet relief and resting-place between the first sudden breaking forth of the unarmed Achilles, and his more prepared and final going out to battle; two passages which, if they had followed too close upon each other, would have injured the distinctness and completeness of each. Of the final going forth of Achilles to battle, his irresistible prowess, his conflict with the River God, and his immediate superiority over the appalled and flying Hector, nothing need be said, but that it fully equals the high-bred contest of the element heroes and gods. Achilles could scarcely be in danger, for his antagonists must almost always be men. It is surprising how much the sameness of war is varied in the Iliad, but this chiefly arises from its fluctuations, which could scarcely have taken place in the presence of Achilles, without lowering his transcendent powers. Yet, though he recedes, Achilles is not lost to our sight; like the image of Brutus in the Roman procession, his absence is a part of his preparations and in bold relief, under the influence of the moment; some allusion is made to his superior valour, power, or even beauty and swiftness, rivets our attention. In the mean time, the occasion is seized for displaying the prowess of the other great chieftains; they are led forth in succession, exhibiting splendid valour and enterprise, but still are found wanting in the hour of trial; the gallantry of Diomed, the spirit of Memelias, the heavy brute force of Ajax, the obstinate courage of Idomeneus—even the power and craft of the deities, are employed in vain to arrest the still advancing, still conquering forces of Hector and the Trojans, till at last they are thundering before the outworks of the camp, and forcing their way into its precincts. Not that the progress of Trojan success is rapid and continuous; the war fluctuates with the utmost variety of fortune; the hope and fear of the hearer is in a constant state of excitement, lest Hector should fall by a meaner hand, and, notwithstanding the proud ascension of Achilles, Greece maintain her uninterrupted superiority. Still, on the whole, Jove is inexorable; the tide of Trojan success swells onward to its height; Patroclus, in the arms of Achilles, arrests it for a time, but in vain; it recoils with redoubled fury; up to the instant, the turning point of the poem, the tremendous crisis for which the whole Iliad has hitherto been, as it were, a skilful prelude; when, unarmed and naked, Achilles, with his voice alone, and by the majesty of his appearance, blazing with the manifest terrors of the deity, arrests at once and throws back the tide of victory; and from that moment the safety, the triumph of Greece, are secure, the fate of Hector and of Troy is decided; the tide of war, of battle, of opportunity, mingled with the mysterious awe attendant on a being envioned by the gods, is the most sublime in the whole range of poetry. (I., 18, 245.)'
tempt the poet, assured of his hearer's profound sympathy, to prolong the strain. The last book, unnecessary as it seems to the development of the wrath of Achilles, yet has always appeared to us still more remarkably conducive to the real though remote design of the Iliad. We have before observed, that the premature and preadverted mind of the poet seems to have delighted in relieving the savage conflict with traits of milder manners; and the generous conduct of Achilles towards his touching respect for the aged Priam, might almost seem as a prophetic apology to a gentler age for the barbarity with which the poet might think it necessary to satisfy the implacable spirit of vengeance which prevailed among his own warlike compatriots. Hector dragged at the car of his insulting conqueror was for the fierce and martial vulgar, for the carousing chieftain, scarcely less savage than the Northman, delighted only by his dark Sagas; Hector's body, preserved by the ridge's of the Iliad, is none the less his destined victim, it cannot, by any effort, bring ourselves to suppose that the separate passages, which form the main interest of the poem, the splendid bursts, or more pathetic episodes, were originally composed without any view to their general effect; in short, that a whole race of Homers struck out, as it were by accident, all these glorious living fragments, which lay in a kind of uniformed chaos, till a later and almost mightier Homer commanded them to take form, and combine themselves into a connected and harmonious whole. There is another very curious fact, on which we do not think, though it was perceived by both Wolf and Heyne, that sufficient stress has been laid—the perfect consistency of the characters in the separate parts of the poem. It is quite conceivable that there should have been a sort of conventional character assigned to different heroes by the minstrels of elder Greece. To take Mr. Coleridge's illustration of the ballads on Robin Hood; in all of these bold Robin is still the same frank, careless, daring, generous, half-comic adventurer: so Achilles may have been by prescription,

**Impiger, iracundus, inexcubilis, acer;**

Ajax heavy and obstinate, Ulysses light and subtle; but can we thus account for the finer and more delicate touches of character, the sort of natural concomitant to Priam, lamented by the desolate women, for the heart of the poet himself, and for the few congenial spirits which could enter into his own more chastened tone of feeling. Still, in all this there is nothing of the elaborate art of a later age; it is not a skilful compiler, arranging his materials so as to produce the most striking effect: the design and the filling up appear to us to be evidently of the same hand; there is the most perfect harmony, the expression, the versification; and we cannot, by any effort, bring ourselves to suppose that the separate passages, which form the main interest of the poem, the splendid bursts, or more pathetic episodes, were originally composed without any view to their general effect; in short, that a whole race of Homers struck out, as it were by accident, all these glorious living fragments, which lay in a kind of uniformed chaos, till a later and almost mightier Homer commanded them to take form, and combine themselves into a connected and harmonious whole. There is another very curious fact, on which we do not think, though it was perceived by both Wolf and Heyne, that sufficient stress has been laid—the perfect consistency of the characters in the separate parts of the poem. It is quite conceivable that there should have been a sort of conventional character assigned to different heroes by the minstrels of elder Greece. To take Mr. Coleridge's illustration of the ballads on Robin Hood; in all of these bold Robin is still the same frank, careless, daring, generous, half-comic adventurer: so Achilles may have been by prescription,

**Ilium, Ilium, Ilium,**

There was, indeed, a goddess who presided over childbirth, and who was the same in the Greek mythology with the Juno Lucina of the Romans. In the Iliad (11, 270) mention is made of Iliumia in the plural, and they are called the daughters of Juno. In two other parts, however, of the same poem (16, 187, and 19, 103), the term Iliumia occurs in the singular. In the Odyssey (19, 188) and in Hesiod (Theog., 922) the number is reduced to one. We also meet with but one Iliumia in Pindar (Ol. 6, 72.—Nem., 7, 1), and the subsequent poets in general. It is not by any means an improbable supposition, that Iliumia was originally a moon-goddess, and that the name signifies "light wonderer," from ἱλυ, "light," and ὀνος, "to move rapidly." (Welcker, Kret. Kol., p. 11, 19.) The moon was believed by the ancients to have great influence over growth in general; and as, moreover, a woman’s time was reckoned by moons, it was natural to conceive that the moon-goddess presided over the birth of children. (Keightley's Mythology, p. 193, seq.)

**IIlus or Ilia, I.** Another name for the city of Troy, or, more properly, the true one, since Troja, the appellation given to the place by the Roman writers, was, strictly speaking, the name of the district.
Troy—an. II. Novum, a city of the Troad, the site of which is not to be confounded with that of Troy. Whatever traces might remain of the ruins of the city of Ilium, were again selected by the Greeks, these soon disappeared, as Strabo assures us, by their being employed in the construction of Sigeum, and other towns founded by the Æolians, who came from Lesbos, and occupied nearly the whole of the Troad. The first attempt made to restore the town of Troy was by some Astypalæans, who, having first settled at Rhesyum, built, near the Simois, a town which they called Polium, but which subsisted only a short time; the spot, however, still retained the name of Polisma when Strabo wrote. Some time after, a more advantageous site was selected in the neighborhood, and a town, consisting at first of a few habitations and a temple, was built under the protection of the kings of Lydia, the then sovereignties of the country. This became a rising place; and, in order to ensure the prosperity of the colony, and to enhance its celebrity, the inhabitants boldly affirmed that their town actually stood on the site of the ancient Troy, that city having never been actually destroyed by the Greeks. There were not wanting writers who propagated this falsehood, in order to flatter the vanity of the citizens (Strabo, 601); and when Xerxes passed through Tros on his way to the Hellespont, the pretensions of New Ilium were so firmly established, that the Persian monarch, when he visited their acropolis, and offered there an immense sacrifice to Minerva, actually thought that he had seen and honoured the famous city of Priam. (Herod., 7, 42.) In the treaty made with the successor of Xerxes, Illium was recognised as a Greek city, and its independence was secured; but the peace of Antialcidas restored it again to Persia. On the arrival of Alexander in Asia Minor (Arrian, Exp. At. 1, 11, 12), or, as some say, after the battle of the Granicus (Strab., 593), that prince visited Illium, and, after offering a sacrifice to Minerva in the citadel, deposited his arms there. So say others, said to have been preserved in the temple from the time of the siege of Troy. He farther granted several rights and privileges to the Æolians, and promised to erect a more splendid edifice, and to institute games in honour of Minerva; but his death prevented the execution of these designs. (Arrian, l.c. Strab., l.c.) Lysimachus, however, to whose share Troy fell on the division of Alexander's empire, undertook to erect a temple which he planned to be the equal, if not rival, of the temple of Minerva at Athens, to which he added the temple of its former monarch. He enclosed the city within a wall, which was forty stadia in circumference; he also increased the population by removing thither the inhabitants of several neighbouring towns. (Strabo, 593.) At a subsequent period Illium farther experienced the favour and protection of the kings of Pergamus; and the Romans, on achieving the conquest of Asia Minor, sought to extend their popularity, by securing the independence of Illium which they determined to found, and to give its origin, and added to its territory the towns of Rhesyum and Gergitha. (Livy, 37, 37.—Id., 38, 29.) And yet it would appear, that at that time Illium was far from being a flourishing city, since Demetrius of Scæpis, who visited it about the same period, affirmed that it was in a ruinous state, many of the houses having fallen into decay for want of tiling (on Strab., l.c.). During the civil war between Sylla and Marius, Illium was besieged and taken by assault by Fimbria, a partisan of the latter. This general gave it up to plunder, butchered the inhabitants, and finally destroyed it by fire. Not long after, however, Sylla arrived in Asia, defeated Fimbria, who fell by his own hand, restored Illium to the surviving inhabitants, reinstated them in their possessions, and restored the walls and public edifices. (Appian, Bell. Mithr., c. 53.—Plut., Vit. Syll. l.c., Strab., 594.) After the battle of Pharsalla, Illium was visited by Julius Cæsar, who explored, if we may believe Lucan, all the monuments and localities which claimed any interest from their connexion with the poem of Homer. (Phars. 9, 961.) Cæsar, in consequence of his visit, and his pretended descent from Iulus, conceded some grants to the Æolians; he also instituted those games to which Virgil has alluded in the Jœnich, and which the Romans called "Ludi Trojanii." (Æn. 5, 602.)

Suet., Vit. Cass. 39.—Dio Cass. 43, 23.) We trace the history of this place also during the times of the emperors. It preserved its privileges and freedom under Trajan, as we learn from Pliny, who styles it, "IIIum immune, unde omnis clara" (5, 39). It subsisted under Dioclesian, and it is even said that Constantine had entertained, at one time, serious thoughts of transferring thither the seat of empire. (Sozom., Hist. Eccles., 2, 3.—Zosim., 2, 34.) The last records we have of its existence are derived from Hierocles (Synecd., p. 663), the Itineraries, and the notices of Greek bishops under the Byzantine empire. It became afterward exposed to the ravages of the Saracens and other barbarians, who depopulated the Hellespont and Troad; it sunk beneath their repeated attacks, and became a heap of ruins. The surrounding villages are yet filled with inscriptions, and fragments of buildings and monuments, which attest its former splendour and magnificence. According to the account of a modern traveller, who has minutely explored the whole of Tros, New Illium occupied a gently rising hill about seventy feet high, above the adjacent plain, in which the waters of the Tumbrek—tchaï, a stream called Kameh-nou or Kamar-nou form some marshes. The Turks call the site of New Illium Hissewdjick, or Eski Kalafatli. (Choisial Gouffier, vol. 2, pt. 3, p. 381.—Barker Webb, Osservazioni intorno l'Argo Troiano, Bibl. Ital., No. 67, Luglio, 1821.) New Illium was twenty-one miles from Abydos, and about eleven miles from Dardanus. (Strab., 991.—Rin. Anton., p. 334.) —We must be careful, as has already been remarked, not to attribute to the ancient town the name of the city of Priam, an error into which many careless travellers have fallen. (Cramer's Asia Minor, vol. 1, p. 194, seq.)

IIIÆBÆUS or ELIÆBÆUS, a city of Gallia Narbonensis, south of Ruscino, and in the territory of the Sardones, the same probably with the Volci Tectosages. It was a flourishing place when Hannibal passed through his march into Italy, and here he established a garrison. (Strab., 991.) Its site, which is still marked by the mound called Ilium, was destroyed by Magnentius, and here Constantine died in a castle built by himself. It is now Elne. (Mela, 2, 5.)

ILLICIÆ, a city of the Contestani in Spain, northeast of Carthago Nova. Now Elche. (Mela, 2, 6.—Plin., 3, 2.)

ILLITÆANSUS, a bay on the southeast coast of Spain, extending from Carthago Nova to the Dianium Promontorium. It is now the bay of Alicante. (Mela, 2, 6.)

ILLITURGIS, ILLITURGIS, or ILLITURGI, a city of Spain, not far from Castulo and Mentess, and five days' march from Carthago Nova. It was situate near the Petic, on a steep and rugged rock, and was called in later times by the Romans Illiturgis. Appian calls it Hurgia (Bell. Hisp., c. 32), and it is the same place called Illiturgis by Ptolemy (2, 4), and the Iurges of Stephanus of Byzantium. The place was destroyed by Scipio B.C. 210 (Liv., 28, 19), but was soon afterward renewed. The site of the ancient place is near the modern Andujar, where the church of St Potenciana stands. (Uberti, Geogr., vol. 2, p. 380.)

ILLFYCUM, ILLYRIVM, and ILLYRIA, a country bordering on the Adriatic Sea, opposite Italy. The name of Illyrians, however, appears to have been common
to the numerous tribes which were anciently in possession of the countries situated to the west of Macedonia, and which extended along the coast of the Adriatic from the confines of Istria to the borders of Epirus. Still farther north, and more inland, we find them occupying the great valleys of the Sanae and Durance, which were only terminated by the junction of those streams with the Danube. This large tract of country, under the Roman emperors, constituted the provinces of Illyricum and Pannonia.—Antiquity has thrown but little light on the origin of the Illyrians from the evidence connected with their early manners and customs of the barbarous hordes of which the great body of the nation was composed. Their warlike habits, however, and the peculiar practice of puncturing their bodies, which is mentioned by Strabo as being also in use among the Thracians, might lead us to connect them with that widely-extended people. (Strabo, 315.) It appears evident, that they were a totally different race from the Celts, as Strabo carefully distinguishes them from the Gallic tribes which were incorporated with them. (Strabo, 313.) Appian, indeed, seems to ascribe a common origin to the Illyrians and Celts, for he states that Illyrians and Celtus were two brothers, sons of Polyphemus and Galatea, who migrated from Sicily, and became the progenitors of the two nations which bore their names (Bell. Ill. 2); but this account is evidently too fabulous to be relied on. It is not unlikely that the Illyrians, under the leadership of Iulus, were the earliest dominators of Italy. The Liburni, who were undoubtedly a part of this nation, had formed settlements on the Italian shore of the Adriatic at a very remote period. The Veneti, moreover, were, according to the most probable account, Illyrians. But, though so widely dispersed, this great nation is but little noticed in history until the Romans made war upon it, in consequence of some acts of piracy committed on their trade. At this period the Illyrians, nominally at least, were Illyrians as connected with the affairs of Macedonia; for instance, in the expedition undertaken by Perdiccas, in conjunction with Brasidas, against the Lyncestae, which failed principally from the support afforded to the latter by a powerful body of Illyrian troops. (Thucyd. 4, 125.) They were frequently engaged in hostilities with the princes of Macedonia, to whom their warlike spirit rendered them formidable neighbours. This spirit of independence had been suggested to the government of Bardylis, who is known to have been a powerful and renowned chief, though we are not positively acquainted with the extent of his dominions, nor over what tribes he presided. Philip at length gained a decisive victory over this king, who lost his life in the action, and thus a check was given to the rising power of the Illyrians. Alexander was likewise successful in a war he waged against Clytus, the son of Bardylis, and Clau sia, king of the Teutanti. The Illyrians, however, still asserted their independence against the kings of Macedon, and were not subdued till they were involved in the common fate of nations by the victorious arms of the Romans. The conquest of Illyria led the way to the first interference of Rome in the affairs of Greece; and Polybius, from that circumstance, has entered at some length into the account of the events which then took place. He informs us, that about this period, 320 B.C., the Illyrians on the coast had become formidable from their maritime power and the extent of their depredations. They were governed by Agron, son of Pleurastus, whose forces had obtained several victories over the Epirots, Epirots, and Achaeans. On his death, the empire devolved upon his queen Teuta, a woman of an active and daring mind, who openly sanctioned, and even encouraged, the piratical exploits of her subjects. Among those who suffered by these lawless pirates were some traders of Italy, on whose account satisfaction was demanded by the Roman senate.
the Himalaya Mountains on the north of India has been appreciated. In 1802, Col. Crawford made some measurements, which gave a much greater altitude to these mountains than had ever before been suspected; and Col. Colebrook, from the plains of Rohilcund, made a series of observations which gave a height of 22,000 feet. Lieut. Webb, in his journey to the source of the river Jumna, measured on the peak of Jamnavatar, which gave upward of 25,000 feet.

The same officer, in a subsequent journey, confirmed his former observations. This conclusion was objected to, on account of a difference of opinion respecting the allowance which ought to be made, for the deviation of the light from a straight direction, on which all conclusions drawn from the measurement of angles must depend. In a subsequent journey, however, this same observer fixed the altitude by additional measurements, and by observing the fall of the mercury in the barometer at those heights which he himself visited. It was found by these last observations that the line of perpetual snow does not begin till at least 17,000 feet above the level of the sea, and that the banks of the Setledge, at an elevation of nearly 15,000 feet, afford pasture for cattle, and yielded excellent crops of mountain-wheat. This mild temperature, however, at some altitude, proved injurious to the northern side of the chain. This probably depends on the greater height of the whole territory on the northern side, in consequence of which, the heat which the earth receives from the solar rays, and which warms the air immediately superincumbent, is not so much expanded by the time the ascending air reaches these greater elevations, as in that which has ascended from a much lower country. Mr. Frazer, in a later journey, inferred that the loftiest peaks of the Himalaya range varied from 18,000 to 23,000 feet; but he had no instruments for measuring altitudes, and no barometer, and he probably did not make the due allowance for the extraordinary height of the snow-line. The point, however, is now at last settled. The Himalaya Mountains far exceed the Aides in elevation; Chimborazo, the highest of the latter, being only 21,470 feet above the level of the sea, while Ghost Cote, in the Dhaulагahiri range, attains to an elevation of 28,000 feet, and is the highest known land on the surface of the globe.

Imbicides, a patronymic given to Asius, as son of Imbracus. (Virg., En., 10. 123.)

Imbesides, a patronymic given to Giscaus and Lades, as sons of Imbracus. (Virg., En., 12. 343.)

Imbos, an island of the Agae, 22 miles east of Lemnos, according to Pliny (4, 12), and now called Imbro. Like Lemnos, it was at an early period the seat of the Pelasgi, who worshipped the Cabiri and Mercury by the name of Imbranos. (Steph. Byz., s. v. Ιμπός.) Imbos is generally mentioned by Homer in conjunction with Lemnos. (Hymn. in Apollo, 36.—Io, 13. 32.) It was first conquered by the Persians (Herod., 5, 27), and afterward by the Athenians, who derived from thence excellent darters and targeters. (Thucyd., 4, 29.) There was a town probably of the same name with the island, the ruins of which are to be seen at a place called Castro. (Cramer's Anc. Greece, vol. 1, p. 342.)

Inachides, the name of the first eight successors of Inachus on the throne of Argos.

Inachides, a patronymic of Eaphus, as grandson of Inachus. (Ovid, Met., 1, 704.)

Inchis, a patronymic of Io, as daughter of Inachus. (Ovid, Fast., 1, 454.)

Inchis, a daughter of Oceaus and Tethys, father of Io. He was said to have founded the kingdom of Argos, and was succeeded by his son Phoroneus, B.C. 1807. Inachus is said, in the old legend, to have given his name to the principal river of Argolis. Hence probably he was described as the son of Oceaus, the common parent of all rivers. They who make Inachus to have come into Greece from beyond the sea, regard his name as a Greek form for the Oriental term Enak, denoting "great" or "powerful," and this last as the root of the Greek ἄγας, "a king." The foreign origin of Inachus, however, or, rather, his actual existence, is very problematical. —According to the mythological writers, Inachus was the son of Io by the mean-uncle Melia. (Apollod. 2, 1, 1. —Hygin., ad loc.)—II. A river of Argolis, flowing at the foot of the Acropolis of Argos, and emptying into the bay of Nauplia. Its real source was in Mount Lycreus, on the confines of Arcadia; but the poets, who delighted in fiction, imagined it to be a branch of the Inachus of Amphilochia, which, after mingling with the Acheuls, passed under ground, and reappeared in Argolis. (Strabo, vol. 2, p. 223.) According to Dodwell (vol. 2, p. 245.) the bed of this river is a short way to the northeast of Argos. It is usually dry, but supplied with casual floods after hard rains, and the melting of snow on the surrounding mountains. It rises about ten miles from Argos, at a place called Muthis, in the way to Tripolitza in Arcadia. In the winter it sometimes descends from the mountains in a rolling mass, when it does considerable injury. On the 26th of March it was frozen, and a subsequent heat caused the ice to melt. (Cramer's Anc. Greece, vol. 2, p. 271.) This account is sufficient intelligible: and, in order to identify the Inachus, which, flowing from Mount Lacon, in the chain of Pindus, united its waters with the Acheuls, and, passing under the sea, finally reached Argos, in the Peloponnesus. Such was the account of Sophocles, as appears from the passage quoted by the geographer, probably from the play of Inachus. (Compare Oxford Strabo, vol. 1, p. 391, in nata.) Strabo, however, regards this as an invention of the poets, and says that Hecateus was better informed on the subject, who affirmed that the Inachus of the Amphilochians was a different river from that of the Peloponnesian Argos. According to this ancient geographical writer, the former stream flowed from Mount Lacon; whence also the Aetas, or Aeus, derived its source, and fell into the Acheuls, having, like the Amphilochian Argos, received its appellation from Amphilochus. (Strab., 271.) This account is sufficient intelligible: and, in order to identify the Inachus with the modern river which corresponds with it, we have only to search in modern maps for a stream which rises close to the Aeus or Vouousa, and, flowing south, joins the Acheuls in the territory of the ancient Amphilochi. Now this description answers precisely to that of a river which is commonly looked upon as the Acheuls itself, but which would seem, in fact, to be the Inachus, since it agrees with the account given by Hecateus, and it should be observed, that Thycydides places the source of the Acheuls in that part of Pindus which belonged to the Dolopes, a Thessalian people, who occupied the southeastern portion of the chain. (Thucyd., 3, 105.) Modern maps, indeed, point out a river coming from this direction, and uniting with the Inachus, which, though a more considerable stream, was not regarded as the main branch of the river Strabo elsewhere describes, what he derived from the said of the junction of the Inachus and Acheuls. (Strab., 327.) But in another passage he quotes a writer whose report of the Inachus differed materially, since he represented it as traversing the district of Amphilochia, and falling into the gulf. This was the statement.
madeby Ephorus (ap. Strab, 326), and it has led some modern geographers and critics, in order to reconcile these two contradictory accounts, to suppose that there was a stream which, branching off from the Acheulian, fell into the Ambraican Gulf near Argos. This is more particularly the hypothesis of D'Anville; but modern travellers assure us that there is no such river near Argos or the Gulf of Ambracia (Geogr., vol. 2, p. 225); and, in fact, it is impossible that any stream should there separate from the Acheulian, on account of the Amphipholis Mountains, which divide the valley of that river from the Gulf of Arta. Mannert considers the small river Kriketi to be the representative of the Inachus (Geogr., vol. 8, p. 65), but this is a mere torrent, which descends from the mountains above the gulf, and can have no connexion with Mount Laconmus or the Acheulian. All ancient authorities agree in time of de-ivering the Inachus from the chain of Pindus. (Cra-

INARIAN, an island off the coast of Campania, otherwise called Xeanaria and Pithecusa. Under an ex-
tinguished volcano, in the middle of this island, Jupiter was fabled to have confined the giant Typhusus. (Con-
sult remarks under the articles Xeanaria and Arima.) Heyne thinks that some of the early Latin poets, in describing the Typhusus, or the place, may have understood Homer's el' απίουρον, and rendered it by Inarimae or Inarima; and that the fable of Typhusus, travelling westward, was assigned to Xeanaria or Pith-
ecusa as a volcanic situation. (Heyne, Excurs. ad Verg., Aen., 9, 715.)

INARUS, a son of Psammeticus (Thucyd., 1, 104), king of that part of Libya which borders upon Egypt. Sailing forth from Marea, he drew over the greater part of Libya to revolt from Artaxerxes, the Persian emperor, and, becoming himself their ruler, called in the Athenians to his assistance, who happened to be engaged in an expedition against Cyprus, with two hundred ships of their own and their allies. The enter-
prise at first was eminently successful, and the whole of Egypt fell under the power of the invaders and their ally. Eventually, however, the Persian arms triumphed, and Inarus, being taken by treachery, was crucified. (Thucyd., 1, 109; 1, 110.) Herod-
otus and Ctesias say he was crucified, ἵππῳ τρικέκτονα, which might more properly be termed imple-
ment. Bloomfield (ad Thucyd., 1, c.) thinks that he was of the ancient royal family of Egypt, and descended from the Psammeticus who died B.C. 617. It is not improbable, he adds, that, on Apries being put to death by his chief minister Amasis, his son, or some near relation, established himself among the Libyans bordering on Egypt, from whom descended this Xae-
metricus.

INDIA, an extensive country of Asia, divided by
Ptolemy and the ancient geographers into India intra
Gangem and India extra Gangem, or India on this
side, and Gangem, the Ganges. The first divi-
sion answers to the modern Hindustan; the latter to
the Birman Empire, and the dominions of Pegu, Siam,
Laos, Cambodia, Cochín China, Tonquin, and Ma-
lawa.—Commerce between India and its western, and western na-
tions of Asia appears to have been carried on from the
earliest historical times. The spicey, which the company of
Ismaelites mentioned in Genesis (37, 25) were carrying into Egypt, must in all probability have been the produce of India; and in the 30th chapter of Exodus, where an enumeration is made of various spices and perfumes, cinnamon and cassia are expressly
mentioned, which must have come from India, or the
neighbours of the Indian Archipelago. It has not been thought by many, that the Egyptians must have used
Indian spices in embalming their dead; and Diodore Siculo says (1, 91), that cinnamon was actually em-
ployed by this people for that purpose. The spice trade appears to have been carried on by means of the
Arabs, who brought the produce of India from the modern Sinde, or the Malabar coast, to Hadramunt in the southwestern part of Arabia, or to Gerra on the
Persian Gulf, from which place it was carried by means of caravans to Petra, where it was purchased by Pho-
nician merchants. A great quantity of Indian articles
was also brought from the Persian Gulf by the Eu-
ropeans. (See Indus.) The trade of the Phoenicians was carried across the Syrian desert into Phoenicia. Eu-
rope was thus supplied with the produce of India by
means of the Phoenicians; but we cannot assent to the
opinion of Robertson (Historical Disquisition on In-
da), that Phoenician ships sailed to India; for there is no reason for believing that the Phoenicians had any
harbours at the head of the Red Sea, as Robertson supposes, but, on the contrary, the Idumeans remain-
ed independent until the 25th chapter of Esdras, which
and in the 27th chapter of Ezekiel, which contains a
list of the nations that traded with Tyre, we can dis-
cover none of an Indian origin; but the names of the
Arabian tribes are specified which supplied the Pho-
nicians with the products of India (v. 19, 22). The
conquest of Idumea by David gave the Jews posses-
sion of the harbour of Ezion-geber on the Red Sea,
from which ships sailed to Ophir, bringing "gold and
fine gold, and precious stones, and spices and sar-

Darius Hystaspis, 521 B.C. The tales which Diodo

873
Hoddu (Esther, 1, 1), which is evidently the same as the Hindu of the Persian and Arab geographers. The first mention of the Indians in a Greek author is in the "Supplices" of Aeschylus (v. 287); but no Greek writer gives us any information concerning them till the time of Herodotus. We may collect from the account of this historian a description of three distinct tribes of Indians: one dwelling in the north, near the city Carpathus, who are said to have lived in an alliance to the Persians, and that this voyage occupied 30 months. Darius also, it is said, subdued the Indians and formed them into a satrapy, the tribute of which amounted to 360 talents of gold. (Hered., 3, 94.) The extent of the Persian empire in India cannot be ascertained with any degree of certainty. The Persians appear to have included under the name of Indians many tribes dwelling to the west of the Indus; it seems doubtful whether they ever had any dominion east of the Indus; and it is nearly certain that their authority did not extend beyond the Punjab. — The knowledge which the Greeks possessed respecting India, previous to the time of Alexander, was derived from the Persians. We do not find the name of Indian or Hindu in ancient Sanscrit works; but the country east of the Indus has been known under this name by the western nations of Asia from the earliest times. In the Zend and Pehlevi languages the name of the Hindu is identical with the Persian Haddu. The second tribe or tribes evidently did not live under Brahminical laws; some of them dwelt in the marshes formed by the Indus, and subsisted by fishing; others, called Padai, with whom we may probably class the Calantia or Calatia, were wild and barbarous tribes, such as exist at present in the mountains of the Deccan. The third class, who are described as speaking the Sanscrit, and therefore to us must be considered as Indians proper, and never killing anything living, are more likely to have been genuine Hindus. (Hered., 3, 98, seq.) Herodotus had heard of some of the natural productions of Hindustan, such as the cotton-plant and the bamboo; but his knowledge was very limited.—Ctesias, who lived at the court of Artaxerxes Mennön for many years, has given us a fuller account than Herodotus of the manners and customs of the Indians, and of the natural productions of the country. He had heard of the war-elephants, and describes the parrot, the monkey, cockínal, &c.—The expedition of Alexander into India, B.C. 326, first gave the Greeks a correct idea of the western parts of this country. Alexander did not advance farther east than the Hyphasis; but he followed the course of the Indus to the ocean, and afterward sent Nearchus to explore the coast of the Indus as far as the Persian Gulf. The Indus was inhabited, at the time of Alexander's invasion, by many independent nations, who were as distinguished for their courage as their descendants the Rajpoots. Though the Macedonians did not penetrate farther east than the Hyphasis, report reached them of the Præsi, a powerful people on the banks of the Ganges, whose king was prepared to resist Alexander with an immense army. After the death of Alexander, Seleucus made war against Sandrocottus, king of the Præsi, and was the first Greek who advanced as far as the Ganges. This Sandrocottus, called Sandracophtus by Athenæus (Epit., 1, 32), is probably the same as the Chandragupta of the Hindus. (Wilson's Theatre of the Hindus, 2, p. 127, seqq., 2d ed.—Schlegel, Indische Bibliothek, vol. 1, p. 246.) Sandrocottus is represented as king of the Gangarídæ and Præsi, who are probably one and the same people, Gangarídæ being the name given to them by the Greeks, and signifying merely the people in the neighbourhood of the Ganges, and Præsi being the Hindu name, the same as the Præchi (i.e., "eastern country") of the Sanscrit writers. Seleucus remained only a short time in the country of the Præsi, but his expedition was the means of giving the Greeks a more correct knowledge of the eastern part of India than they had hitherto possessed; since Megasthenes, and afterward Daimachus, resided for many years as ambassadors of the Syrian monarchs at Palibothra (in Sâncrit, Pataliputra), the capital of the Præsi. From the work which Megasthenes wrote on India, later writers, even in the time of the Roman emperors, such as Strabo and Arrian, appear to have derived their principal knowledge of the country. The Seleucids probably lost all influence at Palibothra after the death of Seleucus Nicator, B.C. 281; though we have a brief notice in Polybius (11, 34) of an expedition which Antiochus the Great made into India, and of a treaty which he concluded with a king Sophagassénus (in Sanscrit, probably, Subhagasaena, i.e., "the leader of a certain province") of the Sâncrit writers, to supply him with a certain number of war elephants. The Greek kingdom of Bactria, which was founded by Theodotus or Diodotus, a lieutenant of the Syrian monarchs, and which lasted about 120 years, appears to have comprised a considerable portion of northern India. — After the foundation of Alexander, the Indian trade was almost entirely carried on by the merchants of that city: few ships, however, appear to have sailed from Alexandria to India in the time of Strabo, with the exception of the monsoons by Hippalus; and the Arabians supplied Alexandria, as they had previously done the Phœnicians, with the produce of India. The monsoons must have become known to European navigators about the middle of the first century of our era, since they are not mentioned by Strabo, but were well known in the time of Pliny. Pliny has given us (6, 20) an interesting account of the trade between India and Alexandria in the time of Augustus. We learn from him that the ships of the Alexandrian merchants set sail from Berenice, a port of the Red Sea, and arrived, in about 30 days, at Ocelis or Carre, in Arabia. Thence they sailed by the wind Hippalus (the southwest monsoon), in 40 days, to Muziris (Mangalore), the first emporium in India, which was not much frequented, on account of the pirates in the neighbourhood. The port at which the ships usually stayed was that of Parae (at the mouth, probably, of the Nelsurae river). After remaining in India till the beginning of December or January, they sailed back to the Red Sea, met with the wind Africæ or Auster (south or south-west wind), and thus arrived at Berenice in less than a twelvemonth from the time they set out. The same author informs us, that the Indian articles were carried from Berenice to Coptos, and thence by land, at a distance of about 300 Roman miles, on camels; and that the different halting-places were distinguished by the wells. From Coptos, which was united to the Nile by a canal, the goods were conveyed down the river to Alexandria.—We have another account of the Indian trade, written by Arrian, who lived, in all probability, in the first century of the Christian era, and certainly not later than the second. Arrian had been in India himself, and describes in a small Greek treatise, entitled "the Periplus of the Erythraean Sea," the coast from the Red Sea to the western parts of India; and also gives a list of the most important exports and
INDIA.

imports. According to this account, the two principal ports in India were Barygaza on the northwestern, and Barace or Nelcynda on the southwestern coast. To Barygaza (the modern Barosch, on the river Ner-

bur, the ancient city was built by the Phoenicians, Plithana (Pulanch), and Tagara (Droghur). But Bar-

ace or Nelcynda seems, from the account of Pliny and Arrian, to have been the principal emporium of the Indian trade. The Roman ships appear to have seldom sailed beyond this point; and the produce of countries farther east was brought to Barace by the native merchants. The knowledge which the Romans possessed of India beyond Cape Comorin was exceedingly vague and defective. Strabo describes the Ganges as flowing into the sea by one mouth; and though Pliny gives a long list of Indian nations, which had not been previously mentioned by any Greek or Roman writers, we have no satisfactory account of any part of India, except the description of the western coast by Arrian. Ptolemy, who lived about 100 years later than Pliny, appears to have derived his information from the Alexandrian merchants, who only sailed to the Malabar coast, and could not, therefore, have any accurate knowledge of the eastern parts of India, and still less of the countries beyond the Ganges; still, however, he is the earliest writer who attempts to de-

scribe the countries to the east of this stream. There is great difficulty in determining the position of any of the places enumerated by him, in consequence of the great error he made in the form of the peninsula, which he has made to stretch in its length from west to east instead of from north to south; a mistake the more extraordinary, since all preceding writers on India with whom we are acquainted had given the general shape of the peninsula with tolerable accuracy. — The Romans never extended their conquests as far as India, nor visited the country except for the purposes of commerce. But the increase of the trade between Alexandria and India seems to have produced in the Indian princes a desire to obtain some farther information concerning the western na-

tions. We read of emigrations to Augustus Caesar, sent by Pandion and Porus, and also of an embassy from the island of Ceylon to the Emperor Claudius. Bohlen, in his work on the Indians (vol. 1, p. 70), doubts whether these embassies were sent; but as they are both mentioned by contemporary writers, the former by Strabo and the latter by Pliny, we can hardly question the truth of their statements. We may form some idea of the motives which actuated the emperors by the account of Pliny (6, 23), who in-

forms us, that the Roman world was drained every year of at least 50 millions of sesterces (upward of 1,900,000 dollars) for the purchase of Indian commodi-
ties. The profit upon this trade must have been im-

mensely, if we are to believe the statements of Pliny, that Indian articles were sold at Rome at 100 per cent. above their cost price. The articles imported by the emperors of the Western empire were chiefly precious stones, spices, perfumes, and silk. It has usually been considered, that the last article was imported into In-
dia from China; but there are strong reasons for be-
lieving that the silk-worm has been reared in India from very early times. Mr. Colebrooke, in his "Essay on Hindu Classes" (Miscellaneous Essays, vol. 2, p. 185), informs us, that the class of silk-twisters and feeders of silkworms is mentioned in an ancient Sanscrit work of the Brahmins, which is to this day transmitted, that silk is known throughout the Archipelago by its Sanscrit name sútra. (Maraden's Malay Dictionary, s.v. sútra.) Those who wish for farther information on the articles of commerce, both imported and ex-

ported by the Alexandrian merchants, may consult with advantage the Appendix to Dr. Vincent's "Peri-
plus of the Erythrean Sea," in which he has given an alphabetical list, accompanied with many explanations, of the exports and imports of the Indian trade, which are enumerated in the Digest, and in Arrian's "Peri-
plus of the Erythrean Sea." — We have no farther ac-
count of the trade between Alexandria and India till the time of the Emperor Tiberius, during whose reign an Alexandrian merchant of the name of Cosmas, who had made several voyages to India, but who afterward turned monk, published a work, still extant, entitled "Christian Topography," in which he gives us sever-
al particulars respecting the Indian trade. But his knowledge of India is not more extensive than that of Arrian, for the Alexandrian merchants continued to visit merely the Malabar coast, to which the produce of the country farther east was brought by native mer-
chants, as in the time of Arrian. Alexandria continued to supply the nations of Europe with Indian ar-
ticles till the discovery of the passage round the Cape of Good Hope by Vasco de Gama in 1498. But the western nations of Asia were principally supplied by the merchants of Basora, which was founded by the Calif Omar near the mouth of the Euphrates, and which soon became one of the most flourishing commercial cities of the East. In addition to which it must be re-
collected, that a land-trade, conducted by means of caravans, which passed through the central countries of Asia, existed from very early times between India and the western nations of Asia. (Encycl. Useful Knowl., vol. 12, p. 222, seq.)

History of India from the earliest times to the Mo-

hammedan Conquest.

The materials for the history of this period are very few and unsatisfactory. The only ancient his-
tory written in the Sanscrit language which the re-

searches of modern scholars have been able to ob-
tain, is a chronicle of the kings of Cashmere, entitled "Raja Taringini," of which an abstract was given by Abulfazl in the "Ayn-i-Akberry." The original Sanscrit was obtained for the first time by English scholars in the present century, Hope published it at Calcutta in the year 1835. An interesting ac-
count of the work is given by Professor Wilson, in the 15th volume of the "Asiatic Researches." But, though this volume throws considerable light upon the early history of Cashmere, it gives us little information respecting the early history of Hindustan. The exist-
ence of this chronicle, however, is sufficient to dis-
prove the assertion which some persons have made, that the Hindus possessed no history prior to the Mohammedan conquest; and it may be hoped that similar works may be obtained by the researches of modern scholars. We may also expect to obtain far-
ther information by a more diligent examination of the various inscriptions which exist upon public buildings in all parts of Hindustan, though the majority of such ins-
criptions relate to a period subsequent to the Moham-
medan conquest. The Brahmins profess to give a his-
tory of the ancient kingdoms of Hindustan, with the names of the monarchs who reigned over them, and the principal events of their reigns. But their accounts are derived from the legendary tales of the Puranas, a class of compositions very similar to the Greek Theogonies; and although these, and es-
pecially the two great epic poems, the "Ramayana" and "Mahabharata," are exceedingly valuable for the information they give us respecting the religion, civilization, and customs of the ancient Hindustan, they are not to be considered as a trustworthy basis for historical events. — The invariant tradition of the Hindus points to the northern parts of Hindustan as the original abode of their race, and of the Brahminical faith and laws. It appears probable, both from the tradition of the Hindus and from the similarity of the Sanscrit to the Zend, Greek, and Latin languages, that the nation from which the genuine Hindus are descended must at some pe-

riod have inhabited the plains of Central Asia, from

675
which they emigrated into the northern part of Hindustan. Heeren and other writers have supposed, that the Brahmins, and perhaps the Kshatriyas and Vaisyas, were a race of northern conquest, who the Greek and Persian invaders emigrated upon the Indian soil from their original home. Whatever may be the origin of this people, it is evident that the Hindu themselves never regarded the southern part of the peninsula as forming part of Ayarvarta, or "the holy land," the name of the country inhabited by genuine Hindus. Ayarvarta was bounded on the north by the Himalaya, and on the south by the Vindhya Mountains (Manu, 6, 21-24); the boundaries on the east and west cannot be so easily ascertained. In this country, and especially in the eastern part, there existed great and powerful empires, at least a thousand years before the Christian era (the probable date of the Ramayana and Mahabharata), which had made great progress in knowledge, civilization, and the fine arts, and of which the ancient literature of the Sanscrit language is an imperishable memorial. According to Hindu tradition, two empires only existed in the most ancient times, of which the capitals were Ayodhya or Oudh, and Pratishtana or Vitora. The kings of these cities, who are respectively denominated children of the Sun and of the Moon, are supposed to have been the lineal descendants of Satyavarta, the seventh Manu, during whose whole life all living creatures, with the exception of himself and his family, were destroyed by a general deluge. Another kingdom was afterward established at Magadha or Baken, by Jara- antha, appointed governor of the province by a sovereign of the Lunar race. A list of these kings is given by Sir William Jones, in his "Essay on the Chronology of the Hindus." (Asiat. Research., vol. 2, p. 111, seq., 8vo ed.)—The kings of Ayodhya appear to have conquered the Deccan, and to have introduced the Brahminical faith and laws into the southern part of the peninsula. Such, at least, appears to be the meaning of the Ramayana, according to which, Rama, an incarnation of Vishnu, and the son of the king of Ayodhya, penetrates to the extremity of the peninsula, and conquers the giants of Lanka (Ceylon). This is in accordance with all the traditions of the peninsula, which recognise a period when the inhabitants were not Hindus. We have no means of ascertaining whether these conquests by the monarchs of Ayodhya were permanent; but we know that, in the time of Arrian and Pliny, the Brahminical faith prevailed in the southern part of the peninsula. These were the nations enumerated by the great travelers, Chera, Chola, and Chera, and are all said to have been founded by natives of Ayodhya, who colonized the Deccan with Hindus from the north. Pandya was the most powerful of these kingdoms: it was bounded on the north by the river Velar, on the west by the Ghautus, though in early times it extended as far as the Malabar coast, and on the south and east by the sea. Its principal town was the city of Travancore. This kingdom is confirmed by Pliny, Arrian, and Ptolemy, who all mention Pandion as a king who reigned in the south of the peninsula. The Brahminical colonists appear to have settled principally in the southern parts of the Deccan: the native traditions represent the northern parts as inhabited by savage races till a much later period. This is in accordance with the accounts of the Greek writers. The names of the places on the upper part of the eastern and western coasts are not Sanscrit. The modern Concac is described by both Arrian and Pliny as the pirate coast; and the coast of the modern Orissa is said by Arrian to have been inhabited by a savage race called Kiratas. They appear to be identical with the Kiratas of the Sanscrit writers, and are represented to have been a race of savage foresters. The accounts of the Greeks who accompanied Alexander, and more particularly that of Megasthenes, give us, as we have already shown, some information respecting the northern part of Hindustan in the third and fourth centuries before the Christian era. But hardly anything is known of the history of Hindustan from this period to the time of the Mohammedan conquest. There are only a few very historical events of which we can speak with any degree of certainty. After the overthrow of the Greek kingdom of Bactria by the Tartars, B.C. 126, the Tartars (called by the Greeks Scythians, and by the Hindus Saka) overran the greater part of the northwestern provinces of Hindustan, which remained in their possession till the reign of Vicramaditya I., B.C. 66, who, after adding numerous provinces to his empire, drove the Tartars beyond the Indus. This sovereign, whose date is pretty well ascertained, since the years of the Samvat era are counted from his reign, resided at Ayodhya and Canoj, and had dominion over almost the whole of northern Hindustan, from Cashmere to the Ganges. He gave great encouragement to learning and the fine arts, and his name is still cherished by the Hindus as one of their greatest and wisest princes. He fell in a battle against Salivahana, raja of the Deccan. We also read of two other sovereigns of the same name: Vicramaditya II., A.D. 191, and Vicramaditya III., A.D. 441. The most interesting event in this period of Hindu history is the persecution of the Buddhists, and their final expulsion from Hindustan. It is difficult to conceive the reasons that induced the Hindu sovereigns, after so long a period of toleration, to aid the Brahmins in this persecution; more especially as the Jains, a sect strikingly resembling the Buddhists, were tolerated in all parts of Hindustan. Christianity is said to have been introduced into Hindustan in the first century; according to some accounts, by the apostle Thomas; and, according to others, by the apostle Bartholomew. But there is very little dependance to be placed upon these statements. The first Christians who were settled in any number in Hindu- stan appear to have been Nestorians, who settled on the Malabar coast for the purposes of commerce. No Nestorian church appears to have existed in India; and in the sixth century we learn from Cosmas that Christian churches were established in the most important cities on the Malabar coast, and that the priests were ordained by the Archbishop of Seleucia, and were subject to his jurisdiction. When Vasco de Gama arrived at Cochin, on the Malabar coast, he was surprised to find a great number of Christians, who inhabited the interior of Travancore and Malabar, and who, so far from being a race of pagans or Heathens, as the Christians appeared to the Christian writers to be, are the descendants of those Nestorians who emigrated to Hindustan in the fifth and sixth centuries, since there is no reason for believing that any Hindus were converted by their means to the Christian religion. (Encycl. Us. Knoel., vol. 12, p. 224, seq.)

India, a celebrated river of India, falling, after a course of 1300 miles, into the Indian Ocean. The sources of this river have not yet been fully explored. Its commencement is fixed, by the most probable conjecture, in the northern declivity of the Cailas branch of the Himalaya Mountains, about lat. 31° 20' N., and long. 80° 30' E., within a few miles of the source of the Altlrde, and in a territory under the dominion of China. Its name in Sanscrit is Sindhi or Hindh, an appellation which it receives from its blue colour. Under the same name Sindus it was known even to the Ro-
mans, besides its more common appellation of Indus. In lat. 28° 28', the Indus is joined by five rivers, the ancient names of which, as given to them by Greek writers, are, the Euphrates, the Jutium, Hysaphus, and Xerdrus. These five rivers obtained for the province which they watered the Greek name of Pentapotamia, analogous to which is the modern appellation of Pendjub, given to the same region, and signifying in Persian "the country of the five rivers." (Consult Lassen, Comment. de Penthapota, Indica, 4to, Bonnæ, 1827.—Beck, Allgemeines Repertorium, vol. 1, pt. 2, p. 112.) The Xerdrus, now the Sutlej, is the longest of the five rivers just mentioned, and the longest stream also within the Himalaya range, between the Indus and the Burrampooter. The union of all the five rivers into one, before they reach the Indus, was a point in geography maintained by Ptolemy; but, owing to the obscurity of modern accounts, promoted by the splittings of the Indus, and the frequent approximation of streams running in parallel courses, we had been taught to regard this as a specimen of that author's deficiency of information, till very recent and more minute inquiries have re-established that questioned point, and, along with it, the merited credit of the ancient geographer. The five rivers form one great stream, called by the natives in this quarter the Cherraub; but in the other countries of India it is known by the name of Punjand. The united stream then flows on between 40 and 50 miles, until it joins the Indus at Multan Cote. The mouths of the Indus Punjab takes seven in number; Mannert gives them as follows, commencing on the west: Sagapa, now the river Patty; Sinthos, now the Darraway; Aureum Ostium, now the Ritchel; Chariphus, now the Patty; Sapara, Sabala, and Lonibare, of which last three he professes to know nothing with certainty. According, however, to other and more recent authorities, the Indus enters the sea in one volume, the lateral streams being absorbed by the sand without reaching the ocean. It gives off an easterly branch called the Pallalee, but this returns its waters to the Indus at a lower point, forming in its circuit the island on which Hyderabads stands. (Malte-Brun, Geogr., vol. 3, p. 13, Am. ed.)

Ino, daughter of Cadmus and Harmonia. (Vid. Athamas.)

Inóps, a river of Delos, watering the plain in which the town of Delos stood. (Strab., 485.—Collin., Hist. de Delos, vol. 1, 206.)

Inóus, a patronymic given to the god Palaon, as son of Ino. (Virg., Æn., 5, 823.)

Inóusæres (in Greek Ἰνούσσιοι), the most numerous as well as the most powerful tribe of the Cisalpine Gauls, according to Polybius (2, 17). It would appear indeed from Ptolemy (p. 64) that their domain extended at one time over the Libicii, another powerful Gallic tribe in their vicinity; but their territory, properly speaking, seems to have been confined by the rivers the Tschéz and Addus. The Inusæres took part in the Gaulish wars against the Romans, and zealously co-operated with Hannibal in his invasion of Italy. (Polyb., 2, 40.) They are stated by Livy (5, 34) to have founded their capital Mediolanum (now Milan) on their first arrival in Italy, and to have given it that name from a place so called in the territory of the Elqui in Gaul. (Plin., 3, 17.—Pltol., p. 63.—Consul.)

Consult remarks under the article Gallia, page 531, col. 1.)

Insüla Sacra, an island formed at the mouth of the Tiber, by the separation of the two branches of that river. (Procopius, Rel. Got., 1.—Rutil. Itin., 1, 169.)

Initia, 1. a city of Umbria, so called from its being situated between two branches (inter amias) of the river Nar. (Varro, L. L., 4, 5.)

Hence also the inhabitants of the place were known as the Interamnites, to distinguish them from those of Interamnate, a city of the same name in the province of Acarnania. (Livy, 3, 21.) An ancient inscription cited by Cluverius (Ital. Ann., vol. 3, 159) was, in a genuine, Interamna, now represented by the well-known town of Terrin, was founded in the reign of Numa, or about 80 years after Rome. It is noted afterward as one of the most distinguished cities of municipal rank in Italy. This circumstance, however, did not save it from the calamities of civil war during the disastrous struggle between Sylla and Marius. (Florus, 3, 21.)

The remains Interamna, which were formerly watered by the Nar, are represented as the most crum- ducive in Italy (Tacit., Ann., 1, 69); and Pliny assures us (18, 28), that the meadows were cut four times in the year. Interamna is commonly supposed to have been the birthplace of the historian Tacitus, and also of the emperor of the same name. (Cramer's Anc. Italy, vol. 1, p. 276.)—II. A city of Picenum, in the territory of the Pretutii; hence called, for distinction sake, Pretutiana. (Pltol., p. 62.) It is now Terra- sante, situated between the small rivers Visions and Tur- dino. (Romanelli, Antica Topografia, &c., pt. 3, p. 298, seqq.)—III. A city of New Latium, situated on the Liris, and between that river and the small stream now called Sogne, but the ancient name of which, Strabo, who states the fact, has not mentioned. It was usually called Interamna ad Lirim, for distinction sake from the other cities of the same name. According to Livy (9, 28) it was colonized A.U.C. 440, and defended itself successfully against Sgro, which Strabo made an attack upon it soon after. (Livy., 10, 36.)

Interamna is mentioned again by the same historian (26, 9) when describing Hannibal's march from Capua to Rome. We find its name subsequently among those of the refractory colonies of that war. (Livy., 27, 9.) Pliny informs us that the Interamnites were surnamed Lusinates and Succasini. (Pltol., 3, 5.)

Cluverius imagined that Ponte Coree occupied the site of Interamna, and made the same situation to be in the same situation to be in harmony with that of a place called Terame Castrume, in old records, and the name of which is evidently a corruption of Interamna. (Cramer's Anc. It., vol. 2, p. 117.)

Inisti Castrum. Vid. Castrum II.

Io, daughter of Iasus, or, as the dramatic writers said, of Inachus, was priestess of Juno at Argos, and, unhappily for her, was beloved by Jupiter. When this god found that his conduct had exposed him to the vengeance of Juno, and the scorn of the gods, who had deserted him, he changed Io into a white cow, and declared with an oath to his spouse that he had been guilty of no infidelity. The goddess, according to him, called the cow of him as a present; and, on obtaining her, set the "all-seeing Argus" to watch her. (Vid. Argus.) He accordingly bound her to an olive-tree in the grove of Mycена, and there kept guard over her. Jupiter, pitying her situation, directed Mercury to steal her away. The god of ingenious devises made the attempt, and, dashing against Argus warning of his projects, he found it impossible to succeed. Nothing then remaining but open force, Mercury killed Argus with a stone, and hence obtained the appellation of Argus-slayer (Ἀργοσθέρεφτος). The vengeance of Juno was, however, not yet satiated; and she sent a gad-fly to torment Io, who fled over the whole world from its pursuits. She swarmed through the Ionian Sea, which was said to have been derived from the name "Argus" of the gad-fly. She then wandered up the plains of Illyria, ascended Mount Hamus, and crossed the Thracian strait, thence named the Bosporus (vid. Bos- porus), she rambled on through Scytia and the country of the Cimmerians, and, after wandering over various regions of Europe and Asia, arrived at last on the banks of the Nile, where she assumed her original form, and bore to Jupiter a son named Epaphus. (Vid. Epa- phus.)—The legend of Io would not appear to have attracted so much of the attention of the earlier poets.
Homer never alludes to it, unless his employment of the term Αγριπέροντες (Agrιperontes) is to be regarded as intimating a knowledge of Io. It is also doubtful whether she was one of the heroines of the Eocene. Her story, however, was noticed in the Αγριμι, where it is said that her father's name was Peirên, that her keeper Argus had four eyes, and that the island of Eubea derived its name from her. (Apollod., 2, i, 3. — Schol. ad Eurip., Pæd. 1835, v. "Argus.") Pausanias said that Juno placed an eye in the back of Argus's neck, and deprived him of sleep, and then set him as a guard over Io. (Ap. Schol. ad Eurip., l. c.) Ἐσχύλus introduces Io into his "Prometheus Bound," and he also relates her story in his "Suppliant."—When the Greeks first settled in Egypt, and saw the statues of Isis with cow's horns, they, in their usual manner, inferred that she was their own Io, with whose name here had a slight similarity. At Memphis they afterward beheld the worship of the holy bull Apis, and naturally supposing the bull-god to be the son of the cow-goddess, they formed from him a son for their cow, whose name was a occasion of the new legend relative to the mode by which she was restored to her pristine form. (Müller, Proleg. p. 183, seq. — Keightley's Mythology, p. 406, seq.)—The whole story of Io is an agricultural legend, and admits of an easy explanation. Io, whether considered as the offspring of Laevis (the plow) or of Peisandus (the plow-stick or implementer" or "tryer"), is a type of early agriculture, progressing gradually by the aid of slow and painful experience. Jupiter represents the firmament, the general source of light and life; Juno, on the other hand, is the type of the atmosphere, with its atomary and capricious changes. Early agriculture suffers from these changes, which impede more or less the fostering influence of the pure firmament that lies beyond, and heighten, with increased care over the labours of primitive husbandry. This ever-watchful superintendence is typified by Argus with his countless eyes, save that in the legend he becomes an instrument of punishment in the hands of Juno. If we turn to the version of the fable as given in the Αγριμι, the meaning of the whole story becomes still plainer, for here the four eyes of Argus are types of the four seasons, while the name Eubea continues the legend, that, as Io went as far as the Gulf, she returned. Argus, continues the legend, was slain by Mercury, and Io then left free to wander over the whole earth. Now, as Mercury was the god of language and the inventor of letters, what is this but saying, that when rules and precepts of agriculture were introduced, first orally and then in writing, mankind were released from that ever-watching care which early husbandry had required from them, and agriculture, now reduced to a regular system, went forth in freedom and spread itself among the nations!—Again in Egypt Io finds at last a resting-place; here she assumes her original form, and here brings forth Epaphus as the offspring of Jove. What is this but saying that agriculture was carried to perfection in the fertile land of the Nile, and that here it was touched (εἰρετικά and δύνατα) by the true generative influence from on high, and brought forth in the richest abundance!—Still farther, the eyes of Argus, we are told, were transferred by Juno to the pluck of her favourite bird; and the peacock, it is well known, gives sure indications, by its cry, of changes about to take place in the atmosphere, and is in this respect, therefore, intimately connected with the operations of husbandry. We see, too, from this, why, since Juno is the type of the atmosphere, the peacock was considered as sacred to the goddess. (Vid. Juno.)—From what has been said, it would seem that the name Io is to be deduced from Ιω (ίου), "to go," as indicative of vegetation going forth from the bosom of the earth.

10. I SÔTES, a king of Lycia, father of Sthenobas, the wife of Pratus, king of Argos. (Vid. Bellerophon.)

12. JOCASTA, a daughter of Menoeceus, who married Laius, king of Thebes, by whom she had Ædipus. She was afterward united to her son Ædipus without knowing who he was, and had by him Eteocles, Polynices, Ismene, and Antigone. She hung herself on discovering that Ædipus was her own offspring. (Vid. Laius, and Ædipus.)

12. IOLOUS, a son of Iphiclus, king of Thessaly, who assisted Hercules in conquering the Hydra. (Vid. Hydra, and Hercules.)

19. IOLCOS, a town of Thessaly, in the district of Magnesia, at the head of the Pelasgicus Sinus, and north-east of Demetrias. It was celebrated in the heroic age as the birthplace of Jason and his ancestors. Iolcos was situated at the foot of Mount Pelion, according to Findar (Nem., 4, 87), and near the small river Anaurus, in which Jason is said to have lost his sandals. (Apoll. Rhod., 1, 48.) Strabo affirms that civil dissentions and tyrannical government hastened the downfall of this place, which was once a powerful city; but its ruin was finally completed by the foundation of Demetrias in its immediate vicinity. In his time the town no longer existed, but the neighbouring shore still retained the name of Iolcos. (Strab., 436. — Compare Liv., 43, 12. — Sclayz, p. 25. — Steph. Byz., s. v. Ιωλάς. — Plin., 4, 9.) The poets make the ship Argo to have been built at Iolcos: any reference to this, whether even be understood as referring the fact to Aphetos, or else by Iolcos they mean the adjacent coast. (Cramer's Anc. Greece, vol. 1, p. 428.)

11. IGLE, a daughter of Eurytus, king of Óchalia. (Vid. Hercules, page 598, col. 2.)

10. ION, I. the fabled son of Xuthus, and reputed progenitor of the Ionian race. (Vid. Ion., 2.) II. A tragic poet, a native of Chius, and surnamed Xuthus. ION was the beginning of the Ionian order, and he is the origin of all the Ionian races. Number of his dramas is variously estimated at from twelve to forty. Bentley has collected the names of eleven. (Ephrat. ad Mill. Chron. I. Malal. subj.) The same great critic has also shown that this Ion was a person of birth and fortune, distinct from Ion Ephesianus, a merebegging histrad. Besides tragedies, Ion composed dithyrambs, elegies, &c. His elegies are quoted by Athenaeus (10, p. 436), as also his Ἱάτριων, a work giving an account of all who paid him for his services to Chios. (Athenaeus, 3, p. 93.) Ion also composed several works in prose, some of them on philosophical subjects. Though he did not exhibit till after Euripides had commenced his dramatic career, and though he was, like that poet, a friend of Socrates (Diog. Laert., 2, 23), we should be inclined to infer, from his having written dithyrambs, that he belonged to an earlier age of the dramatic art, and that his plays were free from the corruptions which Euripides had introduced into Greek tragedy: it is, indeed, likely that a foreigner would copy rather from the old models than from modern innovations. Ion was so delighted with being decreed victor on one occasion, that he presented each citizen with a vase of Chian pottery. (Athen., 1, p. 4.) We gather from a joke of Aristophanes, on a word taken from one of his dithyrambs, that Ion died before the exhibition of the Pax, B.C. 130. (Pax, v. 833. — Theatre of the Greeks, p. 94, 4th ed., 1831.)

14. ÍGIÄNES, one of the main original races of Greece. The origin of the Ionians is involved in great obscurity. The name occurs in the Iliad but once, and in the form "Ιαννεσ" (I., 13, 685); but not many years after the war of Troy, the Ionians appear as settled in Attica, and also in the northern part of the Peloponnesus, along the coast of the Corinthian Gulf. Homer narrates that the Athenians were originally Pelasgic but that after Ion, the son of Xuthus, became the leader of the forces of the Athenians, the people

678
the name of Ionia. It appears probable that the Ionians, like the Æolians, were a conquering tribe from the mountains of Thessaly, and that at an unknown period they migrated southward, and settled in Attica and part of the Peloponnesus, probably mixing with the native Pelasgi. The genealogy of Ion, the reputed son of Xuthus, seems to be a legend under which is veiled the early history of the Ionian occupation of Attica. Erupides, in order to flatter the Athenians, makes Ion the son of Apollo. Whatever may be the historical origin of the Ionian names, Athenians and Ionians came to be considered as one and the same people. In the Peloponnesus the Ionians occupied the northern coast of the peninsula, which was then called Ionia, and also Ægialian Ionia, and the sea which separates the Peloponnesus from Southern Italy assumed the name of Ionian Sea, a circumstance which would seem to indicate the extent and prevalence of the Ionian name. This appellation of Ionian Sea was retained among the later Greeks and Romans, and is perpetuated to the present day among the Italians. When the Dorians invaded the Peloponnesus, about 1100 years B.C., the Achai, being driven thence, gathered towards the north, and took possession of Ionia, which thenceforth was known by the name of Achai. The Ionians of the Peloponnesus, in consequence of this, migrated to Attica, whence, being straitened for space, and perhaps, also, harassed by the Dorians, they retired thence into Asia Minor, and the Ionian territories thenceforth was occupied by the Ionians. This migration is mentioned in the Iliad as one of the causes which induced Xerxes, king of Persia, to take the war against the Greeks. Hence Bochard makes Iavan the son of Iapeth, the ancestor of the Ionians. The Persians, moreover, would seem to have called the Greeks by a similar appellation. Thus, in Aristophanes (Acharn., v. 104), a Persian, who speaks broken Greek, is introduced, expressing himself as follows: οἷς λαγη αὐτοκρατορίαν τε καὶ τεχνίτας τε. They, however, who favour such etymologies, should first determine whether the Hebrew is to be regarded as the primitive language or not; since, if the latter be the case, the terms that are given in Hebrew scripture to the early rulers and leaders in the family of Noah, are mere translations from the primitive tongue, and certainly can form no sure basis for the erection even of the slightest superstructure of etymology.

IONIA, a district of Asia Minor, where Ionians from Attica settled, about 1050 B.C. This beautiful and fertile country extended from the river Hermus, along the shores of the Ægean Sea, to Miletus, and the temple of the Brazen Horse on the promontory of Poseidon. Its southern limit, however, probably varied at different times, since some made Ionia reach to the Sinus Lassius. Strabo makes the circuit of Ionia 3430 sta-
Under the Chron., as argued by Joshua, Syria, and its adjacent coast, the Ionian Gulf was inhabited, according to Sclavx, at the straits near Hydruntum (p. 5). Of the Ionian Sea he says nothing; Herodotus, however, makes it extend as far south as the Peloponnesus. Thucydides keeps up the distinction just alluded to, calling the Adriatic by the name of the Ionian Gulf (being probably as ignorant as Herodotus of any other application for this arm of the sea), and styling the coast as far as the western coast of Greece, the Ionian Sea (1, 24). In later times a change of application took place. The limits of the Adriatic were extended as far as the southern coast of Italy and the western shores of Greece, and the Ionian Gulf was considered to be now only a part of it. Eustathius asserts (ad Dionys. Perieg., v. 92), that the more accurate writers of his day maintained this distinction. Hence the remark of Ptolemy is rendered intelligible, that 'the Ionian Sea extends along the whole western coast of Greece down to the southern extremity of the Peloponnesus.' (Mannert, Geogr., vol. 9, p. 12.)

Iophon, the son of Sophocles, is described by Aristophanes (Ran., 73, seqq.) as a man whose powers were, at the time of his father's death, not yet sufficiently proved to enable a critic to determine his literary rank. He appears, however, to have been a creditable dramatist, and gained the second prize in 42, B.C., when Euripides was first and Ion third. (Arg. ad Eurip., Hippol.—Theater der Griechen, p. 94, seq., 4th ed.)

Joppa, an ancient city of Palestine, situated on the coast, to the northwest of Jerusalem, and to the south of Caesarea. In the Old Testament it is called Japho (Joshua, 19, 46—2 Chron. 2, 16.—Jonah, 1, 3). It was the only harbour possessed by the Jews, and the wood for the temple, which was cut out Mount Lebanon, was brought in floats to Joppa, thence to be sent in the ships to Jerusalem. Joppa was the ancient city, and fell under the power of the kings of Syria, until the Maccabees conquered it, and restored it to their nation. The Jews, not being a commercial people, made no use of Joppa as a place of trade; and hence it became a retreat for pirates. (Strabo, 759.) Under the Roman power the pirates were made to disappear. In the middle ages Joppa changed its name to Jaffa or Yaffa. (Abulfed, Tafs. Syr., p. 80.)—Joppa was made by the ancient mythologists the place of the seat of water demons, and here a great fountain was said to have been reigned. (Strabo, l.c.) Pliny (9, 5) even gravely informs us, that M. Scaurus brought away from this place to Rome the bones of the sea-monster to which the princess had been exposed, and which were of a remarkable size. They were probably the remains of a large whale. The Jews saw in them the bones of the whale that had swallowed Jonah; the Greeks, on the other hand, connected them with one of the legends of their mythology, of the fish swallowed by the map; and hence their popular name of Jonah, the fish or whale, their writing for the western pilgrims, and here the promised pardons commenced. It possesses still, in times of peace, a considerable commerce with the places in its vicinity, and is well inhabited, chiefly by Arabs. Mr. Wilson says the harbour is rocky and dangerous, and difficult of access; in which state it has been since the time of Josephus, who says that a more dangerous situation for vessels cannot be imagined. The same traveller estimates the present population at 5000. The place is distinguished for its fruits, and the watermelons that grow here are said to be superior to those of any other country. Mr. Buckingham says, 'that Jaffa, as it is now seen, is seated on a promontory jutting out into the sea, and rising to the height of about 150 feet above its level.' (Mannert, Geogr., vol. 6, pt. 1, p. 256.)

Jordânus, a famous river of Palestine, which, according to Josephus, was made by the Philistines from Phiala, about ten miles north of Cæsarea Philippi. This origin of the river was ascertained by Philip the tetrarch, who made the experiment of throwing some chalk or straw into the lake, which came out where the river emerges from the ground, after having run about 120 furlongs beneath the surface of the earth. Mannert deems this story fabulous, and makes, the river rise in Mount Panæas. The Talmudists say that the Jordan rises out of the cave of Panæas. They assert, moreover, that Leshem is Panæas, Leshem was subdued by the Danites, and Jerobam placed one of his golden calves in Dan, which is at the springs of Jordan. Josephus says that the springs of Jordan rise from under the temple of the golden calf. Possibly this temple might stand on a hill, so convenient and proper for such an edifice, that the temple of Augustus was afterward built upon it. Burekhardt, however, says that it rises about four miles northeast from Cæsarea Philippi, in the plain, near a hill called Tiberias. There, he says, two springs rise from each other, one smaller than the other, whose waters unite immediately below. Both sources are on level ground, among rocks of what Burekhardt calls tufwacke. The larger source immediately forms a river 12 or 15 yards wide, which rushes rapidly over a stony bed into the lower plain. It is soon after joined by the river of Panæas, or Cæsarea Philippi, which was on the northeast of the city. Over the source of this river is a perpendicular rock, in which several niches have been cut to receive statues, the largest of which is above a spacious cavern, between which the river rises. This niche, the editor of Burekhardt conjectures, contained a statue of Pan, whence the name of Panæas given to the city, and of Taveiov to the cavern. Seetzen differs from Burekhardt in making the spring of the river Hasheiba, which rises half a league to the west of Hasheiba, and which, he says, forms the branch of the Jordan, to be the proper head of that river. A few miles below their junction, the two rivers, now the considerable stream, enter the small lake of Houle, the ancient Samochonitis or Meron, into which several other streams from the mountains discharge themselves; some of them, perhaps, having equal claims to the honour of forming the Jordan with those above mentioned. So that, in truth, the Lake of Houle may be considered as the real source of the river. After quitting this small lake, the river runs a course of about 12 miles to the Lake Tabaria, the ancient Sea of Tiberias or Greece, where the ancients placed the entrance of the Jordan; this is the plan of its course. The Jordan, it appears, anciently overflowed (as it probably does sometimes now) in the first month, which answers to our March: as it was at this time that the armies enumerated in 1 Chron., 12, passed the Jordan to David at Ziklag, 'when it had overflowed all its banks.' This was, in fact, the time when the frequent rains and the melting of the snows have made the river bigger than it is at any other time.
JOSEPHUS.

on the mountains at its source would be most likely to occasion such an inundation. Travellers have given different accounts of this celebrated stream. Maunder assigns it a breadth of 20 yards; but represents it as deep, and so rapid that a man could not swim against the current. Volney calls it from 60 to 80 feet between the two principal lakes, and 10 or 12 feet deep; but makes it 60 paces at its embouchure; Chateaubriand, about the same point, 50 paces, and six or seven feet deep close to the shore. Dr. Shaw considered it as 30 feet broad and 4 feet deep; Mr. Burchard, who crossed it higher up, calls it 80 paces broad, and three feet deep; and that it daily discharges 6,090,000 tons of water into the Dead Sea. Burchard, who crossed it higher up, calls it 80 paces broad, and three feet deep; but this was in the middle of summer. Mr. Buckingham, who visited it in the month of January, 1816, states it to be little more at the part where he crossed it, which was a short distance above the parallel of Jericho, than 25 yards in breadth, and so shallow as to be easily fordable by the horses. At another point, higher up in its course, he describes it as 120 feet broad. From a mean of these and other accounts, its average width may be computed at 30 yards. It rolls so powerful a volume of water into the Dead Sea, that the strongest and most expert swimmer would be foil’d in any attempt to swim across it at its point of entrance: he must inevitably be hurried down by the stream into the lake. The banks of the Jordan are in many places covered with bushes, reeds, tamarisks, willows, oleanders, &c., which form a barrier against various wild animals, who here concealed themselves till the swelling of the river drove them from their coverts. To this Jeremias alludes (49, 19). Previously to the destruction of the four cities of the plain, it is probable that the Jordan flowed to the Red Sea, through the valley of Ghor or Arabia. — The etymology of its name has been variously assigned. It is thought by some to come from the Hebrew יָרָד, a descent, from its rapid descent through that country. Another class of etymologists deduce its name from the Hebrew יָרָד and סִירָא, importing the caldron of judgment. Others make it come from יָרָד, a spring, and Дан, a small town near its source; and a third class deduce it from יָרָד and דָּנ, two rivulets. It most probably derives its name from יָרָד-דָּנ, the name of a river of the same name in Arabia, near which it it takes its rise. The Arabs call it יְרָד וָדֵד, the Persian, אָרְדֵּן, and the Arabian geographer Edrisi, Zacchar, or swelling. (Man- ford’s Scripture Gazetteer, p. 257.) For six weeks or (as he is called in the Analecta of Mahlon) Jordanes, a Goth by birth, secretary to one of the kings of the Alans, and, as some believe, afterward bishop of Ravenna. In the year 552 of our era he wrote a history of the Goths (Re Robus Ge- ticus). This is merely an abridgment of the history of Cassiodorus, and is written without judgment and with great partiality. He composed also a work enti- tled De renovarum et temporum successione, or a Roman history from Rome to Augustus. It is only a shadow of the history of Florus, in which such alterations and additions, however, as to enable us sometimes to correct by means of it the text of the Roman historian. (Schüll, Hist. Lit. Lat., vol. 3, p. 177.) Jot, an island in the Ægean Sea, to the north of Thera. Here, according to some accounts, Homer was interred. (Strab., 484. — Plin., 4, 12.) It was also said, that the poet’s mother was a native of this island. (Steph. Beor, s. v. Ιότη.) The modern name is Νησί, which Bondelmonti assigns to a totally later derivation, since it merely comes from a Roman corru- pition. (Bondell., Ins. Archipl., p. 99, ed. De Sinner.) JOSEPHUS, Flavius, a celebrated Jew, son of Ma- thias, a priest, born in Jerusalem. The date of his birth is A.D. 37. He was a man of illustrious race, lineally descended from a priestly family, the first of the twenty-four courses, an eminent distinction. By his mother’s side he traced his genealogy up to the Aaronic princes. He grew up with a high reputation for early intelligence and memory. At fourteen years old (he is his own biographer) he was so fond of letters, that the chief priests used to meet at his father’s house to put to him difficult questions of the law. At sixteen he determined to acquaint himself with the three prevailing sects, those of the Pharisees, Sadducees, and Esseni- ses. For though he had led for some time a hardy life, he was, yet sufficiently acquainted with the character of each sect to decide which he should follow. Having heard of a certain Essene named Banus was leading in the desert the life of a hermit, making his ra­iment from the trees and his food from the fruits of the earth practising cold abulations at all seasons, and, in short, using every means of mortification to increase his sanctity, Josephus, ambitious of emulating the fame of such an example of holy seclusion, joined him in his cell. But three years of this ascetic life took off his zealous ambition; he grew weary of the desert, abandoned his great example of painful devotion, and returned to the city at the age of nineteen. Then he joined the sect of the Pharisees. In his twenty-sixth year he undertook a voyage to Rome, in order to make interest in favour of certain priests, who had been sent there to answer some unimportant charge brought by Felix. On his voyage he was shipwrecked and in great danger. His ship foundered in the Adriatic, and a hundred of the crew and passengers were cast into the sea, eighty contrived to swim, and were taken up by a ship from Cyprus. They arrived at Puteoli, the usual landing-place, and Josephus, making acquaint­ance with one Aliturus, an actor, a Jew by birth, and from his profession in high credit with the Emperor Voppea, he obtained the release of the prisoners, as well as valuable presents from Poppea, and returned home. During all this time he had studied diligently and made himself master of the Greek language, with the few of his countrymen could write, still fewer with a correct pronunciation. On his return home he found the Jews on the point of revolt against the power of Rome. After vainly endeavouring to oppose this rash determination, he at last joined their cause, and held various commands in the Jewish army. At Jotapata, in Galilee, he signalized his military ability in supporting a siege of forty-seven days against Vespasian and Titus, in a small town of Judea. During the siege and capture, 40,000 thousand of the Jews; none were spared but women and children and the number of captives amounted only to 1200, so faithfully had the Roman soldiery executed their orders of destruction. Josephus saved his life by flying into a cave, where forty of his countrymen had also taken refuge. He dissuaded them from committing suicide, and, when they had all drawn lots to kill one another, Josephus, with one other, remained the last, and surrendered themselves. He was agreed by Vespasian by foretelling that he would become one day the master of the Roman empire. (Joseph. Vit., 6 75. — Millman’s History of the Jews, vol. 2, p. 253, seqq.) Vossius (Hist. Gr. 2, 8) thinks that Josephus, who, like all the rest of his nation, expected at this period the coming of the Messiah, applied to Vespasian the prophecies which announced the advent of our Saviour. He remarks that Josephus might have been an abettor of such a scheme, yet more since he was besieged. His prophecy having been accomplished two years afterward, he obtained his freedom and took the premonition of Flau- vius, to indicate that he regarded himself as the freed­man of the emperor. Josephus was present during the whole siege of Jerusalem, endeavouring to per­suade his countrymen to capitulate. Whether he se­verely considered resistance impossible, or, as he 4 R
JOSEPHUS.

Josephus pretends, recognising the hand of God and the accomplishment of the prophecies in the ruin of his country, he esteemed it impious as well as vain; whether he was actuated by the baser motive of self-interest, or the more generous desire of being of service to his miserable countrymen, he was by no means held in the same estimation by the Roman army as by Titus.

They thought a traitor to his country might be a traitor to them; and they were apt to lay all their losses to his charge, as if he kept up secret intelligence with the besieged. On the capture of the city, Titus offered him any boon he would request. He chose the sacred books, and the lives of his brother and fifty friends.

He was afterward permitted to select 190 of his friends and relatives from the multitude who were shut up in the Temple to be sold for slaves. The estate of Josephus lying within the Roman encampment, Titus assigned him other lands in lieu of it.

Vespasian also conferred on him a considerable property in land. Josephus lived afterward at Rome, in high favour with Vespasian, Titus, and Domitian.

The latter permitted certain Jews and a eunuch, the tutor of his son, who had falsely accused him; exempted his estate from tribute, and advanced him to high honour. He was a great favourite with the Empress Domitia. The time of his death is uncertain; he was certainly alive at the end of the first century, and may have perished in the second. After his surrender he had married a captive in Cæsarea, but, in obedience, it may be presumed, to the law which permitted such marriages to a man of priestly line, he discarded her, and married again in Alexandria.

By his Alexandrian wife Josephus had three sons; one only, Hyrcanus, lived to maturity. Dissatisfied with this wife's conduct, he divorced her also, and married a Cretan woman, from a Jewish family, of uncertain virtues, containing in her a portion of the most admirable virtue.—At Rome Josephus first wrote the History of the Jewish War (Ioudaikē ἱστορία περὶ διόρωσεως), in the Syro-Chaldaic tongue, for the use of his own countrymen in the East, particularly those beyond the Euphrates. He afterward translated the work into Greek, for the benefit of the Western Jews and the Romans. Both King Agrippa and Titus bore testimony to its accuracy. The latter ordered it to be translated into Latin, which was done with his own hands as an authentic memorial of the times. This work was translated into Latin in the fifth century by Rufinus of Aquileia, or rather by Cassiodorus. (Muratori, Antiq. Ital., vol. 3, p. 920.) Many years afterward, about A.D. 93, Josephus published his great work on the Antiquities of the Jews (Joudaikē Ἀρχαλόγαι), in twenty books. It forms a history of the chosen people from the creation to the reign of the Emperor Nero. Josephus did not write this work for the use of his countrymen, nor even for the Hellenistic Jews: his object was to make his nation better known to the Greeks and Romans, and to remove the contempt in which it was accustomed to be held. The books of the Old Testament, and, where these failed, traditions and other historical monuments, were the sources whence he drew the materials for his work; but, in making use of these, he allowed himself an unpardonable license, in removing from his narrative all that the religion of the Jews regarded as most worthy of veneration, in order not to shock the prejudices of the nations to whom he wrote. He not only treats the books of the Old Testament as if they were mere human compositions, in explaining, enlarging, and commenting upon them, and thus destroying the native and noble simplicity and pathos which renders the first of the sacred volumes in full of attraction, but he allows himself the liberty of often adding to the recital of an event circumstances which change its entire nature. In every part of the work in question, he represents his countrymen in a point of view calculated to conciliate the esteem of the masters of the world. Notwithstanding all this, however, the Antiquities of Josephus are extremely interesting, as affording us a faithful picture of Jewish manners in the time of the historian, and as filling up a void in ancient history of four centuries between the last books of the Old Testament and those of the New. With a view similar to that which dictated the work just mentioned, Josephus wrote an answer to Apion, a celebrated grammarian of Egypt (vid. Apion, No. II.), who had given currency to many of the ancient traditions of Egyptian tradition concerning the Jews. He likewise published his own life, in answer to the statements of his old antagonist, Justus of Tiberias, who had sent forth a history of the war, written in Greek with considerable elegance. At what time he died is uncertain; history loses sight of him in his fifty-sixth or fifty-seventh year. A work entitled Καισαρείας ἡγούμενος, & πέρι αὐτοκράτους Ἀντιπαρους, has been erroneously ascribed to Josephus. In some editions of the Scriptures it appears under the appellation of the Fourth Book of Maccabees. A fragment also, on the Cause of the Universe (περὶ τοῦ πατρὸς), preserved by John Philoponus, a Christian writer of the seventh century, has been incorrectly attributed to Josephus.

Before leaving the biography of this writer, we must say a few words relative to a famous passage in the Antiquities, which has been regarded as containing the first of the three chapters of the eighteenth book (Joes., Op., ed. Hav., vol. 1, p. 161), and is as follows: "At this time there exists Jesus, a wise man, if it be allowed to us to call him a man; for he performed wonderful works, and instructed those who receive the truth with joy. He thus drew to him many Jews and many of the Greeks. He was the Christ. Pilate having punished him with crucifixion on the accusation of our people, he was buried, and on the third day he came again into life. He afterwards declared himself in a public hearing to have been the Son of God. The nation of Christians, named after him, continues even to the present day." This passage, placed in the middle of a work written by a zealous Jew, has all the appearance of a marginal gloss which has found its way into the text. It is not a part of the original text. It is too long to have come from the pen of an infidel, and it is too short to have been written by a Christian. St. Justin, Tertullian, and St. Chrysostom have made no use of it in their disputes with the Jews; and neither Origen nor Photius make any mention of it. Eusebius, who lived before some of the writers just named, is the first who adduces it. These circumstances have suffered to attach suspicion to it in the eyes of some critics, and especially of Richard Simon (under the name of Sainjare, in the Bibliothèque ou Recuei de diverses pièces critiques, Amst., 1708, 8vo, vol. 2, ch. 2) and the historian Gibbon. On the other hand, Henric de Valois (ad Euseb., p. 18, 20), Huet, bishop of Avranches (Demonstr. Evang., p. 27), Isaac Vossius (De LXX. Interpr., p. 161), and others, have defended its authenticity. Lambecius (Biblioth. Fin., vol. 8, p. 5), who advocates the same side, has pretended that the words of Josephus ought to be considered as expressing contempt for our Saviour, although, in order not to offend either party, the historian has concealed his real meaning in equivocal terms. However paradoxical this last opinion may seem, it has assumed an air of considerable probability, in consequence of a slight correction in the text and punctuation which has been proposed by Knittel, a German scholar. (Neue Kritiken über das wohlverstandene Zeugniss des alien Juden Flavius Josephus von Jesu Christo, Braunsvach., 1799, 4to.) A celebrated Protestant divine, Godfrey Less, after having carefully and
exactly examined both sides of the question, has pronounced the passage to be supposititious, and adds, that the silence of the historian respecting our Saviour and the miracles which he wrought, affords a far more eloquent testimony in favour of the truth of our Redeemer's mission than the most laboured statement could have yielded, especially when we consider that the father of Josephus, one of the priests of Jerusalem, could not but have known our Saviour, and since Josephus himself lived in the midst of the apostles. Had the latter been able, he would have refuted the whole history of our Saviour's mission and works. His silence is conclusive in their favour. The efforts of deistical writers, therefore, to invalidate the authenticity of this remarkable passage, have literally recoiled upon themselves, and Christianity has achieved a triumph with the very arms of infidelity. (Disputatio super Josephi de Christo Testimon., Gött., 1791, 4to.)—Compare Olshausen, Historien Ezech. Vet. præcip. monumenta, Berol., 1820, 8vo, and Paulinus, in the Heidel. Jahrb., 1829, p. 733, as also Böhmert, Ueber das Flav. Joseph. Zeugniss von Christo, Leips., 1823, 8vo.)—The best editions of the works of Josephus are Hadum's 2 vols. fol., Oxon., 1720, and Havercamp's, 2 vols. fol., Anst., 1726. A new edition, however, is much wanted. Oberhüer commenced one, of which three volumes appeared, embracing the text of Havercamp, in 1735, and the editor had promised a commentary, in which to be contained the result of his own researches, and of those of others made at his request in the principal libraries of Europe. The edition was to be accompanied also by a Lexicon of Josephus, in which the language of this writer would be compared with that of Philo, of the Alexandrian school, and of the writers of the New Testament. His death prevented the completion of his design, and the new edition is impatiently looked for. In 1825-1827, a 12mo edition, in 6 vols., appeared from the Leipzic press, under the editorial care of Richter. The text, however, is merely a reprint of that of Hadum and Havercamp. (Hoffmann, Lex. Bibliogr., vol. 2. p. 588. —Schöll, Gesch. der Griech. Litt., vol. 2. p. 383, seqq.)

Iovianus, Flavius Claudius, born A.D. 331, was the son of Veronicianus, of an illustrious family of Macedonians, and a prominent officer in the Consti-
tine. Iovianus served in the army of Julian, in his unlucky expedition against the Persians; and when that emperor was killed, A.D. 363, the soldiers proclaimed him his successor. His first task was to save the army, which was surrounded by the Persians, and in great distress for provisions. After repelling repeated attacks of the enemy, he willingly listened to proposals for peace, which were, that the Romans should give up the conquest of former emperors westward of the Tigris, and as far as the city of Nisibin, which was still in their hands, but was included in the territory to be given up to Persia, and that, moreover, they should render no assistance to the king of Armenia, then at war with the Persians. These conditions, however, offensive to Roman pride, Jovian was obliged to submit to, as his soldiers were in the utmost desti-
tion. It is a remarkable instance of the Roman notions of political honesty, that, Euripus reproaches Jovian, not so much with having given up the territory of the empire, as with having observed so humiliating a treaty after he had come out of his dangerous posi-
tion, instead of renewing the war, as the Romans had constantly done on former occasions. Jovian delivered Nisibis to the Persians, the inhabitants withdrawing to Amida, which became, after this, the chief Roman town in the province of Nisibis. Jov-
ian, who was of the Christian faith, revoked the edicts of Julian against the Christians. He also supported the orthodox or Nicene creed against the Arians, and he showed his favour to the bishops who had previ-
ously suffered from the Arians, and especially to Atan-
nasius, who visited him at Antioch. Having been acknowledged over the whole empire, Jovian, after staying some months at Antioch, set off during the winter to Constantinople, and, on his way, paid fun-
eral honours to Julian's remains at Tarasus. He con-
tinued his journey in very severe cold, of which sev-
eral of his attendants died. At Ancyræ he assumed the consular dignity; but, a few days after, being at a place called Dedastas, in Galatia, he was found dead in his bed, having been suffocated, as some say, by the vapour of charcoal burning in his room; according to others, by the steam of the plaster with which it had been newly laid; while others, again, suspected him of having been poisoned or killed by some of his guards. He died on the 16th of February, A.D. 364, being 33 years of age, after a reign of only seven months. The army proclaimed Valentinianus as his successor. (Annum Marcel. 25, 5, seqq. —Le Beau, Hist. du Bas-Empire, vol. 2, p. 186, seqq.)

Jovinus, born of an illustrious family of Gaul, assumed the imperial title under the weak reign of Ho-
norius, and, placing himself at the head of a mixed army of Burgundians, Alemani, Alani, &c., took poss-
session of part of Gaul, A.D. 411. Ataulphus, king of the Visigoths, offered to join Jovinus, and share Gaul between them; but the latter having declined his aid, the Visigoths, instead of making a serious alliance with Honorius, attacked and defeated Jovinus, and, having taken him prisoner, delivered him to Dardanus, prefect of Gaul, who had him put to death at Narbo (Narbonne), A.D. 412. (Jornand., de Reb. Gōt., c. 32, seqq. —Olymp.

Iphicles, a son of Amphlyton and Alemona, born at the same birth with Hercules. The children were the eight months old, when two huge ser-
Glents into the chamber to devour them. Iphicles alarmed the house by his cries, but Hercules raised himself up on his feet, caught the two monsters by the throat, and strangled them. (Pind., Nēm., 1, 49, seqg.

—Ithocr., Idyll., 24. —Apollo., 2, 4.) Iphicles, on attaining to manhood, was slain in battle during the expedition against the sons of Hippocoon, who had been defeated at Éoneus, the son of Lycymnus. (Pau-
san., iv. 29.)

Iphicles, a king of Phylace in Phthiotis, whose name is connected with one of the legends relative to Melampus. (Vid. Melampus.)

Iphicrates, an Athenian general, of low origin, but distinguished abilities. He was most remarkable for a happy innovation upon the ancient routine of Greek tactics, which he introduced in the course of that gen-
eral war which was ended B.C. 387, by the peace of Antalcidas. This, like most improvements upon the earlier mode of warfare, consisted in looking, for each individual soldier, rather to the means of offence than protection. Iphicrates laid aside the very weighty panoply which the regular infantry, composed of Greek citizens, had always worn, and substituted a light tar-
get for the large buckler, and a quilted jacket for the coat of mail; at the same time he doubled the length of the sword, usually worn thick and sharp, and, creased in the same, or, by some accounts, in a greater proportion, the length of the spear. It appears that the troops whom he thus armed and disciplined (not Athenian citizens, who would hardly have submitted to the necessary discipline, but mercenaries following his standard, like the Free Companions of the middle ages) also carried missile javelins; and that their fa-
vourite mode of attack was to throw the arrows of one of whose charge they could not have resisted, trusting in their individual agility to baffle pursuit. When once the close order of the column was broken, its individual soldiers were overmatched by the longer weapons and unencum-
bled movements of the lighter infantry. In this way Iphicrates and his targets (pelatae), as they were called, gained so many successes, that the Peloponnesian infantry dared not encounter them, except the Lacedaemonians, who said, in scoff, that their allies feared the targets as children fear hobgoblins. They were themselves, however, taught the value of this new force, B.C. 592, when Iphicrates waylaid and cut off a force of 10000, a herd of horses, and a train of baggage. The loss in men was of no great amount; but that heavy-armed Lacedaemonians should be defeated by light-armed mercenaries was a marvel to Greece, and a severe blow to the national reputation and vanity of Sparta. Accordingly, this action raised the credit of Iphicrates extremely high. He commanded afterward in the Hellespont, B.C. 389; in Egypt, at the request of the Persians, B.C. 374; relieved Coreya in 373, and served with reputation on other less important occasions. We have a life of this commander by Cornelius Nepos. (Xen. Hist. Gr., 4, 5, 13.—Id. ib., 4, 8, 34, seqq.—Id. ib., 6, 2, 13.—Diod. Sic., 15, 41.—Id., 15, 44.—Id., 16, 85.—Corn. Nep., Vit. Iphicr.)

Iphigenia, a daughter of Agamemnon and Clytemnestra. The Grecian fleet against Troy had assembled at Aulis; but Agamemnon, having killed a deer in the chase, boasted that he was superior to all the gods in hunting. This caused the Grecian fleet to be detained. According to another account, the stag itself had been a favourite one of Diana's. Calchas thereupon announced, that the wrath of the goddess could only be appeased by the sacrifice of Iphigenia, the daughter of the offender, and the father, though most reluctant, was compelled to obey. The maiden was accordingly obtained from her mother Clytemnestra, under the pretence of being wanted for a union with Achilles; and having reached the Grecian camp, was on the point of being sacrificed, when Di- ana, moved with pity, snatched her away, leaving a hind in her place. The goddess carried her to Tauris, where she became a priestess in her temple. It was the custom at Tauris to sacrifice all strangers to Di- ana; and many had been thus immoderately under the ministration of Iphigenia, when Orestes and his friend Pyldades chanced to come thither, in obedience to the oracle. On theone side these men were guided by the appeal of Agamemnon to convey to Argos the statue of the Tauric Diana. When Orestes and Pyldades were brought as victims to the altar, Iphigenia, perceiving them to be Greeks, offered to spare the life of one of them, provided he would convey a letter for her to Greece. This occasioned a contest between them, which should sacrifice himself for the other, and it was ended in Pyldades' yielding to Orestes, and agreeing to be the bearer of the letter. This discovery was the con- sequence; and Iphigenia accordingly contrived to carry off the statue of Diana, and to accompany her brother and Pyldades into Greece. The story of Iphigenia has been made by Euripides the subject of two plays, in which, of course several variations from the common legend are introduced. The name and story of Iphi- genia are unnoticed by Homer. Iphigenia is probably the name of the Etruscan Diana. She is the daughter of Diana-Oribia of Sparta, at whose altars the boys were scourged. It was probably this rite that caused Iphi- genia to be identified with the "Virgin," to whom hu- man victims were offered by the Tauri. (Herod., 4, 103.) The story of Iphigenia would seem to have been then invented to account for the similarity. Miller thinks that Lemnos was the original mythic Tau- ris, whence the name was transferred to the Etruscan. (Dorsetl, vol. 1, p. 397, seqq.) The Homeric name of Iphigenia is Iphianassa. (Hom., 11., 9, 144, seq.— Heyne, ad loc.—Compare Lucr., 1, 86.)

Iphitus, I. a son of Eurytus, king of Oechalia. (Vid. Hercules, p. 598, col. 2.) II. A king of Elis, son of Praxoneides, in the age of Lycurgus. He re-}

established the Olympic games 470 years after their first institution, or B.C. 884. It was not, however, until 108 years after this (B.C. 776) that the custom was introduced of inscribing in the gymnasium at Olympia the names of those who had borne off the prize in the stadium. The first whose name was thus inscribed was Coroebus. (L'Art de vérifier les Dates, vol. 3, p. 167.—Picot, Table Chronol., vol. 1, p. 322.)

Ire, is a native of Greece, disciple of Poly carp, and bishop of Lyons, in France. The time of his birth, and the precise place of his nativity, cannot be satisfactorily ascertained. Dodwell refers his birth to the reign of Nerva, A.D. 97, and thinks that he did not outlive the year 190. Grabe dates his birth about
the year 108. Dupin says that he was born a little before the year 1400, and died a martyr in 202. On the martyrdom of Photinus, his predecessor in the see of Lyons, Irenaeus, who had been a distinguished member of the church in that quarter, was appointed his successor in the diocese, A.D. 174, and presided in that capacity at two councils held at Lyons, in one of which the Gnostic heresy was condemned, and in another the Arian tenets. He was a native of a distant part, and Dürrigom, and lived there beside with Valentinus, Florinus, and Blaust, against whose opinions he afterward wrote with much zeal and ability. He wrote on different subjects; but, as what remains is in Latin, some supposed he composed in that language, and not in Greek. Fragments of his works in Greek are, however, preserved, which prove that his style was simple, though clear and often entirely in the ordinary language concerning the soul are curious. He suffered martyrdom about A.D. 202. From the silence of Tertullian, Eusebius, and others, concerning the manner of his death, Cave, Blassine, and Dodwell have inferred that he did not die by martyrdom, but in the ordinary course of nature. With these Lardner coincides. The best edition of his works is that of Grabe, Oxon., fol. 1702. Dodwell published a series of six essays on the writings of this father of church history, in which he illustrates several critical references and remarks.

Isæus, a beautiful country in Libya, not far from Cyrene. When Battus, in obedience to the oracle, was seeking a place for a settlement, the Libyans, who were his guides, managed so as to lead him through it by night. Milton calls the name Isissæ, for which he has the authority of Pindar. (Pind., Pyth., 9, 185—Herod., 4, 158, seqq.)

Iris, I. the goddess of the rainbow. Homer gives not the slightest hint of who her parents were; but Homer, however, makes her the daughter of Thaumas (Wonder), by the ocean-nymph Electra (Brightness), no unapt parentage for the brilliant and wonder-exciting bow of the skies. (Theog., 265.) The office of Iris in the Iliad is to act as the messenger of the king and queen of Olympus; a duty which Mercury performs in the Odyssey, in which poem there is not any mention made of Iris. There is little mention, also, of the goddess in the subsequent Greek poets, but, whenever she is spoken of, she appears quite distinct from the celestial phenomenon of the same name. In Callimachus (H. in Del., 216 seqq.) and the Latin poets, Iris is appropriated to the service of Juno; and by these last she is invariably (and we may even say clumsily) confounded with the rainbow. According to the lyric poet Alceus, which is followed by Nonnus, Iris was by Zephyrus the mother of Love. (Alceus, ap. Pind., Amator, 20—Nonnus, 51, 110, seq.) Homer styles Iris "gold-winged" (H., 8, 398—Ib., 9, 185), the only line in the poet which makes against Voss's theory, that none of Homer's gods were winged. (Mythol. Briefe, vol. 1, Br. 12, seqq.) The name Iris ('Iρας) is usually derived from ἱππος, ἰπός, "to say," an etymology which suits the office of the goddess, and which accords with the view taken of the rainbow in the Book of Genesis. Hermann, however, renders Iris by the Latin term Sertia, from ἵππος, "to speak," the rainbow being formed of seven united or blended colours: "Iiris, Sertia, quod ex septem coloribus consista est." (Opusc., vol. 2, p. 179. —Keightley's Mythology, p. 200.—II. A river of Pontus, rising on the confines of Armenia Minor, and flowing into the sea southeast of Amisus. It receives many tributaries, and near the end of its course passes through the district of Phanareus. The Turks call it the Tokali, and in its mouth it is joined by the rivers Jekil-Ermak, or the Green River. "It has been a prevalent opinion among geographers, both ancient and modern," observes Rennell (Geography of Western Asia, vol. 1, p. 269), "that the Iris made a course to the eastward of north, from Amasea to the Sinus Amnesus. Ptolemy allows N. 20° E. and 64 miles in distance. Dr. Howell allows northeast-by-north in his map; D'Anville north exactly." The same writer has the following ingenious conjecture respecting the origin of its ancient name. "M. D'Anville says that its name is Jekil-Ermak, or the Green River. 'Tournefort tells us that the sister river (the same with the Lykus, the larger branch) was called Ermak, or a placename from the colour of the soil. May it not be, that, if the river was red at some seasons, and green (or fancied to be so) at others, this may have occasioned the name of Iris, from the Greeks!' (Geography of Western Asia, vol. 1, p. 356.)

Irus, a beggar of Ithaca, remarkable for his large stature and his excessive gluttony. His original name was Aramas, but he received that of Iris, as being the messenger of the suiters of Penelope. (Ἰρός, κατὰ τὸν Πολυτικοῦ, τοῦ ἔρωτι, τό λεγο καί ἀπαγγέλλω. Eustath. ad Od., 18, 6.) Iris attempted to obstruct the entrance of Ulysses into the palace, under the mean disguise assumed by the latter on his return home, and in presence of the whole court challenged him to fight. Ulysses immediately brought him to the ground with a single blow. (Od., 18, 1, seqq.)

Isás, a young Spartan, who, when Epaminondas and the Thebans had attacked Lacedaemon, and the city was in danger of falling into their hands, rushed forth from his dwelling in a state of nudity, and newly anointed with oil, having nothing but a spear in one hand and a sword in the other, and in this condition contended valiantly against the foe. The Ephori honored him with a chariot for his gallant achievement, but, at the same time, fined him 1000 drachmas for having dared to appear without his armour. (Plut., Vit. Ages.) This story is introduced by Blaggell, in his paper "The mixture of virtue and vice in the human character." (Spectator, No. 564.)

Isèi̜Οs, an orator of Chalcis, in Euboea, who came to Athens, and became the pupil of Lysias, and soon after the master of Demostenes. (Clinton, Fasti Hellenici, 2d ed., p. 117.) Dionysius of Halicarnassus could not ascertain the time of his birth or death. So much as this, however, appears certain, that the vigour of his talent belonged to the period after the Peloponnesian war, and that he lived to see the time of King Philip. His style bears a great resemblance to that of Lysias. He is elegant and vigorous; but Dionysius of Halicarnassus does not find in him the simplicity of the other. He understands better than Lysias the art of arranging the several parts of a discourse, but he is less natural. When we read the exposition of a speech of Lysias, nothing appears artificial therein: on the contrary, everything is studied in the orations of Isæi̜Οs. "One would believe Lysias," adds Dionysius, "though he were stating a false fact, or one cannot, without some feeling of distrust, assest to Isæi̜Οs, that he is not the judge of the truth." Again: "Lysias seems to aim at truth, but Isæi̜Οs to follow art: the one strives to please, the other to produce effect." Dionysius farther remarks, that, in his opinion, with Isæi̜Οs originated that vigour and energy of style (δεί-
which his pupil Domosthenes carried to perfection.

 Dioscop., de isag. judic. — Op., ed. Reiske,
 vol. 5, p. 613, seqq. — So far as the extant specimens of Isauria enable us to form an opinion, this judgment appears to be just. The perspicuity and artless simplicity of the style of Lysias are admirable; but, on reading Isurus, we feel that we have to do with a subtly discursive, subtile, and comprehensive writer, strong and pointed, but have too much the appearance of studied effect, and for that reason often fail to concive. — The author of the life of Isurus, attributed to Plutarch, mentions sixty-four orations of his, fifty of which were allowed to be genuine. At present there are only eleven extant, all of which are of the forensic class, and all treat of matters relating to wills, and the succession to the property of testators or persons intestate. They are, however, written in a style of the highest classical excellence. These orations are valuable for the insight they give us into the laws of Athens as to the disposition of property by will and in cases of intestacy, and also as to many of the forms of procedure. — The best edition of the text of Isurus is by Bekker, forming part of the Oratores Attici (1822—1823, 8vo. Berol.—Orat. Att., vol. 3.) The most useful edition, however, is that of Schömann, Gyrphusis, 1851, 8vo. Sir W. Jones has given a complete list of the orations, and the same is found in the edition of Isurus by Rennell 1779. His version, however, extends only to ten of the orations, the eleventh having been discovered since. (Schöll, Hist. Lit. Gr., vol. 2, p. 216.) II. A native of Assyria, likewise an orator, who came to Rome A.D. 17. He is greatly commended by Pliny the younger, who observes that he always spoke extemporaneously, and that his language was marked by elegance, unlaboured ease, and great correctness. (Plin., Ep., 2, 3.) Isurus, a river of Umbria. Its only name appears to have been the Sapis. (Strab., 216.—Pltol., p. 64.) Its modern appellation is the Sasso. It rose not far from Sarsina, and fell into the Adriatic to the northwest of the Rubicon. (Lucan, 2, 406.) Isar and Isara. I. Now the isère, a river of Gaul, where Fabius routed the Allobroges. It rose in the Graian Alps, and fell into the Rhodanus near Valentia, the modern Valence. — II. Another, called the Oasis, which falls into the Seine below Pariss. The Celtic name of Briva Isara, a place on this river, has been translated into Pont-Oise. Isauria (or orum), the capital of Isauria, near the confines of Phrygia. Strabo and Stephanus of Byzantium use the term as a plural one (tà Isauron); Ammianus Marcellinus, however, makes it of the first declension (14, 8). It was a strong and rich place, and its inhabitants appear to have acquired their wealth, in a great degree, by plundering the neighbouring regions. The city was attacked by the Macedonians under Perdiccas, the inhabitants having put to death the governor or set over the province by Alexander. After a brave resistance, the Isaurians destroyed themselves and their city by fire. The conquerors are said to have obtained much gold and silver from the ruins of the place. (Diod Sic., 18, 22.) During the contentions between Alexander's successors, the neighbouring mountainers rebelled, and continued doing an irregular annoyance until they were reduced by Serrusius, hence style Isauricus, and the city was again destroyed. A new Isaura was afterward built by Amyntas, king of Galatia, in the vicinity of the old city, and the stones of this last were employed in its construction. (Strab., 691.) This new Isaura appears to have existed until the third century, when Trebellianus made it his residence, and raised here the standard of revolt. He was slain, and Isauria, probably in consequence of the impending war with the Galatians, is said to have been destroyed, and from hence thence to Ammianus, its remains were in time scarcely perceptible. (Amm. Marcell., I. c. — Treb. Pollio, 30 Tyranni, c. 25.) D'Avenel places the old capital near a lake, about whose existence, however, the ancients are silent; the modern name he makes Bev- Shehri. New Isaura he places on the lace southeast of the former, and terms it Sudi-Shehri. Mannert opposes this position of the last, and is in favour of Sirri-Serai, a small village east-northeast of Iconium. (Mannert, Anc. Geogr., vol. 6, part 2, p. 188.) Isauria, a country of Asia Minor, north of, and adjacent to, Pisidia. The inhabitants were a wild race, remarkable for the violence and rapine which they exercised against their neighbours. P. Serrusius derived from his reduction of this people the surname of Isauricus. A conformity in the aspect of the country, which was rough and mountainous, caused Cilia Trachea, in a subsequent age, to have the name of Isauria extended to it, and it is thus denominated in the notices of the eastern empire. With respect to Isauria, Sir John Strabo2 says: "The inhabitants are as might have been wished; but the subject, perhaps, was not well known to him. He no doubt regards Isauria as a province or a part of Pisidia at large: and mentions its two capitals, the old and the new. But then he speaks of the expedition of Serrusius, which was sent to one of those cities, as a transaction connected with the modern or maritime Isauria; that is, Cilia Trachea. This may, perhaps, be explained by the circumstance of the occupation of the two parts of Cilia Trachea, one as consul of Cilia, and the expedition being prepared and sent forth from Caycus, in that country, as a convenient point of outset. But Strabo describes Cilia Trachea under its proper name, and fixes its boundary westward at Coracesium, on the seacoast; and therefore seems to have had no idea of any other Isauria than that which lay inland. The Isauria of Pliny includes both the original province of that name, lying north of Taurus, and also Cilia Trachea, which had been added to the other; possibly from the date of the above-mentioned expedition of Serrusius. About a century and a half had elapsed between the time of Serrusius and Pliny; and great changes had probably taken place in the arrangement of boundaries of countries so lately acquired. In later times, the name of Isauria seems to have become appropriate to Cilia Trachea. Ammianus Marcellinus wrote at so much later a period, that one can hardly allow his description to apply to ancient geography. He describes Isauria as a maritime country absolutely; and perhaps the original Isauria was not known by that name, but merged into the larger province of Pisidia." (Geography of Western Asia, vol. 2, p. 73, seqq.) Isauricus, a surname of P. Serrusius, from his conquests over the Isaurians. (Ovid, Fast., 1, 594.— Cic., Att., 5, 21.—Vitr. Isaura and Isauria.) Ismârû, 1. A native of Charax, near the mouth of the Tigris, who published in the reign of Caligula a "Description of Parthia." (Παρθίαν περιγραφήν.) It no longer exists; but we have a work remaining, which appears to be an extract from it, and is entitled Στράτηγος Παρθικροτομός. "Partian Halting-places." This work gives a list of the eighteen provinces into which the Parthian empire was divided, with the principal places in each province, and the distances between each town. The list is probably taken from official records, such as appear, from the list of provinces, &c., in Herodotus, to have been kept in the ancient Persian empire. The production just referred to has been printed in the second volume of Hudson's "Geographica veteris Scriptores Graci Minorum," with a dissertation by Dodwell. There is also a memoir on Isidorus by Saint-Croix, in the 50th volume of the Rec. de l'Inst. (Paris, 1825.) In the ante-Nicene and Post-Nicene Fathers, of which Aeg., an epigrammatic poet, some of whose productions are preserved in the Anthology. (Jacobs, Anthol. Gr., vol. 3, p. 177; vol. 10, p. 329.) III. An epigrammatic poet, a native of Bolbitine in Egypt. (Jacobs, Anthol. Gr., vol. 10, p. 322.)—IV. A native of Mileb, a Greek architect of the sixth century,
who, together, with Anthemius, was employed by Justinian, emperor of the east, to erect the church of St. Sophia at Constantinople. Anthemius merely laid the foundation of the edifice, and was then arrested by the hand of death, A.D. 534. Isidorus was charged with the completion of this structure. This church is a square building, with a hemispherical cupola in the centre, and its summit 400 feet from the pavement below. This edifice, which was considered the most magnificent monument of the age, was scarcely finished before the cupola was thrown down by an earth-quake. But Justinian had it immediately rebuilt. On the taking of Constantinople by the Turks, the church of St. Sophia was appropriated to the worship of the Mohammedan conquerors.—V. A New Platoni-
ist, a native of Gaza, who succeeded Hegias in the chair of Athens, in the fifth century, or, rather, at the beginning of the sixth. He was a zealous follower of Proclus, but deficient in talent and erudition, and, consequently, soon made way for Zeno dotus as his successor. (Schöll, Hist. Lit. Gr., vol. 7, p. 116.)—VI. A native of Pelusium, a saint in the Roman Catholic calendar, and one of the most celebrated of the disciples of Chrysostom. He lived in the fifth century, professed the monastic life from his youth, and composed some thousand epistles, of which two thousand and twelve remain, in five books, and are deemed valuable, especially for the information which they afford respecting the religious and civil practicals. The best edition is that of Schottus, Paris, 1638, fol. In 1738, Henmann attacked the authenticity of a part of these epistles, in a tract entitled "Epistolae Isidori Pelusiota maximiin partem con- fectae," &c.—VII. Another saint in the Roman Catho-
lic calendar, and a distinguished Spanish prelate towards the beginning of the seventh century, when he succeeded his brother Leander in the see of Seville. He was called, by his countrymen, "Isidore of Seville." He was, however, a native of Carthage Nova (CARTHAGENA), of which his father Severianus was governor. He presided in a council held in that city, A.D. 619; and at the fourth national council, A.D. 633, in which numerous regulations were by his influence adopted, in order to reform ecclesiastical discipline in Spain. He was well acquaint-
ed with Greek and Hebrew, and was considered by the ancients as a master in the moral and secular science. The style of his works, however, is not very clear, and his judgment appears to have been very de-
fective. He died A.D. 636.—Isidorus was the au-
thor of many works, chiefly, however, compilations. His principal production is entitled "Twenty Books of Origins and Etymologies" (Originem sive Ety-
nologiarum Libri X.). Death prevented him from finishing this, and it was completed by his friend Brailio, bishop of Saragossa. It contains far more than the title would seem to promise, and is, in fact, a species of encyclopædia, or a summary of all the sciences cultivated at that period. The first book is divided into forty-three chapters, of which the first thirty-eight explain terms connected with grammar. The remaining five have reference to matters connected with history. The second book is devoted principally to rhetorical subjects; it contains also an introduction to philosophy, and a system of Dialectics after Porphy-
ry, Aristotle, and Victorinus. The third book treats of arithmetic, music, and astronomy. The fourth book is devoted to medicine. The fifth book con-
tains jurisprudence and chronology; together with a species of historical summary, terminating at the sixth year of the reign of Heclaclus. In the sixth book, the author occupies himself with the Bible, with hi-
braics and common speech; he speaks of canons, of 
gospels, and councils; he then explains the paschal cycle, the calendar, and the festivals of the church. The seventh and eighth books treat of God, of angels and men, of faith, of heresies, of pagan philosophers, of sibyls, of magicians, and of the gods of the heathen. The ninth book has for its subjects the different lan-
guages spoken among men, names of communities, official dignities, relationships, affinities, marriages. The last ten books explain and define a large number of words, the origin of which is not generally known. In these etymologies the author has no doubt commit-
ted a number of errors, neither has he displayed much critical acumen in many of his remarks; yet, goith-
standing these defects, the work is valuable, as it is the result of the extracts from lost works which it contains, and because it serves to show to what state of advance-
ment each of the sciences of which it treats had at-
tained among the ancients. Isidorus was also the au-
thor of a work entitled "De Diferentis sive propri-
itate verborum," in three books. The first of these is taken from Agustius and other ancient grammarians; the second treats "de differentiis spiritualibus." The third, more complete than the first, is arranged in an alphabetical order. We have also various glossaries ascribed to Isidorus, of which has been formed a liber glossarum. A small glossary, containing gram-
marial terms in Greek and Latin, was published for the first time by Heusinger, in his second edition of Malius Theodorus.—We have to mention also a Chronicle by Isidorus, from the beginning of the world to the fifth year of the reign of Heclaclus, A.D. 615. It is divided into four books, or the first six chapters, and contains likewise some new details respecting the period in which it was composed. It is sometimes cited under the following titles: "De Temporibus;" "Abbrevi-
tior Temporum;" "De Sex mundi etatis;" "Imago 
Mundi." Isidorus wrote also two abridged histories of the Germanic tribes that settled in Spain during the fifth century; one entitled "De historiis, sive Chron-
icon Gotorum;" and the other, "Commentationes Nupicis, first is followed by an appendix on the Vandals and Suevi. Other works of Isidorus are as follows: A Treatise on Ecclesiasti-
cal Writers;" "Sentences;" "Commentaries on the His-
torical Books of the Old Testament;" "Scriptural 
Allegories;" A Book of Poems, or Prolegomena to the 
Scriptures;" A Treatise on Ecclesiastical Dis-
cipline, in which he mentions seven prayers of the 
sacrifice still to be found in the Masorabic mass, 
which is the first mass of which we have an account. Isidorus was the principal author. A collection of canons, attributed to this Isidorus, were by a later priest of the same 
name, Isidore of Seville, who is more admired by later churchmen for learning than discrimination, and is frequently ranked among musical writers, much being 
said by him on the introduction of music into the church, in his divine offices. The best edition of the works of Isidorus is that of Arevali, Rome, 1797—1803, 2 vols fol. The best edition of the Origines is that of Otto, forming the third volume of Linde-

Isis, one of the chief deities of the Egyptians, and the sister and spouse of Osiris. She was said to have 
first taught men the art of cultivating corn, and was 
regarded as the goddess of fecundity. Hence the 
cow was sacred to her. The annual festival of Isis in 
Egypt lasted eight days, during which a general puri-
ication took place. The priests of the goddess were 
bound to observe perpetual chastity; their heads were 
shaved, and they went barefoot. This deity was often 
represented as a woman with the horns of a cow. She 
also appears with the lotus on her head and the sis-
trium in her hand: and in some instances her head is 
seen seen covered with a hood. The temples, or the abodes of Isis are frequent 
ornaments of Egyptian capitals on the pillars of the 
temples. As the worship of Isis passed into foreign 
lands, it assumed a foreign character and many foreign
ISIS.

attitudes, as we see from the Greek and Roman writers. Sometimes she is represented like Diana of Ephesus, the universal mother, with a number of breasts. The mysterious rites of Isis were probably in their origin symbolical: on one of her statues was this inscription, 'I am all that has been or that shall be, I have not had, I have not not had.'—But the Isisic rites, transplanted to Italy, became a cloak for licentiousness, and they were repeatedly forbidden at Rome. Tiberius caused the images of Isis to be thrown into the Tiber; but the worship subsequently revived, and Juvenal speaks of it in an indignant strain.

—The Isisic Table in the Turin Museum, which is supposed to represent the mysteries of Isis, has been judged by Champollion to be the work of an uninstructed artist. The explanations given by Plutarch, c. 10, 32, 13—The legend of Isis and Osiris may be found in full detail in Creuzer (Symbolik, vol. 1, p. 258, seqq.). On comparing the different explanations given by Plutarch and other ancient writers, it will appear that Osiris is the type of the active principle, Isis of the passive principle, and Horus of the sublunary elements; Isis, on the contrary, is the passive force, the power of conceiving and bringing forth into life in the sublunary world. Osiris was particularly adored in the sun, whose rays vivify and impart new warmth to the earth, and who, on his annual return in the spring, appears to create anew all organic bodies. He was adored also in the Nile, the cause of Egyptian fertility. Isis was the earth, or sublunary nature in general; or, in a more confined sense, the soil of Egypt inundated by the Nile, the principle of all fecundity, the goddess of generation and production. United to one another, Osiris and Isis typify the universal Being, the soul of nature, the Pantheus of the Orphic verses. (Symbolik, par Guigniaut, vol. 1, pt. 2, p. 806.)—In accordance with this general view of the subject are the remarks of Knight: "Isis was the same with the goddess of generation, except that by the later Egyptians the personification was still more generalized, so as to comprehend universal nature; whence Apuleius invokes her by the names of Eleusinian Ceres, Celestial Venus, and Proserpina; and she answers him by a general explanation of these titles. 'I am,' says she, 'Nature, the parent of things, the sovereign of the elements, the primary progeny of time, the most exalted of the deities, the first of the heavenly gods and goddesses, the queen of the shapes, the uniform countenance; who dispose with my rod the numerous lights of heaven, the salubrious breezes of the sea, and the mournful silence of the dead; whose single deity the whole world venerates in many forms, with various rites and many names. The Egyptians, skilled in ancient lore, worship me with proper ceremonies, and call me by my true name, Queen Isis.'" (April, Met., 11, p. 257.)

This universal character of the goddess appears, however, to have been subsequent to the Macedonian conquest, when a new modification of the ancient systems of religion and philosophy took place at Alexandria, and spread itself gradually over the world. The statues of this Isis are of a composition and form quite different from those of the ancient Egyptian goddess; and all that we have seen are of Greek or Roman sculpture. The original Egyptian figure of Isis is merely the animal symbol of the cow hominized, with the addition of the serpent disc, or some other accessory worship. The Roman figures of her are infinitely varied, to signify by various symbols the various attributes of universal nature. In this character she is confounded with the personifications of Fortune and Victory, which, as in reality, no other than those of Providence, and, therefore, occasionally decked with all the attributes of universal power. The allegorical tales of the loves and misfortunes of Isis and Osiris are an exact counterpart of those of Venus and Adonis (Stud., s. v. aionygora), which signify the alternate exertion of the generative and destructive attributes. (Enquiry into the Symb. Lang., &c., § 118, 119.) The Disa of the Suevi (Isis of the Suevi) was a female deity, and the one in whose name a temple was enveloped in a net, similar to the cortina of Apollo on the medals of Cos, Chersonesus in Crete, Neapolis in Italy, and the Syrian kings; but, instead of having the serpent coiled round it as in the first, or some symbol or figure of Apollo placed upon it as in the rest, it is terminated by a human head. (Ol. Rudbeck, Atlant., vol. 2, c. 5, p. 219.)

This goddess is unquestionably the Isis whom the ancient Suevi, according to Taci tus, worshipped by the name of Libera or Isiva, and from whom the name of the first name appears to be an article or prefix joined to it; and the Egyptian Isis was occasionally represented enveloped in a net, exactly as the Scandinavian goddess was at Upsal. (Isiic Table, and Ol. Rudbeck, Atlant., p. 209.) This goddess is delineated on the sacred drums of the Laplanders, accompanied by a child, similar to the Horus of the Egyptians, who so often appears in the lap of Isis on the religious monuments of Egypt. She was also transplanted to Crete, and there worshipped a sacred group, composed of an old woman with one male child in her lap, and another standing by her, which probably represented Isis and her offspring. They had likewise another idol, called the golden heifer, which seems to have been the animal-symbool of the same personage. (Ol. Rudbeck, Atl., p. 512, seqq.—Ib., p. 280.—Knight, Enquiry into the Symb. Lang., § 185.) For some speculations on the name of Isis, Jablonaski may be consulted. (Pamph. Egypt., 2, 29.—Id. Opusc., 1, s. e.) Isiic received, as is well known, the names of "Lady," "Mistress," "Mother," "Nurse," &c., common to many other Egyptian deities. Her favourite name, however, is "Myriomyra," or "She that has ten thousand names." Creuzer finds an analogy between the Egyptian Osiris and Isis, and the Hindu Isia and Isen or Isi; and this analogy displays itself not only in their respective attributes and offices, but also in the meaning of their names; they are the "Lord" and "Lady," two titles of almost all great popular divinities among the pagan nations both of ancient and modern times. The different forms of the Egyptian year, and the successive efforts made to correct the calendar, could not fail to produce considerable variations in the legend of Isis and Osiris, which had itself been founded originally on a normal period. In this way, perhaps, we may explain the double death of Osiris, and regard it as typifying those variations that were the necessary result of the vague state of the year. The principal festivals of Egypt, moreover, established, like those of most other nations, after the natural epochs of the year, found at once in the popular mythology their commentary and their sanction. The most solemn one of these, called the festival (the lamentations) of Isis, or the disappearance (death) of Osiris, commenced on the 17th of November. At Athens, or the 15th of November, according to Plutarch, there was a festival of mourning and tears. (Plut., de Is. et Os., c. 39, 69, p. 501, 549, ed. Wyttem—Creuzer, Comment. Herod., p. 120, seqq.) Towards the winter solstice was celebrated the finding of Osiris; and on the seventh of Tybi, or the second of January, the arrival of Isis from Phainica. A few days after, the festival of Osiris found (a second time) united the crimes of the Romans and the part taken by them in the joy experienced by Isis herself. The festival of grain-sowing and that of the burial of Osiris; the festival of his resurrection, at the period when the young blade of grain began to show itself out of the ground; the pregnancy of Isis, the birth of Harpocrates, to whom were offered the first fruits of the approaching
harvest; the festival of the Pamilyia; all these fell in a great period embracing the one half of the year, from the autumnal to the vernal Equinox. And on the public fast of Apollo at Pharnethus (March), the entrance of Osiris into the Moon, which planet his he believed to fecundate, that it might, in its turn, fecundate the earth. (Plut., Ib.) Finally, on the 30th of Epiphi (24th of July), the festival of the birth of Horus took place (of Horus the representative of Osiris, the conqueror of Typhon), in the second great period, extending from the month Pharmuthi (27th of March) to Thoth (29th of August), when the year recommenced. (Cruizer, Symbolik, note 3, Guignaniit, vol. 1, pt. 2, p. 801.)

IsMaraus (Ismara, pilar), a mountain of Thrace near the mouth of the Hebrus, covered with vineyards. This part of Thrace was famous for its wines. Ulysses, in the Odyssey, is made to speak in commendation of some wine given him by Maron, the priest of Apollo. Ismarus was situated in the territory of the Oicones, whose capital was also called by the same name. Homer (Od., 1, 40) makes Ulysses to have taken and plundered this city; but the natives coming down from the interior in great force, he was driven off with severe loss both of men and ships. Ismarus is only known to later writers as a mountain celebrated for its wine, which indeed Homer himself alludes to in another passage. (Od., 1, 197.—Virg., Georg., 2, 37.)

IsMene, I. a daughter of Cepius and Jocasta, who, when her sister Antigone had been condemned to be buried alive by Creon for giving burial to her brother Polynices, against the tyrant's positive orders, declared herself as guilty as her sister, and insisted upon being punished along with her. (Soph., Antig.—Apollod., 3, 5.—II. A daughter of the river Asopus, who married the poet Hesiod, and was also tamed Argus, by whom she was Issa. (Apollod., 2, 1.)

IsMEnIa, I. a celebrated musician of Thebes. When he was taken prisoner by the Scythians, Athenian, as the king of the country, observed, that he liked the neighing of his horse better than all the music of Ismiania. (Plut. in Apophth.)—II. A Theban general, sent to Persia on an embassy by his countrymen. As none were admitted into the king's presence without orders, Ismænius had recourse to artifice to avoid performing an act which would render him degraded in the eyes of his countrymen, and yet, at the same time, to offend against the customs of Persia. When he was introduced he dropped his ring, and the motion he made to recover it from the ground being mistaken for the required homage, Ismænius had a satisfactory audience of the monarch. (Alvan, V. H., 1, 21.)

IsMEnius, I. a son of Apollo and Melia, one of the Neriedes, who gave his name to a river of Bœotia, near Thebes.—II. A river of Bœotia, in the immediate vicinity of Thebes, at the foot of a hill. It was sacred to Apollo, hence called Ismænius, who had a temple here. (Pind., Pyth., 11, 6.—Soph. Ed. Tyr., 19.)

The Ismænius is more frequently alluded to in conjunction with the celebrated fountain of Dirce. (Eurip., Bacch., 152, 1., Phæn., 374, 1., Herc., Pur., 572,—ib., 788, 1.—Pind., 8, 38.) Ismænius is in authority, that the Ismænius has less pretensions to the title of a river than the Athenian Iissus, for it has no water except after heavy rains, when it becomes a torrent, and rushes into the Lake of Hypisa, about four miles west of Thebes. (Tour, vol. 2, p. 268.) Sir W. Gell states that it is usually dry, from its being made to furnish water to several fountains. (Cramer's Anc. Greece, vol. 5, p. 229, sqq.)

Isocrates, a distinguished orator, or, rather, oratorical writer, born at Athens, B.C. 436. His principal teachers were Gorgias, Prodicus and Timias. On account of his weak voice and natural timidity, he was distinguished as an orator not by the style of his composition, but with the greatest adviser to instruction in the art of eloquence and preparing orations for others. His success as a rhetorical instructor was most brilliant. He taught at both Chios and Athens, and some of the greatest orators of Greece, such as Isæus, Lycurgus, Hyperides, and, according to some accounts, Demosthenes, formed themselves in his school. Hence Cicero compares this school of his to the wooden horse at Troy: since the latter contained the most famous chieftains of the Greeks, the former the leaders in eloquence. (De Orat., 2, 22.) Although he never filled any public station, yet he rendered himself useful to his country by the discourses which he published on various topics of a political character. He is said to have charged one thousand drachmas (nearly 180 dollars) for a complete course of oratorical instruction, and to have said to some one who found fault with the largeness of the amount, that he would willingly give ten thousand drachmas to any one who should impair to him the self-confidence and the command of voice requisite in a public orator. The orations of Isocrates were either sent to the persons to whom they were addressed, for their private perusal, or they were intrusted to others to deliver in public. He is said to have delivered only one himself. Isocrates treated of great moral and political questions, and his works are distinguished for their regard to principle and an aversion to all meanness and injustice. In his childhood Isocrates was the companion of Plato, and they remained friends during their whole lives. He had a great veneration for Socrates. After the death of that distinguished philosopher, which filled his scholars with fear and horror, he alone had the courage to appear in mourning. He gave another proof of his courage by publicly defending Themæus, who had been proscribed as a tyrant. Isocrates was particularly distinguished for a polished style and an harmonious construction of his sentences. In Cicero's opinion, it was he who first gave to prose writing its due rhythm. The art of Isocrates is always apparent, a circumstance which, of itself, diminishes in some degree the effect of his writings, and is almost inconsistent with vigour and force. The address to Demonicus, for example, is an almost uninterrupted series of antitheses and scholae. This is the address of the great orator of Athens, Isocrates is still a perfect master in the style which he has adopted, and has well merited the high encomiums of Dionysius of Halicarnassus for the noble spirit and the rectitude of purpose which pervade all his writings. The composition, revision, and repeated polishing of his speeches occupied so much time that he published little. His celebrated Panegyric Oration, for example, is said to have occupied him ten whole years—The politics of Isocrates were conciliatory. He was a friend of peace: he repeatedly exhorted the Greeks to concord among themselves, and to turn their arms against their common enemies, the Persians. He addressed Philip of Macedon in a similar strain, after his peace with Athens (B.C. 346), exhorting him to reconcile the states of Greece, and to unite their forces against Persia. He kept up a correspondence with Philip, and two of his epistles are well preserved. Isocrates wrote much in prose, as well as in verse, which he wrote to the then youthfoul Alexander, congratulating him on his proficiency in his studies. Though no violent partisan, he proved, however, a warm-hearted patriot; for, on receiving the news of the battle of Chaeronia, he refused to take food for several days, and thus closed his long and honourable career at the age of ninety-eight. B.C. 317. In Plutarch's time sixty orations went under his name, not half of which were, however, deemed genuine. Twenty-two, however, he never write, The most remarkable
ISOCRATES.

is the discourse entitled Παναγνηρίκος, Παγανηρίκος, or "Panegyric On Oration," i.e., a discourse pronounced before the assembled people. The Panegyric of Isocrates was delivered at the Olympic games, and was written in the time of the Lacedaemonian ascendency. Hence, the Lacedaemonian kings were wont to discourse with each other in a noble emulation, and to unite their forces in an expedition against Asia; and he descants eloquently on the merits and glories of the Athenian commonwealth, on the services it had rendered to Greece, and on its high intellectual cultivation; while he defends it from the charges, urged by its enemies, of tyranny by sea, and of oppression towards its colonies. Among the other twenty discourses, the latter are: Isocrates, against the Athenians of Callias; the latter are: Isocrates of the Athenians, who, with his brother Callias, belonged to the highest class of Athenian citizens. It consists of moral precepts for the conduct of life and the regulation of the department of the young. Many critics have thought that this piece, abounding with excellent morality, and resembling an epistle rather than a discourse, is not the true account of the Isocrates, but that other orators of the same name, of whom mention is made by the ancient writers, namely, Isocrates of Apollonia, or Heraclea in Pontus, who was a disciple of the Athenian philosopher; and Isocrates the friend of Dionysius of Halicarnassus. One thing is certain, that Harpocration cites a discourse of the Apollonian Isocrates, under the title of Πανάγηγος πρὸς Δημοκρίτων καὶ, and it is not probable that the master and his disciple would have written orations addressed to the same individual. As regards the third Isocrates just mentioned, it is very doubtful whether he ever existed.—2. Πρὸς Πότιλον, Discourse addressed to Nicocles II., son of Evagoras, and prince of Samalim in Cyprus, on the art of reigning.—3. Νικόκλεος, Νικοκλεος, a discourse composed for this prince, to be pronounced by him, and treating of the duties of subjects towards their sovereigns. Nicocles is said to have presented Isocrates, in return, with twenty talents. This piece is sometimes cited under the name of the Cyprian Discourse, Κύπριος λόγος. Five other discourses of Isocrates are of the deliberative kind. 1. Περὶ τοῦ ἐν ταύτῃ τοῦραμα, of the Panegyric, of which we have already spoken.—2. Φιλίτος, or Πρὸς Φιλίτον, "Discourse addressed to Philip of Macedon," to induce him to act as mediator between the Greek cities, and to make war against Persia.—3. Αρχίδαμος, Archidamus. Under the name of this prince, who afterward ascended the throne of Sparta, the orator endeavours to persuade the Lacedaemonians, after the battle of Mantinea, not to relinquish Messenia.—4. Αρεσπακτάγικος, Areopagiticus. One of the best discourses of Isocrates. In it he counsels the Athenians to re-establish the constitution of Solon, as modified by Clisthenes.—5. Περὶ εὐρίτης, ή συμπαγίας, "Of Peace," or, "Respecting the Allies." In this discourse, pronounced after the conclusion of the peace between the Greeks and the Persians, the Athenians to make peace with the inhabitants of Chios, Rhodes, and Byzantium. We have also four discourses by this writer that fall under the head of ἐϑρομεναι, viz., 1. Ἐναγόρας, Ἐναγορας A funeral oration on Evagoras, king of Cyprus, and father of Nicocles, who had been assassinated, Ol. 101, 3.—2. Ἐλένης ἐν τω χύμοιν, Ἐλογον ἐν Ηλένα, a piece full of pleasing digressions.—3. Βούστρωνίος, Βοστρωνιος, a discourse of this kind, in which the Cellatis, the sons of Neptune and Lyssanassa, who reigned in Egypt, and introduced into that country human sacrifices. Hercules delivered the earth from this monster. The sophist Polyocrates had written on Busiris; Isocrates, who hated him because he had published an accusation of Socrates, wished, in treating of the same subject, to mortify the sophist and make his work a failure.—4. Παναγηρίκος, Παγανηρίκος. An eloge on the Athenians; one of the best pieces of Isocrates, but which has reached us in a defective state.—We have likewise from the pen of Isocrates eight discourses of a moral kind:—1. Ἀσκόπος, Ἀσκόπος, Complaint of the inhabitants of Platæa against the Thebans.—2. Περὶ τῆς ἀντιδιάθεσεως, "Of the exchanging of property with another." According to the Athenian laws, the three hundred richest citizens were obliged to equip triremes, furnish the commonwealth with necessary supplies of money, &c. If any person appointed to undergo one of these duties could find another citizen of better substance than himself to pay for it, the one who was the richer of the two might take the other place, and the other put in his place. If the person named, however, denied that he was the richer of the two, they then exchanged estates. Isocrates, having acquired great riches, had twice to undergo this species of prosecution. The first time he was defended by his adopted son Alpharens, and gained his cause; the second time he was attacked by a certain Lysimachus, was unsuccessful in his defence, and compelled to equip a trireme. One of these discourses is published by Isocrates on this latter occasion. It has reached us in an imperfect state, but has been completed in our own days by the discoveries of a modern scholar, Moustoxides.—3. Περὶ τοῦ ἔκχους. A pleading respecting a team of horses, pronounced for the son of Alcibiades.—4. Τραπεζικός, a pleading against the banker Pasion, pronounced by the son of Sopenas, who had confided a sum of money to his care. Pasion had denied the deposit.—5. Πανακρατωρίδης ἢ τοῦ Κολλοχοῦ. An "actio translatina" against Callicmachus.—6. Αλλαγοπτικός, a pleading pronounced at Αλγίνα, in a matter of succession.—7. Κατὰ τοῦ Δαμίατον, a pleading against Locchites for personal violence against a certain individual whose name is not given. We have only the second part of this discourse.—8. Αμίνηρος, or Πρὸς Ἐλείνου ὑπερ Νίκου, "Pleading for Nicias against Euthydemus." The latter was a faithless deposits, who reckoned on the impossibility of proving a certain deposit through want of witnesses to the transaction.—We have finally a discourse of Isocrates against the Sophists (κατὰ τῶν σοφιστῶν), which must be placed in a class by itself. There was also a work on Rhetoric composed by him, more commonly called a Τέχνη, "Theory." Cicero states that he was unable to procure this work (De Invent., 2, 2): it is cited, however, by Quintilian (Instr. Or., 3, 1, 14.) The best edition of the Greek text is the Berkheiser, forming part of his Oratset Atticst. (Berol., 1822—1823, 3vo.—Orat. Att., vol. 2.) The two most useful editions are, that of Lange, Hal., 1803, 8vo, and that of Coray, Paris, 1807, 8vo, forming the second volume of the Bibliothèque Éllénique. This last is based upon a MS. brought from Italy to France, which is the earliest one extant of our author. Coray's edition is accompanied with very learned notes, and is not without very useful scholia, and with judicious editions. The editions of Batten, Cantab., 1729, 2 vols. 8vo, and of Auger, Paris, 1782, 3 vols. 8vo, are not remarkable, especially the latter, for a very accurate text. Auger's work abounds with typographical errors, and he is also charged with a careless collation of MSS. The best edition of the Panegyricus is that of Morus and Spohn, with the notes and additions of Batten, Lips., 1821, 8vo. In the preface of the edition of 1821, Spohn gives a summary of this son of this book in the notes, and in the introduction on the Greek text of Batten.—We have already alluded to the completing of the oration Περὶ τῆς ἀντιδιάθεσεως, by Moustoxides. This scholar found a perfect MS. of the discourse in question in the Ambrosian Library at Milan, and published an edition of the entire piece in 1812 at Milan. It is, however, very inaccurately
I S S  
I S T

printed. A more correct edition was published by Orellius, in 1814, 8vo, with a double commentary, critical and philological, in German; and also a smaller edition, containing merely the Greek text with various readings. These two editions are more accurate, but of different value. (Schenk, Hist. Lit. Gr., vol. 2, p. 208; seqq.—Hoffmann, Lex. Bibliograph., vol. 2, p. 620.)

Iseri, one of the smallest of the Dalmatian islands, but the best known in history. It is mentioned by Scylax as a Greek colony (p. 8), which, according to Scymnus of Chios, was sent from Syracuse (v. 412). Iseri is often alluded to by Polybius in his account of the Illyrian war. It was attacked by Teuta; but the siege was raised on the appearance of the Roman fleet, and the inhabitants immediately placed themselves under the protection of that power. (Appian, Illyr., 7.—Polyb., 2, 11.) It became afterward a constant station for the Roman galleys in their wars with the kings of Macedon. (Liv., 43, 9.) In Cæsar’s time the town appears to have been very flourishing, for it is styled “nobilissimum earum regionum oppidum” (B. Alex., 47), and Pliny informs us that the inhabitants “gave the name of Iseri to the island, which Scymnus states that the wine of this island was much esteemed (1, 22). Its present name is Issa. (Cramer’s Anc. Greece, 1, p. 44.)

Issiônës, the principal nation in Serica, whose metropolis was Sera, now Känt-schu, in the Chinese province of Shen-Si, without the great wall: this city has been erroneously confounded with Pekin, the capital of China, which is 300 leagues distant. They had also two towns, both called Issedon, but distinguished by the epithets of Serica and Scythica. (Ptol.—Bischoff and Müller, Würterb. der Geogr., p. 649.)

Issus, a town of Cilicia Campanetia, at the foot of the main chain of Amanus, and nearly at the centre of the head of the gulf to which it gave its name (Issi-cus Sinus). Xenophon describes Issus (“Iosoci, in the plural”) as a considerable town in his time. Cyrus remained here three days, and was joined by his fleet from the Peloponnesus. These ships anchored close to the shore, where Cyrus had his quarters. (Anab., 1, 4.—Compare Arrian, Exp. Alex., 2, 7.—Diod. Sic., 17, 32.) Issus was famous for the victory gained here by Alexander over Darius. The error on the part of the Persian monarch was in selecting so contracted a spot for a pitched battle. The breadth of the plain of Issus, between the sea and the mountains, appears from Callisthenes, quoted by Polybius, not to exceed four stadia, 1,344, but two stadia, a spot very inadequate for the manoeuvres of so large an army as that of Darius. The ground was, besides, broken, and intersected by many ravines and torrents which descended from the mountains. The principal one of these, and which is frequently mentioned in the narrative of this momentous battle, is the Pinurs. The two armies were at first drawn up on opposite banks of this stream; Darius on the side of Issus, Alexander toward the sea. A piece of disagreement may be obtained from the narratives of Arrian, Curtius, and Plutarch, and from the critical remarks of Polybius on the statement of Callisthenes. The town of Issus, in Strabo’s time, was only a small place with a port. (Strab., 676.) Stephanus says it was called Nicopolis, in consequence of the victory gained by Alexander (s. v. Iosoci). Strabo, however, speaks of Nicopolis as a distinct place from Issus. Cicero reporta, during his expedition against the mountain-simers of Amanus, he occupied Issus for some days. (Ep. ad Att., 5, 20.) Issus was also remarkable, at a later day, for the defeat of Niger by Severus. The modern Aïssé appears to correspond to the site of the ancient town. (Cramer’s Asia Minor, vol. 2, p. 359, seqq.—Compare Renfell, Geography of Western Asia, vol. 5, p. 94.)

Ister, I. a native of Cyrene, who flourished under Ptolemy III. of Egypt. Suidas makes him to have been a disciple of Callimachus. Besides his "Artiké," in sixteen books, he left a number of other works, on Egypt, Argolis, Elis, &c. A few fragments only remain; two were collected and published with those of Demon, another historian, by Siebelis and Lenz, Lips., 1812, 8vo.—II. The name of the eastern part of the Danube, after its junction with the Savus or Saaws. The term is evidently of Teutonic or German origin (Osten, "east").

Isthmia, sacred games among the Greeks, which received their name from the Isthmus of Corinith, where they were observed. They were instituted in honour of Min in 586 B.C. (Pausan., 2, 20, 7), and were subjugated and thrown into a sea-deity when his mother Ino had thrown herself into the sea with him in her arms. After they had been celebrated for some time with great regularity, an interruption took place, at the expiration of which they were re-established by Theseus in honour of Neptune. These games were celebrated every five years. (Alex. ab Alex., Gen. D. 5, 5.) When Corinith was destroyed by Mummian, the Roman general, they were still observed on the isthmus for some time. It has been supposed that the city was trusted with the superintendence, which had been before one of the privileges of the ruined Corinthians. Conflagration of every kind were exhibited, and the victors were rewarded with garlands of pine leaves. Some time after the custom was changed, and the victor received a crown of dry and withered parsley. At a subsequent period, however, the pine again was adopted. (Consult, for the reason of these changes, the remarks of Plutarch, Sympos., 5, 3.—Op., ed. Reiske, vol. 8, p. 657, seqq.)

Isthmus, a small neck of land which joins a country to another, and prevents the sea from making them separate, such as that of Corinth, called often the Isthmus by way of eminence, which joins Peloponnesus to Greece. (Vid. Corinthi Isthmus.)

Istria or Histria, a peninsula lying to the west of Liburnia, and bounded on the south and west by the Adriatic. It was anciently a part of Illyricum. Its circuit and shape are accurately described and defined by Strabo (314) and Pliny (3, 19). Little is known respecting the origin of the people: but an old geographer describes them as a nation of Thracian race (Scymn. Ch., Perieg., 390), and this opinion seems at least to have probability in its favour. There is little to interest in the account of the wars waged by the Romans against this insignificant people; it is to be found in the Liv., 41. It is to be noted that they were completely subjugated A.U.C. 575. Augustus included Istria in Cisalpine Gaul, or rather Italy, removing the limit of the latter country from the river Formio (Ri-sano) to the little river Arsa. (Plin., 3, 18.)

The Greeks, in their fanciful mythology, derived the name of Istrià from that of the Ister or Danube; they conveyed the Argonauts from the Euxine into the Ister, and then, by an unheard-of communication between this river and the Adriatic, led their heroes into the waters of the latter. (Sclyrax, Perieg., p. 6.—Strabo, 46.—Aristot., Hist. Anim., 8, 13.) Not satisfied, however, with these wonders, they affirmed that a band of Colchians, sent in pursuit of Jason and Medea, followed the same course, and, by a fruitless search, rested in Istrià, and finally settled on its shores. (Pomp. Mel., 2, 3.) This strange error no longer prevailed in the time of Strabo, when Istrià had become known to the Romans, and formed part of their vast empire. (Cramer’s Ancient Italy, 1, p. 134, seqq.)

Istropolis, a city of Thrace, situate on the coast of the Euxine, below the mouth of the Ister, where a lake or salt lake, called Halmirias, formed by an arm of the Danube, has its issue into the sea. It appears to have been succeeded at the present day by a place called
ITALIA.

Kara-Kemón, or "the black fortress," Istropolis is said to have been founded by a Milesian colony.

The Ialavras, a mountain of Galilea Inferior, near the southern limits of the tribe of Zebulon, and southeast from Carmel. According to Josephus (Bell. Jud., 4, 6), it was 30 stadia high, and had on its summit a plain of 26 stadia in extent. Its modern name is Tabor. This mountain is supposed by some to have been the scene of our Saviour's transfiguration. Jerome, Cyriel, and other writers, are in favour of the position, but it is contested by Roland (Palestine, p. 247). The name Tabor or Taboro, which was given to the ancient one among the natives, appears to be derived from the Hebrew tabbor, "a height" or "summit." (Roland, l. c.) The Greek writers call it Οακρον and Αραβόρον (or Αραβόρο) βορ. (Compare the Jupiter Abar- yurus of Rhodes and Agrigentum, and the remarks of Ritter, Vorhalle, p. 339.) On the summit of this mountain was situate a fortified town called Abaryzon. (Polyb., 5, 70. — Vid. Abaryzon.) Mount Tabor is situate two leagues southeast of Nazareth, rising out of the great plain of Esdraelon, at its eastern side. Its figure is that of a truncated cone, and its elevation, according to Buckingham, about 1000 feet; but, from the circumstance mentioned by Burckhardt, of thick clouds resting on it in the morning in summer, and his being an hour in ascending it, it may perhaps be considered as higher than Buckingham supposed, though, from the time of the ancient town occupied in the same spot not more than 400 or 500 feet, or from 1400 to 1500 in all. It is represented as entirely ecalessar. Dr. Richardson describes it as a dark-looking, insulated conical mountain, rising like a tower to a considerable height above those around it. On the summit is a plain about a mile in circumference, which shows the remains of the ancient fortress mentioned above. The view from this spot is said to be one of the finest in the country.

ITALIA, a celebrated country of Europe, bounded on the north by the Alps, on the south by the Ionian Sea, on the northeast by the Adriatic or Mare Superum, and on the southwest by the Mare Tyrrenenum or Infernum. It was called Hesperia by the Greeks, from its western situation in relation to Greece (Virg., Æn., 1, 530), and received also from the Latin poets the appellation of Aesopia (Virg., Æn., 7, 54), Saturnia (Virg., Georg., 2, 172), and Oenotria. The name Ialavras, in which it is found in the works of the Oenotri or Siculi (Antioch. Syrac., ap. Dion. Hal., 1, 2. — Thucyd., 6, 2). Others sought the origin of the term in the Greek word ἱρᾶὸς, or the Latin sitius, which corresponds to it (Varro, R. R., 2, 5. — Dion. Hal., 1, 35); and others again make the name to have belonged originally to a small canton in Calabria, and to have become gradually common to the whole country. The ancients differed from us in the traduction of names to countries. Thus they regarded the name as belonging to the people, not to the land itself; and in this they were more correct than we are, who call nations after the countries they inhabit. Asia Minor, for example, was an appellation unknown to the earlier classic writers, and only began to come into use after the country had fallen into the hands of the Romans. Previous to this, the different nations which people that peninsula had their separate appellation and hence known by the same name; thus, the Homerides, named after Homer, as the Iliad and the Odyssey bear his name. In the same way, a general name for what we now term Italy was not originally thought of. When the Greeks became first acquainted with this country, they observed it to be peopled with several distinct nations, as they thought; and hence we find it divided by them about the time of Aristotle into six or seven countries, Ausonia or Opica, Tyrrhenia, Iapigia, Ombria, Liguria, and Henetia. Thucydides, for instance, in speaking of Cumae, says that it is situate in Opica; and Aristotle, cited by Dionysius of Halicarnassus, terms Latium a part of this same Opica. As regards the time in which the appellation was first given by the early Greeks to what is now denominatd Calabria ulterior, or to that southern extremity of the boot which is confined between the Sinus Terinumus (Gulf of St. Euphemia) and the Sinus Scylliacus (Gulf of Squillace). Such, at least, is the account of Aristotle (Polit., 7, 10) and Strabo (254). This was not done because the name was in strictness confined to that section of the country but because the Greek name at that early period very little, comparatively speaking, of the interior, and were as yet ignorant of the fact, that most of the numerous nations which people the Italian peninsula were the descendants of one common race, the Italii, who originally were spread over the whole land, even to the foot of the Alps. The nations in the south of Italy, with whom the Greeks first became acquainted, were found by them to be descended from the Itali, or, rather, they found this name in general use among them, hence they called their section of the country by the name of Italy. As their knowledge of the interior became more enlarged, other branches of the same great race were successively discovered, and the name Italy thus gradually progressed in its application until it reached the southern limits of Cisalpine Gaul. To this latter country the name of Gallia Cisalpina was originally given, because it was peopled principally by Gauls, who had settled in those parts, and dislodged the ancient inhabitants. In contrast with what has just been advanced, we find that, in the time of Antiochus, a son of Xenophanes, who lived about the 320th year of Rome, and a little anterior to Thucydides, the appellation Italy was given to a part of Italy which lay south of a line drawn from the small river Laurus to Metapontum. (Dion. Hal., 1, p. 59.) Towards the end of the fifth century of Rome, it designated all the countries south of the Tiber and Æsia. At length, in the pages of Polybios, who wrote for the 600th year of Rome, we find the name in question given to all Italy up to the foot of the Alp. The including of Cisalpine Gaul under this appellation was an act of policy on the part of the second triumvirate, who were afraid lest, if it remained a province, some future proconsul might imitate Caesar, and overthrow with his legions the authority of the republic. At a still later period, Augustus divided Italy into eleven provinces, and extended its limits on the northeast as far as Pola, thus comprehending Ialvard. It is somewhat remarkable, that the name Italy, after having gradually extended to the Alps, should at a subsequent epoch be limited in its application to the northern parts alone. When the Emperor Maximian, towards the close of the third century of the Christian era, transferred his residence to Milan, the usage prevailed in the West of giving the name of Italy exclusively to the five provinces of Emilia, Romagna, Tuscany, Latium, and Cisalpine Gaul, and was thus comprehended by the Lombards who were styled monarchs of Italy. — As regards the other names sometimes applied to Italy, it may be observed, that they are, in strictness, names only of particular parts, extended by poetic usage to the whole country. Thus Ænotria properly applies to a part of the southeastern coast, and was given by the Greeks to this portion of the country, from the numerous vines which are grown there, and which are called here, as also by the Greeks, Vitis. Thus, too, Saturnia in fact belongs to one of the hills of Rome, &c.—Italy may be divided into three parts, the northern, or Gallia Cisalpina; the middle, or Italia Propria; and the southern, or Magna Graecia. Its principal states were Gallia Cisalpina, Etruria, Umbria, Picenum, Latium, Campania, Samnmium and Hínpíi, Apulia, Calabria, Lucania, and Bruitorum Ager. Originally the whole of Italy appears to have been peopled by one common race, the Itali, who were
spread from the Alps to the southernmost extremity of the land. This position receives very strong support from the fact that the name Italus was in general use among the various nations of the Italian peninsula. In the language of fable it was the appellation of an ancient monarch. We find mention made of a King Italus among the Ausones and Opici, and likewise among the Morgetes, Siculi, and Sabini. We find, moreover, all these early tribes using one common dialect, the Oscan. Now, that such a being as Italus, of whom we hear, appears extremely improbable; and still more so the assertion that Italus was named after this ancient king. Daily experience proves that countries are called after the nations who inhabit them; and few, if any, examples can be adduced of nations taking an appellation from their rulers. In the present case it appears scarcely credible. We know of no period when the different Italian tribes were under the control of a single ruler, and yet each have their Italus. Was there a monarch over each of the principal districts of Italy? and, still more, did each separate community form the resolution of deriving from their respective monarch a name for themselves and the region they inhabited, so that, finally, the common name for the whole land became Italia? Either supposition is absurd. —The name Italia, then, was the generic name of the whole race, and the land was called after it, each community being known at the same time by a more particular and personal appellation, as Latini, Umbri, &c. The fact of the universal presence of the Oscan tongue is strongly corroborative of what has just been advanced. But, it may be contended, no proof exists that any king named Italus was acknowledged by the traditions of the Tusci or Umbri. The answer is an easy one. Antiquity makes mention of these as the progenitors of the Latini, among whom a King Italus appears; and Scymnus records an old author Latinum, and becomes the Umbri from the seconded from Latinius, the son of Ulysses and Circe. That these two nations, moreover, spoke a language based on the old Italian or Oscan form of speech, was discovered by the Romans in the case of the Rhaeti, a branch of the former, who had retired to the Alps upon the invasion of the Gauls. The original population of Italy then was composed of the Itali. They were the earliest inhabitants of various nations, which we shall now enumerate in the historical order. The earliest of these new-comers appear to have been the Illyrian tribes, and, in particular, the Liburni, who may, with truth, be regarded as the earliest of European navigators. They extended themselves along the coast of the Adriatic as far as Iapigia. Next in the order of time were the Veneti, a branch of the great Scelavonic race (vid. Veuci), who settled between the mouths of the Po and the Illyrian Alps. Were they the earliest possessors of this part of Italy? or did they expel the Tuscian Etruscan? All is uncertainty. Of the origin of the great Etrurian nation, we have already spoken under the article Hetruria. The Siculi, who appear to have been the original inhabitants of Latium, and who were subsequently driven out and retired to Sicily (vid. Siculi), are falsely considered by some to have been of Iberian origin. A fourth people, however, who actually came into this part of Italy, or did they expel the Tuscan Etruscans? They were the Greeks. Before the time of the Trojan war there are no traces of any such emigration; but after the termination of that contest, accident threw many of the returning bands upon the Italian coast. We find them in Apulia, on the Sinus Tarentinus in Cënotis, at Pisa, and in Latium as the chief part of the province of Alba Longa. —Their language, the 'Ocic Greek, for they were principally Achæi, operating upon the old Italic or Ocean tongue, then prevalent in a number of sub-divisions. At the same time, with many peculiarities and forms of Pelasgic origin, gave rise to the Latin tongue. Trojan female captives were brought along with them by the Greeks, but no Trojan men, nor any prince named Eneas ever set foot in the Italian peninsula. The last ancient people who formed settlements at any early period in Italy were the Gauls. They entered during the reign of Tarquinius Priscus, and successive hordes made their appearance under the following kings. They seized upon what was called, from them, Cisalpine Gaul, and one division of them, the Semones, even penetrated far into the centre of Italy. They were finally expelled by the Romans, more through the want of union than of valour. —Origin of the Latin tongue, the origin of the Latin tongue, a very plausible theory was started by Jàkel, which assigns it to the German. (Der Germanycher Ursprung der Lateinischen Sprache, &c., Breslau, 1831.) He makes the Latin to be mainly and essentially the dialect of a Teutonic race, that migrated from Germany into Italy by the way of the Tyrol, at a period vastly more remote than that to which Roman history reaches. The germ of this theory, however, is found in Funciuse (De Origine et Faustitia. L., p. 64, c. 5. De Matre Lingua Latinae Germanicae).—Ancient geographers appear to have entertained different ideas of the figure of Italy. Polybius considered it, in its general form, as being like a triangle, of which the two seas meeting at the promontory of Cosaithus (Capo di Stilo) as the vertex, formed the sides, and the Alps the base. (Polyb, 2, 14.) But Strabo is more exact in his delineation, and observes, that its shape bears more resemblance to a quadrilateral than a triangular figure, with its outline rather irregular than rectilinear. (Strabo, 5, 210.) Pliny describes it in shape as similar to an elongated oak-leaf, and terminating in a crescent, the horns of which would be the promontories of Leucopetra (Capo delle Arm) and Lacinum (Capo delle Colonne). According to Pliny (3, 5), the length of Italy, from Augusta Praetoria (Augusta Praetoria, c. 136, 137), the modern city of Aosta, to the promontory of Capo Corno, was 1020 miles; but this distance was to be estimated, not in a direct line but by the great road which passed through Rome and Capua. The real geographical distance, according to the best maps, would scarcely furnish 500 modern Italian miles of 60 to the degree, which is equal to about 700 ancient Roman miles. The same writer estimates its breadth from the Varus to the Arsia at 370 miles, and the greatest breadth of the whole promontory of Atoll, at 136 miles; in the narrowest part, between the Sinus Scyllaeus and Sinus Taurus, at 20 miles. The little lake of Cutilia, near Reste (Rictii) in the Sabine country, was considered as the umbilicus or centre of Italy. (Plin, 3, 12.) —It might be expected that the classical authors of Rome would dwell with fondness on the peculiar advantages enjoyed by their favoured country. Accordingly, we find a variety of passages, which Cluverius has collected in his fifth chapter (De Naturee calvi solique Italiani ac laudibus eis), where the happy qualities of its soil and climate, the variety and abundance of its productions, the resources of every kind which it possesses, are proudly and eloquently displayed. Those that seem principally deserving of notice are the following: Plin, 3, 13. —Virg, Georg, 2, 136, seqq. —Dion. Hal, Ant. Rom., 1, 36.

Climate of Ancient Italy.

It has been thought by several modern writers that the climate and temperature of Italy have undergone some change during the lapse of ages, and that the land was anciently colder in winter than it is at the present day. (Du Bois, Hist. vol. 2, p. 298. —L'Abbe Longueville, cited by Gibbon, Misc. Works, vol. 3, p. 245.) In the examination of this question, it is impossible not to consider the climate and geographical condition of America at this day. Boston is in the same latitude with Rome, but the severity of its winter far exceeds not that of Rome only, but of Paris and London. Allowing that
the peninsular form of Italy must at all times have had an effect in softening the climate, still the woods and marshes of Cisalpine Gaul, and the perpetual snows of the Alps, far more extensive than at present, owing to the then uncultivated and uncleared state of Switzerland and Germany, could not but have been felt even in the neighborhood of Rome. The Romans, even on the heights of Latium and Etruria, resided in the Apennines, and the peninsula was occupied a far greater space than in modern times; this would increase the quantity of rain, and, consequently, the volume of water in the rivers; the floods would be greater and more numerous, and, before man's domination had completely subdued the whole country, there would be large accumulations of water in the low grounds, which would still farther increase the coldness of the atmosphere. The language of ancient writers, on this point, favours the view that even in the Roman winter, in their days, was more severe than it is at present. It is by no means easy to know what weight is to be given to the language of the poets, nor how far particular descriptions or expressions may have been occasioned by peculiar local circumstances. The statement of the younger Pliny (Epist., 2, 17), that the bay-tree would rarely live through the winter without shelter, either at Rome or on its own hill at Lanuvium, if exposed to the wind, would be regarded as confirming this, if the bay is less hardy than some other evergreens, yet how can it be conceived that a climate in which the olive would flourish could be too severe for the bay? There must either have been some local peculiarity of winds or soil which the tree did not like, or else the fact, as is sometimes the case, must have been too hastily assumed; and men were afraid, from long custom, to leave the bay unprotected in the winter, although, in fact, they might have done it with safety. But the elder Pliny (17, 2) speaks of long snows being useful to the corn, which shows that he is not speaking of the mountains; and a long snow lying in the valleys of central or southern Italy would surely be a very unheard-of phenomenon now. Again: the freezing of the rivers, as spoken of by Virgil and Horace, is an image of winter which could not, we think, naturally suggest itself to Italian poets of the present day, at any point to the south of the Apennines. Other arguments to the same effect may be seen in a paper by Daines Barrington, in the 58th volume of the Philosophical Transactions. Gibbon, too, after stating the arguments on both sides of the question, comes to the same conclusion. (Misc. Works, l. c.) He quotes, however, the Abbé de Longueue as saying that the Tiber was frozen in the bitter winter of 1709. Again: the olive, which cannot bear a continuance of severe cold, was not introduced into Italy till long after the vine: Fenestella asserted, that its cultivation was unknown as late as the reign of Tarquinius Priscus (Plin., 15, 1); and such was the notion entertained of the cold of all inland countries, that Theophrastus (Plin., 15, 1) held it impossible to cultivate the olive at the distance of more than 400 stadia from the sea. But the cold of winter is perfectly consistent with great heat in the summer. The vine is cultivated with success on the Rhine and the land of Devonshire and Cornwall, although the winter at Coblenz and Bonn is far more severe than it is in Westmorland; and evergreens will flourish through the winter in the Westmoreland valleys far better than on the Rhine or in the heart of France. The summer heat of Italy was probably much the same in ancient times as it is at present, except that there were a greater number of spots where shade could be had in hot midsummer; rain would be very prevalent, therefore, was more endurable. But the difference between the temperature of summer and winter may be safely assumed to have been much greater than it is now, notwithstanding the arguments of Eustace and several other travellers. (Arnold, History of Rome, vol. 1, p. 499, seqq.)

The Malaria in Ancient and Modern Times. It now becomes a question, whether the greater cold of the winter, and the greater extent of wood and of undrained waters which existed in the time of the Romans, may not have had a favourable influence in mitigating that malaria which is at the present day the curse of the country. But it is certain that this immediate neighbourhood of Rome. One thing is certain, that the Campagna of Rome, which is now almost a desert, must, at a remote period, have been full of independent cities; and although the greater part of these had perished long before the fourth century of Rome, yet even then there existed Ostia, Laurentum, Ardea, and Anintum on one side, and Veii and Cere on the other, in situations which are now regarded as too unhealthy to support the heat of the summer; and yet all the lands of the Romans on which they, like the old Athenians, for the most part resided regularly, lie within the present range of the malaria. Some have supposed that, although the climate was the same as it is now, yet the Romans were enabled to escape from its influence, and their safety has been ascribed to their practice of wearing woollen next to the skin instead of linen or cotton. But, not to notice other objections, in the opinion of Gower, the Romans regarded unhealthy situations with the same apprehension as their modern descendants. (Cato, R. R., 2—Varro, R. R., 1, 4.—Id., 5, 3, 5.—Id., 5, 3, 12.) On the other hand, Cicero (de Repub., 2, 6) and Livy (7, 38) both speak of the immediate neighbourhood of Rome as unhealthy; but, at the same time, they extol the positive healthiness of the city itself; ascribing it to the hills, which are at once airy themselves, and offer a screen to the low grounds from the heat of the sun. It is true, that one of the most unhealthy parts of modern Rome, the Piazza di Spagna and the slope of the Pincian Hill above it, was not within the limits of the ancient city, yet the praise of the healthiness of Rome must be understood rather comparatively with that of the immediate neighbourhood than positively. Rome, in the summer months, cannot be called healthy, even as compared with the other great cities of Italy, much less if the standard be taken from Berlin or from London. Again: the neighbourhood of Rome is characterized by Livy as "a pestilential and parched soil." The latter epithet is worthy of notice, because the favourite opinion has been, that the malaria is connected with marshes and moisture. But it is precisely here that we may find the explanation of the spread of the malaria in modern times. Even in spring nothing can less resemble a marsh than the present aspect of the Campagna. It is far more like the down country of Dorsetshire, and, as the summer advances, it may well be called a dry and parched district. But this is exactly the character of the plains of Estremadura, where the British forces suffered so grievously from malaria fever in the autumn of 1809. In short, abundant experience has proved, that when the surface of the ground is wet, the malaria poison is far less noxious than when all spring rain which has fallen on the surface is gone, and the damp makes its way into the atmosphere from a considerable depth under ground. If, then, more rain fell in the Campagna formerly than now; if the streams were fuller of water, and their course more rapid; above all, if, owing to the uncleared state of central Europe, and the greater abundance of wood in Italy itself, the summer heats set in later, and were less intense, and more often relieved by showers; then its effect upon the malaria, it is every reason to believe that the Campagna must have been far healthier than at present; and that precisely in proportion to the clearing and cultivation of central Europe, to the felling of the woods in Italy itself, the consequent decrease in the quantity of rain, the shrinking of the streams, and the disappearance of the wa-
ter from the surface, has been the increased unhealthy-
ness of the country, and the more extended range of the
501, seqq.)

Italicus, I. the capital of the Pergami in Italy. (Vid.
Confer.),—II. A city of Spain, north of Hispalias,
and situate on the western side of the river Batia. (Strabo,
141.—Oros., 5, 23.) It was founded by Publius
Seipio in the second Punic war, who placed here the
old soldiers whom age had incapacitated from the performance of military service. (Appian, B. Hisp.,
c. 39.—Ces., B. Civ., 2, 20.) It was the birthplace of
the Emperor Trajan, and is supposed to correspond with
Serrila la Vecia, about a league distant from the city
of Seattle. (Suria, ad An. 1, p. 413, 432.— Flores.
Exp. S. F., 12, p. 227.—Ukert, Geogr., vol.
2, p. 372.)

Italicus, a poet. (Vid. Silus Italicus.)

Italis, a fabled monarch of early Italy. (Consult
remarks under the article Italia, page 693, col. 1.)

Ithaca, a celebrated island in the Ionian Sea, north-
east of Cephallenia. It lies directly south of Leucadia,
from which it is distant about six miles. The ex-
tent of the celebrated island, as given by ancient au-
thorities, does not correspond with modern computa-
tion. Dicemarchus describes it as narrow, and meas-
uring eighty stadia, meaning probably in length (Grœc.
Stat., v. 51,) but Strabo (455) affirms, in circumfer-
ce, which is very wide of the truth, since it is not less
than thirty miles in circuit, or, according to Pliny
(4, 12), twenty-five. Its length is nearly seventeen
miles, but its breadth not more than four. Ithaca is
well known as the native isle of Ulysses. Enanti-
thus asserts (ad II., 2, 632) that it derived its name
from the hero Ithacus, who is mentioned by Homer
(Od., 17, 207). That it was thoroughly rugged and
mountainous we learn from more than one passage of
the Odyssey, but especially from the fourth book, v.
605, seqq.—It is evident, from several passages of
the same poem, that there was also a city named Ithaca,
professed to be the capital of the island, and the residence of
Ulysses (3, 80). Its ruins are generally identified with
those crowning the summit of the hill of Aito. (Dod-
well, vol. 1, p. 66.) "The Venetian geographers,"
observer Sir William Gell, "have in a great degree
contributed to raise doubts concerning the identity of
the modern with the ancient Ithaca, by giving in their
charts the name of Vol di Compare to this island.
That name, however, is totally unknown in the
country, where the island invariably called Ithaca
by the inhabitants, and Thera by the vulgar. It has been
asserted in the north of Europe, that Ithaca is too in-
considerable a rock to have produced any contingent of
ships which could entitle its king to so much considera-
tion among the neighbouring isles; yet the unrivalled
excellence of its port has in modern times created a
fleet of 50 vessels of all denominations, which trade to
every part of the Mediterranean, and from which four
might be selected capable of transporting the whole
amount of commerce of the whole islands. The shores of
the same writer makes the population of the island 8000.
It is said to contain sixty-six square miles. (Gell's Geog-
raphy and Antiquities of Ithaca, p. 39.)

Ithakelae, I. three islands opposite Vibo, on the
coast of Bruttium. They are thought to answer to the
modern Braces, Praca, and Torricella. (Birchoff
und Müller, Wörterb. der Geogr., p. 651.)—II. Bais
is called in Silus Italicus "sedet in Ithakelae," be-
dcause founded by Baisus, the pilot of Ulysses, accord-
ing to the poetic legends of antiquity. (Sil. Ital., 8,
539.—Compare Lycochoron, Cassand., 694.—Tzetzes,
ad loc.)

Ithome, I. a town of Thessaly, in the vicinity of
Metropolis. It is conceived by some modern travel-
ers to have been situated on one of the summits now
occupied by the singular convents of Metaeora. (Hol-
334.) Cramer, however, thinks it ought to be looked for
to the north of the Peneus, near Ardam and Pet-
chouri.—II. A fortress of Messenia, on a mountain of
the same name. It was celebrated for the long obsti-
acile defence (ten years) which the Messenians at
there made against the Spartans in their last revolt.
The mountain was said to have derived its name from
Ithome, one of the nymphs that nourished Jupiter. On
the summit was the temple of Jupiter Ithomatas, to
whom the mountain was especially dedicated. Strabo
compares the Messenian Acropolis to Acorinthus,
being situated, like that citadel, on a lofty and steep
mountain, enclosed by fortified lines which connected it
within itself. Hence they were but slightly defended the
two strongest places in the Peloponnese. When Philip,
the son of Demetrius, was planning the conquest of
the peninsula with Demetrius of Pharos, the latter
advised him to seize first the horns of the heifer, which
would secure to him possession of the animal. By
these eminational expressions he designated the Pelo-
ponnese, and the two bulwarks above mentioned.
(Strab., 361.—Polyb., 7, 11.) Seyclay says Ithome
was eighty stadia distant from the sea. (Pentj., p. 16.)

Ithuri Portus, a harbour of Gaul, whence Caesar
set sail for Britain. Caesar describes it no farther than
by saying, that from it there was the most convenient
passage to Britain, the distance being about 30 miles.
(B. G., 5, 2.) Calais, Boulogne, and Etaples have
each its respective advocates for the honour of being
the Ithuri Portus of antiquity. The weight of authority,
however, is in favour of Wissant or Pissan; and with
this opinion D'Anville concurs. Caesar landed at the
Portus Lemania or Lymne, a little below Dover. For
a long time this was the principal crossing-place. In
a later age, however, the preference was given to Ges-
sorium or Boulogne in Gaul, and Rutupium or Rich-
borough in Britain. Lemaire, however, is in favour of
making the Ithuri Portus identical with Gessorium,
as others had been before him. (Ind. Geogr. ad Ces.,
B. G., p. 291.)

Ithuri, Estuarium, now Sallay Firth, in Scot-
land.

Itrura, a province of Palestine, so called from Itur
or Jeter, one of the sons of Ishmael, who settled in it;
but whose posterity were either driven out or subdued
by the Amorites, when it is supposed to have formed
part of the kingdom of Bashan, and subsequently of
the half tribe of Manasseh east of Jordan; but, as it
was situated beyond the southern border of Mount
Hermon, called the Dybal Heish, this is doubted. It
lay on the northeastern side of the land of Israel,
between it and the territory of Damascus or Syria; and
is supposed to have been the same country at present
known by the name of Djeour, on the east of the
Dybal Heish, between Damascus and the Lake of Ti-
berias. The Itrurans being subdued by Aristobulus,
the high-priest and governor of the Jews, B.C. 106,
were forced by him to embrace the Jewish religion,
and were at the same time Jewishized. Caesar, the son
of Philip, one of the sons of Herod the Great, was te-
trach or governor of this country when John the Bap-
tist commenced his ministry. (Pli., 5, 23.—Joseph.
3, 1.)

Itrus, son of Tereus, king of Thrace, by Prone,
daughter of Pandion, king of Athens. He was killed
by his mother when he was seven years old, and
carved out of wood. He was changed, according
unto one account, into a pheasant, his mother into a
swallow, and his father into an owl. (Vid. Philomelea.
—Ovid, Met., 6, 620.—Amor., 2, 14, 29.—Horat.,
Od., 4, 12.)

Jebra, I. a son of Hiempsal, king of Numidica,
succeeded his father about 50 B.C. He was a warm
supporter of the senatorial party and Pomperty, being
695
moved, it is said, to this course by a gross insult which, in his youth, he had received from Caesar. He gained, B.C. 49, a great victory over Curio, Caesar's lieutenant in Africa. After the battle of Pharsalia and the death of Pompey, he continued steady to his cause; and when Caesar invaded Africa, B.C. 46, he supported his client Cato. Caesar was killed in the first instance reduced the dictator to much difficulty. The battle of Thapsus, however, turned the scale in Caesar's favour. Juba fled, and, finding that his subjects would not receive him, put an end to his life in despair, along with Petreus. (Vid. Petreus.) His connection with Cato has suggested the underplot of Addison's tragedy. (Plut., Vit. Pompey.—Id., Vit. Cás.—Flor., 4, 12.—Sueton., Vit. Jul., 35.—Lucan, 4, 69, 89.) The second of the name was son of the preceding. He was carried to Rome by Caesar, kindly treated, and well and learnedly educated. He gained the friendship, and fought in the cause, of Augustus, who gave him the kingdom of Mauritania, his paternal kingdom of Numidia having been erected into a Roman province. Juba cultivated diligently the arts of peace, was beloved by his subjects, and had a high reputation for learning. He reserved for himself the privilege of cultivating natural history; of Assyria; of Rome; of painting and painters; of theatres; of the qualities of animals; on the source of the Nile, &c., all which are now lost. Juba married Cleopatra, the daughter of Antony and Cleopatra, queen of Egypt. Strabo, in his sixth book, speaks of Juba as living, and in his seventeenth and last book as then dead. This would probably fix his death about A.D. 17. (Clinton, Fast. Hellen., vol. 3, p. 351, &c.—Plut., Cod., 151.—Athenea., 8, 3, 433, &c.—Plut., Mor., 269, &c.) Consult the dissertation of the Abbe Sevin, Sur la Vie et les Ouvrages de Juba, in the Mem. de l'Acad. des Ins., &c., vol. 4, p. 457, seqq.)

JUDEA, a province of Palestine, forming the southern division. It did not assume the name of Judaea until after the return of the Jews from the Babylonian captivity; though it had been denominat®ed, long before, the kingdom of Judæa, in opposition to that of Israel. After the return, the tribe of Judah settled first at Jerusalem; but afterward, spreading gradually over the whole country, they gave it the name of Judæa. Judæa, being the seat of religion and government, claimed many privileges. It was not lawful to intercalate the year out of Judæa, while they might do it in that country. Nor was the sheaf of first-fruits of the barley to be brought from any other district than Judæa, and as near as possible to Jerusalem. The extent of this remarkable country has varied at different times, according to the nature of the government which it has enjoyed or been compelled to acknowledge. When it was first occupied by the Israelites, the land of Canaan, properly so called, was confined between the shores of the Mediterranean and the western bank of the Jordan; the breadth at no part exceeding fifty miles, while the length hardly amounted to three times that space. At a later period, the arms of David and of his immediate successors were extended upon the boundaries of the kingdom to the Euphrates and Orontes on the one hand, and in an opposite direction to the remotest confines of Edom and Moab. The population, as might be expected, has undergone a similar variation. It is true, that no particular in ancient history is liable to a better founded suspicion, than the numerical statements which respect nations and armies; for pride and fear have in their turn contributed no small share to exaggerate both, in proportion to the amount of persons capable of taking a share in the field of battle. Proceeding on the usual grounds of calculation, we must infer, from the number of warriors whom Moses conducted through the desert, that the Hebrew people, when they crossed the Jordan, did not fall short of two millions; while, from the facts recorded in the book of Samuel, we may conclude with greater confidence that the enrolment made under the direction of Joab must have returned a gross population of five millions and a half. The present aspect of Palestine, under an administration where everything decays and nothing is renewed, can afford no viutation of the statements. Hasty observers have indeed pronounced, that a hilly country, destitute of great rivers, could not, even under the most skilful management, supply food for so many mouths. But this precipitate conclusion has been vigorously combated by the most competent judges, who have taken pains to estimate the produce of a soil, under the fertilizing influence of a sun which may be regarded as almost tropical, and of a well-regulated system of irrigation, with which it is practicable with the greatest success. Cannan, it must be admitted, could not be compared to Egypt in respect to corn. There is no Nile to scatter the riches of an inexhaustible fecundity over its valleys and plains. Still it was not without reason that Moses described it as a “good land, a land of brooks of water, of fountains, and depths that spring out of valleys and hills; a land of wheat, and barley, and vines, and fig-trees, and olive-trees; and land of almonds; and land that yieldeth bread without scarceness; thou shalt not lack anything in it; a land whose stones are iron, and out of whose hills thou mayest dig brass.” (Deuteron., 8, 7, seqq.) The reports of the latest travellers confirm the accuracy of the picture drawn by this divine legislator. Near Jericho the wild olives continue to bear berries of a large size, which give the finest oil. In places subjected to irrigation, the same field, after a crop of wheat in May, several of the trees are continually bearing flowers and fruit at the same time, in all their stages. The mulberry, planted in straight rows in the open field, is festooned by the tendrils of the vine. If this vegetation seems to languish or become extinct during the extreme heats—if in the mountains it is at all seasons detached and interrupted—such exceptions to the general luxuriance are not to be ascribed simply to the general character of all hot climates, but also to the state of barbarism in which the great mass of the present population is immersed. Even in our day, some remains are to be found of the walls which the ancient cultivators built to support the soil on the declivities of the mountains; the form of the cisterns in which they collected the rain-water; and traces of the canals by which this water was distributed over the fields. These labours necessarily created a prodigious fertility under an ardent sun, where a little moisture was the only requisite to preserve the vegetable world. The accounts given by native writers respecting the productive qualities of Judæa are not in any degree opposed even by the present aspect of the country. The case is exactly the same with some islands in the Archipelago; a tract from which a hundred individuals can hardly draw a scanty subsistence, formerly maintained thousands in affluence. Moses might justly say there was abundance in this district. The flocks of the Arabs still find in it a luxuriant pasture, while the bees deposite in the holes of the rocks their delicious stores, which are sometimes seen flowing down the surface. The opinions just stated in regard to the fertility of ancient Palestine, receive an ample confirmation from the Roman historians, to whom, as a part of their extensive empire, it was intimately known. Tacitus especially, (Hist., 5,) in the accuracy with which he appears to be formed for his own use, describes its natural qualities with the utmost precision, and, as is his manner, suggests rather than specifies a catalogue of productions, the accuracy of which is verified by the latest observations. The soil is rich, and the atmosphere dry; the country yields all the fruits,
Judaea.

Which are known in Italy, besides balm and dates. But it has never been denied that there is a remarkable difference between the two sides of the ridge which forms the central chain of Judaea. On the western acclivity, the soil rises from the sea towards the elevated ground in four distinct terraces, which are covered with an unfeuding verdure. The shore is lined with mastic-trees, palms, and prickly pears. Higher up, the vines, the olives, and the sycamores amply repay the labour of the cultivator; the natural groves are often consisting of evergreen oaks, cypress, arandachus, and turpentine.

The face of the earth is embellished with the rosemary, the cyrus, and the hyacinth. In a word, the vegetation of these mountains has been compared to that of Crete. European visitors have dined under the shade of a lemon-tree as large as one of our strongest oaks, and have seen sycamores, the foliage of which was sufficient to cover thirty persons, along with their horses and camels. On the eastern side, however, the scanty coating of mould yields a less magnificent crop. From the summit of the hills a desert stretches along to the Lake Asphaltites, presenting nothing but stones and ashes, and a few thorny shrubs. The sides of the mountains enlarge, and assume an aspect at once more grand and more barren. By little and little, the scanty vegetation languishes and dies; even mosses disappear, and a few thorny shrubs are the only occupation of the rocks. In the centre of this amphitheatre there is an arid basin, enclosed on all sides with summits scattered over with a yellow-coloured pebbles, and affording a single aperture to the east, through which the surface of the Dead Sea and the distant hills of Arabia present themselves to the eye. In the midst of this country of stones, encircled by a wall, we perceive extensive ruins, stunted cypress, bushes of the aloes, and prickly pear, while some bits of the nearest order, resembling whitewashed sepulchres, are spread over the desolate mass. This spot is Jerusalem. (Belon, Observations, &c., p. 140.—Hasselquist, Travels, p. 56.—Shultze's Travels, vol. 2, p. 86.)—This melancholy delineation, which was suggested by the state of the Jewish metropolis in the third century, is not quite inapplicable at the present hour. The scenery of external nature is the same, and the general aspect of the country is very picturesque; but beauty is strictly a relative term, and is everywhere greatly affected by association; we must not be surprised when we read in the works of Eastern authors the high encomiums which are lavished upon the vicinity of the holy capital. Abulffer, for example, maintains, not only that Palestine is the most fertile part of Syria, but also that the neighbourhood of Jerusalem is one of the most fertile districts of Palestine. In his eye, the vines, the fig-trees, and the olive-groves, with which the limestone cliffs of Judaea were once covered, identified themselves with the richest returns of agricultural wealth, and more than compensated for the absence of those spreading fields, waving with corn, which are necessary to convey to the mind of a European the ideas of fruitfulness, comfort, and abundance.—Following the enlightened narrative of Malte-Brun, the reader will find that southward of Damascus, the point where the modern Palestine may be said to begin, are the countries called by the Romans Auranitis and Gaulonitis, consisting of one extensive and noble plain, bounded on the north by Hermon or Djabel-el-Sheik, on the southwest by Djabel-Edjan, and on the east by Haouran. In all these countries there is not a single stream which retains its water in summer. The most of the villages have their pond or reservoir, which they fill from one of the many wadies which flow from the chain of Lebanon. Of all these districts, Haouran is the most celebrated for the culture of wheat. Nothing can exceed in grandeur the extensive undulations of their fields, moving like the waves of the ocean in the wind. Bothin, or Batanea, on the other hand, contains nothing except calcareous mountains, where there are vast caverns, in which the Arabian shepherds live like the ancient Troglydotes. Here a modern traveller, Dr. Seetzen, discovered, in the year 1816, the magnificent ruins of Gerasa, now called Djerash, where three temples, two superb amphitheatres of marble, and hundreds of columns still remain, among other monuments of Roman power. But by far the finest thing that he saw was a long street, bordered on each side with a splendid colonnade of Corinthian architecture, and terminating in an open space of a semicircular form, surrounded with sixty Ionic pillars. In the same neighbourhood, the ancient Gilead is distinguished by a forest of stately oaks, which supply wealth and employment to the inhabitants. Petra presents on its numerous terraces a mixture of vines, olives, and pomegranates. Karak-Moab, the capital of a district corresponding to that of the primitive Moabites, still meets the eye, but is not to be confounded with another town of a similar name in the Stony Arabia. (Seetzen.—Annales des Voyages, vol. 1, p. 398—Correspondence de M. Zach, p. 425.)—The countries now described lie on the eastern side of the river Jordan. But the same stream, in the upper part of its course, forms the boundary between Gaulonitis and the fertile Galilee, which is identical with the district of Umm el-Qaiwain, a tract which is remarkable for the beauty of its situation amid groves of myrtle, is supposed to be the ancient Bethulia, which was besieged by Holofernes. Taba- ria, an insignificant place, occupies the site of Tiberias, which gave its name to the lake more generally known by that of Gennesareth, or the Sea of Galilee; but industry has now deserted its borders, and the fisherman with his skiff and his nets no longer animates the shores. The whiteness of the cliffs still retains some portion of its former consequence. Six miles farther south stands the hill of Thabor, sometimes denominated Itabyrus, presenting a pyramid of verdure crowned with olives and sycamores. From the top of this mountain, the reputed scene of the transfiguration, we look down on the river Jordan, the lake of Gennesareth, and the Mediterranean Sea. (Maunder, p. 69.).—Galilee, says Chateaubriand, is a country of verdure, and verdure is protected and cherished by an industrious people under an enlightened government. Vine-stocks are to be seen here a foot and a half in diameter, forming, by their twining branches, vast arches and extensive ceilings of verdure. A cluster of grapes, two or three feet in length, will give an abundant supper to a whole family. The plains of Esdraelon are occupied by Arab tribes, around whose brown tents the sheep and lambs gambol to the sound of the reed, which at nightfall calls them home. —Proceeding from Galilee towards the metropolis, we enter the land of Samaria, comprehending the modern districts of Aretha and Nablonus. In the former we find the remains of Cesarea; and on the Gulf of St. Jean d'Acre stands the town of Caipha, where there is a good anchorage for ships. On the southwest of this gulf extends a chain of mountains, which terminates in the promontory of Carmel, a name famous in the annals of our religion. There Elijah proved by miracles the divinity of his mission; and there, in the middle ages of the church, resided thousands of Christian devotees, who sought a refuge for their piety in the caves of the rocks. Then the mountain was wholly covered with chapels and gardens, whereas at the present day nothing is to be seen but scattered ruins amid forests of oak and olives, the bright verdure being only relieved by the verdant gum trees by which they are suspended. The heights of Carmel, it has been frequently remarked, enjoy a pure and enlivening atmosphere, while the lower grounds of Samaria and Galilee are obscured.
by the densest fogs. — The Shechem of the Scriptures, successively known by the names of Neapolis and Nablious, still contains a considerable population, although its dwellings are mean and its inhabitants poor. The ruins of Samaria itself are not covered with orchards, and the people of the district, who have forgotten their native dialect, as well, perhaps, as their angry disputes with the Jews, continue to worship the Deity on the verdant slopes of Gerizim. — Palestine, agreeably to the modern acceptation of the term, embraces the country of the ancient Philistines, the most formidable enemies of the Hebrew tribes prior to the reign of David. Besides Gaza, the chief town, we recognise the celebrated port of Jaffa or Yaffa, corresponding to the Joppa mentioned in the sacred writings. Repeatedly fortified and dismantled, this famous harbour has presented such a variety of appearances, that the description given of it in one age has hardly ever been found to apply to its condition in the very next. Bethlehem, where the divine Messias was born, is a large village inhabited promiscuously by Christians and Mussulmans, who agree in nothing but their detestation of the tyranny by which they are both unmercifully oppressed. The dignity of the sacred manger is occupied by an elegant church, ornamented by the pious offerings of all the nations of Europe. It is not our intention to enter into a more minute discussion of those old traditions, by which the particular places rendered sacred by the Redeemer's presence are still marked out for the veneration of the faithful. They present much vagueness, mingled with no small portion of unquestionable truth. At all events, we must not regard them in the same light in which we are compelled to view the story that claims for Hebron the possession of Abraham's tomb, and attracts on this account the veneration both of Nazarenes and Moslems. — To the northeast of Jerusalem, in the large and fertile valley called El-Ga'ur, and watered by the Jordan, we find the village of Richea, near the ancient Jericho, denominated by Moses the City of Palms. This is a name to which it is still entitled; but the groves of opchalsamum, or balm of Mecca, have long disappeared; nor is the neighbourhood any longer adorned with those singular flowers known among the Crusaders by the familiar appellation of Jericho roses. A little farther south two rough and barren chains of hills encompass with their dark steeps a long basin formed in a clay soil mixed with bitumen and rock-salt. The water contained in this hollow is impregnated with a solution of different saline substances, highly, however, curative, and partially neutralized with mutric and sulphuric acid. The salt which it yields by evaporation is about one fourth of its weight. The bituminous matter rises from time to time from the bottom of the lake, floats on the surface, and is thrown out on the shores, where it is gathered for various purposes. (Vid. More Mortuorum.) — This brief outline of the geographical limits and physical character of Lower Palestine may suffice here. Details much more ample have been found in numerous works, whose authors, fascinated by the interesting recollections which almost every object in Palestine is fitted to suggest, have endeavoured to transfer to the minds of their readers the profound impressions which they themselves experienced from a personal review of ancient scenes and monuments. But we purposely refrain from the minutest description of the subjects we naturally invite us, because, by pursuing such a course as this, we would be unavoidably led into a train of local particulars, while setting forth the actual condition of the country and of its venerable remains. However, we supply, in the following table, the means of comparing the division or distribution of Canaan among the twelve tribes, with that which was afterward adopted by the Romans.

In a pastoral country, such as that beyond the river Jordan especially, where the desert in most parts bordered upon the cultivated soil, the limits of the several possessions could not at all times be distinctly marked. It is well known, besides, that the native inhabitants were never entirely expelled by the victorious Hebrews, but that they retained, in some instances by force, and in others by treaty, a considerable portion of land within the borders of all the tribes: a fact which is connected with many of the defects and troubles into which the Israelites subsequently fell. (Russell's Palestine, p. 26, seqq.)

JUGURTHA, the illegitimate son of Manestabil, by a concubine, and grandson of Masinissa. He was brought up under the care of his uncle Micipsa, king of Numidia, who educated him along with his two sons. As, however, Jugurtha was of an ambitious and aspiring disposition, Micipsa sent him, when grown up, with a body of troops, to join Scipio Africanus in his war against Numantia in Spain, hoping to lose, by the chances of war, a youth who might otherwise, at some subsequent period, threaten the tranquillity of his children. His hopes, however, were frustrated. Jugurtha so distinguished himself as to become a great favourite with Scipio, who, at the conclusion of the war, sent him back to Africa with strong recommendations to Micipsa. Micipsa then adopted him, and declared him joint heir with his two sons Adherbal and Hiempsal. After Micipsa's death (B.C. 118), Jugurtha, aspiring to the undivided possession of the kingdom, effected the murder of Hiempsal, and obliged Adherbal to escape to Rome, where he appealed to the senate. Jugurtha, however, found means to bribe many of the senators, and a commission was sent to Africa, in order to divide Numidia between the two princes. The commission firstsetName to the best portion to Jugurtha, who, not long after their departure, invaded the territory of his cousin, defeated him, besieged him in Cirta, and, having obliged him to surrender, put him to a cruel death; and this almost under the eyes of Scipaurus and others, whom the Roman senate had sent as umpires between the two rivals (B.C. 112). This news caused great irritation at Rome, and war was declared against Jugurtha. After some fighting,
however, he obtained from the consul Calpurnius, under the most favourable conditions, the quiet possession of the usurped kingdom. But this treaty was not ratified at Rome; Calpurnius was recalled, and the new consul Posthumius Albinus was appointed to the command in Sicily. Meanwhile, Caesar, having suppressed Sylla, expected to appear at Rome; but as he then succeeded in bribing several of the senators, and also Babius, a tribune of the people, no judgment was given. Imboldened by this success, he thereupon caused Massiva, son of his uncle Gulusia, whom he suspected of aiming at the kingdom, to be assassinated in the Roman capital. The crime was fixed upon him; but as he was under the public guarantee, the senators and commanders of the army, urging him to leave Rome immediately. It was while departing from the city on this occasion that he is said to have uttered those memorable words against the corruption of the Roman capital which are recorded in the pages of Sallust: "Ah, venal city, and destined quickly to perish, if it could but find a purchaser!" Posthumius was now sent to his province in Africa, to prosecute the war; but he soon returned to Rome without having effected anything, leaving the army under the command of his brother Aulus Posthumius, who allowed himself to be surprised in his camp by Juturna, to whom he surrendered; and his troops, having passed under the yoke, evacuated Numidia. The new consul Metellus, arriving soon after with fresh troops, carried on the war with great vigour, and, being himself above temptation, reduced Juturna to the last extremity. Caius Marius was serving as lieutenant to Metellus, and, in the year B.C. 107, supplanted him in the command. Juturna, meantime, having allied himself with Bocchus, king of Mauritanica, gave full employment to the Romans. Marius took the town of Capasa, and in a hard-contested battle defeated the two kings. Bocchus now made offers of peace, and Marius sent to him his qustor Sylla, who, after much negotiation, induced the Mauritanian king to give up Juturna into the hands of the Romans, as the price of his own peace and security. Juturna followed in chains with his two sons, the triumph of Marius, after which he was thrown into a subterranean dungeon, where he was starved to death, or, according to others, was strangled. His sons were sent to Venusia, where they lived in obscurity. The war against Juturna lasted five years; it ended B.C. 106, and has been immortalized by the pen of Sallust. (Sall., Bell. Jug.—Plut., Vit. Mar.) "It is said by some, bringing him to the palace when he was led before the car of the conqueror, he lost his senses. After the triumph he was thrown into prison, where, in his haste to strip him, some tore his robe off his back, and others, catching eagerly at his pendants, pulled off the tips of his ears along with them. When he was thrust down naked into the dungeon, all confused, he said, with a frantic smile, 'Heavens! how cold is this bath of yours! There, having struggled for six days with the hunger and the last year's labouring for the preservation of his life, he came to such an end as his crimes deserved.'" (Plut., Vit. Mar.)

JULIA LEX. I. Agraria, proposed by Julius Caesar in his first consulship, A.U.C. 694. Its object was to distribute the lands of Campania and Stellae to 20,000 poor citizens, who had three children or more. (Cic., Ep. ad Att., 2, 16.—Vell. Patres., 2, 44.)—II. Another by the same, entitled de Pudicitia, about morals generally. (Cic., Pro Arch., 111.)—III. Another, at the ratification of all Pompey's acts in Asia. (Suet., Vit. Jul., 20.)—IV. Another by the same, de Provinciis ordinandis. This was an improvement on the Cornelian law about the provinces, and ordained that those who had been pratores should not command a province above one year, and those who had been consuls not above two years. It also ordained that Achaea, Thessaly, Athens, and, in fact, all Greece, should be free, and should use their own laws. (Cic., Phil., 1, 8.—Id. in Plut., 15.—Dio Cass., 43, 25.)—V. Another by the same, de Judicibus, ordering the Justices to be chosen from those senatorial candidates who should pay the tribuni ararum, (Suet., Vit. Jul., 41.—Cic., Phil., 1, 9.)—VI. Another by the same, de Reptundis, very severe against extortion. It is said to have contained above 100 heads. (Cic., Ep. ad Fam., 8, 7.—Suet., Vit. Jul., 43.)—VII. Another by the same, de libera procuratoripom., that the children of those proscribed by Sylla should be admitted to freedom; (Suet., Vit. Jul., 43.)—VIII. Another by the same. This was a supplementary law. It allowed an expenditure of 200 sesterces on the dies profesti, 300 on the Kalends, nones, ides, and some other festivals; 1000 at marriage feasts, and similar extraordinary entertainments. Gellius ascribes this law to Augustus, but it seems to have been enacted in succession by both Caesar and him. By an edict of Augustus or Tiberius, the allowance for an entertainment was raised, in proportion to its solemnity, from 300 to 2000 sesterces. (Julius, Vit. 47, 2.—Dio Cass., 54, 2.)—IX. Another by Augustus, concerning marriage, entitled de Maritandis Ordinibus. (Vit. Papia-Poppaea Lec.)—X. Another by the same, de adulteriis, punishing adultery.—XI. Another, de tuttoribus, by the same. It enacted that guardians should be appointed for orphans in the provinces, as at Rome, by the Atilian Law. (Just., Inst. Attl. Tit.) Julia, I., a daughter of Julius Caesar, by Cornelia, celebrated for her beauty and the virtues of her character. She had been affianced to Servilius Cepio, and was on the point of being given to him in marriage, when her father bestowed her upon Pompey. (Plut., Vit. Pompei, 47.—Appian, Bel. Civ., 1, 14.) Julia possessed great influence both over her father and husband, and, as long as she lived, prevented any cut-back between them. Her sudden death, however, in childbed, severed the tie that had in some degree bound Pompey to his father-in-law, and no private considerations any longer existed to alay the jealousies and animosities which political disputes might enkindle between them. The amiable character of Julia, and her constant affection for her husband, gained for her the general regard of the people; and this they testified by insisting on celebrating her funeral in the Campus Martius, a compliment scarcely ever paid before. Julia was a woman of great grace, with a face that was always loved her tenderly, and the purity and happiness of his domestic life is one of the most delightful points in his character. (Sueton., Vit. Jul., 21.—Id. ib., 26.—Id. ib., 84.)—II. The sister of Julius Caesar. She married M. Attius Balbus, and became by him the mother of Octavia Minor and Augustus. (Sueton., Vit. Jul., 74.—Id., Vit. Aug., 4.—Id. ib., 8.)—III. The aunt of Julius Caesar. At her decease, she left the enormous fortune of 60,000 talents from the rostra. (Sueton., Vit. Jul., 6.)—IV. The daughter of Augustus by his first wife Scribonia. As he had no children by Livia, whom he had subsequently espoused, Julia remained sole heiress of the emperor, and the choice of her husband became a matter of great importance. She was first married to her cousin Claudius Marcellus, the nephew of Augustus by his sister Octavia (Tact., Ann., 1, 3.—Sueton., Vit. Aug., 42.)—V. Married to Velleius, one of the famous lines of the sixth ₣Eneid, for which Octavia so largely rewarded him. But Marcellus dying young and without children, Augustus selected for the second husband of his daughter his oldest friend and most useful adherent, M. Vipsanius Agrippa. This marriage seemed to answer all the wishes of Augustus, for Julia became the mother of five children: Caesu, Lu...
cious, Julia, Agrippina, and Agrippa Postumus. Agrippa died A.D. 741, and Julia was married, for the third time, to Tiberius Claudius Nero, the son of Livia, and afterward emperor. Tiberius subsequently, for whatever reasons, thought proper to withdraw from Rome to the island of Rhodes, where he lived in the greatest retirement. During his absence, his wife Julia was guilty of such gross indiscretions as to make, when her husband returned, she was again confined for some time, and treated with the greatest rigour; nor would Augustus ever forgive her, or receive her again into his presence, although he afterward removed her from Pandataria to Rhegium, and somewhat softened the severity of her treatment. When her husband Tiberius ascended the throne, she was again severely dealt with, and finally died of ill-treatment and starvation. (Πάνω κακώνας καί λιμων.—Zonaras, p. 548.—Sueton., Vit. Aug., 63.—Id., Vit. Aug., 65.—Id., Vit. Tib., 7.—Id. ib., 50.—Tacit., Ann., 1, 53.)—V. The grand-daughter of Augustus, and daughter of Agrippa and Julia (IV). She was married to L. Paulus, but, imitating the licentious conduct of her mother, she was banished by Augustus for her adulterous proceedings to the island of Tenedtis, off the coast of Germainiae, for the space of 20 years, and where at last she terminated her existence. (Tacit., Ann., 4, 71.)—VI. A daughter of Drusus Caesar, the son of Tiberius, by Livia or Livilla, the daughter of Nero Claudius Drusus. She was married first to Nero Caesar, son of Germanicus and Agrippina, and afterward to Rubellius Blandus. She was cut off by the intrigues of Messalina, A.D. 796. (Tacit., Ann., 3, 25.—Id. ib., 6, 27.—Id. ib., 13, 19.)—VII. A daughter of Claudius Drusus and Messalina, his half-brother. Her frantic father carried her to the temples of all the goddesses, and dedicated her to Minerva, as to the patroness of her education. She discovered in her infancy strong indications of the cruelty that branded both her parents. She suffered death with her mother after the assassination of Caligula. (Sueton., Vit. Calig., 25.—Id. ib., 59.)—VIII. A Syrian female, daughter of Bassianus, priest of the Sun. She became the mother of the future Constantine, after the death of her husband, and of the Emperor, on the death of her first son. Constantius. The superstition of the Roman nation was determined, it seems, in his choice, by hearing that Julia had been born with a royal nativity; in other words, that she was destined to be the wife of a sovereign prince. (Spartian., Vit. Sec., 3, seqq.) Her full name was Julia Domna (Salmus, ad Spart., Vit. Sec., 20), the latter part of it not being contracted, as some suppose, from Domina, but being the actual surname of a family. (Tristian, Const., Hist., vol. 2, p. 119, seqq.—Menag., Aman. Jur., c. 25.) Julia is said to have been a female of cultivated mind and considerable literary attainments. She applied herself also to the study of philosophy, and employed a large portion of her time in listening to, and taking part in, the disputations of philosophers and sophists. Hence Philostratus calls her μάθητας τῆς αλήθειας. (Vit. Sophist.—Philost.—Phil.: Op., ad Merot., p. 6.) She disgraced herself, however, by her adulterous proceedings, and is even said to have conspired on one occasion against the life of her own husband. (Spart., Vit. Sec., 18.) Julia became by Severus the mother of Caracalla and Geta, the latter of whom was slain in her arms by the orders of his brother, in which struggle she herself was wounded. To increase, if possible, the anguish she must naturally have felt on this account, Caracalla ordered her to suppress every token of grief. (Spart., Vit. Get., 5.) After the death of Caracalla and the accession of Macrinus, she put an end to her existence by starvation, her death being hastened by a cancer on the bosom, which she had privately irritated by a blow. (Dio Cass., 78, 23.) On the nature of her death, as well as on the question of her incestuous union with Caracalla, consult the remarks of Bayle, Hist. Dict., vol. 6, p. 445, seqq., in notis.
an edict of universal toleration, he soon showed a
marked hostility to the Christians: he took the reve-
ues from the churches, and ordered that those who
had assisted in pulling down the heathen temples
should rebuild them. This was the signal for a fearful
reaction and persecution against the Christians in the
provinces, where many were imprisoned, tortured,
and even put to death. Julian restrained or punished
some of his officers, but he evidently had gone too
far. There was evidently a determined struggle through-
out the empire between the old and the new religion,
and Julian wished for the triumph of the former. He
forbade the Christians to read, or teach others, the works
of the ancient classic writers, saying that, as they re-
jected the gods, they ought not to avail themselves of
the learning and genius of those who believed in
them. {Juliani Op., Epist. 42, ed. Spankh.} He also
forbade Jews, and any people, civil or military, and
subjected them to other disabilities and humiliations.
Julian has been called "the Apostate;" but it seems
very doubtful whether, at any period of his life after
his boyhood, he had been a Christian in heart. The
bad example of the court of Constantius, and the
schisms and persecutions that broke out in the bosom
of the church, may have turned him against religion
itself, and by its vanities, of which he had a considerable
share, and which were specified by the examples of
the sophists, made him probably consider himself as
desirous to revive both the old religion and the glories of
the empire. That he was no believer in the vulgar
mythological fables is evident from his writings, es-
specially the piece called "the Cæsars;" and yet he
possessed great zeal for the heathen divinities, and he
wrote orations in praise of the mother of the gods and
the sun. Making it an allowance for the difficulties of
his position and the effect of earlier impressions, he
may be fairly charged with a want of candour and of
justice, and with much affectation bordering upon
hypocrisy. If we choose to discard the invectives of
Gregory of Nazianzus, of Cyril, and of Jerome, we
may be allowed, at least, to judge him by the
narrative of Ammianus, and by his own works, and
the result is not favourable to his moral rectitude or his
sobriety of judgement. A very learned and very tem-
perate modern writer, Cardinal Gerdil, in his "Con-
siderations sur Julian," in the 10th volume of his
works, has so judged him; he has founded his opin-
ion, not on the fathers, but on the accounts of Julian's
panegyrists, Libanius and other heathen writers.—Ju-
ilian, having resolved on carrying on the war against
the Persians, repaired to Antioch, where he resided for
several months. His neglected attire, his un-
cleanliness, and the posture of his habits, drew upon him
the sarcasms of the corrupt popula-
tion of that city. The emperor revenged himself
by writing a satire against them, called Misopogon
and, what was worse, by giving them a
rapecious governor.—It was during his residence at
Antioch that Julian undertook to aim what he thought
would prove a deadly blow to Christianity. An order
was issued for rebuilding the temple of Jerusalem;
the Jews were invited from all the provinces of the
empire, to assemble on the holy mountain of their fa-
thers, and a bold attempt was thus made to falsify the
language of ancient prophecy, and annul, if we may
venture so to speak, the decree which had been pro-
nounced by the Almighty against his once chosen, but
now rejected, people. The accomplishment of this da-
ing and impious scheme was intrusted to Alypius,
who had been governor of Britain, and every effort was
made to excite and enhance the part of the
"imperial sophist" as on that of the Jewish themselves.
But the attempt was an unavailing one, and was sign-
ificantly and miraculously interrupted. Few historical
facts, indeed, rest on graver and more abundant testi-
mony. The narratives of Gregory of Nazianzus and
of Rufinus are confirmed in the fullest manner by Am-
nianus Marcellinus, himself a heathen writer: "When
Alypius," observes Ammianus, "was plying the work
vigorously, and the governor of the province was lend-
ing his aid, fearful glores of fire, bursting forth repeat-
cedly from the earth close to the foundations, scorched
the workmen, and rendered the place, after frequent
trials on their part, quite inaccessible."

{Hist. des Juifs, liv. 6.} "This species and splendid
miracle," as Gibbon sooperiously terms it, has given
rise to much diversity of opinion in modern times.
Warburton strenuously advocates its authenticity, and
most of the sounder theologians agree with him in
this opinion. Lardner, however, doubts its truth.

(Jewish and Heilthen Testimonies, vol. 4, p. 47, seq.)
More judiciously, speaking of Julian, who had long been
put in the vault under the temple-mountain, igniting and
bursting forth on a sudden.

(Consult Michaelis, Götting. Mag., 1783, page 772.)
Salverte promptly settles the whole affair by suppo-
sing that it was merely the explosion of a mine, which
had been prepared by the Christians! {Des Sciences
Occultes, voL 2, p. 224.—Let us now return to Julian.
Having set off at length from Antioch on his Persian
expedition, with a brilliant army reckoned at thirty-
thousand men, he crossed the Euphrates, took
several fortified towns of Mesopotamia, then crossed the
Tigris, and made himself master of Ctesophon.
Here his progress ended. The close Roman legions
were harassed on all sides by the light cavalry of
the Persians, and reduced to great distress for want
of provisions. Still they presented a formidable front
to the enemy, and Sapor, the Persian king, was in-
clined to come to terms, when, in the course of an
attack made upon the Roman army while on its march
Julian, whom the heat of the weather had induced to
lay aside his cuirass, received a mortal wound in
his side from a javelin. Being carried to his tent,
he expired the following night (June 26th, A.D. 363).
He died with perfect calmness and composure, sur-
rounded by his friends, conversing on philosophical
subjects, and expressing his satisfaction at his own
near approach to the termination of his labours.
His remains were carried to Tarsus in Cilicia,
according to his directions, and his successor Jovian
erected a monument to his memory. Such was the
end of Julian, in the 32d year of his age, after a reign
of one year and about eight months from the death of
seq.—Gibbon, Decline and Fall, c. 21, seq.)—It is
still a very common tradition, that when Julian him-
self wounded, he caught in the hollow of his hand
some of the blood that issued from his side, and, fling-
ning it in the air, exclaimed, "Take thy fill, Galatian;
thou hast conquered me, but still do I renounce thee!
" and that, after having thus blasphemed against our Sa-
vior, he indulged in a thousand imprecations against his
own gods, by whom he saw himself abandoned.
(Compare Sozom., 6, 2.) The whole is a mere fab-
ry. Equally undeserving of credit is the following account, that
Julian, having been placed, as usual, on his receiving his wound,
was very anxious to be rescued; he wished to precipitate himself
into its waters, that he might pass away from the eyes of
men, and be regarded as an immortal.—Julian had
many brilliant, and some amiable qualities; his mor-
als were pure, and even austere; his faults were chiefly
those of judgment, probably influenced by the impressions of early youth, an ardent and somewhat mystical imagination, and the flattery of those around him. Of all the character of Julian, Ammianus Marcellinus appears to be the one who has done it with the most truth. This historian renders justice to the eminent qualities of Julian, without, at the same time, concealing his defects. The perfect impartiality, the candour and frankness of this soldier, merit equal confidence both when he praises and condemns. As a writer, Julian deserves praise for the purity and eloquence of his style. One is apt to mistake this from his works that he had read all the classical authors, for they are filled with allusions to passages of these authors, to their opinions, and to images and expressions employed by them. These allusions give sometimes to the writings of Julian a certain obscurity, because many of the productions to which he refers no longer exist. To most extensive reading he united much talent and much vigour of imagination. Morals, metaphysics, and theology, the last of which is with him nothing more than a species of allegorical metaphysics, were the subjects of which he treated in preference.—The works left by Julian are of three classes 1. Hares. 2. Satires. 3. Letters.—With the exception merely of the fragments preserved by St. Cyril and Socrates, we have lost the work Against the Christians and against their creed. The Emperor Julian adopted every means by which, without openly persecuting Christianity, he might degrade it, and cause its followers to fall into contempt. Julian, as a philosopher himself, believed that there existed no surer mode of restoring paganism, at the expense of the new religion, than by attacking the latter through the means of a work full of strong arguments, and in which satire also should not be spared. A man of letters, he wanted not a large portion of self-complacency and conceit; and it appeared to him, that no one was more proper to be the author of such a work, than he who had studied the spirit of the two contending systems of religion, and who had publicly declared himself the patron of a form of worship fast sinking into oblivion, and the enemy of a religion, to the triumph of which he should have reflected that the safety of his own family was intimately attached. Such, no doubt, were the reasons which induced Julian to enter the lists against Christianity. He wrote his work during the winter evenings which he spent at Antioch, in the last year of his life. Supported by pagan philosophers, who expounded from this position, the re-establishment of the religion of their fathers, with which, in their blindness, they connected the renunciation of the splendour and power of the Roman empire, the imperial author was encouraged by their suffrages, and no doubt aided by their abilities. Apollinaris of Laodicea rebelled the attack of Julian by the arms of reason alone; exposing, in a treatise which he wrote "On the Philosophy of the heathen philosophers respecting Deity, and that, not in the spirit of the Holy Scriptures to the aid of his argument. This work of Apollinaris must have been composed in a very short time after the appearance of the emperor's treatise, since Julian appears to have read it before he quitted Antioch, March 5th, A.D. 363. Julian pretended to confound his opponent, and wrote to certain bishops of the church this pastoral de mote: "Ap. licet tu si manet in huius mundo ecce fidelis, ut nemo te condamnet." To this one of them, probably St. Basil, replied, 'Anecygos, αλλ᾽ σιν γυνης, εί γηρος γυνης, σιν ακατηγής, 'Thou hast read, but not comprehended it; for thou hadst comprehended it thou wouldst not have condemned it." Fifty years, however, elapsed before the work of Julian was completely refuted by productions carefully composed, and which entered into a detail of the sophisms which had been advanced against Christianity and the character of its Divine founder. Either the subject was considered, in the interval, as completely exhausted, or else the dreadful catastrophe which terminated the existence of Julian, and which he had incurred as a punishment inflicted by the Deity against his vengeance, had caused his writings to fall into neglect. After the period of time above alluded to, Philip of Side, St. Cyril of Alexandria, and Theodoret, undertook the task of completely prostrating the arguments of the "apostate emperor," and it is to the work of St. Cyril that we owe our knowledge of a part of that of Julian. From this refutation, which bears the following title: "Τηρητα της ιερας και της αληθειας, "Of the holy religion of the Christians, in reply to the writings of the impious Julian," we learn that it was divided into seven books, each of small extent; and that the first three bore this title: 'Ανατροφη των Εκκλησιων, "The nurture of the Churches." These are the only ones which St. Cyril has taken the trouble to refute. It is not difficult to perceive that an admirer of such work, as such Julian was, could easily give to his work a specious appearance, composed to impress on weak and shallow minds, especially when the author himself was surrounded by all the adventitious circumstances of rank and power. The mode adopted by Julian, of appearing to draw his arguments against Christianity from the Scriptures themselves, gives an air of candour and credibility to a work; but it requires no great acumen to show, that Julian either did not understand, or else affected to misunderstand, the doctrines which he combated; and that he has presented facts and denied indubitable truths. The success which his work would no doubt have had if his life had been prolonged, would only have been due to the talent which he possessed in wielding the arms of ridicule: arms the more dangerous, because the wounds which they inflict never cicatrise, and because malevolence, taking pleasure in believing what is false, closes its eyes against the truth when the latter undertakes to destroy that falsity. It was by the aid of the refutation of St. Cyril, mentioned above, that the Marquis d'Argens undertook in the 18th century to restore the lost work of Julian. It was published in Greek and French, at Berlin, 1764, in 8vo, and reprinted in the same city in 1767. Had the object of this individual been to manifest to the world the errors of the Roman infidel, and to teach the pretended philosophers of the day how little philosophy has to advance that is worthy of reliance when religion is in the same, his undertaking has been completely unsuccessful. But it was not the end which the Marquis d'Argens had in view. He did not dare to declare openly for Julian, and yet could not find a sufficient reason for excusing his conduct. The consequence has been, that the production of D'Argens has been attacked by two German scholars, and the latter of the two has combated with so much success the sophisms and fallacies in question, that, after having read the two works, every unprejudiced mind is convinced that the pages of the French philosopher has been completely refuted. The first of the German writers just alluded to, G. F. Meier, published his work in 1764, at Halle, in 8vo, under the following title: "Beurtheilung der Betrachtungen des Herrn Marquis v. Argens, über den Kaiser Julian," the other, W. Crichton, who was subsequently a clergyman at Königsberg, entitled his production "Dissertatio de falso ac absurdo argumento, in qua et adverso et ultra Christiana Religionem, de Heidenkultus," Halle, 1765, 8vo. — We will now pass to an enumeration of the works of Julian that have come down to our own times. 1. 'Εγχύμονος προς τον Αποκόροτα Κορονάτην, "Eloge on the Emperor Constantius." 2. Περὶ τῶν αὐτοκράτορος πράξεων, ἡ πέρι βασιλείας, "Of the actions of an emperor, or of government." 3. 'Εγχύμονος Ευστάθιος τῆς Βασιλείας, "Eloge on the Empress Eusebia."
JULIANUS.

These three productions were composed by Julian in his youth, when he was striving to consolidate the fav-
our of Constantius, on whom his fortunes depended.
They have, indeed, a simplicity of thought and writ-
ing more simplicity than one would expect in com-
positions at this period. In the *first of these harangues,*
Julian had to pronounce a eulogy on one who had been the murderer of his father, of his brother, in a word, as he himself says on another occasion, the execution-
er of his family, and his personal enemy. It was a
theme worthy the plant and fertile genius of the art-
ficial Julian, but just decorated with the title of Caesar
by that very Constantius, and on other occasions sought for pretexts to destroy him. To dissemble,
then, the faults of this prince, and to exaggerate his
good qualities, in such a panegyric, would be the aim
proposed to himself by the writer; and yet, it must in
justice be remarked, that, with some exceptions, the
character of Constantius, as drawn by Julian, coincides
in its general features with that delineated by the his-
torians of the time. In the second harangue, written
probably after he had resided some years in Gaul, Jul-
ian still concealed his inclination towards paganism.
He openly professes in this piece the doctrine of Plato
and the heathen philosophers, and constantly affects
to substitute the plural form "gods" for the singular
"God." The *third of these discourses, addressed
to the princes to whom Julian owed his life and his dig-
finitv of Caesar, is too profusely adored, and burdened,
as well as with error, as he says.*—4 Eic. *To-
coo, "In honour of the Sun, the Sun." A discor-
ade addressed to the prefect Sallustius.—5 Eic.
*προς μητέρα δεν, "In Honour of the Mother of the
G ODs." These two productions are full of enthuzi-
as, and are written in a species of poetical prose.
They contain many allegorical allusions, which to us
can only appear frigid and ridiculous. In the system
of Julian, the world existed from all eternity; but
there exist some fine thoughts, which, in the mit-
trials of Caesar; and foresee-
ing, no doubt, that the young prince would succeed to
the empire, had traced for him the line of his duty, and
laid before him what the world expected at his hands.
Julian replies to this letter with the greatest ability and
moderation.—10. Manifesto against the Emperor Con-
stantius, in the form of a letter to a senator and peo-
ple of Athens. Julian addresses, as he says, his justi-
cication for taking up arms against Constantius, to the
people of Athens, on account of the love of justice
exhibited by them in ancient times. It is a piece ex-
remely important in an historical point of view, since
Julian, no longer caring for his cousin, exposes the
powers and weaknesses of this emperor.
The letter appears to have been written a short time previous to the
death of Constantius.—11. A long fragment of a
letter to a pagan pontiff, containing instructions rela-
tive to the duties to be performed by the peres-
tors of paganism, of whom Julian, by virtue of his imperial
station, was sovereign pontiff. This letter ap-
pears to have been written during his stay at Antioch.
Setting aside the slanders which this piece contains
against the Christians, it may be regarded as well de-
scribing a perusal.—12. Καλοκαρής, Ἐν διηθεμηνίον, "The
Cæsars, or the Banquet." This is one of the most
skilled productions; but Julian is a little out of con-
consideration some impious allusions which it contains,
one of the most agreeable effusions of antiquity. It
is a faithful and true picture of the virtues and vices
of the predecessors of Julian. The plan of the work is
as follows. He relates to a friend a story in the form
of a dialogue, after the manner of Lucian. Ramulus,
named Quirinus after his apotheosis, gives a feast at
the Saturnalia, and invites all the gods to it. Wish-
ing, at the same time, to regulate the Caesars, he causes
a theatrical play to be set for the gods, in the upper
region of the air. The tyrants, who would have
disgraced the society of gods and men, are thrown
headlong, by the inexorable Nemesis, into the Tartar-
rean abyss. The rest of the Caesars advance to their
seats, and, as they pass, they undergo the scrutiny and
scrutiny of Silenus. A controversy arises about the
first place, which all the gods adjudge to Marcus An-
~elius. This recital affords Julian an opportunity of
blasting the character of his predecessor, the Emperor
Constantine, whom he represents as an effeminate man
and a debauche.13. Ἀναλύοις, Η Μοσφόροις, "The
inhabitant of Antioch, or the Beard-hater." In
this satire, filled with pleasuresies of a forced char-
acter, Julian avenges himself on the people of Antioch,
who had amused themselves with the philosophic cos-
tume which he affected. He draws, in a pleasant
manner, his own portrait, describing his beard, his
ashy habits, &c.; and while he makes an ironical confession of his own faults, he in-
dulges in a severe satire on the licentious and effen-
manners of Antioch. The work betrays marks of
the precipitation with which it was composed; for
it is full of repetitions.—We have also ninety letters
of Julian: these are not treats of a philosophic or
moral nature, to which the epistolary form has been
given; they are genuine letters, written in the course
of correspondence with others; though occasionally
the Didian law about expenditure by severer penalties. — IV. Norbana, by L. Junius Norbanus, the consul, A.U.C. 771, that slaves who had been manumitted in any of the less solemn ways should not obtain the full rights of Roman citizens, but only those of the Latins who were transplanted into colonies. (Plin., Ep., 10, 105.)

Juno, a Roman divinity, identical with the Grecian Hera, and is not considered, therefore, in one and the same article with the latter. In Homer, this goddess is one of the children of Saturn and Rhea, and the sis ter and wife of Jupiter. When the latter placed his sires in Tartarus, Rhea committed Juno to the care of Oceanus and Tethys, by whom she was nurtured in their grotto-palace. (IV., 14, 202, seqq.) Hesiod, who gives her the same parents, says that she was the last spouse of Jove. (Theog., 921.) According to the Argive legend, Jupiter effected his union with Juno by assuming first the form of a cuckoo. (Schol. ad Theocr., 15, 64.—Pausan., 2, 17.) In the Iliad (for she does not appear in the Odyssey), Juno, as the queen of Jupiter, shares in his honours. The god is represented as a little in awe of her tongue, yet daunting her by his menaces. On one occasion he reminds her, how once, when she had raised a storm, which drove his son Hercules out of his course at sea, he tied her hands together, and suspended her between the earth and air (IL., 15, 18, seqg.); and when her son Vulcan would aid her, he flung him down from Olympus. (II., 1, 590, seqg.—Compare II., 15, 22.) In this poem the goddess appears dwelling in peace and harmony with Latona, Diane, Themis, and their children: later poets speak much, however, of the persecution which Latona underwent from the enmity of Juno, who also visited with severe infictions Io, Semele, Alcmea, and other favour children of Jove. The children of Minerva and Juno were Mars, Hebe, and the Iliyihya, to whom some add the Graces. (Coluth., Rapt. Hel., 88, 173.) Vulcan was the progeny of Juno without a sire; she was also said to be some have given origin to the monster Typhon. (Horn., Hymn., 2, 127, seqg.) In the mythical cycles of Bacchus and Hercules, Juno acts a prominent part as the persecutor of these heroes, on account of their being the offspring of Jupiter by mortal women. In the Odyssey, she is active in the cause of the Achaei in the war of Troy. In the Argonautic cycle she is the protecting deity of the adventurous Jason. There is, in fact, no one of the Olympian deities more considerably Grecian in feeling and character than Juno.—The chief seats of her worship were Argos, Samos, and Platea. She was also honoured at Sparta, Corinth, Coreyza, and other places. The victims offered to her were lime, ewe-lambs, and cows. The willow, the pomegranate, the dittany, the lily, were her sacred plants. Among birds, the cuckoo, and afterward the peacock, were appropriated to the Olympian queen. (Vid. Argus, and consult remarks under the article Io.) The peacock is an Indian bird, and, according to Theophrastus, was introduced into Greece from the East. Its Persian name at the present day is Taous. (Compare the Greek raµè.) Peafowl were first introduced into Samos; and being birds that gave indications, by their cry, of a change of weather, they were consecrated to Juno, and the legend was gradually spread, that Samos was their native place.—The marriage of Jupiter and Juno was viewed as the pattern of those of mankind, and the goddess was held to preside over the nuptial league. Hence she was named the Yoker (Zeöia), the Consecrator (Títelos), the Marriage-Goddess (Par-mon-tpia). Juno was represented by Poly- xena as seated on a throne, holding in one hand a pomegranate, the emblem of fecundity, in the other a sceptre, with a cuckoo on its top. Her air is dignified and matronly, her forehead broad, her eyes large, and
her arms finely formed. She is attired in a tunic and mantle.—The term Ἰος is evidently the feminine of Ἰππος, anciently Ἰππος, and thus they answer to each other as the Latin Herus and Hera, and the German Herz and Herrin, and therefore signifies master and mistress.—The name JUNO, on the other hand, is evidently derived from the Greek ΔΙΩΝΗ, the female ΔΙΩΣ or ΖΕΥΣ.—The quarrels of Jupiter and Juno in the Homeric mythology are evidently mere physical allegories, Jupiter denoting the ether or upper region of air, and Juno the lower strata, or our atmosphere. Hence the discord and strife that so often prevail between the king and queen of Olympus, the master and mistress of the universe, are merely so many types of the storms that disturb our atmosphere, and the ever-varying changes that characterize the latter are plainly indicated by the capricious and quick-changing temper of the spouse of Jove. At a later period, however, a new element appears to have entered into the mythology of Juno. The Earth, as the recipient of fertilizing showers from the atmosphere, became in a manner identified with the spouse of Father Ether; and we find Juno, now resembling in many of her attributes both Cybele and Ceres, appearing at one time as Earth, at another as the passive productive principle. Hence the consecration of the cow to Juno, just as, in the religion of the ancient Germans, the cow was regarded as the seat of the deified ice, snow, or Earth. At Argos, the chariot in which the priestess of Juno rode was drawn by oxen. (Herod., 1, 31.) Cows were also sacred to the Egyptian Isis, the goddess of fertility, and who resembles in some of her attributes the Grecian Ceres. (Knight, Enquiry into the Symb. Lang., &c., § 30.—Classical Journ., vol. 23, p. 227.—Knightley's Mythology, p. 98, seqq.—Constant, de la Religion, vol. 1, p. 198.) Jupiter is said to have reared, shown himself to, and taught Juno to drive the chariot of the clouds, and to bring showers to distant parts, and to place thunder above the distant and vying phenomena, such as thunder and lightning, wind, clouds, snow, and rainbows, are therefore ascribed to him, and he sends them either as signs and warnings, or to punish the transgressions of man, especially the perversions of law and justice, of which he is the fountain. (II., 1, 238, seqq.) Jupiter is called the "father of men and gods;" his power over both is represented as supreme, and his will is fate. Earthly monarchs obtain their authority from him (II., 2, 197, 205); they are but his vicereders, and are distinguished by epithets derived from his name; such as Jove-sprung (Διουγενής), Jove-reared (Διότρεφης), Jove-belonged (Διόπλος). In his palace on Olympus, Jove lives like a Grecian prince in the midst of his family; alterations and quarrels occur between him and his queen, Juno; and though, in general, kind and affectionate to his children, he occasionally menaces or treats them with rigour. In the Odyssey, the character of this god is, agreeably to the more moral tone of that poem, of a higher and more dignified order. No indecent alterations occur; both gods and men submit to his power without a murmur, yet he is anxious to show the equity of his decrees and to "justify his ways." (Od., 1, 32.)—The Theogony of Hesiod represents Jupiter as the last-born child of Saturn and Rhea, and as the eighth to the supreme power was freely conferred on him by his brothers. And he thus became the acknowledged head of the Olympian gods, the objects of Grecian worship. (For his warfare with the Titans and Giants, vide. Titans and Gigantes.)—Though Homer names the parents of nearly all the gods who appear in his poems, and it follows thence that they must have been born in some definite places, he never indicates any spot of earth as the natal place of any of his deities. A very ancient tradition, however (for it occurs in Hesiod), made the island of Crete the birthplace of the most venerable of the Olympian deities, Jupiter and Rhea, when about to be delivered of Jupiter, relate to a cavern near Lyctus or Cnosus in Crete. She there brought forth her babe, whom the Melian nymphs received in their arms. Adrastea rocked him in a golden cradle; he was fed with honey and the milk of the goat Amalthea, while the Curetes danced about him, clashing their arms, to prevent his cries from reaching the ears of Saturn. (Callim., Hymn. in Jov. —Vid. Rhes. and Saturnus.) According to another account, the infant deity was fed on ambrosia, brought by pigeons from the streams of Ocean, and on nectar, which an eagle drew each day with his beak from a rock. (Athenaeus, 11, p. 490.) This legend was gradually pragmatized; Jupiter became a mortal king of Crete; and not merely the cave in which he was reared, but the tomb which contained his remains, was shown by the "lying Cretans." (Epithres del Íberos, Carn., Cap., I., 8.—Constant, de la Religion, vol. 1, p. 196.)—The Arcadians, on the other hand, asserted that Jupiter first saw the light among their mountains, and made Rhea to have brought him forth amidst the thickets of Parhassion. All, therefore, that we can collect with safety from these accounts is, that the worship of the Dictaean Jupiter in Crete, and of the Lycaean Jupiter in Arcadia (for he was reared, said the Arcadians, in a cavern of Mount Lycaeus), was of the most ancient antiquity, and that the Euhemeristic principle began to creep in among the Greeks, each people supposed the deity to have been born among themselves. The Cretan legend must, however, be regarded as the most ancient, for the Arcadians evidently attempted to transfer the names of places in it to their own country.—In the Theogony, the celestial progeny of Jove are enumerated in the following order. (Theog., 886, seq.)—Jupiter first espoused Metis (Præmissa) in that state of knowledge. But Heaven and Earth having told him that her first child, a maid, would equal him in strength and counsel, and her second, a son, would be king of gods and men, he caressed her when she was pregnant, and swallowed her; and, after a time, the goddess Minerva sprang from his head. He then married Themis, who bore him the Seasons and Fates. The ocean-nymph Eurynome next produced him the Graces. Ceres then became by him the mother of Proserpina; Mnemosyne of the Muses; and Latona of Apollo and Diana. His last spouse was Juno, who bore him Mars, Hebe, and Ithulia.—According to Homer (II., 5, 370, seq.), Venus was the daughter of Jupiter and Dione. The Theogony farther says, that Maia, the daughter of Atlas, bore him Hermes (Theog., 938). A later fable stated that Asteria, the sister of Latona, flying the love of Jupiter, flung herself from heaven down to the sea, and became the island afterward known by the name of Delos.—Mortal women also bore a numerous progeny to the monarch of the sky, and every species of transmutation and disguise was employed by him to further his views. (Vid. Alcmena, Antiope, Callisto, Danae, Europa, Leda, &c.) The various fables of which the monarch of the gods thus became the subject, and which, while they derogate from his character of sovereign deity, have no regard for the unity of moral purity, lose all their grossness if we regard them merely as so many allegories, which typify the great generative power of the universe displaying itself in a variety of ways, and un-
JUPITER.

JUPITER.

nder the greatest diversity of forms.—It was the habit of the Greeks to appropriate particular plants and animals to the service of the deities. This custom has generally some reason for this, founded on physical or moral grounds, or on both. Nothing could be more natural than to assign the oak (φυγος, quercus ascula), the monarch of trees, to the celestial king, whose ancient oracle, moreover, was in the oak-woods of Dodona. In like manner, the eagle was evidently the bird best suited to his service. The celebrated Agis, the shield which sent forth thunder, lightning, and darkness, and the terror of a god, was the favourite bird for Jupiter by Vulcan. In Homer we see it sometimes borne by Apollo (II., 15, 590) and sometimes by Minerva (III., 5, 738.—Od., 22, 297).—The most famous temple of Jupiter was at Olympia in Elis, where, every fourth year, the Olympic Games were celebrated in his honour; he had also a splendid fate in the island of Aegina. But, though there were few deities less honoured with temples and statues, all the inhabitants of Hellas conceived in the duty of doing homage to the sovereign of the gods. His great oracle was at Dodona, where, even in the Pelasgian period, the Selli announced his will and the secrets of futurity. (II., 16, 233.)—Jupiter was represented by artists as the model of dignity and majesty of men; his countenance grave but mild. He is seated on a throne, and grasping his sceptre and thunder. The eagle is standing beside the throne.—An inquiry, of which the object should be to discover and explain the parts of the Greek mythology that have reference to natural phenomena and the changes of the seasons, although it has never been regularly undertaken, would doubtless show, that the earliest religion of the Greeks was founded on the same notions as the chief part of the religions of the East, particularly of that part of the East which was nearest to Greece, namely, Asia Minor. The Greek mind, however, even in this the earliest of its productions, appears richer and more various in its forms, and, at the same time, to take a loftier and wider range, than is the case in the religion of the Oriental neighbours of the Greeks, the Phrygians, Lydians, and Syrians. In the religion of these nations, the combination and contrast of two beings (Baal and Astarte), the one male, representing the productive, and the other female, representing the passive and nutritive powers of Nature; and the alternation of two states, namely, the strength and vigour, and the weakness and death, of the parent, are most peculiar to Nature. In one of which, was celebrated with vehement joy, the latter with excessive lamentation, recur in a perpetual cycle, that must have wearied and stupefied the mind. The Greek worship of Nature, on the other hand, in all the various forms which it assumed in different quarters, places one Deity, as the highest of all, at the head of the entire system, the God of heaven and light, the Father Etheir of the Latin poets. That this is the true meaning of the name Zeus (Jupiter) is shown by the occurrence of the same root (DIU), with the same significations, even in the Sanscrit, and by the preservation of several of its derivatives, which remained in common use both in Greek and Latin, all containing the notion of Heaven and Day. The root DIU is most clearly seen in the oblique cases of Zeus, Διός, Διή, in which the ὄ has passed into the consonant form F (Διγμα); whereas in Zες, as in other Greek words, the ending is in Z, and the ο retained. With this god of the heavens, who dwells in the pure expanse of ether, is associated, though not as a being of the same rank, a goddess worshipped under the name of Hera or Juno. The marriage of Zeus with this divinity was regarded as a sacred solemnity, and typified the union of heaven and earth in the fortu- tilizing rains. Besides this goddess, other beings are associated on one side with the Supreme God, who has charge of all nature, and on the other with beneficent deities, who carry the influence of light over the earth, and destroy the opposing powers of darkness and confusion: such as Minerva, born from the head of her father, in the height of the heavens; and Apollo, the pure and shining god of a worship belonging to other races, but who, even in his original form, was a god of light. On the other side are deities allied with the earth, and dwelling in her dark recesses; and Jupiter assumed as his especial springing from the earth, but to return to that whence it sprang, these deities are, for the most part, also connected with death; as Hermes or Mercury, who brings up the treasures of fruitfulness from the depth of the earth, and the child, now lost and now recovered by her mother Ceres, Proserpina (Cora) the goddess both of flourishing and of decaying nature. It was natural to expect that the element of water (Neptune or Poseidon) should also be introduced into this assemblage of the personified powers of Nature, and should be peculiarly combined with the goddess of the Earth; and that fire (Vulcan or Hephaestus) should be represented as a powerful principle, derived from heaven and having dominion on the earth, and be closely allied with the goddess who sprang from the head of the god of the heavens. Other deities are less important and necessary parts of this same system, as Venus (Aphrodite), whose worship was evidently, for the most part, propagated over Greece from Cyprus and Cythera, by the influence of Syrophoenician tribes. As a singular being, however, in the assembly of the Greek divinities, stands the changeable god of flourishing, decaying, and renovated Nature, Bacchus or Dionysus, whose alternate joys and sufferings, and marvellous adventures, show a strong resemblance to the form which religious notions assumed in Asia Minor. Introduced by the Thracians (a tribe which spread from the north of Greece into the interior of the country), and not, like the gods of Olympus, recognised by all the races of the Greeks, Bacchus always remained to a certain degree estranged from the rest of the gods, although his attributes had evidently most affinity with those of Ceres and Proserpina. But in this isolated position Bacchus exercises an important influence on the spirit of the Greek nation, and both in sculpture and poetry gave rise to a class of feelings, which agree in displacing from the centre of Nature, the flight of the imagination, and more acute sensations of pain and pleasure, than were exhibited on occasions where this influence did not operate. In like manner, the Homeric Poems (which instruct us not merely by their direct statements, but also by their indirect allusions; not only by what they say, but also by what they do not say), when attentively considered, clearly show how this ancient religion of nature sank into the human, and, by carrying with it the salient and conspicuous forms of the deities of the heroic age. The gods who dwell on Olympus scarcely appear at all in connexion with natural phenomena. Zeus chiefly exercises his power as a ruler and king; although he is still designated (by epithets doubtless of high antiquity) as the god of the other and the storms; and in much later times the old picturesque expression was used, “What is Zeus doing?” for “What kind of weather is it?”—What is this intervention of the gods in the concerns of men? There is no trace of any reference of these deities to their earlier attributes. Vulcan also has passed, from the powerful god of fire in heaven and on earth, into a laborious smith and worker of metals, who performs his duty by making armour and weapons for the other gods and their favourite heroes. As to Mercury, there are some stories in which he is represented as giving fruitfulness to cattle, in his capacity of the rural god of Arcadia; from which, by means of various meta-
morphoses, he is transmuted into the messenger of Zeus and the servant of the gods. ( Müller, Hist. Gr. Lit., p. 13, seqq.)

Jura, a chain of mountains, which, extending from the Rhodanian or Rhone to the Rhenius or Rhine, separated Helvetia from the territories of the Sequani. The word is said to be in Celtic, Jow-rag, and to signify the domain of God or Jupiter. The most elevated parts of the chain are the Dole, 5082 feet above the level of the sea; the Mont Tendre, 5170; and the Reculet (the summit of the Thiory), 5196. (Plin., 3, 4.—Cass., B. C., 1, 2.—Ptol., 2, 9.)

Justinian, Flavius, born near Sardica in Moesia, A.D. 482 or 483, of obscure parents, was nephew by his mother's side to Justinus, afterward emperor. He was educated by the imperial tutor, A.D. 518, decided the fortune of Justinian, who, having been educated at Constantinople, had given proofs of considerable capacity and application. Justinus was igno- rant and old, and the advice and exertions of his nephew were of great service to him during the nine years of his reign. He adopted Justinian as his colleague, and at length, a few months before his death, feeling that his end was approaching, he crowned him in presence of the senator and senators, and made over the imperial authority to him, in April, 527. Justinian was then in his 45th year, and he reigned above 38 years, till November, 565, when he died. His long reign forms a remarkable epoch in the history of the world. Although himself unwarlike, yet, by means of his able generals, Belisarius and Nares, he completely defeated the Vandals and the Goths, and reunited Italy and Africa to the empire. Justinian was the last emperor of Constantinople, who, by his dominion over the whole of Italy, reunited in some measure the two principal portions of the ancient empire of the Caesars. On the side of the East, his arms repelled the inroads of the Sarmatians, and conquered Colchis; and the Negus, or king of Abyssinia, entered into an alliance with him. On the Danubian frontier, the Gepidae, Lango- bardi, Bulgarians, and other hordes, were either kept in check or repulsed. The wars of his reign are relat- ed by Procopius and Agathias. Justinian must be view- ed also as an administrator and legislator of his vast empire. In the first capacity he did some good and much harm. He was both profuse and penurious; personally inclined to justice, he often overlooked, through weakness, the injustice of subalterns; he estab- lished monopolies of certain branches of industry and commerce, and increased the taxes. But he intro- duced the rearing of silkworms into Europe, and the numerous edifices which he raised (s. Isidorus IV.), and the towns which he repaired or fortified, at- test his love for the arts, and his anxiety for the secu- rity and welfare of his dominions. Procopius ("De adjiciis Domini Justiniani") gives a notice of the towns, churches (St. Sophia among the rest), convents, bridges, roads, walls, and fortifications constructed or repaired during his reign. The same Procopius, how- ever, wrote a secret history (Avicạnhor) of the court and reign of Justinian, and his wife Theodora, both of whom he paints in the darkest colours. Theodora, indeed, was an unprincipled woman, with some abili- ties, who exercised, till her death in 548, a great influ- ence over the mind of Justinian, and many acts of op- pression and cruelty were committed by her orders. But yet the Anecdota of Procopius cannot be implicitly trusted, as many of his charges are evidently misrepresentations or malignant exaggerations. — Just- inian is said to have been upright, patient, conso- lous and affable in discourse, and perfect master of his temper. In the conspiracies against his authority and person, he often showed both justice and clemency. He excelled in the private virtues of chastity and temperance; his meals were short and frugal; on sol- emn fast he contented himself with water and vege- tables, and he frequently passed two days and as many nights without tasting any food. He allowed himself little time for sleep, and was always up before the morning light. His restless application to business and to study, as well as the extent of his learning, have been subjects of the greatest enquiries (Avic hạnhor, c. 8, 13). He was, or professed to be, a learned man, a phi- losopher, a lawyer and theologian, a musician and archi- tect; but the brightest ornament of his reign is the compilation of Roman law, which has immortalized his name, and an account of which will be found under the article Tribonianus. Unfortunately, his love of theological controversy led him to interfere with the consciences of his subjects, and his penal enactments and religious organizations were the result of a mischievous intolerance which has ever since afforded a dan- gerous authority for religious persecution. — Justinian died at 83 years of age, on the 14th of November, 565, leaving no children. He was succeeded by his neph- ew Justinus IV. (Ludovig, Vita Justiniani Magni, —Gibbon, Decline and Fall, c. 40, seqq.) — II. The second of the name, was son of Constantine III., and lineal descendant of the Emperor Herachius. He suc- ceeded his father on the throne of Constantinople, A.D. 685, and reigned 17 years, during which time he prom- inently administered the empire, by wars with the Saracens, and by the exactions and oppressions of his ministers. At last, his general Leontius drove him from the throne, and, having caused his nose to be cut off, banished him to the Crimea, A.D. 695. Leontius, however, was soon after deposed himself, and banished by Tiberius Apati- merus, who reigned for seven years. Meantime Justinian had escaped from the Crimea and married the daughter of the Kakan, or King of the Gazari, a tribe of Turks; and he afterward, with the assistance of the Bulgarians, entered Constantinople, and put to a cruel death both Leontius and Tiberius, along with many others. He ordered, also, many of the principal people of Ravenna to be put to death. At last Justinian was dethroned and killed by Philippus Bardanes, A.D. 711. (Encyc. Us. Knobol, vol. 13, p. 166.)

Justinus, I. M. Justinianus, or, as he is named in some manuscripts, M. Justinus Frontinus, a Latin his- torian, generally supposed to have flourished in the age of the Antonines. The chief reason for assigning him to this period is the dedication of his work, addressed to Marcus Aurelius. Many critics, however, regard the line in the manuscripts which expresses this ded- ication as an addition by some ignorant copyist, who had confounded this writer with Justinus the Martyr. Nothing is known of the particulars of Justin's life. He made an epitome of, or, rather, a selection of ex- tracts from, the historical work of Tropius Pompeius. This epitome is entitled, "Historiarum Philippicorum et totius mundi originum, et terra situs, ex Trogo Pompeio excerptarum libri XLIV. a Nino ad Caesar- em Augustum." In making his extracts, Justin gave the preference to those facts and those passages which he considered peculiarly interesting. (Compare his own words: "Omissis his qua nec cognoscenti vulpes polliceantur, nec exempla contumeliosae sua ea quam descripsit " Other events are only mentioned briefly, and by way of transition. Chronology is entirely neglected in the work of Justin, as in the greater part of the ancient writers. Justin is deficient in judgment and sagacity. His style is correct, simple, and elegant, but unequal; it is far preferable, however, to that of Florus. The best editions are, that of Gronovius, L. Bat., 1719, 8vo; of Heerme, Oeuvres, vol. 3, 1775, 8vo; of Wetzel, Leipzig, 1817, 8vo. — The value of Justin's history chiefly depends on the circumstance of Tropicus's work having been compiled from some of the best of the ancient historical writers, such as Theopompus, Herodotus, Ctesias, Hieron- mus of Caria, Timaeus, Phylarchus, Polybius, Posi- dominus, &c. (Compare Guicier, rom Plan des Tro-
JUSTINUS.

expeditions this — and Agesilaus a ——
— of Solon, the tyr- any of the Persians, and the war with Persia which ensued, the battle of Marathon, the history of Xerxes and of his contests with the Greeks Book 3. The accession of Artaxerxes. Digression respecting the Lacedemonians, the legislation of Lycurgus, and the first Messenian war. Commencement of the Peloponnesian war. Book 4. Continuation of the Peloponnesian war, expedition to Sicily. Digression respecting Sicily. Book 5. Close of the Peloponnesian war. The thirty tyrants, and their expulsion by Thrasybulus. The expedition of the younger Cyrus, and the retreat of the Ten Thousand. Book 6. The expeditions of Dercyllidas and Agesilas into Asia. The Theban war. The peace of Antalcidas. The exploits of Epaminondas. Philip of Macedon, and the Peloponnesian Empire — In these first six books, which are to be regarded as a kind of introduction to the history of the Macedonian Empire, the true object of Trogus, his principal guide was Theopompos. He has also occasionally availed himself of the aid of Herodotus and Ctesias, and even of that of the mythographers. — Book 7. Digression respecting the condition of Macedonia anterior to the reign of Philip. Book 8. History of Philip and of the Sacred War. Book 9. End of the history of Philip. Book 10. Continuation of the end of the Persian history, under Artaxerxes Mnemon, Ochus, and Darius Codomanus. — In these four books Trogus appears to have merely translated Theopompos. — Book 11. History of Alexander the Great, from his accession to the throne until the death of Darius. Book 12. Occurrences in Greece during the absence of Alexander: expeditions of this prince into Hyrcania and India. His death. — In these two books, no fact would appear to have been omitted that has been found in other works which have reached us. — Books 13, 14, 15. History of the wars between the generals of Alexander the Great, down to the death of Cassander. Book 16. Continuation of the history of Macedonia to the accession of Lysimachus. — This part of Justin's history is so imperfect, that we find it impossible to divine the sources whence Trogus derived his materials. It has been supposed, however, that the digressions on Cyrene (13, 7) and Hieracles (19, 4) are obtained from Theopompos, and that the episode on India (15, 4) is from Megasthenes. Book 17. History of Lysimachus. Digression respecting Epirus before the time of Pyrrhus. — As Justin shows himself, in this book, very partial towards Seleucus, and the reverse towards Lysimachus, it has been conjectured that Hieronymus of Cardia was the guide of Trogus in this part of his work. The Wars of Pyrrhus in Italy and Sicily. Digression respecting the ancient history of Carthage. Book 19. Wars of the Carthaginians in Sicily. Book 20. Dionysius of Syracuse transfers the theatre of the war to Magna Graecia. Digression respecting Metapontum. Book 21. History of Dionysius the younger. Books 22 and 23. History of Agathocles. — These six books of Justin are very important; they embrace nearly all that we know respecting the Carthaginians before their collision with the Romans. The parts that relate to Syracuse and Magna Graecia, Trogus appears to have taken from Theopompos, and, by way of supplement, from Timaeus: this latter, for example, seems to have furnished Trogus with the data of the war of Marius with Hannibal.

— Book 24. Continuation of the history of Macedonia. Invasion of the Gauls under Brennus. Book 25. Antigonus Gonatas, king of Macedonia. Establishment of the Gauls in Bithynia. Book 26. Continuation of the history of Macedonia. Book 27. Seleucus, king of Syria. Book 28. Continuation of the history of Macedonia to the accession of Philip. Book 29. War of Philip with the Romans. — In these six books Philip has been the principal author of Trogus. Book 30. Continuation of the Macedonian war. Alliance of the Etolians with Antiocho the Great. Book 31. Hannibal prevails on Antiochus to make war against the Romans. War in Syria. Book 32. Death of Philopomen. War of the Romans with Perseus. Death of Hannibal. Book 33. Fall of the Macedonian empire. Book 34. Achaean war. Continuation of the history of Philip. Book 35. Demetrius I. and II., kings of Syria. — These six books are taken from Polybius. Book 36. Continuation of the history of the kings of Syria. Digression respecting the Jews. The kingdom of Pergamus becomes a Roman province. Book 37. History of Mithradates the Great. Book 38. Continuation of the history of Mithradates. Polemy Physcon, king of Egypt. Continuation of the history of Demetrius, king of Syria. Book 39. Continuation of the history of Syria and Egypt. Death of Seleucus, and accession of the kingdom of Syria. Book 40. History of the Parthians. Book 41. Continuation of the history of the Parthians. History of Armenia. — On comparing the contents of these six books with the fragments of Poseidonius of Rhodes that have been preserved by Athenaeus, it would appear that this historian has here been the guide of Trogus. Poseidonius, who was a friend of Trogus', had published a history of the period that had intervened between the destruction of Carthage and the death of Augustus, in the reign of Tiberius. It was a large work in fifty-two books. The digression respecting the Jews is full of confusion; it is well known what erroneous ideas were prevalent concerning this people in the time of Augustus, and even at the period when Tacitus wrote; but one is surprised to find that Justin was not able to rectify the mistakes of his original. — Book 43. Earlier history of Rome and Masilia. In the latter part of this book Justin generally follows the history of Cato. Book 44. History of Spain, derived most probably from Poseidonius. — Such appear to have been, in general, the authorities followed by Trogus, and, consequently, by his abbe- viator Justin. (Scellot, Hist. Lit. Rom., vol. 3, p. 139, seqq.—Bähr, Gesch. der Röm. Lit., p. 299, seqq.)

II. Surnamed the Martyr, one of the earliest and most learned writers of the Christian church. He was the son of Priscus, a Greek by nation, and his wife, the Jewess Plautilla. Sardis, a city of Samaria in Palestine, towards the close of the first century. He was educated in the pagan religion, and, after studying in Egypt, became a Platonist, until, in the year 132, he was led, by the instructions of a zealous and able Christian, to embrace the religion of the Gospel. He subsequently went to Rome in the beginning of the reign of Antoninus Pius, and drew up Plautilla's Confession. He was the first Christian who was put to death. The Christians were suffering rather from popular fury than from the bearing upon them of the regular authority of the state, and it prevailed so far as to obtain for them some favourable concessions from the emperor. He was also equally zealous in opposing alleged heretics, and particularly Marcion, against whom he wrote and published a book. He not long after visited the East, and at Ephesus he had a conference with the Pharos, a learned Jew, to prove that Jesus was the Messiah, an account of which conference he gives us in
JUSTINUS.

JUV.

his “Dialogue with Tryphon.” On his return to Rome he had frequent disputes with Crescens, a Cynic philosopher, in consequence of whose calumnies he published his second apology, which seems to have been presented to the Emperor Justinianus, A.D. 165. It produced so little effect, that when Crescens preferred against him a formal charge of impiety for neglecting the pagan rites, he was condemned to be scourged and then beheaded, which sentence was put into execution A.D. 164, in the seventy-fourth or seventy-fifth year of his age. It was eminently as a martyr or witness that Justin suffered; for he might have saved his life had he consented to join some other system to the heathen deities. Hence with his name has ascended the addition of “The Martyr,” a distinction which, in a later age, was given to Peter, one of the Protestant sufferers for the truth. Justin Martyr is spoken of in high terms of praise by the ancient Christian writers, and was certainly a zealous and able advocate of Christianity, but mixed up its doctrines with too much of his early Platonism. He was the first father of the church who, regarding philosophy and revealed religion as having emanated from the same source, wished to establish between them an intimate union. Justin was of opinion that Plato had derived his doctrine, if not from the Sacred Writings of the Jews, at least from the works of others who were acquainted with these writings, and hence he concluded that the system and the tenets of Plato could be easily brought back to, and united with, the principles of Christianity. All other systems of philosophy, however, except the Platonic, he utterly rejected, and more particularly that of the Cynics. Even in the Platonic scheme he combatted one point, which is in direct opposition to revelation, the doctrine of the eternal duration of the world. There are several valuable editions of his works, the best of which are, that of Maran, Paris, 1742, fol., and that of Oberthiir, Wurtzburgh, 1777, 3 vols. Svo. (Schöll, Hist. Lit. Gr., vol. iv. p. 171.) The name Justin Martyr, or “Elder,” an emperor of the East, born A.D. 450, of Thracian origin. He abandoned the employment of a shepherd for the profession of arms, and, passing through the several military gradations, attained eventually to the highest dignities of the empire. On the death of Anastasius (A.D. 516) he held the command of the imperial guards, and was commissioned by Amanius to distribute a sum of money among the soldiers in order to secure the elevation of one of the creatures of the former. Justin did this, but in his own name, and was in consequence himself proclaimed emperor. Justin was sixty-eight years of age when he ascended the throne. Being himself uninformed in civil affairs, he relied for the despatch of the business of the state on the quaestor Proculus, a faithful servant, and on his own nephew Justinianus, who had acquired a great ascendancy over his uncle. By the death of Justinus, a reconciliation between the Greek and the Roman churches, A.D. 520. The murder of Vitalianus, who had been raised to the consilium, but was stabbed at a banquet, casts a dark shade upon the character of both Justin and Justinian. In other respects Justin is represented by historians as honest and equitable, though rude and distrustful. After a reign of nine years, being afflicted by smallpox a second, and having become weak in mind and body, Justin abdicated in favour of his nephew, and died soon after, in A.D. 527.—IV. The second, surmounted the “Younger,” an emperor of the East, succeeded his uncle Justinianus, A.D. 565. His reign was an unfortunate one. The Langobardi, under their king Alboin, who had been invited by Nar-sea, invaded Italy by the Julian Alps, A.D. 568, and in a few years all Northern Italy was lost to the Byzantine emperor. The provinces of Asia were likewise overrun by the Persians. Internal discontent, moreover, prevailed in the capital and provinces, owing to the malversations of the governors and magistrates, and Justin himself, deprived by infirmity of the use of his feet, and confined to the palace, was not able to repress abuses which had infused vogue into the administration. Feeling at last his impotence, he chose Tiberius, the captain of the guards, as his successor, A.D. 578. The choice was a good one, and the conduct of Tiberius fully justified Justin's discernment. Justin lived four years after his abdication, in quiet retirement, and died in the year 578. (Encycl. Us. Knoell., vol. 13, p. 186.)

Juv., an old Teutonic or Scandinavian tribe, which, in the fifth century of our era, appear to have been settled in the northern part of the Chersoneseus Cimbria, which is still called, after its name, Jutland. Mannert thinks that they were a colony from the opposite coast of Scandinavia, of the same race as the Guthi or Gutas mentioned by Ptolemy. The first Germanic invaders of Britain, after the departure of the Romans, were Jutes, who, under their leaders Hengist and Horsa (A.D. 446), landed in the Isle of Thanet, and settled in Kent. The Saxons, under Ella, came A.D. 477, and the Angles did not come until the following century. (Mannert, Geogr., vol. 3, p. 288.)

JUTurna, a water-nymph in the Italian mythology. Her fountain was near the Numicus, and its waters, owing to her name (from juvo, “to assist”), were held to be very salubrious: the sick drank them (Varro, L. L., 4, p. 21), and the Romans used them in their sacrifices. Juturna was the wife of a god of the sea, a Celestial Oceanus, and there was a temple named the Juturnalina. (Sert. ad Virg., 12, 139.—Ovid, Fast., 1, 464.) Virgil, as usual, Euhemerizing the old Italian deities, makes Juturna the sister of Turnus. She was, he says, violated by Jupiter, and made by him, in recompense, a goddess of the lakes and streams. (Aen., 12, 139.—Keightley’s Mythology, p. 542.)

JUVENALIS, DECUS JUVENIUS (or, according to some, DECUSIUS JUVENIUS), was born in the Roman satirist. His birthplace, on no very sure grounds, is said to have been Aquinum, and he is supposed to have been born somewhere about A.D. 40, under Caligula, and to have died turned of 80, under the Emperor Hadrian. But few particulars of his life are known, and for these we are indebted to a short biographical sketch ascribed to Suetonius. This notice, however, is found in so corrupt a state in the MSS. as to have given rise to intense discussion among critics. The knowledge of the life of Juvenal has been practically impossible by declaring, according to the practice of those days: yet more for his own amusement than from any intention to prepare himself either for the schools or the courts of law. About this time he seems to have discovered his true bent, and betaken himself to poetry. Domitian was now at the head of the government, and showed symptoms of reviving that system of favouritism which had nearly impoverished the country. The enemy, therefore, by declaiming against the poets and authors for a young pantomime dancer of the name of Paris. Against this minion Juvenal seems to have directed the first shafts of that satire which was destined to make the most powerful vices tremble, and shake the masters of the world on their thrones. He composed a satire on the influence of Paris with considerable success, but dared not publish it, though it was secretly handed about among his friends. Hence Quin- tillian, who wrote A.D. 92, makes no mention of Ju-
JUVENALIS.

In the midst of the Latin satirists; although it has been supposed that he had him in view in the passage where he remarks, "we possess at the present day some distinguished ones, whom we will name hereafter." (Inst. Or., 10, 1.) It was under Trajan that Juvenal wrote the greater part of his satires: the thirteenth and fifteenth were composed under Hadrian, when the author was in his 79th year. Then for the first time he rectified his works in public, and met with the most unbounded admiration. The seventh satire, however, involved him in trouble. It was the one he had first composed, and in it the poet had lashed the pantomime Paris, the favourite of Domitian. Hadrian, who had suffered a comedian of the day to acquire a great ascendency over him, believed that the poet meant to reflect upon this weakness of his, and resolved to have revenge. Under pretext, therefore, of honouring the old man, he named him prefect of a legion stationed at Syene, in Egypt; according to others, at Pentapolis, in Libya; or, according to others again, he was sent to one of the Oases, an ordinary abode of exiles. He died a few years after, in this honourable exile—We have sixteen satires from the pen of Juvenal. In some editions they are divided into five books, of which the first contains five satires; the second one; the third three; the fourth three; and the fifth four. If we may judge of the character of a writer from his works, Juvenal was a man of rigid probity, and warmth of heart. He has preserved every where a love of virtue and abhorrence of vice. Differing widely in this respect from Persius, he does not give himself up to the principles of one particular school of philosophy; he paints, on the contrary, in strong and glowing colours, the hypocrisy and the vices of the pretended philosophers of his time, and especially of the Stoic sect, to whose failings Persius had shut his eyes. He differs, moreover, from the Stoics in the point of view: in his schools of philosophy the arms with which he attacked their failings: he found these abundantly supplied by the resources of his own genius, by the experience which a long acquaintance with the world had gained for him, and by the indignation which warmed his bosom on contemplating the gross corruption of the times. His genius in some respect resembled that of Horace, but a long-established habit of familiarity with rhetorical subjects produced an influence on Juvenal which no Stoic could have been equal to; for the Stoics very satisfactorily than that of the friend of Macenas. Horace laughs at the follies of his age; Juvenal glows with indignation at the vices of his own. The former passes rapidly from one topic to another, and seems, as it were, led onward by his subject; Juvenal, on the contrary, follows a regular and methodical plan; he treats his subject according to the rules of the oratorical art, and is careful never to lose the thread of his discourse. The distinctive character of Juvenal's satire is a passionate hatred of, and an inexorable severity towards vice, and on this theme he never indulges in pleasantry; neither does any digression ever lead him off from the object which he has in view. It is this manner that gives to the satires of Juvenal a certain appearance of dryness, which form a direct contrast to the agreeable variety that pervades the satires of Horace. A circumstance extremely favourable to the literary reputation of Juvenal is to be found in the fact, of his not having dared to publish his satires until an advanced period of life. Hence he was enabled to revise and retouch them, to purify his taste, and to calm the fiery spirit which animated his earlier efforts by the sober judgment of mature years. Juvenal is said to have spent much time in attendance on the schools of the rhetoricians, and the effect of this, in an age not remarkable for persons much occupied in this manner, is observed, perhaps, in a tendency to hyperbolical inflation of both thought and style, which would soon betray a writer of less power into the ridiculous. From this his wit, command of language, and force and fulness of thought, completely preserve him; still, perhaps, he would produce more effect if the effort to do his utmost were less apparent.—The writings of Juvenal are addressed to the encouragement of virtue no less than to the chastisement of vice; and parts of them have been recommended by Christian divines as admirable storehouses of moral precepts. Still they lie open to the objection of descending so minutely into the details of vice, as to minister food as well as physic to the depraved mind. To the scholar they are invaluable for the information which they supply concerning private life among the Romans. The best editions of Juvenal are, that of Rupertil, Lips., 1819, 2 vols. 8vo, and that of Lemaire, Paris, 1853, 3 vols. 8vo. The latter, indeed, may be regarded as the Edition Optima. An enumeration of the previous editions will be found in the Prolegomena appended to the last volume of Lemaire's work.

Juvenal, a goddess at Rome, who presided over youth and vigour. She is the same as the Hebe of the Greeks. The altar of Juvenals stood in the vestibule of the temple of Minerva. (Diam. Hal., 3, 69.)

There was a temple of this goddess in which a registry was kept of the names of the young men who were of the military age. (Diam. Hal., 4, 15.)

Juvenalia (lovepoems), a name for Ireland, found among the Greek writers. (Agathem., 2, 4.—Ptol., 3, 3.) In their original form, and together with the classical writers, namely, Iris, Ienras, Juvenalis, Hibernia, &c., the radical Ir or Eri, by which it is still known to its own natives, is plainly traceable. It is customary among the Irish to indicate a country by the prefix Hy or Hua, sometimes written O, as in the case of proper names, signifying, literally, the (dwelling of the) sons or family of; such as Hyamnia, Hy-Twittre, Hy-Brazil, &c. In adding this prefix to names beginning with a syllable of great and open sounds: thus, Hy-n-Each means the country of the descendants of Each or Aecus. Again, this prefix requires the genitive, which in Eri is Erin, and thus all variations of the name, from the Iris of Diodorus Siculus, and the Ir-land or Ire-land of modern times, to the Irenus (Hy-Erins) of the Orphic poems, and the Hibernia (Hy-b-Erins) of the Latin writers, would seem to be accounted for. (Llxox.)

Ixon, in the Odyssey, a Saracen or Peisian, or, according to some, of Phlegyas. Others, again, gave him the god Mars for a sire. He obtained the hand of Dia, the daughter of Deioneus, having, according to the usage of the heroic ages, promised his father-in-law large nuptial gifts; but he did not keep his engagement, and Deioneus seized his horses and detained them as a pledge. Ixon then sent to say that the gifts were ready if he would come to fetch them. Deioneus accordingly came, but his treacherous son-in-law had prepared in his house a pit filled with fire, and covered over with bits of wood and with dust, into which the unsuspecting prince fell and perished. After this deed Ixon became deranged, and the atrocity of the crime was such that neither gods nor men would absolve him, till at length Jupiter took pity on him and purified him, and admitted him to his residence and table on Olympus. But, incapable of good, Ixon cast an eye of desire on the wife of his benefactor, Jcno thereupon, in concert with her lord, formed a cloud in the likeness of herself, which Ixon embraced. He boasted of his good fortune, and Jupiter precipitated him into Erebus, where Mercury fixed him with brazen bands to an ever-revolving fiery wheel. (Pind. Pthul., 2, 39, seqq.—Schol. ad Pind. Pthyl., 2, 99.—Hygin., fab. 62.)
puity on the part of those who, having committed homicide, were admitted to the house and table of the prince, who consented to perform the rites by which the guilt of the offender was supposed to be removed. The extreme case is given, by making Ixion, that is, the Suppliant, and the first sherd of kindred blood, as he is expressly called (the Cain of Greece), act with such base ingratitude towards the king of the gods himself, who, according to the simple earnestness of early mythology, is represented, like an earthly prince, receiving his supplicant into his house or at his board. The punishment inflicted was suited to the offence, and calculated to strike with awe the minds of the hearers. (Keightley's Mythology, p. 314, seq.)

L.

LABARUM, the sacred banner or standard, borne before the Roman emperors in war from the time of Constantine. It is described as a long pike intersected by a transverse beam. A silken veil, of a purple colour, hung down from the beam, and was adorned with precious stones, and curiously inwrought with the images of the reigning monarch and his children. The summit of the pike supported a crown of gold, which enclosed the mysterious monogram at once expressive of the figure of the cross and the two initial letters (X and P) of the name of Christ. (Lipsius, de Cruce, lib. 3, c. 15.) The safety of the Labarum was instructed to fifty guards of approved valour and fidelity. Their station was marked by honours and emoluments; and some fortunate accidents soon introduced an opinion, that, as long as the guard of the Labarum were engaged in the execution of the office, they were secure and invulnerable among the dangers of the field. In the severe conflict at Trier, which displayed the power of this consecrated banner, the sight of which, in the distress of battle, animated the soldiers of Constantine with an invincible enthusiasm, and scattered terror and dismay through the adverse legions. Eusebius (Vit. Const., 1. 2, c. 7, seqq.) introduces the Labarum before the Italian expedition of Constantine; but his narrative seems to indicate that it was never shown at the head of an army till Constantine, above ten years afterward, declared himself the enemy of Licinius and the deliverer of the church. The Christian emperors, who respected the example of Constantine, displayed in all their military expeditions the standard of the cross; but when the degenerate successors of Theodosius had ceased to appear in person at the head of their armies, the Labarum was deposited as a venerable but useless relic in the palace of Constantinople. Its honours are still preserved on the medals of the Flavian family. Their grateful devotion has placed the monogram of Christ in the midst of the ensigns of Rome. The solemn epithets of "safety of the republic," "glory of the army," "restoration of public happiness," are equally applicable to the religious and military trophies; and there is still extant a medal of the Emperor Constantius, where the standard of the Labarum is accompanied with these memorable words, "By this standard thou shalt conquer."—The history of this standard is a remarkable one. A contemporary writer (Cecilianus) affirms, that in the night which preceded the last battle against Maxentius, Constantine was admonished in a dream to inscribe the shields of his soldiers with the celestial sign of God, the sacred monogram of the name of Christ; that he executed the command of Heaven, and that his valour and obedience were rewarded by a triple and victorious battle. The dream of Constantine may be naturally explained either by the enthusiasm or the policy of the emperor. While his anxiety for the approaching day, which must decide the fate of the empire, was suspended by a short and interrupted slumber, the revered form of our Saviour and the well-known symbol of his religion might forcibly offer themselves to the active fancy of a prince who reverenced the name, and had, perhaps, secretly implored the power, of the God of the Christians. As readily on the other hand, might a consummate statesman indulge himself in the use of one of those military stratagems, one of those pious frauds, which Philip and Sertorius had employed on the same occasion. The Labarum, as given by Eusebius, however, is different from this. According to his statement, Constantine is reported to have seen with his own eyes the luminous trophy of the cross placed above the meridian sun, and inscribed with the following words in Greek, "By this conquer." This appearance in the sky astonished the whole army, as well as the emperor himself, who was yet undetermined in the choice of a religion; but his astonishment was converted into firmness of the vision of the ensuing night. Our Saviour appeared before his eyes, and displayed the same celestial sign of the cross, directing Constantine to frame a similar standard, and to march, with an assurance of victory, against Maxentius and all his enemies. (Gibbon, Decline and Fall, ch. 20, vol. 3, p. 256, seqq.) The form of the Labarum and monogram may be seen, as we have it explained, in the third volume of the Pagi's Antiquities. The etymology of the term itself has given rise to many conflicting opinions. Some derive the name from labor; others, fromглавная, "reverence," others, from λαμπάνειν, "to take;" and others, again, from λαμφρά, "spoil." A writer in the Classical Journal assigns the following derivation; he makes Labarum to be, like S. P. Q. R., only a notatio, or combination of initials to represent an equal number of terms; and thus, L. A. B. A. R. V. M. will stand for Labeatus, Socia, Legio, Civitas, and Urbs Antarctivait. (Class. Journ., vol. 4, p. 233.)

LABACIDES, a name given to Cédius as descending from Labdacus.

LABDACUS, a son of Polydorus by Nycteus, the daughter of Nycteus, king of Thebes. His father and mother died during his childhood, and he was left to the care of Nycteus, who, at his death, left his kingdom in the hands of Lycurgus, with orders to restore it to Labdacus as soon as of age. On succeeding to the throne, Labdacus, like Penthues, opposed himself to the religion of Bacchus, and underwent a similar fate. He was father to Laius, and his descendants were called Labcadæci. (Vid. Laïus.)

LABDALON, a hill near Syracuse, forming part of Epipolë. It was fortified by the Athenians in their contest with Syracuse. (Thucyd., 6, 97.—Compare Gudon, de Nitæ Origine Syracusana, p. 190, seqq.)

LABÈTES, a people of Dalmatia, in the lower part, whose territory constituted the principal portion of the dominions of Gentius. His capital was Scodra. In the country of the Labetes was the Labecatus Palus, now the Lake of Scutari. (Livi., 43, 19. —Id., 44, 31. —Plin., 3, 22.)

LABÈO, a surname common to several distinguished Roman families, such as the Ascanii, Antistii, Attii, and Cecii Verrucosii. It is derived from labare, *labium,* which denotes literally one who is thick-lipped. (Charis., 1, p. 79. —Putsch, ex Verr. Flacc.) Among the individuals who bore this name, the following were the most noted. I. Antistius. (Antistius Lab eo.) II. Q. Fabius, was distinguished as a commander, but was regarded as devoid of generosity and good faith towards the vanquished. He obtained a naval victory over the Cretans, and enjoyed the honours of a triumph. In the year 183 B.C. he was created consul along with C. Marcellus, and commanded the army stationed in Liguria. Cicero relates a curious anecdote of his want of principle, when chosen umpire between the inhabitants of Neapolis and Nola, on the subject of their respective boundaries. (De f., 10.) It is
said also that Labeo, having gained a victory over Antiochus, compelled him to consent to cede unto the Romans the one half of his fleet, and that, taking advantage of the equivocal meaning of a portion of the treaty, he caused all the vessels to be sawed in two. (Val. Max., 7, 3.) Labeo is said to have been of a literary turn, and to have aided Terence in the composition of his comedies. (Vid. Terentius.)—II. Attius, a wretched poet in the time of Perseus. He is ridiculed by the later on account of a lengthened version which he had made of the Iliad, but which, nevertheless, had found favour with Nero and his courtiers. (Pera., Sat., 1, 50.—Scho1. ad loc.)

LABERIUS, Decimus, a Roman knight of respectable character and family, who was famed for his talent in writing mimes, in the composition of which fanciful productions he occasionally amused himself. He was at length requested by Julius Caesar to appear on the stage, and act the mimes which he had sketched or written. (Macrobi., Sat., 2, 7.) Laberius was sixty years of age when this occurrence took place. Aware that the entreaties of a perpetual dictator are nearly equivalent to commands, he reluctantly complied; but, in the prologue to the first piece which he acted, he complained bitterly to the audience of the degradation to which he had been subjected. The whole prologue, consisting of twenty-nine lines, which have been preserved by Macrobius, is written in a fine vein of poetry, and with all the high spirit of a Roman citizen. It breathes in every verse the most bitter and indignant feelings of wounded pride, and highly exalts our opinion of the man, who, yielding to an irresistible power, preserves his dignity while performing a part which he despised. It is difficult to conceive how, in this frame of mind, he could assume the jocund and unrestrained gaiety of a mime, or how the Roman people could relish so painful a spectacle. He is said, however, to have represented the feigned character with imitable grace and spirit. But in the course of his performance he could not refrain from expressing strong feelings of freedom and detestableness of tyranny. In one of the scenes he personated a Syrian slave; and, while escaping from the lash of his master, he exclaimed,

"Porro, Quirites, libertatem perdidiun?" and shortly after he added,

"Neceste est multos timeant quem multi timent." on which the whole audience turned their eyes toward Caesar, who was present in the theatre. (Macrobi., l. c.) It was not merely to entertain the people, who would have been as well amused with the representation of any other actor; nor to wound the private feeling of Laberius, that Caesar forced him on the stage. His sole object was to degrade the Roman knighthood, to subdue their spirit of independence and honour, and to strike the people with a sense of his unlimited sway. Thus he formed part of that system which afterwards led him to destroy, by competition in the combat among the ranks of gladiators. Though Laberius complied with the wishes of Caesar in exhibiting himself on the stage, and acquitted himself with ability as a mimetic actor, it would appear that the dictator had been hurt and offended by the freedoms which he used in the course of the representation, and, either on this or some subsequent occasion, bestowed the dra- matic crown on his fellow citizen; Bonner in preference to the Roman knight. Laberius submitted with good grace to this fresh humiliation; he pretended to regard it merely as the ordinary chance of theatrical competition. He did not long survive, however, this double mortification, but retired from Rome, and died at Puteoli about ten months after the assassination of Caesar. (Chron. Euseb., ad Olymp. 184.) The titles and a few fragments of forty-three of the Mimes of Laberius are still extant; but, excepting the prologue already referred to, these remains are too inconsiderable and detached to enable us to judge of their subject or merit. It would appear that he occasionally dramatized the events of the civil wars, as, for instance, the battle of Munda; for Cicero, writing to the lawyer Trebonius, who expected to accompany Caesar from Gaul to Britain, tells him he had better return to Rome quickly, as a longer pursuit to no purpose would be so ridiculous a circumstance, that it would hardly escape the drollery of that arch fellow Laberius. (Ep. ad Fam., 7, 11.) According to Aulus Gellius (10, 7), Laberius had taken too much license in inventing words; and that author also gives various examples of his use of obsolete expressions, or such as are only employed by the lowest dregs of the people. (Dunlop's Roman Literature, vol. 1, p. 552, seqq.)

LABICUM, a town of Italy, about fifteen miles from Rome, between the Via Flaminia and the Via Latina. (Strabo, 237.) A great difference of opinion, however, exists as to its actual site. Cluverius erroneously supposes it to coincide with the modern Zaga- rolo. Holstenius, after a careful examination of the subject, decides in favour of the height on which the modern town of Colonna stands (ad Steph. Byz., p. 194), and his opinion is strengthened by the discovery of several inscriptions near Colonna, in which mention is made of Labicum. (Cramer, Anc. It., vol. 2, p. 75.)

LABIENUS, I. one of Caesar's lieutenants in the Gallic war. In the beginning of the civil war he left Caesar for Pompey (B. Civ., 3, 13), escaped from the battle of Pharsalus, and was killed in that at Munus (B. Hisp., c. 31). Labienus appears to have parted with almost all his former success on abandoning the side of his old commander. A detailed biography of this officer is given in the Biographie Universelle (vol. 23, p. 22, seqq.)—II. a son of the preceding, who inherited all his father's hatred to the party of Caesar. After the defeat of Brutus and Cassius, he refused to submit to the triumvirs, and retired to Parthia, where he was invested with a military command, and proved very serviceable to his new allies in their contests with the Romans. He was made prisoner in Cilicia, and probably put to death. Labienus caused medals to be struck, having on the obverse his head, with this legend, Q. Labienus Parthicus Imper., and, on the reverse, a horse caparisoned after the Parthian manner. (Rasche, Lex. Rei Numism., vol. 4, col. 1402.)

LABIREDUS, a surname of Jupiter in Caria. The name was derived, according to Plutarch, from Laber, the Lydian word for a hatchet, the statue of Jove held in his hand, and which had been offered up by Arselis of Mylassa from the spoils of Candaules, king of Lydia. (Plut., Quast. Gr., p. 301.—Op. ed. Reiske, vol. 7, p. 205.)

LABIENUS PORTUS, or Portus Herculius Liburni, a harbour of Etruria, below the mouth of the Aruns. It is now Livorno, or, as we pronounce the name, Leghorn. Cicero calls it Portus Labrinius (ad Q. frat., 2, 6.—C. de C. Caes., 2, 20.—C. Scaur., 3, 82), but the other is the more usual appellation.

LABYNTUS, a king of Babylon, mentioned by Herodotus (1, 74). He is supposed to have been the same with Nebuchadnesor. (Wesseling et Bähr, ad Herod., l. c.)

LABYRINTHUS, a name given to a species of structure, full of intricate passages and windings, so that it was next only to a labyrinth in the human power of a single individual to extricate himself without the assistance of a guide. The origin of the term will be considered at the close of the article. There were four very famous labyrinths among the ancients, one in Egypt, near the Lake Mires, another in Crete, a third at Lemnos, and a fourth near Clusium in Italy.—I. The Egyptian. This was situated in Lower Egypt, near Lake Mires, and in the vicinity of Arinone or Croco- dilpains. The accounts which the ancient writers

712
LAC

give of it are very different from each other. Herodotus, who saw the structure itself, assigns to it twelve courts. (Herod., 2, 148.) Pliny, whose description is much more highly coloured and marvellous than the rest, says that the number was 36, the number struck while Strabo, who, like Herodotus, beheld the very structure, gives the number of courts as twenty-seven. (Strab., 810.) The following imperfect sketch, drawn from these different sources, may give some idea of the magnitude and nature of this singular structure. A large edifice, divided, most probably, into twelve separate palaces, stretched along with a succession of splendid apartments, spacious halls, &c., the whole adorned with columns, gigantic statues, richly carved hieroglyphics, and every other appendage of Egyptian art. With the north side of the structure were connected six courts, and the same number with the southern. These were open places surrounded by lofty walls, and paved with large slabs of stone. Around these courts ran a vast number of the most intricate passages, lower than the corresponding parts of the main building; and around all these again was a large wall, affording only one entrance into the labyrinth; while at the other end, where the labyrinth terminated, was a pyramid forty fathoms high, with large figures carved on it, and a subterraneous way leading within. According to Herodotus, the whole structure contained 3000 chambers, 1500 above ground, and as many below. The historian informs us, that he went through all the rooms above the surface of the earth, but that he was not allowed by the Egyptians to place his hand in the subterraneous apartments, because in these were the bodies of the sacred crocodiles, and of the kings who had built the labyrinth. "The upper part, however," remarks the historian, "which I carefully viewed, seems to surpass the art of men; for the passages through the buildings, and the variety of windings, afforded me a thousand occasions of wonder, as I passed from a hall to a chamber, and from the chamber to other buildings, and from chambers into halls. All the doors and walls within are of stone, but the walls are farther adorned with figures of sculpture. The halls are surrounded with pillars of white stone, very closely fitted."—According to Herodotus, the labyrinth was built by twelve kings, who at one time reigned over Egypt, and it was intended as a public monument of their common reign. (Herod., 2, 148.) Others make it to have been constructed by Psammaticus alone, who was the eighth of the twelve kings, and his son, Petosches. Mannert assigns it to Memnon. Opinions are also divided as to the object of this singular structure. Some regard it as a burial-place for the kings and sacred crocodiles, an opinion very prevalent among the ancients. Others view it as a kind of Egyptian Pantheon. Others, again, make it to have been a place of assembly for the deputies sent by each of the twelve kings of Egypt (consult article Egyptus, p. 37, col. 1); while another thinks that the Egyptian mysteries were celebrated here. All these opinions, however, yield in ingenuity and acumen to that of Gatterer. (Weltgesch., vol. 1, p. 50, seqq.) According to this writer, the labyrinth was an architectural-symbolical representation of the zodiac, and the course of the sun through the same. The twelve palaces are the twelve zodiacal signs; the one half of the building, which is above, is a symbol of the course of the sun above and below the horizon; while the 3000 chambers in the whole structure have a symbolical reference to the precession of the equinoxes. The Egyptians reckoned, not by tropical or solar, but by sidereal, years. The difference between the two, which depends on the precession of the equinoxes, the Egyptian astronomers made too small; so that they reckoned the precession at one degree in every 100 years, which is the rule of the gods, while the surveyors reckoned the precession at one degree in every 100 years. Hence in 3000 years it amounts to 30 degrees, or exactly one celestial sign; so that the 3000 chambers of the labyrinth indicated symbolically the precession of the equinoxes for each sign of the zodiac. (Herod., 2, 148.) The 810 chambers, which Psammaticus added, signified 810 years, the period of time during which the people might dwell on the earth among the stars, and the whole advance to a new palace or abode. Still farther, as the full period of the wandering of the soul from the body amounted to exactly 3000 years, the 3000 chambers of the labyrinth also had a symbolical reference to this particular article of Egyptian faith. (For other views on this interesting subject, consult Zoega, de Obelisc., p. 418, seqq. 10.)—Beck, Ann. d. Weltgesch., vol. 1, p. 721.—Larcher, ad Herod., l. c. Berlin, ad Herod., Excurs. X., ad Herod., vol. 1, p. 918, seqq.—Descript. de l'Egypte Anc., vol. 2, ch. 17, sect. 3, p. 32, seqq.—Mannert, Geogr., vol. 10, pt. 1, p. 430.—Lebron, in Nouv. Ann. des Voyage, par Eyré et Malte-Brun, vol. 6, p. 134, seqq.)—As regards the name Labyrinth itself, much diversity of opinion exists. Who makes it a term of Cretan origin, derive it ἀπὸ τοῦ μακεδονίας, from its difficulty of egress; or from Adōs, "to seize" or "entwine," with reference to the Cretan labyrinth. Others, finding in Manetho that an Egyptian king, named Laches or Labaris, had erected the structure in question, make the term labyrinth equivalent to "the abode of Labaris." (Beck, l. c.—Jablonso, Voc. Egypt., p. 123.—Te Water, ad loc., p. 125, not. r.) Jablonski himself, adopting the opinion that the labyrinth was the work of many kings in succession, makes the name signify "the work of many," or "of a great multitude," and thinks that the labourers employed on it were Israelites. The latest etymology is that of Sickler, who makes the name labyrinth equivalent to the Hebrew לַפַיָּר-בַּרְיוֹן, i. e., "cohaést ars," for coherens arx, "the connected fortress or palace!" (Handbuch, der Alt. Geogr., p. 797.)—The position of the Egyptian labyrinth is clearly indicated by the words of Herodotus, ὑστερον ἐπί της λίμνης τῆς Μοῖρος, "a little above the Lake Moiris," so that D'Anville is evidently in error when he speaks of two labyrinths in Egypt. Zoega thinks that Paul Lucas discovered in 1714 the remains of the ancient labyrinth at Ksar-Caron (de Obelisc., p. 418, seqq. 10.—Paul. Luc., Voyage en 1714, vol. 2, p. 262). This, however, is erroneous. The ruins at Ksar-Caron are merely those of some temples. (Descript. de l'Egypte Anc., l. c.) It is more probable that the remains of the labyrinth must be sought in the vicinity of Hamah, where a canal joins the Lake Moiris, and where a pyramid is still to be seen. Vast piles of rubbish are here to be seen, and the destruction is supposed to be owing to the Arabs, who may have thought that treasures were concealed under ground here. (Ritter, Erdkunde, vol. 1, p. 810, seqq.—Revue Francaise, 1829, Janv., p. 70.—Von Hammer, Wien. Jahrb., vol. 45 (1829), p. 31.)—II. For an account of the Cretan, Etrurian, and Lacedaemonian labyrinths, see the articles Menoataur, Porzena, and Lemnos respectively.

LACEDÉMONI, I. a son of Jupiter and Taygeta, the daughter of Atlas, who married Sparta, the daughter of Eueratos, by whom he had Amyclas and Eurycle, the wife of Acarius. He was the first who introduced the worship of the Graces into Laconia, and who built them a temple. From Lacedemon and his wife the capital of Laconia is called Lacedemonia. (Herod., p. 10, Hyper., vol. 155.)—II. A city of Peloponnesus, the capital of Laconia, called also Sparta. (Vid. Sparta.)

LACÉDÉMONI, I. and LACÉDÉMOINES, the inhabitants of Lacedemon. (Vid. Lacedemon and Sparta.)

LACHÈS, one of the Parmen. (Vid. Parmen.)

LACNA, a surname of Juno, from her temple at La
cinium in Italy.

LACEDÆMON PROMONTORIUM, a celebrated promontory

4X

713
of Magna Gracia, in the territory of the Bruttii, a few miles to the south of Crotone, which runs out for some distance into the sea, and with the opposite Iapygian promontory encloses the Gulf of Tarentum. (Strabo, 261. —Sylvia, Peripl., p. 4.) Its modern names are Cape della Colonna (Cape of the Columns), and Cape Nao (Cape of the Temple), from the remains of the temple which stood on the summit of its mountains and hills prevented its being tilled so as to be otherwise wise have been. Among the animals of the country may be enumerated wild and tame goats, wild boars, deer, and excellent hounds. A blackish green marble (probably basalt) was obtained at Tanaurus. —(For an outline of Spartan history, consult remarks under the article Sparta.)

Laclanús, I. Lucius Calvisius (or Caecilius Firmi- anus), an eminent father of the church, according to some a native of Africa, while others make him to have been born at Firmium in Italy. The former is most likely, as he studied rhetoric at Sicca, a city of Africa, under Arnobius, and attained so high a reputation by a production called Symposium, or "the Banquet," that, when Dioclesian entertained a design to render Nicomedia a rival to Rome, he appointed Laclanús to teach rhetoric in that city. It is by some supposed that he was originally a pagan and converted, while he was a Christian, by Firmian; but Lardner thinks otherwise; and that he was a Christian during the persecution of Dioclesian is unquestionable. It appears that, owing to the unprofitableness of his pro fession, or other causes, he lived in very narrow circumstances, which it is, however, reasonable to conclude were amended when appointed by the Emperor Constantine Latin preceptor to his son Crispus, after whose untimely death he appears to have again retired to the neglect of his private history, except that he lived to an advanced age, but the exact time of his death is not recorded. As a Christian writer, Laclanús is thought to treat divinity too philosophically; but, at the same time, he is deemed the most eloquent of all the early ecclesiastical authors, and his Latinity has acquired him the title of the Christian Cicero. His principal object was to expose the errors and contradictions of pagan writers on the subjects of the pre-existence and resurrection of Christ, and thereby to establish the credit and authority of the Christian religion, and his works are written with much purity and elegance of style, and discover great erudition. The testimony, indeed, to his learning, eloquence, and piety, is most abundant. Le Clerc calls him the most eloquent of the Latin fathers; and Du Pin places his style almost on a level with Cicero's. Many writers, however, value his rhetoric more than his theology. He has been charged, among other things, with Manichæism, from which Lardner takes great pains to defend him. Middleton has shown, in his "Free Enquiry," that Laclanús was not free from the credulity with which many of the early Christian writers are chargeable. Several material defects, moreover, must be remarked in this writer. He frequently quotes and commends spurious writings as if they were genuine, and makes use of sophistical and puerile reasoning. Examples of this may be seen in what he has advanced concerning the pre-existence of souls, the millennium, the coming of Elias, and many other topics in theology. Upon the subject of morals Laclanús has occasionally said excellent things; but they are mixed with others, injudicious, trifling, or extravagant. He maintains that war is in all cases unlawful, because it is a violation of the commandment, "Thou shalt not kill." He censures, not only the foreign mercantile, but also all kinds of usury, and falls into other absurdities on moral topics. We must not, however, omit to remark, to the credit of Laclanús, his acknowl- edgment, that when Pythagoras and Plato visited bar- barous nations in order to inform themselves concern-
ing their sacred doctrines and rites, they did not become acquainted with the Hebrews; an observation which, had it been earlier admitted, might have prevented many mistakes in the history of philosophy. As a proof, moreover, that Lactantius, notwithstanding all his defects, was capable of thinking justly and liberally, we may refer to an excellent passage in which he strenuously asserts the right of private judgment in religion, and calls on the reader to win the fair inquiry after the truth. (Instit. Div., 2, 7.) We have five prose works remaining of this father of the church: 1. De Officio Dei, an apology for Divine Providence against the Epicureans, drawn principally from the miraculous construction of the human frame.—2. De mortal Persecutionum, a history of the persecutors of Christianity from Nero to Dioclesian. The object of the writer is to show, by the violent deaths which all the persecutors of Chris-
tianity experienced, that God punished their crimes. This work has been preserved to us in a single manu-
script, from which it was published by Baluze. Nour-
ry has maintained that it is not a work of Lactantius, but of a certain Lucius Caecilius, an imaginary being, who owes his existence merely to the mutilated title of a manuscript.—3. The principal work of Lactantius is entitled Divina Institutiones, and is divided into sections which deal successively with the gods, and with two heathens, who wrote against Christianity at the beginning of Di-
oclesian's persecution. The date of the composition of the work cannot be exactly fixed. Bassange, Du Pin, and others, place it about A.D. 330; Cave and Lardner about A.D. 356. Lardner states the arguments on both sides; and, on the whole, the latter opinion seems the more probable. Of this treatise he published an abridgment,—4. entitled Epitome Institutionum.—A great portion of this was already lost by the days of St. Jerome; Pfoff, a professor of Tubin-
gen, discovered the entire abridgment in a very ancient manuscript of the Turin library.—5. De ira Dei. In this work Lactantius examines the question, whether we can attribute anger to the Deity, and decides in the affirmative. The "Banquet" of Lactantius has not reached us. Some ancient manuscripts assign to this father the authorship of a poem, entitled, "De Passione Domini." These poems, however, were written by Verrucius Fortunat-
us, a poet of the sixteenth century. A collection also of enigmas, in verse, has been assigned by some to Lactantius, but incorrectly. Complete editions of the works of Lactantius were published by Heumann, at Göttingen, in 1736 (the preface to this contains a cata-
logue of former editions), and by the Abbé Langlet, Paris, 2 vols. 4to, 1748. (Scholl, Hist. Lit. Rom., vol. 4, p. 26, seqq.—Id., vol. 3, p. 54.—Bähr, Geach. Rom. Lit., pp. 123, 125, 248, 416, 489, 540, 616, 639.—Id., De Placitum, a grammairan, who flourished about 550 A.D. (Sazz. Onomast, vol. 2, p. 45.) He was the author of Ar-
gumenta Metemphoson Ovidii, in prose. (Müller, V. S., p. 139.—Muncker, Præf. ad Fulgent. in My-
theog. Lit.)

Lucydes, a philosopher of Cyrene, who filled the chair of the Platonic school at Athens after the death of Arceailaus. He assumed this office in the 4th year of the 134th Olympiad. He is said to have been the founder of a new school, not because he introduced any new doctrines, but because he changed the place of instruction, and held his school in the garden of Attalus, still, however, within the limits of the Aca-
demic grove. He died of a palsy, occasioned by ex-
cessive drinking, in the second year of the 141st Olympi-
piad. (Diog. Laer., 4, 59, seqq.—Xian., V. H., 2, 41.—Athenæus, 10, 50.)

Ladon, I. a small stream of Eris, flowing into the Peneus, and passing by Pylon. (Paus. v., 6, 22.) In modern maps it is called the Deveiche or Tcheileber.—
II. A river of Arcadia, rising near the village of Lycu-
ria, between the Peneus and Clinor. It was accounted the murmur of the nine Muses. It was first called,
according to Dodwell (p. 442), Keros. Brusi, a general name in Romeic for any abundant source of water. He describes it as gurgling in con-
tinual eruptions from the ground, and immediately forming a fine, rapid river. (Pausan. 8, 20.—Dionys.
9.—Crutler's Ancient Greece, vol. 3, p. 317, seqq.)

Laesius, I. C., surnamed Nepos, an eminent Ro-
man commander, accompanied the elder African to
Spain, and had the command of the fleet assigned him,
which was to co-operate with the land forces. He con-
tributed to the reduction of Carthage Nova, and was
highly honoured by Scipio, both for his services on
this occasion, and also for his judicious conduct in
appeasing a commotion produced by the rivalry that prevailed between the land and naval forces of the Ro-
mans. (Liv., 25, 48.) He was afterward sent to Rome to
obtain the prince's success, he was permitted to attend the arms of the republic. After the close of the
Spanish war, Laesius was despatched by Scipio to the
court of Syphax, to sound that prince, and engage
him to form an alliance with the Romans. The fol-
lowing year (A.U.C. 548, B.C. 265), Asdrubal, the
son of Giscon, having renewed the war in Spain, La-
lius was despatched to oppose him, and nearly succeed-
ed in making himself master of Gades. In A.U.C.
549, B.C. 206, he was directed by Scipio to make a
descent on the coast of Africa, which he effected, and
obtained an immense booty. In the course of this
war he surprised the camp of Syphax during the night,
in conjunction with Masinissa, set fire to it, pursued
and overtook the prince himself, and made him pris-
oner. He conducted Syphax to Rome, and then hast-
ed to rejoin Scipio, and share his glory and his dan-
gers. Laesius was elected praetor A.U.C. 557, B.C.
47, and was chosen by the senate to be candidate
for the consulship, but was defeated by private intrigues, and did not attain to that office until A.U.C. 564, B.C. 190. After his election to the consuls-
ship, Laesius had some difficulties with his colleague, L. Cornelius Scipio, respecting the di-
vision of the provinces. They both desired the gov-
ernment of Greece; but the senate, to whom the ques-
tion was left, decided in favour of Scipio, and Laesius
was obliged to be satisfied with a government in It-
aly. In discharging the duties of this, he repeopled Cre-
mona and Placentia, which had been ruined by wars and
contagious diseases. History, after this, makes no
further mention of him. It was from the narratives of
Laesius that Polybius wrote his account of the cam-
paigns of Scipio in Spain and Africa. (Polyb., 10, 11.
—Liv., 26, 42, seqq.—Id., 27, 7, seqq.—Id., 29, 1,
seqq.) II. Surnamed Sapiens, was son of the
first of the
Sapiens, and, in 5th style, and too fond of employing an-
alogous terms. (Cit., Brut., 21, seqq.) Laesius ac-
companied his friend, the younger Afric anus, to
the siege of Carthage, where he signalized his valor.
After the destruction of this celebrated city, he was
sent as praetor into Spain, and there broke the power

715
of the chieftain Viriathus. (Cic., Off., 2, 11.) He was afterward elected into the college of augurs, B.C. 118, and defeated before the comitia the proposition of L. Crassus, to deprive the senate of the power of electing the members of the augural college, and to transfer this right to the people. Cicero (N. D., 3, 49) calls the speech which he delivered on this occasion "oratuncula aureola." Bribery and intrigue frustrated for some time his applications for the consulship, notwithstanding the success of Scipio in his half year, until B.C. 140, when his merit triumphed over every obstacle. He was consul with C. Servilius Ceplio, and conducted himself in this high office with a moderation well calculated to conciliate all minds. Still, however, he could not obtain a re-election, a circumstance to which Cicero alludes, who blames the people for depriving themselves of the services of so wise a magistrate. (Cic., Tusc., 5, 19.) Laelius lived a country life, and, when there, divided his time between study and agriculture. He appears to have been of a cheerful and equable temper, and to have looked with philosophic calmness on both the favours and the frowns of fortune. Hence Horace (Serm. 2, 1, 72) alludes to the "mitis sapientia Laelii." He numbered among his friends Pacuvius and Terence, and it was thought that, in conjunction with Scipio, he aided Terence in the composition of his dramas. (B. C. 151; Terence, 1, 4.) The friendship that subsisted between Laelius and Scipio was conducted throughout Rome, and it was this which introduced Cicero to place the name of the former at the head of his beautiful dialogue "De Amicitia," the interlocutors in which are Laelius and his two sons-in-law, C. Fannius and Q. Mutius Scævola. Quintilian mentions a daughter of Laelius who was celebrated for her eloquence. (Quint., 1, 1, 6.)

Laeťæi, king of Ithaca and father of Ulysses. He is an inoffensive chief. He ceded the crown to his son and retired to the country, where he spent his time in the cultivation of the earth. Ulysses found him thus employed on his return, enfeebled by age and sorrow. (Vid. Ulysses.)—II. A town and harbour of Cilicia, on the confines of Pamphylia, and west of Selinus. Strabo makes it to have been a fortified post on a hill, with a harbour below (669). It was the birthplace of Diogenes Laerctius. (Vid. Diogenes III.)

Diogenes of Laerctius, a Greek writer. (Vid. Diogenes III.)

Lastrýgoñēs, a gigantic and antrophagous race, mentioned by Homer in his description of the wanderings of Ulysses. The country of the Lastrýgoñēs, according to the poet, lay very far to the west, since Ulysses, when driven from the island of Æolus, sailed on farther for six days and nights, at the end of which time he reached the land of the Lastrýgoñēs. Many exponents of mythological theory, therefore, place the Lastrýgoñēs in Sicily. But for this there is no good reason whatever, since Homer makes this race and that of the Cyclopes to dwell at a wide distance from each other. Equally fabulous is the account given by some of the ancient writers, that a colony of Lastrýgoñēs passed over into Italy with Lamus at their head, and built the city of Formia. When once the respective situations of Greco-Italian lands, therefore, of Æolus and the Lastrýgoñēs lived in the social state. Their king was named Antiphas, their town was called Lastrýgoñia or Telepýlus (it is uncertain which), and a fountain near it Artakia. Such was the state of things, according to Homer, when Ulysses came to this quarter in the course of his wanderings. There was a port at a little distance from the city, which all the ships of Ulysses, but the one in which he himself was, entered. A herald, with two other persons, was then sent to the city. They met the daughter of Antiphas at the fountain Artakia, and were by her directed to her father's house. On entering it they were met by the sight of his wife, who was "as large as the top of a mountain." She instantly called her husband from the market-place, who seized one of them, and killed and dressed him for dinner. The other two made their escape, pursued by the Lastrýgoñēs, who with huge rocks destroyed all the ships and their crews which were within the harbour, the vessel of Ulysses, which had not entered, alone escaping. (Hom., Od., 10, 81; seqq.)

Laev., L. P. Valerius, was consul A.U.C. 472, B.C. 280, and was charged with the command of the army against the Tarantine. The rapidity of his advance into Southern Italy induced Pyrrhus to offer him terms of accommodation, and to propose himself as an umpire between the Tarantines and Romans. Laevius made answer to the monarch's envoy, that the Romans neither wished his master for an arbitrator, nor feared him as an enemy. A bloody battle ensued near Heraclea, which Pyrrhus eventually gained by means of his elephants, these monstrous animals, which the Romans had despised, being the Romans. This was the action after which Pyrrhus exclaimed, that another such victory would prove his ruin. Laevius, not disheartened by his ill success, sent to Rome for fresh levies, and, having received two legions, set out in pursuit of Pyrrhus, who was advancing against Rome, and by a forced march saved Cappa from falling into his hands. (Vid. Pyrrh.)—II. M. Valerius, in 173, of a college, helped to elect the praetors A.U.C. 540, B.C. 214, and commanded a fleet stationed near Brundisium, in the Ionian Sea. Having heard of some warlike movement on the part of Philip, king of Macedonia, he advanced against that prince, gained various successes over him, and, detaching the Ætolians from his side, concluded a treaty with them, which gave the Romans their first firm foothold in Greece. In A.U.C. 544, B.C. 210, he was elected consul, though absent, and obtained the government of Italy, which he exchanged with his colleague M. Marcellus, at the instance of the senate, for that of Sicily. Before setting out for his government, he distinguished himself at Rome by his patriotic conduct. There being a scarcity of money in the public treasury, and a supply of rovers being required for the fleet, it was proposed that private persons should, as on former occasions, in proportion to their fortunes and the extent of their estates, at their own expense, supply the vessels, and find the crews, and the pay and subsistence for thirty days. This measure exciting much murmuring and ill will among the people, and a sedition being apprehended, Laevius recommended to the senate that the rich should first set an example, and contribute to the common fund all their superfluous wealth. The scheme was received with the warmest approbation; and so great was the ardour on the part of the rich to bring in their gold and silver to the treasury, that the citizens, instead of being unable to afford the money, and the clerks to enter the contributions. (Livy, 26, 36.) As soon as Laevius reached Sicily he began the siege of Agrigentum, the only important city which
still held out for the Carthaginians. Its reduction brought with it the submission of the whole of Sicily to the Roman arms. Having been continued in command for another year, he collected all his naval forces, made a descent on the coast of Africa, and, encountering on his return the Carthaginian fleet, gained a splendid naval victory. He was afterward deputed to visit the court of Attalus, king of Pergamus, and obtain the statue of Cybele. (Vid. Cybele.) In A.U.C. 553, B.C. 291, Lais was sent as present at Amphiion, against King Philip; but he died the following year. His sons Publius and Marcus celebrated funeral games in honour of their father, which were continued for the space of four days. (Liv., 24, 10, seqq.—Id., 24, 40, seqq.—Id., 26, 40, seqq.—Id., 29, 11.—Id., 31, 3.—Id., 31, 50.)—III. P. Valerius, a descendant of the preceding, desped at Rome for his vices. (Horat., Serm., 1, 6, 12.—Schol., ad loc.)

Lacus, a Macedonian, father of Ptolemy I., of Egypt. (Consult remarks at the beginning of the article Ptolemaeus I.)

Lagous, I. an island in the Sinus Glaucus, near the northern coast of Lycia, now Panagia or Cordialtasia, or, according to some, Christianity.—II. or Lagussea, an island, or, more properly, a cluster of islands off the coast of Troas, to the north of Tenedos, now Tou- tchan Ada. (Plin., 5, 31.—Bischoff and Müller, Welt, 11, 587.)

Lalædes, a patronymic of Eödipus, son of Lais. (Ovid, Met., 6, fab. 18.)

Lais, I. the most celebrated heterist of Greece. She was born at Hyccara in Sicily, and was made captive when her native city was taken by the Athenians, in the course of the expedition against Syracuse, and was conveyed to Athens. She was at this time seven years of age, and the property of a common soldier. Having been subsequently sold by her first owner, she was conveyed by her purchaser to Corinth, at that period the most dissolute city of Greece, where, after the lapse of a few years, she became one of those females who consecrated themselves in that city to the service of Venus. (Vid. Corinthus, toward the close of the article.) The fame of her extra-ordinary beauty drew together strangers from every part of Greece, while the extravagance of her demands gave entertainment to the town of Miletus, that for every one to go to Corinth. (Ovid, Met., 1, 17, 36.) Paussanias speaks of a tomb of Lais at Corinth, near the temple of Venus Helenis, on which was placed a stone lioness, holding a ram with her front paws, an evident allusion to the unprincipled rapacity of the heterist. The same writer mentions also of a tomb of Lais in Thessaly, whither, according to one account, she had gone through attachment for a youth named Hippostratus; and the females of which country, dreading her evil influence, had assassinated her in the temple of Venus.

Numeristical writers refer to certain coins of ancient Corinth, which have on one side a lioness holding down a ram, and on the other a female head; and they think that these were struck in honour of Lais, the female head being intended as her portrait. (Consult Visconti, Iconogr., Gr., vol. 1, p. 411.) A full account of Lais is given by Bayle (Dict. Hist., s. v.).—II. Another heterist, often confounded with the former, but who lived fifty or sixty years later. She was the daughter of a Corinthian heterist attached to Acli- biades. Others, misled by an equivocal expression of Pamnizier de Grantesnil (Palmerius—Exercit., p. 268), have taken her for the daughter of the first Lais; an error into which Brunck has also fallen (ad Aristoph. Plut., 179).

Laius, a son of Labdacus, who succeeded to the throne of Thebes, which his grandfather Nycteus had left to the care of his brother Lycur, till his grandson came of age. He was driven from his kingdom by Amphion and Zethus, who were insenced against Lycur for the cruelties which Antiope had suffered. (Vid. Antiope.) Having been exiled on the death of Amphion, Lais succeeded to the throne of Thebes, and married the daughter of Menoeceus, called by Homer Epicasta, by others Jocasta. An oracle, however, warned him against having children, declaring that he would meet his death from the hands of a son, and Lais, in consequence, long refrained from becoming a father. At length, having indulged too freely in wine on a festal occasion, he forgot his previous resolution, and Jocasta brought forth a son. The child, as soon as born, was delivered by the father to his herdsman, to expose on Mount Citharon. The herdsman, moved by compassion, gave the babe, according to one account (Soph., Ed. T., 1038), to a nesther belonging to Polybus, king of Corinth; or, as others say (Eurip., Phæn., 28), the grooms of Polybus found the infant after it had been exposed, and brought it to the wife of Polybus, who, being childless, reared it as her own, and named it Eödipus, Polybus being then king (Isagoge). Lais was not aware of its having left her, but now sought to find it, and found the report true of the oracle. Having, as her own son, she reared him, and taught him the true passage from the god. When the chariot of Laius overtook Eödipus, who was on foot, the driver ordered the young man to retire from the path, and make way for one of royal blood. On his refusal a contest ensued, in which Eödipus slew the herdman and his own father, both the latter and his son being ignorant of each other. The body of Lais was found and honourably buried by Damasistratus, king of Pla- tes; and Eödipus, the young man, was delivered to the care of Pimpach. The account here given, which is from Euripides, differs in some respects from other versions of the legend. Sophocles makes Eödipus to have met his father after having consulted the oracle. (Soph., Ed. T., 780, seqq.—Compare Apollod., 3, 5, 7.—Diod. Sic., 4, 64.—Eudoc., 3, 12.)

Lalôn, I. a young female beloved by Horace. (Od., 1, 22, 23.)—II. A slave of Cynthia’s. (Prop., 4, 7, 45.)

Lamachus, a son of Xenophon, sent into Sicily with Nicias. He was killed B.C. 414, before Syr- acuse. Lamachus is alluded to by Aristophanes in his play of the Acharnenses, and with some degree of ridic- ule. That he was a man of high courage, the compliments directly and indirectly paid to him by the same poet (Thesm., 841.—Acharn., 1073, et Voss, ad loc.), sufficiently indicate. From an important trust, also, that was reposed in him by Pericles (Plut., Vic- Peric., c. 20), it should seem, that he was considered by that great statesman a man of talent as well as of courage. If the outward merits of Lamachus had imposed upon the penetration of Pericles, they had not on that of Aristophanes: he saw more frow than substance, more of show than solid worth, in the young soldier; a disposition for the distinctions and emoluments which are to be derived from his position, but no evidence of those high talents which constitute a really great captain. That the dramatist had formed a more correct estimate of the powers of Lamachus than the contemporary statesman, the comparatively
small figure which he afterward made in history sufficiently proves. (Mitchell, ed Aristoph. Acharn., 510.)

LAMBEUS or LAMBER, a river of Cisalpine Gaul, issuing from the Eupilius Lacus, and falling into the Olona, one of the tributaries of the Po. It is now the Lambrò or Lambrone. (Plin., 3, 19.)

LAMIA, a city of Thessaly situate inland from the head waters of the Sinus Maliacus, and, according to Strabo (439), about thirty stadia from the Sperchius. It was near the principal scene of the war which was carried on between the Macedonians under Antipater, and the Athenians, with other confederate Greeks, commanded by Leosthenes; from which circumstance it is generally known by the name of the Lamiae war. Antipater, having been defeated in the first instance, retired to Lamia, where he was besieged by the allies; but he afterward contrived to escape from this place, and retire to the north of Thessaly. Soon after, with the assistance of the army of Craterus, brought for that purpose from Asia, he gave battle to and defeated his opponents at Cranon, and compelled them to sue for peace. This was granted them on severe terms. The Athenians were required to pay the same tribute as before, to receive a Macedonian garrison, defray the expenses of the war, and deliver up their orators, whose appeals to the feelings of the Athenian people had always occasioned so much dissension. The Macedonian commanders, and Hyperidies, particularly aimed at. (Vid. Demosthenes and Hyperidies.)—Livy reports (27, 30) that Philip, the son of Demetrius, twice defeated the Athenians, supported by Attalus and some Roman troops, near this place. Antiochus was afterward received there with acclamations. (Livy, 35, 43.)

The place was subsequently retaken by the Romans. (Lis, 37, 5.—Polyb., Excerpt., 20, 11, seq.—Plut., 4, 8, 9, 10; id., Histor. Rom., 2, 40, 1, p. 107.) there is very little doubt that the site of Zeuxis corresponds with that of the ancient Lamia. —II. ELUS, a Roman of distinguished family, claiming descent from Lamus, the most ancient monarch of the Etruscans. He signalized himself in the war with the Cantabri as one of the lieutenant of Augustus. (Horat., Od., 3, 17.)—III. The mistress of Deme- trius Polioretus, who rendered herself celebrated by her extravagances, her intrigues, and her ascendency over that prince. (Plut., Vit. Demetr.—Elian, V. H., 1, 13.)

LAMNÆ, fabulous monsters, commonly represented with the head and breast of a female, and the body of a serpent. According to some, they changed their forms at pleasure, and, when about to ensure their prey, assumed such appearances as were most seduc- tive and calculated to please. The blood of young persons was believed to possess peculiar attractions for them, and for the purpose of quaffing this they were wont to take the form of a beautiful female. The Lamnæ possessed also another means of accomplishing their object. This was a species of hissing sound emitted by them, so soothing and attractive in its nature, that persons found themselves irresistibly allured by it. When not in disguise, and when they had sated their horrid appetites, their form was hide- ous, their visages gloared like fire, their bodies were besmeared with blood, and their feet appeared of iron or of lead. Sometimes they showed themselves completely blind, at other times they had a single eye, either in the forehead or on one side of the visage. The popular belief made them frequent Africa and Thessaly, in both of which countries they watched along the main roads, and seized upon unwary travellers.—

The fable of Queen Lamia has some analogy to this fiction, and both, in all probability, originated from one and the same source. Lamia, according to Di- odorus Siculus and other ancient authors, was a queen of Africa, remarkable for beauty, who, on ac- count of her cruel disposition, was eventually transformed into a wild beast. Having lost, it seems, her own children by the hand of death, she sought to con- sole her sorrow by zoicing the children of her subjects from their mothers' arms, and causing them to be slain. Hence the transformation inflicted upon her by the gods. (Diod. Sic., 20, 41.—Compare Schol. ad Aristoph. Poc., 757.—Cass., ad Strab., 36.— Wesseling, ad Diod., i. c.) The Lamia figure ex- tensively in the nursery-legends of antiquity, and the names and attributes were standing objects of terror to the young. (Diod., i. c.—Compare Horat., Ep. ad Pis., 340.—Vid. Lemures.)

LAMPÉDO, I. a Lacedemonian demon, wife of Ar- chidasmus—II, king of Sparta, and mother of Agis. She was celebrated as being the daughter, wife, sister, and mother of a king.—II, a queen of the Amazons. (Justin, 2, 4.)

LAMPETIAL, I. a daughter of Helios (the Sun-god) and Neera. She, with her sister Phaethusa, took care of the flocks and herds of her father, in the island of Thrinakia. There were seven flocks of sheep and as many herds of oxen, fifty animals in each flock and herd. They neither bred nor died. Ulysses, in the course of his wanderings, came to this island, which both Tiresias and Circe had strictly charged him to shun. On discovering that it was Thrinakia, the hero at once deserted the ship, with which he had receiv- ed; but as it was evening when he arrived, his companions forced him to consent to their landing, and passing the night there. They promised to de- part in the morning, and took an oath to abstain from the cattle of the sun. During the night a violent storm came on, and for an entire month afterward a strong southeast wind blew, which confined them to the island. When their provisions were exhausted, they decided to break open the ship. They did so, and Ulysses, at the head of fifty herdsmen, and his companions,—the males and females of the cattle—shut up the captain and the rest of the crew in the hold of the ship. At length, while Ulysses was sleeping, Eurylochus prevailed on the rest to slaughter some of the sacred oxen in sacrifice to the gods, and to vow, by way of amends, a temple to Helios. Ulysses, on awakening, was filled with horror at what they had done; and the displeasure of the gods was soon manifested by prodigies; for the hides crept along the ground, and the flesh hewed on the spits. Still they fed for six days on the sacrificial cattle, which they had slain, and then left the island; but, as soon as they had lost sight of land, a terrible west wind, accompanied by thunder, lightning, and pitchy darkness, came on. Jupiter struck the ship with a thunderbolt: it went to pieces, and all were drowned except Ulysses. (Od., 12, 260, seqq.—II, or Lampetia, one of the Hela- des, or sisters of Phaethon. (Ovid., Met., 2, 349.)

LAMPÆRIDUS, ELUS, a Latin historian, who flour- ished in the early part of the fourth century, under Diocletian and Constantine the Great. Of his works there are extant the lives of the emperors Antoninus, Marcus Aurelius, Lucius Verus, Pertinax, Albinus, Macrinus, &c. The life of Alexander Severus, which, according to the Palatine manuscript, is the work of Spartianus, has been by some authorities ascribed to him. The lives are to be found in the collection of the "Historiae Augustae Scribae," 2 vols. 8vo, 1671. Some critics consider Lampidius as identical with Lampidius. (Consult Voss., de Hist. Lat., 2, 7.—Fabric., Bibl. Lat., 3, p. 93, note a.—Sozzi Onomast., vol. i, p. 38.) The style and management of Lampidius will not allow him a place among histori- ans of a superior class, yet he is valuable for his facts. (Bibh. Gesch. Röm. Lat., vol. i, p. 341.)

LAMPÆCÜS, a city of Mycia in Asia Minor, situate on the Hellespont, where, it is said, the Prophets of Abydos were buried. The early name of the spot where Lampascus stood was Pitiusa, from the number of pine-trees which grew there (πίτιος, a pine-tree). A Phocian colony is said to have found-
This text is difficult to read due to the nature of the handwriting and the quality of the image. However, the text appears to be a historical or archaeological description, possibly discussing ancient cities and events. The language used is Latin, and the text mentions various locations, people, and events, including references to ancient cities and their histories.

For a more accurate transcription, a clearer image or a more legible handwritten version would be necessary.
sculptors who executed it are also recorded. They are Agesander, Polydorus, and Athenodorus, natives of Rhodes. Pliny (36, 5) says, "Laocoon, which is in the palace (dema) of the Emperor Titus, is a work to be preferred to all others either in painting or sculpture, and the work of this life. Its execution was long pondered over, and the heads and Athenodorus, Rhodians, executed the principal figure (ezum), and the sons, and the wonderful folds of the serpents, out of one block of marble."—There has been much difference of opinion among antiquaries on several points connected with this group: first, as to the date of the artists; Winckelmann contended that they are of a good period of Greek art, and as early as Lysippus. A considerably later date, however, has been assigned by Furtwängler, Low. The next question discussed has been, whether the sculptor was indebted to the subject to Virgil's fine description (Æn., 2, 260, seqq.), or whether the poet was indebted to the artist. With respect to date, the most careful consideration seems to fix these sculptors as late as the early emperors; and Lessing, whose work on the Laocoon deserves the attention of all who take an interest in the philosophy and capabilities of art, believes they lived in the reign of Titus. With regard to the subject, it is most probable that the story, being well known, offered advantages for illustration to the sculptor, as it did for description to the poet. As Virgil's priest was habited in his robes during the exercise of his priestly functions, and the group under consideration is entirely naked, the argument is additionally strengthened against the assumption that the artist borrowed from the poet. It is more natural to believe that each drew from a common source, and treated the subject in the way best adapted to the different arts they exercised; the sculptor's object being concentration of effect, the poet's amplification and brilliant description.—This group is justly considered, by all competent judges, to be a master-piece of art. It combines, in its class, all that sculpture requires, and, we may say, admits of, and may truly be studied as a canon. The subject is of the most affecting and interesting kind; and the expression in every part of the figures reaches, but does not exceed, the limits of propriety. Intense mental suffering is portrayed in the countenances, while the physical strength of all the three figures is evidently sinking under the irresistible power of the huge reptiles wreathed around their exhausted limbs. One son, in whose side a serpent has fixed his deadly fangs, seems to be fainting; the other, not yet bitten, tries (and the futility of the attempt is well expressed in the sculptor's hands) to discharge one tooth from the serpent's embrace. The father, Laocoon, himself is mighty in his sufferings: every muscle is in extreme action, and his hands and feet are convulsed with painful energy. Yet there is nothing frightful, disgusting, or contrary to beauty in the countenance. Suffering is faithfully and strongly depicted there, but it is rather the exhibition of mental anguish than of the repulsive and unignoble conceptions of mere physical pain. The right arm stands out in an intimate display of knowledge of anatomy and of outward form; the other selected with care, and freed from any vulgarity of common individual nature: indeed, the single figure of Laocoon may be fairly referred to, as one of the finest specimens existing of that combination of truth and beauty, which is so essential to the production of perfect sculpture, and which can alone ensure for it lasting admiration. The youths are of a smaller stature than their father, and the lines of force are not so correctly lighted up as might have been expected, and are hardly justifiable, but taken, probably, with the view of heightening the effect of the principal figure. The right arm of Laocoon is a restoration, but so ably done, though only in plaster, that the deficiency is said to be scarcely a blemish. It is not certain what modern artist has the merit of this restoration, though it is thought that the arm it now bears was the plaster-model of Michael Angelo, who was charged with the task of adding a marble arm, but left the one which he had destined for this object unfinished, in a fit of despair. Some antiquaries have thought that the original action of the arm was not extended, but that the sculptor, by themode, raised it; and they have supported their hypothesis by the fact of there being a rough and broken surface where they think the hand, or perhaps a fold of the serpent, may have come in contact with the hair. (Encycl. Hist. Know., vol. 13, p. 323, seq.—Heyne, Antiq. Auff., vol. 2, p. 34, seqq.—Winckelmann, Werke., vol. 6, p. 101, seqq.—Id., vol. 5, p. 105.—Id., vol. 7, p. 189.—Id., vol. 5, p. 256.—Lessing, Laocoon, § 6, p. 76, &c.)

LAODICEA. A city of Phrygia, in the southwestern angle of the country. It was a situate on the river Ly- cus (hence called Λαοδίκεια ἐπὶ Λύκου, Laodicea ad Lycontum), and stood on the borders of Phrygia, Caria, and Lydia. Its situation coincides exactly with that of Cydrara mentioned by Herodotus (7, 30.—Vid. Cydrara). Pliny, however (5, 29), makes its early name to have been Diospolis, changed subsequently to Rhosas. It contained three boundary stones, as being on the border between the Phrygians and the Lycians, and commonly called by the ecclesiastical writers Trime- taria. Its name of Laodicea was given to it by Anti- ochus Theos, in honour of his wife Laodice. He re- established it. (Steph. Byz., s. v.) Under the Romans it became a very flourishing commercial city. It is supposed to have been destroyed during the in- road of Timur Leng, A.D. 1402. (Duca., p. 42, vol. 3.)
The ruins of Laodicea are now called by the Turks Eski Hissar. (Mannert, Geogr., vol. 6, pt. 3, p. 131.—Leake's Journal, p. 154, seqg.—II.) Scabiosa, a city of Syria, southwest of Emesa and of the Orontes. It is sometimes, though erroneously, styled Cabiosa. The epitaph Scabiosa must have reference to the leprosy, or some cutaneous complaint, very prevalent here in the time of the Roman power. Its previous name was Antiochia ad Libanum, then Alexiana, Laodicea ad Libanum (Strabo, 753.—Pliny, v. 23.) and it must have been situated, therefore, near the northeastern part of the chain of Libanus, in the plain Marayas, which Pococke (2, p. 204) mentions, though he is silent respecting its ancient name. Its site must be looked for to the west of the modern Hassechiah, a day's journey to the southwest of the modern Hems, the ancient Emesa. (Mannert, Geogr., vol. 6, pt. 3, p. 150.) A maritime city of Syria, on an eminence near the coast, called, for distinction sake, Λαοδίκεα κτίς τῇ ἄκτᾳ τῇ ἐκτός, Laodicea ad Marc. (Strabo, 751.—Pliny, v. 21, 5.) It was built by Seleucus Nicator, and named in honour of his mother; and Strabo ranks it among the four principal cities of the country. (Compare Appian, B. Syr., c. 27.) The fruitfulness of the adjacent country, and the quantity of good wine made in this quarter, which furnished a great article of commerce to Alexandria, were the chief reasons that induced Seleucus to found this city. Laodicea may, in fact, be regarded as the harbour of Antiochia. The ancient writers praise its excellent port, and it would seem, even at the present day, to show traces of the works constructed to give security and convenience to the harbour. (Pococke, 2, p. 287.—Walpole's Memoirs, vol. 2, p. 138.) In the civil war after Caesar's death Dolabella stood a long siege to this place; it was finally taken, and suffered severely. (Dio Cass., 47, 30.—Appian, B. Civ., 4, 62.) Hence Antony declared it independent, and freed it from all tribute. (Appian, B. Civ., 5, 7.) It again suffered from Pescennius Niger (Malala, Chron., 11, p. 125,) and therefore his more successful competitor Severus did all in his power to restore it to its former condition. Among other favours shown it, he made the place a colony with the title of Urbanorum (Ulpian, Diges T. iii, c. 75, 15, de consibus.) The modern name is Ladiké. The modern city suffered severely from an earthquake in 1797, the greater part of the buildings having been thrown down. These have been rebuilt, though less substantially than before. Scarcely any wine is now made here, and few vines are planted. (Walpole's Memoirs, vol. 2, p. 138.—Mannert, Geogr., vol. 6, pt. 1, p. 450.—Cass., B. Civ., 1, p. 227—III.) A marine sea-monster, which, according to some, is seen in this part, is supposed to be a frequent breaker of subterranean fires in the vicinity. Strabo mentions this as peculiarly the case in the parts of Phrygia to the west of Laodicea, which were hence termed Cataecauemeni (Karasevauévov, — Strabo, 579.) The place itself was unimportant, and would only seem to have been mentioned by Strabo and Pliny from the circumstance of its having been situated on the great road from the western coast through Melitene to the Euphrates. Leake (Journal, p. 25) gives the modern name as Yorgán Ladik, and speaks of numerous fragments of ancient architecture found there.—V. A city of Media, on the confines of Persia. (Pliny, 6, 26.)—VI. A city of Mesopotamia, near Seleucia. (Pliny, 4, 26.)

LAOMEDON, son of Ilus, king of Troy, married Smyla, the daughter of the Long-armed, by whom he had Tithonus, Lampus, Clitus, Hicetaon, Podarces (afterward called Priam), and Hesione, together with two other daughters. He had also, by the nymph Calybe, a son named Bucolion. (II, 6, 23.) The two deities Apollo and Neptune, having been condemned by Jupiter to be subservient for one year to the will of Laomedon, contracted to build a wall around Troy for a stipulated sum. When, however, this labour was accomplished, Laomedon refused to pay the amount agreed on, and dismissed the two deities, threatening to cut off their ears. He even menaced to tie Apollo hand and foot, and transport him to the distant islands. (II, 21, 441.) To punish him, Apollo and Neptune sent a huge sea-monster, which carried off all the people to be found in the plain. For the rest of his story, see suit the article Hesione.

LAOMEDONTES, an epithet applied to the Trojans from their king Laomedon. (Virg., Aen., 4, 542; 7, 105; 8, 18.)

LAOMEDONTIDES, a patronymic given to the Trojans, from Laomedon their king. (Virg., En., 3, 248.)

LAPHYSTUS, a mountain in Bithynia, extending from the Hellespont to the north of Coronea, on which Jupiter had a temple, whence he was called Laphystus. It was here that Athamas prepared to immolate Phrixus and Helle, whom Jupiter saved by sending them a golden ram. (Pausan., 9, 34.)

LAPITHAE, a tribe or people of Thessaly, whose contest with the Centaurs forms a conspicuous link in classical mythology. (Vid. Centauri, where a full account of the subject is given.)

LARA or LABUNDA, one of the Naiads, daughter of the river Almon in Latium, famous for her beauty and her loquacity, which her parents long endeavoured to correct, but in vain. She revealed to Juno the amours of her husband Jupiter with Juturna, for which the god cut off her tongue, and ordered Mercury to conduct her to the infernal regions. The god violated her by the way, and she became the mother of the Lares. (Vid. Laruni, and note, Fast. 2, 585, seqg.)

LARES, gods of inferior power at Rome, of human origin, who presided over houses and families. There were various classes of them, such as Lares Urbani, to preside over the cities; Familiares, over houses; Rustici, over the country; Comitiales, over crossways; Marini, over the sea; Viales, over the roads, &c. If we closely examine into the nature of the Penates and that of the Lares, we will readily perceive why the former were placed in the hierarchy of the Penates, while the Lares, on the contrary, range themselves under the name of the gods, or rather in the hierarchy of the Genii than the latter. In fact, the Penates were originally gods; they were the powers of nature personified; powers, the wonderful and mysterious action of which produces and upholds whatever is necessary to life, to the common good, to the prosperity of individuals and families; whatever, in fine, the human species cannot bestow upon itself. The case is quite different with the Lares. These were originally human beings themselves; men like unto us in every respect, who, living upon the earth, and who, becoming pure spirits after death, loved still to hover round the dwelling which they once inhabited, to watch over its safety, and to guard it with as much care as the faithful dog does the possessions of its master. Having once partaken of our mortal condition, they know the better from what quarter danger is wont to menace, and what assistance to render to those who found them in every respect their own. They keep off, therefore, danger from without, while the Penates, residing in the interior of the dwelling, pour forth benefits upon its inmates with bountiful hands. The fundamental idea on which rests the doctrine of the Lares, is intimately connected with all the psychology and pneumatics of the ancient Italians. According to Apuleius (De Genio Socearum, vol. 2, p. 237, ed. Bip.) the demons which once had inhabited, as souls, human bodies, were called Lemures: this name therefore designated, in general, the spirit separated from the body. Such a spirit, if it adopted its posterity; if it took possession, with favourable power, of the abode of its children, was called Lar familiarius. If,
on the contrary, by reason of the faults committed in life, it found in the grave no resting-place, it appeared to men as aphantom; inoffensive to the good, but terrible to the wicked. Its name was in that case Lar-

ea. (Festus, p. 200, ed. Dacier.-BuUenger, de Pro-
dig., 4, 20. - Graven, Thes. Antig. Rom., 5, p. 480, seqq.) It was there of precisely clarifying what had been the lot of a deceased pa-
son, whether he had become, for example, a Lar or a Lar
va, it was customary to give to the dead the general appellation of Manes. (Deus Manis.) Vairo, in a more extended sense, if we credit Arrnobius, re-
garded the Lares, at one time, as identical with the Manes, the tutelary genius of the living and the dead; at another time, as gods and heroes roaming in the air; and at another again, as spirits or souls separated from bodies, as Lucan (Phars. 674, 675) says. In the case of the Lare
was called Lara or Larunda. (Arnobius, ad Gent., 3, 41. - Macrobi., Sat., 1, 7.—Marini, gis Alt., 2, p. 373.) This conception of the Lares, as the souls of fathers and of forefathers, protectors of their chil-
dren, and watching over the safety of their descend-
ents, necessarily gave rise to the custom of burying the dead within the dwelling. (Serv., ad Virg., Æn., 5, 294, ed. Bock.—Id., ad Æn., 6, 152. - Isid., Orig., 15, 11. - Zoega, Thes., 24, 19, 91.) Thus near them these tutelary genii, in order to be certain of their assistance and support. In process of time, however, this custom was prohibited at Rome by the laws of the Twelve Tables. (Cic., de Leg., 2, 23.) It was general in early Greece, and among the primitive popula-
tion of Italy. (Plat. Min., p. 254, ed. Bekker.)—The meaning attached to the word Lar
being of itself extremely general, had among the an-
cients different acceptations. (Compare Müller, de Dis Romanorurn Laribus et Penates, p. 60.) Analog-
ogous to the demons (or genii) and heroes of the Greeks, the Lares, pure spirits, invisible masters and protectors, and everywhere present, limited, as little as the Penates, their domain to the domestic hearth. The Etruscans, and the Romans after them, had their Lar
publici and Lores privati. (Hempel., de Dis Laribus, p. xxiv., seqq.) The Lares were supposed to assist at all gatherings together of men, at all public assemblies or reunions, in all transactions of men, in all the most important affairs of the state as well as of individuals. Born in the house, in the bosom of the family, the notion of Lares went forth by little and lit-
tle; extended itself to the streets, to the public ways; above all, to the cross-roads, where the peril was great-
er for passengers, and where assistance was more im-
mediately necessary. From this it extended itself to communities, to entire cities, and even to whole coun-
tries. Hence the numerous classes of the Lares and their various denominations, such as viales, ruales, compitales, grunilides, hostiles, &c. If each individ-
ual had his Lar, his genius, his guardian spirit, even the infant at the breast; so entire families, and whole
races and nations, were equally under the protection of one of these tutelar deities. Here the Lares be-
came in some degree confounded with the Heroes, that is, with the spirits of those who, having deserved a well of their country while on earth, continued to watch over and protect it from that mansion in the skies to which their merits had exalted them. It would seem, too, that at times, the worship of these public Lares, like that of the public Penates, was not without some striking resemblance to that rendered to the great national divinities. The proof that the Lares were not always clearly distinguished from the gods of the sky and earth, and those who, having des-

oned and heroes, is found in an ancient inscription:

"The Lares, powerful in heaven" (Lares Coelo po-
tentes), that is, most probably, inhabiting the region of the air, where they exercised their power. (Graven.,

Thes., 5, p. 686, seqq.—Spanheim, de Vesta, &c.—)

All that the house contained was confided to the super-
intending care of these vigilant genii: they were set
as a watch over all things large and small, and hence
the name of Praestites, which is sometimes given
them. (Ovid, Fast., 5, 128, 133.) Hence the dog
was the natural symbol of the Lares; an image of this
animal was placed by the side of their statues, or else
these were annually consecrated to the care of the Lare
Comment. Herod., 1, p. 239.)—The ordinary altar on
which sacrifices were offered to the Lares was the domes-
tic hearth. The victims consisted of a hog (Horat., Od., 3, 23) or a fowl; sometimes, with the
rich, of a young steer; to them were also presented the first of all the fruits of the season, and libations of
wine were poured out. In all the family repasts, the
first thing done was to cast a portion of all the viands
into the Lareas, as if to lead them into the company of
Lares. In the form of marriage, called coemptio, the
bride always threw a piece of money on the hearth to the
Lares of her family, and deposited another in the
neighbouring cross-road, in order to obtain admission,
as it were, into the dwelling of her husband. (Non.
Marc., de propr. Serv., c. 12, p. 784, ed. Gothofred.)
Young persons, after their fifteenth year, consecrated to the Lures the bulla which they had worn from in-
fancy. It was customary to have the image of the time of service was once ended, dedicated to these
powerful genii the arms with which they had fought the battles of their country. (Ovid, Trist., 4, 8, 21.)
Captives and slaves restored to freedom consecrated to the Lareas the fetters from which they had just been
freed. (Horat., Sat., 1, 5.) Before undertaking a
journey, or after a successful return, homage was paid to
these deities, their protection was implored, or thanks were rendered for their guardian care. (Ovid,
Trist., 1, 3, 33.—Muller, de Dis Rom. Lar. et Penat.
70.—Es. Otto, de Dios viabilus, c. 9.) The new
master of a house crowned the Lareas, in order to ren-
der them propitious; a custom which was of the
most universal nature, and which was perpetuated to the latest times (Plaut. Trinum., 1, 2, 1.—Creuzer,
Comment. Herod., 1, p. 235.) The proper place for
worshipping the Lareas, and where their images stood,
was called Lararium, a sort of domestic chapel in the
Atrium, where were also to be seen the images and
busts of the family ancestors. The rich had often
Lararia, one large and the other small; they had
also "Masters of the Lareas," and "Decurio
Lareas," namely, slaves specially charged with the care
of these domestic chapels and the images of their di-
inities. As to the poor, their Lareas had to be con-
tent with the simple hearth, where honours not less
simple were paid to them. (For farther details re-
specting the Lararia, consult Guthcr., de Veteri iure
Pontificio, 3, 10.—Graven., Thes., 5, p. 139.)—Certain
public festivals were also celebrated in honour of the
Lares, called Lararia and Compitilia. The period
for their celebration fell in the month of December,
a little after that of the Saturnalia. On this occasion
the Lareas were worshipped as propitious deities: hence these festivals were marked by a gay and joyful
character, and thus formed a direct contrast to the
gloomy Lemuria. The Compitilia, dedicated to the Lareas Compitales, were celebrated in the open air, in the
cross-roads (ubi uestis competunt, in compitiis.—Dio
Hal., 4, 14. - Aut. Gall., N. A., 10, 24. - Siccama in
Fastos Calend. Rom.—Graven., Thes., 8, p. 69, &c.)
the day of their celebration was not fixed. They
were introduced at Rome by Servius Tullius, who left
the care of them to the Lareas, for the purpose of deter-
ning the period when they should be held. In early times
they were immolated to the goddess Mania, the mother, accor-
ding to some, of the Lareas, to propitiate her favour for
the protection of the family. This barbarous rite was
subsequently abolished, and little balls of wool were
hung up in the steed of human offerings at the gates
of dwellings. Microbius (Sat., 1, 7) informs us, that it was Jonus Brutus who, after the expulsion of the Tarquins, introduced a new form of sacrifice, by virtue of which, heads of garlic and onions were offered up in place of human heads, ut, pro capitis, capitis supplicatur, in accordance with the oracle of Apollo. Every family, during these festivals, brought a cake for an offering; slaves enjoyed a perfect equality with their masters, as on the Saturnalia; and it was slaves, not free men, that assisted the priests in the sacrifices offered up on this occasion to the tutelary genius of the place, the Palaestra—or, as (Dion. Hal., 7, 7; Schdtens, Od. 3, 17, 14, and Mitscherlich, ad Horat., l. c.) in case of death in a family, a sacrifice of sheep was offered up to the family Lares. (Cic., de Leg. 2, 22, 55, where we must read, with Görenz, vervecius.—Marini, Atti, &c., 1, p. 373.)—As regards the forms under which the Lares were represented, it may be observed, that it differed often but little from that of the Penates. Thus, on the coins of the Cusan family, they are represented as two young men, seated, their heads covered with helmets, and holding spears in their hands, while a dog watches at their feet. Sometimes, as we have already remarked, the heads of the Lares are represented as covered with, or their mantle as formed of, the skin of a dog. At other times we find the Lares resembling naked children, with the bulls hanging from the neck, and always accompanied by the attribute of the dog. (Codex, Symbolik, par Guignmant, vol. 2, pt. 1, 416, sq.)

LARIUM, a town of Apulia, which appears to have belonged once to the Frenlati, from the name of Larinae Frenalti, attached to its inhabitants by Pliny (3, 12). It was situated on the road which led from Picenum into Apulia. (Liv., 22, 18.) Its ruins, which are said to be considerable, occupy the site called Larina Vecchio. (Romanelli, vol. 3, p. 20.)—Larinum, a town of Apulia, on the coast of Tros, north of Termessus, and on the west side of the Orontes, southeast of Apamea. It was either founded or else re-established by Seleucus Nicator. (Appian, B. Syr., c. 57.) Pliny calls the inhabitants Larissi (5, 23). The city appears to have made no figure in history. Its true Oriental name would seem to have been Sirea, or something closely resembling it. Stephanus Byzantinus (s. v.) gives Sizar (Σιζάρα) as the Syriac name of the place, and Abulfeda (Tab. Syr. p. 110) says, Arabicly, أَسِيْراً Ala'sh-Si'ara, fortress in this quarter named Shaizar or Sijzar. (Compare Schulens, Index ad Vitam Saladinii, s. v. Siaizarum.)—II. A town of Lydia, in the Caustrian field, and territory of Ephesus. It had a famous temple of Apollo. Larissa was situated near Mount Tmolus, 160 stadia from Ephesus, and 30 stadia from Tralles, on the northern side of the Messoges. (Strabo, 620.)—III. A town on the coast of Tros, north of Termessus, and Alexandra Tros. Whether it is the same with the place assigned by Homer to the Pelasgi (II, 2, 841) is uncertain. Strabo, however, decides in favour of the Larissa below Cyme. (Manunt, Geogr. vol. 6, pt. 3, p. 465.)—IV. A town of Eolis, in Asia Minor, to the southeast of Cyme, and on the northern bank of the Hermus. (Manunt, Geogr. vol. 6, pt. 3, p. 394.) It is supposed by Strabo to have been the same as Laria, a town of the same name, in Apulia (Cam. 2, 841), and was called by the Eolians, after it was taken by them from the Pelasgi, Phriconas, for distinction sake from the other Larissae. Cyme was also named Phriconas. (Strabo, 621.) Another appellation given to the place was Larissa Egyptianca, because it was said to have been one of the towns which Cyrus the elder gave to the Egyptians who had come over to him from the army of Croesus. (Xen., Cyrop., 7, 1, 45.—Compare Hist. Gr. 3, 1, 7.) In Strabo's time the place was uninhabited.—V. A city of Assyria, on the banks of the Tigris. The ten thousand found it deserted and in ruins. Xenophon states that it had been once inhabited by the Medes. (Anab., 3, 4, 7.) It is, however, considered identical with the city mentioned in Genesis (10, 12) under the name of Rezen; but Michaelis opposes this. (Spicileg. Geogr. Hebr., vol. 1, p. 247.)—VI. An ancient and flourishing city of Thessaly, on the river Peneus, to the northeast of Pharsalus. It is not mentioned by Homer, unless, indeed, the Argo Pelasgi of the poet is to be identified with it (II., 2, 681), and this opinion would not be entirely groundless if, as Strabo (440) informs us, there, formerly a city named Argos close to Larissa. The same geographer has enumerated all the ancient towns of the latter name, and we may collect from his researches that it was peculiar to the Pelasgi, since all the countries in which it was found had at different periods been occupied by that people. (Compare Dion. Hal., 1, 21.) This city was placed in that most fertile part of the province which had been occupied by the Porthybi, who were partly expelled by Larissians, while the rest were kept in close subjection, and rendered tributary. According to Aristotle, the constitution of this city was democratic. Its magistrates were elected by the people, and considered themselves as dependant on their favour. (Aristot., de Rep., 5, 6.) This fact will account for the support which the Athenians derived from the republic of Larissa during the Peloponnesian war. (Thucyd., 2, 92.) The Athenians were assisted by Heraclea princess. Thessaly at the time of the Persian invasion, were natives of this city. (Herod., 9, 58.) Diodorus Siculus (16, 61) informs us, that the citadel of Larissa was a place of great strength. Though the territory of this city was rich and fertile, it was subject to great losses, caused by the inundations of the Peneus. (Strabo, 440.—Plin., 4, 8.—Herod., Tynem. 1, p. 648.) Dr. Clarke states that by Heliodorus the name of Larissa, which still retains the ancient name; but that the inhabitants gave the name of Old Larissa to a Palas Castro, which is situated upon some very high rocks, at four hours' distance towards the east (vol. 7, p. 339). Dr. Holland and Mr. Dodwell are, however, of opinion, that the modern Larissa stands upon the remains of the ancient city. (Holland's Travels, p. 390.—Dodwell's Tour, vol. 2, p. 100.—Cramer's Anc. Græce, vol. 1, p. 385, 386.)—VII. Larissa, a town of Attica, near Mount Hymettus. Some ruins, indicative of the site of an ancient town near the monastery of Syracuse, at the foot of Mount Treto Vou- ni, have been thought to correspond with this ancient Pelasgic settlement. (Strabo, 440.)—VIII. An old name of the Pelasgi in Attica, near Mount Hymettus. Some ruins, indicative of the site of an ancient town near the monastery of Syracuse, at the foot of Mount Treto Vouni, have been thought to correspond with this ancient Pelasgic settlement. (Strabo, 440.)—VII. Larissae, an epithet applied by Virgil (Aen., 2, 197; 11, 404) to Achilles, either with reference to the town of Larissa Cremaste, which lay within his dominions (vid. Larissa VII.), or as equivalent generally to Thessalicae. Heyne prefers the latter interpretation (ad Aen., 2, 197.)—Larissae, a river of Achaia, forming the line of separation between that country and Elis. (Pausan., 7, 17.—Plin., 4, 5.) Strabo informs us that it flowed
from Mount Scoillus, which Homer (I., 11, 757) designates by the name of "Olenian rock." (Strabo, 387.) The modern name of this river is Risa or Mair. (Ant. Græco.

LARIUS, LACUS, a lake of Cisalpine Gaul, north of the Padus, and east of the Lacus Verbanus. The name Larius is supposed to have been of Etrurian origin. Whatever truth, however, there may have been in this conjecture, there is no mention of the name prior to the time of Polybius, who, as Strabo (209) reports, estimated its length at 500 stadia and its breadth at 30, or 38 miles by 4. Servius says that Catone reckoned 60 miles from one extremity to the other, and the real distance, including the Lake of Chiavenna, is not short of that measurement; so that Virgil (Georg., 2, 159) seems justily to say, "Anne lacus tantus? te lari maxime." The younger Pliny had two villas on this lake, which he describes (Epist., 9, 7). The one which he calls his Tragedy stood probably at Bellaggio, as from thence the view extends over both arms of the lake. The intermitting fountain, of which he gives an account (4, 20), still exists under the name of Pinnana. This lake receives the Adduas or Adda, which again emerges from it, and pursues its course to the Po. The modern name is Lago di Como, from the modern Como, the ancient Comum. The surrounding country is highly picturesque, being covered with vineyards, interspersed with beautiful villas, and skirted by lofty mountains. A headland, running boldly into the lake at its southern end, causes it to branch off into two arms, at the extremity of the western one of which the town of Como is situated.

LARS OF LARUS TOLANUM, a king of the Veientes, slain in battle by Cornelius Cossus. (Vid. Spoilia Opima.—Liv., 4, 17.—Id., 4, 19.)

LARTIUS FLORUS, I. T., a consul, who appeased a sedition raised by the poorer citizens, and was the first dictator ever chosen at Rome, B.C. 498. (Liv., 2, 18.)—II. Syrusus, one of the three Romans who withstood the fury of Porsenna's army at the head of a bridge while the communication was cutting down behind them. His companions were Cocles and Herminius. (Vid. Cocles.—Liv., 2, 10, 18.—Dioms. H. —Val. Max., 3, 2.)

LAVVE, a name given to the wicked spirits and apparitions which, according to the notions of the Romans, issued from their graves in the night, and came to terrify the world. (Consult remarks under the article Latine.)

LAVVUS, or LAVVUS, C. T., a celebrated dithyrambic poet, born at Hermon in Argolis, and, according to some authorities, the instructor of Pindar. (Thom. Mag., Vit. Pind.) He was contemporary with Simonides (Aristoph., Vesp., 1401.—Schol., Vesp., 1402), and flourished in the reign of Hipparchus at Athens (Herod., 7, 6), and in the reign ofarius. (Schol., Vesp., 1401.) He was the first that introduced the dithyrambic measure into the celebrations at the Olympic games. The poet and Logos of Antiquity appear. In an elder description of Lavus, Lucan, uses the word Dithyrambus in two verses cited by Athenæus (p. 628), so that Lucan could not have been the inventor of this species of measure. (Bentley, Diss. on Phalaris, p. 254, ed. 1816.)

LATINE FERILIS, or Latin Holydays, a festival among the Romans. It was originally the solemn meeting of the cantons of Latium, and afterward, on the occasion of their wars, the chief cities of Rome. After the dissolution of the Latin state; but the opinion that Tarquinius instituted the festival is quite erroneous, as its antiquity is proved to have been far higher. Like the Greek festivals, this Latin one ensured a sacred truce. It lasted four days. The consuls always celebrated the Latin Holydays before they set out to their provinces; and if they had not been rightly performed, or if anything had been omitted, it was necessary that they should be repeated. (Consult on this whole subject Niebuhr, Rom. Hist., vol. 2, p. 6, seqq., Eng. transl.)

LATINI, the inhabitants of Latium. (Vid. Latium.)

LATINUS, I. A son of Faunus by Marica, king of the Aborigines in Italy, who from him were called Latini. He married Amata, by whom he had a son and a daughter. The son died in his infancy, and the daughter, called Lavinia, was secretly promised in marriage by her mother to Turnus, king of the Rutuli, one of her most powerful admirers. The gods opposed this union, and the oracles declared that Lavinia must become the wife of a foreign prince. The arrival of Aeneas in Italy seemed favourable to the realization of this prediction, and Latinus was prompted to become the friend and ally of the Trojan prince, and to offer him his daughter in marriage. Turnus, upon this, declared war against the king and Aeneas, but lost his life in battle by the hand of the latter, who thereupon rescued Lavinia as his spouse. Latinus died soon after, and Aeneas succeeded him on the throne of Latium. So says the fabulous legend. (Vid. Aeneas.—Virg., Aen., 9, &c.—Ovid, Met., 13, &c.—Fast., 2, &c.—Dion. Hal., 1, 13.—Liv., 1, 1, &c.—Justin, 43, 1.)—II. A son of Sylvius Aeneas, summoned also Sylvius. He was the fifth king of the Latins, and succeeded his father. (Dion. Hal., 1, 15.)

LATIUM, a country of Italy, lying south of Etruria, from which it was separated by the Tiber. —The earliest records of Italian history, as we are assured by Dionysius of Halicarnassus (1, 9), represented the plains of Latium as first inhabited by the Siculi, a people of obscure origin, but who would be entitled to our notice from the circumstance above mentioned, even had they not acquired additional historical importance from their subsequent migration to the celebrated island from them named Sicily. (Vid. Siculi.) Ancient authors seem to have made the Siculi a more very people who compelled the Siculi to abandon Latium. Dionysius informs us, that Philius ascribed their expulsion to the Umbri and Pelasgi. Thucydes refers the same event to the Opici; while Antochus of Syracuse, a still more ancient writer, represents the Siculi as flying from the Etonti. Notwithstanding this apparent discrepancy, it is pretty evident, that under these different names of Umbri, Opici, and Etonti, we have the names of the Latinus and the Roman historians usually term Aborigines. (Ant. Rom., 1, 10.) The Aborigines, intermingling with several Pelasgic colonies, occupied Latium, and soon formed themselves into the several communities of Latini, Rutuli, Hernici, and Volsci, even prior to the Trojan war and the supposed arrival of Aeneas.—The name of Priscus Latini was first given to those Latini who were converted by the colonists of Rome, and lateronized by Latinus Sylvius, one of the kings of Alba, but most of which were afterward conquered and destroyed by Ancus Marcus and Tarquinius Priscus. (Liv., 1, 3.) In the reign of Tarquinus Superbus we find the Latin nation united under the form of a confederate republic, and acknowledging that ambitious prince as the protector of their league. (Liv., 1, 50.) After the expulsion of the tyrant from Rome, we are told that the Latins, who favoured his cause,
experienced a total defeat near the Lake Regillus, and were forced to sue for peace. (Dian. Hal., 6, 15.) According to this historian, the Latins received the thanks of the Roman senate, some years afterward, for having taken no advantage of the disturbances at Rome, which finally led to the secession of the people to Mons Sacer, and for having, on the contrary, offered every assistance in their power on that occasion; he adds also that a perpetual league was formed at that time between the Latins and the Romans. However, about 143 years afterward, we find the latter openly rebell- ing, and refusing to supply the usual quota of troops which they had agreed to furnish as allies of Rome. Their bold demand, which was urged through L. An- nius Setius, in the Roman senate, that one of the consuls at least should be chosen out of their nation, led to an open rupture. A war followed, which was rendered remarkable from the circumstances of the execution of the young Manlius by order of his father, and the devotion of Decius. After the Latins were defeated in several encounters, the Latins were reduced to subjection, with the exception of a few towns, which experienced greater lenity, and Latium thenceforth ceased to be an independent state. (Lex, 8, 14.—Plin., 34, 5.) At that time the rights of Roman citizens were granted to a few only of the Latin cities; but at a later period the Gracchi sought to level all such distinctions between the Latins and the Romans, and, however, the Social war followed; and though the confederates were finally conquered, after a long and desperate contest, the senate thought it advisable to decree, that all the Latin cities which had not taken part with the allies should enjoy the rights of Roman citizens. Many of these towns were, however, deprived of their privileges by Sulla; and it was not till the close of the republic that the Latins were admitted generally to participate in all the rights and immunities enjoyed by the Quirites. (Suet., Vit. Jul., 8.—Ascon., Ped. in Pis., p. 490.—On the Jus Latii and Jus Italicum, consult Lipsius, ad Tacit., Ann., 11, 24.—Pavini, Comm. Rep. Rom., 3, p. 329.—Spanheim, Orb. Rom., 1, 16.)—The name of Latium was at first given to that portion of Italy only which extends from the mouth of the Tiber to the Circean promontory, a distance of about one hundred miles. The name of Latium was thus extended to the promontory, where the southern boundary was removed to the river Liris, whence arose the distinction of Latium Antiquum and Novum. (Strabo, 231.—Plin., 3, 5.) At a still later period, the southern boundary of Latium was extended from the Liris to the mouth of the river Vulturinus and the Massic hills. (Cramer’s Ann. Italy, vol. 2, p. 1, seqq.)

LATMUS, a mountain of Cariâ, near Miletus. It was famous as having been the scene of the fable of Endymion. (Vid. Endymion.) At the vicinity of this mountain stood the city of Heracles, commonly termed 'Παρθένος ή ύπνος Δαμάου, “Heraclæa below, or at the foot of, Latmus.” The mountain gave to the adja- cent bay the name of Latmaticus Sinus. (Melâ, 1, 17.—Plin., 5, 29.)

LATOBRI, a people of Belgic Gaul, in the vicinity of the Tulingi, Rauraci, and Helvetii, whose country lay on the banks of the Rhine, about 90 miles to the west of the Lacus Brigantinus, or Lake of Constance. If they are the nation called by Ptolemy Latobi, they must have changed their settlements before that geogra- pher wrote, as he includes their territories in Pan- nonia near Noricum. (Cass., B. G., 1, 2.—Id. ib., 3, 1.)

LATOMAE. Vid. Latumiae.

LATÔNA (in Greek Λεόντα), was the daughter of the Titans Ceres and Phoebe. In Homer she appears as one of the wives of Jupiter. In later writers, there occur no traces of enmity between her and Juno. (Il. 2, 41, 499.)

Later poets, however, fable much about the persecution she underwent from that goddess, an account of

which will be found near the commencement of the article Apollo. Her children, Jupiter were Apollo and Diana. —While wandering in the desert, the young goddess came in company with her offspring, Latona, says a legend most preti- tiously told by Ovid (Metamorph., 6, 913, seqg.), arrived in Lycia. The sun was shining fiercely, and the god- ness was parched with thirst. She saw a pool and knelt down at it to drink. Some clowns, who were there cutting sedge and rushes, refused to allow her to alake her thirst. In vain the goddess entreated, representing, that water was common to all, and ap- pealing to their compassion for her babes. The brutes were insensible: they not only mocked at her distress, but jumped into and muddied the water. The god- ness, though the most gentle of her race, was roused to indignation: she raised her hand to heaven, and cried, “May you live for ever in that pool!” Her wish was instantly accomplished, and the clowns were turned into frogs.—Niobe, the daughter of Tantalus, in the manner of a herdsman, proud of her numerous offspring, ventured to set herself before Latona: the offended goddess called upon her children, Apollo and Diana, and soon Niobe was, by the arrows of these deities, made a childless monster, and became stiffened into stone with grief. (Vid. Niobe.)—Titus, the son of Earth, or of Jupiter and Elara, happened to see Lato- na one time as she was going to Delphi (Pytho). Inflamed with love, he attempted to offer her violence. The Goddess was so angry at this, that she soon lay slain by their arrows. His punishment did not cease with life, but vultures preyed upon his liver in Erebus. (Vid. Titus.)—The Greeks personified night under the title of ΑΗΤΩΣ or Latona, and ΛΑΤΒΗ; the one signifying oblivion, and the other sleep or quietude (Plutarch, ap. Euseb., Prop. Evang., 3, 1. —Hesych. s. v. Barōs); both of which were meant to express the unswerved tranquillity prevailing through the whole night. The modern Greeks, however, call the creation or first emanation of light. Hence she was said to have been the first wife of Jupiter (Odysys, 11, 579), the mother of Apollo and Diana, or the sun and moon, and the nurse of the earth and the stars. The Egyptians differed a little from the Greeks, and supposed her to be the nurse and grandmother of Ho- rus and Bosbistas, their Apollo and Diana (Herod., 2, 56.)

LATOPOLIS, a city in Egypt of the Thebaid, between Thebes and Apollinopolis Magna. It derived its Greek name from the fish Latos worshipped there, which was regarded as the largest of all the fishes of the Nile. (Athenaeus, 7, 17.—Strabo, 816.) The later writers drop the term τῶς (polis), and call the place merely Laton (Λατών), Hierocles, and therefore, in the Itin. Anton. and Notitia Imperii, the ablativ form Lato- polis, and is an important place in the caravan trade from Darfur and the more southern regions. (Man- nert, Geogr., vol. 10, pt. 1, p. 331.)
LAVRINA, a Roman divinity, the patron-goddess of thieves, who were also called Laverniones (Festus, s. v.), and of all, who practised artifice and fraud. (Horat., Epig., 1, 16, 60.) At Rome she had an altar by the temple of Tellus, near the gate which was called from her gate the temple of Laverna. (Varro, L. L. 4, p. 45.) There was also a temple of this goddess near Formiae. (Cic. Ep. ad Att., 7, 8.) Laverna is attested by Frontinus (De aedificationibus), sig. a.C. 1291. (Pliny, Nat. Hist., 10, 6.) The district of Laurentum must have been of a very woody and marshy nature. The Silva Laurentina is noticed by Julius Obsequens (de Prod.), and by Herodian (1, 12), the latter of whom reports, that the Emperor Commodus was ordered to this part of the country by his physicians, on account of the laurel-groves which grew there, the shade of which was considered as particularly salutary. It is from this tree that Laurentum is supposed to have derived its name. The marshes of Laurentum were famous for the number and size of the wild boars which they bred in their reedy pastures. (Virg., Enn., 7, 59.—Id. ibid., 10, 707.—Hor., Sat., 2, 4.—Martial, 9, 49.) However unfavourable, as a place of residence, Laurentum may be thought at the present day, on account of the malaria which prevails there, it appears to have been considered as far from unhealthy by the Roman nobles, who, as Strabo informs us, were released from the cares of business, often resorted to this neighbourhood, and amused themselves by gathering shells on the shore. (Val. Max., 8, 6.—Cic., de Orat., 2, 22.) Pliny the Younger says Laurentum was much frequented by the Roman nobles in winter; and so numerous were their villas, that they presented more the appearance of a city than detached dwellings. Every lover of antiquity is acquainted with the elegant and magnificent description he gives of his own retreat. (Ep., 2, 17, 10.) Hortensius, the celebrated orator, and the rival of Cicero, had also a villa in this neighbourhood. (Varro, R. R., 3, 13.—Cramer's Anc. Italy, vol. 2, p. 16, seqq.)

LAURINUM, a range of hills, extending from that part of the Attic coast which lay near Azenia, below the Apytasia Promontorium, to the promontory of Simonium, and from thence to the neighbourhood of Prassia on the coast of Euboea. (Paus., 7, 43.) The inhabitants are styled by Pliny (3, 5) Lauriniates Ulyssenae. Laurinum and Laurentum were latterly united under the name of Lauro-Lavinium. (Front. de Col. —Symmachus, 1, 65.—Vulp., Vet. Lat., 10, 6.) Various opinions have been entertained by antiquaries relative to the site which ought to be assigned to Laevinum. Cluverius placed it near the church of St. Petronella (Ital. Ant., 2, p. 984); Holsteinus on the hill, called in all Latin, the Laurentina (Strabo, 322). This is the place called Practice, about three miles from the coast. (Vulp., Vet. Lat., 10, 1.—Nibby, Viaggio Antiquario, vol. 2, p. 265.—Cramer's Anc. Italy, vol. 2, p. 19.)

Laurea, a fortified town of Noticum Ripense, the station of a Roman fleet on the Danube; and the headquarters of the second legion. (Notit. Imp. Occident.) It lay to the east of the junction of the Oenus and Danube. The modern village of Lokh stands near the site of this place, a short distance to the north of the present city of Ens. (Mannert, Geogr., vol. 3, p. 637.)

Laurentes Agricola, the country in the neighbourhood of Laurentum. (Tabull., 2, 5, 41.)

Laurentum, the capital of Latium, about sixteen miles below Ostia, following the coast, and near the spot now called Paterna. (Vulp., Vet. Lat., 10, 1.—Nibby, Viaggio Antiquario, vol. 2, p. 313.) Cluverius and Holsteinus are both wrong in assigning to Laurentum the position of San Lorenzo. Of the existence of this city, whatever may be thought of Eneas and the Trojan colony, there can be no doubt; without going so far back as to Saturn and Picus, it may be asserted, that the origin of Laurentum was most ancient, since it is mentioned among the ancient cities of Rome and Carthage, recorded by Polybius (3, 22). Though Laurentum joined the Latin league in behalf of Tarquin, and shared in the defeat at the Lake Regillus (Dion. Hal., 5, 61), it seems afterward to have been firmly attached to the Roman interests. (Livy, 8, 9.) Of its subsequent history we know but little; Lucan represents it as having fallen into ruins and be come deserted, in consequence of the civil wars (7, 394). At a later period, however, Laurentum appears to have been restored under the name of Lauro-Lavinium: a new city having been formed, as it is supposed, by the union of Laurentum and Lavinium. (Cicero, De nat. deor., 1, 3, seq.) The district of Laurentum, situated in the quarter of darknes or obscurity. (Compare the change of ά έπ an εί νις and είλλο; θελων and volo; κλείσις and clivus, &c.—Keightley's Mythology, p. 529.—Consult Mem. Acad. des Inscriptions, &c., vol. 7, p. 77, "De la Deesse Lavernae.")

LAVERNIA, a temple of Laverna, near Formiae. (Cic., Att., 7, 8.)

LAVINIA, a daughter of KingLatinus and Amata, promised by her mother in marriage to Turnus, but given eventually to Eneas. (Vid. Latinus.) At her husband's death she was left pregnant, and being fearful of Ascanius, her step-son, she fled into the woods, where she brought forth a son called Eneas Sylvius. (Virg., En., 6, 7.—Ovid., Met., 14, 507.—Liv., 1, 1.)

LAVINUM, a city of Latium, situate on the river Numicius, near the coast, and to the west of Ardea. It was said to have been founded by Eneas, on his marriage with Helena, daughter of Laberius. (Strabo, 323; Polyb., 61, 145.—Liv., 1, 1); this story, however, would go but little towards proving the existence of such a town, if it were not actually enumerated among the cities of Latium by Strabo and other authors, as well as by the Itineraries. Plutarch notices it as the place, into which Tatius, the colleague of Romulus, was assassinated. (Vit. Rom.) Strabo mentions that Lavinium had a temple consecrated to Venus, which was converted into a temple of Minerva. (R., 6.) The inhabitants are styled by Pliny (3, 5) Laviniates Ulyssenae. Lavinum and Laurentum were latterly united under the name of Lauro-Lavinium. (Front. de Col. —Symmachus, 1, 65.—Vulp., Vet. Lat., 10, 6.)

Various opinions have been entertained by antiquaries relative to the site which ought to be assigned to Lavinium. Cluverius placed it near the church of St. Petronella (Ital. Ant., 2, p. 984); Holsteinus on the hill, called in all Latin, the Laurentina (Strabo, 322). This is the place called Practice, about three miles from the coast. (Vulp., Vet. Lat., 10, 1.—Nibby, Viaggio Antiquario, vol. 2, p. 265.—Cramer's Anc. Italy, vol. 2, p. 19.)

Laureacum, a fortified town of Noticum Ripense, the station of a Roman fleet on the Danube, and the headquarters of the second legion. (Notit. Imp. Occident.) It lay to the east of the junction of the Oenus and Danube. The modern village of Lokh stands near the site of this place, a short distance to the north of the present city of Ens. (Mannert, Geogr., vol. 3, p. 637.)

Laurentes Agricola, the country in the neighbourhood of Laurentum. (Tabull., 2, 5, 41.)

Laurentum, the capital of Latium, about sixteen miles below Ostia, following the coast, and near the spot now called Paterna. (Vulp., Vet. Lat., 10, 1.—Nibby, Viaggio Antiquario, vol. 2, p. 313.) Cluverius and Holsteinus are both wrong in assigning to Laurentum the position of San Lorenzo. Of the existence of this city, whatever may be thought of Eneas and the Trojan colony, there can be no doubt; without going so far back as to Saturn and Picus, it may be asserted, that the origin of Laurentum was most ancient, since it is mentioned among the ancient cities of Rome and Carthage, recorded by Polybius (3, 22). Though Laurentum joined the Latin league in behalf of Tarquin, and shared in the defeat at the Lake Regillus (Dion. Hal., 5, 61), it seems afterward to have
LAURIUM.  

Laurium is a mining area in Attica, Greece, noted for its silver and lead deposits. The site is mentioned by ancient authors such as Pliny and Athenaeus. The mining area was known by various names, including Mauronoris, Mauronotis, and Mauronoris (Λαυρωνόριος). According to its description, it is an uneven range of hills full of exhausted mines and scorias. (Antig. of Attica, vol. 3, p. 13.) Mr. Hawkins, in his survey of this part of the Attic coast, discovered many veins of the argentiferous lead ore, with which the country seems to abound; he observed traces of the tower-mines not far beyond Korinthis. The site of the smelting furnaces may be traced to the southward of Thorico for some miles, immense quantities of scorias occurring there. These were probably placed near the seacoast for the convenience of the fuel, which soon became necessary to import. (Walpole's Memoirs, vol. 1, p. 430. — Gell's Itinerary, p. 79. — Dodwell's Tour, vol. 1, p. 358.)—The mines at Laurium were worked either by shafts (φωτα, putei) or adits (ἐνόπους, canae); and by neither of these two modes of working did they, in the time of Xenophon, arrive at the termination of the ore (Xen., de Vestic, 24, 6). For the chambers of the mining timber was probably imported by sea (Demosth. in Mid. p. 568, 17), which, according to Pliny (33, 21), was the case also in Spain. Hobhouse mentions (l.c.) that one or two shafts have been discovered in a small shrubby plain not far from the sea, on the eastern coast; and he states also that a splendid column of stone, partly found, was shown to him at Athens. If the hole which Chandler (Travels, c. 30) saw upon Mount Hymettus was really, as he conjectures, a shaft, it follows that some, at least, had a considerable width, for the circular opening was of more than forty feet in diameter; at the bottom of the hole the two narrow passages led into the hill in opposite directions. It was also the practice, according to Vit. X., to lead the water by open conduits down into the shafts (T., 7). The pillars which were left standing alone at the bottom of the shafts show that the part of the overlying mountain were called ὤμος, and more commonly μεσσοκοινεῖς (Plut., Vit. X., Orat.—Op., vol. 6, p. 256, ed. Hutt.—Pollux, 3, 87.—Id., 7, 98), as they, at the same time, served for the divisions between the different compartments, or, as they were called, workshops. As these pillars contained ore, the proprietors were tempted by their ava-"..."
he modern Liria, five leagues from Valencia. It was this city of which Sertorius made himself master in the face of Pompey's army; and in its vicinity, at a subsequent period, Cnemius Pompeius, son of Pompey the Great, was slain after the battle of Munda. (Plut., Vit. Sert.-Oros., b. 23.—Florus, 4, 2.—Cass., Bell. Hisp., c. 37.)

Láius, I., a river of Lucania, now Lao, running into the Sinus Lauis, or Gulf of Policastro, at the southern extremity of the province. At its mouth stood the city of Láius.—II. A city at the southern extremity of Lucania, at the mouth of the river Láius, and on the gulf of the same name. It was a colony of Sybarites (Herod., 6, 20.—Strab., 253), but beyond this fact we are very little acquainted with its history. Strabo reports, that the allied Greeks met with a signal defeat in the neighbourhood of this place from the Lucanians. These were probably the Posidoniate, and the other colonists on this coast, and we may conjecture that this disaster led to the downfall of their several towns. In Pliny's time Láius no longer existed. (Plin., 3, 5.—Pltol. p. 67.) Cluverius identified its site with the present Láino (Ital. Ant., 2, p. 1262); but later topographers have justly observed, that this town is fourteen miles from the sea, whereas the Tab. Itinerary evidently marks the position of Láius near the coast. It is more probable, therefore, that Seacle represents this ancient city. (Romantic., vol. 1, p. 351.)

Lauis Pompeia, a town of Cisalpine Gaul, next in importance to Mediolanum, and situate to the southwest of that place, near the river Lambros. It was founded, as Pliny reports, by the Boii (3, 17), and afterward probably colonized by Pompeius Strabo, father of the great Pompey. In a letter of Cicero to his brother, it is simply called Laus (2, 15). Its position answers to that of Lodi Vecchio, which, having been destroyed, the modern Lodi has taken. Barbareschi, a Roman Barther Balerno, now the new town of Lodi to be built at the distance of three miles from the ancient site. (Cramer's Anc. Italy, vol. 1, p. 53.)

Laotumé or Latomé, a name properly denoting a quarry, and derived from the Greek λαός, "a stone," and τῆμος, "to cut" or "quarry." This appellation was particularly applied to certain quarries near Syracuse, one of which still bears the name of "The Ear of Dionysius," because it is said to have been used by that tyrant. And to have been so constructed that all the sounds uttered in it converged to and united in one particular point, termed, in consequence, the tympanum. This point communicated with an apartment, where Dionysius placed himself, and thus overheard all that was said by his unsuspecting captives. Such is the popular opinion respecting this place, an opinion which has no other support save the narratives of travellers and the accounts of some modern historians, who have been equally misled by vulgar tradition. There is no doubt, however, but that these quarries actually served as places of imprisonment, and Cicero reproaches Verres with having employed them for this purpose in the case of Roman citizens. (Cic. in Verre, 5, 27.) Elian informs us, that some of the workmen in the quarries near Syracuse remained so long there as to marry and rear families in them, and that some of their children, having never before seen a city, were terrified on their coming to Syracuse, and beholding for the first time horses and oxen. (Elian. V. H., 12, 44.)

Leander, a youth of Abidos, beloved by Hero. The story of his fate will be found under the latter article. (Vid. Hero.)—The following remarks relate to his alleged feat of swimming across the Hellespont and returning the same distance. It was the custom, observes Holbeuse, "for those who would cross from Abidos to Sestos to incline a mile out of the direct line, and those making the contrary voyage were obliged to have recourse to a similar plan, in order to take advantage of the current. Leander, therefore, had a perilous adventure to perform, who swam at least four miles to meet Hero, and returned the same distance the same night. It is very possible, however, to swim across the Hellespont without being the rival or having the motive of Leander. My fellow-traveller (Lord Byron) was determined to attempt it." (Hobhouse's Journey, vol. 2, p. 218, Am. ed.) It appears, from what follows, that Lord Byron failed in his first attempt, owing to the strength of the current, after he and the friend who accompanied him had been in the water an hour, and found themselves in the middle of the strait, about a mile and a half below the castles. A second attempt was more successful; Lord Byron was in the water one hour and ten minutes, his companion, Mr. Ekenhead, five minutes less. Lord Byron represents the current as very strong and the water cold; he states, however, that they were not fatigued, though a little chilled, and performed the feat with little difficulty. The strait between the castles Mr. Hobhouse makes a mile and a quarter, and yet it took four boatsmen five minutes to pull them from point to point. All this tends to throw a great deal of doubt upon the feat of Leander, who could hardly have been a more expert swimmer than Lord Byron, and who, besides, had a longer course to pursue. Consult Lord Byron's own account (More's Life of Byron, vol. 2, p. 308). Turner's remarks appended to the volume just cited, p. 560.

Lesbēa, a city of Boetia, west of Coronea, built on a plain adjacent to the small river Hecryne. It derived its name from Lebadus, an Athenian, having previously been called Midea. This city was celebrated in antiquity for the oracle of Trophonius, situated in a cave above the town, into which those who consulted the Fates were obliged to descend, after performing a solemn rite. This temple was afterwards deserted, and occupied by Pausanias, who also gives a minute description of the sacred cavern (9, 39). The oracle was already in considerable repute in the time of Ctesias, who consulted it (Herod., 1, 46), as did also Mardonius. (Id., 8, 134.) The victory of Leuctra was said to have been predicted by Trophonius, and a solemn assembly was in consequence held at Lesbēa, after the action, to return thanks. This was known, however, to be false, and it is not improbable that the oracle was tampered with, as the story of those who had consulted it was often wrong. (Diod. Sic., 15, 53.) Strabo calls the presiding deity Jupiter Trophonius (Strab., 413), and so does Livy (45, 28), who says the shrine was visited by Paulus Æmilius after his victory over Perseus. The geographer Diæcearchus, as we are informed by Athenæus (13, p. 594, 4.), wrote a full account of the oracle. The modern town of Lesbēa stands near the site of the ancient city: the castle occupies the site of the Aeropoli. (Dodwell, vol. 1, p. 217.—Gell's Itin., p. 178.—Clarke's Travels, vol. 7, p. 168, Lond. ed.—Cramer's Anc. Greece, vol. 2, p. 240.)

Lēbēnus (Λέβηνος), one of the twelve cities of Ionia, northwest of Colophon, on the coast. It was at first a flourishing city, but upon the removal of a large portion of its inhabitants to Ephesus by Lysimachus, it sank greatly in importance. (Pausan., 1, 9.—Strab., 632.) In the time of Horace it was deserted and in ruins. It would seem to have been subsequently restored, as Hierocles, in the seventh century, speaks of it as a place then in existence. (Manzoni, Geogr., vol. 6, pt. 3, p. 316.)

Lechæum, that part of Corinth which was situated on the Sinus Corinthiacus, being distant from the city about 12 stadia, and connected with it by means of two long walls. (Strab., 360.—Xen. Hist. Gr., 4, 5, 11.) It was the central point which Cnemius connected with the western parts of Greece, as well as with Italy and Sicily. (Strab., 1, c. Polibh, 5, 24.—Id., 5, 24, 12.—Liv., 32, 23.) According to Sir W. Gell, 728
"Lecheum is thirty-five minutes distant from Corinth, and consists of about six houses, magazines, and a custom-house. East of it, the remains of the port are yet visible at a place where the sea runs up a channel into the fields. Near it are the remains of a modern Venetian fort." (Htin. of the Morea, p. 205.)

**LECTOMIA.** Ancient traditions, as well as physical observations, point out the former existence of the land of Lectonia, which would seem to have occupied a part of the space now filled by the Grecian Sea. An earthquake probably broke down its foundations, and the whole was finally submerged under the waters of the sea. Perhaps this event happened when the sea, which was formerly extended over the Scythian plains, forced its way through the Bosporus, and precipitated itself into the basin of the Mediterranean. (Compare remarks under the articles Cyaneus and Mediterraneum Mare.)

The numerous islands of the Archipelago appear to be the remains of Lectonia, and this tract of land probably facilitated the passage of the first colonists out of Asia into our part of the world. It was the opinion of Pallas that the Euxine and Caspian Seas, as well as the Lake Aral and several others, are the remains of an extensive sea, which covered a great part of the north of Asia. This conjecture of Pallas, which was drawn from his observations in Siberia, has been confirmed by Klaproth's survey of the country northward of Mount Caucasus. Lastly, M. de Choiseul Gouffier adds, that a great part of Moldavia, Wallachia, and Bessarabia must have been inundated by the sea. It has often been conjectured that the opening of the Bosporus was the occasion of the draining of this ocean in the midst of Europe and Asia. The memory of this disruption of the two continents was preserved in the traditions of Greece. Strabo (49), Pliny (2, 90), and Diodorus Siculus (5, 47), have collected the ancient memorials which existed of so striking a catastrophe. The truth of the story, however, rests on mere and scattered physical observations on the districts in the vicinity of the Bosporus. (Consult Dr. Clarke's Travels, and particularly a Mémoire by M. de Choiseul Gouffier in the Mens. de l'Institut, Royal de France, 1815, in which the author has collected much curious information on this subject.) It appears that the catastrophe was produced by the operation of volcanoes, the fires of which were still burning in the era of the Argonautic voyage. Castor and Pollux were thus transformed into the poetic characters of Apollonius and Valerius Flaccus. According to the false Orpheus, Neptune, being angry with Jupiter, struck the land of Lectonia with his golden trident, and submerged it in the sea, forming islands of many of its scattered fragments. There seems to be some resemblance between the name Lectonia and Lycaonia, but we must refer the latter term, not to a portion of Asia Minor, but to the northern regions of the globe. That name we have in Ovid (Fast. 3, 792) the expression "Lycaonia Arctos," in the same poet (Trist. 32, 2) "Lycaonia sub axe," and in Claudian (Cons. Malt. Thed., 299) "Lycaonia astra." By the northern regions of the globe, however, Italy and Greece can easily be meant, since they were both referred by the ancients to the countries of the North. ( Müller's Uniter. History, vol. 1, p. 32, in notis.—Ural. Mittheil. Gr. Arch. and Memo., vol. 1, p. 346.—Herminin in Orph. Arg. 1274.)

**LECTONIA.** A promontory of Troas, below the island of Tenedos, now Cape Baba. It formed the northern limit, in the time of the eastern empire, of the province of Asia, as it was termed, which commenced near the Maeander, and extended along the coast upward to Lectum. Dr. Clarke speaks of this promontory as follows: "The once we sailed to the promontory of Lectum, now Cape Baba, at the mouth of the Adramyttian Gulf: the southwestern extremity of that chain of mountains of which Garganus is the summit. This cape presents a high and bold cliff, on whose steep acclivity the little town of Baba appears, as though stuck within a nook. It is famous for the manufacture of knives and poisons: their blades are distinguished in Turkey by the name of Baba Lekiz." (Travels, vol. 3, p. 252, seqq., Lond. ed.) A very accurate view of the promontory is given in Gell's Topography of Troy, p. 21. The place was called Baba from a dervish (Baba) buried there, who always gave the Turks intelligence when any rovers were in the neighbouring seas. (Clarke, i. c., in notis.—Egmont and Heyman's Travels, 1, p. 192.)

**Leda,** a daughter of King Chassus and Eurythemis, who married Tyndarus, king of Sparta. According to the common account, she became, by Jupiter (who assumed for that purpose the form of a swan), the mother of Pollux and Helen, and by her own husband, the parent of Castor and Clytemnestra. Two eggs, it seems, were brought forth by her, from which, respectively, came the children just named, Pollux and Helen being in one, and Castor and Clytemnestra in the other. Other versions, however, are given of the legend, for which consult the articles Castor and Helena. (Virg., Aen., 3, 328.)

**LEDUM,** an epithet given to Hermione, &c., as related to Leda. (Virg., Aen., 3, 328.)

**LEGIO SEPTIMA GEMINA.** A Roman military colony in Spain among the Astures, northeast of Asturicas. It was first founded in 47 B.C., but was afterwards (332) restored by Augustus, as the馈. (Heym., fab. 28.—Ovid, Met., 7, 771.)—II. One of Acteon's dogs.

**LELEGES,** a name applied to Miletus, because once possessed by the Leleges. (Plin., 5, 29.)

**LELEGES,** an ancient race, whose history is involved in great obscurity, in consequence of the various and almost contradictory traditions which exist concerning them; according to which, they are on the one hand the ancestors of the Lelaps, and on the other, the inhabitants of Greece, while on the other they are said to be the same people as the Carians. Herodotus states (1, 171) that the Carians, who originally inhabited the islands of the Egean Sea, were known by the name of Leleges before they emigrated to Asia Minor; and according to Pausanias (7, 2, 4), the Leleges formed only a part of the Carian nation. The Leleges appear, from numerous traditions, to have inhabited the islands of the Egean Sea and the shores of Asia Minor from a very early period. In Homer they are represented as the allies of the Trojans; and their king Altes is said to have been the father-in-law of Priam. (II. 20, 96.—Ili. 21, 86.) They are said to have founded the temple of Juno in Samos (Atheneus, 15, p. 672), and Strabo informs us that they once inhabited, together with the Carians, the whole of Ionia. (Strab., 331.)—On the west coast, in the interior of the peninsula, respecting them in the north of Greece, we find no connexion between them and the Carians. According to Ariostello (quoted by Strabo, 332), they inhabited parts of Acarnania. Etolia, Oupan- tia, Locris, Lucaea, and Boiotia. In the south of Greece we again meet with the same confusion in the traditions of Megara respecting the Leleges and the Car- rians. Car is said to have been the most ancient of the Leleges, and to have been succeeded in the royal power, after the lapse of twelve generations, by Lelex, a foreigner from Egypt. (Pausan. 1, 39, 4, seq.)
Pylus, the grandson of this Lelx, is said to have led a colony of Megarian Lelges into Messenia, where he founded the city of Pylus. (Pausan., 4, 36, 1.) The Lacedaemonian traditions, on the contrary, represent the Lelges as the original inhabitants of Laconia. (Pausan., 3, 1, 1.) It can scarcely be doubted, from the numerous traditions on the subject, that the Lelges were in some manner closely connected with the Carians. (Vid. Cuv. ; Encyc. Us. Knoss.) The position is, that the Lelges were a people of Pelasgian race, a portion of whom emigrated at a very early period from the continent of Greece to the islands of the ^Egean Sea, where they became connected with the Carians (who were a portion, probably, of the same great family), and subsequently joined them in their descent upon Asia Minor. (Thirtall's History of Greece, vol. 1, p. 44.—Phildalpous Museum, No. 1, s. v. Ancusae.—Encyc. Us. Knoss., vol. 13, p. 417.) Lelx, an Egyptian, said to have come with a colony to Megara, and to have attained to kingly power there. (Pausan., 1, 39, 4.—Vid. Lelges.)

Lemnias Portus, or Lymne, a harbour of Britain, a little below Dover, where Caesar is thought to have landed on his first expedition to that island, having set out from the Portus Itius in Gaul, a little south of Calais. (Vid. Itius Portus.)

Lemnos, an island of the lake of Gaul, in the southwest angle of the territory of the Helvetii, and separating them in this quarter from the Allobrogos. It is now the lake of Geneva. This is a most beautiful expanse of water in the form of a crescent, the concave side of which is upward of 45 miles long. Its greatest breadth is about 12 miles. It never wholly freezes over in the severest winters, and it rises about ten feet in summer, by the melting of the snows on the Alps. Besides the Rhone, which traverses its whole length, there are several rivers emptying into it from the west (e.g. the Stalimene.) Lemnos is known in ancient mythology as the spot on which Vulcan fell, after being hurled down from heaven, and where he established his forge. A volcano, which once was burning on the island, may have afforded ground for the fable. A story is also recorded by Herodotus and other ancient writers of the women of Lemnos having murdered all the men. (Vid. Hypsipyle.) Homer states that the earliest inhabitants of this island were the Sintians, a Thracian tribe (II, 1, 593.—Strabo, Eoc., 7, p. 331), whence Apollonius Rhodius terms it Τυρησία Αέμηνον (1, 609.—Compare Solch. Thom., 2, 98.—Steph. Byz., s. v. Αέμηνον.) To these succeeded the Tyrrhenian Pelasgi, who had been driven out of Attica. They are said to have afterward stolen some Athenian women from Brauron, and carried them to Lemnos; and it is also said, that these children of these women having despaired of their half-brethren, born of Pelasgian women, the Pelasgi took the resolution of murdering both the Athenian women and their offspring. In consequence of these atrocities, Lemnos had a bad name among the ancient Greeks. (Consult Erasm., Chil. col., 297, s. v. Αέμηνον κακόν.) Lemnos was still in the possession of these Pelasgi when it was invaded and conquered by Otanes, a Persian general. (Herod., 5, 28.) But on his death it is probable this island was subsequently reconquered; for we know nothing subsequent to this event, Miltiades conquered it for Athens, and expelled those Pelasgi who refused to submit to his authority. (Herod., 6, 140.) During the Peloponnesian war Lemnos remained in the possession of Athens, and furnished that state with its best light-armed troops. (Thucyd., 4, 28.—Id., 7, 57.) Pliny speaks of a remarkable labyrinth which existed in this island, and of which some vestiges were still to be seen in his time. He says it had massive gates, so well poised that a child could throw them open, and one hundred and fifty columns, and was adorned with numerous statues, altars, pictures, and splendid than those of Crete or Egypt (36, 13). Modern travellers have in vain attempted to discover any trace of this great work. Dr. Hunt says (1, p. 61), "we could only hear a confused account of a subterranean staircase in an uninhabited part of the island called Pouniah." This spot the Dr. visited; but he was of opinion that those ruins have no relation to the labyrinth mentioned by Pliny. He conceives them rather to belong to Hephasteia—i.e. contained a remarkable volcano, called Mosychlus, from which fire was seen to blaze forth, according to a fragment of the poet Antimachus, preserved by the scholarist on Nicander (ad. Ther., 472). This volcanic appearance will account for the ancient name of Αθαλία, which Lemnos is said to have borne in distant ages. (Polyb., ap. Steph. Byz.—s. v. Αϊθαλία.) The whole island," says Dr. Hunt, "bears the strongest marks of the appearance of volcanic fire; the rocks in many places are converted into a sort of varnished and beautiful porphyry, which is sold in the markets of Alexandria." (Wagpole's Memoirs, vol. 1, p. 59.—Cramer's Anc. Greece, vol. 1, p. 338.) Sonnini, also, before this, remarked respecting this island, that internal fires were very probably still burning there, for he met with a spring of hot water which had been brought to supply baths, and with another of aluminous water. The priests of Lemnos were reckoned famous for the cure of wounds, and the efficacy of their skill was so great, that the name of their island, Lemnos, was probably the origin of the celebrated species of red earth found in the island, called Lemnian earth. This the ancients thought a sovereign remedy against poisons and the bites of serpents, but it is now held in little or no esteem in Europe, although the Greeks and Turks still believe it to possess wonderful medicinal properties. It is dug out of a hill in the island with great ceremony and at particular times, in presence of the Turkish sandjak or governor of the island, under the superintendence of the bishop, and is shaped into little balls and stamped with the governor's seal, whereas it has derived the name of terra sigillata ("sealed earth"). The governor makes a traffic of it, and sends it to Constantinople and other places. It is also used for tanning leather. The modern name of Lemnos is Stalimene. (Cramer's Anc. Greece, vol. 1, p. 398.)

Lemovices, I. a people of Celtic Gaul, subsequently incorporated into Aquitania. They were situated to the south of the Bituriges Cubi and to the west of the Arverni. Their capital was Augustomurium, afterward called Lemovices, now Lomorges, in the department de la Haute-Vienne. (Cas., B. G., vol. 7, 4.)—II. A people of Gaul, forming part of the Armorican nations, and lying to the east and northeast of the Osismii. (Cas., B. G., vol. 7, 75.) Some scholars, however, with great probability, suppose that the text of Caesar, where mention is made of them, requires correction, and that for Lemovices we ought to read Leones. (Consult Lemaire, Ind. Geogr., ad Cas., p. 295.)

Lemures, a name given by the Romans to the spirits of the departed, also called Manes. If beneficent, they were termed Lares; if hurtful, Larves. (Vid. Lares, p. 731, col. 2, near the end.) Solomon celebrated by the name of the Lemures, called Lemuria. They began on the night of the 9th May, and were continued for three nights, not successively, but alternately during six days. Midnight was the time for their celebration. The master
of the house then arose, and went barefoot, through the darkness, to a fountain, where he washed his hands. Then, of a sudden, he appeared in the middle of the house without a sound; the people were startled to see him, and a low noise ran through the whole house. The mere shadow of him, and he was seen tomoving the window in a manner that might be gathering around. After he had washed his hands three times, he returned, casting a glance at the house, and uttering in a low tone the following words:—"With these eyes do I ransom myself and my family." He repeated these same words nine times, with the same formality, and without any explanation. Then, after a short interval of silence, he exclaimed with a loud voice, striking at the same time on a choral vessel, "Paternal Maues, Le- mures, deities of the lower world, depart from this abode." Fines were immediately kindled in every part of the mansion, and the ceremony ended. During the time for celebrating these rites the temples were closed, and no one could be united in marriage.

(OLD, Fast, 5, 421, seqq.—Pers., Sat., 5, 185.—Horat., Epit., 2, 2, 203.)

LENTUS, a surname of Bacchus, from ληπός, a wine-press. (Vid. Bacchus, and also Theatrum, § 2, Dramatic Contest.)

LENTULUS, a family name of one of the most ancient and distinguished branches of the Gena Cornelia. The appellation is said to have been derived from the circumstance of one of the line having been born with a wart on his visage, shaped like a lentil (lens, gen. lentus). It was observable, however, that the appellation arose from some peculiar skill displayed by the founder of the family in the culture of the lentil. The most eminent or best known of the Lentuli were the following:—I. L. Cornelius, was consul A.U.C. 427, B.C. 327, and cleared Umbria of the brigands that infested it. He was present, six years afterward, at the disastrous affair of the Furiae Caudina, and was one of those who exhorted the Roman consuls to submit to the decision of the Samnite Senate, in order to save the whole army. (Liv., 8, 22, seqq.—Id., 9, 4.) II. P. Cornelius, surnamed Sura, a Roman nobleman, grandson of P. Cornelius Lentulus, who had been Princeps Senatus. He married Julia, sister of L. Julius Caesar, after the death of her first husband, M. Antonius Creticus, to whom she had borne M. Antonius the triumvir. Lentulus was a man of talents, but extremely corrupt in his private character. He was as a public citizen, and his family in his manners, proceeding from a love of popularity, raised him through the usual gradations of public honours to the office of consul, which he obtained B.C. 73, in conjunction with Cn. Ausidius Orestis. Expelled subsequently from the senate on account of his immoral conduct, he had procured the praetorship, the usual step for being restored to that body, when Catiline formed his design of subverting the government. Peveril ventured on the natural consequence of exasperation, added to immoderate vanity and extravagant ambition, induced him to join in the conspiracy. The soothsayers easily persuaded him that he was the third member of the Cornelian house, destined by the Fates to enjoy the supreme power at Rome, Cinna and Sylla having both attained to that elevation. His schemes, however, all proved abortive: he was arrested, along with others of the conspirators, by the orders of Cice- rius, who, having denounced to the consuls, and having been, brought before a full senate, was condemned to death, and strangled in prison. Plutarch informs us that he received the name of Sura from the following circumstance. He had wasted a large sum of money in his quaeestorship under Sylla, and the latter, enraged at his conduct, demanded a statement of his accounts in the senate. Lentulus thereupon, with the utmost indignation, declared he had no accounts to produce, and contemptuously presented the calf (sura) of his leg. Among the Romans, and particularly among the boys, the player at tennis who missed his stroke presented the calf of his leg, to receive as a punishment. The practice was very common in Lentulus, in allusion to that game, acted in this manner: he followed for the surname, or, rather, nickname of Sura. (Sall., Bell. Cat.—Plut., Vit. Cic.)—III. P. Cornelius, surnamed Spinder, held the office of curule adile B.C. 65, when Cicero and Antonius were consuls. His great wealth enabled him to display a magnificence in the celebration of the games which surpassed what had ever before been seen at Rome. In the year 59 B.C. he was praetor of Hispania Citerior. He was elected consul with Q. Cassius Metellus Nepos, and procured, with others, the recall of Cicero from banishment. In the civil war he attached himself to the side of Pompey, and, having been taken prisoner, was brought before Caesar at Corfinium, and set at liberty. He fought in the battle of Pharsalia, and fled to Rhodes; but the Rhodians refused him protection. Nothing farther is known respecting him. According to Valerius Maximus, he received the sur- name of Spinther from his resemblance to a comedian of that name. (Val. Max., 9, 14, 4.—Cic., Off., 2, 16.—Id., ad Quir. post. Red., 5.—Id., Ep. ad Fam., 13, 48, &c.)—IV. Cn. Galuticus, was consul A.D. 26, and was put to death by Caligula on a charge of conspiracy. (Dio, Cass., 59, 22.—Sueton., Vit. Claud., 9.) He was distinguished as an historical and a poetical writer. (Voss., Hist. Lat., 1, 25.—Crass. ad Sueton., 42.)

Leo, I. a philosopher or astronomer of Constantinople, in the first half of the ninth century. He is spoken of in high terms by the Byzantine writers. One of his numerous pupils having been taken prisoner by the Arabsians and conducted to Bagdad, astonished, it is said, the Caliph Al-Mamoun by the extent of his astronomical knowledge. The surprise of the Mus- simian prince was, however, greatly increased when he learned that he was but a mere scholar. When the Caliph ascertained that it had reached its height when he was informed that the preceptor from whom he imbibed his learning was living in obscurity at Constantinople. The caliph im- mediately invited Leo to leave a country where his merits found no reward, and come to a court where the sciences were honoured. Leo dared not, however, leave the capital of the East for such a purpose, with- out first obtaining the permission of the reigning em- peror. He submitted his reasons and explanations, and gave his assent, but bestowed many appointments on the hitherto neglected astronomer, and gave him the use of a church for his public lectures, which had be- fore been delivered in a mere hut. The caliph then addressed a remarkable letter to Theophilus, requesting him to allow Leo to spend only a short time with him, and promising him, in return, a large sum of mon- ey, and a lasting peace and alliance. Theophilus per- sisted in his refusal, but opened, at the same time, a public school for Leo in one of the imperial palaces, assigned to him the instruction of the youth of the capital, and loaded him with honours and privileges. He was subsequently appointed to the archbishopric of Thessalonica; but, being a decided enemy to images, was compelled to abandon his see when the heresy of the Iconoclasts was condemned, A.D. 849. He re- turned upon this to Constantinople, and resumed his cell in the monastery of the Metamorphosis. As he has left no work behind him, we can form no opinion of his scientific merits; for the reputation which his pup- il gained at the court of Bagdad, and the eulogiums bestowed on Leo himself by the Byzantine writers, ought not to carry any very great weight with them. It should be remarked, however, that Caesar Bards, wishing to revive the sciences at Constantinople, fol- lowed himself to be directed in this enterprise by the advice of Leo. (Le Beau, Histoire du Bas-Empire, vol. 7, p. 69, seqq.—Vol. 7, p. 136.—Scholl, Hist. 731.)
LEO.

Lit. Gr., vol. 7, p. 58.)—II. An historical writer, sur
named the Carian, who published a continuation of
Theophranes. His work, which extends from A.D.
813 to 949, is entitled Χρονογραφία τα των νεω βα-
sαλίων περίεχον, "Chronicle of the late emperors.
We have an edition of this work by Comenius, Paris,
1555, fol.—III. Surnamed the Deacon (Διάκονος),
born about A.D. 950, at Cela, a village of Ionia at
the foot of Mount Ida. He was created by vir-
tue of his office of Διάκονος, to the court of the Greek
emperors, which is nearly all that we know of his per-
sonal history. He wrote, in ten books, a history of the
emperors Romanus II. the younger, Nicephorus
Phocas, and John Zimisces, that is, of the years in-
cluded between 959 and 975. His object in compo-
sing this work was to give a histoire raisonnee of the
events which took place under his own eyes. Such an
undertaking, however, was beyond his strength. His
style is inere, his language is not always clear, and we are ofen
startled at the introduction of Latin words in a Greek
garb. His work abounds with specimens of false elo-
quence and bad taste: occasionally, however, we meet
with agreeable and pleasing details. The best ed-
tion at present is that of Hase, Paris, 1819, folio.
The work will form a part, however, of the new ed-
tion of Byzantine writers now in a course of publica-
tion, under the direction of Mageng and Mageng,
Metropolitan of Myilene, flourished about 1340 A.D. He
wrote commentaries on the works of Aristotle "On Inter-
pretation," and the "first Analytics." The first of
these commentaries is given in the Aldine collection
of the Peripatetic writers, 1503; the second at the end
of the Venice edition (1536) of John Philoponos.

V. The First, surnamed the Great, an emperor of the
East, born in Thrace of an obscure family, and who
owed his advancement through the various gradations of
the military ladder only to the favor of And, a
Greek chief who commanded the auxiliaries, and
his son Ardabarius. Leo was in command of a body
of troops encamped at Selymbria, when his ambi-
tious protector made him ascend the throne left va-
cant by the death of the virtuous Marcian. The Senates confirmed this choice; and Leo was acknow-
ledged as emperor at the head of the forces, Feb.
7, A.D. 457, by the senate, presided over by the
patriarch of Constantinople. It is believed to have been
the first example given of this sacred sanction in the ele-
vation of a monarch to the throne. Aspar soon per-
ceived that Leo would not long support the yoke im-
posed upon him. A quarrel arose between them rel-
tive to the party of the Eutychians who had massa-
cred their bishop and appointed another in his stead.
Aspar espoused the cause of the latter, but Leo drove
him from his palace and appointed an orthodox prelate
to the vacant place. Leo had already before this ob-
tained some signal successes over the barbarians, and
had restored peace to the empire of the East. He
whish also to put an end to the troubles of the West-
ern Empire, torn by the ambition and fury of Ricimer,
desolated by Genseric, and governed by mere phan-
toms of emperors. Genseric braved the menaces of
Leo. The latter, whose armies had just repelled the
Huns, and slain one of the sons of Attila, united all
his forces, and sent them into Africa against the Vam-
dal prince; but the inexperience, or, according to Propocius, the treachery of Basiliscus saved Genseric,
and the Roman army returned ingloriously home.
Aspar and his son were suspected of having contribu-
ted by their intrigues to bring about these reverses, and
Leo, warried out with their audacity, determined
to put an end to it. Afraid, however, of their power,
he feared to annul the supremacy of his son-in-
law, he flattered Aspar with the hope of a union between
Patricia, a son of the latter, and Ariadne, daughter
of the emperor. A report of this intended match, pur-
posefully circulated abroad, excited the indignation of the
populace, who hated the family of Aspar on account
of their Arian principles. A sedition ensued. Aspar
and his sons were compelled to fly for refuge to the
church of St. Euphemia, and were only induced to
quit this asylum on the urgent invitations of Leo,
confirmed by oaths, for them to come to the royal pal-
ace. The moment they arrived there, Aspar and Ar-
dabarius were beheaded. The Arians, enraged at
the loss of Leo's protectors, attacked Ricimer in ten-
able the repose of the West, and prevailed upon the
Goths to attack Constantinople. The environs of the
capital were in consequence laid waste for the space of
two years by these barbarian invaders, until Leo
succeeded in driving them off and concluding a peace.
He died A.D. 474, leaving the empire to the young
Leo, the son of his daughter Ariadne and of Zeno, an
Isaurian, whom he had made a patrician and captain
of his guards, in order to balance the power of Aspar.
He had first vainly endeavoured to fix the young
upon Zeno himself. Leo has preserved the reputation
of an active, enlightened, and vigilanti monarch, who
neglected nothing that had a tendency to promote the
welfare of his subjects. He promulgated wise laws,
and gave the example of moderation and economy
which had been so long needed in the state. He is
not exempt, however, from the charge of avarice, and
of weakness also, in allowing the ambition of Aspar
and Ricimer to overstep the bounds of due limits (p.
135.)—VI. The second, called also the Younger,
grandson of Leo I., and son of Ariadne and Zeno.
He was declared Augustus at the moment of his
grandfather's death. Although scarcely four
years old at the period of his elevation, this choice
was, notwithstanding, very agreeable to the people,
who detested Zeno on account of his Arian tenets and his
Isaurian origin. Verina, however, the wife of the
loved emperor, not Ariadne, the wife of Zeno,
neglected neither intrigues nor seductive arts to con-
ciliate for Zeno the favour of the populace. When
all difficulties were believed to be removed, Ariadne
conducted the young Leo to the hippodrome, and
placed him on an elevated throne. There the child,
a feeble tool in the hands of two ambitious females,
called Zeno to him, and, placing the crown on the
head of the latter, named him his successor: and,
tells us, they were both then beheaded, as was
supposed, by Zeno, his own father, after a reign of
about ten months. (Biogr. Univ., vol. 24, p. 136.)

VII. The third, surnamed the Isaurian, born in Isau-
ria of a mean family, and originally a dealer in cattle.
His true name was Conon. A prediction made to
him by some Jews, who declared that his fortune
would be a brilliant one if he changed his name and
took up the profession of arms, determined him
on a new career. He served at first as a private sol-
dier in the army of Justinian II. Here his zeal,
and some services which he had rendered, attracted
the notice of the emperor, who received him into his
guards, and raised him rapidly to the highest stations.
Justinian having at length begun to entertain fears of
his ambition, sent him on a dangerous expedition
against the tribes of Caucasus. After having signal-
ized his valour and military skill in the execution of
this order, Leo returned to Constantinople, and Anas-
tius, who was now on the throne, appointed him to
the command of the troops in Asia. On receiving in-
telligence of the deposition of Anastius, Leo refused
to acknowledge Theodosius III., whom the revolted
fleet had proclaimed emperor. The Saracens, who
were then ravaging the empire, excited Leo to seize
upon the seaports, and promising to aid him with all
his forces. He had great need of prudence and ad-
dress for managing these dangerous allies. Obliged
alternately to deceive and to intimidate them, he
found at last a fit moment for marching on Constanti-
ople, where Theodosius yielded up the throne to him

732
with scarcely any resistance. Leo was crowned emperor March 25, A.D. 717. The Saracens, whom he had amused by false pretences, now advanced to the capital, and besieged it by sea and land. In the extremity Leo had imposed his wife, Theodora, and courage, and, after long and obstinate conflicts, he succeeded in repelling his dangerous assailants. In 719, an attempt on the part of Anastasius to regain the throne failed through the activity of Leo, and the unsuccessful aspirant lost his head. He sustained also, with varied success, the repeated attacks of the Saracens in Sicily, Italy, and Sardinia. So many services rendered to the empire Leo had placed in the rank of great personages, he had not the fondness for theological quarrels, too common in those ages of ignorance, involved him in long and dangerous collisions. He espoused the cause of the Iconoclasts, and his severity drove many of the inhabitants into open rebellion. After a stormy conflict, marked by the most cruel persecutions, Leo died, A.D. 741, leaving the throne to his son Constantine Copronymus. (Biogr. Univ., vol. 24, p. 136, seq.)—VIII. The fourth, an emperor of the east, the son of Constantine Copronymus. He ascended the throne A.D. 775, and died A.D. 780, after an unimportant reign.—IX. The fifth, surnamed the Armenian, an emperor of the East, who rose from an obscure station to the throne. He succeeded the emperor Michael Rangabe, whom the soldiers rejected in a mutiny secretly fomented by the ambitious Leo. His reign continued for seven years and a half. He was the first emperor for fifty years that had delivered the military discipline introduced by him into the civil government. He was an Iconoclast, but his religious insobstancy obtained for him, in fact, the name of Chameleon. He was slain by a band of conspirators at the very foot of the altar, during the morning celebration of the festival of Christmas. (Gibbon, Decline and Fall, c. 48.)—X. The sixth, surnamed the Philosopher, an emperor of the East. He was the son of Eudoxia, wife of Basil I. The irregularities of his mother have left some doubt relative to his legitimacy; he was acknowledged, however, by Basil, as his son and successor. Already at the age of 19 years, the young prince had made himself beloved by all the empire. Santabares, however, the favourite of Basil, an artful and dangerous man, irritated at the contempt and hatred which Leo testified for him, sought every means to destroy Leo. He enjoined his son to have him cast into prison on suspicion of plotting against his father's life. A cruel punishment at first threatened him; but the parent relented, and his son, being allowed to justify his conduct, was restored to all his former honours. A little while after, the death of Basil left Leo master of the Eastern empire. He ascended the throne with his brother Alexander in 889; but the latter, given up to his pleasures, abandoned to Leo the whole care of the government. Perhaps the effeminacy and licentiousness of Alexander obtained for Leo, by the mere force of flattering comparison, the title of Philosopher, which his life in no degree justified. Scarcely had he ascended the throne when he deposed Photius, the celebrated patriarch, who was secretly connected with Santabares in the plot for his destruction. Santabares himself underwent a cruel punishment, and was then driven into exile. Leo, with the ill success which the ill success against the Bulgarians obliged him to submit to some terms of peace as those barbarians pleased to propose. A total defeat of his fleet by the Saracens also took place a short time before his death, which happened A.D. 911, after a reign of 25 years. "The name of Leo VI. has been dignified," observes Gibbon, "with the title of Philosopher, and the union of the prince and the sage, of the active and the speculative virtues, would indeed constitute the perfection of human nature. But the claims of Leo are far short of this ideal excellence. Did he reduce his passions and appetites under the dominion of reason? His life was spent in the pomp of the palace, in the society of false friends and concubines; and even the clemency which he showed, and the rigor which he strove to preserve, must be imputed to the softness and indolence of his character. Did he subdue his prejudices and those of his subjects? His mind was tinged with the most puerile superstition; the influence of the clergy, and the errors of the people, were consecrated by his laws, and the oracles of Leo, which reveal, in prophetic style, the fates of the empire, are founded on the art of fortunetelling and divination. If we still inquire the reason of his sage appellation, it can only be replied, that the son of Basil was less ignorant than the greater part of his contemporaries in church and state; that his education had been directed by the learned Photius; and that several books of profane and ecclesiastical science were composed by the pen or in the name of the imperial philosopher. But the reputation of his philosophy and religion was overthrown by a domestic vice, the repetition of his nuptials." (Decline and Fall, c. 48.) He was four times married, and had a son by each of these unions, but he lost three of his children successively at an early age. He left the empire to Constantine, his son by Zoe, his fourth wife.—We have remaining seventeen predictions or oracles of this pretended prophet, written in iambic verse. Rutgerius published the first sixteen, to which Leunclavius added the seventeenth, up to that of Constantine his son, who was then associated with him in the empire. Leo's principal work is that on Military Tactics, containing the elements of this branch of the military art: Τῶν εν στόλως τακτικῶν συνότοις, ου κακοί, ου Πολεμικῶν παρακεκλήσεως. It is a compilation from the works of Arrian, Aelian, and especially Onesander, and contains some curious illustrations of the state of military knowledge in his day. The best edition is the translation of Meursius, Leof. It was translated into French by Maizérot, Paris, 1771, 2 vols. 8vo. The libraries of Florence and of the Vatican are thought to contain many other military, and likewise some religious works, of this same emperor. (Biographie Universelle, vol. 24, p. 141, seq.)

**LEOCRAES, an Athenian statuary and sculptor, mentioned by Pliny (34, 6, 18) as having flourished in the 102d Olympiad. He built the Maenad, in connexion with Scopes, Bryaxes, and Timotheus, to whom some add Praxiteles.** (Plin., 36, 5, 4.—Vitruv., VII., Pref., s. 13.) A list of his works is given by Sillig, from ancient authorities. (Dict. Art., s. v.)

**LEONATUS, one of the generals of Alexander. On the death of that monarch he was appointed to the charge of Parygia Minor, which lay along the Hellespont. He was, however, on the side of the Per- dicæas to establish Eumenes in the kingdom of Capadocia, he communicated to the latter a plan which he had in view of seizing upon Macedonia. Eume- nes immediately divulged this to Perdicæas. The plan thus formed by Leonatus was based upon his as- sisting Antipater in the Laman war. Accordingly, though both Eumenes and Perdicæas knew his real in- stigations, he crossed over with a body of forces into Europe, and brought succour to Antipater against the confederate Greeks; but his ambitious designs were..."
LEONIDAS, I. a celebrated king of Lacedaemon, of a family of the Eurypontidæ, sent by his countrymen to re-establish the fortress of Thermopylae against the invading army of Xerxes, B.C. 480. A full narrative of the whole affair, together with an examination of the ancient statements on this subject, will be found under the article Thermopylae.—II. Son of Cleonymus, of the line of the Agidæ, succeeded Areus II. on the throne of Sparta, B.C. 257. Agis, his colleague in the sovereignty, having resolved to restore the institutions of Lycurgus to their former vigour, Leonidas opposed his views, and became the main supporter of those who were inclined to a relaxation of ancient strictness. He was convicted, however, of having transgressed the laws, and was obliged to yield the supreme power to Cleombrotus, his son-in-law. Not long after he was re-established on the Spartan throne, and avenged the affront which he had received at the hands of Agis, by impeaching him and effecting his condemnation. (Pausan., 2, 9.—Id. 3, 6.—III. A native of Alexander, who flourished at the beginning of the Christian era. He wrote, among other things, epigrams denominated ἰσόφραγα, arranged in such a manner, that the numerical value of all the letters composing any one distich is equal to that of the letters of any other. He was very probably the inventor of this learned species of trilling. (Schöll, Hist. Lit., vol. 4, p. 56.—Compare Jacobs, Catal. Poet. Epigramm., s. v.—IV. A native of Tarantum, who flourished about 375 B.C. He has left behind a hundred epigrams in the Doric dialect, and which belong to the best of those that have been preserved for us. (Jacobs, Catal. Poet. Epigramm., s. v.)

LEONTIN, a town of Sicily, situate about five miles from the seashore, on the south of Catana, between two small streams, the Lissus and Terias. The place is sometimes called by modern writers Leontium; this, however, is not only a deviation from Thucydides, who always uses the form Ἀλεύντων, but, in fact, is employed by no ancient author except Ptolemy; and Cluverius there suspects the reading to be a corruption for Ἀλεύντων. (Bloomfield, ad Thucyd., 6, 3.) It was founded by a colony of Chalceans from Eubea, who had come to the island six years before, and had then settled Naxos, near Mount Taurus; where Tauromenium was afterward founded. That they should have selected Leontium, which was only a small place, and a place which they would not have been likely to choose, to build a colony contrary to their own inclinations, is indeed strange; but it may be accounted for from the superior fertility of the plain of Leontium, which has ever been accounted the richest tract in Sicily; for the very same reason they soon afterward settled Catana. (Thucyd., l. c.—Bloomf., ad loc.) The Siculi were in possession of the territory where Leontium was founded prior to the arrival of the colony, and were driven out by force of arms. Leontium for a time flourished, and then became powerful, eventually sank under the superior power and prosperity of Syracuse. Its quarrel with this last-mentioned city led to the unfortunate expedition of the Athenians, whose aid Leontini had solicited. The city ultimately fell under the Syracusan power. The celebrated Gorgias was a native of this place. (Mannert, Geostr., vol. 9, pt. 2, p. 301, seqq.)

Leonfoma, an Athenian female, originally a hetairæ, and afterwards a wife. Her husband, Polykleitos, who pretended to be the old M Miles, the most eminent friend and disciple of Epicurus. Many slanders were circulated respecting her intercourse with the philosopher and his followers. She herself composed works on philosophy. (Diog. Laert., 10, 7.—Plut., non posse stam. v. Sec. Epic., 4, 16.—Cic., N. D., 1, 33.) A detailed biography of Leonfoma may be found in the Biographie Universelle (vol. 24, p. 170.—Compare Ritter, Hist. Philos., vol. 3, p. 402). Of the other hetairæ who frequented the garden of Epicurus, it may be supposed that they were only brought to the common meals in accordance with the custom of the day. (Ritter, l. c.).

LEOPOLD, I. a king of the Teutonic knight-errants, of the House of Hapsburg, reigning from 1158 to 1208; and of the line of the Hohenstaufen. He was of the party of Demosthenes, and the violence of his harangues in favour of democracy drew the well-known reproof from Phocion: "Young man, thy words are like the cypresses, tall and large, but they bear no fruit." He had, however, gained reputation enough to be chosen leader of a large body of mercenary soldiers; returned from Asia shortly before the death of Alexander, who, on that event being made known, were taken openly into the pay of the republic. His first exploit was the defeat of the Boeotians near Platea. After this he took post at Pyle, to prevent the entrance of Antipater into Greece, defeated him, and shut him up in Lamia, a town of Thessaly, to which he laid siege; and from that siege the Lamian war has its name. Leosthenes, however, was killed in the course of it; and after his death success deserted the Athenian arms. He left a high reputation; and his picture, painted by Arcesilas, is mentioned by Pausanias (1, 1) as one of the objects in the Pirusan worthy of notice. (Diod. Sic., 18, 9.—Id., 18, 11, seqq.)—II. An Athenian commander, condemned to death, B.C. 361, for being defeated by Alexander of Pherrae. (Diod. Sic., 15, 95.)

LEOTYChides, I. a king of Sparta, son of Menares, of the line of the Proclida. He ascended the throne B.C. 491, a few years before the invasion of Greece by the Persians, and succeeded to Demaratus. Having been appointed, along with Xanthippus the Athenian, to the command of the Grecian fleet, he gained, in conjunction with his colleague, the celebrated victory of Mycale. He afterward sailed along the coast of Asia Minor, causing the inhabitants to revolt, and received into alliance with the Greeks the Ionians and Samians, who, in the battle of Mycale, had been the first to declare in favour of their ancient allies. Some years after this, Leotychides having been sent into Thessaly against the Alcadian, suffered himself to be influenced by their presents, and retired without having gained any advantage. He was accused on his return, and, not deeming himself safe at Lacedaemon, he took refuge at Tegea, in the temple of Minerva Alea (499 B.C.). Zeuxidas, his son, being dead, Archidamus, his grandson, was placed on the throne. Leotychides died at Tegea 467 B.C. (Hephaest., 6, 60.—Cic., N. D., 8, 15.) He was the son of Agis, king of Sparta. He passed, however, most commonly for the son of Alcibiades, whom Agis had received into his abode when exiled from Athens. Although Agis had formally recognised his legitimacy, it was nevertheless disputed, and Lyssander eventually succeeded in having Agesilas his brother appointed king in his place. (Corn. Nep., Vit. Ages.—Pausan., 3, 8.)

LEPIDA, Emilia, daughter of Manius Lepidus, and wife of Drusus Caesar. She was engaged in an adulterous intercourse with Sejanus, and was suborned by that ambitious and profligate minister to become the accuser of her own husband to Tiberius. Notwithstanding her crimes, she was protected during her father's life, but, being afterward made a subject of attack by the informers of the day, she put an end to her own existence. (Tacit., Ann., 4, 20.—Id., 6, 40.)

Leptis, chief town of the province of Tripolita, which afterwards belonged to the Roman Empire. It was celebrated as a naval station from the time of Augustus. The remains of a theatre, built by the Roman emperor, are still to be seen there. (Cassius, 5, 5.)

LEPITTUS, son of C. Lepidus, who was a Roman senator, who was the partner of Pompey in the conquest of Asia, and who was employed as governor of the island of Rhodes. (Ann., 1, 22.—Id., 3, 22.)—III. Domitia, daughter of Drusus and Antonia. She was grand-niece of Augustus, and aunt of Nero, who destroyed her by poison. (Tacit., Ann., 13, 19.—IV. Domitia, daught
ler of Antonia the younger, by Lucius Domitius Aenobarbus. She was the wife of Valerius Messalla, and mother of Messalina, and is described as having been a woman of dignity and probity, and of a violent and impetuous spirit. In point of beauty and vice, she was the rival of Agrippina, Nero's mother. She was condemned to death through the influence of the same Agrippina. (Tacit., Ann., 11, 37. —Id., Ann., 12, 64. —Sueton., Vit. Claud., 26.—Id., Vit. Ner., 7.)

Lepidus, the name of one of the most distinguished families of the patrician gens, or house, of the Æmili. The individuals most worthy of notice in this family are the following: I. M. ÆMILIUS LEPIDUS, was sent as an ambassador to Ptolemy, king of Egypt, at the close of the second Punic war, B.C. 201. (Polyb., 16, 34.—Livy., 31, 2.—Compare Tacitus, Ann., 2, 67.) He obeyed the consulship B.C. 187 (Liv., 39, 5. —Polyb., 23, 1), and again in B.C. 175. In B.C. 179 he was elected Pontifex Maximus and Censor. (Livy., 40, 42.—Aut. Gell., 12, 9.) He was also Princeps Senatus six times. (Lan., Epist., 43.) He died B.C. 150. —II. M. ÆMILII LEPIDUS, was prior B.C. 81; after which he obtained the province of Sicily. (Cic. in Ver., 3, 91.) In his consulschip, B.C. 78, he endeavoured to rescind the measures of Sylla, but was driven out of Italy by his colleague Quintus Catulus and by Pompey, and retired to Sardinia, where he died the following year, while making preparations for a renewal of the war. (Appian, Bell. Civ., 1, 105.—Liv., Epit., 90.—Plut., Vit. Pompe., 16.) —III. M. ÆMILII LEPIDUS, the triumvir, son of the preceding, was aside B.C. 52, and prior B.C. 49, in which year Caesar came to an open rupture with the senatoric party. Lepidus, from his first entrance into public life, opposed the party of the senate; and though he does not appear to have possessed any of the talent and energy of character by which Antony was distinguished, yet his great riches and his family connexions made him an important accession to the popular cause. On the first expedition of Caesar into Spain, Lepidus was left in charge of the city, though the military command of Italy was intrusted to Antony. During Caesar's absence, Lepidus proposed the law by which the former was created dictator. In the following year, B.C. 48, he obtained the province of Hispania Citerior, with the title of proconsul; and in B.C. 46 was made consul for the first time, and master of the horse, an appointment which again gave him the chief power in Rome during the absence of the dictator in the African war. In B.C. 44 he was again made master of the horse, and appointed to the provinces of Gallia Narbonensis and Hispania Citerior; but he did not immediately leave Rome, and was probably in the senate house when Caesar was assassinated. After the death of Caesar, Lepidus was courted by both Brutus and Cassius. When, however, the Senate, which had decreed that an equestrian statue should be erected to him, in any part of the city he might fix upon, Lepidus promised to assist the senate; but, at the same time, carried on a secret negotiation with Antony. On his arrival in his province, being ordered by the senate to join Decimus Brutus, he at length found it necessary to throw off the mask; and, instead of obeying their commands, united his forces with those of Antony. Some weeks after, the celebrated triumvirate was established between Antony, Lepidus, and Octavius (Augustus); and in the division of the provinces, Lepidus received the whole of Spain and Gallia Narbonensis. The conduct of the war against Brutus and Cassius was assigned to Antony and Augustus: while the charge of the city was intrusted to Lepidus, who was again elected consul (B.C. 43). After the defeat of Brutus and Cassius, Antony and Augustus found themselves sufficiently powerful to act contrary to the advice and wishes of Lepidus; and, in the new division of the provinces which was made after the battle of Philippi, 31, Sardinia, with the African war, and proconsul from Lepidus, and Africa was given to him in their stead. Lepidus had now lost all real authority in the management of public affairs; but he was again included in the triumvirate, when it was renewed B.C. 37. In the following year he was summoned from Africa to assist Augustus in Sicily against Sextus Pompeius; and he landed with a large army, by means of which he endeavoured to regain his lost power, and make himself independent of Augustus. But in this attempt he completely failed. Being deserted by his own troops, he was obliged to implore the mercy of Augustus, who spared his life, and allowed him to retain his private property and the dignity of Pontifex Maximus, which he had obtained on the death of Julius Caesar, but deprived him of his province and triumvirate, and banished him, according to Suetonius, to Circell. (Sueton., Vit. Aug., 16.) After the battle of Actium, his son formed a conspiracy for the assassination of Augustus on his return from the East, which was discovered by Maccenas; and Lepidus, having incurred the suspicion of his former colleague, repaired to Rome, where he was treated, according to Dio Cassius, with studied insult and contempt. (Encycl. Us. Kanet., vol. 13, p. 438.)—IV. A companion of Caligula in his career of debauchery. The prince made him marry his sister Drusilla, and gave him hopes of being named in his will. But Lepidus, however, who would seem to have reckoned but little, after all, on the promises of the emperor, conspired against him. The conspiracy was detected, and cost its author his life. He is supposed by some to have been the son of Julia, grand-daughter of Augustus, and consequently cousin-german to Caligula. (Tacit., Ann., 14, 2.)—V. A poet of an uncertain period, a poem of whose, entitled Prodigiorum, was published by Aldus Manutius at Venice, 1598.

Leptonti, a people of the Alps, near the source of the Rhone, on the south of that river. The Leptonine Alps separated Italy from the Helvetii. The Leptoni are known to have inhabited that part of the Alps which lies between the Great St. Bernard and St. Gothard. (Cass., B. Gall., 4, 10.—Plin., 3, 20.—Strabo, 204.)

LEFTINES, 1. A son of Hermocrates, and brother of Dionysus, Callius, the Elder. He was sent against Magi, general of the Carthaginians, with the whole fleet of the tyrant, B.C. 396. At first he gained some advantages, but having separated himself too much from the main body of the fleet, he was surrounded by the enemy, and lost a large number of his vessels. After having remained for some time in a state of disgrace, he recovered the favour of the tyrant, and married his daughter. He commanded the left wing at the battle of the Syrtes, B.C. 353, where he also perished. Amicably. His fall occasioned the defeat of the army. (Diod. Sic., 14, 48.—Id., 14, 60.—Id., 15, 17.)—II. A Syracusan, who, in conjunction with Callipus, took the city of Rhegium, occupied by the troops of Dionysus the Younger (351 B.C.). He was subsequently in the number of those who massacred this same Callipus, to avenge the death of Dion. (Diod. Sic., 16, 45.)—III. A tyrant of Apulia. He was one of the other cities of Apulia, together with B.C. 342), and exiled to Corinth, (Diod. Sic., 16, 72.)—IV. An Athenian orator, who proposed that certain immunities from the burdensome offices of chorusag, gymnasiar, and hesi- tiater, which used to be allowed to meritorious citizens, should be taken away. A law was passed in accordance with this. Demosthenes attacked it and procured its abrogation. —V. A Syrian, general of Do- metrius, who put to death at Laodicea, Octavius, a commissioner whom the Romans had sent into the
East to arrange the affairs of Syria. He was sent to Rome, to be delivered up along with Isocrates, who was also a party to the murder, but the senate refused to receive either (Plut. fragm., lib. 31.—Op., ed. Btp., vol. 10, p. 29, seqq.)

Leptis, the name of two cities in Africa, distinguished by the epithets of Mrylyn (Magna) and Mirpdp (Pasa or Minor).—I. The first was situated towards the great Syris, at the southeast extremity of the district of Tripolis. Leptis Magna was founded by the Phoenicians, and ranked next to Carthage and Utica among their maritime cities. Under the Ro-

mans it was signalized, as Sallust informs us, by its fidelity and obedience. On the occupation of Africa by the Vandals, its fortifications appear to have been destroyed; but they were probably restored under Justinian, when the city became the residence of the prefect Sergius. It was finally demolished by the Saracens; after which it appears to have been wholly abandoned, and its remains, according to Leo Africanus, were employed in the construction of the modern Tripoli. The modern name is Lepidi. An acc-

count of the remains of the ancient city will be found in Beechy's Travels, p. 74, seqq., and in the Modern Traveller, pt. 49, p. 61. Capt. Beechy describes the country around Lepidi as beautiful and highly produc-
tive. (Mela, 1, 7.—Plin., 5, 4.—Strab., 574.)

II. The latter was in the district of Byzacium or Em-
porium, about 18 miles below Hadrumetum, on the coast. It is now Lempita. It paid a talent a day to the Carthaginians as tributo. (Vid. Emporium.) The Phoenicians, according to Sallust, were its founders. (Lucan, 2, 251.—Plin., 5, 19.—Sallust, Jug., 77.—

Mela, 1, 8.)

Lesina or Plauasia, a small island in the Medi-

terranean, on the coast of Gallia Narbonensis, south

of Nicea. It is now St. Margaretie. Strabo gives it the name of Plauasia, from its shape. (Tact., Ann., 1, 9.)

Lesina, a small lake in Argolis, near the western coast of the Sinus Argolicus, rendered celebrated by the fable of the many-headed hydra slain by Hercules, and connected also with the legend of the Danaides, who flung into its waters the heads of their murdered husbands. (Vid. Hercules, Hydra, and Danaides.) The Lermian Lake was formed by several sources, which discharged themselves into its basin. Minerva is said to have purified the daughters of Danaus by means of its waters; which circumstance subsequently-

ly was celebrated by an annual festival. The lake was esti-

mated, as Pausanias affirms, by Philammon, son of Apollo and father of Thamyris, in honour of Ceres. (Pausan., 2, 37.—Strab., 371.—Cramer's Ancient Greece, vol. 3, p. 237.)

Lesos, a small island off the coast of Caria, and forming one of the cluster called Sporades. (Plin., 5, 51.) It was peopled from Miletus, and very prob-
bly belonged to that city. Strabo gives its inhabi-
tants the name of Les were. (Vid. Egean.)

Lesbos, now Metelin, an island of the Egean, lying

off the coast of My西亚, at the entrance of the Gulf of Adriamttion. It was first settled by a body of Pelasgi, who, under the conduct of Xanthus their king, having been driven from Argos, passed from Lycia into this island, then called Issa, and named by them Pelaesia. Seven generations after this, and a short time subsequent to the downfall of Demophon, who gave the name of Macarea to Attica, then denominated Ionia, with a colony to this island. From him it received the name of Macarea. Lesbus, an Eolian, joined himself to this colony, married the daughter of Macarea, who was called Methyme, and gave his own name to the island after the death of his father-in-law. The elder daughter of Macarea was named Mytlene; her name was given to the capital of the whole island. This is said to have taken place two generations before the Trojan war. Homer speaks of the island under the name of Lesbos, as being well inhabited. Other, and perhaps more accurate accounts, make the Eolians to have two colonies in the island, for the first 130 years after the Trojan war. Herodotus makes five Eolian cities in Lesbos. Pliny mentions other names besides those already given, which seem, how-

ever, to have been merely general apppellations, deno-
ting some circumstance or feature in the island, as Hi-
mere, the wished-for, Lastia, the woody, &c. The island contained forests of beech, cypress, and fir trees. It yielded marble of a common quality, and the plains abounded in grain. Warm springs were also found; agates and precious stones. (Pococke, vol. 2, pt. 2, p. 20.) The most profitable production was wine, which was preferred in many countries to all the other Greek wines. To the present day, the oil and figs of Lesbos are accounted the best in the Archipelago. The island anciently contained nine cities, for the most part in a flourishing condition; among them Mytylene, Pyrrha, Metythna, Aries, Ereus, and Antissa: at present 120 villages are enumerated. From an insignificant monarchy, Lesbos first became a powerful democracy. The Lesbians then made great conquests on the Continent, and in the former territory of Troy, and even resisted the Athenians themselves. Lesbos was next disturbed by the Samians, and afterward by the Persians, to whom it was finally obliged to submit. After the battle of Mycale, it shook off the Persian yoke, and became the ally of Athens. During the Peloponnesian war, it separated more than once from Athens, but was always reduced to obedience. A distinguish-
ed citizen of Mytylene, exasperated that several rich inhabitants had refused his sons their daughters in marriage, publicly accused the city of an intention to conclude a league with the Lacedaemonians, by which false accusation he induced the Athenians to send a fleet against Lesbos. (Arisiot., de Rep., 5, 4.) The nearest cities, Metythna excepted, armed in defence of their capital, but were overpowered, the walls of Mytylene were demolished, and a thousand of the richest inhabitants put to death. The territory of Metythna alone was spared. The island itself was divided into 3000 parts, of which 300 were devoted to the service of the gods, and the rest divided among the Athenians, by whom they were rented to the an-
tient proprietors. (Thucyd., 3, 80.) The cities of Lesbos, nevertheless, soon rebelled again. The Lesbians, exasperated by the conduct of the Athenians, with whom the island was regarded as the abode of pleasure and licentiousness. At the same time they had the reputation of the highest refinement, and of the most distinguished intellectual cultivation. Poetry and mu-

sic made great progress here. The Lesbian school of music was highly cultivated, and is said to have had the following origin: When Orpheus was torn to pieces by the Bacchantes, his head and lyre were thrown into the river Acheron, and by the waves cast on the shores of Lesbos, near Met-

themna. Meanwhile harmonious sounds were emit-
ted by the mouth of Orpheus, accompanied by the lyre, the strings—of the latter being moved by the breath of the wind. The Metythmenae, therefore, buried the head, and suspended the lyre in the temple of Apollo; and, as a recompense for this, the god be-

came an object of veneration. The Metythmenae were a most refined and elegant people, and the artistic and poetic culture of this is the sister art of poetry. (Hy-

gin., Poc. Astron., 2, 7.) In reality, Lesbos produced musicians superior to all the other musicians of Greece. Among these the most distinguished were Arion and Terpander, Acaeus and Sappho, moreover, were esteemed among the first in lyric poetry. Pittacus, Theophrastus, Theophranes, Hellanicus, Myrillus, &c., were also natives of this island. A variety of hills, clad with vines and olive-trees, rise round the numer-

Lesbos.

Lesbos or Lesbo, a son of Lapithus, grandson of Aëolus, who married Methymna, daughter of Macareus. He succeeded his father-in-law, and gave his name to the island over which he reigned. (Vid. Lesbos.)

Leschos, a Cyclic bard, a native of Mytilene, or Pyrrha, in the island of Lesbos, and considerably later than Arctinus. The best authorities concur in placing him in the time of Archilochus, or about the 18th Olympiad (B.C. 708-704). Hence the account which we find in ancient authors, of a contest between Arctinus and Leschos, can only mean that the latter competed with the earlier poet in treating the same subjects. His poem, which was attributed by many to Homer, and was the subject to very different authors, was called Deidamia. A Little Iliad (Vid. Leschos) was intended as a supplement to the great Iliad. We learn from Aristotle (Poet., c. 23, ad fin., ed. Bekk. — c. 38, ed. Tyrren.), that it comprised the events before the fall of Troy, the fate of Ajax, the exploits of Philoctetes, Neoptolemus, and Ulysses, which led to the taking of the city, as well as the account of the destruction of Troy itself; which statement is confirmed by Herodotus, and returned to. The last part of this (like the first part of the poem of Arctinus) was called the Destruction of Troy: from which Pausanias makes several quotations, with reference to the sack- ing of Troy, and the partition and carrying away of the prisoners. It is evident, from his citations, that Leschos, in many important events (for example, the death of Priam, the end of Astyanax, and the fate of Ενώς, whom he represents Neoptolemus as taking to Pharsalus), followed quite different traditions from those of Arctinus. The connexion of the several events was necessarily loose and superficial, and without any unity of subject. Hence, according to Aristotele, while the Iliad and Odyssey only furnished materials for one tragedy each, more than eight might be formed out of the Little Iliad. (K. O. Müller, Hist. Gr. Lit., p. 66. — C. G. Müller, de Lesche Poetica.)

Lérus, I. one of the rivers of the lower world, the waters of which possessed the property of causing a total forgetfulness of the past. Hence the name, from the Greek λήσις (lésis), signifying "forgetfulness" or " oblivion." The shades of the dead drank a draught of the waters of Lérus, when entering on the joys of Elysium, and ceased to remember the troubles and sorrows of life.—II. A river of Spain. Its true name, however, was the Limius, according to Ptolemy, or, according to Pliny (4, 34), the Lusia. Strabo styles it the Belion. It was in the territory of the Calliacei, a little below the Minius. Its name, Lérus (or, as it should be rather termed, δή της λήσις, the river of forgetfulness), was given to it from the circumstance of the Celts and Turduli, who had gone on an expedition with united forces, losing here their common commander, becoming disunited, forgetting the object of their expedition, and returning to their respective homes. There was so much superstitious dread attached to this stream, that Brutus, in his expedition against the Calliacei, could with great difficulty induce his soldiers to cross. (Ubert, Geogr., vol. 2, p. 297.)

Lecua, a town of Italy, in Messapia, near the Iapygian promontory. It was in the country of the Salentini. The ancient name remains in the modern appellation of the Iapygian promontory, and also in the name of a church dedicated to the Virgin, under the title of S. Maria de Lecua. (D'Anville, Anal. Geogr., de l'Italie, p. 233.)

Lecuea, a town of Ionia, west of the mouth of the Hermus, at the entrance of the Smyrnes Sinus. It was washed by a promontory, which, according to Pliny (5, 29), was anciently an island. Near this place, Andronicus, the pretender to the crown of Pergamus, was defeated by the Roman consul Crassus. (Mel. i, 17. — Mannert, Geogr., vol. 6, pt. 3, p. 338.)

Lecuat of Leucadia, an island in the Ionian Sea, off the coast of Acarnania. It once formed part of the continent, but was afterward separated from the mainland by a narrow cut, and became an island. The modern name is Santa Mauro. In Homer's time it was still joined to the mainland, since he calls it 'Αρτέμις ὑπεροίκος, in opposition to Ithaca and Cephallenia. (Od. 24, 377. — Compare Strabo, 451.)

Scylax also affirms "that it had been connected formerly with the continent of Acarnania." It was first called Epileucadi, and extends towards the Leucadian promontory. The Acarnanians being defeated by the Greeks in the Gulf of Ambracia, the first name was preserved as the name of a thousand colonists from Corintha. These occupied the country which is now an island, the isthmus having been dug through. (Peripl., p. 13. — Compare Scymnus, Ch., v. 464. — Plut., Vit. Themist.) Strabo informs us, that this Corinthian colony came from the settlements of Ambracia and Anastorium; and he ascribes to it the cutting of the channel of Dioryctus, as it is commonly called (M., 7, 2.) This work, done, as Strabo must have been posterior to the time of Thucydides, for he describes the Peloponnesian fleet as having been conveyed across the isthmus on more than one occasion (3, 80 ; 4, 8). Livy, speaking of Leucas, says, that in his time it was an island, but in the Macedonian war it had been a peninsula (33, 17). Pliny reports, that it was once a peninsula called Neritos; and, after it had been divided from the mainland, was reunited to it by means of the sand which accumulated in the passage. The cut itself, three stadia in length, was, as we have already said, called Dioryctus (4, 2. — Polyb., 5, 5). Strabo says that in his time it was crossed by a bridge. (Strab., 452.) Dodwell states (vol. 1, p. 50), that the canal of Santa Mauro is fordable at the present day in still weather. The remains of a bridge are seen, which joined it to the continent, and which was built by the Turks when they had possession of the island. — The cape of which he was Leucadia was Lecuta. (Livy 33, 17) describes it as situated on the strait itself. It rested, according to him, on a hill looking towards Acarnania and the east. Thucydides (3, 94) likewise states, that the town was situate within the isthmus, as also Strabo (l. c.), who adds, that the Corinthians removed it to its situation on the strait from Nercum. Dr. Holland (vol. 2, p. 91) speaks of the ruins of an ancient city about two miles to the south of the modern town.—The island, however, is said to have been for a promontory at its southwestern extremity, called Leucate. It was celebrated in antiquity for being the lover's land, and is said by Strabo to have derived its name from the white colour of the rock. Sappho is said to have been the first to try the remedy of the leap, when enamoured of Phaon. (Menand., ap. Strab., l. c. — Ovid, Her., 15, 185.) Arretinians, quoted by Homer, so celebrated the Carian and returneth to the city of their respective homes. There was so much superstitious dread attached to this stream, that Brutus, in his expedition against the Calliacei, could with great difficulty induce his soldiers to cross. (Ubert, Geogr., vol. 2, p. 297.)

Virgil represents this cape as dangerous to mariners. (En., 3, 274; 8, 676.) Sir W. Geil describes it as a white and perpendicular cliff of considerable elevation, and has given a beautiful representation of it in one of the plates appended to his work.
on the Geography and Antiquities of Ithaca. On the summit of the promontory was a temple of Apollo. Strabo states a curious custom which prevailed, of casting down a criminal from this precipice every year, on the festival of the gods; and adds, that, in the town, and the environs of it, the practice continued, and was applied to all kinds of criminals. If he reached the water alive, he was picked up by boats stationed there, and allowed to depart from the territories of Leucadia. (Strab., 452.—Cic., Tusc. Q., 4, 18.—Cramer’s Anc. Greece, vol. 2, p. 13, seqq.)

LEUCATA, a promontory at the southwestern extremity of Leucas. (Vid. Leucas.)

This island in the Euxine Sea, near the mouth of the Borysthenes, is remarkable, that it was the same with the westernmost extremity of the Dromos Achillia, which was formed into an island by a small arm of the sea, and lay facing the mouth of the Borysthenes; now named Tenira. It derived its name from its white sandy shores. (Mannert, Geogr., vol. 4, p. 235.) According to the poets, the souls of the ancient heroes were placed here as in the Elysian fields, and enjoyed perpetual felicity. Here, too, the shade of Achilles is said to have been united to that of Helen. (Vid. Helena I.)

LEUCI, a people in the southeastern quarter of Gallia Belgica, and to the south of the Mediaticrini. Lucan speaks of them, in conjunction with the Remi, as very expert with the sling (1, 424). Their territory extended from the Matrona to the Mosella, and corresponded to the northeastern part of the department of the Upper Marne, and to the southern part of the departments of the Meuse and Meurthe, or, in other words, to the country around Toul. (Cass. B. G., 2, 14.—Tacit., Hist., 1, 64.—Plin., 4, 17) II. Montes (Arwyq tep), mountains in the western part of the island of Crete, to the south of Cydonia; now Aliprovosa. (Strabo, 475.)

LEUCIPPOS, I. a celebrated philosopher, of whose native country and preceptor little is known with certainty. Diogenes Laertius (9, 30) makes him to have been a native of Elea, and a disciple of Zeno, the Eleatic philosopher; he refers, however, at the same time, to other opinions, which assigned, respectively, Abdera and Miletus as his birthplace. (Compare Tennenmaa, Gesch. der Phil., vol. 1, p. 257.) He wrote a treatise concerning nature, now lost (Pseud. Orig. Phil., c. 12, p. 88.—Fabr., Bibl. Gr., vol. 1, p. 779), from which the ancients probably collected what they relate concerning his tenets. Dissatisfied with the metaphysical speculations of the four philosophers of the Eleatic school he confounded all evidence from the senses, Leucippus and his follower Democritus determined, if possible, to discover a system more consonant to nature and reason. Leaving behind them the whole train of fanciful conceptions, numbers, ideas, proportions, qualities, and elementary forms, in which philosophers had hitherto taken refuge, as the asylum of ignorance, they resolved to examine the real constituents of the world, and to inquire into the mechanical properties of bodies, that from these they might, if possible, deduce some certain knowledge of natural causes, and hence be able to account for natural appearances. Their great object was, to restore the alliance between reason and the senses, which metaphysical subtleties had dissolved. For this purpose they introduced the doctrine of indivisible atoms, possessing within themselves a principle of motion. Soon after, it was considered matter as divisible into indefinitely small particles, particularly Anaxagoras, Empedocles, and Heraclitus; but Leucippus and Democritus were the first who taught, that these particles were originally destitute of all qualities except figure and motion, and therefore may justly be reckoned the authors of the atomic philosophy. The following summary of the doctrine of Leucippus will exhibit the main state of this system, and, at the same time, sufficiently expose its absurdities. The universe, which is infinite, is in part a plenum and in part a vacuum. The plenum contains innumerable corpuses or atoms, of various figures, which, in their motion, struck against each other; and hence arose a variety of curvilinear motions, which continued till at length atoms of similar forms met together, and bodies were produced. The primary atoms being specifically of equal weight, and not being able, on account of their multitude, to move in circles, the smaller rose to the exterior parts of the vacuum, while the larger, entangling themselves, formed a spherical shell, which revolved about its centre, formed, as it were, a world in itself, and consisted of all kinds of bodies. This central mass was gradually increased by a perpetual accession of particles from the surrounding shell, till at last the earth was formed. (Diog. Laert., l. c.—Theodoret, Serm., 4.—Cic., N. D., 1, 42.—Plut., de Plac. Phil., 2, 7.—Id. ibid., 3, 12.) In the mean time, the spherical shell was continually supplied with new bodies, which, in its revolution, it gathered up from without. Of the particles thus collected in the spherical shell, some in their combination formed humid masses, which, by their circular motion, gradually became dry, and were at length ignited and became stars. The sun was formed in the same manner, in the exterior surface of the shell; and the moon in its interior surface. In this manner the world was formed, and, by an inversion of the process, it will at length be dissolved. (Diog. Laert., l. c.—Pseud. Orig. Phil., l. c.—Enfield’s History of Philosophy, vol. 1, p. 421, seqq.—Tennemann, Gesch. der Phil., vol. 1, p. 258, seqq.) II. A brother of Tyndarus, king of Sparta, who married Philodice, daughter of Inachus, by whom he had two daughters, Hilaire and Phoebe, known by the patronymic of Leucippides. They were carried away by their cousins, Castor and Pollux, as they were going to celebrate their nuptials with Lyneus and Idas. (Ovid, Fast., 5, 701.—Apoll., 3, 10, &c.—Pausan., 3, 17.)

Luscinia, a cape of Italy, in the territory of the Bruti, and regarded by all ancient writers on the geography of that country as the termination of the Apennines. Strabo (259) asserts that it was distant fifty stadia from Rhegium; but this computation ill accords with that of Pliny (3, 10), who removes it twelve miles thence. (Compare Cic., Phil., 1, 3.—Meta, 2, 4.) The error probably lies in the text of the Greek geographer, as there is no cape which corresponds with the distance he specified, and which is to the modern point of land which answers to Luscopatra; some fixing it at Cape Pittaro (D’Anville, AnaL Geogr. de l’Ital., p. 261), others at the Punta della Saletta (Grimaldi, Annal. del Regn. di Napoli, vol. 1, Introd., c. 28.—Romanelli, vol. 1, p. 97), and others at the Cape dell’ Arm. The latter opinion seems more compatible with the statement of Pliny, and is also the generally credited. (Clavertius, Ital. Antiq., vol. 1, p. 1299.)—Pittara, Collar, Geogr., Ant., 1, 2, c.—Notes to the French Strabo, l. c.—Cramer’s Ancient Italy, vol. 2, p. 433.)

Luzonhary, an ancient name of Tenedos, given to it probably from the appearance made by the summits of its chalk hills. (Pausan., 10, 14.—Manuet., Geogr., vol. 6, pl. 3, p. 510.)

Lucvcoila, a small island in the Sinus Parium. It was so called from Lucina, by which name its inhabitants called it, and from one of the Sirens. (Lycophron, v. 722, seqq.—Strabo, 252.) Dionysius (1, 53) calls it Leucasia. It is now known by the name of Licoesa ( Cue., Ital. Antiq., vol. 2, p. 1259), and sometimes by that of Isola piana. (Vid. Zannoni’s Map of the Kingdom of Naples.) It was once probably inhabited, as several vestiges of buildings were discovered there in 1696. (Antonin., della

Lucanovii, the Greek form of a name applied by the Persians to the Cappadocians, and signifying White Syrians. (Herod., 1, 72.—Id., 5, 45.—Id., 7, 72.—Strabo, 543.) The Persians called the Cappadocians by this appellation, because they considered them to be a branch of the great Syrian nation, from the resemblance of their language, customs, and religion, and because they found that they possessed a fairer complexion than their swarthy brethren of the south. The Greek colonies on the coast of Pontus received this name from the Persians, and expressed it by the forms of their own language, but, in its application, restricted it to the inhabitants of the mountainous country lying along the coast, from the Promontory Jasonium in the east, to the mouth of the Halys in the west, while they called the people in the interior of the country by the name of Cappadocians. The Lucanovii became in time blended into the nation of the Paphlagonians. Mannert, Geogr., vol. 2, pt. 2, p. 329, seqq.)

Leucotla, I. the name given to Ino after she had been transformed into a sea-goddess. Both she and her son Palaemon were held powerful to save from shipwreck, and were invoked by mariners. The name Leucotela is supposed to be derived from the white waves running rapidly on (Aorwri, white, and dJw, to run, to rush). In Lycia, the suppliants of the God Apollo, and buried alive by her insane father. The god caused the frankincense shrub to spring up from her grave. (Ovid, Met., 4, 196, seqq.)

Leuctra, a small town of Boeotia, southeast of Thebes, and west of Platae, famous for the victory which Epaminondas, the Theban general, obtained over the superior force of Cleombrotus, king of Sparta, on the 21st of July, B.C. 371. (Pausan. 9, 13.) In this famous battle 4000 Spartans were killed, with their king Cleombrotus, and no more than 300 Thebans. From that time the Spartans lost the empire of Greece, which they had held for so many years. The Theban army consisted at most of 6000 men, whereas that of the enemy was at least thrice that number, including the allies. But Epaminondas trusted most to his cavalry, in which he had much advantage over the king's body, and in this object the Theban general wisely chose to gratify them rather than hazard the success of another onset. According to Strabo (414), Leuctra was situate on the road from Thebes to Platae, and, according to Xenophon (Hist. Gr., 6, 4), in the territory of the former. An oracle had predicted that the Spartans would sustain a severe loss in this place, because some of their youths had violated two maxims of Leuctra, who afterward destroyed themselves. (Pausan. 9, 19, seqq.—Plutarch, Vit. Epamin. —Xen., Hist. Gr., 1, c.) The spot still retains in some degree its ancient name, Leuea, pronounced Leufia. Dr. Clarke noticed here several tombs and the remains of an ancient fortress upon a lofty conical hill. The ground in the plain is for a considerable space covered with immense fragments of marble and stone. (Clarke's Travels, vol. 7, p. 110, Lond. ed.—Compar. Ant., vol. 1, p. 261.—Cramer's Anc. Greece, vol. 2, p. 212.)

Leuctrum, I. a town of Messenia, on the coast, sixty stadia from Cardamyle. (Pausan., 4, 26.) In consequence of its frontier situation, it became a source of dispute between the Messenians and Lacoonians. Philip, the son of Amyrbius, who acted as umpire, proposed the place to the Messenians. (Plutarch, Alex. Philipp., 9) It is called Leuctra by Thucydides (5, 54) and Xenophon. The latter informs us it was situated above the promontory of Males. (Hist. Gr., 6, 5.) It was said to have been founded by Pelops. (Strab., 360.)

The ancient site is still distinguished by the name of Leuctro. —II. A small town of Achaia, on the Sinus Corinthiacus, above Ereum, and in the vicinity of Rhymph, on which latter he was despondent. (Itin. san., 7, 24.)—III. A town of Arcadia, beyond Magnopolis. (Pausan., 8, 27.) It is perhaps Leontari, near which Sir W. Gell remarked the site of a small ancient city. (Itin. of the Morea, p. 138.)

Leuxovii, a people of Gaul in Lugenursion Secunda, near the mouth of the Sequana, and on its left banks. Their capital was Noviomagus, now Lusium. (Cass., B. G., 3, 9.—Itin. Ant., 385.)

Libanius, a celebrated sophist of Antioch, in the age of the Emperor Julian, born A.D. 314, of a good family. At the age of fifteen he frequented a school of certain sophists, of whom he speaks with great contempt in his Biography, calling them etwfla sot-utw. Brought back to the truth path of learning by a more intelligent preceptor, he studied with ardour the finest models of antiquity. He continued his studies during four months at Athens, and afterward lived in Constantinople, where he was honored, not only as one of the instructors of Julian, and the Sophist Bemarcbus, were his teachers. Having failed in his expectation of obtaining a chair at Athens, he began to profess eloquence, or the sophistic art, at Constantinople. His success was brilliant, but excited the envy of his contemporaries. Bemarcbus, in particular, having been worsted by him in an oratorical contest, to which he had challenged his innumerable pupils, had made him a memorial of calumny for the purpose of effecting his destruction. He charged him with sorcery, and represented him as a man covered with vices. The prefect of the city lent a favourable ear to the charge, and Libanias was in consequence compelled to leave Constantinople (A.D. 346). He retired to Nicæa, and from this place he went to Nicomedæa, where he obtained great celebrity as an instructor. He was frequently engaged in the defence of his friend Aristimæus, the spring time of his life. Recalled at length to Constantinople, he found a new prefect there, who became the protector of his enemies and the persecutor of himself. Disgusted at this state of things, and not daring to accept a chair at Athens, which had been offered him, he obtained permission from Caesar Gallus to return for four months to his native city. This prince having been slain in 354, Libanias passed the rest of his days at Antioch, where he had numerous disciples. The Emperor Julian, who, before his expedition into Persia, knew him only by his writings, was his constant admirer. He named him quasor, and addressed many letters to him, the last of which, written during his expedition against the Persians, has come down to us. The death of Julian was a double loss for Libanias; it took away a protector, who had shielded him from the attacks of his enemy, and it caused to vanish the hopes which he had entertained of witnessing the re-establishment of paganism. Under the reign of Valens, Libanias was exposed anew to the persecution of his enemies, and was charged with being engaged in a plot against the tranquillity of the state. He succeeded, however, in establishing his innocence. He would even appear to have gained the good will of the monarch, for he composed a panegyric on him, and addressed to Constans a harangue, in which he requested a confirmation of the law that awarded to natural children a share of the father's property at his death. This law interested him personally, from the circumstance
of his having natural children of his own. If it be true that he lived to the time of Arcadius, he must have attained to more than 90 years of age. Besides his Προγυμνασμάτα, Libanius has left harmonies, declamations, Мιλετιά (discourses on imaginary subjects), stories, and letters on various points of morality, politics, and literature. All these pieces are well written, and though the style of Libanius is open to the objection of not being an elaborate care, we may notwithstanding perceive the power of the orator that Constantineople ever produced. Gibbon, therefore, would seem to have judged him altogether too harshly, when he characterizes his writings as, for the most part, "the vain and idle compositions of an orator who cultivated the science of words; and the productions of a recluse student, whose mind, regardless of his contemporaries, was incessantly fix'd on the Trojan man, and the Athenian commonwealth." (Decline and Fall, c. 24.) It is no little glory for this sophist to have been the preceptor of St. Basil and St. Chrysostom, and of having been connected in intimate friendship, notwithstanding the opposition of their religious sentiments, with these two pillars of the church.

—Libanius, as we have already remarked, was a pagan, and attached to the religion of his fathers. His tolerance forms a singular contrast with the persecuting zeal of the Christians of his time; and a remarkable proof of this is the work, which, in the days of Julian, he proposed to be retouched by himself, and, at the age of 60 years, unless there be some mistake in the number, and retouched by him when about 70 years. It forms the most interesting production of his pen. Another of these pieces is entitled Μονοβια, and is a Lament on the death of Julian. Libanius does not pretend to conceal, in this discourse, that one ground of his deplo- ring the death of Julian was his being a pagan, but the charity which would result therefrom. A third is a discourse addressed to Theodosius on the preservation of the temples and idols of paganism. A fragment of this discourse was discovered by Mai, in 1823, in some of the Vatican MSS. A fourth is entitled Τηρών Ἰερῶν, "Respecting the Temples." In this discourse, pronounced or written about A.D. 390, Libanius entreats the Emperor Theodosius to set bounds to the fanaticism of the monks, who were destroying the temples of paganism, especially those in the country, and to order the bishops not to connive at these excesses. —The Declamations, or exercises on imaginary subjects, exceed forty in number. Some idea may be formed of their nature by the titles of a few:

"Discourse of Menelaus, addressed to the Trojans, and demanding back his spouse." "Discourse of Achilles, in answer to Ulysses, when the latter was sent by Agamemnon to propose a reconciliation." "Discourse of a parasite who deplores the loss of a dinner," &c. —A very interesting part of the works of Libanius is his epistolary correspondence. There are more than 2000 letters written by him, and the number of persons to whom they are addressed exceeds 550. There are among these some illustrious names, such as the Emperor Julian, and his uncle, who bore the same name, governors of provinces, generals, jurists, &c. There are also among his corres- pondents some fathers of the church, such as St. Athanasius, St. Basil, St. Gregory of Nyssa, St. John Chrysostom, &c. As to the subjects of these letters, there are many, it must be confessed, of a very uninteresting nature, containing, for example, mere compli- ments, recommendations, or the recital of domestic affairs. A large number, however, have claims on our attention by the beauty of the ideas and sentences, the importance of the subject matter, and the historical illustrations which they have preserved for us. —We have also from his pen Arguments to the Speeches of Tryphon, or the Devil, which were re- dit:ed with the edition of the works of Libanius. The best edition of the Discourses and Declamations is that of Reiske, published by his widow ("profata est Ernestina Christina Reiske"). Lippa, 1791—1797, 4 vols. 8vo. A quarto edition, put forth by Reiske himself in 1784, was interrupted by his death, after only the first vol- ume had appeared. Still, however, a good edition is much wanted, as Reiske's has neither historical introduc- tions, commentary, nor even tables, and is, moreover, burdened with the inaccurate version of Morell. The most numerous collection of the Letters will be found in the edition of J. C. Wolf, Amat. 1738, fol. (Schöll, Hist. Lit. Gr., vol. 6, p. 159, seq.)

Libanius, a chain of mountains in Syria, deriving their name from their white colour (Rellandi, Palestina, p. 311), the eastern part in particular being covered with continual snow. (Jcr., 18, 14.) Some make the range commence in the Anti- Libanus mountains of Armenia, and give the general name of Libannus to the entire chain of mountains running thence to the south; it is more accurate, however, to make it begin near Aradus in Phoenicia, and, after forming the northern boundary of that country, run to the south, and end near Sidon. There are, however, several parallel chains, four of which, towards the west, have the gen- eral name of Libanius applied to them, while another parallel chain was called Antilibanus, and separate Liba- nus, that is to say, composed of four chains or enclosures of mountains, which rise one upon the other; the first is very rich in grain and fruits; the second is barren; the third, though higher than this, enjoys perpetual spring, the trees being always green, and the orchards full of fruit. It is so beautiful that some have called it a terrestrial paradise. The fourth is very high, so that it is difficult for man or beast to ascend the mount- taniety by reason of the great cold. Volney states that the snow remains on Libanus all the year round towards the northeast, where it is sheltered from the sea-winds and the rays of the sun. Maundrell found that part of the mountain-range which he crossed, and which, in all probability, was by no means the highest, covered with deep snow in the month of May. Dr. Clarke, in the month of July, saw some of the eastern summits of Lebanon, or Antiliban, near Damascus, covered with snow, not lying in patches, as is common in the summer season with mountains which border on the line of perpetual congelation, but do not quite reach it, but with "that perfect, white, smooth, and velvety-like appearance which snow only exhibits when it is very deep; a striking spectacle in such a climate, where the beholder, seeking protection from a burning sun, almost considers the firmament to be on fire." At the time this observation was made, the thermometer, in an elevated situation near the Sea of Tiberias, stood at 102° in the shade. Sir Frederic Henniker passed over snow in July; and Ali Bey de- scribes the same eastern ridge as covered with snow in September. We know little of the absolute height, and less of the mineralogy, of these mountains. Burch- hardt describes Lebanon as composed of primitive limestone; but Athanasius, and other ancient authors, make it more probably consists either of transition or mountain limestone. If so, it must be considered as one of the highest points at which either of these sub-
stances is found. Of the noble cedars which once adorned the upper part of this mountain, but few now remain, and those much decayed. Burckhardt, who crossed Mount Libanos in 1810, counted about 36 large ones, 50 of middle size, and about 300 smaller and young ones; but more might exist in other parts of the mountain. The wine, especially that made about the convent of Canobin, still preserves its ancient celebrity; and is reported by travellers, more particularly by Rouwolff, Le Bruyn, and De Is Roque, to be of the most exquisite kind for flavour and fragrance, which fall in the lower regions of Lebanon, and the melting of the snows in the upper ones, furnish an abundance of perennial streams, which are alluded to by Solomon. (Song, 4, 15.)

On the declivities of the mountain grew the vines that furnished the rich and fragrant wines which Hosea (14, 7) celebrated, and which may still be obtained by proper culture. The snow of Lebanon was probably transported to a distance, for the purpose of cooling wine and other liquors. Solomon speaks of the cold of snow in the time of harvest (Prov., 25, 13), which could be obtained nowhere in Judaea nearer than Lebanon. (Manmet., Geogr., vol. 6, pt. 1, p. 341. — Mansford's Scripture Gazetteer, p. 314, seqq.)

Libera, the name of an ancient Italian deity, identified with the Grecian Dionysus or Bacchus. His festival, named Liberalia, was celebrated on the 17th March. On this occasion the mats were burned or libera. (Varro, L. L., 5, p. 55. — Ovid, Fast., 3, 713, seqq.) When the worship of Ceres and Proserpina was introduced at Rome, Proserpina was named Libera, and the conjured deities were honoured as Ceres, Liber, and Libera. The name Libera is commonly derived from libera, "free," and is referred to the influence of wine in freeing from care. Others, however, prefer deducing it from lūḅ to "pout forth," and the wine being the god affected by moisture. (Keightley's Mythology, p. 517.)

Liberea, a name given to Proserpina among the Romans. (Vid. Liber.)

Liberalia, a festival celebrated annually in honour of Liber, the Roman Bacchus. It took place on the 17th of March. (Vid. Liber.)

Liberas, the Goddess of Freedom, the same with the Grecian Liberty. Her name makes her the daughter of Jupiter and Juno. (Prof., 10, 2; Munch.) Tiberius Gracchus is said to have erected the first temple to her at Rome, on the Aventine Hill, and it was here that the archives of the state were deposited. The goddess was represented as a Roman matron, arrayed in white, holding in one hand a broken sceptre, and in the other a pile surmounted by a pileus or cap: at her feet lay a cat, an animal that is an enemy to all restraint. The cap alluded to the Roman custom of putting one on the heads of slaves when manumitted. (Liv., 24, 16. — Id., 25, 7. — Ovid, Trist., 3, 1, 72. — Plut., Vit. Gracch.)

Libethra, I. a city of Macedon, situate, according to Pausanias (9, 30), on the declivity of Olympus, and not far from the tomb of Orpheus. An oracle declared, that when the sun beheld the bones of the poet, the city should be destroyed by a boar (ην νοῦς). This event was supposed impossible; but the column of Orpheus's monument having been accidentally broken, a gap was made by which light broke in upon the tomb, when the same night the torrent named Sus, being prodigiously swollen, rushed down with violence from Mount Olympus upon Libethra, overthrowing the walls and all the public and private edifices, and every living creature in its furious course. Whether Libethra recovered from this devastation occasioned by this inundation is not stated in any writer, but its name occurs in Livy as a town in the vicinity of Dium before the battle of Pydna (44, 6). Strabo also alludes to Libethra when speaking of Mount Helicon, and remarks, that several places around that mountain attested the former existence of the sanctuary of the Pierus in the Boeotian districts. (Strab., 409, 10. — Id., 471, 7.) From these passages it would appear that the name of Libethra was given to the summit of Olympus which stood above the town. Hence the muses were summoned Libethridae as well as Pierides. (Virg., Eclog., 7, 21. — Cramer's Anc. Greece, vol. 1, p. 210.) — II. A fountain of Thessaaly, on Mount Homole, in the district of Magnesia, at the northern extremity. (Plin., 4, 9. — Meis, 2, 3.)

Libri, a name given to the Muse of Music. (Cramer's Anc. Greece, vol. 1, p. 210.) From these passages it would appear that the name of Libethra was given to the summit of Olympus which stood above the town. Hence the muses were summoned Libethridae as well as Pierides. (Virg., Eclog., 7, 21. — Cramer's Anc. Greece, vol. 1, p. 210.) — II. A fountain of Thessaaly, on Mount Homole, in the district of Magnesia, at the northern extremity. (Plin., 4, 9. — Meis, 2, 3.)

Liburnian, a goddess at Rome presiding over funerals. In her temple were sold all things requisite for them. By an institution ascribed to Servius Tullius, a piece of money was paid her for every one who died, and the name of the deceased entered in a book called Libitinæ ratio. (Dion. Hal., 4, 15. — Sueton., Vit. Ner., 39.) The object of this custom was to ascertain the number of deaths annually. Libitina and Venus were regarded as one and the same deity, because, according to the Eleusinian teaching, both were joined in the ceremony of the toga and consorts on their birth and death. It would be more correct, however, to say that we have here a union of the power which creates with that which destroys. (Plut., Quast. Rom., 23.)

Liburnia, a province of Illyricum, along the Adriatic, over against Italy, having Dalmatia on the south, and Istria on the north. Zarà, ancient Iadera, and afterward Diodora, was once its capital. The ruins of Burnum, the Liburnia of Strabo, are to be sought on the right hand of the Tinneyth / Drikkar / Driokon, in the desert of Bukovina. The Liburnians were an Illyrian tribe, and their country now answers to part of Croatia. They appear to have been a maritime people from the earliest times; and the Greeks, who colonized Corcyra, are said, on their arrival in that island, to have found it in their possession. (Strab., 270.) Scylax seems to distinguish the Liburni from the Liburnians, restricting probably the latter appellation to that part of the country that was better known to the Greeks. The same writer alludes to the sovereignty of the Liburni as not excluding females; a fact which appears to have reference to the
history of Teuta, and might serve to prove that this geographical compilation is not so ancient as many have supposed. (Seylax, p. 7.) Strabo asserts, that the Liburni extended along the coast for upward of 1500 stadia. (Strab., 315.) According to Pliny (3, 13), they once occupied a considerable extent of territory on the coast of Picenum, and he speaks of Truentum as the only remaining establishment of theirs, in his day, in this quarter of Italy. It is chiefly on this information of Pliny that Frere has ground his system of the tribe. (Ib. p. 40.) He says—"I believe that these Liburni, as well as all the others, came by land. But it would be more natural to suppose that the Liburni, as a maritime people, had crossed over from the opposite coast of Dalmatia. (Mém. de l'Acad. des Inscr., &c., vol. 18, p. 285.) The galleys of the Liburnians were remarkable for their light construction and swiftness, and it was to this of their kind that Augustus gave in a great measure indebit for his victory over Antony at Actium. (Dict. Cass., vol. 29, 32.) Hence, after that time, the name of naves Liburna was given to all quick-sailing vessels, and few ships were built but of that construction. (Veget., 4, 33.) The Liburnians were a stout, able-bodied race, and were much employed at Rome as porters, and sedan or litter-carriers. Hence Martial, in describing the preparations of his countrymen for the transport of goods, nowhere alludes to better bearers than the Liburnians. (Corol. 12, 112.)" The island of Liburnia, as the name given by the Greek and Roman poets to what was otherwise called Africa. In a more restricted sense, the name has been applied to that part of Africa which contained the two countries of Cyreniaca and Marmarica, together with a very extensive region in the interior, of which little, if anything, was known, and which was generally styled Libya Interior. (Vid. Africa.)

Liburnia, a small island off the coast of Liburnia, said to amount to the number of forty. The name originated with the Greek geographers. (Strab., 315.)

Liburnus, a chain of mountains near Apulia, crossed by Hannibal in his march from Samnium and the Peloponnesus into Apulia. It is stated that, before he arrived in the latter province, he crossed this chain; which probably answers to the branch of the Apenines bordering on the valley of the Tifernus to the north, and known by the name of Monte della Serra. (Polyb., 3, 101.—Romanelli, vol. 3, p. 20.—Cramer's Anc. Italy, vol. 2, p. 270.)

Libya, I. a daughter of Epaphus and Cassiopeia, who became mother of Agenor and Belus by Neptune. (Apollod. 2, 9, 3.—Pausan., 1, 16, 4.) Her name is given by the Greek and Roman poets to what was otherwise called Africa. In a more restricted sense, the name has been applied to that part of Africa which contained the two countries of Cyreniaca and Marmarica, together with a very extensive region in the interior, of which little, if anything, was known, and which was generally styled Libya Interior. (Vid. Africa.)

Libyka, a small island of the Mediterranean, which lies along the coast of Libya, extending eastward as far as the island of Crete. (Mela, 1, 4.—Strab., 247.)

Libyssa, a small village of Bithynia, west of Nicomedes, and near the shores of the Sinus Actacenus. It is rendered memorable for containing the tomb of Hannibal, whence, no doubt, its name. (Plut., Vit. Flaminius, 32, 9.—Euthrop., 4, 11.—Plin., 5, 3.) It is thought to answer to the modern Gebisse or Dschebize. If, however, Pococke be correct (vol. 3, 2, c. 18) in making Gebisse 24 English miles from Pontischum or Pantik, we ought rather to decide in favour of the Diache or Diacibiz of the middle ages (Socotm. Hist. Eccles., 6, 14), which lies on the same coast, nearer Pontichum. (Mannert, Geogr., vol. 6, pt 3, p. 535, seqq.)

P路桥ia, a small island, situated off the eastern bank of the Lucus, in the modern Obodromaukreis, to the northeast of Fussen. (Plin., 3, 20.—Bischoff und Muller, Wörterbuch der Geogr., p. 698.)

Lichades, small islands near Caneum, a promontary of Eubea, called so from Lichas. (Vid. Lichas.) They were three in number, Carea, Phocasia, and Scarpia. They are thought to answer to the modern Ponticonesi. (Ovid, Met., 9, 165, 217.)

Lichas, the ill-fated bearer of the poisoned tunick from Deianira to Hercules. In the paroxysm of fury occasioned by the venom of the hydra, the hero caught Lichas by the foot and hurled him into the sea from the summit of Cetus. (Ovid, Met., 9, 165, 217.—Compare Milten, P. L., 5, 548.) He was changed by the compulsion of the gods into one of a group of small islands, which hence derived their name. (Vid. Lichades.)

Liciina lex. (Consult remarks under the article Liciinus I.)

Liciina, I. daughter of P. Liciinus Crassus, and wife of Caius Gracchus. (Plut., Vit. Gracch.)—II. The wife of Maccenas. She was sister to Proculeius, and bore also the name of Terentia. She is thought to be alluded to by Horace (Od., 2, 12, 13) under the name of Lycinyma. (Bentley, ad Horat., i.e.—Compare remarks under the article Maccenas.)

Liciinus, I. C. Liciinus Stolo, of a distinguished plebeian family at Rome, was made tribune of the commons, together with his friend L. Sextius Lateranus, in the year 375 B.C. These tribunes brought forward three "rogations," that is to say, bills or proposed laws of no very extensive objects of legislation, in which the people were distinctly asked to decide upon: 1. That in future no more military tribunes should be appointed, but two annual consuls, as formerly, and that one of the two should always be a plebeian. The occasional appointment of military tribunes, part of whom might be chosen from the plebeians, was a device of the senate to prevent the plebeians from obtaining access to the consulship. 2. To deduct from the capital of all existing debts, from one of which the citizens were most deeply in debt, and to have these debts written off by the debtor as interest, and the remaining principal to be discharged in three years by three equal payments. This seems, according to our modern notions of money-transactions, a very summary, and not very honest, way of settling standing engagements; but if we carry ourselves back to that remote period of Roman society, and take into consideration the enormous rate of interest demanded, the necessities of the poorer citizens, who were then, as they are now, often forced to fight the battles of their country, and had no means of supporting their families during the interval except the ruinous one of borrowing money from the wealthy, who were mostly patricians, and also the fearful power which the law gave to the creditor over the debtor, and the atrocious manner in which that power was used, or abused, in many instances, such as those reported by Livy (2, 23, 6; 14, 9, 28), we shall judge more passionately of the proposition of Liciinus. 3. The third rogation has been a subject of much perplexity to modern inquirers. Its object, as briefly expressed by Livy, was, that no one should possess (possideret) more than 500 jugera (about 333 acres) of land; and until lately it has been literally understood, by most readers of Roman history, as fixing a maximum to private property. But Beaufort, and more lately Heyne, Niehoff, and Savigny, have shown, that the limitation referred to the holding of land belonging to the aeger publicus, or public domain of the state. It appears that most of the large estates possessed by the patricians must have been portions of this public domain, which consisted of lands conquered at various times from the surrounding nations. This land the patricians had occupied, cultivated, and held as tenants at will, they and their descendents paying to the state a tenth of all grain, a fifth on the produce of plantations by vineyards, and a certain tax per head of cattle grazing on the public pasture. This was the kind of possession which the Liciinan rogation proposed to limit and regulate. Liciinus proposed, that all who had more than
600 jugera should be made to give up the surplus, which was to be distributed among those who had no property, and that in future every citizen was to be entitled to a share; this nearly coincided in land, with the same restriction, and subject to the same duties. This might be considered as a bill for the better distribution of plunder among those engaged in a plundering expedition, for the land thus acquired and distributed cannot be compared to real property as held throughout Europe in our own day; and this reflection may perhaps serve to moderate somewhat the warmth of our sympathy in reading of the complaints of the Roman plebeians, the upper classes, in detail.

Solution of land, which had been, in fact, taken by violence from a third party, the other nations of Italy, who were the real sufferers.

—The patricians, who had, till then, the best share of the common plunder, opposed to the utmost the passage of these three laws. The contest lasted during ten whole years, during which the republic at one time fell into a kind of anarchy. Camillus also, at one period, was appointed dictator, as a last expedient on the part of the nobility, and in that capacity stopped the voting at the Comitia Tributa, by threatening to summon the people to the Campus Martius, and to enlist and march them into the field. At last, however, the three rogations passed into law. Sextius Lateranus, the colleague of Licinius, the first plebeian consul, was chosen for the next year, 365 B.C., together with a patrician, L. Æmilius Mamercinus. The senate, however, refused to confirm the election of Sextius, and the proceedings began with another fearful threatened of a civil war, when Camillus interposed, and an arrangement was made, that, while the patricians conceded the consulship to the plebeians, the latter should leave to the patricians the praetorship, which was then for the first time separated from the consulship. Thus was peace restored.

Licinius, the great mover of this change in the Roman constitution was rewarded with the consulship 366 B.C., but nothing remarkable is recorded of him while in that office. In the year 356 B.C., under the consulship of C. Marcius Rutulus and C. Manlius Imperiosus, we find Licinius charged and convicted before the praetor of a breach of his own agrarian law, and fined 10,000 asses. It seems that he possessed 1000 jugera, one half of which he held in the name of his son, whom he had emancipated for the purpose. After this we hear nothing more of Licinius. (Plutarch, Knol., vol. 13, p. 464, seqq.—Lit., lib. 6 at 7—Niebuhr, Röm. Gesch., vol. 3, p. 1, seqq.—Val. Max., 8, 6, 8—Savinay, Das Recht des Besitzes, p. 175)—II. Murana. (Vid. Murana.)—III. Varro Murana, a brother of Proculeius, who conspired against Augustus with Fannius Capio, and suffered for his crime. Herone addressed him to his 10th ode, book 2.—IV. C. Flavius Valerius, a Roman emperor. A sketch of his history will be found incorporated with that of Constantine. (Vid. Constantinus.)

Licinius, a Roman barber, made a senator by Julius Caesar merely because he bitterly hated Pompey. Compare the language of the scholar (ad Horat., Ep. ad Pis., 301): "Quod odisse Pompeium, a Caesar senatore factus dixit." 

Licinius, Q., was at first a lieutenant of C. Consins, but when that man was sent to Africa, Licinius, and afterward succeeded him in that province. He sided with the republican party against Caesar, and was condemned to exile. His brothers at Rome solicited his recall, but their application was opposed by Tuber, who openly accused Licinius before the dictator. Cicero appeared as the advocate for Licinius, and his speech on the occasion has come down to us. This oration was pronounced after the Cassian having vanquished Pompey in Thessaly, and destroyed the remains of the republican party in Africa, assumed the supreme administration of affairs at Rome. Merciful if the conqueror appeared, he was understood to be much exasperated against those who, after the rout at Pharsalia, had renewed the war in Africa. Licinius, when on the point of obtaining his election, was formally accused by his old enemy Tuber of having borne arms in that contest. The dictator himself presided at the trial of this cause, much prejudiced against Licinius, as was known from his having previously declared that his resolution was fixed, and was not to be altered by the charms of eloquence. Cicero, however, overcame his prepossessions, and extorted from him a pardon. The countenance of Caesar; it is said, changed as Cicero proceeded in his speech; but Cicero is touched on the battle of Pharsalia, and described Tuber as seeking his life amid the ranks of the army, he was so agitated that his body trembled, and the papers which he held dropped from his hand. The oration of Tuber against Licinius was extant in Quintilian's time, and probably explained the circumstances which induced a man who had fought so keenly against Caesar at Pharsalia to undertake the prosecution of Licinius. (Plut., Vit. Cic.—Dunlop's Roman Law, vol. 2, p. 317, Lond. ed.)

LIG or Liguris, now the Loire, the largest river of Gaul; it rises in Mons Cebenna or Cevennes, and for the first half of its course runs directly north, then turns to the west, and falls into the Atlantic between the territories of the Pictones and Namnetes. (Cass. B. G. 3, 9.—Id. ibid., 7, 5.—Asoon, Mostl., v. 461—Lucan, 1, 439.)

Ligustrorum, the inhabitants of Liguria. (Vid. Liguria.)

Liguria, a country of Cisalpine Gaul, lying along the shores of the Sinus Liguisticus or Gulf of Genoa, having the Varus on the west, and the Macra on the southeast, and bounded on the north by the Alps. The Ligures, termed Liguros and Ligurios by the Greeks (Strabo, 203.—Polyb., 2, 16), appear to have been a numerous and powerful people, extending, in the days of their greatest strength, along the shores of the Mediterranean and Rhodannum, even reaching also into the interior of Gaul and the valleys of the Maritime Alps. According to some accounts, they had penetrated to the west as far as the borders of Spain. (Thucyd., 6, 2.—Sclv. Perip., p. 4.) Of the origin of this people we have no positive information; but there is good reason for supposing that they were Celts, though Strabo (128) distinguishes them from the Gauls. The story which is told by him in his 2nd book, 19 (Nemes), as well as the acknowledgment the Ambrones as belonging to the same stock with themselves; the affinity of the term Ligur to the Celtic Lige-gour or Lige-gyr, together with other words, evidently belonging to the same root, which Cluverius has collected (Ital. Ant., vol. 1, p. 50), may be considered as plausible grounds at least for the support of such an opinion. Though the period of their settlement in Italy cannot be determined, (If we may judge from the fictions. The Greeks, who were unacquainted with the real situation of Liguria, made that country the scene of some of their earliest and most poetical fictions.) the siege of Hercules (Euxfcci, Persol. Strab., 183) that the Ciceros were identified with it. (Virg., Æn., 10, 185.) And it is not improbable, that the fabule of Phæthon's sisters shedding tears of amber, a substance which the Greeks called Liguria (Strabo, 202), had its origin in the country which produced that substance, and gave it its name. (Millin, Voyage èn Italie, vol. 2, p. 336.) Herodotus was better acquainted with the Ligurians (6, 9), mentioning part of the mercenary forces of Carthage, in its wars against the Greeks of Sicily (7, 165). The conquest of Liguria by the Romans was not effected.
till long after the second Punic war. The Ligurians had joined Hannibal with a considerable force soon after his arrival (Polyb., 3, 60), a circumstance of itself sufficient to provoke hostilities on the part of the conquerors; but there was another reason which rendered the subjugation of Liguria extremely desirable. It afforded the easiest communication with Gaul and Spain over the Maritime Alps, an object in itself of the greatest importance. The Ligurians long and obstinately resisted the forays of the Romans, when the rest of Italy had been subjugated for many years. The Romans could only obtain a free passage along their shore of twelve stadia from the coast (Strabo, 180); nor was it till the Ligurians, after a war of eighty years' duration, had been driven from every hold in their mountains, and whole tribes had even been carried out of the country, that they could be said to be finally conquered. (Livy, 40, 38.—Id., 41, 12.)—The Ligurian character does not appear to have been held in much esteem by antiquity; while it allows them all the greatest courage and useful counsel with mountainers (Cic., Agr., 2, 35.—Virg., Georg., 2, 168), qualities which were even shared in an uncommon degree by the weaker sex (Diod. Sic., 5, 39), it taxes them too plainly without craft and deceit to be misunderstood. (Virg., Aen., 11, 700.—Serenus, ad loc.—Claudian, Idyl., 12.)—According to the statement of Polybius (2, 18), the boundaries of the Ligurians in Italy seem to have been the River Arno, the Ligurian province was by Cato, according to Maecenas, 700.—Drepanum, a city on the coast, near the middle of the eastern coast. It was the old capital of the island before Rhodes was built, and is said to have been founded by the Heliedes. Others made Tlepolemus its first settler (Strabo, 654), and others, again, assigned its foundation to Danaus. (Strab., l.c.—Diod. Sic., 5, 58.) Lindus is one of the three cities allied to Homer (II., 2, 668). Notice of it also occurs in the Parian Chronicle. It contained a very ancient temple of Minerva, hence called the Lindian, built, according to a tradition, by the Danaiades. (Strab., l.c.) The statue of the goddess was a shapeless stone. (Callim., ep. Euseb., Prop. Eo., 3, 8.)
LINUS

Pindar's Seventh Olympic Ode, in honour of Diogoras of the Rhodian, was consecrated in this temple, being inscribed in letters of gold. (Suid. Adv. Fid.); Or, 7, inst.) Here also was a temple ship connected with which consisted, according to Lactantius (1, 31), in revellings and execration ("mal- culitiae et sexcratione celebrantur, caque pro violatis habent, si quando inter solemnes ritus vel imprudentes alius ezcederit bonum verbum"). This temple contained a painting of the god by Parrhasius. (Atheneu- nas, 12, p. 543.) There were several other pictures by the same painter, some inscribed with Linnus, inscribed with his name. (Athen., 15, p. 687.) This place was also famous for having produced Cleobulus, one of the Seven Sages of Greece; and also Chares (or Cares) and Laches, the artists who designed and completed the Colossus. A mistake, highly characteristic of his ignorance in classical matters, was committed by Vol- taire, respecting this famous statue: it is mentioned by Montelle, in a note to the article Lindus, Encyclopedie de Voltaire, having read Indian for Lindian, relates that the Colossus was cast by an Indian!—Lindus was the port resort to by the fleets of Egypt and Tyre before the founding of Rhodes.—A small town, with a citadel, retaining the name of Linus, still occupies the site of the ancient city. Ca- vary says (Letters on Greece, p. 96, Eng. transi.) that the ruins of the temple of Minerva are still visible on an island off the coast near the town. This island is said to be very numerous. (Clarke's Travels, vol. 3, p. 281, Lond. ed.—Tavernier, Voyage, vol. 1, c. 74.)

Linnóxos, I. a people of Gaul, whose territories included Vogesus, Vosges, and, consequently, the sources of the rivers Mosse or Meuse and Matrona or Marne. Their chief city was Andomadunum, afterward Lingones, now Langres, and their territory corresponded to the modern department de la Haute-Marne. They were a branch of the Galia Cisalpina, occupying the extreme northeastern portion of Gallia Cispadana. They were a branch of the Transalpine Lingones. Polybius is the only au- thor who has pointed out the district occupied by this people in Italy (2, 17). Appian characterizes the Lingones generally as the fiercest and wildest of the Gauls. (Bell. Gall., fragm.)

Linus was a native of Chalcis, a son of Apollo and Terpsichore; according to others, the off- spring of Amphimaras and Urania; and according to others, again, of Mercury and Urania. (Suid., s. v. Ái- voir.—Hes., fragm. ap. Eustath., p. 1163.—Conon, c. 19.—Heyne, ad Apollod., 1, 3, 1.) Apollodorus makes him a brother of Orpheus (1, 3, 2; 2, 4, 9). He was said to have been the inventor of the Harp in music, and to have been killed by the latter in a fit of passion, being struck on the head with a lyre. His trigical death was the subject of a solemn festival at Thebes. (Consult Hauptmann, Proclus. de Lino, Gera, 1760, and the notes of Burette on Piutarch's Dialogue on Music, Mem. de l'Acad. des Inscriptions, &c., vol. 10, p. 195.) Stobaeus has preserved twelve pretended verses of this poet; they have reference to the fa- mous proposition of the Eleatic school, adopted subse- quently by the New Platonists and New-Pythagore- ans. "Ex poeno dè tò év thymon xronon ouv néllovs X've. —The whole has been engendered by the whole." These verses, however, were fabricated in a later age. In the Discourses of Stobaeus (Eclog., 1, 11) there are two other verses on the divine power. According to Archiobhop Usber, Linus flourished about 1280 B.C., and he is mentioned by Eusebius among the poets who wrote before the time of Moses. Diodorus Siculus tells us, from Dionysius of Mytilene, the his- torian, who was contemporary with Cicero, that Linus was the first among the Greeks that invented verse and music, as Cadmus first taught them the use of letters (3, 66). The same writer likewise attributes to him an account of the exploits of the first Bacchus, and a treatise upon the Greek mythology, written in Pelasgian characters, which were also those used by Orpheus, and by Herodotus, the historiographer of Herodotus. Diodorus says likewise, that he added the string licha- nos to the Mercurian lyre, and assigns to him the inven- tion of rhythm and melody, which Suidas, who regards him as the most ancient of poets, confirms. He is said by many ancient writers to have had several disci- plies of great renown, among whom were Hercules, Thamyris, and Orpheus.—Thus much for the ordinary learning; according to the present author, the following remarks, however, will be found, we think, to contain a far more correct view of the subject. Among the plaintive songs of the early Greek hus- bandmen is to be numbered the one called Linus, mentioned by Homer (II., 18, 569), the melancholy character of which is shown by its fuller names, Al- vo and Otióvov (literally, "Alas, Linus!" and "Death of Linus"). It was frequently sung in Greece, according to Homer, at the grape-picking. According to a fragment of Hesiod (ap. Eustath., p. 1163— fragm. 1, ed. Geisf.,) all singers and players on the cithara lament at feasts and dances Linus, the beloved son of Urania, and call on Linus at the beginning and the end, which probably means that the song of lamenta- tion began and ended with the exclamation Al fave. Linus was originally the subject of the song, and the whole of the long poem was divided into Linus and the hot season. It is obvious that these cannot have been the real persons whose, death excited so general a sympathy, although the fables which were offered in explanation of these customs often speak of youths of royal blood, who were carried off in the prime of their life. The real object of lamentation was the tender beauty of spring destroyed by the summer heat, and other phenomena of the same kind. The imagini- nation of the ancient people times invested with a personal form, and represented as gods, or beings of a divine nature. According to the very remarkable and explicit tradition of the Argives, Linus was a youth who, hav- ing sprung from a divine origin, grew up with the shepherds among the lambs, and was torn in pieces by wild dogs; whence arose the festival of the lambs, at which many dogs were slain. Doubtless this festival was celebrated during the greatest heat, at the time of the constellation Sirius, the emblem of which, among the Greeks, was, from the earliest times, a ra- ging dog. It was a natural confusion of the tradition, that Linus should afterward become a minstrel, one of the earliest bards of Greece, who begins a contest with Apollo himself, and overcomes Heracles in play- ing on the cithara; even, however, in this character Linus meets his death, and we must probably assume that this was the subject of the ancient song. In Homer the Linus is represented as sung by a boy, who plays at the same time on the harp, an accom- paniment usually mentioned with this song; the young men and women who bear the grapes from the vine- yard follow him, moving onward with a measured step, and uttering a shrill cry, in which, probably the chief stress was laid on the extolling of "Life. That this shrill cry (called by Homer buvɔs) was not nec- essarily a joyful strain, will be admitted by any one who has heard the buvɔs of the Swiss peasants, with its sad and plaintive notes resounding from hill to hill. (Müller, Gr. Lit., p. 17, seq.)
LIPARIA, the largest and most important island in the group of the Eolica Insulae, or Lipari Islands. Its original name was Melissaus (Melzigovius.—Cal- 
tim., H. in Dion., 49), and it was uninhabited until Liparus, son of King Aixon, having been driven out by his brethren, came hither with a body of followers, colonized the island, and founded a city. Both the island and city then took the name of Lipara. He colonized also some other islands of the group. (Strabo, 275.—Diod. Sic., 5, 7.) The original inhabitants, therefore, according to this tradition, were natives of Italy. The Greeks, however, contributed their part also to the ancient legend, and made Eolus come to this same quarter with a body of companions, and re-
ceive in marriage Cyane, the daughter of Liparus. Eolus now assumed the government, and established his aged father-in-law once more on the soil of Italy, in the territory of Surrentum, where the latter continued to reign until his death.—Leaving mythic, we now come to real history. In the 50th Olympiad (B.C. 577-574), a colony of Cnidians, along with many Rhodians and Carians, settled in Lipara. They had previously established themselves on the western coast of Sicily, but had been driven out by the Elymians and Phoenicians. From this period Lipara was re-
garded as a Doric colony (Seym., Ch., 261.) The inhabitants began to be powerful at sea, having been converted by Pliny to piracy by the Tyrrhenian pirates, whom they worsted in several encour-
ters. Eventually, however, they followed the bad ex-
ample set them by their maritime neighbours, and be-
came pirates themselves. (Liv., 5, 28.) When the Carthaginians were striving for the possession of Si-
cily, they perceived the importance of Lipara as a naval station, and accordingly made it their own. During the first Punic war it fell into the hands of the Huns, and Lipara was converted into a Roman colony by the name from the ancient Lipara. They were anciently called Eolica Insula, from having been fabled to be ruled over by Eolus, god of the winds; and they were also styled Vulcania Insula, from their volcanic nature, on which was based the fable of Vulcan's hav-
ing forges in Strongyle, one of the group, on whose head his smikey in Etna. The ancients knew them to be vol-
canic, but did not narrowly examine them; this has been known with a degree of precision. Lipa was the name of the Lipari islands, and are commonly reckoned seven in number, and Lipari is the largest of these, being 19\textdegree\, Italian miles in circuit. This island is peculiarly valuable to the naturalist, from the number and beauty of its volcanic products. According to Diodorus, all the Eolian islands were subject to great irruptions of fire, and their craters were visible in his time. (vid. Strongyle.—Plin., 3, 9.—Mela, 2, 7.—Jornada, de Regn. Suec., p. 29.—Manvmen. Geogr., vol. 9, pt. 2, p. 459, seqq.)

Liris, now Carigliano, a river of Campania, which it separated from Latium, after the southern boundary of the latter had been removed from the Circiian prom-
ontory. (vid. Latium.) It falls into the sea near Minturnae. According to Strabo, its more ancient name was Kalavris: according to Pliny, Glanis. (Stra-
bo, 233.—Pliny, 3, 5.) Its source is in the country of the Marsi, west of the Lacus Fucinus. This river is particularly noticed by the poets for the sluggishness of its stream. (Horat. Od., 1, 31.—Sil. Ital., 4, 348.) In the vicinity of Minturnae the Pontine marsh-
es ended, in which Marius hid himself, and whence he was dragged with a rope round his neck to the prison of Minturnae. (vid. Marius.)

Lissus, a city of Illyria, near the mouth of the Dri-
lo. According to Diodorus Siculus (15, 19), it was colonized by some Sophists in the time of Dionys-
ios the Elder. Lissus fell subsequently, however, into the hands of the Illyrians, who retained it with the consent of the Romans, after they had concluded a peace with Teuta. (Polyb., 2, 12.) Not many years intervened before Philip of Macedon, having surprised the Acropolis, its citadel, compelled the town to surren-
der. An interesting account of this expedition is to be found in the Fragments of Polybius (8, 15). We are not informed by what means the Illyrians re-
covered possession of Lissus, but Livy speaks of it as belonging to Gentius (44, 30). Cesar, who has fre-
quent occasion to mention this city during the pro-
gress of the civil war carried on by him in Illyria, in-
forms us, that he had previously stationed there a considerable body of Roman citizens, who readily de-
ivered up the town on the appearance of his forces. (B. Civ., 3, 29.) The situation of the ancient Lissus can hardly be identified with the modern Alesio, which is more inland, and may rather answer to Acro-
lisus. (Cramer's Anc. Greece, vol. 1, p. 43.)

Litfa, the old capital of the Aborigines, in the country afterward settled by the Sabines. It was 24 stadia from Tiara, that is, three miles lower down in the valley of the Salto. The town was surprised by the Sabines in an expedition by night, and the inhab-
habitants were driven out. (Dion. Hal., 1, 14.)

Litterum, a town of Italy, in Campania, west of Atella, and north of Cume. Its situation has been dis-
puted; but antiquaries seem now agreed in fixing the site of the town at a place called Torre di Patria. The difficulty arose chiefly from the mention of a riv-
er named the Taurus by the historian Strabo. (Strabo. 243.—Litt. 32, 29.) This river can be no other than that which rises in the Apennines above Nola, and, flowing at no great distance from Acerra, discharges its waters into the sea near Litterum. This stream is apt to stagnate near its entrance into the sea, and to form marshes anciently known as the Palus Litterum, now Lago di Patria. Litterum became a Roman colony in the same year with Vulturnum. (Liv., 94, 45.) It was reconquered by the Tauri Capena, in the time of the Gracchi. (Liv., 39, 51.) Strabo (242) certainly seems to imply that he spent the remainder of his life at Litterum, and also makes mention of his tomb there. According to Valerius Maximus (5, 3, 2), Scipio himself had caused to be engraved on it this inscription,

INGRATA. PATRIA. NE. OSSA. QVIDEM. MEA. HABES.,

which would be decisive of the question. It is not improbable that the little hamlet of Patria, which is supposed to stand on the site of Scipio's villa, is in-
debted for its name to this circumstance. Seneca gives an interesting description of a visit he made to the remains of the villa, and of the reflections to which it gave rise, in a letter to one of his friends. (Ep., 86.) Pliny asserts that they were to be seen in his day, near Litterum, some olive-trees and myr-
tles said to have been planted by the illustrious exile. (Plin., 16, 44.—Cramer's Anc. Italy., vol. 2, p. 145, seqq.)

Livia, L. Drusilla (Livia Drusilla Augusta, or Livia Augusta), a celebrated Roman female of the Claudian line, and daughter of Livius Drusillus Clau-
dianus, was born B.C. 69. She married Tiberius Clau-
dianus Nero, and when her husband was compelled to flee from Italy in consequence of the troubles connect-
ed with the civil war (vid. Claudius II.), she accom-
panied him, first to Sicily, and afterward to Greece. In this latter country they were kindly received by the
LIVIA.

Lacedaemonians, whom she subsequently recompensed for the asylum they had afforded her. To rare personal attractions Livia added the charms of a cultivated intellect; and when it was again safe for her husband and herself to return to Rome, she soon drew upon her the notice of Augustus, who demanded her from her husband. Tiberius dared not refuse; and Augustus, having repudiated his own wife Scribonia, made Livia his spouse. She had already borne two sons to her first husband, namely, Tiberius, who was afterward emperor, and Drusus Germanicus; but what rendered the affair most disreputable, was the childlessness of her being six months gone in pregnancy at the time of her union with Augustus. This, the only one she had after her marriage with the emperor, died almost at the moment of its birth. Livia was twenty years of age when she was thus called to share the empire of the world; and, availing herself skilfully of the influence which she soon acquired over the mind of Augustus, she began to concert the event which preceded the succession to her own son Tiberius. With this view, she was suspected of having caused the death of the young Marcellus, who might have proved an obstacle to her ambitious views, though it must be confessed that there is no positive testimony which would seem to justify the suspicion. She soon lost her own son Drusus Germanicus; but she did not imitate Octavia, who had actually weared out Augustus by her contrivance. She lent an ear to the consolations of the philosopher Areus, and testified her gratitude to Augustus for the honours he had decreed to the memory of her son. In all this, no doubt, there was much of dissimulation, even if we make the fullest allowance for the feelings of a parent. After the premature death of the two sons of Julia, Livia hastened to call her own son Tiberius to her side, and prevailed upon Augustus to adopt him, along with Agrigp- na Posthumus, the last of the family of the Caesars. Her next care was to exclude this same Agrippa from the succession, an object which she easily effected by means of secret calumnies; and when now the path to the throne stood open for Tiberius, she is said by some to have hastened the end of Augustus himself, by means of poisoned figs which she had given him to eat. Whether the supposition is well founded, or not, is beyond our present investigation. Be this, however, as it may, it is at least certain that she had the entire control of his last moments. Everything that passed within the walls of the dwelling where he lay was concealed by her with the utmost care. Hasty messengers were sent after Tiberius to recall him instantly to the death-bed of the emperor; and with so much secrecy was the whole affair shrouded, that, although it was given out that Tiberius found his adoptive father (Sueton., Vit. Aug., 97, seqq.), and had a long and affectionate interview with him, yet Tacitus informs us, that it was never clearly ascertained whether these stories were not mere fabrications; and whether Augustus was not, in reality, already dead when Tiberius arrived at Nola. By a singular clause in his will, Augustus adopted Livia herself, directing her to take the name of Julia Augusta, and make her joint sharer in the inheritance with her son. The latter, however, showed but little gratitude to his parent, to whom he was in every sense indebted for his elevation. When the senate wished to decree new honours to her, he opposed the step; he never consulted her about public affairs, a thing which Augustus was always accustomed to do; and yet, at the same time, he took care to conceal his ingratitude under the most studied respect. At length, however, an open rupture ensued, which continued until the period of her death. Livia died at Rome, at the age of 86 years. Her funeral was celebrated without any kind of display, and her great-grandson Ca- ligula pronounced her funeral eulogium, which was almost the only honour then rendered to her memory. Her will was not contested; and it was not until Claudius, whom she had never liked, ascended the throne, that divine honours were caused by him to be decreed unto her. Livia appears to have been a woman of strong mind, and she is said to have been always consulted by Augustus on public affairs, and often to have given him the most judicious advice. That she was an ambitious woman is most evident; and possibly, in the forthrightness of her views, she may have been a guileless woman. But she, indeed, towards her, might be explained in this way, since, by one of those strange contradictions that sometimes present themselves even in the character of the most vicious, he may have been aware of all her secret arts for his own advancement, and, though so largely benefited thereby, may have cherished a secret detestation for the very individual to whom he owed his elevation. (Sueton., Vit. Aug.—Id. Tiber., 46. —Vell. Paterec., 2, 75.)—II. or Li- villa, daughter of Nero Claudius Drusus, by his wife Antonia the Younger, was sister to Germanicus, and grand-daughter of the Empress Livia. Her first hus- band was Caius, the son of Agrippa; after his death, when still quite young, she married Drusus the son of Tiberius. Sejanus seduced her affections from the latter. Engaged in a career of adultery with that flagis- trious minister, she hoped to bring him to the crown, and with this view conspired against her husband. Her guilt being afterward fully detected, she was put to death by order of Tiberius. (Sueton., Vit. Tiber., 62.—Tacit., Ann., 4, 3, et 40.— Id. ib., 6, 2.)—III. Orestilla, called by Dio Cassius (59, 8) Cornelis Orestina. She was on the point of marrying C. Calpurnius Piso, when Caligula, en- couraged of her beauty, carried her off from the very midst of the marriage ceremony, and in a few days razed her house. She was subsequently condemned by him to exile. (Sueton., Vit. Calig., 25.—Dio Cass., i. c.)

LIVIE LEGES, proposed by M. Livius Drusus, a tribune, A.U.C. 662, about transplanting colonies to different parts of Italy and Sicily, and granting corn to poor citizens at a low price; also, that the judices should be chosen indiscriminately from the senators, and that the states of Italy should be admitted to the freedom of the city. Drusus was a man of great eloquence and of the most upright intentions; but, endeavouring to reconcile those whose interests were diametrically opposite, he was crushed in the attempt, being murdered by an unknown assas- sin in his own house, upon his return from the for- um, amid a number of clients and friends. No in- quiry was made about his death. The conservative states of Italy considered this event as the signal of a revolt, and endeavoured to extort by force what they could not ob- tain voluntarily. Above 300,000 men fell in the con- test in the space of two years. At last the Romans, although upon the whole they had the advantage, were obliged to grant the freedom of the city, first to the allies, and afterward to all the states of Italy. (Vell. Paterec., 2, 13, seqq.—Pline., 3, 18.)

Livius I. Andronicus, an enthusiastic poet who flour- ished at Rome about 240 years before the Christian era. He was a native of Magna Graecia, and, when his country was finally subdued by the Romans, was made captive and brought to Rome (H.C. 267). It is generally believed that he there became the slave, and afterward the freedman, of Livius Salinator, from whom he derived one of his names; but these facts do not seem to rest on any authority more ancient than the Eusebionian ceremonies, and in a few years

The precise period of his death is uncertain; but in Cicero's dialogue of Senecaute, Cato is introduced, saying that he had seen old Livius while he was him-
tell a youth (c.14). Now Cato was born B.C. 235, and since the period of youth among the Romans was considered as commencing at fifteen, it may be presumed that the existence of Livius was at least protracted till B.C. 220. It has been frequently said that he lived till the year B.C. 208, A.U.C. 546, because Livy (27, 37) mentions, that a hymn composed by this ancient poet was publicly sung in that year, to avert the disasters threatened by an alarming proli- gy; but the historian does not declare that it was written for the occasion, or even recently before. Festus, however, informs us (s. v. Scribas), that the Romans paid distinguished honour to Livius, in consequence of the success which attended their arms in the second Punic war, after the public recitation of a hymn which he had composed.—Livius wrote both tragedies and comedies. The earliest play of his was represented B.C. 220, A.U.C. 514, about a year after the termination of the first Punic War. Like Thespis, and most other dramatists in the commencement of the theatrical art, Livius was an actor, and for a con- siderable time the sole performer of his own pieces. Afterward, however, his voice failing, in consequence of the audience insisting on a repetition of favourite passages, he introduced a boy, who relieved him by declaiming the recitative part in concert with the flute, while he himself executed the corresponding recitation, the other actors, whose part his exertion was required, only employing his own voice in the conversational and less elevated scenes.—"Hence," observes Livy (7, 2), "the practice arose of dividing the representation between two actors, and of reciting, as it were, to the gesture and action of the comedian. Thenceforward the custom so far prevailed, that the comedians never uttered anything except the verses of the dialogue." And this system, apparently simple, was the cause of the most perfect literary compositions, which were written, under certain modifications, to subsist on the Roman stage during the most refined periods of taste and literature. The popularity of Livius increasing from these performances, as well as from a propitiatory hymn he had composed, and which had been followed by great public success, a building was assigned to him on the Aventine Hill. This edifice was partly converted into a theatre, and was also inhabited by the players in his pieces, and frequently acted along with them. (Festus, s. v. Scribas.) It has been disputed whether the first drama represented by Livius Andronicus at Rome was a tragedy or comedy. (Osann., Anal. Crit., c. 13.) However this may be, it appears from the names which have been preserved of his plays, that he wrote, as we have already said, both tragedies and comedies. These titles, which have been collected by Fabricius and other writers, are: Achilles, Adonis, Egesthus, Ajax, Andromeda, Antipha, Cen- tauri, Equus Trojanus, Helena, Hermione, Ino, Lydus, Protesilaadomia, Serrens, Tereus, Teucer, Virgo. (Bibl. Lat., vol. 3, l. 4, c. 1.) Such names also evince, that most of his dramas were translated or imitated from the works of his countrymen of Magna Gracia, or from the great tragedians of Greece. Thus, Echylus wrote a tragedy on the subject of Egesth- us: there is still a play of Sophocles extant by the name of Ajax, and he is known to have written an Andromeda: Stobaeus mentions the Antipa of Eu- ripides: four Greek dramatists, Sophocles, Euripides, Anaxandrides, and Philfault, composed tragedies on the subject of Tereus; and Epicarmus, as well as others, chose for their comedies the story of the Si- rens.—Little, however except the titles, remain to us of so well called Livian drama. The chief passages which possess, in connexion, is four lines from the tragedy of Ino, forming part of a hymn to Diana, recited by the chorus, and containing a poetical and animating exhortation to a person about to advance to the chaste.

This passage testifies the vast improvement effected by Livius on the Latin tongue; and, indeed, the polish of the language, and metrical correctness of these hexameter lines, have led to a suspicion that they are not the production of a period so ancient as the age of Livius, or, at least, that they have been modernized by some later hand. (Jos. Scaliger, Lect. Auson. — Osann., Anal. Crit., p. 36.) Some verses in the Carmen de Arte Metraca of Terentius Maurus are the chief authority for these hexameters now being by Livius. As the verses in the chorus of the Ino are the only passage among the fragments of Livius from which a connected meaning can be elicited, we must take our opinion of his poetical merits from those who judged of them while his writings were yet wholly extant. Cicero has pronounced an unfavoura- ble decision, declaring that they were scarcely worthy a second perusal. (Brutus, c. 18.) They long, however, continued popular in Rome, and were read by the youth in schools even during the Augustan age of po- etry. It is evident, indeed, that at that period of Ro- man literature there was a good deal of what corre- sponds with modern black-letter taste, and which led to the inordinate admiration of the works of Livius, and the bitter complaints of Horace, that they should be ex- tolled as perfect, or held up by old pedants to the imita- tion of youth, in an age when so much better models ex- isted. It has, however, been observed, that the Livian verses have been too much read in the schools, and too much admired in an age which could boast of models so greatly superior, he is at least entitled to praise as the first inventor among the Romans of a species of poetry which was afterward carried by them to much higher perfection. By translating the Odyssey, too, into Latin verse, he adopted the means, which, of all others, was most likely to foster the infant literature of the country, and to advance the most pure and perfect taste, and, at the same time, with those wild and romantic adventures, which are best suited to attract the sympathy and interest of a half-civilized nation. This happy influence could not be prevented even by the use of the rugged Saturnian verses, which led Cicero to compare the translation of Livius to the ancient statues that might be attributed to Dædalus. (Brutus, c. 18. — Dunlop's Rom. Lit., vol. 1, p. 216.)—Livy's works are extant, and con- tained the commencement B.C. 219, and again in 297. During his first term of office he carried on a successful war in Illyricum; during the second he had for his colleague Claudius Nero. Livius and Nero were personal enemies, but the interests of their common country reunited them for a time in the bonds of friendship. They marched together against Hasdru- bal, and gained the victory at the Metaurus in Umbria. Livius received the honours of a triumph for this ex- ploit, and his colleague only an ovation, although the former insisted that his colleague was entitled to the same distinctions with himself. Three years after he was censor with the same Nero, and caused an un- popular tax to be levied on salt, whence he obtained the sobriquet of Salinator (from salina, "salt-works"). The old enmity between Livius and Nero broke out afresh in their censorship, as Livy (29, 37) informs us. (Livy, 27, 34 — Id., 29, 9, seqq. — Id., 29, 5, &c.)—III. Drusus, a tribune. (Yid. Liv. Leges.) —IV. Titus, a celebrated historian. He was born at Patavium, the modern Padua, of a consular fam- ily, in the year of Rome 695, B.C. 59. Titus Liv- ius Optimus was the first of the Livian family that came to Rome; and from him was descended Caius Livius, the father of the historian. (Zarabella, Storia della genti Livia.) This presented it with a rich and early instruction in his native city. But, though his education was provincial, he was taught all the useful learning of his age; and it has been conjectured, from several passages of his history, and the general colour
of his style, that he had acquired some superfluous academic accomplishments in a school of declamation. (Mankodo, Origin and Progress of Language, vol. 5, b. 1, c. 1.) It would appear, that he remained at Patavium during the whole period of the civil disensions, proscriptions, and violations of property which followed the assassination of Caesar. It has been even maintained by some writers, that he commenced his great work at Patavium ere he visited the capital. (Krause, de Fide Libert. Lib. 1., 1811.) But through the whole of the first portion of which is the part they suppose he had written before coming to Rome, he speaks concerning the localities of the city, its customs, judicial forms, and religious ceremonies, as one who was actually on the spot, and had ocular proof of all he relates. At whatever time he came to Rome, it is evident that he commenced his history between the years 725 and 730 A.U.C., or B.C. 29 and 24; for in the first book (c. 1.) Gibbon's Misc. Works, vol. 4, p. 425, where he wrote the temple of Janus had been twice shut since the reign of Numa, once after the first Punic war, and again in his own time by Augustus. Now this temple never had been closed by Augustus till 725, so that the passage could not have been written prior to that year; and it could not have been written subsequently to 730, because in that year Augustus again shut the temple, and Livy, of course, must have then seen and written on the circumstance, exactly as he did before, since the age of Numa. Soon after his arrival at Rome, he composed some dialogues on philosophical and political questions (Seneca, Epist. 100), which he addressed to Augustus. These dialogues, which are now lost, procured for him the favour of the emperor, who gave him free access to all those archives and records of the state which might be serviceable in the prosecution of the historical researches in which he was engaged. He allotted him apartments in his own palace, and sometimes even condescended to afford explanations, that facilitated the right understanding of documents which were important to his investigations. Livy appears, indeed, to have been on intimate terms with Augustus, who used, according to Tacitus (Ann. 4, 24), to call him a "Pompeian," on account of the praises which he bestowed on Pompey's party. It appears that the emperor was well pleased with the good graces of the emperor, and only for the purpose of facilitating the historical researches in which he was engaged. We do not hear that he accepted any pecuniary favours, or even held any public employment. It has been conjectured by some writers, from a passage in Suetonius (Vit. Claud. 41), that he had for a short time superintended the education of Claudius, who afterward succeeded to the empire. It appears, however, that Livy had no concern with the education of his pupil; although the expressions scarcely authorize this inference, they prove that, at Livy's suggestion, Claudius undertook in his youth to write a history of Rome from the death of Julius Cæsar, and thus acquired the habits of historical composition, which he continued after his accession; being better qualified, as Gibbon remarks, to render great actions than to perform them.

Livy continued for nearly 20 years to be closely occupied in the composition of his history. During this long period his chief residence was at Rome, or in its immediate vicinage; but he occasionally retired to Naples, that he might there arrange with leisure and tranquility the materials he had amassed in the capital. (Funcius, de Virili Estate Ling. Lat., pars 2, c. 4.) He also paid frequent visits to his native city, where he was invariably received with distinguished honours. Though Livy's life was not finished till the year 745 A.U.C., B.C. 9, he had previously published parts of it, from time to time, by which means he early acquired a high reputation with his countrymen, who considered him as the same rank among their historians that Virgil occu

plied among their poets, and Cicero among their orators. His fame reached even to the remotest extremities of the Roman empire. An inscription of the time was so struck with his illustrious character, that he travelled all the way from that city to Rome on purpose to see him, and, having gratified his curiosity, straightway returned home. (Plut. Ep., 2, 8.) Livy continued to reside at Rome till the death of Augustus. On the accession of Tiberius he returned to Patavium, where he survived five years longer, and at length died at the place of his nativity, the 17th of A.D 17, and in the 76th year of his age.—Livy is supposed to have been twice married. By one of his wives he left several daughters and a son, to whom he addressed an epistle or short treatise on the subject of rhetoric, in which, while delivering his opinion concerning the authors most proper to be read by youth, he says, that they ought first to study Demosthenes and Cicero, and that the latter's works as a mimicBusiness Data Processing

and were more popular among the ancients, as well as among the people of the present day. (Seneca, Epist. 91.) Livy's history was written in such a style that the works of Cicero and Virgil, the great orators, were not more admired.

(Quint., Inst. Or., 10, 1.) After his death, statues were erected to Livy at Rome; for we learn from Suetonius that the mad Caligula had nearly ordered that all his images, as well as those of Virgil, should be removed from the public libraries. His more rational subjects, nevertheless, regarded Livy as the only historian that had yet appeared, whose dignity of sentiment and majesty of expression were equal to the situation of the thousand years of the Roman republic.—The work of Livy comprehended the whole history of Rome, from its foundation to the death of Drusus, the brother of Tiberius, which happened in the year B.C. 9. It consisted of 142 books; but of these, as is well known, only 35, with some fragments of others, are now extant. The first ten books, which are still remaining, and which have been termed the first Decade, bring down the history from the revolution of Numa in Italy to B.C. 293, or to within a few years of the commencement of the war with Pyrrhus. An hiatus of the following ten books, or second Decade, deprives us of the interesting expedition of Pyrrhus, who landed in Italy in order to succour the Tarentines, the discomfiture at length sustained by that enterprise. The last war, commenced in the year 293 B.C., was continued for the second Carthaginian contest, B.C. 218, in which Hannibal invaded Italy, and it continues with little interruption till the end of the forty-fifth book, or the period when the Romans resolved on the destruction of Carthage, and began the third war which they waged against the ill-fated city; thus comprehending in one unbroken narration the complete history of the great struggle in which Hannibal and Scipio were the chief actors, and the campaigns in which Scipio against Philip, those against his successor Perseus, and the contest with Antiochus, king of Syria. Still, however, it must be admitted, that the most valuable portion of Livy's history has perished. The commencement of those disensions which ended in the subversion of the liberties of Rome, and the motives by which the actors on the great political stage were influenced, would have given scope for more extensive and more philosophic deduction than details of the wars with the Sabines and Samnites, or even of those with the Carthaginians and Greeks. Stronger reliance might also have been placed on this portion of the history than on that by which it was preceded. The author's account of the civil wars of Marius and Sylla, of Pompey and Caesar, may have been derived from those who were present at these destructive contests, and he himself was living an intelligent and intelligent observer of all the subsequent events which history recorded. Both Lord Bolingbroke and Gibbon have declared that they would willingly give up what we now possess of Livy on the terms of recovering what we have lost. (Gibbon's History of the Decline and Fall of the Roman Empire, vol. 1, p. 12.)
In addition, then, to the first ten books of Livy's history, we have from the 21st to the 45th books, both inclusive; though from the 40th to the 45th they are full of lacuna. We possess also some fragments, and among them one of the 91st book, discovered in 1772, in a palimpsest manuscript in the Vatican library. This last-mentioned fragment was first published by Bruns (Hamburg, 1773), and afterward by Kreyssig (Chemnitz, 1807). There also exist brief epitomes of the lost books, as well as of those which have come down to us. They have been frequently supposed, though without sufficient reason, to have been compiled by Florus.

We have, however, only epitomes of 140 books; but it has been satisfactorily shown by Sigonius and Drakenborch (ad Liv., Epit., 138), that the epitomes of the 138th and 137th books have been lost, and that the epitome of the 136th book, as it is called, is in reality the epitome of the 139th.—With the aid of this collection of epitomes, and that of other ancient writers, both Greek and Latin, Freimsmheim, a learned German scholar of the 17th century, composed a collection of supplements to replace the books that are lost.

He has imitated admirably the style and general manner of Livy, and has displayed great care and accuracy in citing his authorities. Many hopes have been entertained, at various periods, of recovering the lost books of Livy's work, but they appear at last to have been abandoned. Freimsmheim doubts much, and has been sufficiently strongly encouraged to believe that there was a translation of them in Arabic, but none such has ever been discovered.—Tacitus (Ann., 4, 34) and Seneca (Suaror., 7), among the later Roman writers, speak in the highest terms of the beauty of Livy's style, and of the fidelity of his history; praises which have been constantly repeated by modern writers.

But, while most will be ready to admit that his style is eloquent, his narrative clear, and his power of expression great, his nature and severity may at least be doubted; that he was deficient in the first and most important requisites of a faithful historian, a love of truth, diligence and care in consulting authorities, and a patient and pains-taking examination of conflicting testimonies. Livy made very little use even of such inscriptions and public documents as were within his reach. He appeals, indeed, to the treaty of Spurius Cassius with the Latins, engraved on a column seen by Titus Livy (2, 10, 21—2), but he adds that it is a question of the inscription on the Spolia Opima of Cornelius Cassius, preserved in the temple of Jupiter Feretrium, which was at variance with the received Fasti (or register of magistrates) and the common accounts of historians, he does not appear to have had the curiosity to examine the monument itself, but is content with repeating the report of Augustus Caesar (4, 4, 26). This is one of the few passages in which he descends to a critical comparison of evidence and authorities; and it will serve as a proof how little expert he was in that art of an historian, and how little he valued its results: for, though in his digression he professes to believe in the superior authority of the inscription, in the main course of his narrative he follows the beaten track of writers who had gone before him. He makes no mention of other monuments which he had in his possession; the brazen column in the temple of the Aventine Diana, on which was engraved the treaty of Servius Tullius with the Latins, with the names of the tribes who were members of the league (Dion. Hal., 4, 26); the treaty of Tarquinius Superbus with Gabii, written on a bull's hide, and preserved in the temple of Dios Fidius (Dion. Hal., 4, 59); a treaty with the Sabines, in the time of the kings (Hor., Epit., 2, 1, 25) cannot be in doubt.

To this desire of excelling the glory of his country, there is no doubt, to a similar impulse actuating those from whom he copied) we must ascribe the singular phenomenon which appear on the face of the history, that,
in perpetual wars with the surrounding states, the Romans were never defeated in the open field (9, 191); that when they were defeated, it was always by perseverance, or famine, or sedition; and that, at such seasons, their enemies abstained from attacking them; that they gained victory after victory without subduing their opponents; that taken cities reappear in the power of their original possessors; that consuls and deacons of each successive year that still remain are not known to have failed to supply subjects for new triumphs to new consuls and new dictators; that soldiers, which must have exhausted any state of ancient Italy, diminished not the number of their perpetually-renovated adversaries. To this passion for extolling the military reputation of Rome we owe the comparative neglect of the less popular and less ostentatious subjects of domestic history. Every war and triumph of which state aegrotes, our triumphs, are examples, where the interest of the nation is the foremost consideration; and, on the other hand, in subjects where the interest of the citizens, even their defence, is the foremost consideration, we find that many a great act, even of war, is neglected in order to supply the defects of the writers who preceded him. He was satisfied if from a popular commotion he could extract the materials of an eloquent speech. It is a sufficient proof that on this most important portion of Roman history he was really ignorant, that, with all his powers of language, he does not convey clear and vivid ideas to the minds of his readers. Who has not risen from the midst of the Thracian, the early books of Livy with the distinct notion of a client or of an agrarian law? (Malden, History of Rome, p. 39, seqg.)—Inexperienced, too, in military affairs, his prose blunders have been attributed to him in relation to encampments, circumvallations, sieges, and warlike operations of all kinds. (Casaubon, Pref. ad Polyb.—Polard, Comment.—Niebuhr, Röm. Gesch., vol. 2, p. 430, 814.)—He did not, like Polybius, visit the regions which had been the theatre of the great events which he commemorates, and hence arise many mistakes in geography, and much confusion with regard to the situation of cities and the boundaries of districts. (Lachmann, de Pontibus Hist. Lit., p. 106.) "Considered in this point of view," says Gibbon, "Livy appears merely as a man of letters, little acquainted with the art of war, and careless in point of geography." (Misc. Works, vol. 5, p. 371.)—We have already spoken of the style of Livy. One point, however, connected with this part of the subject remains to be noticed. That fastidious critic and envious detractor of his literary contemporaries, Asinius Pollio, had said that there was a certain Patavinity in the style of Livy; by which he meant to convey the idea that there was something in his expressions which bespoke a citizen of Patavium, and which would not have appeared in the style of a native of Rome, in "a man of old, senator, and publican, the Patavinity of Livy must have consisted in that political partiality to the faction of Pompey, appears to be entirely erroneous; for such principles would not have been blamed by Pollio, who rather affected republican sentiments, and extolled the Pompeians. (Tacit., Annal., 4, 34.) The notion adopted by Bu- deus (De Philosophia, fol. 22), who thinks that Livy's Patavinity lay in his enmity to the Gauls, who were the natural foes of the Patavians, and often ravaged their territories, is equally without foundation. Nor is the conjecture of Barthius and Le Vayer, that it consisted in an undue partiality for his native district, much more successful. Morhof, which was no difficult task, has refuted all these theories (De Patavinini, vol. 1, 134, 174; Littasina libri); and, justly believing that the Patavinity of Livy was accidental, or a coincidence of several causes, he has entered into an elaborate discussion concerning what defect or blemish was implied in the word Patavinity. Some, as he informs us, have thought, with Laurentius Pignorius (Origine Patuanae, c. 17), that it appeared in a certain orthography peculiar to the Patavians, as sibi for sibi, quaie for quasi. Polemics Flavius thinks that it lay in the diffuseness or prolixity, which this author says, the Patavians, both ancient and modern, have been addicted in all his compositions. (Centuria Conjectorum, c. 45.) This is the opinion which seems, on the whole, to be adopted by Morhof himself, and by F unc ci us; and it is founded on Pollio's having affected an admiration of that succinct and jejunie mode of composition, which was erroneously considered as approaching the Attic taste, and which Brutus and Calvus employed in oratory, in opposition to the Western Laevi of eloquence exercised by Cicero and Hortensius. Pollio himself would probably have been puzzled to define his precise notion of Patavinity: but it is most probably that it applied to some peculiarities of expression which were the remains of the ancient dialect of Italy. It appears, though this is a subject of controversy, that there was a refined and vulgar idiom at Rome, and the difference would be still wider between the urban and provincial dialects. The former would be free from everything rustic or foreign, and to possess a certain undefinable purity, simplicity, and grace. It was either in a want of this charm, or in some provincial expressions, that Patavinity must have consisted, if, indeed, existence in the work of Livy was not altogether imaginary on the part of Pollio. But neither Erasmus, who has repeatedly the censure, nor any other writer, has pointed out an example of Pata vinity from the great Latins of the former state by birth. The only names of which the capital can boast are those of Lucrètius, Cæsar, and Varro. Were all the other poets, orators, and historians free from provincial idioms; and did Livy alone retain Patavinity? He was older, indeed, when he first visited the capital, than Horace or Ovid; but he was not so far advanced in life as Virgil or Catullus when they first foisted their way to Rome from Mantus and Verona. (Dunlop's Roman Literature, vol. 3. p. 469, seq.) The best editions of Livy are, that of Crevier, Paris, 1735-41, 4to, 6 vols.; Drakenburch, Amst., 1738-46, 4to, 7 vols.; Rudimmann, Edin., 1751, 12mo, 4 vols.; Ernsteit, Lips., 1769-1804, 8vo, 4 vols.; Stroth, improved by Doering, Gottha, 1796-1813, 12mo, 7 vols.; Ruperti, Göttin., 1807-1809, 6 vols. 8vo; and that of Lemaire, Paris, 1822-1825, 12 vols. 8vo. Locri, a people of Greece, were known of old as people comprehended under the name of Locri three tribes of the same people, which, though distinct from each other in territory as well as in nominal designation, were doubtless derived from a common stock. These were the Locri Ozole, the Epicennidii, and Opuntii. A colony of the last named tribe, who at an early period had settled on the shores of Magna Graecia, were distinguished by the name of Epicynendii, or Opuntii, and were called Locri. The Epicennidii and Opuntii, both of which tribes had been known to Homer, as he makes no mention of the Ozole; whence we might conclude that they were not so ancient as the rest of the nation. The earliest and most authentic accounts concur in ascribing the origin of this people to the Leleges. (Aristot., ap. LUC..
LOLC

Strabo, 321.—Hesiod, ap. eund.—Serv., Ch., 590.—

Diezarch, v. 71.) The Locri Ozolae occupied a nar-
row tract of country, situated on the northern shore of the
Corinthian Gulf, commencing at the Ætolian Rhium,
and terminating near Crissa. To the west and north-
the Ætolian, and the Ætolians, as the latter direction, the Dorians, while to the east they
bordered on the district of Delphi, belonging to Pho-
cis. They are said to have been a colony from the more
celebrated Locrians of the east (Strabo, 427.—

Eustath., ad II., 2, 531), and their name, according to
fabulous accounts, was derived from some set frit springs
(bi, olo) near the hill of Taphius or Taphiassus,
situated on their coast, and beneath which it was re-
portedly said that the Æolians, who had ascended the
mountain, had placed the cause of the Peloponnesians.

(Thucyd., 3, 95.)—The Epimenidians Locri, whom
we must next describe, occupied a small district im-
mediately adjoining Thermopylae, and confined be-
 tween Mount Cnemis, a branch of Geta, whence they
derived their name, and the sea of Euboea. (Strabo,
416, 425.—Eustath., ad Dionys. Perieg., v. 426.) Homer
classes them with the Opunti, under the gen-

eral name of Locri, (v., 2, 536). They derived
their name of Epimenidai from their situation in the vic-
inity of Mount Cnemis. —The Opuntian Locri follow
after the Epimenidai: they occupied a line of coast
about fifteen miles, beginning a little south of Cne-
mides, and extending to the town of Haima, on the
frontiers of Boeotia. Inland their territory reached

the Phocian towns of Hyampolis and Aba. This peo-
dle derived their name from the city of Opus, their
metropolis. (Strabo, 425.—Cramer's Anc. Greece,
vol. 2, p. 104.)—II. A people of Magna Gracicia or
originally a colony of the Locri Opuntii from Greece.
They first settled near the promontory of Zephyrium,
at the lower extremity of Bruttium, on the Ionian Sea,
and hence obtained the appellation of Epizephyrii, by
which they were distinguished from the Locri of
Greece. Here they built the city of Locri. They
removed, however, from this position three or four
years after, and built another city on a height
named Mount Eoapia. Strabo, however, makes the
Locri who settled in Bruttium to have been a division
of the Ozole from the Crissaean Gulf, and remarks,
that Ephorus was incorrect in ascribing the settlement
 to the Locri Opuntii; but it is certain that this opin-
ion of Ephorus seems to be supported by the testimony
of many other writers, and therefore is generally preferred
by modern critics. (Mazzoch. in Tab. Herod. diaet.,
1, 5.—Hume, Op. Hist., vol. 4, p. 460.—id., ad

Vign., Xen., 3, 399.) We derive some information
relative to the origin of the Epizephyrian Locri
from Polybius, who acquaints us, that, from his having
 been the means of obtaining for this city a remission
 of heavy contributions on more than one occasion, he
 had contracted a feeling of kindness and partiality to-
wards its inhabitants, which they, on the other hand, re-
paid by every mark of gratitude and attention. His
freedom from the painful necessity of sending them
into the Ætolian states, to inquire minutely into their laws and institu-
tions, so much admired by antiquity as the work of
the celebrated lawgiver Zaleucus; and also into the
early history, as well as origin, of their city. To
the latter point he had paid the greater attention, from
the obloquy and calumny which Timæus, the Sicilian his-
torian, had hesped upon Aristotle, in his endeavour to

repute what he deemed his false representation of that
event. The great philosopher, in his work on the Ital-
ian republics, stated, that the colony which founded
the Epizephyrian city was formed principally by slaves,
who, during the absence of their masters, had carried
the name of the Patras, of the Ætolian, and even
the inventive of Timæus, there was, however, supported by Poly-
bius on the authority of the Locri themselves; from
whom he learned, that all their nobility was to be re-
ferred to the female part of their community, who had
accompained their ancestors from Greece, and were
descended from the most illustrious families of their
metropolis; and that, so far from having derived their
polity and customs from that quarter, as the Sicilian
historian supposed, they had traced them to the
military and usages of the Siculi, who were in possession
of the country at the time of their arrival, and whom
they afterward expelled. (Polyb., fragm., 12, 5.)—But
it was to the institutions of their great legislator Za-
leucus that this city was mainly indebted for its pros-
perity and fame. His laws, which, according to the
assertion of Demosthenes, continued in full force
for the space of 200 years (Orat. in Timocr.), are said to
have been a judicious selection from the Cretan, Laced-
æmonian, and Arcopagitic codes, to which were, how-
ever, added several original enactments; among these,
that is noticed as particularly deserving of commenda-
tion by which every offence had its peculiar penalty
attached to it; whereas, in other systems of legisla-
tion, punishment was awarded according to the arbi-
trary decision of the judge. The Thuriens, who after-
ward adopted the code of Zaleucus, injured its sim-
plicity by their additions, which too much atten-
dion was paid to minute points and matters of detail.
(Ephor., ap. Strab., 260.—Compare Plat., de Leg.,
p. 638.—Diod. Sic., 12, 20.—Athc., 10, 7.—Cic.,
de Leg., 2, 6.) The situation of the ancient city of
Locri has not been hitherto determined with accuracy,
though the most judicious antiquarians and travellers
agree in fixing it in the vicinity of Gerace. (Barr.,
1, 3.—Cluver., It. Ant., vol. 2, p. 1501.—Romanelli,
vol. 1, p. 161.) This modern town stands on a hill,
which is probably the Monte Esopis of Strabo, and
where the citadel was doubtless placed. But the
name of Pagliai, which is attached to some consid-
erable ruins below Gerace, naturally leads to the
supposition that this was the site of the Epizephyrian
Locri. (Reidela, Voyage dans la Grande Grece, p.
140.—Stiwnburne's Travels, p. 340.) D'Anvill
re moved it too far to the south when he supposed it to
accord with the Moda di Bruttium, v. 3, p. 620.—
Niebuhr states, with a curious fact, that there is still re-
main ing at the present day, in the district of ancient
Locri, a population that speaks Greek, and he cites in
support of this assertion the testimony of Count Zur-
lo, an Italian noble. (Roman History, vol. 1, p. 5,1,
in notis.—Cramer's Ancient Italy, vol. 2, p. 404, seqq.)

LOCUSTA, a notorious female poisoner at Rome
during the first century of our era. She poisoned Clau-
dius by means of a cup of poison, and Brutus by means
of a similar cup of poison. The latter loaded her with
presents after the perpetration of the deed, and actually placed
learners under, in order that her art might be perpetuated.
She was put to death by Gaia. (Tacil., Ann. 12,
66.—Id., ib., 13, 15.—Sueton, Vit. Ner., 33.—Jus-
Sat., 1, 71.)

LOCURIA, Vid. Aius.

LOLLELINEA, grand-daughter of Lollius Paul-
linus, who made herself so infamous by her tapacity
in the provinces. She married C. Memmius, a man of
consular rank, but was taken from him by Caligula,
who made her his own wife, but soon after repudiated
her. (Sueton, Vit. Calig., 25.—Die Casa, 59, 12.) She
afterward, on the death of Messalina, aspired to a union
with Claudius, but was put to death through

782
the influence of Agrippina. (Sueton., Vit. Claud., 26.
Tacit., Ann., 12, 22.)

Lollius, I. M. P. P., Psallicaus, a Roman nobleman,
son of Quintus of Augustus, who gave him (A.U.C. 728, B.C. 26) the government of Galatia, with the
title of propraetor. He acquitted himself so well in
this office, that the emperor, in order to recompense
his services, named him consul, in 732, with L. Aurelius Lepidus. Being sent in 737 to engage the Ger-
mans, who had made an irruption into Gaul, he had the
misfortune, after some successes, to experience a
defeat in the battle of the valley of the river Lollia-
tiana, and in which he lost the eagle of the fifth le-
gnion. It appears, however, that he was able to repair
the disaster, and regain the confidence of Augustus,
for this monarch chose him, about A.U.C. 751, B.C.
3, to accompany his grandson Caius Caesar (afterward the Emperor Caligula) into the East, as a kind of
director of his youth ("velut moderator iuventutis.") Vel.
Patr., 2, 102.) In the course of his reputation,
became guilty of the greatest deprivations, and formed
secret plots, which were disclosed to Caius Caesar by
the king of the Parthians. Lollius died suddenly a few
days after this, leaving behind him immense riches,
but a most odious memory. (Pliny, 9, 35, 57.)

Whether his end was voluntary or otherwise, Veelius
Paterculus (l. e.) declares himself unable to decide.
Horace addressed to him one of his odes (the ninth of the first book, 267), to urge him to begin life again with
Lollius, but died seven or eight years before Lollius had
disgraced himself by his conduct in the East. (Comp.
Sanadon, ad Horat., l. c.—II. A son of the pre-
ceding, to whom Horace addressed two of his epistles
(the second and eighteenth of the first book.) He was
the eldest son of M. Lollius Palicanus, and is therefore
styled by Horace Maxime (acat. natis. Several
modern scholars, such as Torrentius, Baxter, Dacier, Claud-
guin (Observ. on Hor., 180, 4, 192), make Horace, in the epistle just referred to, address Lollius the father, not the son. This, how-
ever, violates chronology, since it appears from Epis.
2, that the person to whom it is inscribed was quite a
young man. The other side of the question is advo-
cated by Noris (ad Cenotaph. Pis. 2, 14, p. 255),
Bayle (Dict. Hist., s. v.), Masson (Vit. Hor., p. 256),
and many other editors of Horace, of whom Horando-
ner, Düring, &c. The epithet maxime, as employed
by Horace, has also given rise to considerable discus-
sion. Torrentius, Dacier, and many other commen-
tators, refer it to the mental qualities of the individual;
while Scaliger, Marcius, Meibomius, Vanderburg, and
others, consider Maxime a family or proper name.
The authority, however, which has been cited from
Gruter (598, 2), to substantiate this last opinion, is
fully opposed by chronological arguments. (Consult
Obbians, ad Horat., l. c.) Besides, the distinctive
family name of the Lollii was Psallicaus, or, as it
is written on coins, Polikamous. (Compare Burmann,
at Quintil., 4, 2.—Ernesti, Clas. Cis., s. v. Psalika-
num. Val. Max., 3, 8, 3. Ellendt, ad Cis., Brut.,
p. 162.—Rasche, Lex. Rei Num., vol. 4, col. 1815.)

Londinium (Ptol. Aelius.)—Less correctly Lon-
dinum, a city of the Trinobantes, in Britain, now Lon-
don. Though it appears to have had a very remote
antiquity, and already existed in the time of Caesar,
though, in consequence of his march being in a differ-
ent direction, it remained unknown to him. Tacitus
(Ann., 14, 33) speaks of it as a place of great com-
merce, and, indeed, its favourable situation for trade
must have given the place a very early origin. Its
later name was Augusta Trinobantum, in honour, proba-

ably, of some Roman emperor. (Compare Ammanni,
Marcellinus, 27, 8. "Londinium, nactus oipidum,
quod Augustum posteros appellavit." ) Bede styles it
Londonia, and also Civitas Londinio (2, 4, 7; 3,
3). Ancient Londinium is generally thought to have
occupied that part of the modern city which lies on
the north of the Thames, near the tower of London.
The Roman emperor Augustus, however, assigns Londinium to the Qua-
tius, many have been led to decide in favour of the
borough of Southwark, on the south side of the river, or,
rather, to the part immediately west of this, especially
as here many remains of antiquity have been found.
It is most probable, however, that the ancient city
lay on both sides of the stream, so that Pliny might
assign it as well to the Trinobantes and Atrebati as
to the Catuvellauni. (Mannert, Geogr., vol. 2, p. 146.)

Longinus, a celebrated Greek critic and rhetorical
writer, who flourished during the reigns of Flavius
Claudius and Aurelian. (Photius, Cod. 265, p. 1470.
—Georg. Symmell., Chron., p. 384.) The place of
his birth is uncertain. Some make him to have been
a native of Palmyra (Sellar., Ant. Palmyr., p. 288),
others of Emesa in Syria (Gabri, de Petra.—Holsten,
Vit. Porphyry, c. 5), and others, again, of Emesa in
Lydia, which he could well be, according to Dions.
us of Phaselis. The most probable opinion is
that which regards him as an Athenian. (Jons, Hist.
Phil., 3, 14.—Ruhnken, Vit. Long., § 3.) It is of
Longinus that Eunapius first made the remark which
has been so often repeated in similar cases; he called
him a living library and a walking study. (Biblio-
thetae tis evrphous kai peripateto Menousos.—Eunap.
appears to have taken this information from his work Πηρ τελευων, pre-
served by Porphyry in the life of Plotinus, p. 127, that,
from an early age, he travelled much in company with
his parents, surveyed many regions, and made himself
acquainted with all the individuals, distinguished in
philosophy, whom his various journeys thus threw in
his way. He became the pupil of Ammonius Sac-
cas at Alexandria, and also of Origen, a disciple of
Ammonius. He married Elpaca, a daughter of Longinus,
Geras and Origen, the famous Christian writer. He was a
genuine Platonist, as appears not only from his works, or, rather,
the fragments of his works, that have come down to us,
but also from the commentaries on Plato composed by
him, of which Olympiodorus and Proclus make
mention. (Ruhnken, Vit. Long., § 6.) The loss of
these commentaries is the more to be regretted by us,
as it would appear that Longinus directed his attention
to the style as well as to the doctrines of Plato. After
having completed his course of study and preparation,
Longinus opened a school at Athens, giving instruction
not merely in the oratorical art, but in criticism and
also in philosophy. (Ruhnken, Vit. Long., § 9.)
Here he numbered the celebrated Porphyry among his
disciples, whose Syrian name Malech he changed into
Porphyrius of synonymous import. (Eunap., in Vit.
Porph., p. 13.) After having spent a long portion
of his life at Athens in the instruction of youth and the
composition of numerous works, Longinus visited the
East, either to transact some business at Emesa, or
to spend a short time with certain relations of his who
dwelt there. It was on this occasion that he became
known to Zenobia, the celebrated Queen of Palmyra,
who engaged his services as her orator in Cappadocia.
(Vopiscus, Vit. Aurel., c. 30.) He subsequently
subsequently appointed as minister, and aided her with his
counsels. Longinus is said, in his new capacity, to have
induced Zenobia to shake off the Roman yoke, and to
have dictated the proud and spirited letter which she
sent to the Emperor Aurelian (c. 30). This letter so
irritated the Roman emperor, that, having shortly after made himself master of Palmyra, he caused Longinus to be put to death (A.D. 273). Zenobia, overcome by the terrors of impending destruction, became for a while a captive of Longinus, and after petitioning for the forgiveness of her conqueror by imputing the whole blame of the war to the counsels of Longinus. (Zosimus, 1, 56.) The spirit of the minister, however, rose in proportion to the danger, and he met his fate with all the calmness of a true philosopher.—The principal work of Longinus is his treatise Peri Ὑψωσις ("On the Sublime," or, more accurately, perhaps, "On elevation of thought and language"). This is one of the most celebrated productions of antiquity, and is probably the fragment of a much larger work. There is, however, some doubt whether this treatise was in reality written by him. Modern editors have given the name of the author of the work as "Dionysius Longinus," but in the best manuscripts it is said to be written "by Dionysius or Longinus" (Διόνυσος ἢ Λογινὸς), and in the Florence manuscript by an anonymous author. Suidas says, that the name of the counsellor of Zenobia was Longinus Cassetas. Some critics have conjectured that this treatise was written by Dionysius of Halicarnassus or by Dionysius of Pergamum, who is mentioned by Strabo (625) as a distinguished teacher of rhetoric; but the difference of style between this work and the acknowledged works of Dionysius of Halicarnassus, renders this conjecture very improbable; and as to the other Dionysius, the conjecture has no foundation. (Consult Remarks on the supposed Dionysius Longinus, &c., London, 1826, 8vo.) The author of the treatise on the Sublime, whoever he may have been, develops it, with a truly philosophical spirit, the nature of sublimity in thought and expression. He establishes the laws for its use, and illustrates these by examples, which constitute, at the same time, an ingenious criti-

que upon the highest productions of antiquity. The style of the work is animated and correct; though critics think that they discover in it forms of expression which could not have been employed prior to the third century, and which stand in direct opposition to the theory of Amatı, this scholar making the work to have been composed in the age of Augustus. Ruhnken thought he discovered, in reading Apisines, a Greek rhetorician, all the lost work of Longinus on Rhetoric excepting the first chapter. He found it intermingled with the work of the former, and recognised in it as a translation of the latter; but these suppositions were never surpassing in the treatise on the Sublime. A communication on this subject was transmitted by him to the editor of a French periodical, "Bibliothèque des Sciences et des Beaux-Arts," and appeared in 1765 (vol. 24, pt. 1, p. 273). The accuracy of Ruhnken's opinion, however, in assigning the fragment in question to the critic Longinus, is far from being generally acceded to. Weiske gives a portion of the fragment, with a Latin version, in his edition of Longinus; and there is no similarity between it and the general style and manner of Longinus. His decision is evidently a correct one. (Weiske, Pref. ad ed. Long., p. xxiv.) The best edition of the treatise Peri Ὑψωσις is that of Weiske, Lips., 1809, 8vo, reprinted at London, 1820.—An enumeration of the works of Longinus, as far they can be ascertained, is given by Ruhnken, in his dissertation on the Life and Writings of Longinus, published with a Latin version, in the journal of the Academy of Sciences in Weiske's edition (p. LXXI., scc.) The list is as follows: 1. Οἱ Φιλολόγοι, or, more correctly, perhaps, Φιλόλογοι ὁμιλεῖται. (Weiske, ad Ruhnkh, Vit. Long., p. LVI., in notis.) It was a work in more than twenty books, and was devoted to a critical examination of the writers of antiquity.—2. Peri τοῦ κατὰ Μεθύδον ("On the Oration of Demosthenes against Meidias").—3. Αποφήματα Ομηρικά ("Homeric Difi-
ages of antiquity, proclaims the sophist. The singular circumstance is, that neither Suida nor Photius so much as allude to the work or name the author, which, unaccountable as it may appear, would almost induce us to imagine, in spite of the thing being pronounced "impossible" by Vellum, that the romance was really produced in the midst of the bad taste and wearisome scholastics of the eighth century. The imitations mentioned by Courrier rather tend to strengthen this suspicion than otherwise; for if the work were really pillaged by Achilles Tatius, Xenophon of Ephesus, Nicetas Eugenius, Eumathius, and the whole host of scribblers from the second century downward, this would prove incontestably that it was intimately and directly inspired, and would explain the critics of so vast a space of time should have conspired to preserve an inviolable silence on the subject, to conceal the author's name, to refrain from the slightest allusion to his piece, is utterly beyond comprehension. We must confess, that it does require some stretch of faith to believe that a Longus was produced in the eighth century, a period which affords no name better known than that of the chronic-maker Syneclitus. But, however, it is not to imagine that such a man would be acquainted with the literature of his language from the earliest times, and more especially with those productions of romantic fiction which he was destined to imitate and surpass. Moreover, without a particle of invention himself, and gifted rather with an ingenuous industry directed by an acquired and fastidious taste, than with natural grace and power, he would be thrown upon these for his resource. So he gathered even from the weeds of the garden of literature those minute events which would become visible only when collected and arranged in his cell; and the future examiner, by a natural mistake, would trace the theft to the poor rather than to the rich, just as we may say of the pulpy end of the grass-flower, it tastes or smells of honey, and not of the fragrant stores of the bee, they taste or smell of the grass-flower. — Chloe is the romance, par excellence, of physical love. It is a history of the senses rather than of the mind, a picture of the development of the instincts rather than of the sentiments. In this point of view it is absolutely original; and the subject, pleasing, indeed, in its nature, but dangerous and seductive to the youthful imagination, becomes, when treated by the masterly and seldom indeclicate pen of Longus, philosophical and moral. Unlike the moral vulgarities of modern Europe, which can only be hated on the heart by brutalizing the mind, there is a charm about its freedom, a purity in its very ignorance of virtue. Vice is advocated by no sophistry, palliated by no seductions of circumstances, and punished by no sufferings. Vice, in fact, does not exist, unless ignorance be a crime and love an impurity. Daphnis and Chloe have been brought up together, free denizens of the fields, and granted, and suit with ease to the Lesbian paradise; their eyes have rested from infancy on the same objects; their ideas have been formed by the same train of circumstances; their tastes, feelings, habits, all have sprung from the same root, and grown under the same influence. Their hearts understand each other; the poetry of nature has entered their souls, and is reflected in their eyes; but poor, at least in the wealth of the world and its acquirements, humble in all their matter and spirit, sentiment finds no passage into language, and no voice, but the voice of nature is heard in their hearts. "Paul and Virginia" is nothing more than "Daphnis and Chloe," delineated by a refined and cultivated mind, and spiritualized and purified by the influence of Christianity. Taking the difference of time, climate, knowledge, and faith into account, the parallel is complete. If St. Pierre had made his lovers shepherds in the isand of Lesbos, under a pagan regime, his work, instead of being one of the most exquisite and delightful of all modern productions, would have been a issue of metaphysical mechanism and absurdity. Even in the faults of the two works there is a striking analogy to which the present writer will refer in the third canto. The romance carries his ignorance to a pitch of exaggeration which is absolutely repulsive; while the ill-timed and extravagant prudence of Virginia in the catastrophe, in the hands of any other writer than St. Pierre, would have surprised the reader into a smile. "The expressions of Longus," says Huet, "are all of fire and vivacity; he produces wit, spirit; his pictures are agreeable, and his images arranged with skill. The characters are carefully sustained, the episodes grow out of the story; and the passions and sentiments are depicted with a delicacy sufficiently in keeping with pastoral simplicity, but not always with the rules of romance. Probability is almost never violated, except in the machinery which is employed without discretion, and which injures the denouement of the piece, in other respects good and agreeable." (Foreign Quarterly, No. 9, p. 153, seqq.—The best editions of Longus are the original Lips., 1777, 2 vols. Svo.; Schäffer, Lips., 1803, 12mo; and that of Courrier, re-edited by De Sinner, Paris, 1829, 8vo. Courrier's text contains the fragment which fills up the hiatus: p. 13, ed. Villosot, and p. 15, ed. Schäffer. It was copied from a Florentine manuscript, and first published at Rome in 1810, by Courrier, then an artillery officer in the French service. The fragment first appeared separately, but was soon after inserted into an edition of the whole romance carried by the same scholar. The manuscript is the same from which Chariton, Xenophon Eupheus, and De Furia's Systematic Fables have been published; and it contains also Longus, four books of Achilles Tatius, and several Opuscula enumerated by De Furia, p. xxxvii., xxxviii., ed. Lips., 1810. Lortie, a nymph, daughter of Neptune, pursued by Priapus, and who escaped from him by being changed into the aquatic lotus. (Ovid, Met., 9, 348.) Lotoφæctos, a people on the coast of Africa, near the Syrtites. They received this name from their living upon the lotus. Ulysses visited their country at his return from the Trojan war. (Hom., Od., 9, 94.) Homer says, that whoever ate of the lotus lost all wish of returning home, and became dearsous of remaining in the land that produced it. Compare Herodotus (4, 177). According to Renell, the location of the Lotophagi is on the coast of Africa, and it is the want of a more extended knowledge of the countries bordering on the desert, on the part of the ancient writers. He states that the tribes who inhabit these countries, and whose manners are in any degree known to us, eat universally of this fruit. The shrub or tree that bears the lotus fruit is disseminated over the edge of the Great Desert, from the coast of Cyrene, round by Tripolis and Africa Propria, to the borders of the Atlantic, and the coast of Africa are not the only places in it, are the want of a more extended knowledge of the countries bordering on the desert, on the part of the ancient writers. He states that the tribes who inhabit these countries, and whose manners are in any degree known to us, eat universally of this fruit. The shrub or tree that bears the lotus fruit is disseminated over the edge of the Great Desert, from the coast of Cyrene, round by Tripolis and Africa Propria, to the borders of the Atlantic, and the coast of Africa are not the only places in it, are the want of a more extended knowledge of the countries bordering on the desert, on the part of the ancient writers. He states that the tribes who inhabit these countries, and whose manners are in any degree known to us, eat universally of this fruit. The shrub or tree that bears the lotus fruit is disseminated over the edge of the Great Desert, from the coast of Cyrene, round by Tripolis and Africa Propria, to the borders of the Atlantic, and the coast of Africa are not the only places in it, are the want of a more extended knowledge of the countries bordering on the desert, on the part of the ancient writers. He states that the tribes who inhabit these countries, and whose manners are in any degree known to us, eat universally of this fruit. The shrub or tree that bears the lotus fruit is disseminated over the edge of the Great Desert, from the coast of Cyrene, round by Tripolis and Africa Propria, to the borders of the Atlantic, and the coast of Africa are not the only places in it, are the want of a more extended knowledge of the countries bordering on the desert, on the part of the ancient writers. He states that the tribes who inhabit these countries, and whose manners are in any degree known to us, eat universally of this fruit.
Lucan, a city of Etruria, northeast of Pisa, on the river Auser of Serchio. It still preserves its situation and name. It is mentioned for the first time by Livy, as the place to which Tiberius Graccus retired after the unfortunate campaign on the Trebia (21, 59). The same writer states it to have been colonized A.U.C. 575 (41, 13.—Yell. Patr., i, 15). Caesar frequently made Lucu his headquarters during his command in the two Gauls. (Cic. Ep. ad Fam., i, 9.—Suet. Cæs., 24.) It is also mentioned by Strabo (217.—Curt. Hist. of Greece, iv. 19). It is a city of the inhabitants of Lucania. (Vid. Lucania.) Lucania, a country of Magna Graecia, below Apulia. It was occupied, in common with the other provinces of southern Italy, by numerous Greek colonies. The native race of the Lucani were numerous and warlike, and said to be of Samnitic origin. These, as their numbers increased, gradually advanced from the interior to the coast, and were soon engaged in hostilities with the Greeks, who, unable to make good their defence, gradually retreated; thus allowing their harsh, and restless foes to obtain possession of all the settlements on the western coast. These aggressions of the Lucani were for a season checked by the valour and ability of Alexander, king of Epirus; but upon his death they renewed their inroads with increased confidence and success, making themselves masters of Thurii, Metapontum, Heraclea, with several other towns, and finally reducing the Grecian league to an empty name, with only the shadow of its former brilliancy and power. Such was the state of things when the Romans, engaged in the war with Egypt, were unable to make any effectual resistance after Pyrrhus had withdrawn his forces from Italy, submitted to the victors. The war with Hannibal, carried on for so many years in this extremity of Italy, completed its desolation and ruin; for, with the exception of a few towns restored and colonized by the Romans, this once flourishing tract of country became a dreary waste, retaining only the ruins of deserted cities, as mournful relics of the late abodes of wisdom and genius.—Lucania, considered as a Roman province, was separated from Apulia by the Bradanus, and a line drawn from that river to the Silarus; which latter stream served also for a boundary on the side of Campania. To the southwest the river Lao divided the Lucani from the Bruttii, as did also the Crathis to the southeast. (Strabo, 255.—Cramer's Anc. Italy, vol. 2, p. 347.)

Lucius M. Annæus, a Latin poet, born A.D. 38, at Corduba, in Spain, where his family, originally from Italy, had been settled for several generations, and where some of its members had filled public offices. (Suet., Vit. Lucan.—Fabr., Bib. Lat., vol. 2, p. 141.) His father, Annæus Mela, was a Roman knight, and enjoyed great consideration in the province. Lucan was named after Annæus Lucanus, his maternal grandfather, who was distinguished for his eloquence. His father was also the youngest brother of Seneca the philosopher. At a very early age, Lucan was sent to Rome, where he received his education. Rhemius Palemon and Flavius Virginius were his teachers in grammar and eloquence. The principles of the Stoic philosophy were taught him by Anæus Cornutus, a Greek philosopher, who instructed at Rome until Nero, offended at his opinions and lan guage, banished him to an island. Lucan's talent for poetry developed itself at an early period; he was ac quainted with the most eminent poets in Greece, and at the age of only fourteen years of age. Having completed his education at Athens, he was placed by Seneca, his paternal uncle, who had charge at that time of the youth of Nero, around the person of the young prince. Nero soon became attached to Lucan, and raised him to the dignity of an augur and questor before he had reached the proper age for either of these offices. During his magistracy Lucan exhibited to the populace a magnificent show of gladiators. The folly of Nero, who pretended to be a great poet, and the vanity of Lucan, who would not yield the palm to any competitor, soon embroiled the two friends. Nero offended the young and presumptuous aspirant by abruptly quitting, on one occasion, an assembly in which the latter was reciting one of his poetical productions. Lucan sought to avenge this affront by presenting himself in another assembly as a competitor against the prince. We hardly know who was the more voluble. Among the judges, who believed the poetical art about to be degraded, if a bad piece, though composed by a prince, should receive the crown; or the courage of the judges, who decreed the prize to a subject who had dared to compete with his master. The vengeance of Nero was not slow in overtaking the impudent poet: it wounded him in the most sensible part, for he was commanded to abstain in future from declaiming in public. Without being unjust towards the memory of Lucan, we may attribute to the hatred which from this time
LUCANUS.

he conceived against Nero, the part that he subse-
quently took in the conspiracy of Piso; but it was to
be a task which he could in any way be defended
from a reproach which Tacitus makes against him,
and which has affixed an indelible stigma to his name.
It is said that, deceived by a promise of pardon in
case he should discover his accomplices, and wishing
to propitiate the favour of Nero, who had destroyed
his own mother, by incurring in like manner, in his
turn, the guilt of Parricide, he declared that his mother
Aricia was a party in the conspiracy. The admirers
of Lucan have suggested, that this tale was invented
by Nero or his flatterers, to heap odium on the char-
acter of a poet from a contest with whom he had
brought away nothing but disgrace. Unfortunately,
however, for the correctness of this assertion, it may
be alleged in reply, that Tacitus, a close scrutinizer
into the artifices of tyranny, relates the charge with-
out expressing the least doubt as to its truth. (Ann.,
15, 56.) But, however this may be, the cowardly
complaisance of the poet, if he were really guilty of
the conduct ascribed to him, could not prove of any
avail; he was merely permitted to choose the manner
of his death. He caused his veins to be opened, and
died with a degree of courage that formed a strange
contrast to the pusillanimity in which, but a moment
before, he had indulged. It is even said, that, feel-
ing himself enfeebled by the loss of blood, he recited
four verses in the midst of his passion; (2.) which
he had put into the mouth of a dying德尔西us. He per-
ished A.D. 65, at the age of 27 years. Although
accused of being an accomplice, his mother was not in-
volved in his disgrace. Lucan left a young widow,
whose character and merits are praised by both Mat-
rial and Statius. She was named Polla Argentaria,
and is reckoned by Sidonius Apollinaris (2, 10) among
the number of those celebrated females whose coun-
sels and sallies of fancy are interwoven with their his-
band's in the composition of their works. The various
poems of Lucan, his "Combat of Hector and Achilles,"
which he composed at the age of twelve years; his
"Description of the burning of Rome;" his "Sat-
urnalia;" his tragedy of "Medea," left unfinished by
him, have all perished. We have remaining only one
poem, the "Pharsalia," or the war between Caesar
and Pompey. It is comprised in ten books; but,
since we are off about Lucan's narrative, it is prob-
able that some part has been lost, or that the poet had
not finished the work at the time of his death.
The first book opens with the most ex-
travagant adulation of Nero, in which the poet even
exceeds the base subserviency of the poets of the age
of Augustus. The Pharsalia contains many vigorous
and animated descriptions, and the speeches are char-
acterized by considerable rhetorical merit, but the lan-
guage is often inflated, and the expressions are ex-
tremely laboured and artificial. The poem is also de-
icient in that truth to nature, and in those appeals to
the feelings and the imagination, which excite the
sympathy of every class of readers. Still, great al-
lowance must be made for the youth of the author,
who, if he had lived longer, would probably have cured
himself of those faults and defects which are now so
comprehensively ascribed to him. The Pharsalia cannot
be regarded as an epic poem, since both poetic invention
and machinery, which form the very soul of the epo-
pée, are altogether wanting in it. The event on
which the action is based was not sufficiently far re-
oved from Lucan's own times to permit him to in-
dulge his imagination in adorning it with fictions.
The poem should rather be called an historical one.
The principal defect in the Pharsalia, admitting that
it is not only more than an historic poem, is the want
of unity of action. One cannot perceive, on reading
the work, what is the object which the poet had in
view, what is the point to which everything
ought to tend. Is it the momentary triumph of free-
dom of Brutus or of Caesar, which Lucan has wished
to celebrate? Or was it his intention to publish and
colour the disastrous consequences of civil discord?
Or did he wish to dilate on some moral or political
virtue? Great uncertainty accompanies all these
questions. It is true, the poem being probably left
unfinished, it becomes proportionately more difficult
to pronounce upon its object; but, at the same time,
this object ought to be so clearly indicated in every
part of the poem, as to form the key which were, its
very soul, and to be the pivot around which everything
should turn. Faithful to the laws of history, far different in
their character from those of the epopeé, Lucan does
not, in the commencement of his poem, transport us
at once into the midst of affairs; he goes back to the
origin of the civil war between Caesar and Pompey,
and follows events in chronological order. His prin-
cipal heroes are Pompey, Caesar, Cato, and Brutus.
But we may charge the poet with not having fully
succeeded in the delineation of their characters, and
with producing sometimes a different impression upon
his readers from that which he intended to effect.
The character of Pompey is exalted, even at the ex-
pense of historical truth; that of Caesar is treated with
injustice; and yet, notwithstanding all this, Lucan
has failed in making the former interesting, and Cas-
 Caesar, in spite of the poet, is the true hero of the Phar-
salia; he is the centre of all events; we see him pro-
ceeding to his death, only before our eyes, while we
only see and hear of Pompey in the exaggerated eu-
logiums lavished upon him by the poet. But it is
principally in his digressions, in the numerous descrip-
tions with which he adorns his narrative, some of
which, at the same time, afford proofs of distinguished
talent, that Lucan betrays a want of judgment and of
good taste, the immediate results of his youth, and of
his imitator, his mode of conducting his scenes, and his
Alexandria. Erudition often supplies the place of va-
riety; and the brilliant conceits brought into vogue
by his uncle Seneca, together with the maxims of the
Porch, to which he was attached, are made to stand
in lieu of that enthusiasm and dignity which form two
of the principal features of epic composition. His
versification, too, wants the elegance and the melody
of Virgil's.—Besides the Pharsalia, several critics
have, among others, composed in imitation of an historic
poem ascribed to Lucan a poem in 361 verses, which has
come down to us, and which contains a eulogium on
Calpurnius Piso, the same who conspired against Ne-
or. Barthius thinks that this production formed one
of a collection of fugitive pieces published by Lucan
under the title of Silvae; but other critics, among
whom may be cited Fabricius and Wernsdorff, have
clearly shown that Lucan cannot be regarded as the
author of the poem. The expressions employed by
its author to indicate the lowness of his origin and
the scantiness of his fortune, do not apply with any
correctness to Lucan, descended as he was from a
good family, and rich as well in his own as in the
property brought him by his wife. It is assigned with
more propriety to Saleius Bassus, a friend of Lucan's.
—The best editions of Lucan are, that of Curtius,
Lips., 1726, 8vo, re-edited and completed by Wern-
sdorff, Lips., 1828, 2 vols. 8vo; Oudem., Lugd. Bat.,
1728, 2 vols; Burmann, Lugd. Bat., 1740, 4to; Le-
maire, Paris, 1830—1832, 3 vols 8vo, and that of
Weise, Quellenb., 1835, 8vo. The edition published
at Glasgow (1816, 8vo), with the notes of Bentley and
Grotius, is also a good one. (Schöll, Hist. Lit. Rom.,
vol. 2, p. 286, seqq.—Bähr, Gesch. Rom. Lit., p. 94,
seqq.)—II. Ocelus, a Lucanian philosopher. (Vid. Ocelus.)
LUCERIA, a city of Apulia, about twelve miles to
the west of Arpi. It was a place of great antiquity,
and was said to have been founded by Diomedé
LUCIANUS.

whose offerings to Minerva were still to be seen in the temple of that goddess in the time of Strabo (294). Luceria was the first Apulian city which the Romans appear to have been solicitous to possess; and though it was long an object of contention with the Samnites, they finally secured their conquest and sent a colony there, A.D. 440. (Liv., 9, 2.—Diod. Sic., 18.)—Full accounts of all the battles and sieges which took place in Apulia are enumerated among those cities which remained most firm in their allegiance to Rome during the invasion of Hannibal. (Livy, 27, 10.—Polyb., 3, 88.)

In the civil wars of Pompey and Caesar, Luceria is mentioned by Cicero as a place which the former was anxious to retain, and where he invited Cicero to join him. (Ep. ad Att., 8, 1.—Cass. Hemst., Civ., 1, 24.) It seems to have been noted for the excellence of its wool, a property, indeed, which, according to Strabo (284), was common to the whole of Apulia. This place still retains its ancient site under the modern name of Lucera. (Cramer's Anc. Italy, vol. 2, p. 285, seq.)

Luceres, the third of the three original tribes at Rome. These three original tribes were the Ramnenses or Ramnes, the Tatienses or Tatiienses, and the Luceres. (Vid. Roma.)

Lucius, a celebrated Greek writer, born at Samos, and travelled in Asia, Africa, and Europe. When he flourished is uncertain. Suidas, who is the only ancient writer that makes mention of him, informs us that he lived in the time of Trajan, and also before that prince (Διηγεται δὲ γενέσθαι ἐπί τοῦ Καίσαρος Τραϊανοῦ, καὶ ἐπίσκεψιν.) This, however, Vossius denies to be correct. (Hist. Gr., 2, 15.) The same Suidas also states, that, after having followed the profession of an advocate at Antioch with little success, he turned his attention to literary composition; and that he was finally reduced to live by writing pieces by dogs, which this writer considers a well-merited punishment for his impiety in attacking the Christian religion. Lucian himself, however, (Revitr., p. 29), assigns as the reason for his quitting the profession of an advocate, his disgust at the fraud and chicanery of the lawyers of the day; and as for the story of his death, we may safely pronounce it a pious falsehood. In a dissertation on Isidorus of Charax, Dacier composition; and that he was finally reduced to live by writing pieces by dogs, which this writer considers a well-merited punishment for his impiety in attacking the Christian religion. Lucian himself, however, (Revitr., p. 29), assigns as the reason for his quitting the profession of an advocate, his disgust at the fraud and chicanery of the lawyers of the day; and as for the story of his death, we may safely pronounce it a pious falsehood. In a dissertation on Isidorus of Charax, Dacier decides that he never went to India, and that he finished his days in Asia, during the reign of Nicakes, when he was no longer a young man. The manner of his death, as described by the ancient authors, is uncertain. Some say that he was strangled by his own hand, and others that he died of natural causes. (Op., ed. Hemst., vol. 1) The great_View of Lucian, 14, agrees in opinion with Hemstyer, places him under the Antonines and Commodus. Vossius also (l. c.) makes him a contemporary of Athenianus, who lived under Marcus Aurelius, and Isonius (Script. Hist. Phil., 3, 10, p. 60) inclines to the same opinion, considering him as contemporary with Democritus, who flourished under Antoninus Pius and his successor. Reitz (De Athen., Lucani, p. 69.—Op., ed. Hemat., vol. 1), agreeing in opinion with Hemstyer, places him under the Antonines and Commodus, and makes him to have lived from 120 B.C. until 260.—Destined at first, by his father, who was in humble circumstances, to the profession of a sculptor, he was placed with that view under the instruction of his uncle. But, becoming soon disgusted with the employment, he turned his attention to literature, and travelled into Asia Minor and Greece, in the latter part of which countries he was present, according to the computation of Dodwell, at the celebration of the 233d, 234th, and 235th Olympiads (A.D. 157, 161, 165), answerring to the 22d, 26th, and 30th years of his age. In his 29th year he appears to have heard historical lectures in Ionia. His principal place of residence while in this country was the city of Ephesus. Whether Lucian entered upon the profession of an advocate before he became a writer is uncertain, and that is perhaps the more correct opinion. Anti- och was the scene of his labours in this new vocation; but he soon became disgusted with forensic pursuits, and turned his attention to others of a more purely rhetorical nature. Eloquence applied to sophist declamations and improvisations, if we may be allowed the expression, opened at this time the surest path to fortune and fame. The sophists were constantly engaged in travelling to and fro among the great cities: they announced a discourse as an itinerant musician at the present day would announce a concert; and all who could conveniently be present were always ready to hear and see them, and to pay liberally for the harmless and entertaining periods with which their ears were gratified. Lucian yielded to the fashion of the day, and abandoned the bar for the tribunal. He again directed his thoughts to travel, and visited Asia, Greece, and particularly Gaul, in which last-mentioned country he settled for a time as a teacher of rhetoric, and soon obtained great celebrity and a numerous school. He appears to have remained in Gaul till he was about forty, when he gave up the profession of rhetoric, after having acquired considerable wealth. On his return from Gaul he visited Italy, and paints in vivid colours, in his "Nigrina," the corruption of the capital. During the remainder of his life we find him travelling about from place to place, and visiting successively Macedonia, Cappadocia, Paphlogonia, and Bithynia. The greater part of his time, however, was passed in Athens, where he lived on terms of the greatest intimacy with Democritus, and was regarded as his disciple. He made the study of man his particular object, we find him embracing no one of the systems then in vogue, but following, as far as he could be said to have followed any sect, the tenets of the school of Epicurus. In his old age he obtained from Marcus Aurelius an honourable employment in Egypt. Some make him to have been placed over a part of this province; but it appears more probable that he was appointed registrar to one of the higher tribunals. He died at a very advanced age.—What distinguishes Lucian as a writer is a genius eminently satirical, a brilliancy of thought, and a larger share of humour than any other author of antiquity, with the exception, perhaps, of Aristophanes and Horace. His irony spares no folly and no prejudice on the part of his contemporaries, but wages against their failings a continual warfare. The writings of Lucian very rarely betray any marks of the decline usually observable in the characters of its age. He is a very peculiar instance of a writer who is said to have lived. His style, formed by the study of the best models, and especially of Aristophanes, would never lead us to suspect that he was a native of the distant province of northern Syria: it is as pure, as elegant, and as Attic as if he had flourished in the classic periods of Grecian literature, and the defects of the age in which he lived merely show themselves in the desire to coin new expressions, and to divert others from the more evident and legitimate meaning; faults from which he has not been able to save himself, although he ridicules them in one of his own productions, the "Lexiphanes." Neither has he been always able to resist the inclination of adorning his style with the tinsel of quotations and phrases borrowed from the ancient poets and historians, and frequently misplaced. The greater part of his productions have the dialogue form; but they are not, like the dialogues of Plato, dissertations put into the mouths of interlocutors, merely to destroy the monotonous uniformity of a continued discourse. The dialogues of Lucian are true conversations; they are in every sense dramatic. He says himself (Διὰ τῆς καταθ., ε. 33) that he has restored dialogue to earth, after it had been lost in the regions of the clouds; and that, despoiling it of its tragic garb, he has brought it in contact with pleasantness and the comic muse, which he treats are various and interesting: history, philosophy, and all the sciences furnish him with materials. Lucian may, in fact, be regarded as the Aristophanes of his age, and, like the great comic poet, he had recourse to raffinity and satire to accomplish the
great object he had in view. This object was, to expose all kinds of delusion, fanaticism, and imposture; the quackery and imposition of the priests, the silly and absurdity of the superstitious, and especially the solemn nonsense, the prating insolence, and the immoral lives of the philosophical charlatans of his age. His study was human nature in all its varieties, and the arena in which he lived furnished ample materials for his observation. Many of his pictures, though drawn from the circumstances of his own times, are true for every age and country. If he sometimes discloses the follies and vices of mankind too freely, and occasionally uses expressions which are revolting to our ideas of morality, it should be recollected that every author ought to be judged by the age in which he lived, and not by a standard of religion and morality which was unknown to the writer. The character of Lucian’s mind was decidedly practical: he was not disposed to believe anything without sufficient evidence of its truth; and nothing that was ridiculous or absurd escaped his raillery and sarcasm. The tales of the poets respecting the attributes and exploits of the gods, which were still firmly believed by the common people of his age, were especially the objects of his satire and ridicule in his dialogues between the gods, and in many other, of his writings. In the latter he should have attacked the Christians in common with the false systems of the pagan religion, will not appear surprising to any one who considers that Lucian probably never took the trouble to inquire into the doctrines of a religion which was almost universally despised in his time by the higher orders of society. The greater part, if not all, of the dialogues of Lucian appear to have been written after his return from Gaul and while he was residing at Athens; but most of his other pieces were probably written during the time that he taught rhetoric in the former country. Our limits, of course, will not allow an examination of the numerous writings of Lucian. We will content ourselves with noticing merely one piece, partly on account of its peculiar character, which has made it a subject of frequent reference, and partly because the general opinion of scholars at the present day is adverse to its being regarded as one of the productions of Lucian. It is the Φιλόστατος, ή διδακτóκεινος ("The lover of his country, or the student"). The author of this piece, whoever he was, ridicules, after the manner of Lucian, the absurdities of the Greek mythology; but his satire has, in fact, no other end than to serve as an introduction to an unsparring attack on the Christians: they are represented as wicked men, continually offering fruits, with the malice of the devil of their own. The authenticity of this piece has been much disputed. Mention is made in it of events, which some place under Nero or even under Claudius, others under Trajan or Marcus Aurelius, and some under Julian. The first of these, as, for example, Theodore Marcellus, think, in consequence, that the author of the piece lived during the first century. What appears to favour this opinion is a passage in which the writer alludes, without naming, Nero or Trajan, or even Marcus Aurelius, to our Saviour himself. Some orthodox theologians have shown themselves favourably inclined to this system, because in a passage of the dialogue the question of the Trinity is openly stated, and they have taken this as a proof that this doctrine was taught prior to the council of Nice. Marcianus, however, is mistaken. Artemidorus, author of the Oneirocritica, is cited in the Philopatria: it is true, critics are not agreed as to the period when this work was composed; but in any event he cannot be placed lower than Hadrian. In the dialogue under consideration, so strong a resemblance to the other works of Lucian is perceptible, that there occur so many phrases and forms of expression which are familiar to him, that, if it be not the work of Lucian himself, it could only have been composed by some writer that came after him. Huet and Gesner have found in it a much more accurate acquaintance with Christianity than we can suppose Lucian to have possessed, after having read his Peregrinus. Scholl, following the side exposed by Gesner, takes the Philopatria to have been the work of a man who, after having been initiated into the mysteries of Christianity, hesitated not to return to paganism, and not to return to paganism, but to throw himself into the arts of incredulity. The tone which pervades it betrays the bitterness of an apostate. — We have remaining, besides his other works, fifty Epigrammata ascribed to Lucian. The greater part are of that hyperbolic cast which was so much in vogue during the first centuries of the Christian era. Lucian, however, has not carried this kind of poetry to that point of extravagance to which later writers pushed it. The best editions of Lucian are, that of Hemsterhuy, completed by Reitz, Amst., 1730–36, 4 vols. 4to, edited in a more complete manner by Gesner, Amst., 1743, 3 vols. 4to, and to which must be added, although of inferior value, the Lexicon Lucianum of C. R. Reitz, brother to the former, Ultr., 1746, 4to; that of the Bipont editors, in 10 vols. 8vo, a reprint of the preceding, but containing, besides, the various readings and the notes of Gesner. The best edition of the works of France, collected by M. Belin de Belieu; and that of Lehmann, Lips., 1822–1831, 8vo, of which 9 volumes have thus far appeared. This last edition, however, is much disfigured by typographical errors. (Hoffmann, Lex. Bibliograph., vol. 3, p. 32.)

LUCIFER, the name of the planet Venus, or morning star. It was called Lucifer when appearing in the morning before the sun; but when it follows, it and appears some time after its setting, it is called Heosphorus (Vid. Hesperus.)

Lucilius, I. C., a Roman knight, born at Susa, a town in the Auruncian territory, A. U. C. 149. He was descended of a good family, and was grand-uncle, by the mother's side, to Pompey the Great. In early youth he served at the siege of Numania, in the same camp with Marius and Jugurtha, under the younger Africanus, whose friendship and protection he had thus the good fortune to acquire. (Vell. Patere., 2, 9.) On his return to Rome from his Spanish campaign, he dwelt in the house which had been built at the public expense, and had been inhabited by Seleucus Philopator, prince of Syria, while he resided in his youth as an hostage at Rome. (Ascon. Pedian., in Cic., contr. L. Piso.) Lucilius continued to live on terms of the closest intimacy with the brave Scipio and the wise Lictor. (Liv., 44, 3, 1, 4.) These powerful protectors enabled him to satirize the vicious without restraint or fear of punishment. In his writings he drew a genuine picture of himself, acknowledged his faults, made a frank confession of his inclinations, gave an account of his adventures, and, in short, exhibited a true and spirited representation of his whole life. Fresh from business or pleasure, he seized his pen while his fancy was yet warm and his passions were still alive to his interests and to损坏. These powerful protectors enabled him to satirize the vicious without restraint or fear of punishment. In his writings he drew a genuine picture of himself, acknowledged his faults, made a frank confession of his inclinations, gave an account of his adventures, and, in short, exhibited a true and spirited representation of his whole life. Fresh from business or pleasure, he seized his pen while his fancy was yet warm and his passions were still alive to his interests and to damages. All these feelings or incidents he faithfully related, and made his remarks on them with the utmost freedom. (Horat., Serm., 2, 1, 30.) Unfortunately, however, his writings are so mutilated, that few particulars of his life and manners can be gleaned from them. Little farther is known concerning him than that he died at Naples, but at what age has been much disputed. Eusebius and Jerome have fixed it at 45, which, as he was born in A. U. C. 605, would be in the 651st year of the city. But Dacier and Bayle assert that he must have been much older, as he speaks in his Satires of the Lucilian law against extortionate expenditure at entertainments, which was not promulgated till B. C. 97 or 96 (A. U. C. 657 or 658). The expression, moreover, sp-
plied by Horace to Lucilius (Serm., 2, 1, 34), namely, seneor or "old," seems to imply, as Clinton has remarked (Past. Helv., vol. 2, p. 135), that he lived to a later date. — The period at which Lucilius wrote was favourable to satiric composition. There was a struggle existing between the old and new manners, and the freedmen so much agitating the Roman mind, that Lucilius, though he had been so long and yet been totally checked by law. Lucilius lived with a people among whom luxury and corruption were advancing with fearful rapidity, but among whom some virtuous citizens were anxious to stem the tide which threatened to overwhelm their countrymen. His satires, therefore, were adapted to please those stanch "taudaces temporis acti" who stood up for ancient manners and discipline. The freedom with which he attacked the vices of his contemporaries, without sparing individuals, the strength of colouring with which his pictures were charged, the weight and asperity of the reproaches with which he loaded those who had exposed themselves to his ridicule or indignation, had nothing revolting in an age when no consideration compelled to those forbearances necessary under different forms of society or government. By the time, too, in which he began to write, the Romans, though yet far from the peaks of greatness, either under the shades of which, had the delicate and cutting irony of the Greek comedies, of which the more ancient Roman satirists had no conception. Lucilius chiefly applied himself to the imitation of these dramatic productions, and caught, it is said, much of their fire and spirit. The Roman language likewise had grown more refined in his age, and was thus more capable of receiving the Grecian beauties of style. Nor did Lucilius, like his predecessors, mix iambic with trochaic verses. Twenty books of his satires, from the commencement, were in hexameter verse, and the rest, with the exception of the thirtieth, in iambics or trochaics. His object, too, seems to have been bolder and more extensive than that of his predecessors, and was not so much to excite laughter or ridicule as to correct and chastise vice. Lucilius thus bestowed on satiric composition such additional grace and regularity that he is declared by Horace to have been the first among the Romans who wrote satire in verse. But, although he may have greatly improved this sort of writing, it does not follow that his satires are to be considered as a different species from those of Ennius, a light in which they have been regarded by Cassaubon and Ruperti; "for," as Dryden has remarked, "it would thence follow that the satires of Horace are wholly different from those of Lucilius, because Horace has not less surpassed Lucilius in the elevation of his style and manner, and surpassed Ennius in the turn and ornament of his." The satires of Lucilius extended to not fewer than thirty books, but whether they were so divided by the poet himself, or by some grammarian who lived shortly after him, is uncertain. He was reputed, however, to be a voluminous author, and has been satirized by Horace for his hurried copiousness and facility. Of the thirty books there are only fragments extant; but their connection, which is not thrown into such a fititude for catching the full spirit of the poet, we perceive something of his manner. His merits, too, have been so much canvassed by ancient writers, who judged of them while his works were yet entire, that their discussion enables us in some measure to appreciate his poetical claims. It would appear that he had great vivacity and humour, uncommon command of language, intimate knowledge of the life and manners, and considerable acquaintance with the Grecian masters. Virtue appeared in his draughts in native dignity, and he exhibited his distinguished friends, Scipio and Laelius, in the most amiable light. At the same time, it was impossible to portray anything more powerful than the sketches of his various characters. His rogue, glutton, and courtisan are drawn in strong, not to say coarse, colours. He had, however, much of the old Roman humour, that celebrated but undefined urbanitas, which indeed he possessed in so eminent a degree, that Phiny says it began with Lucilius in composition (Prof. Hist. Nat.), while Cicero declares that he carried it to the highest perfection, and that it almost expired with him. But the chief characteristic of Lucilius was his vehemence and cutting satire. Macrobius (Sat., 3, 16) calls him "Acer et violentus poeta," and the well-known lines of Juvenal, who relates how he made the guilty tremble with his pen, as much as if he had pursued them sword in hand, have fixed his character as a determined and inexorable persecutor of vice. His Latin is admitted on all hands to have been sufficiently pure (Adull. Gall., 18, 5.—Horat., Sat., 1, 10), but his verbatim corruption was rugged and prosaic. Horace, while he allows that he wrote more polished than his contemporaries, calls his muse "pedestris," talks repeatedly of the looseness of his measures, "incomposite pede curriere versus," and compares his whole poetry to a muddy and troubled stream. Quintilian does not entirely coincide with this opinion of Horace; for, while blaming those who considered him as the greatest of poets, which some persons still did in the age of Augustus, he pursued the pleasure without the style. This is the judgment expressed for Lucilius by Erasistratus, "qua nulliouthas, qui esse aliquid quod tollere possit, putas" (Inst. Or., 1, 10, 1). The author of the books Rhetoricorum, addressed to Herennius, and which were at one time ascribed to Cicero, mentions, as a singular awkwardness in the construction of his lines, the disjunction of words, which, according to proper and natural arrangement, ought to have been placed together, as,

"Hae res ad te scriptas Luci misuisus Aelii."

Nay, what is still worse, it would appear from Asconius that he had sometimes barbarously separated the syllables of a word,

"Hec mihi—max potieris aco."

As to the learning of Lucilius, the opinions of antiquity are different; and even those of the same author often appear somewhat contradictory on this point. Quintilian says that there is "Erudito in eo mira." Cicero, in his treatise De Finibus, calls his learning "Mediocris;" thou afterward, in the person of Crassus, in his treatise De Oratione, he twice terms him "docus" (1, 16; 2, 6). Dacier suspects that Quintilian was led to consider Lucilius as learned, from the pedantic intermixture of Greek words in his compositions, a practice which seems to have excited the applause of his contemporaries, and also of his numerous works in the Augustan age, for which they have been severely ridiculed by Horace, who always warmly opposed himself to the excessive popularity of Lucilius during that golden period of literature. It is not unlikely that there may have been something of political spleen in the admiration expressed for Lucilius during the age of Augustus, and something of courtly complaisance in the attempts of Horace to raise him. Augustus had extended the laws of the twelve tables respecting libels, and the people who found themselves thus abridged of the liberty of satirizing the great by name, might not improbably seek to avenge themselves by an overstrained attachment to the works of a poet, who, living, as they would insinuate, in better times, practised without fear what he enjoyed without restraint. (Gifford's Juvenal, Pref. p. 43.) Some motive of this sort, doubtless weighed with him, and of the age of Augustus, since much of the satire of Lucilius must have been unintelligible, or, at least, uninteresting to them. Great part of his compositions appear to have been rather a series of libels than legitimate satire, being occupied with virulent attacks on contemporary citizens of Rome. Douza, who has collected and edited all that remains of the satires of Lucilius, mentions the
names of not less than sixteen individuals who are attacked by name in the course even of these fragments, among whom are Quintus Oppius, the conqueror of Liguria, Cassius Metellus, whose victories acquired for him the surname of Macedonius, and Cornelius Lepus, at that time Princeps Senatus. Lucilius was equally severe on contemporary and preceding authors: Ennius, Pacuvius, and Accius having been alternately satirized by him. (Aul. Gel., 17, 21.) In all this he indulged with impunity (Horat., Sat., 2, 1); but he did not escape so well from a player whom he had ventured to censure, and who took his revenge by exposing Lucilius on the stage. The poet prosecuted the actor, and the cause was carried on with much warmth on both sides before the prator, who finally acquitted the player (Rhet., ad Herren., 2, 13).—Lucilius, however, did not confine himself to attacking vicious mortals. In the first book of his satires he appears to have declared war on the false gods of Olympus, whose plurality he denied, and ridiculed the simplicity of the people, who bestowed on an infinity of gods the venerable name of father, which should be reserved for one.—Of many books of the Satières such small fragments remain, that it is impossible to conjecture their subjects. Even in those books of which there are a greater number of fragments extant, they are so disjointed that it is difficult to put them legibly together as the scattered chaff of life. (Thuc. 1, 41.)—Lucilius, who has been the most successful in arranging the broken lines, is by many considered as but a conjectural and philological sport. Those few passages, however, which are in any degree entire, show great force of satire. Besides satirizing the wicked, under which category he probably classed all his enemies, Lucilius also employed his pen in praise of the brave and virtuous. He wrote as much as he learned from Horace, and, according to Scipio Africanus; but whether the elder or younger, we are not certain. Lucilius was also author of a comedy entitled Nummularia, of which only one line remains; but we are informed by Porphyrian, the scholar on Horace, that the plot turned on Pythisa, a female slave, tricking her master Simo out of a sum of money, with which to portion his daughter. (Dunlop's Roman Literature, vol. I, p. 393, seqq.)—Douza's edition of the fragments as we learn from Horace, in J.R.S., Lugd. Bat., 4to: a later but inferior edition, cura fratrum Vulpium, appeared in 1713, Patav. Lemaire has subjoined a reprint of Douza's Lucilius to the third volume of his edition of Juvenal and Persius, Paris, 1830.—II. An epigrammatic poet in the age of Nero. We have more than one hundred of his epigrams remaining. Wernsdorff assigns to him the poem entitled Etra, commonly supposed to have been written by Comus Severus. (Poet. Lat. Min., vol. IV, pt. 2, p. 3, seqq.)—Lucilla, daughter of the Emperor Marcus Aurelius and of Faustina, was born A.D. 146. At the age of seventeen she was given in marriage to Lucius Verus, at that time commanding the Roman armies in Syria. Verus came as far as Ephesus to meet her, and the union was celebrated in this city; but, habituated to debauchery, Verus soon relapsed in his former mode of life; and Lucilla, finding herself neglected, took up her woman's revenge, and entered on a career of similar profligacy. Returning subsequently with her husband to Rome, she caused him to be poisoned there; and afterward, in accordance with her father's directions, contracted a second union with Claudius Pompeianus, an aged senator, of great merit and probity. Her licentious conduct, however, underwent no change, and she was banished to the island of Cypsera by her brother Commodus, against whom she had formed a conspiracy. Not long after, Commodus sent a centurion to her place of exile, who put her to death, in the 38th year of her age, A.D. 184. She had by her marriage with her second husband a son named Latus Pompeianus, put to death by order of Caracalla, and a daughter. ( Dio Cass., 71, 1. — Id., 72, 4. — Jov. Capit., Vit. Aurel., 7. — Id., Vit. Ver.)—Lucina, a surname of Juno, as the goddess who presided over the delivery of females. She was probably so called from bringing children into the light. (Lucina, from lucus, lucis, "light."—Vit. Juno.)—Lucretia, a celebrated Roman female, daughter of Lucretius, and wife of Collatinus. Her name is connected in the old legend with the overthrow of the kingsy power at Rome, and the story is related as follows: Tarquinius Superbus waged war against Ardea, the capital of the Rutuli, a people on the coast of Latium. The city was very strong by both nature and art, and made a protracted resistance. The Roman army lay encamped around the walls, in order to reduce it by hunger, since they could not by direct force. While lying half idle here, the princes of the Tarquin family became very solicitous for the safety of their own province. They were distressed about their own safety, and, though it was near midnight, they found Lucretia, with her handmaids about her, working at the loom. It was admitted that Lucretia was the most worthy lady; and they returned to the camp at Ardea. But the beauty and virtue of Lucretia had excited in the base heart of Sextus Tarquin the fire of lawless passion. A few days he returned to Collatia, where he was hospitably entertained by Lucretia as a kinman of her husband, and he took up his lodging in her chamber; and, when persuasion was ineffectual, he threatened to kill her and one of her male slaves, and, laying the body by her side, to declare to Collatinus that he had slain her in the act of adultery. The dread of a disgrace to her memory, from which there could be no possible mode of effacing the stain, produced a result which the fear of death could not have done; a result not unnatural in a heathen, who might dread the disgrace of a crime more than its commission, but which shows the conventional morality and virtue of the times, how ill-founded and almost weakly sentimental in even that boasted instance of female virtue.—Having accomplished his wicked purpose, Sextus returned to the camp. Immediately after his departure, Lucretia sent for her husband and father. Collatinus came from the camp accompanied by Brutus, and her father Lucretius from the town with Publius Valerius. They found Lucretia sitting on her bed, weeping and inconsolable. In brief terms she told what had befallen her, required of them the pledge of their right hands, that they would avenge her injuries, and then, drawing a knife from under her robe, stabbed herself to the heart and died. Her husband and father burst into a loud cry of agony; but Brutus, snatching the weapon from the wound, held it up, and swore, by the chaste and noble blood which stained it, that he would pursue to the uttermost Tarquinii and all his accursed race, and thenceforward suffer no man to be king at Rome. He then gave the bloody knife to her husband, her father, and Valerius, and called on them to take the same oath. Brutus thus became at once the leader of the enterprise. They bore the body of Lucretia to the market-place. There Brutus advanced in the parade and showed the unhappy woman to the people, and called upon the senators and the Roman citizens to avenge Lucretia. Some of them joined Brutus and his cause and took part in the procession. Others, in a state of consternation, fled from the city. Brutus then caused them all to meet at the Capitol and thence forth to march towards Rome. There they met with the senate and the plebeians, and with them they numbered the people of Rome. Their coming raised a tumult, and drew together great numbers of the citizens. Brutus, availing himself of his rank and authority as tribune of the Celere or captain of the knights, summoned the people
to the Forum, and proceeded to relate the bloody deed which the villainy of Sextus Tarquinius had caused. Nor did he content himself with that, but set before them, in the most animated manner, the cruelty, tyrann,
y and oppression of Tarquinius himself; the guilty man, and the melancholy consequences of the measures he had used to retain it, and the unjust repeal of all the laws of Servius Tullius, by which he had robbed them of their liberties. By this means he wrought so effectually upon the feelings of the people, that they passed a decree abolishing the kingly power itself, and banishing for ever Lucius Tarquinius Superb-
us, and his wife and children. (Lut., 1, 51, seqq.— Dion. Hal., 4, 15.) The story of Lucreteria is very in-
gredient. It is told by Dion., and is related by Digennarius, which he apparently reads in rather unfavourable than to his character. (Notti Romane, vol. 1, p. 171, seqq.—Compare Augustin., Civ. D., 1, 19, p. 68, as cited by Bayle, Dict. Hist. s. v.) In all likeliness, however, the whole story is false, and was merely in-
vvented in a later age, to account for the overthrow of
kingly power at Rome.

**Lucrétia.** a mountain range in the country of the Sabines, and the windings of which lay the farm of Horace. It is now Monte Liberati. (Herat., Od., 1, 17, 1.—Compare the description given by Eustace, *Classical Tour*, vol. 2, p. 247, seq.)

Lucrétius, I. Titus Lucrétius Carus, a celebrated Roman writer. Of his life very little is known, and even the year of his birth is uncertain. According to the chronicle of Eusebius, he was born A.D. 588, B.C. 98, being thus nine years younger than Cicero, and two or three years younger than Caesar. To judge from his style, he would be supposed older than either; but this, as appears from the example of Sal-
lust, is no certain test, as his archaisms may have arisen from the imitation of ancient writers, and we know that he was a fond admirer of Ennius. A taste for Greek philosophy had been excited at Rome to a considerable extent some time previous to this era. and Lucrétius was sent, with other young Romans of rank, to study at Athens. The different schools of philosophy in that city seem, about this period, to have been frequent according as they received a tem-
porary fashion from the comparative abilities of the pro-
fessors who presided over them. Cicero, for example, who had attended the Epicurean school at Athens, and who became himself an academic, intrusted his son to the care of Cratippus, a peripatetic philosopher. After the death of its great founder, the school of Ep-
icurus flourished, and was held in higher estimation by him throughout the period when Lucrétius was sent to Athens, it had again revived under the patronage of L. Memmnius, whose son was a fellow-student of Lucretius, as were also Cicero, his brother Quintus, Cassius, and Pom-
ponius Atticus. At the time when frequented by these illustrious youths, the gardens of Epicurus were superintended by Zeno and Phædrus, both of whom, but particularly the latter, have been honoured with the name of Epicure, Cicero himself; perhaps the dearest friend of Lucrétius, was this Memmnius, who had been his schoolfellow, and whom, it is sup-
posed, he accompanied to Bithynia, when appointed to the government of that province. (Good's Lucre-
tius, Pref., p. xxxvi.) The poem *De Rerum Natura*, if not undertaken at the request of Memmnius, was doubt-
less much encouraged by him; and Lucrétius, in a
dedication expressed in terms of manly and eloquent commendation, shows how deeply he was indebted to the
double adulation of some of his great successors, tells him that the hoped-
for pleasure of his sweet friendship was what enabled him to endure any toils or vigils. The life of the poet was short, but happily was sufficiently prolonged to enable him to complete his poem, though perhaps not to give some portions of it their last polish. Accord-
ing to Eusebius, he died in the 44th year of his age,
highly moral on account of its details, even when its
systematic scope is erroneous or apparently dangerous.
Notwithstanding passages which seem to echo Spino-
зизм, and almost justify crime, the Essay on Man is
rightly considered as the most moral production of
the most moral among the English poets. In like
manner, where shall we find exhortations more elo-
quent than those of Lucretius, to the pursuit of virtue
and the love of merit? In the same manner, in the
same manner of language, in the same manner of
cruelty, and luxury and lust; against all the dishonest
pleasures of the body, and all the turbulent pleasures
of the mind?—In versifying the philosophical system
of Epicurus, Lucretius appears to have taken Emped-
ocles as a model. All the old Grecian bards of whom
we have any account prior to Homer, as Orpheus,
Linus, and Musaeus, are said to have written poems
on the dryest and most difficult philosophical questions,
as he was. Some of the great men of his age have
been rightly considered, philosophical poets as
of the highest kind, and its themes are invariably
placed in the mouths of their divinest songsters.
Whether Lucretius may have been indebted to any
such ancient poems, still extant in his age, or to the
subsequent productions of Palaephatus the Athenian,
Antiochus, or Eratosthenes, who, as Suidas informs
us, wrote poems on the structure of the world, it is
impossible now to determine. And it is determined
that some of them have extant himself considerably the
work of Empedocles. The poem of that philosopher, entitled
περὶ φύσεως, and inscribed to his pupil Pausanias,
was chiefly illustrative of the Pythagorean philosophy,
in which he had been initiated. Aristotle speaks on
the subject of the merits of Empedocles in a manner
which does not seem to be perfectly consistent (ap.
Eikhastèd, Lucret., p. lxxvii., cit., cii., ed. Lips.,
1801), but we know that his poem was sufficiently
celebrated to be publicly recited at the Olympic games,
along with the works of Homer. His philosophical
system was different from that of Lucretius; but he
discussed almost all the subjects on which the
Roman bard afterward expatiated. In particular,
Lucretius appears to have derived from his predecessor
his notion of the original generation of man from the
teeming earth; the production, at the beginning of the
world, of a variety of defective monsters, which were
not allowed to multiply their kinds; the distribution
of animals according to the prevalence of one or other
of the four elements over the rest in their composition;
the vicissitudes of matter between life and inanimate
substance; and the leading doctrine, "mortem nihil
ad nos pertinentem," because absolute insensibility is the
consequence of dissolution. If Lucretius has in any
way benefited by the works of Empedocles, he has, in
return, been most lavish and eloquent in his commend-
ations. One of the most delightful features in the
character of the Latin poet, is the glow of admiration
with which he writes of his illustrious predecessors.
His eulogium of the Sicilian philosopher, which he
has so happily combined with that of the country
which gave him birth, affords a beautiful example of
his manner of infusing into everything poetic sweet-
ness. Ennius had translated into Latin the verse
Greek poem of Epicurus, which, from the fragment
preserved, appears to have contained many specula-
tions with regard to the productive elements of
which the world is composed, as also concerning the preserv-
active powers of nature.
To the works of Ennius
our poet seems to have been indebted, partly as a
model for enriching the still scanty Latin language
with new terms, and partly as a treasury or store-
house of words already proven. He has too celebrated with
the most ardent and unconfined enthusiasm.
These writers, Empedocles and Ennius, were
probably Lucretius' chief guides; and, though the
most original of the Latin poets, many of his finest
passages may be traced to the Greeks. The beautiful
 lamentation,
virtue, extols her because her charms are real.—One thing very remarkable in this great poet is the admirable clearness and closeness of his reasoning. He repeatedly values himself not a little on the circumstance that, with an intractable subject, and a language not yet accommodated to philosophical subjects, and scanty in terms of physical as well as metaphysical science, he yet manages to force in his arguments; and this object it is generally admitted that he has accomplished, with little or no sacrifice of pure Latinity.—The two leading tenets of Epicurus, concerning the formation of the world and the mortality of the soul, are established by Lucretius in the first three books. A great portion of the fourth book may be considered as episodical. Having explained the theory of primal atoms, and of the soul, which is formed from them, he announce that there are certain images (rerum simulata) or effluvia which are constantly thrown off from the surface of whatever exists. On this hypothesis he accounts for all our external senses; and he applies it also to the theory of dreams, in which whatever images have occupied the senses during day most readily recur. The principal subject of the fifth book, a composition unrivalled in energy and richness of language, in full accord with the course of events in the history and laws of the visible world, with those of its inhabitants. The poet presents us with a grand representation of Chaos, and the most magnificent account of the creation that ever flowed from mortal pen. In consequence of their ignorance and superstitions, the Roman people were rendered perpetual slaves of the most idle and unfounded terrors. In order to counteract these popular prejudices, and to heal the constant dissatisfactions that accompanied them, Lucretius proceeds, in the sixth book, to account for a variety of extraordinary phenomenons, both in the heavens and on the earth, which at first view seemed to deviate from the usual laws of nature. Having discussed the various theories formed to account for electricity, water-spouts, hurricanes, the rainbow, and volcanoes, he lastly considers the origin of pestilential and endemic disorders. This introduces the celebrated account of the plague, which ravaged Athens during the Peloponnesian war, with which Lucretius concludes this book and his magnificent poem. "In this narrative," says a late translator of Lucretius, "the true genius of poetry is perhaps more powerful and triumphantly exhibited than in any other poem that was ever written. Lucretius has ventured on one of the most unorth and represSng subjects to the museS that can possibly be brought forward, the history and symptoms of a disease, and this disease accompanied with circumstances naturally the most nauseous and indelicate. It was a subject altogether new to numerical composition; and he had to strive with all the pedantry of technical terms; and all the abstraction of a science in which he does not appear to have been professionally initiated. He strove, however, and he conquered. In language the most captivating and in the most unexpected ideas the most precise and appropriate, he has given us the entire history of this tremendous pestilence. The description of the symptoms, and also the various circumstances of horror and distress attending this dreadful scourge, have been derived from Thucydidcs, who furnished the facts with great accuracy, having been himself a spectator and a sufferer under this calamity. His narrative is esteemed an elaborate and complete performance; and the faithful yet elegant account of this Greek historian, the Roman bard has added all that was necessary to convert the description into poetry."

—in the whole history of Roman taste and criticism, nothing appears so extraordinary as the slight mention that is made of Lucretius by succeeding Latin authors; and, when mentioned, the coldness with which he is spoken of by all Roman critics and poets, with the exception of Ovid. Perhaps the spirit of free thinking which pervaded his writings rendered it un safe to extol even his poetical talents; or perhaps, and this is the more probable supposition, the nature of his subject, and the little taste which the Romans in general manifested for speculations like those of Epicurus, Lucretius is simply made to appear less estimated below its real merits. —The doctrines of Lucretius, particularly that which impugns the superintending care of Providence, were first formally opposed by the Stoic Manilius, in his Astronomic poem. In modern times, his whole philosophical system has been refuted in the long and elaborate poem of the Cardinal Polignac, entitled "Anti-Lucretius, sive de Deo et Nature." This enormous work, though involving nothing of original invention, he has successfully reduced to a form and a style which make the whole poetry of Lucretius appear much shorter than it really is; the poem is divided into two books, each, and the whole is addressed to Quintins, an atheist, who corresponds to the Lorenzo of the Night Thoughts. Descartes is the Epicurus of the poem, and the subject of many heavy panegyrics. In the philosophical part of his subject, the cardinal has sometimes refuted at too great length propositions which were manifestly absurd: at others, he has impugned demonstrated truths, and the moral system of Epicurus, which he has shewn was, in the hypothesis of the pre-existence of matter. But he has rendered ample justice to his poetical merit; and, in giving a compendium of the subject of his great antagonist’s poem, he has caught some share of the poetical spirit with which his predecessor was inspired. (Dunlop's Roman Literature, vol. 1, p. 416, seq.). —The work of Lucretius, like that of Virgil, had not received the finishing hand of its author at the period of his death. The tradition that Cicero revised it and gave it to the public, does not rest on any authority more ancient than that of Eusebius; and, had the story been true, it would probably have been mentioned in some part of Cicero’s voluminous writings, or those of the early critics. Eichstädt, while he denies the revival by Cicero, is of opinion that it had been corrected by some critic or grammarians; and that thus two manuscripts, differing in many respects from each other, had descended to posterity, the one as it came from the hand of the poet, and the other as amended by the reviser. The opinion, however, though advocated with much learning and ingenuity, is an untenable one. —The best editions of Lucretius are, that of Laminus, Paris, 1564, 1570, 4to, with a very useful commentary; Crecch, Oxon., 1685, 8vo, often reprinted; Havercamp, Lugd. Bat. 1725, 2 vols. 4to; Wakefield, Lond., 1796, 4to, 3 vols., and Gisage., 1818, 8vo, 4 vols.; and of Forbiger Laps., 1828 12mo. A good edition, however, still much wanted, as Wakefield’s is at best an unsatisfactory performance, and Eichstädt’s has never been completed. —If. Spurius Lucretius Tricipitinus, the father of Lucretia, was chosen as colleague in the consulship to Poplicola, to supply the place of Brutus, who had fallen in battle. He died, however, soon after his election, and M. Horatius was appointed to finish the year. (Liv. 1, 584, 4., Luc. ii, 461, 2., and Ov. Met. ii. 150.) Lucianus, a lake in Italy near Campania, on the coast of Campania. According to Dio Cassius (48, 50), there were three lakes in this quarter lying one behind the other. The outermost was called Tyrrhenus, the middle one Lucinum, and the innermost Avernus. The Lucrine was shut in from the outermost lake or bay by a dike raised across the narrow inlet. This work, according to Strabo, was eight stadia in length, and a small island in the middle was called the Isle of Hercules. (Strab., 245.) Agrigra cut a communication between these lakes and the sea, and built at the opening, but between and uniting the Lucrine and Avernian lakes, the famous Julian Harbour. The object in doing this chiefly was to procure a place along the coast fit for exercising and training a body
LUCUS, Lucius Licinius, descended from a distinguished Roman family, was born about B.C. 115, and served under Sylla in the Marian war. Sylla had a very high opinion of the talents and integrity of Lucullus, and employed him, though he was very young, in many important enterprises. While the former was besieging Athens (B.C. 87), Lucullus was sent into Egypt and Africa to collect a fleet; and, after the conclusion of the war with Mithradates, he was left in Asia to collect the money which Sylla had imposed upon the conquered states. So great, in deed, was the regard which Sylla had for him, that he dedicated his commentaries to him, and in his last will and testament bequeathed his books to his son. B.C. 74, when Lucullus was elected consul, and was appointed to the command of the war against Mithradates. During the following eight years he was entirely engaged in conducting this war; and, in a series of brilliant campaigns, completely defeated Mithradates, and his powerful son-in-law Tigranes. In B.C. 73 he overcame Mithradates at Cyzicus, on the Propontis; and in the following year again conquered him at Cabiria, on the borders of Pontus. In B.C. 69 he marched into Armenia against Tigranes, who had exposed the cause of his father-in-law, and completely defeated his forces near Tigranocerta. He followed up his victory by the capture of this place, and in the following year took also Nisibis, in the northern part of Mesopotamia; but he was not able to derive all the advantage he might have done from his victories, in consequence of the mutinous disposition of his soldiers. Lucullus never appeared so amiable to his troops; and their dissatisfaction was increased by the acts of Clodius, whose sister Lucullus had married. The popular party at home were not slow in attacking a general who had been the personal friend of Sylla, and who was known to be a powerful supporter of the patrician party. They accused him of protracting the war, on account of the facilities it afforded him of acquiring wealth; and eventually carried a measure by which he was removed from the command, and succeeded by Pompey. B.C. 66.—The senate, according to Plutarch, had looked forward to Lucullus as likely to prove a most powerful supporter of the patrician order: but in this they were disappointed; for, on his return to Rome, he took no part in public affairs, but passed the remainder of his life in retirement. The immense fortune which he had amassed during his command in Asia he employed in the erection of magnificent villas near Naples and Tusculum: and he lived in a style of magnificence and luxury which appears to have astonished even the most wealthy of his contemporaries. Lucullus was a man of refined taste and liberal education: he wrote in his youth the history of the Marian war in Greek (Plut. Vit. Lucull., c. 38.—Compare Cic., Ep. ad Att., 1, 12), and was a warm supporter of learning and the arts. His houses were decorated with the most costly paintings and statues, and his library, which he had collected at an immense expense, was open to all learned men. He lived on intimate terms with Cicero, who has highly praised him, and was inscribed one of his books with the name of his friend, namely, the 4th book of his "Academic Questions," in which he makes Lucullus define the philosophical opinions of the Old Academy.—It is said that, during the latter years of his life, Lucullus lost his senses, and that his brother had the care of his estate. He died in his 67th or 68th year. We have a life of him by Plutarch. (Plut. Vit. Lucull.—Appian, Bell. Mithrād.—Encycl. Us. Knowel., vol. 14, 192.)

Lucumo, the title applied to the hereditary chiefs who ruled over each of the twelve independent tribes of the Etruscan nation. It would seem also to have been given to the eldest sons of noble families, who, by their right of primogeniture, would have a fairer claim to public offices and the honours of the state. (Müller, Etrusker, vol. 1, p. 356.) The original Etrurian term was Lucumens, and hence among the Latin writers we sometimes meet with the form Lucumo, as in Propertius (4, 1, 29). Niebuhr thinks that the words Lucummo and Luceres may be both referred in etymology to Lugur, the old German for "a seer," and may have had reference originally to divining by auspices, a privilege reserved for the rulers of the state and the heads of houses. (Rom. Hist., vol. 1, p. 242, Walter's transl.)

Lucu, I. Apollinaris, games in honour of Apollo, celebrated annually at Rome on the fifth of July, and for several days thereafter. They were instituted during the second Punic war, for the purpose of propitiating success, and at first had no fixed time of celebration, until this was determined by a law which P. Licinius Varus, the city priest, had passed. After this they were held, as above mentioned, in July. (Livy, 25, 12.—I.ub., 27, 23.—Manut., ad Cit. Epi. Att., 1, 136.)—The Quinquennial (Lituria Quinquennalis) festival in honour of Ceres, accompanied with public games in the circus, at which the people sat arrayed in white, and during and immediately before which the greatest abstemiousness was enjoined. The injunction was removed at nightfall. The celebration took place on the 9th of April. (Aul. Gel., 18, 2, seqq.—Plaut., Aulul., 2, 6, 5.)—III. Magni or Romanii, celebrated in honour of Jupiter, Juno, and Minerva. (Cic. in Ver., 7, 14.)—IV. Megalenses, called also simply Megalesia, celebrated in honour of Cybele, or the great mother of the gods. Hence the name from μεγάλης (fem. of μεγάς), "great," an epithet applied to Cybele (μεγάλη κυβέρνητι, "great mother"). They were instituted towards the end of the second Punic war, when the statue of the goddess was brought from Pessinus to Rome. (Livy, 29, 14.) Ovid makes the time of celebration the 4th of April. (Fast., 4, 179; but Liby mentions the 12th of the same month.) (Livy, 29, 14.) The statement of Ovid is generally considered the more correct.

Lugudunensis Gallia, a part of Gaul, which received its name from Lugdunum, the capital city of the province. (Consult the article Gallia, p. 530, col. 2, near the end.)

Lugudunum, I. a city of Gaul, situated near the confluence of the Rhodanus and the Rhone or Saône. It is one of the places conquered by Caesar, and, a short time after his death, Munatius Plancus received orders from the Roman senate to re-assemble at Lugdunum the inhabitants of Vienna or Vienne, who had been driven out of their city by the Allobroges. (DiQ Caus., 46, 50.) In a little while it became very powerful, so that Strabo (192) says, it was not inferior to Narbonne with respect to the number of inhabitants. The ancient city did not occupy exactly the same spot as the modern one, but lay on the west side of the Rhone
LU P  
L U S

and Seleucia, while the chief part of modern Lyons is on the east side, at the very confluence of the two streams. At the extremity of the point of land formed by the two streams, and, of course, precisely corresponding with the southern extremity of the modern city, stood the famous altar erected by sixty Gallic nations in honour of Augustus. (Liv., Epit., 137.—Strabo, l. c.) At Lugdunum was established the gold and silver coinage of the province, and from this city, as a centre, the main roads diverged to all parts of Gaul. (Strab., l. c.) In the third century it declined in importance, on account of the vicissitudes and rapid growth of Arles and Narbo. Lugdunum is said by Strabo to have been situate at the foot of a hill. In Celtic, duns signifies a "hill," and from this comes the Latin termination dunam. The earlier name is said by Dio Cassius (l. c.) to have been Lugudonum (Λογγοδονος). Plutarch (de Plau. s. 115. — Op., ed. Reiske, vol. 10, p. 732) derives the name from Λογγυς, the Celtic, according to him, for a "raven," and δοςος, a "hill," and explains this etymology by the tradition of a flock of ravens having appeared to the first settlers Momoros and Atepornatus, when building on a hill in obedience to an oracle. (Compare Reimar, ad Dion. Cass., l. c.—Reiske, ad Plut., l. c.—For other etymologies of the name of this city, consult Merula, Cosmogr., p. 2, l. 3, c. 24.—Vossius, Hist. Græc., p. 346.)—II. A city of the Batavi, in Germania Inferior, now Leyden. The modern name is said to be derived from the name Latui, which it took in the middle ages. (Mannert, Geogr., vol. 2, p. 241.)

LUNA, I. (the Moon). Vid. Selene.—II. A city of Etruria, in the northwestern angle of the country, situate on the coast, and remarkable for its beautiful and capacious harbour. The modern name of this harbour is Golfo di Spazia. Before the new division under Augustus, Luna had formed part of Liguria; and its harbour, situate on the north side of the Macra, certainly was in that province. Cluverius contends that this ancient city occupied the site of the modern Lerici; especially as Strabo (222) and Mela (2, 4) seem to place it on that bank of the Macra; but the ruins which now bear the name of Luni, a little below Sarzana, and the denomination of Lunigiana applied to the adjacent district, together with the authority of Ptolemy (p. 61) and Pliny (3, 5), leave no doubt as to the true position of Luna. The harbour of Luna was chiefly resorted to by the Romans as a rendezvous for their fleets when they sent to Spain. (Liv., 34, 9.—Id., 39, 21.) Strabo states it contained several ports, and was worthy of a nation which so long ruled the sea. The town itself was deserted in the time of Lucan (1, 586). Luna was very famous for its white marbles, which now take their name from the neighbouring town of Carrara. (Strab., l. c.—Plin., 36, 11, 33.—Id., 39, 21.) Pliny speaks of the wine and cheese made in the neighbourhood of Luna (14, 16); the latter were sometimes so large as to weigh one thousand pounds. (Lact. div., 43, 45.—Stratmann, 27.) Inscriptions give Luna the title of a Roman municipium. (Crümer's Italy, vol. 1, p. 171, seqq.)

LUPA (a she-wolf), an animal held in great veneration at Rome, because Romulus and Remus were fed to have been suckled by one. (Vid. Romulus.)

LUPERCAL, a cave at the foot of the Palatine Hill, consecrated by Evander to the god Pan, who was venerated Lupercus by the Latins, as protecting the flocks and flocks sacrificed in it. (Plaut., Dióc. 4, 100.) Inscriptions give the name of one of the consuls of Rome, which was the common derivation of the name. (Arnob., 4, 3.—Sera., ad Æn., 8, 343.—Justin, 43, 1.) Others, however, deduced the term, according to Quintilian, from lusus and capra, by a transposition of letters in the case of the latter word, because they sacrificed in the cave above mentioned a goat (caprum iubebant), and purified the city with the skin of the animal cut into thongs. (Quint., 1, 5, sub fin.—Vid. Lupercalia.)

LUPERICIA, a yearly festival, observed at Rome the 16th of February, in honour of the god Pan, and which have been instituted by Evander. (Vid. Luperci.)

LUPERICI, the priests of Pan. (Vid. Lupercal.) On the festival of this god, which was termed Lupercalia, a goat was sacrificed, and the skin of the victim was cut up into thongs. Thereupon the Luperci, in a state of nudity, except having a girdle of goat's skin around their loins, and holding these thongs in their hands, ran up and down the city, striking with the thongs all whom they met, particularly married women, who were thence supposed to be rendered prolific. (Sertor., ad Virg., Æn., 8, 343.—Ovid, Fast., 2, 427.—Id., 5, 101.) There were three companies of Luperci; two of ancient date, called Fabianus and Quintilianus, from Fabius and Quintillus, who had been at one time at their head; and a third order called Juli, instituted in honour of Julius Caesar, at the head of which was Antony; and therefore, as the leader of this, he went, on the festival of the Lupercalia, although consul, almost naked into the Forum Julium, attended by his lictors, and having made a harangue before the people, he, according to concert, as it is believed, presented a royal diadem to Caesar, who was sitting there arrayed in his triumphal robes. A murmure ran throughout the multitude, but it was instantly changed into loud applause when Caesar rejected the proffered ornament, and persisted in his refusal, although Antony threw himself at his feet, imploring him to accept it. (Cic., Philol., 2, 31, 43.—Dio Cass., 45, 31.—Id., 46, 5.—Sueton., Vit. Jul., 79. —Plut., Vit. Cass.)

LUPERCUS, or Sulicius Lupercus Servatus Junior, a poet, who appears to have lived during the latter periods of the western empire. He has left an elegy "on Cupidity," and a sapphic ode "on Old Age." (Wernstorff, Poet. Lat. Min., vol. 3, p. 235.) He is supposed by some to have been also the author of a small poem "on the Advantages of a Private Life," found in the Anthology of Burmann (vol. 1, p. 508.)

LUPIAE OF LUPPIA, I. A small river in Germany, falling into the Rhine, now the Lippe. It is in modern Westphalia. (Mela, 3, 3.—Vell. Pat., 2, 105.)—II. A town of Italy, southwest of Brandisium, now Lecco, the modern capital of the territory of Otranto. (Plin., 3, 11.—Mela, 2, 4.)

LUPUS, I. a native of Messana in Sicily, who wrote a poem on the return of Meleagrus and Helen to Sparta. He is mentioned by Ovid (ex Pont., 4, 16.—Compare Mongtior, Bibl. Sicul., 1, p. 24.)—II. A poet of the Roman nobility, called Lucilius in his satires. (Pers., Sat., 1, 115.—Compare Liv., Epit., 73.—Jul., Obscures, 115.)

LUSITANIA, a part of ancient Hispania, on the Atlantic coast. The name must be taken in two senses. All the old writers, whom Strabo also follows, understood by Lusitania the territory west of the Lusitani, and these were comprehended between the Duriius and the Tagus, and extended in breadth from the ocean to the most eastern limits of the modern kingdom of Portugal. (Strab., 152.) The Lusitani in time intermingled with the Spanish tribes in their vicinity, as, for example, with the Vettones, Calliaccii, &c., on which account the name of Lusitania was extended to the territories of these tribes, and, finally, under this name became the name of the country south of the Tagus. This is the first sense in which the term Lusitania must be taken, comprising, namely, the territories of the Lusitani, the Calliaccii, the Vettones, and some lands south of the Tagus. The Romans, after the conquest of the country, made a new arrangement of the several tribes. The territories of the Calliaccii, lying north of the Duriius, they included in Hispania Tarraconensis, but, as equivalent, they added to Lu-
Lycia, all the country south of the Taurus, and west of the lower part of the Anas, as far as the sea. According to this arrangement, Lycia was bounded on the south by the Atlantic, from the mouth of the Anas to the Sacrum Promontorium or Cape St. Vincent; on the west by the Atlantic; on the north by the Durus; and on the east by a line drawn from the latter river, a little west of the modern city of Toro, in a southeasterly direction to the Anas, touching it about eight miles west of Merida, the ancient Emerita Augusta. The modern kingdom of Portugal, therefore, is in length larger than ancient Lusitania, since it comprehends two provinces beyond the Durus, Entre Douro y Minho and Tras los Montes, and since it has the Minius or Minho for its northern boundary, but from west to east it is much smaller than Lusitania. The latter embraced also Salamanca, the greater part of Extremadura, and the western extremity of Toledo. The most southern part of Lusitania was called Cuneus, or the wedge (vid. Cuneus), and is now termed Algarve, from the Arabic Al-garb, or the west. Its extreme promontory was called Sacrum. (Vid. Sacrum Promontorium.—Mannert, Geogr., vol. 1, p. 327.)

Lycistra, a town of Belgic Gaul, on an island in the Sequana or Seine, and the capital of the Parisi. Hence it is often called Lutitia Parisiorum. (Cass., B. G., 7, 7.) It was at first a place of little consequence, but under the emperors it became a city of importance. It had two Notitia Lutetia, one of it as the gathering-place for the seamen on the river. In this passage, too, the name Parisi, as applied to the city itself, first appears. At Lutetia, Julian the Apostate was saluted emperor by his soldiers. He had here his usual winter-quarters. The city began to increase in importance under the first French kings, and was extended to the two banks of the river, the island being connected with them by bridges. It is described by a part of its Notitia Parisi (66) speaking of it as the gathering-place for the seamen on the river.

Lyceus, a surname of Bacchus, as loosing from care (ἀναξίος, from λυσθ, “to loosen” or “free.”—Vid. Liber.)

Lyceum, a mountain near Athens. Plato says (in Crat.) that it was opposite the Pyx; and Antonius Caryatius relates a fabulous story, which would lead us to imagine that it was close to the Acropolis. (Hist. Mirab., 12.) Stattius alludes to its olive plantations. (Thub. 631.—Leake’s Topogr., p. 70.—Cramer’s Anc. Græcia, vol. 2, p. 335.)

Lyceum, festival in Arcadia in honour of Pan, or the Lycian Jove. They were the same in origin as the Lupercalia of the Romans.—II. A festival at Argos in honour of Apollo Lyceus, who delivered the Argives from wolves. Lyceum, a mountain in the southwestern angle of Arcadia, deriving great celebrity from the worship of Jupiter, who, as the Arcadians contended, was born on its summit. Here an altar had been erected to the god, and sacrifices were performed in the open air. The temenos was inaccessible to living creatures, since it was closed within its precincts, they died within the space of a year. It was also said, that within this hallowed spot no shadows were projected from the bodies of animals. Pausanias affirms, that nearly the whole of Peloponnesus might be seen from this elevated point. (Pausan., t. c.—Theoc. Idyl., 1, 123.—Virgil, Georg., 1, 16.) Mr. Dodwell, who gives an animated description of the view he beheld from Mount Lyceus, states that the modern name is Tetragi. The remains of the altar of Jupiter are yet visible near the summit. (Pausan., vol. 5, p. 392.—Cramer’s Anc. Græcia, vol. 3, p. 336.)

Lycomedes, the father of Neobeule. He promised his daughter in marriage to the poet Archilochus, but afterward refused to fulfil his engagement when she had been courted by a man whose opulence had more influence than the fortune of the poet. This irritated Archilochus; he wrote a bitter invective against Lycomedes and his daughter, who hung themselves in despair. (Horat., Epod., 6, 13.—Ovid, Fast., 592.) Such is the common account. The story, however, appears to have been invented after the days of Archilochus; and one of the scholiasts on Horace remarks, that Neobeule did not destroy herself on account of any injurious verses on the part of Archilochus, but out of despair at the death of her father. (Scholi, Hist. Lit. Gr., vol. 1, p. 201.)

Lycon, an early citizen of Arcadia, son of Pelasgus. He built Lycosura, on Mount Lyceus, and established the Lycean festival in honour of Jove. Pausanias makes him contemporary with Cercopis (8, 2). His whole history, however, appears to be mythical, as will presently appear. According to the legend given by Apollodorus (3, 8, 1), Lycon was born, by different wives, the father of fifty sons; and, according to another account, mentioned by the same writer, the parent of one daughter, Callisto. Both Lycon and his sons were renowned for their courage and impudence. To entertain the stranger they slaughtered a boy, and, mingling his flesh with that of the victims, set it before their guest. The god, in indignation and horror at the barbarous act, overturned the table (whence the place derived its future name), struck with lightning and impudence the name of the place, and turned it into lyke. (Pausan., vol. 5, p. 336.)

Lycomedes, son of Telamon. He was the father of Odysseus, who, according to the tradition in which Homer lived, was the descendent of Lycomedes, who was the son of Telamon, the nephew of Aias. (Ovid, Fast., 592.—Homer, Odys., 3, 409.) Pausanias says, that the story was founded by the Achaeans in the time of Aias, to explain the origin of the Phrygian Lycomedes, and that the name Lycomedes is to be understood as Lykomedeis, the name of the whole family. (Pausan., vol. 8, p. 351.)

Lycon, a town in Asia Minor, forming the southeastern quarter of Phrygia. The origin of its name and of its inhabitants, the Lycoanes, is lost in obscurity. The Greeks asserted that Lycoan of Arcadia, in obedience to the commands of an oracle, founded a city here, and gave his name to the nation and country; this, however, is an incredible tale. According to others, it derived its name from Lykos, a wolf, the country abounding with these animals. Our first acquaintance with this region is in the relation of the expedition of the younger Cyrus: “The ridges lying
to the northward of Konia (Iconium) and Eckrie (Archal-
la),” observes Leake, “form the district described by
Strabo as the cold and naked downs of Lyconaim, which
furnished pasture to numerous sheep and wild
asses, and where was no water except in very deep
wells. As the limits of Lyconia are defined by
Strabo, he makes it appear very certain, that it
must have been between Philomelem and Tyryrion
the west, and Coropassus and Garsabora on the east
(which last place was 960 stadia from Tyryrion, 1,20
from Coropassus, and 680 from Mazaca), we have the
exact extent of the Lyconian hills intended by the
geographer. Branching from the great range of Tau-
rus, near Philomelem, and separating the plain of
Laodicea from that of Iconium, they skirted the great
valley which lies to the south westward of the latter
city, as far as Archalla (Eckrie), comprehending a part
of the mountains of Hassan Dagh. It would seem
that the depopulation of this country, which rapidly
followed the decline of the Roman power and the ir-
ruption of the Eastern barbarians, had left some re-
manes of the vast rocks of Amyntas, mentioned by
Strabo, in undisturbed possession of the Lyconian
hills to a very late period: for Hadji Khalis, who de-
scribes the ancient condition of the country, and
adds that there was a breed of wild sheep on
the mountain of Fodul Baba, above Ismit, and a tomb of
the saint from whom the mountain receives its name;
and that sacrifices were offered at the tomb by all
those who hunted the wild sheep, and who were
taught to believe that they should be visited with the
displeasure of heaven if they dared to kill more than
two of these animals at a time. Hadji Khalis lived in
the middle of the 17th century.” (Leake’s Journal, p. 67, seqq.)

With respect to its physical geography, Lyconia was, like Isauria, included in a vast basin,
formed by Taurus and its branches. (Rennell, Geog-
raphy of Western Asia, vol. 2, p. 99.) Towards the
east, the Lyconians bordered on Cappadocia, from
which they were separated by the Halys; while to-
towards the south they extended themselves from the
frontiers of Cilicia to the country of the Pisidians.
Between them and the latter people there seems to
have been considerable affinity of character, and prob-
obly of blood; both nations, perhaps, being originally
spring from the ancient Solymi. Subsequently, how-
ever, they would appear to have become distinguished
from one another by the various increments which
each received from the nations in their immediate
vicinity. Thus, while the Pisidians were intermixed
with the Carians, Lycians, and Phrygians, the Ly-
conians received colonists probably from Cappado-
cia, Cilicia, Pamphylia, Phrygia, and Galatia; at
the same time, both, in common with all the nations
of Asia Minor, had no small proportion of Greek settlers
in their principal towns. It is a curious fact, which
we derive from the New Testament (Acts, 14, 11), that
the Lyconians had a peculiar dialect, which therefore
must have differed from the Phrygian language; but
our information, as we assert it to the present day
is, that of that ancient Lyconian. It is
however, very probable, that the Lyconian idiom was
only a mixture of these and the Phrygian language.
—Cramer’s Asia Minor, vol. 2, p. 63.)

Lycastra, an ancient town of Crete, in the vicinity
of Gnosus, by the inhabitants of which place it was
destroyed. Strabo, who mentions this fact, states
that “it is called Lycastra, and is situated near
479.) Polybius informs us (23, 15), that the Lyca-
stan district was afterward wrested from the Gnos-
sians by the Gortynians, who gave it to the neighbour-
ting town of Rhactus. (Cramer’s Anc. Greece, vol. 3,
pp. 370.)

Lyceum (Certain), a sacred enclosure at Athens,
dedicated to Apollo, where the polemarch originally
kept his court. It was decorated with fountains,
plantations, and buildings, by Pisistratus, Pericles,
and Lycurgus, and became the usual place of exercise
for the Athenian youths who devoted themselves to
Harpoocrates, s. e.) Nor was it less frequent-
ly by imposing levies from those attached to retrench-
ment and study. We know that it was more especially
the favourite walk of Aristotle and his followers, who
thence obtained the name of Peripatetics. (Cic.,
Acad. Quest., i, 4.) Here was the fountain of the
hero Panops (Plat., Lys., p. 203), and a plane-tree
of great size and beauty, mentioned by Theophrastus.
(Hist. Pl., i, 11. — Compare Plat., Phdr., p. 239.)

The position commonly assigned to the Lyceum is on
the right bank of the Ilissus, and nearly opposite
the church of Petros Stauromenos, which is supposed
to correspond with the temple of Diana Agrotera, on
the other side of the river. (Cramer’s Anc. Greece,
vol. 2, p. 340.)

Lychnidus, a city of Illyricum, situate in the inte-
rior, on a lake from which the Drino rises. Its
foundation is ascribed by a writer in the Greek Anchora
to Cadmus. (Christod., epigr. 2.) We hear of its be-
coming converted to Christianity, and the mission of
the war with Perseus, king of Macedon (Liv., 43, 9),
and from its position on the frontier it must have al-
ways been a place of importance. This was more
especially the case after the construction of the great
Egyptian Way, which passed through it. (Polyb., 
Strab., 327.) It appears to have been still a large
and populous town under the Greek emperors.

Properties relates, that it was nearly destroyed by an
earthquake, which overthrew Corinth and several oth-
—Compare Mulch., Sophist. Excerpt., p. 64.) It is
the opinion of Palmarus, who has treated most fully
of the history of Lychnidus in his description of an
Cic., this town was replaced by Achrida,
ancest of the Bulgarians; and, according to
some writers of the Byzantine empire, also the
native place of Justinian, and erected by him into an
archbishopric, under the name of Justinianna Prima.
This opinion of the learned critic has been adopted by
the generality of writers on comparative geography.
(Grece. Ant. Descr., p. 498. — Wesseling, ad Hin.,
p. 652.—Mannert, Geogr., vol. 7, p. 415.) Cramer,
however, shows very conclusively that the modern
Ochrida (as it is now called) does not coincide with
the ancient Lychnidus, but that the ruins of the latter
place are still apparent near the monastery of St.
Nikolaus (Anc. Greece vol. 3, p. 49), on the opposite
shore of the lake, and about fourteen miles south of
Ochrida. (Cramer’s Anc. Greece, vol. 1, p. 71, seqq.)

Lychnitis Palus, a lake of Illyria, on which Lych-
uidus was situate. It was formed principally by the
waters of what is now the black Drino, and was a con-
siderable expanse of water, about 20 miles in length
and 8 in breadth. Diodorus informs us, that Philip, son
of Amyntas, extended his conquests, in a year, of
this lake to the river. Pausan. says it abounded in fish,
which were salted for the use of the inhabitants. (Stru-
bo, 327.) He also mentions several other lakes in
the vicinity which were equally productive. (Cramer’s
Anc. Greece, vol. 1, p. 74.)

Lycia, a country of Asia Minor, in the south,
bounded on the north east by Pamphylia, on the west and north-
west by the Carians, and on the north by Phrygia and
Pisidia. The country has been called Lycia, and the
earliest inhabitants seem to have been the Solymi.
Sarpedon, however, being driven from Crete by his brother
Minos, came hither with a colony, and drove the Soly-
mi into the interior, with whom, however, they had still
to wage a continual warfare. (Hom., Il, 6, 180.—Id. 
ibid., 10, 430.—Id. ibid., 12, 30.) The new-comers
took the name of Termilia, as Herodotus writes it (1

Digitized by Microsoft®
LYCIA.

173), or Tremilia, as others give it. (Steph. Byz., s. v. Τρεμίλια.) Afterward, Lycus, driven from Athens by his brother Αέγεος, retired to the Tremilia, where he was well received by Sarpedon, and gave, it is said, the appellation of Lycia to the country, and Lycii to the people, from his own name. In the Homeric poems the country is always called Lycia, and the Solymi are mentioned as neighbours of the people over the coast called Τακτάλιθος, to be sought by the King of Lycia. (II., 6, 184.) The Solymi, however, disappeared from history after Homer's time, and the name Milyas remained for ever afterward applied to the region commencing in the north of Lycia, and extending into Phrygia and Pisidia. Into this region the Solymi had been driven, and here they remained under the appellation of Milyas, though the name Solymi still continued in Mount Solyma, and the names of the Solymian cities, called as previously sought by the King of Lycia, to receive the name of Climax. This southern arm of Taurus is so lofty as to be generally covered with snow, and by its course, presenting itself across the line of the navigation along shore, forms a conspicuous landmark, particularly from the eastward. From its general fertility, the natural strength of the country, and the goodness of its harbours, Lycia was one of the richest and most populous of the countries of Asia in proportion to its extent. The products were wine, wheat, cedar-wood, beautiful plane-trees, a sort of delicate sponge, and fine officinal chalk. It is recorded, to the honour of the inhabitants, that they never committed acts of piracy like those of Cilicia and other quarters. The Lycians appear to have possessed considerable power in early times; and were almost the only people of the Halys who were not subdued by Croesus. (Herod., 1, 28.) They made also an obstinate resistance to Harpagus, the general of Cyrus, but were eventually conquered. (Herod., 1, 176.) They supplied Xerxes with fifty ships in his expedition against Greece. (Herod., 7, 92.) After the downfall of the Persian empire, they continued subject to the Seleucids till the overthrow of Antiochus by the Romans, when their country, as well as Caria, was granted by the conquerors to the Rhodians; but their freedom was afterward again secured to them by the Romans (Polyp., 30, 5), who allowed them to retain their own laws and their political constitution, which is highly praised by Strabo (665), and, in his opinion, prevented them from falling into the piratical practices of their neighbours, the Pamphylians and Cilicians. According to this account, the government was a kind of federation, consisting of 23 cities, which sent deputies to an assembly, in which a king was chosen for the whole of Lycia, as well as judges and other officials. The king was elected by magistrates and freeholders of the several cities. All matters relating to the government of the country were discussed in this assembly. The six principal cities, Xanthus, Patara, Pinar, Olympus, Myra, and Tlos, had three votes each, other cities two votes each, and the least important places only one each. In consequence of disensions among the different cities, this constitution was abolished by the Emperor Claudius (Sueton., Claud., 28.), and the whole country united to the province of Pamphylia. (Dio Cass., 60, 17.—Encycl. Us. Knol., vol. 14, p. 210.—Crane's Asia Minor, vol. 2, p. 242, seq.) The interior of Lycia was entirely unknown to Europeans until the visit of Mr. Fellows in 1838, who travelled over a large portion of it. According to this individual, the country is erroneously represented in all the maps, and there are no mountains of any importance in the interior. The coast, however, is surrounded by lofty mountains, which rise in many places to a great height. (Encycl. Us. Knol., vol. 14, p. 210.) It was at Patara in Lycia that Apollo had a famous temple and oracular place; and there he was fabled to pass the winter months of December. The term υβηρνα applied to Lycia by Virgil (Aen., 4, 143.—Heyne, ad loc.).

LYCUMÉA, a female allied to Horace, and thought by Bentley to be the same with Terentia, the wife of Mucenas. (Horat., Od., 2, 12, 13.—Bentley, ad loc.)

LYCIS, a surname of Apollo, given to that deity as the god of light, and derived from the old term ΑΥΣΗ, "light," which, according to the etymology of the name, may be connected with the Latin lucem. (Compare remarks under the article Lycean.) According to the common but erroneous opinion, Apollo was called "Lycius" because worshipped with peculiar honours at Patara in Lycia. (Vid. Patara.)

LYCOMÉDES, a king of Scyros, an island in the Αἰγαεία Sea, son of Apollo and Parthenope. He was secretly intrusted with the care of young Achilles, whom his mother Thetis had disguised in female attire to acquaint him with the whole of female nature before he knew the care he must perish. (Vid. Achilles.) Lycomedes rendered himself infamous for his treachery to Thesus, who had implored his protection when driven from the throne of Athens by the usurper Mnestheus. Lycomedes, as it is reported, either envious of the fame of his illustrious guest, or bribed by the emissaries of Mnestheus, led Thesus to an elevated place on presence of showing him the extent of his dominions, and perfidiously threw him down as a precipice, where he was killed. According to another account, however, his fall was accidental. (Plut., Vit. These., 14, 17; 7, 4.—Apollod., 3, 13.)

LYCON, an Athenian, who flourished about 405 B.C., and who, together with Anytus and Melitus, was concerned in the prosecution instituted against Socrates. (Vid. Socrates.)—I. A Periatic philosopher, a native of Thrace, and the pupil and successor of Strato of Lampsacus. He flourished about 270 B.C., and was for forty years the head of the Periatic school at Athens. He succeeded Strato at the date just mentioned; and enjoyed also the friendship of Attalus and Eumenes. (Diog. Laert., 5, 66.— Athenus, 12, p. 546.) Lycon appears to have been the author of a treatise on the sovereign good. His eloquence induced his friends to change his name from Lycon to Glykon (γλυκός, sweet). Cicero has preserved his "omne locupletem, rebus ipsa jejuniorem" (De Fin., 5, 5.)

LYCOPHRON, I. a son of Periander, king of Corinth. The murder of his mother Melissa by his father had such an effect upon him, that he resolved never to speak to a man who had been so wantonly cruel to his own family. This resolution was strengthened by the advice of Procles, his maternal uncle, and Periander at last banished to Corcyra a son whose disobedience and obstinacy had rendered him so obnoxious to Periander, being incapable of reigning. Lyconphon was the only surviving child who had any claim to the crown of Corinth. But, when the infirmities of Periander obliged him to look for a successor, Lyconphon refused to come to Corinth while his father was there, and he was induced to leave Corcyra only on promise that Periander would come and dwell there while he remained the master of Corinth. This exchange, however, prevented the coronation. The Corcyreans were apprehensive of the tyranny of Periander, murdered Lyconphon before he left that island. (Herod., 3, 51.)—II. A native of Chalcis, in Euboa, the son of Socles, and adopted by the historian Lycus of Rhegium, was a poet and grammarian at the court of Ptolemy Philadelphia from B.C. 280 to B.C. 250,
where he formed one of the seven poets known by the name of the Tragic Pleiades. (Vid. Alexandrina Schola, towards the end of that article.) He is said by Ovid to have been killed by an arrow. (Ibis, 531.) Lycophron wrote a large number of tragedies, the titles of many of which are preserved by Suidas. Only one production of his, however, has come down to us, a poem classed by the ancients under the head of tragic, but more correctly by the moderns under that of Lyri
cus or lyric. Lycophron wrote it either in the Alexandrine or Cassandra. It is a monologue, in 1474 verses, in which the Trojan princess Cassandra predicts to Priam the overthrow of Ilium, and the misfortunes that await the actors in the Trojan war. The work is written in Iambic verse, and has no pretensions to any poetical merit; but, at the same time, it forms an inexhaustible mine of grammatical, historical, and my-
thological erudition. Cassandra, in the course of her predictions, goes back to the earliest times, and de-
scends after the reign of Alexander of Macedon. There are many digressions, but all contain valuable facts, drawn from the history and mythology of other
nations. The poet has purposely enveloped his poem with the deepest obscurity, so much so that it has
been styled τὸ σκοτεινὸν ποίημα, "the dark poem." There is no artifice to which he does not resort to pre-
vent his being clearly understood. He never calls any one person part of his poem, but designates him by some circum-
cumstances or event in his history. He also abundes with unusual constructions, separates words which should be united, use strange terms (as, for example, κέλορ, lieis, ἦμασος, and φιεμα, in place of νις); forms the most singular compounds (such as αἰθημαλεκτος, άλ
νοδίκεχυντος), and indulges also in some of the boldest metaphors. The Alexandrian grammarians amassed a vast collection of materials for the elucidation of what must have appeared to them an admirable pro-
duction. Many MSS. were preserved through the monasteries and monastic commentaries, and has thus preserved for us a part at least of those illustrations, without which the poem, after the lapse of more than 2000 years, would be un-
intelligible. He has refuted also the opinion that Lycophron was not the author of the work. The loss of Lycophron's dramatic pieces is hardly to be regretted, if we can form any opinion of his poetic merits from the production to which we have just referred. A work of less value was a commentary on the Iliad by Callimachus (προμελιας), and which must have been of considerable ex-
tent, since Athenaeus quotes from the 9th book of it, would have proved, no doubt, a valuable accession to
our list of ancient productions, since on this subject the learning of Lycophron must have had full scope allowed it. The best editions of Lycophron are, that printed at Basle, 1546, fol., enriched with the Greek commentary of Tzetzes; that of Canter, 8vo, apud Comelinum., 1598; that of Potter, fol., Oxon., 1702, and that of Bachmann, Lips., 1828, 2 vols. 8vo. The last will be found to be most complete and useful, since it contains, among other subsidies, the Greek paraphrase. Bachmann also published, in 1828, in the second vol-
une of his Anecdota Graece, a Lexicon Lycophronum, previously unedited, containing a very ancient collection of scholia. (Scholl, Gesch. Gr. Lit., vol. 2, p. 47, seq.)

LYCOPOLIS (Λεκυμ πόλις), or the "city of wolves," a city of Upper Egypt, on the western side of the Nile, northwest of Antinoopolis. It derived its name from the circumstance of extraordinary worship being paid here to wolves, which, according to Diodorus Siculus, drove back the Egyptians when they invaded Egypt, and pursued them to Elephantina. (Diod. Sic., 1, 68.) Fliny merely writes the name Lycon as that of the city (5, 9), and Hierocles Λύκον τῆς Οὔρυχου, and, after him, the French savans who accompanied Bonaparte to Egypt, place the site of ancient Lycopolis near
the modern Syut. Mannert, however, decides in fa
vour of the vicinity of Manfuluth, coinciding in this with Pocoke. (Geogr., vol. 10, pt. 1, p. 387.)

LYCOREA, I. one of the earliest names of Parnassus.
The modern name of the mountain is Liakoura. (Dodweil, Tour, vol. 1, p. 189.) II. A small town on one of
the highest summits of Parnassus. (Strabo, 423. — Pausan., 10, 6.) It appears to have been a place of the highest antiquity since it is stated by the Arun-
delian marbles to have been once the residence of Deu-
caullation. The name of Lycouras (which was more ancient than Delphi). Dodwell was informed that there was a vil-
lage called Liakoura about three hours from Castri (Delphi), which was deserted in winter on account of the
snow, the inhabitants then descending to the neigh-
bouring villages. Some of the peasants of Liakoura informed him that their village possessed con-
siderable remains of antiquity. (Dodwell, 1, c. — Cra-

LYCORIS, a female to whom Gallus, the friend of Virgil, was attached. (Consult remarks on page 545, col. 1, near the end.)

LYCOPHRON, the more ancient name of the Evenus. (Strab. 451.)

LYCOSERA, a town of Arcadia, on the slope of Mount Lycus, regarded by Pausanias (8, 38) as the most ancient city in the world: it still contained some few inhabitants when he made the tour of Arcadia. Dodweil is inclined to identify its position with that of
Agios Giorgios, near the village of Stala, where there
are walls and other remains which manifest signs of the remotest antiquity. (Tour, vol. 2, p. 305.) Gell, in his journey in Italy, 10, 210, however, speaks of Delli Hassan in the road from Sineno to Karitena, adds as follows: "We descend again to-
wards the Alpheus. This is the road which Pausanias seems to have taken to Lycorma, which must have been either on the remarkable peak called Souria to Castro, or almost on the summit of Diaphoric (Lycus), near the hippodrome, where are the ruins of a fortification." The same writer remarks (Narrative of a Journey to and through the Home of the ancients, 2, 263) that, "the summit, called Sourias to Castro, is probably the an-
cient Lycorma." (Siebelis, ad Pausan., 8, 38. — Cra-

LYCUS, one of the most considerable cities of Crete, situate apparently to the northeast of Praesus, and at no great distance from the sea, since Strabo assigns to it the haven of Chersonesus. It was already an important city in the days of Homer and Hesiod; and Idomeneus, who was a native of the place, obtains from it, in Virgil (Aene., 3, 401), the epithet of Ly-
cus. (Compare Homer, II., 2, 647; 17, 610.) Ac-
cording to Hesiod (Theog., 477), Jupiter was brought up in Mount Aegeus, near Lycus. We are informed by Aristotle (Polit., 2, 8) that Lycus subsequently received a Lacedemonian colony (compare Polyb., 4, 54), and we learn from Diodorus Siculus that it was indebted to the same people for assistance against the mercenary troops which Phaethus, the Phocian gen-
eral, had led into Crete after the termination of the Sacred war (16, 62). The Lycians, at a still later
period, were engaged in frequent hostilities with the republic of Gnossus, and succeeded in creating a for-
midable party in the island against that city. But the
Gnossians, having taken advantage of their absence on a distant expedition, surprised Lycus and utterly
destroyed it. The Lycians, on the loss of their city, so
disheartened by this unexpected calamity, that they abandoned at once their ancient abodes, and withdrew to the city of Lampe, where they were kindly and hos-
LYCURGUS.

Lycurgus is said to have published fifteen orations (Vit. X. Orat., p. 849, C.—Thompson).—According to Polybius, they afterward recovered their city, with the aid of the Gortynians, who, at their request sent them a confederacy, which they had taken from the Cnossians (23, 15; 24, 53). Strabo also speaks of Lycurgus as existing in his time (Strab., 479), and elsewhere he states that it was eighty stadia from the Libyan Sea. (Strab., 476.) The ruins of Lycurgus were placed by D'Anville at Lasœtis; but the exact site, according to the latest maps, lies toward the northwest of that place, and is called Panagia Cardidissana. (Cramer's Anc. Greece, vol. 3, p. 306.)

LYCURGUS, I. a king of Thrace, who, when Bacchus was passing through his country, assailed him so furiously that the god was obliged to take refuge with Theseus. Bacchus avenged himself by driving Lycurgus mad, and the latter thereupon killed his own son Dryas with a blow of an ax, taking him for a vine-branch. The land became, in consequence, sterile; and his subjects, having been informed by an oracle that it would not reign until the monarch was put to death, bound Lycurgus, and left him on Mount Pangæus, where he was destroyed by wild horses. (Apollod., 3, 5, 1.)—II. An Athenian orator, was one of the warmest supporters of the democratic party in the contest with Philip of Macedon. The time of his birth is uncertain, but he was older than Demosthenes (L. Arg. Aristod.—); and if his father was killed by order of the thirty tyrants (Vit, X. Orat., p. 841, B), he probably succeeded his predecessor previous to B.C. 404. But the words of the biographer are, as Clinton has justly remarked, ambiguous (Fast. Hell., vol. 2, p. 515), and may imply that it was his grandfather who was put to death by the thirty. Lycurgus is said to have derived instruction from Plato and Isocrates. He took an active part in the management of public affairs, and was one of the Argus men (1, 23, 3), who succeeded (B.C. 494) in counteracting the designs of Philip against Ambarchia and the Peloponnesus. (Demosth., Phil., 3, p. 129, ed. Reiske.) He filled the office of treasurer of the public revenue for three periods of five years, that is, according to the ancient idiom, twelve years (Did. Sic., 16, 88); and was noted for the integrity and ability with which he discharged the duties of his office. Böckh (Public Econ. of Athens, vol. 2, p. 183, Eng. Tr., 238, seq.) says that Lycurgus was one of the statesmen of antiquity who had a real knowledge of the management of finance. He raised the revenue to twelve hundred talents, and also erected, during his administration, many public buildings, and completed the docks, the armory, the theatre of Bacchus, and the Panathenian course. So great confidence was placed in the honesty of Lycurgus, that many citizens confided to his custody large sums; and, shortly before his death, he had the accounts of his public administration engraved on stone, and set up in a part of the wrestling-school. An inscription, preserved to the present day, containing some accounts of a manager of the public revenue, is supposed by Böckh to be a part of the accounts of Lycurgus. (Publ. Econ. of Ath., vol. 1, p. 264.—Corr. Inscrip. Græc., vol. 1, p. 250, No. 157.)(1)

After the battle of Chonones (B.C. 395), Lycurgus conducted the accusation against the Athenian general Polycles. He was one of the orators demanded by Alexander after the destruction of Thebes (B.C. 335). He died about B.C. 332, and was buried in the Academia. (Pausan., 1, 29, 15.) Fifteen years after his death, upon the ascendency of the democratic party, a decree was passed by the Athenian people that public honours should be paid to Lycurgus; a brazen statute of him was erected in the Ceramicus, which was seen by Thucydides, a statute, however, which, as far as we can learn, the family was allowed the privilege of dining in the Prytanæum. This decree, which was proposed by Stratocles, has come down to us at the end of the 'Lives of the Ten Orators.' Lycurgus is said to have published fifteen orations (Vit. X. Orat., p. 849, C.—Thompson).—According to Polybius, they afterward recovered their city, with the aid of the Gortynians, who, at their request sent them a confederacy, which they had taken from the Cnossians (23, 15; 24, 53). Strabo also speaks of Lycurgus as existing in his time (Strab., 479), and elsewhere he states that it was eighty stadia from the Libyan Sea. (Strab., 476.) The ruins of Lycurgus were placed by D'Anville at Lasœtis; but the exact site, according to the latest maps, lies toward the northwest of that place, and is called Panagia Cardidissana. (Cramer's Anc. Greece, vol. 3, p. 306.)

This decree, which was proposed by Stratocles, has come down to us at the end of the 'Lives

The text appears to be a historical biography of Lycurgus, detailing his life, actions, and contributions. It mentions his role in Athenian politics, his connection with Lycurgus, and his subsequent involvement in the affairs of Polemarchus and the Panathenaic contest. The text also highlights his contributions to Athenian democracy and finance, as well as his role in public life and his eventual death.
LYCURGUS

LYD

till the maturity of his ward and the birth of an heir should have removed every pretext for such imputation; and this, indeed, was the object of the most of the Lycurgus, and the repeated invitations of his countrymen, was spent in voluntary exile, which, however, he employed in maturing a plan, already conceived, for remedying the evils under which Sparta had long laboured, by a great change in its constitution and laws. With this view he visited many foreign lands, observed their institutions and manners, and conversed with their sages. Crete and the laws of Minos are said to have been the main object of his study, and a Creten piece of one of his instructors in the art of legislation. But the Egyptian priests likewise claimed him as their disciple; and reports were not wanting among the later Spartans, that he had penetrated as far as India, and had sat at the feet of the Bramins. On his return he found the disorders of the state aggravated, and the need of a reform more generally felt. Having strengthened his authority with the sanction of the Delphic oracle, which declared his wisdom to transcend the common level of humanity, and having secured the aid of a numerous party among the leading men, who took up arms to support him, he successively procured the enactment of a series of solemn ordinances or compacts (Rhetras), by which the civil and military constitution of the commonwealth, the distribution of property, the education of the citizens, the rules of their daily intercourse and of their domestic life, were to be fixed on a hallowed and immutable basis. Many of his enactments roused a violent opposition, which even threatened the life of Lycurgus; but his fortitude and patience finally triumphed over all obstacles, and he lived to see his great idea, unfolded in all its beauty, begin its steady course, bearing on its front the marks of immortal vigour. His last action was to sacrifice himself to the perpetuity of his work. He set out on a journey to Delphi, after having bound his countrymen by an oath not to assist him and his disciples after his return. When the last seal had been set to his institutions by the oracle, which foretold that Sparta should flourish as long as she adhered to them, having transmitted this prediction to his fellow-citizens, he resolved, in order that they might never be dischaged from their oath, to die in a foreign land. The place and manner of his death are veiled in an obscurity befitting the hero; the temple of Delphi, of Crete, and of Elis, all claimed his tomb; the Spartans honoured him, to the latest times, with a temple and yearly sacrifices, as a god. — Such are the outlines of a story, which is too familiar to be cast away as an empty fiction, even if it should be admitted that no part of it can bear the scrutiny of a rigorous criticism. But the main question is, whether the view which it presents of the character of Lycurgus as a statesman is substantially correct; and in this respect we should certainly be led to regard him in a very different light, if it should appear that the institutions which he is supposed to have collected with so much labour, and to have founded with so much difficulty, were in existence long before his birth; and not only in Crete, but in Sparta; nor in Sparta only, but in other Grecian states. And this we believe to have been the case with every important part of these institutions. As to most of those, indeed, which were common to Crete and Sparta, it seems scarcely to admit a doubt, and is equally evident, whether we acknowledge or deny that some settlements of the Dorian in Crete preceded the conquest of Peloponnesus. It was at Lyctus, a Laconian colony, as Aristotle informs us, that the institutions which Lycurgus was supposed to have taken for his model flourished longest in their original purity; and hence some of the ancients contended that they were transferred from Laconia to Crete; an argument which Ephorus thought to confute, by remarking, that Lycurgus lived five generations later than Athenæus, who founded one of the Dorian colonies in the island. But, unless we impute to these great men the error of supposing of Minos or its Lycurgus, we must conclude that they merely retained what they brought with them from the mother country. Whether they found the same system established already in Crete, depends on the question whether a part of its population was already Dorian. On any other view, the general adoption of the laws of Minos in the Dorian cities of Crete, and the tenacity with which Lycurgus adhered to them, are facts unexplained and difficult to understand; for the contemplation of the Spartan institutions themselves seems to justify the conclusion, that they were not so much a work of human art and forethought as a form of society, originally congenial to the character of the Dorian people, and to the situation in which they were placed by their new conquests; and in its leading features not even peculiar to this, or to any single branch of the Hellenic nation. This view of the subject may seem scarcely to leave room for the intervention of Lycurgus, and to throw some doubt on his individual existence: so that Hellanics, who made no mention of him, and referred his institutions to Eurysthenes and Procles, would appear to have been much more correctly informed, or have had a much clearer insight into the truth than the later historians, who ascribed everything Spartan to the more celebrated lawgiver. But, remarkable as this variation is, it is perhaps easy to account for. After the great conflux of the ancients into the Peloponnesus, the Spartan society, like that of the other ancient writers; from which we at least conclude, that Lycurgus was not an imaginary or symbolic person, but one whose name marks an important epoch in the history of his country. Through all the conflicting accounts of his life, we may distinguish one fact, which is unanimously attested, and seems independent of all minister discrepancies—that by him Sparta was delivered from the evils of anarchy and confusion, and earned the respect of all those, from the date she became a period of tranquility and order. (Thirzell's History of Greece, vol. 1, p. 393, seqq.) — For an account of the legislation of Lycurgus, consult the article Sparta. 

LYCUS, a king of Beotia, successor to his brother Nycteus, who left no male issue. He was instrueted with the government during the minority of Labdacus, the son of the daughter of Nycteus. (Vid. Antiope.) 

LYDIA, a country of Asia Minor, situate between the waters of the Boeotian coast and the Thermaic Gulf. The river Thermaus divided it into eastern and western parts, and between this river and the Thermaic Gulf there was a tract of land on each side of the Thermaus, called by the names of Thusis Minor, and Thusis Major.
LYDIA.

name which he bears doubtless attaches great respectability to his testimony; but as we have no opportunity of weighing his authenticitv on this particular subject, from being unacquainted with the sources whence he drew his information, and also from having no parallel historian with whom to compare his account, it is evident we cannot place such dependence on his Lydian history as on that of Egypt, Babylon, and Persia. Our suspicions, of course, will be increased, if we find that the circumstances detailed by him in his relations to himself, and at variance also with other authorities. Time has unfortunately deprived us of the Lydian annals of Xanthus, a native of the country, somewhat anterior to Herodotus, and whose accounts were held in great estimation for accuracy and fidelity by sound judges (Dion. Hal., Rom. Ant., 1, 30.—Strab., 579, 626, 680, &c.); but from incidental fragments preserved by later writers we are led to infer, that he had frequently adopted traditions materially differing from those which Herodotus followed, and that his history also, as might be expected, contained several important facts unknown to the latter, or which it did not enter into the plan of his work to insert.—The general account which we gather from Herodotus respecting the origin of the Lydian nation, is this: he states that the country known in his time, by the name of Lydia, was previously called Midea, and that the first king of Lydia was Halius (Herod., 1, 7.—Id., 7, 74). This seems confirmed by Homer, who, nowhere mentions the Lydians, but numbers the Macedonians among the allies of Priam, and assigns to them a country which is plainly the Lydia of subsequent writers, (H., 2, 864, seqq.). Herodotus further states, that the name of the Lydians was derived from Lydos, a son of Arys, one of the earliest sovereigns of the country, and in this particular he closely agrees with Dionysius of Halicarnassus, and many other historians of ancient Cond. This period was passed by a Lydian, who, being the son of the last king, and of a freed woman, is said by an oracle, became the author of a new dynasty, which reigned through two-and-twenty generations, and during the space of 505 years. (Herod., 1, 7.) The introduction of the name of Hercules indicates at once that we have shifted our ground from history to mythology and fiction. The doubts and suspicions which now arise are rather increased than lessened on inspecting the list of the lineal descendants of Herodotus who reigned at Sardis. Well might Scaliger exclaim with astonishment when he saw the names of Ninus and Belus following almost immediately after that of Hercules their ancestor. (Scl., Can. Isagi., lib. 3, p. 327.) It has been supposed that these names imply some distant connexion between the Lydian dynasty of the Heracleides and the Assyrian empire; and there are some curious traditions preserved, apparently by Xanthus, in his history of Lydia, which go some way towards supporting this hypothesis. It is probable that the original population of Lydia came from Syria and Palestine, and the Scriptural name of Jud or Judim may have some connexion with this. In such a case we shall be no longer surprised to find Ninus and Belus among the sovereigns of the country. But whatever connexion may have existed between the Lydians and the nations to the east of them, their language and customs, and the original population may have come, it is evident that the Lydians in the time of Herodotus were no longer the earlier inhabitants of the ancient Moenia. They had come from Thrace and Macedonia with the Phrygians, Carians, and Myrians, and were much intermingled with the Pelasgi, Leleges, Caucones, and other primitive tribes. We now come to a period when the records of Lydia are more sure and faithful. Candaules, whom the Greeks named Myrillus, was the last sovereign of the Heracleid dynasty. He was assassinated, as Herodotus relates, by his queen and Gyges. The latter succeeded to the vacant throne, and became the founder of a new line of kings. Under his successor it is probable that the mines of Ionia and other parts of Lydia were first brought into activity. This would account for the fabulous stories which are related respecting him and his extraordinary wealth. (Cic., Off., 3, 9.) Under this sovereign, the Lydian empire had already made considerable progress in several districts of Asia Minor. Its sway extended over a great part of Mysia, Troad, and the shores of the Hellespont (Strabo, 590), and before his death Gyges had subdued, in the name of the cities of Colophon and Magnesia. (Herod., 1, 14.—Nic. Damasc., Excerpt.) After Gyges came, in succession, Ardy, Sadyattes, Alyattes, and Croesus. With Croesus ended the line of the Mermnads, and Lydia became, on his dethronement, annexed by Cyrus to the Persian empire. (Vid. Ctesias.) The Lydians had previously been a warlike people, but from this time they degenerated totally, and became the most voluptuous and effeminate of the Persians. (Herod., 79.—Id., 1, 155, seqq.—Athenaeus, 2, p. 515, seqq.) They were celebrated for their skill in music and other arts, and are said to have invented games, and to have been the first to coin money. (Athenaeus, 14, p. 617, 634.—Id., 10, p. 432.—Herod., 1, 94.) The conquest of Lydia, so far from really increasing the power of the Persians, tended rather to weaken it, by softening their manners, and rendering them as effeminate as the subjects of Croesus; a condition with the Persians the Ionians had already suffered. The great wealth and fertility of the country have always caused it to be considered the most valuable portion of Asia Minor, and its government was probably the highest mark of distinction and trust which the King of Persia could bestow upon a subject. In the division of the empire made by Darius, the Lydians and some small tribes, apparently of Morian origin, together with the Hemiotes and the Ataxans, were paid into the royal treasury the yearly sum of 500 talents. (Herod., 3, 90.) Sardis was the residence of the satrap, who appears rather to have been the king's lieutenant in lower Asia, and superior to the other governors. Lydia, somewhat later, became the principal seat of the power usurped by the younger Cyrus, and, after his overthrow, was committed to the government of his enemy, Tissaphernes. (Xen. Anab., I, 1, 1° Id., Hist. Gr., 1, 5.—Id., ib., 3, 1.) After the death of Alexander we find it subject for a time to Antigonus; then to Archaeus, who caused himself to be declared king at Sardis, but was subsequently conquered and put to death by Antiochus. (Polyb., 5, 57, 4.) Lydia, after the defeat of the latter sovereign by the Romans at Magnesia, was annexed by them to the dominions of Eumenes. (Lis., 38, 39.) At a later period it formed a principal part of the proconsular province of Asia (Plin., 5, 29), and still retained its name through all the vicissitudes of the Byzantine empire, when it finally passed under the dominion of the Turks, which now call its northern portion Saroukhan, and the southern Auvin. (Cramer's Asia Minor, vol. 1, p. 413, seqq.)—As regards the question respecting the Lydian origin of the Eturian civilization, consult the article Heturii.
emperors at Constantinople, and under Justinian he
attained to the rank of Constantinople. He was re-
garded as a man of erudition, and a good writer both
in prose and verse. Among other productions, he com-
posed a work on the Roman Magistrates, Ἱππὶ ὁφῶν
τῆς Ῥωμαίων πόλεως. This work, important for the
light which it throws on Roman antiquities, was re-
garded as lost, until Choiseul-Gouffier, French ambas-
sador at Constantinople, and the celebrated Villoison,
discovered it, in 1784, a manuscript upon a roll, in the
library of Prince Constantine Morusi. This manuscript, which
is of the 10th century, belongs to the King of France.
Morusi having presented it to Choiseul-Gouffier, who,
after the death of Villoison, directed Fus and Hase
to edit it. Their edition appeared in 1812, with a
learned commentary on the life and writings of Lydus
by Hase. To this must be added the critical epistle
of Fus to Hase, Bonn, 1821. Niebuhr calls the
work of Lydus a new and rich source of Roman his-
tory. Another work of Lydus's was entitled Ἱππὶ δο-
σμίων, "On Prodigies." In this he has collected
together all that was known in the days of Justinian of
the science of augury, as practised by the Tuscans and
Romans. The work is only known by an abridgment
in Latin, made by the "Venerable Bede." and by two
fragments in Greek, published, one under the title of
Ἕβους βεβολογονία, "Thunder for each day," and
the other under the title of Ἱππὶ εἰσεγέρων, "Concern-
ing Earthquakes." The first of these is merely a trans-
lation of a passage extracted from the work of P. Ni-
gidius Figulus, the contemporary of Cicero. The
travel in prodigies itself, however, is not lost, but
exists, though in a mutilated state, in the same manu-
script of Choiseul-Gouffier from which the work on
magistrates was made known to the learned world.
We have also a third fragment, a species of Calendar,
but only in a Latin translation.—The fragment Ἱπ-
πίς προστιμίων in published in the Necro-
247, and that Ἱππί εἰσεγέρων by Schow, in his edition of
Lydus's work Ἱππί μνην. The Calendar is given in
the Uranologium of Petavius, Paris, 1630, fol., p.
94. In 1823, Hase published the work itself on Prod-
igies, from the manuscript just mentioned. Lastly,
we have a work by Lydus, "On the Months," Ἱππί
μνην. The main work itself is lost, but there exist
two fragments of it, one by Maximus Planudes. It contains many particulars
relative to the mythology and antiquities of the Greeks and
Romans. It was originally published by Schow,
Lips., 1794, and has since been edited by Reuther.
Lips., 1827. The best edition of Lydus is by Bekker,
Bonn, 1837, and forms part of the "Corpus Scrip-
torum Historiae Byzantinae."
LYS

LYS

duced him with temper and wisdom. About B.C. 396 he returned to Sparta. In the following year, on occasion of a quarrel with Thebes, he was sent into Pho-cis to collect contingents from the northern allies, a task for which his name and popularity rendered him peculiarly fit. Having done this, and being on his way to join the Lacedaemonian army, he was surprised and slain by the Thebans at Halauris in Boetia. The force which he had collected was dispersed, and the war at once came to an end, with no credit to the Lacedaemonians, B.C. 395.—It is said that, urged by ambitious hopes, he meditated a scheme for abolishing the hereditary right of the descendants of Hercules, and rendering the Spartan throne elective, and that he had tampered largely with different oracles to promote his scheme. Xenophon, however, a contemporary historian, makes no mention of this rumour. The subject has been discussed by Thirlwall, in an Appendix to the fourth volume of his history, on the influence of the Lacedaemonians on the lyra.

Life and Letters of Xenophon, vol. i. p. 207. He had also written of Lysander actually formed such a project; and that the same motive which induced the Spartan government to hush up the affair, would 'certainly have led Xenophon carefully to avoid all allusion to it. (Hist. of Gr., vol. 4, p. 461.)—We have a Life of Lysander from Plutarch, and another from Nepos. (Plut., Vit. Lys. — Nep., Vit. Lys. — Xen., Hist. Gr.—Enc. Us. Knowl., vol. 14, p. 469.) One of these is attributed to Agyrtes—III. A grandson of Lysander. (Pausan., 3, 6.)

Lysias, one of the ten Athenian orators, was born at Athens B.C. 458. His father Cephalus was a native of Syracuse, who settled at Athens during the time of Pericles. Cephalus was a person of considerable wealth, and lived on intimate terms with Pericles and Socrates; and his house is the supposed scene of the celebrated dialogues relative to Plato's Republic. Lysias was able to study the art of rhetoric with his brother Polemarchus, at the first foundation of the colony. Here he remained for thirty-two years; but, in consequence of his supporting the Athenian interests, he was obliged to leave Italy after the failure of the Athenian expedition to Sicily. He returned to Athens B.C. 411, and carried on, in partnership with his brother Polemarchus, an extensive manufactury of shields, in which they employed as many as 120 slaves. This enterprise did not succeed; the firm was dissolved in 343 B.C. By his marriage with a certain Lydian lady, his house was attacked one evening by an armed force while Lysias was entertaining a few friends at supper; their property was seized, and Polemarchus was taken to prison, where he was shortly after executed (B.C. 404). Lysias, by bribing some of the soldiers, escaped to the Piraeus, and sailed thence to Megara. He has given us a graphic account of his escape in his oration against Eratosthenes, who had been one of the thirty tyrants. Lysias actively assisted Thrasylus in his enterprise against the Thirty; he supplied him with a large sum of money from his own resources and those of his friends, and hired a considerable body of soldiers at his own expense. In return for these services Thrasylus proposed a decree, by which the rights of citizenship should be conferred upon Lysias; but, in consequence of some informality, this decree was never carried into effect. He was, however, allowed the peculiar privileges which were sometimes granted to resident aliens (namely, to-πείπα). Lysias appears to have died about B.C. 375.—The author of the Life of Lysias attributed to Plutarch mentions 425 orations of his, 230 of which were allowed to be genuine. There remain only 34, which are all forensic, and remarkable for the method which reigns in them. The purity, the perspicuity, the grace and eloquence which characterise the orations of Lysias, would have raised him to the highest rank in the art had they been coupled with the force and energy of Demosthenes. His style is elegant without being overloaded with ornament, and always preserves its tone. In the art of narration, Dionysius of Hal-
Phrygia, where a bloody battle was fought, in which Antigonus was slain and his army totally defeated. The dominions of Antigonus were divided among the conquerors, and Lysimachus obtained the northwestern part of Asia Minor. He shortly after married Arsinoë, the sister of Ptolemy, king of Egypt, although his eldest son Agathocles had already married Lyssandra, the half sister of Arsinoë. In B.C. 326 he obtained possession of Thrace, Macedonia, and Epirus, and became king of Epirus, who had laid claims to that country, to retire to his native dominions. Hitherto the career of Lysimachus appears to have been a fortunate one, but the latter part of his life was embittered by family dissensions and intestine commotions. Arsinoë, fearful lest her children should be exposed, after the death of her husband, to the violence of Agathocles, persuaded Lysimachus to put him to death. Agathocles had been an able and successful general; he was also a great favourite with the people, who deeply resented his death; and Lysimachus found himself involved in almost open war with his own subjects. Lyssandra, the widow of Agathocles, fled to Babylon, and entreated Seleucus to make war against Lysimachus. The Syrian king was willing enough to take advantage of the troubled state of his rival's kingdom; but Lysimachus, anticipating his intentions, marched into Asia, and fell in a battle with the forces of Seleucus, in the seventeenth year of his reign (Diod. Hal. Vid. syr. c. 64), or in his seventy-fourth according to Justin (17.1.—Compare Plut., Vit. Demetr.—Justin.—Pausan., 19. 9, seq.). The town of Lysimachia was founded by this monarch. (Vid. Lysimachia.—Encycl. Us. Knowl., vol. 14, p. 228.)

_Lysippus._ I. a celebrated sculptor and statuary, born at Sicyon, and placed by Pliny in the 114th Olympiad, B.C. 324. He was contemporary, therefore, with Alexander the Great. Lysippus was at first a worker in bronzes, but he applied himself to sculpture early, and until his talent and inclinations led him to fix upon the profession of a sculptor. He was particularly distinguished for his statues in bronze, which are said to have been superior to all other works of a similar kind. He introduced great improvements into his art, by making the head smaller, and giving the body a more easy and natural position, than was usual in the works of his predecessors. Pliny informs us, that his statues were so highly celebrated by the historians, that the manner in which the hair was always executed. (Plin., 34, 8.) Lysippus is said to have been self-taught, and to have attained his excellence by studying nature alone. His talents were appreciated by his contemporaries; the different cities of Greece were anxious to obtain his works; and Alexander is reported to have said, that no one should paint him but Apelles, and no one represent him in bronze except Lysippus. (Plin., 7, 37.—Cic. Ep. ad Fam., 5, 12.) His reputation survived his death; many of his most valuable works were brought to Rome, in which city they were kept in so much esteem, that Tiberius is said to have almost excited an insurrection by removing a statue of Lysippus, called Apoxomemos, from the warm baths of Agrippa to his own palace. —Lysippus is said to have executed 610 statues, all of the greatest merit (Plin., 34, 7), many of which were colossal figures. Pliny, Pausanias, Strabo, and Vitruvius have preserved long lists of his works; of which the most celebrated appear to have been, various statues of Alexander, executed at different periods of his life; a group of equestrian statues of those Greeks who fell at the battle of the Granicus; the Sun drawn in a chariot by four horses, at Rhodes; a colossal statue at Tarentum; a statue of Hercules, at Alyzia in Acarnania, which was afterward removed to Rome; and a statue of Opportunity (xopas), represented as a youth, with wings on his ankles, on the point of flying from the earth.

Among the numerous pupils of Lysippus, the most celebrated was Chares, who executed the Colossus at Rhodes. (Junius, de Pict. Vet. Catal., p. 109, seqq. —Silvig, Dict. Art., s. v.—Encycl. Us. Knowl., vol. 14, p. 228, seq.) II. A painter, whose country is uncertain, but who appears to have been acquainted with the art of enamelling; for on one of his pictures kept at Aegina, there was inscribed the word _bises._ (Plin., 35, 11.—Silvig, Dict. Art., s. v.)

Lysias, a member of the Lydian family, and son of the Pythagorean sect. He and Philolaus were the only two disciples of Pythagoras who escaped the destruction of the school of Crotona. Lysias upon this retired to Thebes, where he ended his days, and where he is said to have had the illustrious Epaminondas for a pupil. It is difficult, however, to reconcile this fact with the established chronology, although it is vouched for by the best writers. Epaminondas was born 412 B.C.; and, supposing that Lysias was only 20 years old at the death of Pythagoras, he must have been 120 years of age when Epaminondas was first old enough to profit by his instruction. In making this calculation we suppose that Pythagoras died B.C. 496. The anachronism, however, becomes still more glaring, if, with Nauck and Freret, we fix the birth of Pythagoras at B.C. 460. Supposing, on the other hand, that this philosopher was born B.C. 576, which is the other extreme, Lysias must still have been 105 years old when Epaminondas was born. It is, therefore, to suppose that there were two Pythagoreans named Lysias, who have been confounded by the ancient writers. —To Lysias are ascribed some of the "Golden Verses" of Pythagoras. (Buret., Mem. de l'Acad. des Inscr., &c., vol. 13, p. 226.) He wrote a commentary on the doctrine of his master, and also a letter to Hipparchus of Tarentum, reproaching him for his indiscretion in having divulged the secrets of their common master. This latter production has not come down to us, but several epistles collected by Aldus, and also among the Pythagorean fragments in Cassaubon's edition of Diogenes Laertius. (Scholl, Hist. Lit. Gr., vol. 2, p. 304.) Many of the MSS. and early editions of Nepos (Vit. Epam., c. 2), give the reading _Lysiam_ instead of _Lysim_, on which variation consult the notes of Bos and Fischer.

_Lysistrata_, a statuary of Sicyon, who flourished in the 114th Olympiad. He is said to have been the brother of the sculptor Lysippus. (Plin., 35, 2, 44.) He is said to have been the first artist that made use of gypsum moulds for wax casts. (Plin., i. c.)

_Lysitra_, a city of Asia Minor, placed by Ptolemy in Isauria; but, according to Pliny, Hierocles, and the Acts of the Apostles, it belonged to Lycasia. It was in the vicinity of Derbe. Leake has the following remarks relative to its site, which go to confirm the opinion of Ptolemy:—"Lysitra appears to have been nearer than Derbe to Iconium; for St. Paul, leaving the great city, first goes to Lysitra and thence to Derbe, and in like manner returns to Lysitra, to Iconium, and to Antioch of Pisidia. And this seems to agree with the arrangement of Ptolemy, who places Lysitra in Isauria, and near Isaura, which seems evidently to have occupied some part of the valley of Sedy Shehr or Bey-Shehr. Under the Greek empire, Homonada, Isaura, and Lysitra, as well as Derbe and Larnanda, were six bishoprics in the consular province of Lycasia, and were bishoprics of the metropolitan see of Iconium. The similarity of names induced me first to believe that Lysitra was situated at the modern _Ilissena_; but we find, as well in the civil arrangement of the cities in Hierocles, as in the ecclesiastical lists in the Notitia Episcopatum, that Lysitra and Ilissra were distinct places. I am inclined to think that the vestiges of Lysitra may be sought for, with the greatest probability of success, at or near _Wran Khatoun_ or _Khatoun Srai_, about 30 miles to the southward of Iconium." (Journal, p. 102.)
MACEDONIA.

MACEDONIA. — A people of Africa who occupied the coast to the northwest of and near the Greater Syrtis. They are thought to have been the same with those named Syrites by Pliny. Herodotus states that they had a custom of shaving only the centre of their head, carefully shaving the rest, and that, when they went to war, they used the skins of ostriches instead of shields (4, 175). The river Cinyphos flowed through their territory. (Compare Diol. Sic., 3, 48.) — II. A people of Arabia Deserta, on a projection of land where the Sinus Persicus is narrowest. Ptolemy calls the promontory Assabo: its modern name, however, Ophi Maccendon, bears some faint resemblance to that of the Mac. (Bischoff and Müller, Wörterb. der Geogr., s. v.)

MACEDONIA, an ancient name of Crete.

MACEDONIA, a country of Europe, lying to the west of Thrace, and north and northeast of Thessaly. — The boundaries of this country varied at different times. When Strabo wrote, Macedonia included a considerable part of Illyria and Thrace; but Macedonia Proper may be considered as separated from Thessaly, on the south, from the district of Mount Maenius from Illyria, on the west, by the great mountain chain called Scardus and Berna, and which, under the name of Pindus, also separates Thessaly from Epirus; from Messia, on the north, by the mountains called Orbelus and Scornius, which run at right angles to Scardus; and from Thrace, on the east, by the river Strymon. The Macedonians of Herodotus, however, was still more limited, as is afterward mentioned. Macedonia Proper, as defined above, is watered by three rivers of considerable size, the Axios, Lydias, and Haliacmon, all which flow into the Sinus Thermicus, the modern Gulf of Saloniki. — The whole of the district on the seacoast, and to a considerable distance into the interior, between the Axios and the Haliacmon, is very low and marshy. — The origin and early history of the Macedonians is involved in much obscurity. Some moderns have attempted, against all probability, to derive the name from the Ktittim mentioned in the old Testament (Gen. 10, 4. — Numb. 24, 24. — Jer. 10, 10. — Ezek. 27, 6. — Dan. 11, 30). This opinion appears to have arisen, in part, from the description of the country inhabited by the Ktittim, which is supposed to answer to Macedonia; but still more from the fact, that, in the book of Maccabees, Alexander the Great is said to have come from the land of Chettim (εκ τῆς γῆς Χεττιτῶν, 1 Macc. 1, 1), and Penses is called king of the Ktittim (Ktittow, 1 Macc. 8, 5). — In inquiring into the early history of the Macedonians, two questions, which are frequently confounded, ought to be carefully kept distinct, namely, the origin of the Macedonian people, and that of the Macedonian monarch under the Temenides; for, while there is abundant reason for believing that the Macedonian princes were descended from an Hellenic race, it appears probable that the Macedonians themselves were an Illyrian people, though the country must also have been inhabited in very early times by many Hellenic tribes. The Greeks themselves always regarded the Macedonians as barbarians, that is, as a people not of Hellenic origin; and the similarity of the manners and customs, as well as the languages, as far as they are known, of the early Macedonians and Illyrians, appear to establish the identity of the two nations. In the time of Herodotus, the name of Macedonia comprehended only the district of Mount Maenius; and he observes that Macedonia was separated from Bottias by the united mouth of the Lydias and Haliacmon (Herod., 7, 127). How far inland Herodotus conceived that Macedonia extended, does not appear from his narrative. — According to many ancient writers, Macedonia was anciently called Emathia (Plin., 4, 17. — Justin, 7, 1. — Aqu. Gall., 14, 6); but we also find traces of the name Macedonians, from the earliest times, under the ancient forms of Macetum (Macetor), and Macedni (Macedovi). They appear to have dwelt originally in the southwestern part of Macedonia, near Mount Pindus. Herodotus says that the Do- Gerasus, the people of whom the Macedonians were called Macedonians (1, 56. — Compare 8, 43); and, although it is by many reasons to be doubted whether the Macedonians had any particular connexion with the Dorians, it may be inferred, from the statement of Herodotus, that the Macedonians once dwelt at the foot of Pindus, whence they emigrated in a northeasterly direction. — The origin of the Macedonian dynasty is a subject of some intricacy and dispute. There is one point, however, on which all the ancient historians agree: namely, that the royal family of that country was an offshoot of the Temenides of Argos. The difference of opinion principally regards the individual of that family to whom the honour of founding this monarchy is to be ascribed. The account of Herodotus seems most worthy of being received. According to this writer, three brothers named Gavanes, Aropus, and Perdic- cas, descended from Temenus, left Argos, their native place, and dwelt in a part of the country, which Herodotus called the Thessaly. — They then advanced thence into Upper Macedonia, where, after experiencing some singular adventures, which Herodotus details, they at length succeeded in acquiring possession of a principality, which devolved on Perdiccas, the youngest of the brothers, who is therefore considered, both by Herodotus (8, 137) and Thucydides (2, 99), as the founder of the Macedonian dynasty. These writers have also recorded the names of the successors of this prince, in this order: Deiades, Philip, and Alexander, all the country to the river Strymon, and even the Macedonian peninsula from Amphipolis to Thessalonica, belonged to Thrace, and Macedonia likewise on the north. Philip conquered this peninsula, and all the country to the river Nessus and Mount Rhodope; also as Macedonia and Illyria beyond Lake Lychnitis. Thus the widest limits of the Macedonians were those of the Eight Tithes, though there is little to interest the reader in their history. — Before the time of Philip, father of Alexander, all the country beyond the river Strymon, and even the Macedonian peninsula from Amphipolis to Thessalonica, belonged to Thrace, and Macedonia likewise on the north. Philip conquered this peninsula, and all the country to the river Nessus and Mount Rhodope; also as Macedonia and Illyria beyond Lake Lychnitis. Thus the widest limits of the Macedonians were those of the Eight Tithes, though there is little to interest the reader in their history. — Before the time of Philip, father of Alexander, all the country beyond the river Strymon, and even the Macedonian peninsula from Amphipolis to Thessalonica, belonged to Thrace, and Macedonia likewise on the north. Philip conquered this peninsula, and all the country to the river Nessus and Mount Rhodope; also as Macedonia and Illyria beyond Lake Lychnitis. Thus the widest limits of the Macedonians were those of the Eight Tithes, though there is little to interest the reader in their history.
Macedonia. According to the "Epitomizer" of Strabo (lib. 7), it was bounded by the Adriatic on the west; on the north by the mountains of Scardus, Orbelus, Rhodope, and Hæmus; on the south by the Via Egnatia; while on the east it extended as far as Cypsela and the mouth of the Hebrus. But this statement with its boundaries to Macedonia cannot be correct, since we know that the province of Macedonia was bounded on the south by that of Achæia; and although it is extremely difficult, if not impossible, to fix the precise boundaries of these provinces, it yet does not appear that Achæia extended farther north than the south of Thessaly. —Macedonia now forms part of Turkey in Europe, under the name of Macedonia or Filiba Vilejët, and contains about 70,000 square miles, consisting of plains, forest tracts, turkeys, Greeks, and Albanians. The southeastern part is under the pacha of Saloniki; the northern under boys or agas, or forms free communities. The capital Saloniki, the ancient Thessalonica, is a commercial town, and contains 70,000 inhabitants. —Ancient Macedonia was a mountainous and woody region, the riches of which consisted chiefly in mines of gold and silver; the coast, however, produced corn, wine, oil, and fruits. Modern Macedonia is said to possess a soil more fruitful than its neighbors, whose province is chiefly forested, which parts are in the districts in so fertile as the coast of Athos or the ancient Chalcedice. The land in the valleys of Panomi and Cassandra, when grazed by the lightest plough, yields, it is said, a more abundant harvest than the finest fields in the department between the Eure and the Loire, or the granary of France; if the wheat in its green state be not browsed by sheep or cut with the scythe, it perishes by too much luxuriance. Macedonia is also famous for its cotton and tobacco, and its wines are some of them equal to those of Burgundy. (Malte-Brun, Geogr, vol. 6, p. 156, seqq.; Eng. transl, —Cramer’s Anc. Greece, vol. 1, p. 164, seqq. —Encycl. Us. Knowl., vol. 14, p. 241.) —For a list of the ancient kings of Macedonia, with remarks on their reign, consult Clinton’s Fasti Hellenici, p. 221, seqq.; 2d ed.

MACER. I. a Latin poet, a native of Verona. He was the author of a poem on birds, entitled Ornithogonia, and of another poem, entitled Sallus, on the title of Therisca. This last was an imitation, in some degree, of the Therisca of Nicander. (Quint, Inst. Or., 10, 1, 56.—Spalding, ad Quint, Inst. Or., 6, 3, 96.) We have no remains of either of these works. The poem De Herbarum virtutibus, commonly ascribed to him, is now regarded as a production of the middle ages. (Ogryal, Dial., 4, p. 217, seqq. —Brokuhas, ad Tibiul, p. 574.—Veesenmeyer, Bibliogr. Analekzt., p. 84.)—I. A friend of Ovid, who wrote a continuation of the Iliad, and also an Antithemis. He has been frequently confounded with the preceding, but flourished, in truth, at a later period. The former died in Asia, B.C. 17. (Compare the remarks of Wernsdorff, Poet. Lat. Min., vol. 4, p. 579, seqq.)

MACINANS, a powerful tyrant of Sparta, whose views at one time extended to the subjugation of all Peloponnesus. He was defeated and slain by Philopoimen in the war against Athens. (Plutarch, Phocion, p. 84.)

MACIUN, a celebrated physician, son of Asculapius, and brother to Podaliarius. He went to the Trojan war, where his skill in surgery and the healing art proved of great service to his countrymen. Mauchon was one of those shut up in the wooden horse, and is by some supposed to have fallen on the night that Troy was taken. He received divine honors after death, and had a temple erected to him. (Hom., II., 226; Virgil, Aen., 960. —Iliad, II., 122. —Iliad, V., 34.) Achilles is said to have given the name from the old verb páxyw, the root of µύχων, and makes it denote one who is skilful with the hand. (Aen., p. 206.) "Mauchon," observes the President Goguet (Origin of Laws, &c., vol. 2, p. 267, Eng. transl.), "was himself a very able physician. He was a soldier as well as a physician. He was wounded dangerously in the shoulder in a sally which the Trojans had made. Nestor immediately brought him back to his tent. Scarex are they entered there, before Mauchon took a drink mixed with wine, in which was a little bit of the honey of Aegina, the honey of the Olympian bee. (II., 11, 506, seqq.) What ill effects must not this mixture produce, since wine alone is very opposite to the healing of wounds! The meats which Mauchon afterward used (II., 11, 629) do not appear in any way proper for the state in which he found himself. In another part of the Iliad (4, 218) Menelaus is wounded with an arrow: they make Mauchon immediately come to heal him. The son of Asculapius, after having considered the wound, sucks the blood, and puts on it a dressing to appease the pain. Homer does not specify what entered into that dressing. It was only composed, according to all appearances, of some bitter roots. This conjecture is founded on the following circumstance: in the description which the poet gives of the healing of such a wound, he says expressly that they applied to the wound the juice of a bitter herb bruised (11, 845). It appears that this was the only remedy which they knew. The virtue of this herb is not known; but it may be added the remarks of an eminent physician of our own country. "It appears that the practice of Mauchon and Podaliarius was very much confined to the removal of the darts and arrows with which wounds had been inflicted, and afterward to the application of fomentations and styptics to the wounded parts; for, when the heroes recorded by Homer were in other respects severely injured, as in the case of Æneas, whose high-bose was broken by a stone thrown by Diomed, he makes no mention of any other than suppurating means employed for their relief." (Hosack’s Medical Essays, vol. 1, p. 38.)

MACRA, a river flowing from the Apennines, and dividing Liguria from Etruria, now the Magra. (Lucan, 2, 426.—Liv., 39, 32.) The Arno formed the southern boundary of Liguria until the reign of Augustus. (Plin., 3, 5.)

MACRINIUS, Titus Fulvius Julius, a Roman, who, from a private fortune, rose to the highest command in the army, and proclaimed himself emperor when Valerian was made prisoner by the Persians, A.D. 260. He is one of the so-called "thirty tyrants" of later Roman history, but appears to have been, as far as we can judge from his brief period of authority, an able prince. Macrinius was proclaimed emperor along with his two sons Macrianus (Junior) and Quietus. When he had supported his dignity for a year in the eastern parts of the empire, Macrinius marched towards Rome to crush Gallienus, who had been proclaimed emperor. He was defeated in Illyricum by the lieutenant of Gallienus, and put to death with his elder son, A.D. 262. (Treb. Poll., Vit. Macrian.)

MACRINUS, I. M. Opilius Severus, a native of Mauritania, was prætorian prefect under Caracalla, whom he accompanied in his expedition against the Parthians, and caused to be murdered on the march. Macrinus, after some time, was the first of the Macrians to be proclaimed emperor by the army, A.D. 217, and his son Diadumenianus, who was at Antioch, was made Caesar; both elections were confirmed by the senate. Macrinus, after a battle with the Parthians near Nisibis, concluded peace with them. On his return to Antioch he reformed many abuses introduced by Caracalla. But his excessive severity displeased the soldiers, and an insurrection, excited by Mosa, the aunt of Caracalla, broke out against Macrinus. He was defeated near Antioch, fled as far as Chalcedon, where he was arrested and put to death, A.D. 218, after a reign of about 14 months. His son Diadumenianus shared his fate. He was succeeded by Hellogabalus. (Jul. Capitol., Vit. Macrin.)
—Herodian, 4, 12, 2, seqq.—II. A friend of the poet Persius, to whom his second satire is inscribed. They had been fellow-students under Servilius Numanus. (Lemare, ad Pers., Sat., 2, 1.)

Macrobius, a people of Ethiopia, highly celebrated in antiquity, and whom Herodotus has copiously described, living among the Hittites and marching against them by Cambyses, and in this way they have obtained a name in history. A rumour of the vast quantity of gold which they possessed determined Cambyses to march against them. He sent, however, beforehand some spies into their country, from the nation of the Ichthyophagi, as they understood their language. The accounts, which the neighbouring people gave, represented the Macrobius as a tall and beautiful race, who had their own laws and institutions, and elected the tallest among them to the dignity of king. The Ichthyophagi, on asking the monarch of the Macrobians, to whom they brought these accounts as if ambassadors from Cambyses, for what length of time his subjects lived, were told for the space of 120 years, and sometimes longer. Hence the name given them by the Greek writers of Macrobius (Macroboioi, "long-lived"). Gold was the metal in commonest use among them, even for the uncertain and frivolous purposes, that Cambyses, on the return of his spies, immediately marched against the Macrobius, but was compelled to return, from want of provisions, before he had proceeded a fifth part of the way. (Herod., 3, 17, seqq.)—Bruce takes the Macrobius for a tribe of the Shangallas, dwelling in the lower part of the gold countries, Cuba and Nuba, on both sides of the Nile, to the north of Fashkúr. (Travels, vol. 2, p. 554, seqq.) Heeren, however, more correctly thinks, that the people in question are to be sought for farther south, in another region. None of the Shangallas, that we know of, live in cities, or have reached that degree of civilization imputed to the Macrobius. He thinks it probable, therefore, that the Macrobius of Herodotus should be sought for on the coast, or in one of the ports of Adel, and in the vicinity of Cape Guardafui. This would place them in the country of the Somauites, who are, perhaps, their descendants. (Heeren, Ideen, vol. 2, pt. 1, p. 333, seqq.)

Macrobius, I., a Latin writer, who flourished in the first half of the fifth century, under Theodosius the Younger. His full name is Aurelius Macrobius Ambrosius Theodosius. (Func., de veget. L. L. senect., 4, 27. — Fabric., Bib. Lat., vol. 3, p. 180.) As he was not a Roman by birth, and seeks in this an excuse for his Latin style (Sat., 1, 1), he has been regarded as a foreigner. He was a student at Rome. (Fabric., i. c. in notis.) In the manuscripts he bears the title of Vir Consularis et illustris; and from this some have concluded, that he is the same with the Macrobius mentioned in a law of the Theodosian code (lib. 6, tit. 8) as Profectus sacri cubiculi, or chamberlain of the royal bedchamber. Other critics have remarked, however, that this office was commonly given to eunuchs, and that Macrobius the writer had a son. It is very uncertain whether Macrobius was a Christian or not. The supposition that he held the office of chamberlain under a Christian emperor has been the chief, or, perhaps, the only ground for imagining him to have been a Christian, since the language of his writings and the interlocutors in the dialogues are entirely heathen. (Consul Mahul, Dissertation sur la Vir, &c., de Macrobe. — Class. Journ., vol. 20, p. 116.) The works of Macrobius are three in number: 1. Commentarii in Somnium Scipionis of Cicero, it contains much information respecting the opinions of the later Platonists on the laws which govern the earth and the other parts of the universe. There is a Greek version by Maximus Planudes, which was first published, from the MS. in the King's Library at Paris, by Hess, Hal., 1833, 8vo. Some critics have thought that the commentary we have just been considering ought to be regarded as a part of the second work of this writer, of which we are going to speak, and from which it has been detached through the carelessness of the early editors. There are reasons no good reason for this opinion.—2. Saturnalia, a work, which first appeared in the first year of the consulship of Macrones, and was addressed to his son. This is a compilation after the manner of the Attic Nights of Aulus Gellius; it has, however, the dialogue form, and is supposed to be the transcript of a conversation which took place at table during the celebration of the Saturnalia. The principal interlocutors are a certain Vectius Pretextatus, Q. Aurelius Symmachus and his brother Flavianus, Cecina De- nianus, Alciatus, and the Emperor. It contains discussions of a great variety of historical and mythological topics, explanations of many passages of ancient authors, remarks on the manners and customs of the Romans, &c. An idea of the general nature of the work may be formed from the titles of some of the chapters: Of the origin of some Roman words.—Of the origin of the Saturnalia.—Of the Romans year and its divisions—Proof that all the gods of the pagans are derived indirectly from the gods of Ciceró's house.—Of Augustus.—Of Julia.—Details on the luxury of the Romans.—Observations on the Eneid, and a comparison between Virgil and Homer.—Why those who turn round are attacked with vertigo.—Why women have softer voices than men.—Why shame makes one blush.—Why bodies plunged in water appear larger than they really are, &c. Many things in Macrobius are drawn from Aulus Gellius, and some from Plutarch. The third work of Macrobius treated of the difference between the Greek and Latin languages, and also of their analogy: De differentiis et societatis Gotici Latinae Verbi. We have only an extract from this, made by one Joannes, supposed to be the same with the celebrated Joannes Scutius, who lived in the time of Charles the Bald. (Schoel, Hist. Lit. Rom., vol. 3, p. 322, seqq. — Bähr, Gesch. Rom. Lit., p. 724, seqq.) The best edition of Macrobius is that of Gronovius, Lugd. Bat., 1670, 8vo. The edition of Zeune, Lips., 1774, 8vo, has a very faulty text, but very useful and extensive notes. The text is a careless reprint of that of Gronovius. The Bippont edition, 1789, 2 vols. 8vo, has no notes, but a very correct text. The Notitia Literaria prefixed is also very useful.—II. An ecclesiastical writer, who lived in the sixth century. He was at first a disciple of the Catharinean church. Learning, but not industry, made common cause with the Donatists. We have a fragment remaining of a letter of his to the people of Carthage, but nothing exists of a treatise which he wrote while yet belonging to the orthodox persuasion, entitled "Ad confessores et virgines."

Macrobes, a nation of Asia, occupying the northern parts of Armenia, probably between the town of Arze and the coast of the Euxine. They are mentioned in the Annales Armentini as one of the nations which the Greeks marched. The Macrobes are called Macrocephali by Scalyc (p. 33), but Pliny seems to distinguish them as two different people (6, 4). Herodotus informs us that the Macrobes used circumcision, having, as they themselves reported, derived the practice from the Colchians. (Herod., 2, 104.) The natural inference to be drawn from this passage is, that the Macrobes were of Colchian origin. Strabo says that this people were in his time no longer called by their ancient appellation; but were named Sanni (Strab., 548); and Eustathius, who confirms this statement, writes the word Tzani, according to the more modern Greek orthography (ad Dionys. Perieg., 766). Cramer thinks, that the modern name of Dymuk is a corruption of Sannice. (Asia Minor, vol. 1, p. 286.)
Mæa, a city of Numidia, near Tagaste, and northwest of Sicca. It appears to have been a place of some importance, and, in the Notitiae Numidiae, Prudentius Metaeurasius is named as its bishop. It is commonly regarded as the birthplace of Apuleius, though Mannert is in favour of the Roman colony Ad Modera. Now identified with Madaura, it is supposed by Gruter's (p. 606, n. 10), the name of the city is given as Mæa. (Mannert, Geogr., vol. 10, pt. 2, p. 321.)

Mæander, a river of Asia Minor, rising near Cleans in Phrygia, and, after forming the common boundary between Lydia and Caria, falling into the Ægean below the promontory of Mycale. It was remarkable for the winding nature of its course (σωλάκων ὄς ὑπ' ὑπηρεβάλθη—Strab. 577), and hence all oblique or winding fold of the name of Mæander. (Strab., l.c.) It received the waters of various streams, the Marayas, Orgas, &c., but was not remarkable for its size as far as regarded breadth, though a deep river, and fordable only in a few places in the early part of its course. According to Xenophon (Anab., 1, 2), the Mæander rose in the palace of Cyrus, flowing from thence through his park and the city of Ceans. In the vicinity rose the Marayas, which formed a junction with the river, and was celebrated among the ancients as the spot where the Scæulum stood the city of Apamea. (Compare the remarks of Leake, Tour, p. 158, seqq.) According to Strabo (693), the common boundary of Caria and Phrygia, on the Mæander, was at Carura. After the river had reached Lydia and Caria, it widened, and entered upon what the ancients denominated the plain of the Mæander, which extended from the borders of Phrygia to the sea, nearly 100 miles. This plain varied in breadth from 5 to 10 miles, and was ornamented with a number of fine cities and towns. Great changes have taken place on the coast, at the mouth of the Mæander, by the great deposition of mud and earth in the course of ages: changes that have so completely altered the face of things as described by the ancients, that the first of modern geographers was totally misled in his estimate of the ancient geography, by attempting to reconcile it with the modern, on the ground of the imperfect descriptions of it in the ancient books. D'Anville had no conception that the Gulf of Latmus received the Mæander, but supposed a considerable space to exist between them. Nor was he aware that the gulf itself no longer existed; that its wide opening to the sea was closed up by alluvions; and that the island of Lade, so often mentioned as a rendezvous in the history of the naval warfare of ancient times, had become a part of the main land, rising, like the rock of Dumbarton, from the marshy soil; and, moreover, that the southern part of the gulf was transformed into a fresh-water lake. The mud of the Mæander, having been deposited across the southeast arm of the gulf, formed its upper part into a lake; which soon became fresh, when the access of the seawater was barred out, as it receives a great quantity of land waters from the surrounding mountains. It is named the Lake of Bagh, from a town at the southeast corner: it is about 15 miles in length, and from 3 to 5 in breadth. Chandler represents it as a sweet and pure, and the mud in particular at the bank as extremely deep. (Tour in the Levant, vol. 3, p. 96.)

Mæitas, a people in the north of Britain, near the vallum Severi of wall of Severus, comprising the Ota-
or disturbance; and at length no conspiracies were formed. At the same time, and with a similar object, he did all in his power to render the administration of Augustus moderate and just; and, as he perfectly understood all the weaknesses and virtues of his character, he easily bent his disposition to the side of mercy. While he himself, as prefect of the city, had retained the capital in admirable order and subjection, he was yet remarkable for the mildness with which he exercised this important office, to which belonged the management of all civil affairs in the absence of the emperor, the regulation of buildings, provisions, and commerce, and the cognizance of all crimes committed within a hundred miles of the capital. Seneca, who is by no means favourable, in other respects, to the character of Mæcenas, allows him a full tribute of praise for his clemency and mildness. (Epist., 114.) So sensible was Augustus of the benefits which his government derived from the counsels and wise administration of Mæcenas, and such was his high opinion of his sagacity, fidelity, and secrecy, that everything which concerned him, whether political or domestic, was confided to this minister. Such, too, were the terms of intimacy on which they lived, that the emperor, when he fell sick, always made himself be carried to the house of Mæcenas; so difficult was it to find repose in the habitation of a prince! During the most arduous and difficult period of his administration, and while exercising an almost unremitting assiduity, Mæcenas had still the appearance of being sunk in sloth and luxury. Though he could exert himself with the utmost activity and vigilance when these were required, yet in his hours of freedom he indulged himself in as much ease and softness as the most delicate lady in Rome. (Vell. Patern., 2, 88.) He was moderate in his desires of wealth or honours; he instanced the ingratitude and volupptuousness by nature and inclination; and he rather wished to exhibit than conceal his faults. The air of effeminate ease which he ever assumed, was perhaps good policy in reference both to the prince and people. Neither could he be jealous of a minister who was apparently so careless and indifferent, and who seemed occupied chiefly with his magnificent villas and costly furniture. He usually came abroad with a negligent gait and in a loose garment. When his friends, or to use the words of Tacitus, his urinantibus, his ungirt robe trailed on the ground, and he wore a little cloak, with a hood like a fugitive slave in a pantomime. Instead of being followed by lictors or tribunes, he appeared in all public places attended by two enuums. (Senec., Epist., 114.) He possessed a magnificent and spacious villa on the Esquiline Hill, to which a tower adjoined remarkable for its height. The gardens of Mæcenas, which surrounded the villa, were among the most delightful in Rome or its vicinity. Here, seated in the cool shade of his green spreading trees, whence the most musical birds constantly warbled their harmonious notes, he was accus- tomed to linger, and pay at idle hours his court to the muses. Being fond of change and singularity, the style of Mæcenas's entertainments varied. They were sometimes profuse and magnificent, at others elegant and private; but they were always inimitable in point of taste and fancy. He was the first person who introduced at Rome the luxury of young male's flesh; his table was served with the most delicious wines, among which was one of Italian growth and most exquisite flavour, called from his name Maccanatium (Pliny, 8, 43); and hence, too, the luxurious Trimachio, who is the Magister Convini in the Satyricon of Petronius Arbiter, is called Maccanatius, from his love of luxurious and voluptuous restraint. (Pliny, 14, 6.) His sumptuous board was thronged with parasites, whom he also frequently carried about to sup with his friends, and his house was filled by musicians, buffoons, and actors of mimes or pantomimes, with Bathulius at their head. These were strangely intermingled in his palace with tribunes, clerks, and lectors. But there, too, were Horace, and Varus, and Valgius, and Virgil! Of these distinguished poets, and of many other literary men, Mæcenas was, during his whole life, the patron, protector, and friend. Desert in learning never failed, in course of time, to obtain from him its due reward; and his friendship, when once procured, continued steady to the last. Among the distinguished men who frequented the house of Mæcenas, a constant hearse was intended to have subsisted. They never occasioned uneasiness to each other; they were neither jealous nor envious of the favour and felicity which their rivals enjoyed. The noblest and most affluent of the number were without insolence, and the most learned without presumption. Merit, in whatever shape it appeared, occupied an honourable and unmolested station. Mæcenas is better to be the dupe of a patron of literature than as an author; and, living in a poetical court, and surrounded with poets, it was almost impossible that he should have avoided the contagion of versification. He wrote a tragedy called Octavia, a poem entitled De Cultu, and some Pha- lecian and Galliabisc verses. All these have perished except a few fragments cited by Seneca and the ancient grammarians. To judge from these extracts, their author does not seem to have thought of the various problem in the literary history of Rome, that one who read with delight the works of Virgil and Horace, should himself have written in a style so obscure and affected. The effeminacy of his manners appears to have tainted his language; though his ideas were sometimes happy, his style was loose, florid, and luxuriant (Senec., Epist., 19); and he always aimed at winding up his periods with some turn of thought or transition in which he excelled in style or striking. These conceits were called by Augustus his calamisstri; and in one of that emperor's letters, which is preserved in Macrobius, he parodies the luxuriant and sparkling style affected by his minister. Mæcenas continued to govern the state, to patronise good poets, and write bad verses, for a period of twenty years. During this long space of time, the only interruption to his felicity was the continued love and respectful obedience of a most devoted and capricious woman was the sister of Proculeius, so eminent for his fraternal love (Horat., Od., 2, 2, 5), as also of Li- cinius Muriana, who conspired against Augustus. The extravagance and bad temper of this fantastical yet lovely female, were sources of perpetual chagrin and uncer- tainty to his husband. Though his existence was imbittered by her folly and caprice, he continued, during his whole life, to be the dupe of a passion which he entertained for her. He could neither live nor without her; he quarrelled with her and reconciled almost every day, and put her away one moment to take her back the next; which has led Seneca to remark, that he was married a thousand times, yet never had but one wife. Tener- tia vied in personal charms with the Empress Livia, and is said to have gained the affections of Augustus. The umbrage Mæcenas took at the attentions paid by Dio Cassius as the chief cause of that decline of imperial favour which Mæcenas experienced about four years previous to his death. For, although he was still treated externally with the highest consideration, though he retained all the outward show of grandeur and interest, and still continued to make a poet to his taste present to him on his birthday, he was no more the emperor on the anniversary of his accession to state affairs as a favourite or confidant. Others have supposed that it was not the intrigue of Augustus with Terentia which diminished his influence, but a discovery made by the emperor, that he had revealed to his wife some circumstances
concerning the conspiracy in which her brother Mu-
rena had been engaged. Suetonius inform us, that he
had felt some displeasure on that account; but Mu-
rena's plot was discovered in the year 733, and the
decline of Mæcenas's political power cannot be placed
earlier than 733. The disgust conceived by masters
when they have given all, and by favourites who have
nothing more to receive, or are satisfied with honors,
must have occasioned for the court a degree of murmu-
ring between Augustus and his minister. But the declining
health of Mæcenas, and his natural indolence, increas-
ing by the advance of years, afforded of themselves
sufficient cause for his gradual retirement from public
affairs. His constitution, which was naturally weak,
had been impaired by effeminacy and luxurious living.
He had laboured from his youth under a perpetual
fever (Plin., 7, 51); and for many years before his
death he suffered much from wakefulness, which was
greatly aggravated by his domestic chagrins. Mæce-
nas was fond of life and enjoyment; and of life even
without enjoyment. Hence he anxiously resorted to
different remedies for the cure or relief of this distress-
ing malady. Wine, soft music sounding at a dis-
tance, and various other contrivances, were tried in
vain. At length, Antonius Musa, the imperial physi-
cian, who had saved the life of Augustus, but accel-
ered that of Mæcenas, allayed the emperor's delusion
of his complaint by means of the distant murmurs of falling water. The sound was artifi-
cially procured at his villa on the Esquiline Hill.
During this stage of his complaint, however, Mæcenas
resided principally in his villa at Tibur, situated on
the banks of the Anio, and near its celebrated cas-
cades. This was indeed a spot to which Mæcenas
might have sent his kindest dreams; and the pure air
of Tibur, with the streams tumbling into the valley
through the arches of the villa, did bestow on the
born-out and sleepless courtier some few moments of
repose. But all these resources at length failed. The
ravenous and feverish disorder with which Mæce-
nas was afflicted increased so dreadfully, that for
three years before his death he never closed his eyes.
In his last will, he recommended Horace, in the most
affectionate terms, to the protection of the emperor:
"of Tibur, with the stream tumbling into the valley.
He died in 745, in the same year with Horace, and was buried
in his own gardens on the Esquiline Hill. He left no
child, and in Mæcenas terminated the line of the an-
cient Etrurian princes. But he bequeathed to pos-
terity a name, immortal as the arts of which he had
been through life the generous protector, and which
is deeply inscribed on monuments that only can be
destroyed by some calamity fatal to civilization.
Mæcenas had nominated Augustus as his heir, and the
emperor thus became possessed of the Tiburine villa,
which had formed the principal residence of the min-
ister during the close of his life, and in which the
monarch passed a great part of the concluding years
of his reign. The death of his old favourite revived
all the esteem which Augustus had once entertained
for him; and, many years afterward, when wont with
regret at having divulg'd the shame of his daughter
Julia and punished for the offense, he acknowledged his
irreparable loss by exclaiming, that he would have
been prevented from acting such a part had Mæcenas
been still alive. So difficult was it to repair the loss
of one man, though he had millions of subjects under
his obedience. "His legions," says Seneca, "being
cut to pieces, he recruited his troops—his fleets, de-
stroyd by storms, were soon refitted—public edifices,
consumed by the flames, were rebuilt with greater
magnificence; but he could find no one capable of dis-
charging the station, which he had foreseen by Mæ-
cenas with equal integrity and ability." (Dunlop's

Mæni, a people of Thrace, above the Palus Bistot-

nís, noticed by Thucydides in his narrative of the ex-
pedition of Sitalces into Macedonia, but of whom He-
rodotus seems to have had no knowledge. (Thucyd.,
2, 98.)

Mætius, a Roman, slain by Ahala, master of the horse
to the horator Cincinnatus, for aspiring to su-
preme power. (Liv., 4, 13, seqq.)

Mætius, a name applied to the Bac-
chante or priestesses of Bacchus, and alluding to
their phrenzied movements. It is derived from μαιφλαια,
"to rave."

Mænēlos (πληρ. Μανηλα), I. a mountain in
the south-eastern part of Arcadia, sacred to the god
Pan, and considered, on account of its excellent pa-
tures, to be one of the favourite haunts of that rural
deity. (Theocr., Idyl., 1, 123.—Virg., Georg., 1, 17.
Ovid, Met., 1, 216.) The modern name is Róino.
Dodwell says that its height is considerable, and is,
like the other Peloponnesian mountains of the first or-
der, it is characterized by intersecting glens and val-
leys, watered by numerous rivulets, and cultivated with
sylvan scenery. It is not, however, as he remarks,
to be compared with Taygetus either for grandeur or be-
auty.

Mænvlus extends far to the northeast, bounding
the western side of the plains of Mantinea and Orcho-
menus, and occupying a tract of country anciently
called Dória. For Mænvlus and Mænvlus, the Mat.

icle gives the epithet of "cold!" (μενανναστηρος—
Pausan., l. c.—Dodwell, vol. 2, p. 418.)—II. A town of
Arcadia, in the vicinity of Mount Mænvlus, which took
its name, according to Pausanias (8, 3), from one of
the sons of Lycaon, its founder. It was in ruins in
the time of Pausanias, and its situation has not been
clearly investigated by modern travellers. (Dodwell,
vol. 2, p. 418.)

Mænvlus, a river of Greece, falling into the Rhine
at Moguntiacum (Mayence or Mainz), and now the
Main. The Romans first became acquainted with it on
getting possession of Moguntiacum. Ptole-
my makes no mention of this river, but would seem
to have been acquainted with its sources. It is worthy
of remark, that the inhabitants on the Main, in the vi-
cinity of Wurtzburg, still call the river, according to
the Roman fashion, the Mön. The name Mænvlus is a
later form than the other. (Emmem. Pauly. Const., c. 13.
—Mannert, Geogr., vol. 3, p. 423.)

Mæonia. Vid. Lydia.—The Etruscans, supposed
to have derived their civilization, or, according
or others, to have sprung, from a Lydian colony, are often
called Mæonides (Virg., Æn., 11, 759), and the Lake
Tryasymenus in their country is styled by Silius Itali-
cus Mæonius Lacus. (Sil. Ital., 15, 35.)

Mæonides, a surname of Homer, in allusion to his
supposed Lydian or Mæonian origin. (Vid. Homer.)

Mæotis. I. an epithet applied to Omphale as queen
of Lydia or Mæonia. (Ovid, Fast., 2, 310, 352.)—II.
The same epithet is also applied to Arachne as a na-
tive of Lydia. (Id., Met., 6, 103.)

Mæotike, a general name for the tribes dwelling
along the Palus Mæotis. (Plin., 4, 12.—Strab., 495.)
Mela (1, 2) uses the epithet Mæotici, and Vopiscus
calls them Mæotidae.

Mæotis Palus, or Sea of Azof, a large marshy
lake between Europe and Asia, northeast of the Eu-
rine, and connected with it by the Cimmerian Bospo-
rus, or Straits of Jénica. It is formed by the Tanais
(Don) and other rivers. Its waters are brackish; they
are well stored with fish, but are shallow to a great
distance from the banks. No rock has been observed
in any part of it. The surface is about twelve inches
higher in spring than in the rest of the year. (Malte-
bru, vol. 6, p. 465. Am. ed.) The Palus Mæotis is
said by Mela (1, 2) to have been also called Mæotis
(μαεοτις τα καλέτας—4, 86, 45), and the Mother of
the Pontus Euxinus (μαεοτιος τού Πονοβου—4, 86).
This name, Mæotis, is the earlier and general form.
We have here a curious link in the chain connecting the early religion of India with that of the countries to the west. The leading idea appears to be one of a cosmogonial nature, and to refer to the action of the humid principle as the generating cause of all things. Hence the Aphrodite of the Greeks, rising from the bosom of the waters (ανυδατος — Ἀφροδίτη παντογενής. Orpheus, Ἡ., 54, ed. Herm.), or, in other words, the great Mother (All) of the Egyptians, the same with their Isis. (Creutzer, Symbol., vol. 1, p. 354): the Μάρ (Mot) of Sanchonathan (λίθος αὐτων μικρισία πτωτο·—Bochart, Geogr. Sacr., 2, 2, p. 705); the Χάος of Hesiod (Theog., 123); the Μήτης, to whom a temple was erected in the vicinity of the Hypanis and Borysthenes (Herod., 4, 53.—Wess., ad loc.); the γη μήτρα, the primitive slime (Creutzer, Symbol., vol. 4, p. 392); the Μήτρα, ἡ προεστήγη πάνα (Hesych., ed. Alberti, p. 597); the Μήτρα of Hesiod and of the Orphic poets (Orpheus, Argen., ed. Herm. Apoll., 6, 19, n., p. 461); and the Μαῖα of the Doric dialect (Iambl., Vit. Pythag., ed. Kiesling, p. 114, 56.).

The root of this word is to be found in the Sanscrit. (Compare Hesychius, Mal, μέγα. *Ivoul.) Mana-Mai (Magna Mater) is worshipped at the present day by the Buddhists in Nepal. (Kirpatrick, Account of Nepal, vol. i, p. 114.) The worship of the Græce (τηνον μήτρα Βασσαλία—Orpheus, Hymn., 49, 4, ed. Herm., p. 313) the mother of gods and nurse of all things (θεών μήτρα, τρόφος πάνω—Orpheus, Hymn., 26 et 27, ed. Herm., 286, seqq.); the Metis whom Jove espoused as his first consort, after the conflict with the Titans (Hesiod, Theog., 866). appears to have spread from east to west, and one of the early seats of this worship to have been in the vicinity of the Palus Niloticus. These slimes were regarded as a type of that primitive slime from whose teeming bosom the world was supposed to have been formed. (Ritter's Vorkalle, p. 57.—Id. ibid., p. 161, seqq.)

Messia Sylva, a forest in Etruria, southwest from Veii. It originally belonged to this city, but was taken by Ancus Marcius. (Livy, 1, 33.) Pliny reports that it was abandoned with dormice. (Plin., 8, 58.)

Mævī, a minor hymn poet of the Augustan age, whose name Bavius, frequently attacked the productions of Virgil, Horace, and other distinguished writers of the day. They are both held up to ridicule in turn by Virgil and Horace, and owe the preservation of their names to this circumstance alone. (Virg., Eclog., 3, 90.—Voss, ad loc.—Servius, ad Virg., Georg., 1, 210.—Horat., Epod., 10, 2—Weichert, de obrect. Horat., p. 12.—Bähr, Gesch. Röm. Lit., vol. I, p. 129.)

Magetobia, a city of Gaul, the situation of which has given rise to much discussion. Some place it near Bingsa, below Moguntia; and they found this opinion on the opening lines in the poem of Ausonius upon the Mosella. D'Anville, however, and subsequent writers, discover traces of the ancient name in the spot called at the present day la Magote de Broie, at the confluence of the Arz and Ogno, near a village named Pontailler, which belonged formerly to Burgundy. This opinion is confirmed by an inscription found in this quarter on the fragment of an urn, dug up, along with other articles, in 1802. The inscription is MAGETOB (Cas., B. G. I, 31.—Lemaire, Ind. Geogr., ad Cas., s. v.)

Maoi, the name of the priests among the Medes and Persians, and whose order is said to have been founded by Zoroaster. The Magi formed one of the six tribes into which the Medes were originally divided (Herod., 1, 11). In the days of the Median empire, they continued to retain at the court of their conquerors a great degree of power and authority. It would appear, however, that they did not witness with indifference the sovereignty pass from the Medes to the Persians; and it was probably owing to the intrigues of the whole order, that a conspiracy was formed to deprive Cambyses of the throne, by representing one of their number as Smerdis, the son of Cyrus, who had been previously put to death by his brother. Herodotus, who has given the history of this conspiracy at length, evidently regarded it as a plot, on the part of the Magi, to restore the sovereignty to the Medes, hence he represents that they were called the "Magian Makers" (T. Shew, Symbol., ed. Kiesling, vol. 1, p. 597), as conjuring the Persians to prevent the Medes from again obtaining the supremacy. (Herod., 3, 65.) And the Persians themselves must have looked upon it in the same light, since, after the discovery of the conspiracy, and the murder of the pretended Smerdis by Darius Hystaspis and his companions, a general massacre of the Magi ensued, the memory of which event was annually preserved by a festival called "the Slaughter of the Magi" (Mayaphor), during which none of the Magi were allowed to appear in public. (Herod., 3, 79.)

Ctes., Pers., c. 15.)

This event, however, does not appear to have impaired their influence and authority; for they are represented by Herodotus, in his account of the Persian religion, as the only recognised ministers of the national worship (1, 322).—The learning of the Magi was connected with astrology and enchantment, in which they were so celebrated, that we may consider them the first astrologers and enchanters. Thus, the Septuagint translates the Chaldee Ashap by the word Magus (Máyóos.—Dan., 1, 20.—Id. 2, 2, 27.

—Compare Acts, 13, 6, 8.) The word was also applied to designate any men celebrated for wisdom; whence the wise men of the East, who came to see the infant Saviour, are called simply Magi. (Matt., 2, 1.) It would appear from a passage in Jeremiah (39, 9), that the Babylonian priests were also called "the Magi," and the interpretation of Rab-Mag., "chief of the Magi," be correct. (Gesenius, Hebr. Lex., s. v. Mag.) The etymology of the word is doubtful. In Pers. the name of the priest is mugh; and it is not improbable, as Gesenius has conjectured, that the term may be connected with the root meaning "great," which we have in the Greek μυγ-ας, Ber. magias, and the Persian mih; and the Sanscrit mah-at. It is a curious fact, that the Hindu grammarians also distinguished the five word "worship." (Wilson's Sanscrit Dict., s. v. Mah-at.—Encycl. Us. Knowl., vol. 1, p. 280, seq.)—The Magi were divided into three classes: the first consisted of the inferior priests, who conducted the ordinary ceremonies of religion; the second presided over the sacred fire; the third was the Archimagus or high-priest, who possessed supreme authority over the whole order. They had three kinds of temples; first, common oratories, in which the people performed their devotions, and where the sacred fire was kept only in lamps; next, public temples, with altars, on which the fire was kept continually burning, where the higher order of Magi directed the public devotions, and the people assembled; and, lastly, the grand seat of the Archimagus, which was visited by the people at certain seasons with peculiar solemnity, and to which was deemed an indispensable duty for every one to repair, as their best chance in life. This principal temple was erected, it is said, by Zoroaster, in the city of Bactra (the modern Balk), and remained till the seventh century, when the followers of Zoroaster, being driven by the Mohammedans into Carmania, another building of the same kind was raised, to which those who still adhered to the old Magian religion resorted. They were divided into several sects; but this division does not merely relate to the offices of religion alone. No images or statues were permitted in the Magian worship. Hence, when Xerxes founded idols in the Grecian temples, he, by the advice of the Magi, set them on fire, saying that the
MAGI.

gods, to whom all things are open, are not to be
confined within the walls of a temple. The account which
Diogenes Laertius gives of the Magi is this (1, 6, seqq.): "They are employed in worshipping the gods
by prayers and sacrifices, as if their worship alone
would be acceptable; they teach their doctrine concern-
ing the heaven, and the earth, and the sea, and the
fire, and the earth, and the water; they reject the use of
pictures and images, and reprove the opinion that the
gods are male and female; they discourse to the peo-
ple concerning justice; they think it impious to con-
sume dead bodies with fire; they allow of marriage
between mother and son; they practise divination and
prophecy, pretending that the gods appear to them;
they forbid the use of ornaments in dress; they clothe
themselves in a white robe; their mode of sleeping
is on the ground as their bed, of herbs, cheese, and bread for
food, and of a reed for their staff." And Strabo re-
lates, that there were in Cappadocia a great number
of Magi, who were called Pyretki, or worshippers of
fire, and many temples of the Persian gods, in the
midst of which were altars, attended by priests, who
daily renewed the sacred fire, accompanying the cere-
mony with music. The religious system of the Magi
was founded on the two contrary principles, the one
Reiske, vol. 7, p. 468), says: "Some maintain, that
neither is the world governed by blind chance without
intelligence, nor is there one mind alone at the head of
the universe; but since good and evil are blended, and
nature produces nothing unmixed, we are to conceive,
not that there is one storekeeper, who, after the manner
of a host, dispenses adulterated liquors to his guests,
but that there are in nature two opposite powers, which
Zoroaster, acting each other's operations, the one accomplishing
good designs, the other evil. To the better power
Zoroaster gave the name of Oromasdes, to the worse
that of Ariamnus; and affirmed that, of sensible ob-
jects, the former most resembled light, the latter
darkness. He also taught that Mithras was a divinity,
who acted as a moderator between them, whence he
was called by the Persians the Mediator. After
relating several fabulous tales concerning the contest
between the good and evil demon, Plutarch, still re-
citing the doctrines of Zoroaster, proceeds: "The
fated time is approaching in which Ariamnus himself
shall be utterly destroyed; in which the surface of the
earth shall become a perfect plain, and all men shall
speak one language, and live happily together in one
society." He adds, on the authority of Theopompus,
"It is the opinion of the Magi, that each of these gods
shall subdue men; he will succeed by turns, for six thousand
years, but that, at last, the evil principle shall perish,
and men shall live in happiness, neither needing food
nor yielding a shadow; the God who directs these
things taking his repose for a time, which, though it
may seem long to man, is but short." Diogenes Laer-
tius (l. c.), after Hectaeus, gives it as the doctrine of
Zoroaster, that the gods (meaning, doubtless, those
of whom he last speaks, Oromasdes and Ariamnus) were
defined being three, but will appear probable, from a com-
parison of these with other oriental sects, that they
adopting the principle commonly held by the ancients,
that from nothing, nothing can be produced, conceived
light, or those spiritual substances which partake of the
active nature of fire and darkness, or the impenetrable,
opaque, and passive mass of matter, to be emanations
from one eternal source; that to derived substances
he gave the names, already applied by the Magi to the
celestial and terrestrial elements. Opinion and falsehood,
and the first fountain of being, or the supreme di-
vinity, he called Mithras. These active and passive
principles he conceived to be perpetually at variance;
the former tending to produce good, the latter evil;
but that, through the mediation or intervention of the
Supreme Being, the contest would at last terminate in
favour of the good principle. (Enfield's History of
Philosophy, vol. 1, p. 63, seqq.)

MAGNA GRECIA OF MAJOR GRECIA (Liv., 31, 7. —
Justin, 20, 2), an appellation used to designate the
southern part of Italy, in consequence of the numerous
and flourishing colonies which were founded by the
Greeks in that part of the world. It was some difficulty in determining how far this name extended,
but it does not appear to have been applied to the
country beyond Cumae and Neapolis; and some geog-
raphers have even thought, though without sufficient
reasons, that it was confined to the colonies on the
Gulf of Tarentum. Pliny apparently considers Magna
Grecia to begin at the Locri Epizephyrii (3, 15); but
Strabo (175) even includes the Grecian towns of Sicily
between Messana and Catana. The time when the name of Magna
Grecia (Μαγνα Προχρις) was first applied to the south of Italy is uncertain. It does not occur, as far as we are aware, in the early Greek writers, such as
Herodotus, Thucydides, &c., but it is used by Po-
lybius (2, 39), and succeeding Greek and Roman
writers. Taking the name in the widest significan-
tion which is given to it by Strabo, Magna Grecia may
be justly considered as an appropriate name; since it
includes the various cities, from across the Euxine to
the island of Sicily. The time when the name of Maga
Grecia (Μαγνα Προχρις) is first mentioned is some
mention to any in Greece itself. The most important of
these were, Tarentum, founded by the Lacedemoni-
s; Sybaris, Crotona, and Metapontum, by the Ache-
aus; Locri Epizephyrii, by the Locrians; and Rh-
gium, by the Chalcidians; and in Sicily, Syracuse,
founded by the Corinthians; Gela, by the Cretans and
Rhodians; and Agrigentum, by the inhabitants of
pare Cramer's Anc. Italy, vol. 2, p. 380.)

MAGNA MATER, a name given to Cybele. (Vit.
Cybele, Pessinus, and Ludi Megaleisii.)

MAGNENTIUS, a German by birth, who, from being
a private soldier, rose to the head of the Roman em-
pire in the West. He was at first a prisoner of war,
but, to free himself from chains, he joined the Roman
troops, and became distinguished for valour. He was
commander of the Jovian and Herculean bands, sta-
tioned to guard the banks of the Rhine at the time
when Constantine I had incurred the contempt of the
army by his indolence and voluptuosity, and having
revolted against that prince, and caused him to be
killed near the Pyrennes, A.D. 350, he proclaimed
himself Emperor of the West. At Rome he acted with
great tyranny, and by his extortions was enabled to
keep in pay a large army to support his usurped au-
thority. So formidable, indeed, did he appear, that
Constantius, emperor of the East, and brother of the
deceased Constant, offered him peace, with the pres-
sion of Gaul, Spain, and Britain, but his offer was re-
jected. A war ensued, and Magnentius was totally
defeated. He fled to Aquileia, and afterwards ob-
tained a victory over the van of the pursuing army at
Ticini.

MAGNESIA, I. a city of Lydia, described by Strab.
(14, 647) as situate in a plain, at the foot of a mount-
inous country, called Oiolus. It was not far from
Mount Meander. Hence, for distinction sake from Magnesia near Mount Sipylos, it was usually styled "Magnesia at the
Meander" (Μαγνησία ήπε Μαενδρός). In its immedi-
ate neighbourhood flowed the small stream Letheus,
which issued from Mount Pactysias lying to the north,
and joined the Meander not far from this place. Mag-

784
nnesia, according to Pliny (5, 29), was fifteen miles, according to Artemidorus (ap. Strab., 663), 120 stadii, from Ephesus. Strabo makes it a city of Æolian origin, which is not contradicted by another statement of the same writer, when he makes the Magnesians to have been expelled from the island by_beach of Monte Dydymi of Thessaly.—Magnesia was sacked by the Cimmerians during their inroads into Asia Minor. It was afterward held by the Milesians, and was one of the cities assigned, for his support, to Themistocles, by the King of Persia. The modern Ghiuzel-kissar (Beautiful Castle) had been generally thought to occupy the site of the ancient Magnesia. M. Barbé de Bocage, however, in the notes to his translation of the Histories of Herodotus, is convinced of the idea of thinking that Ghiuzel-kissar occupied the position of Tralles; but it was not until Mr. Hamilton explored the ruins of Magnesia at Inekbazar, and discovered the remains of the celebrated temple of Diana Leucothoeryne, that the question could be considered as satisfactorily determined in favour of the latter place. (Leake's Journal, p. 243, seqq.)—II. A city in the northern part of Lydia, southeast of Commagene, and in the immediate neighborhood of the Hermus. On the loses of the foot of Mount Sipylos, and hence, for distinction sake from the other Magnesia, was called "Magnesia near Sipylos" (Makemagia πρὸς Σιπύλω). Its founder is not known, nor its earlier history. It was first brought into notice by the battle fought in its neighbourhood between Antiochus and the Romans (187 B.C.). It was not a place of much importance under the Roman dominion, as the main road from Pergamum to Sardis passed on one side of it. At the close of the Mithridatic war the Romans gave it its freedom. It was frequently injured by earthquakes, and was one of the twelve cities destroyed by the earthquake in the reign of Tiberius, that was, however, easily rebuilt. (Tact., Ann., 2, 47. — Plin., 2, 84.) It became afterward the seat of a bishopric. The modern name is Magnisa. (Tawneriet, 1, 7. — Mannert, Geogr., vol. 6, p. 3, p. 372.)—III. A district of Thessaly. The Greeks gave the name of Magnesia to that narrow portion of Thessaly which is confined between the Peneus and Pagassaran Bay to the north and south, and between the chain of Ossa and the sea on the west and east (Strabo, 441, — Scyl., Peripl., 2, p. 24. — Pliny, 4, 9.) The people of this district were called Magnesians, and appear to have been in possession of it from a remote period. (Hom., 2, 2, 768. — Pind., Pyth., 4, 140.—Id., Nem., 5, 50.) They are also universally alluded to by the Roman and the Alexandrine bonyk body. (Eschin., de fals. leg., p. 122.—Paus., 10, 8. — Harpocrat., s. v. Ἀρμακτιόν.) The Magnesians submitted to Xerxes, giving earth and water in token of submission. (Herod., 7, 123.) Thucydides leads us to suppose they were in his time dependent on the Thessalians (2, 10). They passed with the rest of that nation under the dominion of the kings of Macedon who succeeded Alexander, and were afterward taken from the Romans and the Ancients by the Cynoscophes. (Polyb., 18, 29, 5. — Livy, 33, 32.) Their government was then republican, affairs being directed by a general council, and a chief magistrate called Magnetarch. (Livy, 34, 31.—Strab., 9, 442. — Xen., Anab., 6, 1. — Cramer's Anc. Greece, vol. 1, p. 419, seqq.)—IV. A city of Magnesia, on the coast, opposite the island of Scithia. It was conquered by Philip, son of Amyntas. (Cramer's Anc. Greece, 59.)

Mago, I, a Carthaginian admiral, who gained a naval victory over Leptines, the commander of Dionysius the elder, off Catana, in which the latter lost 100 vessels, and more than 20,000 men. (Diod. Sic., 14, 90.) Some years after this we find him at the head of a land force, endeavouring to make head against Dionysius in person; but, being defeated, he was compelled to take shelter in the neighbouring town of Abacenum. (Diod. Sic., 14, 90.) Being subsequently placed at the head of another expedition into Sicily, he met with equal ill success. (Diod. Sic., 14, 95.) He fell at last in battle against Dionysius, B.C. 383. (Diod. Sic., 15, 15.)—II. Son of the preceding, succeeded him in the command of the Carthaginian fleet B.C. 383. He defeated Dionysius in a great battle, in which the latter lost more than 14,000 men, and compelled him to sue for peace and pay 1000 talents to the Carthaginians. A considerable time after this, he came, at the head of 150 vessels, with 60,000 men, to take possession of Syracuse, which was, according to agreement, delivered up to him by Ictes, excepting the citadel, which was held by the forces of Dionysius, defeated and slain, however, accursed to Carthage; for Mago, suspecting treachery on the part of his new ally, and having long wished for a pretence to depart, weighed anchor on a sudden and sailed back to Africa, "shamefully and unaccountably," says Plutarch, "suffering Sicily to slip out of his hands." (Plut., Vit. Timol.)—III. Grandfather of the great Hannibal. He succeeded Mago in the command of the Carthaginian fleet, and most probably inspired it with the discipline which he introduced. The Carthaginian senate, fearing lest Pyrrhus might quit Italy in order to seize upon Sicily, sent Mago, at the head of 120 vessels, to offer aid to the Romans, in order that the King of Epirus might find sufficient employment for his arms in Italy. The offer, however, was declined. Mago was succeeded by his two sons Hasdrubal and Hamilcar. (Justin, 18, 2, seqq.—Id., 11, 1.)—IV. Son of Hamilcar and brother of Hannibal. He commanded an ambuscade at the battle of Trebia (Livy, 21, 54), and was also present at the battle of Cannae, B.C. 216. Having been sent to Carthage to carry the news of the latter victory, he is said to have poured out in the vestibule of the senate-house the golden rings obtained from the fingers of the Roman knights who had fallen in the battle. These, when measured, filled, according to the common account, three medit and a half; though Livy, with true national feeling, states that there was another and more correct tradition, which made the rings to have filled not much more than a single modulus. (Livy, 23, 12.) The modius contained a little over one gallon, three quarts dry measure.

Mago was subsequently sent into Spain, where he was defeated by the Scipios at Ilturigus (Livy, 23, 49), but he afterward joined his forces with those of Andru- bal at Buggia. He then crossed with the Andalusians to Sicily. At a later period, he was himself again de- feated along with Hanno, Andruibal's successor, by Sil- anus, the lieutenant of Scipio. (Livy, 28, 2.) On flying to Gades, he was ordered by the Carthaginian senate to cross over with a fleet to Sicily, and carry succours to Hannibal. He conceived thereupon the bold design of seizing upon Carthago Nova as he sailed along. Failing, however, in this, he was obliged to stop at a point called Pentius, to pay the Levies. Here he made himself master of the smaller island of the two (the modern Minorca), and fortified and gave his name to the harbour. (Vid. Magnis Portus.) The following summer Mago landed on the coast of Liguria, with 12,000 foot and 200 horse, took Genua by surprise, and made himself master also of the harbour and town of Savo, and was soon at the head of a numerous army, by the joint aid of a powerful body of Ligurians with his forces. Held, however, in check by the consul Cethegus, who prevented him from uniting with Hannibal, he turned his arms to a different direction, and penetrated into Insubria, but he was severely wounded in battle with the Romans. He reached, however, Liguria by an able retreat, and there met an order from the senate at home, requiring him to return immediately to Carthage, then menaced

5 G
by Scipio. He embarked his troops and set sail, but died of his wound at the island of Sardinia, B.C. 203. (*Livy, xli, 20.* Note: compare varies from other writers as to the manner of his death, and says that he either perished by shipwreck or was murdered by his servants. (*Nep., Vit. Hannub, c. 8.*)) V. A Carthaginian who worked on agriculture in the Punic tongue, which was translated into Latin by order of the Roman senate. It was in twenty-eight books according to Varro. The latter informs us also, that it was translated into Greek by Cassius Dionysius of Utica, who made twenty books of it; and that it was still farther condensed by Diophanes of Byzantium, who brought it down to six books. (*Varro, De R. R., 1, 1.* )

Magon, a river of India falling into the Ganges. According to Mannert, the modern name is the Kampgong. (*Geogr., vol. 5, pt. 1, p. 92.* )

Mahabharat, a Carthaginian officer in the army of Hannibal, appointed to carry on the siege of Saguntum when Hannibal marched against the Cretani and Corpetani. (*Livy, 31, 12.* ) After the battle of the Lake Trasimenes in Italy, he was sent in pursuit of the flying Romans. (*Livy, 22, 6.* ) At the battle of Cannae he commanded the cavalry, and strenuously advised Hannibal, after the latter had gained his decisive victory, to march at once upon Rome. (*Livy, 22, 51. Id., 23, 18.* )

Maia, daughter of Atlas and Pleione, and the mother of Mercury by Jupiter. She was one of the Pleiades; and the brightest of the number, according to some authorities: others, however, more correctly make Halcyone the most luminous. (*Vid. Pleiades, and consult Ideler, Sternnamen, p. 146.* )

Majorianus, Julius Valerius, grandson of the Majorianus who was master of the horse in Illyria during the reign of Theodosius. He distinguished himself early as a brave commander under Aetius, and at the death of the latter he rose to such distinction that he was elected Emperor of the West in the room of Aetius, whom he compelled to resign the imperial dignity in 457. He was assassinated by Ricimer, one of his generals, after a reign of four years and a half, at Dertona in Liguria. (*Picer, Lex. Univ., vol. 13, p. 98.* )

Mala, I. a promontory in the southeastern part of the island of Lesbos, now Cape St. Marie.—II. A celebrated promontory of the Peloponnese, forming the extreme point to the southeast, and separating the Iaconic from the Argolic Gulf. Strabo reckons 670 stadia from thence to Temaris, including the sinuosities of the bay. It is the point nearest to the ancients the most dangerous point in the circumnavigation of the peninsula, even as early as the days of Homer. (Od., 1, 80; 3, 286.) Hence arose the proverbial expression, "After doubting Cape Mala ex forget your country." (*Strab., 378.—Eustath., ad Od., p. 1408.—Compare Herod., 4, 179.—Thucyd., 4, 53.—Sejy., p. 17.* ) It is now usually called Cape St. Angelo, but sometimes Cape Malo. (*Cramer’s Ancient Geography, 303, p. 196.*)—III. A city of Phthiotis. (*Vid. Mala.* )

Malmvetun, the ancient name of Benvenutum. (*Livy, 9, 27.* )

Malia, the chief city of the Melians, in the district of Phthiotis in Thessaly, from which they probably derived their name. (*Steph. Byz., s. v. Malaitic;* ) It was near the head-water of the Sinus Maliacus, now the Gulf of Zeytoun. It is the ancient name of half of Thessaly, running up in a northwest direction from the northern shore of Euboea, and on one side of which is the Pass of Thermopylae. It is noticed by several writers of antiquity, such as Herodotus (4, 33), Thucydides (3, 96), and Strabo (432). It now takes its name from the neighbouring city of Zeytoun. It should be observed that Livy, who often terms it the Maliacus Sinus (27, 30; 31, 40), elsewhere uses the appellation of Thaenanium Sinus (38, 5), which he has borrowed from Polybius (10, 42.—Steph. Byz., s. v. Aivia.—Cramer’s Anc. Greece, 326)—

Malienses of Malii, the most southern tribe of Thessaly. They are called by the Attic writers Μπαλιής, Melians, but in their own Doric dialect Μαλιης. Scylax, indeed, seems to make a distinction between the Μαλιης and Μαλιετ, which is to be found in no other author. Palmerius (ad *St.,* p. 32) considers the whole passage to be corrupt. The Melians occupied principally the shores of the gulf to which they, sometimes associated their name, extending as far as the narrowest part of the Straits of Thermopylae, and to the valley of the Sperchius, a little above its entrance into the sea. (*Herod., 7, 198.* ) They are admitted by Æschines, Pausanias, and Harpocrates, in their lists of the Amphictyonic states; which was naturally to be expected, as this celebrated assembly had always been held in their country. The Melians offered earth and water to Xerxes in token of submission. (*Herod., 7, 192.* ) According to Herodotus, their country was chiefly flat; in some parts the plains were extensive, in others narrow, being confined on one side by the Malia Gulf, and towards the land by the lofty and inaccessible mountains of Thermaania. (*Cramer’s Anc. Greece, vol. 1, p. 435.* )

Malli, a people in the south-western part of India intra Gangena, along the banks of the Hydotes. (*Strabo, 699.* ) It was in attacking a fortress of the Mali that Alexander was severely wounded. (*Plut., Vit. Alex.* ) The territory of this people would seem to have been in some degree to correspond to the modern province or soobah of Moulian. (*Vincent’s Voyage of Nearchus, p. 130.* )

Mallos, a town of Cilicia Campestris, eastward from the river Pyramus; now a small village called Malo. (*Mela, 1, 13.—Curt., 3, 7.—Iucan, 3, 225.* )

Malthinus, a name occurring in Horace (Str., 1, 2, 27.) It was thought very effeminate among the Romans to appear in public with the tunic carelessly or loosely girded. For this Malchius was blamed; and the question arises, whether Horace means, under the character of Malchus, to portray his patron, or whether the reference is merely one of a general nature. Opinions, of course, are divided on this subject. At first view, it appears hardly probable that the poet would embrace such an opportunity, or adopt such a mode of censoring his friend and benefactor, one to whom he owed so large a share of his own elevation. And yet, when we take into consideration all the circumstances of the case, the respective characters of the bard and his patron, as well as the sincere and manly nature of the intimacy which existed between them, it would seem as if this very way of attacking the foibles of Mæcæus was the result of a genuine friendship, the applying a desperate remedy to a disgraceful failing. But, it will be asked, does not the presence of stultus in the text militate against this idea? We are not disposed to regard stultus in a softened sense. Both regards it here as equivalent merely to "quiunque imprudenter aut inepte agunt," and this explanation derives support from the following line of Afranius (ap. Iul., 10, litt. 5.): "Ego stultum met existimau, fatum esse non opinior." In addition to what is here stated, we may observe, that the very name of Malchius, as indicating an effeminate person, may contain a covert allusion to Mæcæus. The personal habits in this respect were well known to all. The word is derived either from the Greek μαλθής, or from the old Latin term malta, equivalent to mallis, and used, according to Nonius, by Lucilius.

Mamerinna, a name of Messana in Sicily. (*Vid. Mameritini.—Marit., 13, 117.—Strab. 7.* )

Mameritini, a band of Campanian mercenaries, originally employed in Sicily by Agathocles. After having
MAMMERTUM, a town of the Bruttii, northeast of Rhegium. It appears to have originally been founded by a band of Campanian mercenaries, who derived their name from Mamers, the Oscar Mars, and are known to have afterward served under Agathocles and other princes of Sicily. (Vid. Mamertini.) Barrio and other native antiquaries have identified this ancient town with the site of Martovana; but this place, which is situated between Nicastro and Cosenza, seems too distant from Locri and Rhegium to accord with Strabo's description. (Strab., 261.) The majority of modern topographers, with Oliverius at their head, place it at Urdico, an episcopal see, situation above Reggio and Gerace, and where old coins appertaining to the Mamertini are said to have been discovered. (Cramer's Anc. Italy, vol. 2, p. 438.)

MAMELIUS, LEX, de limitibus, ordained that there should be an uncultivated space of five feet broad left between farms, and if any dispute happened about this matter, that a single arbiter should be appointed by the prior to determine it. The law of the twelve tables required three arbiters. This law was proposed by C. Mamertinus, the noblest of the Mamertini, and was decreed in 514 A.U.C. (Consult Ernesti, Index Leg. ad Cic., s. v. Mamilia. --- Goergen, ad Cic., de Leg., 1., 21.)

MAMMURUS VETRUS, an architector in the reign of Numa. When the Ancile or sacred shield fell from heaven, the monarch showed it to all the Roman artists, and ordered them to exert all their skill, and make eleven other shields exactly resembling it. All devoted themselves to the work, however, except Mamumuus, who was so successful in the imitation, and made the other eleven so like unto it, that not even Numa himself could distinguish the copies from the original. (Vid. Ancile and Salii.) Mamurius asked for no other reward but that his name might be mentioned in the hymn of the Salii, as they bore along these sacred shields in procession. (Plut., Vit. Num. --- Ovid, Fast., 3, 261.)

MAMURRA, a native of Formiae, of obscure origin. He served under Julius Caesar in Gaul, as Prefectus fabrorum, and rose so high in favour with him, that Caesar permitted him to enrich himself at the expense of the Gauls in any way he was able. Mamurra, in consequence, became possessed of enormous wealth, and returned to Rome with his ill-gotten riches. Here he displayed so little modesty and reserve in the employment of his fortune, as to have been the first Roman that incrusted his entire house with marble. This structure was set up on the Caelian Hill. We have two epigrams of Catullus against him, in which he is severely handled, and which he allowed himself seriously ridicule in one of his satires (1, 5, 87.) He calls Formiae "Manurrarum urbs," the city of the Latin line being here named after a race of whom nothing was known. (Vid. Formia.)

MANCINUS, C. Hostilius, a Roman consul, who, though at the head of 30,000 men, was defeated and stripped of his camp by only 4000 Numantines. (Liv., Epit., 55.) The remnant of the Roman army was allowed to return, upon making a treaty of peace with the Numantines, but the senate refused to ratify the treaty, and ordered Mancinus to be delivered up to the enemy; but they refused to receive him. Mancinus thereupon returned to Rome, and was reinstated in his rights of a citizen, contrary to the opinion of the tribune P. Rutilus, who asserted that he could not enjoy the right of returning to his country, called by the Romans jus postimini. (Cic., de Oriat. --- Compar. Cic., de Off., 3, 50 --- Flor., 2, 18. --- Id., 3, 14. --- Vell. Patres., 2, 1. --- Duker, ad Flor., l. c.)

MANDANE, a daughter of King Astyages, and mother of Cyrus the elder. (Vid. Astyages.)

Mandela, a village in the country of the Sabines, near Horace's farm. The poet alludes to its cold mountain atmosphere. It is now perhaps Bardela. (Horat., Ep., 1, 18, 105.)

MANDURI, a people of Celtic Gaul, clients of the Aedui, whose chief was also called Mandurius. Their territory answered to what is now the department de la Côte d'or. (Lemaire, Ind. Geog., ad Cas., s. v.)

MANDURIA, a city of Apulia, nearly half way between Brundisium and Tarentum. It still retains its ancient name. This otherwise obscure town has acquired some interest in history from having witnessed the death of Archidamus, king of Sparta, the son of Agesilaus. He had been summoned by the Tarentines to aid them against the Messapians and Lucani, but even his bravery was insufficient to subdue their foes. He fell in the conflict, and his body, as Plutarch relates, remained in possession of the enemy, notwithstanding the large offers made by the Tarentines to recover it. This is said to have been the only instance in which a Spartan king was debarred the rites of burial. (Plut., Vit. Agid. --- Athen., 12, 9. --- Strabo, 280.) Manduria was taken by the Romans in the second Punic war. (Liv., 27, 15.) A modern village of the same name still occupies the site as existing over this town. According to his account, its water always maintained the same level, whatever quantity was added to or taken from it. (Plin., 2, 103.) This phenomenon may still be observed at the present day. (Swinburne's Travels, vol. 1, p. 222.)

MANETHO (Μαβηθω, Μαβηθ, Μαβηθος, Μαβηθος), a celebrated Egyptian writer, a native of Diospolis, who is said to have lived in the time of Ptolemy Philadelphus. He was the author of an immortal work of great learning and wisdom. (Elian, de An., 10, 16.) He belonged to the priest-caste, and was himself a priest, and interpreter or recorder of religious usages, and of the sacred, and probably, also, historical writings, with the title of lepoypayareaig. It appears probable, however, that there were more than one individual of this name; and it is therefore doubtful whether all the works which were attributed by ancient authors, were in reality written by the Manetho who lived in the reign of Ptolemy Philadelphus. Manetho wrote a history of Egypt (Αγιντρι-και) in three books, in which he gave an account of this country from the earliest times to the death of Darius Codomanus, the last king of Persia. There is every reason for supposing that this was written by the Manetho who lived under Philadelphia. Considerable fragments are preserved in the treatise of Joso-
plus against Apeion; but still greater portions in the "Chronicles" of George Syncellus, a monk of the ninth century. The "Chronicles" of Manetho survive, and are a principal source of "Egyptian" history; they were compiled from the "Chronicles" of Julius Africanus and from Eusebius, both of whom made great use of Manetho's "History." The work of Africanus is lost; and we only possess a Latin version of that of Eusebius, which was translated out of the Armenian version of the Greek text preserved at Constantinople. Manetho indicates as his principal sources of information certain ancient Egyptian chronicles, and also, if Syncellus has rightly comprehended his meaning, the inscriptions which Thoth, or the first Hermes, had traced, according to him, in the sacred language, on columns. We say, if Syncellus has rightly comprehended him, because it appears that the passage, in which Manetho speaks of the columns of Egypt, has not been taken from his history of Egypt, but from another work of a mystic character, entitled Sothis. The inscriptions just referred to, as having been written in the sacred dialect, Agathodemon, son of the second Hermes, and father of Taut, had translated into the vulgar dialect, and placed among the writings deposited in the sanctuary of a temple. Manetho gives the list of thirty dynasties or successions of kings who reigned in the same city; for thus are we to understand the word dynasty, which, in Manetho, is not synonymous with reigning family. Hence some of his dynasties are composed of several families. The thirty-one lists of Manetho contain the names of 119 kings, who, according to them, reigned in Egypt during the space of 4465 years. As we cannot reconcile this long duration of the Egyptian monarchy with the chronology of the Scriptures, some writers have hence taken occasion to throw discredit on Manetho, and have placed him in the class of fabulous historians. (Compare, in particular, Petavi., Doctr. Temp., lib. 9, c. 15.) A circumstance, however, which would seem to claim for this historian some degree of confidence is, that the succession of kings given by Manetho corresponds with the Mosaic genealogy as given in the Bible; and that many of the names given by him are such as are found also in the Egyptian chronicles. Manetho himself states that he was merely giving a summary of the Egyptian history, and that he wished to give an equitable account of it. To give an account of the history of Egypt, as it is given in the works of Herodotus, Diodorus, and others, would involve us in difficulties, and, as Tylor has observed, might possibly be called "fiction." But the facts of history, as related by Manetho, have to be reconciled with the pretensions of the more ancient priests of Egypt, who enumerated to Herodotus a list of monarchs which would make the duration of the kingdom of Egypt exceed 30,000 years! We know also, from Josephus, that Manetho corrected many things in Herodotus which betrayed a want of exactness. Larcher accuses Manetho of having been a mere flatterer of the Ptolemies. (Hist. d'Herod., vol. 7, p. 332.) But the latter part of Manetho's work (Memorabilia, or Description of Egypt, vol. 1, p. 301.) Other and more equitable critics, such as Calvisius, Uscher, and Capellus, have endeavoured to reconcile the chronology of Manetho with that of the Scriptures, by rejecting as fabulous merely the first fourteen, or sixteen dynasties. Marsham, however, was the first to approach this end, and that, too, without re-trenching any part of Manetho's catalogue. (Chron. El., Mem., Book 2, part 2, 1672, fol.) He has made it appear, that the first sev- enteen dynasties of Manetho might have reigned simultaneoulsy in different parts of Egypt, and that thus the interval of time between Mnes (whom Marsham believes to have been Ham, the son of Noah), and the end of the reign of Amanis, is only 1819 years. Two great men of the 17th century, Newton and Bessuet, have approved the general result of Marsham's work, and I certainly seem to faulty, in placing, contra- ry to all probability, the commencement of the Egyptian monarchy immediately after the deluge, and in limiting to 1400 years the period that elapsed between Menes and Sesostri. To remove these inconveniences, Perron, giving the preference to the chronology of the Septuagint, modified the system of Manetho, by reckoning 2619 years from Menes to Nectanebus, the last king of the 30th dynasty of Manetho. He places Menes 648 years after the deluge, at the epoch of Debo. Whichever of these systems may be the true one, it would seem that even though the chronology of Manetho is erroneous, it is not for that reason to refuse him all confidence as an historian. As Cambyses had destroyed, or transported into Persia, the ancient documents of Egyptian history, it is more than probable that the priests of Egypt replaced them by new chronicles, in which they must necessarily have committed, without in- tending it, some very great errors. It is from these erroneous sources that Manetho would appear to have drawn, in good faith, his means of information. It is no easy matter, however, after all, to ascertain the real value of Manetho's "History," in the form in which it has come down to us. The reader may judge of the use that has been made of it for Egyp- tian chronology, by referring to Rask's Alte Egyptische Zeitrechnung (Altona, 1830); to the works of Champollion, Wilkinson's Topography of Thebes, and the other authorities which will be indicated by a refer- ence to these works. (Encycl. Us. Knol., vol. 14, p. 379.)—Besides this work, Manetho wrote some other works, which are lost. These were, 1. Περὶ Βίβλου ("Sacred Book"), treating of Egyptian theology. — 2. Βίβλος τῆς Σωτῆς ("Book of Sothis"), an astronomical, or, rather, astrological work, addressed to Ptolemy Philadelphia. — 3. Φυσικὸς ἐπιτροπή ("Epitome of Physics")—4. A poem, in six cantos, which has come down to us under the title of Ἀποτελεσματικά, and treats of the influence of the stars. It is evidently the production of a much later age, as Heinsius has clearly thought, and as Tychriff has demonstrated. (Com- pare Heyne, Opusc. Acad., vol. 1, p. 95.) Among the works published by the credulous Nanni, of Vit- terbo, there is a Latin one ascribed to Manetho, and entitled "De Regibus Aegypti."—The fragments of Manetho have been collected by Joseph Scaliger, and published in his treatise "De Emendatione Tempore- rum." (Schött, Hist. Lit., vol. 3, p. 215, seqq.) The "History of Manetho" has been also published by Eutrope of Lugd. Bat., 1608, 4to. There is a later edition, by Axtius and Rigler, Colon., 1832, 8vo. In Ruperti's and Schlichthorst's "Neues Magazin für Schullehre," Göttigen, 1793 (vol. 2, pt. 1, p. 96, seqq.), there is a dissertation of Ziegler's on the "Αποτελεσματικά," in which he undertakes to show that this poem was written after the time of Augustus. (Hoffmann, Lex. Bibliogr., vol. 3, p. 76.) In Manilius the tribune, A.U.C., 687, for conferring on Pompey the charge of the war against Mithradates. Its passage was supposed to Cicero, who was then prior, and also by Julius Cæ- sar, but from different views. (Vid. Pompeius.)—II. Another, by the same, that freedmen might vote in all the tribes, whereas formerly they voted in some one of the four city tribes only. This law, however, did not pass. (Cic., pro Marcel., 29.—Ernesti, Ind. Lex., A.D.) MANILUS, I. Marcus or Caius, a Latin poet, known only by his poem entitled Astronomica, in five books. The manuscripts do not agree about the name of this poet; some of them calling him Manilius, others Mal- lius. Bentley believed him to have been born in Asia. Two reasons led him to entertain this opinion; the strange construction which appears in some of the verses of the poem, and the fact that the great period when this poet appeared, the Roman wars paid any great attention to the phenomena of the heavens and the lessons of astronomy. It is true, the fourth book of the poem contains two verses (the 41st and 767th) in which Manilius speaks of Rome as his city; but these two lines are boldly declared by the great Eng- lish critic to be interpolated. He endeavours to make it appear that the author of the Astronomica is neither the astrologer Manilius of whom Pliny speaks (38, 17), nor the mathematician of the same name, of whom, on
another occasion, he makes mention (36, 10). Bentley believes that the poet is to be placed in the age of Augustus, and he has no other ground for this belief than the observation which he has made, that Manilius never uses the genitive termination in (auxilli, ingeni, imperi, &c.), but the contracted form in (auxilli, ingeni), which marks a writer of the Augustan age. Properium among the poets first used the form in in.—The poem of Manilius is unfinished. The five books which are extant treat principally of the fixed stars; but the poet promises, in his work, to give an account of the planets. The language is in many instances marked by great purity, many poetical beauties appear, and the whole book contains no impermissible consideration of talent in managing a subject of so dry and forbidding a nature. It appears from many parts of the work that Manilius was a staunch adherent of the Stoic philosophy. The best editions are, that of Bentley, Lond., 1783, 4to, and that of Stoebel, Argent., 1787, 8vo. (Schöll, Lit. Rom., vol. 1, p. 276.)—II. An epigrammatic poet, one of whose epigrams is cited by Varro. (Anth. Lat., vol. 1, p. 673.)—III. Manius, a Roman consul, A.U.C. 605. He left a work on the Civil Law, and another entitled Manilii Monumenta. (Schöll, Lit. Rom., vol. 1, p. 182.) MANILIO, the name of one of the most illustrious patrician gentes of Rome. Those most worthy of note are: I. Manlius Valerianus, who was consul B.C. 390 (Liv., 5, 31), and was the means of preserving the Capitol when it was nearly taken by the Gauls (Liv., 5, 47), from which exploit he received the surname of Capitolinus. He afterward became a warm supporter of the popular party against his own order, and particularly distinguished himself by the liberality with which he assisted those who were in debt. He publicly sold one of his most valuable houses; and as declared, that, as long as he had a single pound, he would not allow any Roman to be carried into bondage for debt. In consequence of his opposition to the patrician order, he was accused of aiming at kingly power. The circumstances attending his trial and death are involved in much obscurity. It would appear that he was accused before the centuries and acquitted; and that afterward, seeing that the patrician order were at the point of being seized upon the Capitol and prepared to defend it by arms. In consequence of this, Camillus, his personal enemy, was appointed dictator, and the curse (i.e., the patrician assembly) condemned him to death. According to Livy, who implies that Manlius did not take up arms, he was thrown down by the Tarpeian rock by the tribunes; but Niebuhr supposes, from a fragment of Dio Cassius (lib. 31), compared with the narrative of Zonaras (7, 24), that he was treacherously pushed down from the rock by a slave, who had been hired for that purpose by the patrician party. (Rom. Hist., vol. 2, p. 610, seq., Eng. transl.) The house which Manlius had occupied was razed to the ground; and the Manlian gens resolved that none of its patrician members should again bear the name of Marcus. Manlius was put to death B.C. 391. II. Titus Manlius Capitolinus Torquatus, was son of I. Manlius surnamed Imperious, who was dictator B.C. 361. When his father Lucius was accused by the tribune Pompionius, on account of his cruelty towards the soldiers under his command, and also for keeping his son Titus among his slaves in the country, Titus is said to have obtained admittance to the house of Pompionius shortly before the trial, and to have compelled him, under fear of death, to swear that he would drop the prosecution against his father. This instance of filial affection is said to have operated so strongly in his favour, that he was appointed in the same year, B.C. 359, one of the military tribunes. (Liv., 7, 4, seq.—Cic., de Off., 3, 31.) In the following year Manlius distinguished himself by slaying, in single combat, a Gaul of gigantic size, on the banks of the Anio. In consequence of his brave action, he received the surname of Torquatus. (Liv., 7, 10.) Manlius filled the office of dictator twice, and in both instances before he had been elected consul: once in order to conduct the war against the Carities, B.C. 351; and the second time in order to preside at the comitia for the election of consuls, B.C. 346. (Liv., 7, 19, seq.) At Rome as at Athens, he at least three times (Cic., de Off., 3, 31.) In his third consulsip he defeated the Latins, who had formed a powerful confederacy against the Romans. In this same campaign he put his own son to death for having engaged in single combat with one of the enemy contrary to his orders. (Liv., 8, 5, seq.)—III. Titus Manlius Torquatus, was consul B.C. 235, and obtained a triumph on account of his conquests in Sardinia. (Vell. Pa., 8, 52.) He was accused of dictating to those who were present at the battle of Cannae. (Liv., 22, 60.) In B.C. 215 he defeated the Carthaginians in Sardinia (Liv., 23, 34, seqq.), and in 212 was an unsuccessful candidate for the office of Pontifex Maximus. (Liv., 25, 5.) In 211 he was again elected consul, but declined the honour on account of the weakness of his body. (Liv., 22, 60.) In the following year, he was appointed dictator in order to hold the comitia. (Liv., 27, 33.) The temple of Janus was closed during the first consulsip of Manlius. (Liv., 1, 19.—Vell. Pat., 2, 38.)—IV. Cneius Manlius Vulso, was consul B.C. 189, and appointed to the command of the war against the Gauls in Gallia, whom he entirely subdued. An account of this war is given by Livy (38, 12, seqq.) and Polybius (25, 16, seqq.). After remaining in Asia for two years, he was sent to Thrace, where he was attacked by the inhabitants in a narrow defile, and plundered of part of his booty. He obtained a triumph B.C. 186, though not without some difficulty. (Liv., 39, 6.—Encycl. Us. Knoll., vol. 14, p. 385, seq.) MANNUS, the son of the German god Tiuistun, of whom that nation believed themselves descendants. (Tacit., Gr. 7.) Mannus is supposed to be the stem name of the Germans (Tuistiones, Teutones, Deutschen), and from him comes forth the Mann of the race, i.e., the Teutonic race itself. (Compare Mannert, Geschichte der alten Deutschen, p. 2.) MANTINEA, one of the most ancient and celebrated cities of Arcadia, said to have been founded by Man- tineus, son of Lycoan. It was situated near the centre of the eastern frontier, at the foot of Mount Artemisius, on the banks of the river Ophius (Pausan., 8, 8), and was at first composed of four or five hamlets; but these were afterward collected into one city (Xen., Hist. Gr., 5, 2, 6, seqq.—Strab., 337), which became the largest and most populous in Arcadia previous to the founding of Megalopolis. (Polyb., 2, 56.) The Mantineans had early acquired celebrity for the wisdom of their political institutions (Polyb., 6, 43, 1), and when the Cynuraeans were distracted by faction, they were advised by an oracle to apply to that people for an arbiter to settle their differences. Their request was granted, and accordingly Demonax, one of the principal citizens of Mantinea, was sent to remodel their government. (Herod., 4, 161.) The Mantineans fought at Thermopylae, but arrived too late to share in the victory of Platea, a circumstance which, according to Herodotus (9, 77), produced some Newt, that upon their return home they banished their command- ers. In the Peloponnesian war they espoused the Lacedaemonian cause; but having taken offence at the conclusion of the treaty between that people and the Athenians after the battle of Amphipolis, they were in-
duced to form an alliance with Argos and Elis, with which confederates they finally made war against Spart-
(Thucyd., 5, 29, seqq.) In the battle which was fought on their territory, they obtained at first a decided advantage against the Lacedaemonian troops op-
posed to them; but the left wing of the allied army having been routed, they were in their turn vigorously attacked, and forced to give way with heavy loss. (Thucyd., 5, 66.) This ill success led to the dissolu-
tion of the confederacy, and induced the Mantinians, now pacific in feeling, to agree with their former Spar-
ta (Thucyd., 5, 78), to which they adhered until the peace of Antalcidas. At this period the Lacedemo-
ñians, bent on strengthening their power in the penin-
sula to the utmost, peremptorily ordered the Mantinians to pull down their walls, or to prepare for war, as the thirty years' truce agreed upon between the two states had now expired. On their refusal to comply with this unjust and arbitrary demand, a Spartan army entered the Mantinian territory, and laid siege to the city. The inhabitants defended themselves with vigour, and might have held out successfully, had not Agesipolis caused the waters of the river Ophis to be diverted from their channel, and directed against the walls of the town, which, being of brick, were easily demolish-
ed. By this Mantinea fell into the hands of the Spar-
tans, who destroyed the fortifications, and compelled the inhabitants to change their constitution from a de-
mocracy to an oligarchy, and to separate, as formerly, into two cities, namely, Mantinea and Mantinea—Hist.
San., 8, 8.—Polyb, 4, 27.) After the battle of Leuc-
tra, however, the Mantinians, under the protection of the Thebes, again united their population and refortified their city, notwithstanding the opposition of the Lacedaemonians. (Xen., Hist. Gr., 5, 5.) Mantinea ac-
quired additional celebrity from the great but undecis-
ive battle fought in its plains between the Boeotians and Spartans, in which Epaminondas terminated his glorious career (B.C. 362); and it continued to be one of the leading cities of Arcadia till it joined the Achaean league, when it fell for a short time into the hands of the Ætolians and Cleomenes, but was recovered by Aratus four years before the battle of Sellasia. (Po-
lybius, 4, 8, 4.) The Mantinians having, however, again joined the enemies of the Achaeans, they treach-
erously put the garrison of the latter to the sword. (Polyb., 2, 58, 4.) This perfidious conduct drew down upon them the displeasure of Agesion Erton who, to save the Achaeans, who making themselves masters of the city, gave it up to plunder, and sold all the free population as slaves; a chastisement which Polybius called as scarcely equal to their offence, though its cruelty was not less of itself. The city was built upon the site of the ancient city, which Virgil tells us was of Tuscan origin, and derived its name from the prophetic Manto, the daughter of Ti-
resias. (En., 10, 199, seqq.—Compare the remarks of Müller on this passage, Etrusker, vol. 1, p. 138, in not.) Whatever of poetical invention there may have been in the origin thus ascribed to Mantus, there can be no doubt of its having been a town of considerable note among the Eturians, when they were in posses-
sion of this part of Italy where it was, and the position of the ancient city was not different from that of the modern Mantua at present occupied. That it was not a place of any great size in Virgil's time may be collected from what the poet himself says of it. (Eclog., 1, 20.) Strabo (213) classifies it with Brixia, Bergomum, and Comum, but Martial attaches to it the epithet of "paraed."
(Geogr., 2, 198.—Ecl., 9, 27; 1, 47.) We are informed by the grammarians Dona-
tus, in his Life of Virgil, that this great poet was born at Andes, a village near Mantua. (Cramer's Anc. Italy, vol. 1, p. 67, seqq.)

MANTINÆUM OPÆDUM, a town of Corcisca, placed by Ptolemy directly east of the mouth of the river Vol-
ex, which was a bay which now answers to that of S. Firenze. Hence the modern Bastia will corre-

MAR

MANTO, a daughter of the prophet Tiresias, endowed with the gift of prophecy. She was made prisoner by the Argives when the city of Thebes fell into their hands; and as she was the worthiest part of the booty, the conquerors sent her to Apollo, the god of Delphi, as the most valuable present they could make. Manto,

MAN, and other called Daphne, remained for some time at Delphi, where she gave up her life, in obedience to the oracle, she came to Claros in Ionia, where she established an oracle of Apollo. Here she married Rhakius, the sovereign of the country, by whom she had a son called Mopsus. Manto afterward visited Italy, where she married Tiberinus, the king of Alba, or, as the poets mention, the god of the river Tiber. From this marriage sprang Ænus, who built a town in the neighbourhood, which, in honour of his mother, he called Mantua. (Schol. ad Apoll. Rhed., 1, 308.—Pausan., 7. 3.—Ps.-Jucyphi., ad Lycoph., 880. —Virg., En. 10, 199, seqq.—Heyne, Excurs. 1, ad En., 10.—Muller, Etrusken, vol. 1, p. 138.) The Italian legend says that Mantua owes its origin to Mantua's similarity to name. (Kinghtley, Mythol., p. 345, in not.)

MANTUA, a city of Gallia Cisalpina, situate on an island in the Mincius, southeast of Brixia, and south of the lake Benacus. It is stated to date its foundation long before the time of Romulus, and Virgil tells us it was of Tuscan origin, and derived its name from the prophetess Manto, the daughter of Ti-
resias. (En., 10, 199, seqq.—Compare the remarks of Müller on this passage, Etrusker, vol. 1, p. 138, in not.) What ever of poetical invention there may have been in the origin thus ascribed to Mantua, there can be no doubt of its having been a town of considerable note among the Eturians, when they were in posses-
sion of this part of Italy where it was, and the position of the ancient city was not different from that of the modern Mantua at present occupied. That it was not a place of any great size in Virgil's time may be collected from what the poet himself says of it. (Eclog., 1, 20.) Strabo (213) classifies it with Brixia, Bergomum, and Comum, but Martial attaches to it the epithet of "paraed."
(Geogr., 2, 198.—Ecl., 9, 27; 1, 47.) We are informed by the grammarians Dona-
tus, in his Life of Virgil, that this great poet was born at Andes, a village near Mantua. (Cramer's Anc. Italy, vol. 1, p. 67, seqq.)

MARATHON, a town of Attica, northeast of Athens, and not far from the coast. It was said to have been named from the hero Marathon (Pliut., Vit. Theas.

Suid. z. v. Mapaéóu), and was already a place of note in the days of Homer. (Od., 7, 81.) From the scho-
li of Sophocles (Ed. Col., 1047), who quotes Phi-
l locus in the Tetrapt, we learn that it possessed a temple consecrated to the Pythian Apollo. Demos-
ter's Hesych. shows that this temple of Apollo was kept on this coast, and that on one occasion it was captured by Philip. (Phil., 1, p. 49.) Eurystheus was said to have been defeated here by Iolas and the Heraclids (Strab., 377), and Theseus to have here destroyed a bull by which the country was infested. (Pliut., Vit. Theas.

Strab., 399.) Marathon, however, is most famous for the victory obtained by the Greeks over the Per-

790
while the Athenians, who had eleven generals including
the polemarch, were for the day under the orders
of Miltiades. According to Cornelius Nepos (Vit.
Military), the Persians were a hundred thousand effective
foot and ten thousand horse; yet Plato, meaning
probably to include the seamen and the various
multitude of attendants upon Asiatic troops, calls the
whole armament five hundred thousand; and Trogus
Pompaeus, according to his epitomizer Justin (2, 9),
did not scruple to add a hundred thousand more.
These writers, however, did not perceive that, by encumbering
the Persians with such useless and unmanageable crowds, they were not heightening, but diminishing, the glory of the conquerors. The Athe-

nians numbered six-and-forty different nations in the barbarian host; and the Ethiopian arrows, remains of
which are still found at Marathon, seem to attest the
fact that Darius drew troops from the remotest provin-
ces of the empire. Yet our calculations must be kept
down by the remark, that the whole invading army
was transported over the sea, according to Herodotus,
in 600 ships. This, on the footing which he fixes else-
where, of 200 men to each trireme, would give 120,000:
and we ought probably to consider this as the utmost
limit to which the numbers of the invaders can reason-
able be carried. Those of the Athenians, including the
Plataeans, are uniformly rated at about 10,000. It is
probable that the number of the troops sent under
the ground this tradition: it probably falls short of the
truth, and certainly does not take the slaves into ac-
count, who served most likely as light-armed troops.
When all these allowances are made, the numerical
iniquity will be reduced to a proportion of five to one.
—It is remarkable, that, though Herodotus represents
the Persians as induced to land at Marathon with a
view to the operations of their cavalry, he does not say
that they had the cavalry at the battle, or of any cause that prevented them. It seems not to have come into action; but perhaps he could not learn by
what means it was kept motionless. Yet there was
a tradition on the subject, probably of some antiquity,
which appears to have assumed various forms, one of
which was adopted by Nepos, who relates, that Milti-
ades protected his flanks from the enemy's cavalry by
an habitus: a fact which it may be thought Herodotus
could scarcely have passed over. It is known to us,
that it had been known to him, but which might have been the foundation of a very obscure account of the matter,
which is given by another author. In the explanation
of the proverb, χαρίς ἵππες (Suidas.—Cent., 14, 73,
Schott), we read, that when Datis invaded Attica, the
Ionians got upon the trees (!), and made signals to the
Athenians that the cavalry had gone away (ὁ εἶναι
χαρίς ὑπ' ἵππες), and that Miltiades, on learning its re-
treat, joined battle and gained the victory; which was
the origin of the proverb, κεῖν τόν τῷ τῶν ἅλωσιν
τῶν. (Thringvall's Greece, vol. 2, p. 241, seq)—The
Persian commanders, doubling the promontory of Su-
nium, coasted along the southern shore of Attica, not
without hope of carrying that city by a sudden assault.
But Miltiades made a rapid march with a large part of
his forces; and when the Persians arrived off the port of
Phalerus, they saw an Athenian army encamped on the
hill of Cynosarges which overlooks it. They cast anchor, but, without attempting anything, weighed
again and steered for Asia.—Marathon, which still
preserves its ancient name, is situated, according to
modern traveller, "at the northwestern extremity of a
valley, which opens towards the southeast into the
plain in which the battle was fought. This ex-
tends along the coast from the northwest to the south-
west. At the extremity and near the sea is seen the
conspicuous tomb raised over the bodies of the Athe-
nians who fell in the battle; and close to the coast
upon the right is a marsh, wherein the remains of
hundreds of bodies has accumulated. The modern
architect, "the northwestern extremity of a valley, which
—Marathon is an uninterrupted plain about two miles and a half in width, and bounded by
rocky, difficult heights, which enclose it at either
extremity. About the centre of the bay a small stream, which flows from the upper part of the valley of Mar-
athon, and has a head of small cascades, discharges
in the sea. A narrow rocky point, projecting from the
shore, forms the northeast part of the bay, close to
which is a salt stream connected with a shallow lake,
and a great extent of marsh land. The village of
Marathon is rather more than three miles from the sea.
Towards the middle of the plain may be seen a large
tumulus of earth, twenty-five feet in height, resembling
those on the plain of Troy." (Cramer's Anc. Greece,
vol. 2, p. 71.)

Marcella, I. daughter of Claudius Marcellus by
his wife Octavia, and sister to Marcus Marcellus.
She was first married to Apuleius, and afterward to
Valerius Messala. (Sueton., Vit. Aug., 53.)—II.
The younger, daughter of Claudius Marcellus by his
wife Octavia, and sister of the preceding. She was
first married to M. Vipsanius Agrippa, and afterward
to M. Julius Antonius. (Sueton., Vit. Aug., 65.)

Marcellus, last Latin writer that merits the title of an
historian. He was born at Ant-
tioch, and lived under Julian and his successors
down to the reign of Valentinian II. A large part
of his life was spent in military service in the Roman
armies. He performed campaigns in Gaul, Germany,
and Mesopotamia, and accompanied Julian on his ex-
pedition against the Persians. The modesty of
Ammianus, which gives us but little information relative
to himself, prevents us from determining what rank he
held in the army, or what employment he pursued after quitting the profession of arms. It appears that
he was invested with the dignity of Comes rei pri-

vate: we find, in fact, in the Theodosian Code (l. xii.,
de appellat), a rescript of the emperors Gratian, Va-

tenian, and Theodosius, addressed to a certain Ammianus,
who is decorated with this title. He died at Rome subsequent to A. D. 348. It is probably in this
city that, at the age of fifty years, he composed his his-
tory of the Roman emperors, which he entitled " Re-
rum gestarum libri xxxi." It commenced with the
accession of Neva., A.D. 96, and consequently at the
period where the history of Tacitus terminated. It is
not known whether Ammianus pretended to write a
continuation of that history, or if any other motive
induced him to select the time at which he began to
work upon a new history. It is very probable that
he had no intention whatever of continuing Tacitus,
as he not only does not mention him, although he cites
Sallust and other Roman writers, but also as his work
shows no imitation whatever of the peculiar manner
of Tacitus. The history of Ammianus proceeds as far as 378 A.D. It embraced, consequently, a period of 282 years; but the first thirteen books, which contained a sketch of the history of 256 years (from 96 to 352), are lost, and we have only the last eighteen.

These eighteen, however, form the most important part of the work, and the work itself. In part, at least, we may assume that he merely arranged materials from writers who had gone before him; although it must be acknowledged, that even this part would have been interesting for us, as many of the works from which he selected are now lost. In the eighteen books, however, that remain to us, and which it is more than probable the copyist transcribed separately from the rest, Ammianus relates the events which occurred during this period. As a pagan, he was not upon the best terms with his amiable materials; but he relates them in the first person; when he details what did not pass under his immediate inspection, he is careful to obtain the requisite information from those who are acquainted with the subject, and who took part in the matter that is related: he does not pretend, however, to give a complete history of his time, and he passes in silence over events respecting which he has neither accurate information nor positive documents. But Ammianus is a master in the art of telling a story than what we would call at the present day memoirs of his time. Ammianus Marcellinus was a well-informed man, and possessed of great good sense and excellent judgment. No writer was ever more entitled to praise for candour and impartiality. He understood well the art of clearly showing the connexion of events, and of painting in striking colours the characters of these individuals whom he introduces into his narrative. In a word, he was in all probability the most accomplished historian who has left his work cast in a more favourable age. Had he lived in the golden period of Roman literature, the study of good models and the society of enlightened men would have perfected his historic talent, and have formed his style in a purer mould. The latter would not, as is too often the case in Ammianus, have been destitute of that simplicity which constitutes one of the great beauties of historical narrative, nor overloaded with ornaments and disfigured by turgid and barbarous forms of expression. These faults, however, in the style of Ammianus, find an excuse in the circumstances of his case. He was a stranger, and wrote in a language not his own; neither did the busy life which he had led in camps permit him to cultivate the talent for writing which nature had bestowed upon him. His good qualities are his own; his defects are those of the times; and, in spite of these defects, his style is conspicuous, among all the writers who were contemporary with him for a purity to which they could not attain.—Ammianus Marcellus is the last pagan historian; for, notwithstanding all that some maintain to the contrary, we have no certain proof of his having been a Christian. A public man, enriched with the experience acquired amid the scenes of an active life, he relates the events connected with the new religion introduced by Constantius and Constantine, with sang-froid and impartiality, and perhaps with the indifference of a man who knew how to raise himself to a point of view where he could perceive naught but masses and results. He blames with equal frankness the anti-christian mysticism of Julian, and the religious intolerance of Constantius and his bishops. He speaks with respect both of the doctrines of Christianity and the ceremony of paganism. A temptation to pass over these matters occurs in the sixteenth chapter of the twenty-first book. After having painted the bitterness of character and the cruelties of Constantius, the historian adds: "Christianam religionem absolutam et simplicem anidi superstitione confundens; in qua sorrenda perplexitas, quam compositione grevis, exceivit dieci dia Plurima; qua progrcssa fuisse alii concertatione verborum: ut certius anistitum jumentis publicis ulterior citroque discurrentium, per symodos, quas appellant, dum ritum omnem ad quam tractareconvaratur arbitrium, res seculaaria succedent nervos." On another occasion (22, 11), blaming the conduct of a bishop, he remarks: "Professiones suae oblitus, quae nihil nisi justum suis et laique dedere desideraverat." Then he immediately proceeds: "—The narrative of Ammianus is often interrupted by geographical and physical digressions. The latter show, as might be expected, a very slight acquaintance with principles; but the descriptions of countries which he had himself seen are extremely valuable. He is one of the principal sources that we have for the geography and history of ancient Germany, a country in which he passed a great number of years. In their course, he finds the luxury and courts of the Roman emperors, on the vices which prevailed there, and on the manners in general of the great. Gibbon (c. 26) candidly avows his obligations to this writer; and from the period when he can no longer derive materials from Ammianus; the work of the English historian loses a great portion of its previous interest. (Schöll, Hist. Lit. Rom., vol. 3, p. 164, seqq.—Fuhrman, Handbuch der Gesch. der Röm. Lit., vol. 2, p. 151.) The life of Ammianus Marcellinus is that of Gronovius, Lugd. Bat., 1693, 4to. The edition of Wagner, completed by Erfurdt, Lips., 1808, 3 vols. 8vo, is also valuable.
during the second Punic war, and was accustomed to be called the sword of the Romans, as Fabius was
denominated their shield. We have a life of him by
Pitarch.—II. Marcus Claudius, held the consulship with
Sertorius Sulpicius, B.C. 51. He was remarkable for
his attachment to republican principles, and his
uncompromising hatred of Caesar. He was voted
by the senate to recall that commander from his province in Gaul. After the battle of
Pharsalia, Marcellus went into voluntary exile, and was
not pardoned by Caesar until some considerable
interval had elapsed, and then only at the earnest in-
tercession of the senate. It was on this occasion that
Cicero delivered his speech of thanks to Caesar.
Marcellus, however, did not long survive to enjoy the
pardon bestowed upon him. He was assassinated by an
adherent of his, P. Magius Cilo. He was then on his
return to Italy. The cause that prompted Cilo to the
act is not known. Cicero conjectures that the latter,
oppressed with debts, and apprehending some trouble
on that score in case of his return, had been urging
Marcellus, who was surety for some part of them, to
furnish him with money to pay the whole, and that, on
receiving a denial, he was provoked to the madness of
killing him. The following letter and epistle (Ep. and Att. 13, 10.—
Compare Ep. ad Fam., 4, 12.) According to others,
however, he was prompted to the deed by seeing other
friends more highly favoured by Marcellus than him-
self. (Val. Max., 9, 11.) After stabbing his patron,
Cilo slew himself.—III. Marcus Claudius, commonly
known as the "Young Marcellus," was the son of
Octavia the sister of Augustus, and consequently the
nephew of the latter. Augustus gave him his daugh-
ter Julia in marriage, and intended him for his suc-
cessor; but he died at the early age of 18, universally
regretted on account of the excellence of his private
character. Virgil has immortalized his memory by the
beautiful lines at the close of the sixth book of the
Aeneid, and which are said to have drawn from Octa-
via so munificent a recompense. (Vid. Virgil.)
Livia was suspected, though without reason, it would
seem, of having made away with Marcellus, who was
an obstacle to the advancement of her son Tiberius.
The more ostensible cause of his death was the inju-
dicial application of the cold bath by the physician
Antonius Musa. (Vid. Musa.)

Marciana, a sister of the Emperor Trajan, who,
on account of her public and private virtues and her
amiable disposition, was declared Augusta and empress
by her brother. She died A.D. 113.

Marcella, a city of Moesia Inferior, to the west of Odessus, founded by Trajan, and named in
honour of his sister Marciana. (Ann. Marcell., 27, 4—Jornand., Get., c. 16.) It soon became an
important place in consequence of its lying on the main road from Constantinople to the Ister, and of its being
the place where preparations were made for all the
expeditions against the barbarians in this quarter.
When the Bulgarians formed a kingdom out of what
was once the Roman Moesia, Marcianopolis became the
capital, under the names of Prasibula (Prasibula
Anna Comm., p. 194) or Preslia. It still retains this
name, and also that of Eski Stamboul with the Turks:
the modern Greek inhabitants, however, call it Mar-
ceanopolis. According to the Itin. Ant. (p. 225.—
Compare Thoopylact., 7, 2), Marcianopolis was 18 miles to the west of Odessus. (Mannert, Geogr., vol. 7,
p. 718.)

Marcianus, I. a native of Thrace, born of obscure
parents, towards the end of the fourth century. He
entered the army, and rose gradually by his merit to
his high rank, and was made a senator by Theodosius II. When Theodosius died (A.D. 450), his sister
Pulcheria, then 52 years old, offered her hand to Mar-
cianus, who was near 60, because she thought him
able to bear the crown with dignity, and with
advantage to the state. Marcianus married her, and
was proclaimed emperor. His reign, which lasted
little more than six years, was peaceful, and his ad-
ministration was equitable and firm. He refused to
pay to Attila the tribute to which Theodosius had
submitted. In the year 456, Marcianus acknowledged
his son as emperor, and returned to the West, and in 457; his wife Pulcheria had died before him. He
was succeeded by Leo I. (Encycl. Us. Knovel., vol.
14, p. 412.—) II. Capella. (Vid. Capella.)

Marcmanni, a nation of Germany, in the south-
eastern part of the country. According to some
authorities, their original seats were in Moravia, whence, on
being hard pressed by the Romans, they retired
into what is now Bohemia. (Vell. Patere., 2, 108.
Mannert, Geogr., vol. 3, p. 110.) Other writers, how-
ever, such as Cluver, Adelung, Mascow, &c.,
make them to have lived between the Maine and
Neckar, previous to their departure for Bohemia.
They were subdued by the emperors Trajan and An-
tonius. Their name denotes "border men," i. e.,
392, seqq.)

Marcus, a phenomenon common to many of the
Romans, Augustus, Eumelius, Lepidus, &c.

Mardi, I. a people of Asia, near the northern fron-
tiers of Media, or rather of Matiene, which formed part
of Media. (Strabo, 524.—Taschucke, ad Strab., l.c.,
vol. 4, p. 550.—Quint. Curt., 5, 5.)—II. A tribe of the
Persians, according to Herodotus (1, 125), but,
according to other writers, a distinct race in their
immediate neighbourhood. (Arrian, Hist. Ind., 49.)
They are represented as a plundering race. (Arrian,
I. c.—) III. A nation dwelling to the south of Bactri-
an, and to the north of the chain of Paropamisus.
Pliny (6, 16) says they extended from Caucasus to
Bactrians, in which he evidently followed the histo-
rians of Alexander, who, out of flattery to that prince,
called the Paropamisus by the name of Caucasus.
As regards these three nations, consult the remarks
of Larcher (Hist. d'Herod.—Table Geogr., vol. 8,
p. 317, seqq.)

Mardonius, a general of Xerxes, who, after
the defeat of his master at Thermopylae and Salamis,
was left in Greece with an army of 300,000 chosen men,
to subdue the country, and reduce it under the power
of Persia. His operations were rendered useless by
the courage and vigilance of the Greeks; and in a
battle at Platea, Mardonius was defeated and left
among the slain, B.C. 479. He had been commander
of the armies of Darius in Europe, and it was only by
his advice that Xerxes invaded Greece. He was
son-in-law of Darius. (Vid. Darius I., where some
other particulars are given respecting him.)

Mare Mortuum, an extensive and most interest-
ing piece of water, in Judaea, about 70 miles long and
20 broad. It was anciently called the "Sea of the
Plain" (Deut. 3, 17; 4, 19), from its situation in
the great hollow or plain of the Jordan; the "Salt
Sea" (Deut. 3, 17.—Josh. 15, 9), for the saltiness
of its water; the "Dead Sea" (Ezek. 47, 18.—Joel 2, 20), from its situation relative to
Judaea, and in contradistinction to the West Sea, or
Mediterranean. It is likewise called by Josephus,
and by the Greek and Latin writers generally, Lacus
Asphaltites, from the bitumen (Asphaltos) found in it;
and the "Dead Sea," its more frequent modern ap-
pellation, from the belief that no living creature
exists in its salt and sulphurous waters. It is at
present called the Sea of Almonatnah and Bahar Lohh;
and occupies what may be considered as the southern extremity of the vale of Jordan.
This sea, so important and so often mentioned in
sacred history, still bears the most unequivocal marks of the catastrophe of which it has been the site.
It differs, indeed, so essentially in situation and proper-

5 H
ties from every other piece of water in the known world, that it is a wonder it has not been the subject of more frequent and extensive observation. Its depth seems to be altogether unknown; and it is only of late that a boat has navigated its surface. Towards its southern extremity, however, in a contracted part of the lake, is a ford, about six miles over, above the village of Maret on, which they report the water to be warm, indicating the presence of warm springs beneath. In general, towards the shore it is shallow; and it rises and falls with the seasons, and with the quantity of water carried into it by seven streams, which fall into this their common receptacle, the chief of which is the Jordan. It also appears either to be on the increase, or to be lowering in some of the others, whence those travellers are to be credited and uncreditable, who report the ruins of the cities either exploded or ingulfed beneath the waters. Troilo and D'Arville attest that they observed fragments of wall, &c. Josephus remarks, that one might still see there "the shadows of the five cities" (πέντε μὲν πολέμων οίκων), leaving it somewhat uncertain what he means by this figurative language. (Bell. Jud., 4, 8, 4.) Strabo gives a circumference of 60 stadia to the ruins of Sodom, according to the tradition of the Arabian geographers of these communities (δαλοστενοί τοις φθολολόγωι ὑπὸ τῶν ἔξωστοι, οὐ δὲ ἑώστων ποιο τρισκαλεθαι πόλης εὐτανῶ, ὀπ τῆς μετροπόλεως, Σωδόμων, σώστρτω κύλιν ἕκτακτω ποι σταδίων.—Strab. 764). Two aged and respectable inhabitants of Jerusalem told Maundrell that they had once been able to see some part of these ruins; that they were near the shore, and the water so shallow at the time, that they, together with some Frenchmen, went into it, and found several pillars and other fragments of buildings. These several authorities are too weighty to be despised; and we may collect from them some support to the opinion, that, at the destruction of the guilty cities, they were not entirely overwhelmed with the waters, but remained more or less exposed to view, as monuments of the judgments of God; and that, from the slow increase of the waters through a period of nearly 4000 years, they have gradually receded from our sight, and are now only to be seen through the water, if seen at all, after seasons of long-continued drought. The water now covering these ruins occupies what was formerly the Vale of Siddim; a rich and fruitful valley, in which stood the five cities, called the cities of the plain, namely, Sodom, Gomorrah, Admah, Zeboim, and Bela or Zoar. The first four of these were destroyed, while the latter, being "a little city," was preserved at the intercession of Lot; to which he fled for refuge from the impending catastrophe, and where he remained in safety during its accomplishment. Naturalists have indulged themselves in many speculations as to the manner in which this destruction took place, and the immediate causes engaged in effecting it; as if this were necessary for our faith. It is probable, however, that in this instance, as in most others, the Almighty called in the intervention of natural agencies for the accomplishment of his purpose. The most reasonable and natural cause of the destruction is founded on what is said in Gen.,14.10, of the soil of the Vale of Siddim, that it was "full of slime pits," or, more properly, pits of bitumen, for thus the word is rendered in the Septuagint. Now it is probable that in this instance, as in that of the flood, the inhabitants of the offending cities were involved in destruction, which met them on all sides, from above and below, so that the earth opened its formation of such or pitch ignited by subterraneous combustion, while a fiery shower from above expedited and ensured their utter destruction. Whatever the means employed might have been, they were evidently confined in a remarkable manner to the devoted districts; as Lot found safety in Zoar, although only a few miles distant, and within the precincts of the plain itself. This circumstance shows to us sufficiently that the country was not destroyed by an earthquake, as supposed by some, which would scarcely have been so partial in its effects. There is also a passage (Gen.,19,28) which favours very much the above opinion respecting the combustion of the soil; where it is said that Abrahams servants got up early the morning, and discovered the burning mount Sin- nom and Gomorrah, and towards all the land of the plain, and beheld, and, the smoke of the country went up as the smoke of a furnace." The character of this catastrophe approaches nearest to that of a volcanic eruption: an opinion which is supported by the physical structure of the soil of the neighbourhood both before and since; the bituminous nature of the soil as described in Genesis (19,10); the occasional eruptions of the Jordan clouds still, in the same locality, as attested by Josephus; and the hot springs and volcanic substances, consisting of lava, sulphur, pumice, and basalt, still found in the vicinity of the lake, as described by Volney, Burckhardt, Buckingham, and other travellers. We know not the character of the soil beneath the surface; the figure, material, and strafication of the mountains: whether a crater or craters are to be found on them, and, if so, whether they have maintained a permanent state through the whole of their direction. All this, and much more in this interesting neighbourhood, remains to be explored by the experienced eye of a geologist. In the absence, however, of such information, it may be surmised that the cities could not have been buried beneath a shower of ashes from a mountain-crater, after the manner of Her- culaneum and Pompeii, as this would be incompatible with the testimony of those who have witnessed the exposed remains of the cities, as well as with the account which represents the plain itself as burning, not the neighbouring mountains. Nor could they have been overwhelmed by a torrent of lava: for besides that this mode is liable to the objection already urged of totally obliterating the cities, the ordinary progress of a lava would not have been equal to the design, as it is never so rapid as not to give ample time for escape. The catastrophe might still, however, have been of a volcanic character, but the vale itself, or some part of it, must have been a crater, which, vomiting forth, not a vitreous and sluggish lava, but a far more liquid and diffusive stream from the bituminous stores beneath, involved the miserable inhabitants on all side, from the earth and from the air, in a deluge of fire. Before this event, the vale of Siddim was a rich and fertile valley; a continuation of that of the Jordan through which the river took its course southward to the sea. This Burckhardt supposed to be the prolongation of the ancient channel of the Jordan, which discharged itself into the sea before its absorption in the expanded Lake of Siddom. This is extremely probable: and there cannot be a more interesting country in the world than this, to be made the subject of an intelligent and accurate geological survey. We may, however, from what we know, infer much: that before the face of the country was changed by the judgment which fell upon it, the ground now covered by the waters of the Dead Sea was an extensive valley, called the Vale of Siddim, on which stood the five cities, and through which the Jordan flowed in its course to the sea. That it flowed through the vale may be inferred from the great fertility of the latter; that it passed beyond it, is
equally to be inferred from the want of space over which the water could expand itself to be exhausted by evaporation. But the discovery of the opening on the southern border of the lake, and the inclined valley leading thence to the sea, have rendered these inferences almost conclusive. We may then, and must in future, account for the origin of the lake to which in question, when the combustion of the soil, or of its substrata, occasioned a subsidence of the level of the valley, by which the river was assassinated in its course, and a basin formed to receive its waters. These gradually spread themselves over its surface, and would no doubt soon have filled it, and resumed the ancient channel to the southward, had not their increase been retarded by the process of evaporation, which advanced in an increasing ratio as the expense of water grew wider and wider. The newly-formed lake would thus continue to extend itself, until the supply of water from the streams, and the consumption by evaporation, arrived at a balance. When this took place, or whether it has even yet taken place, cannot be known; at least without such observations as have not yet been made. That it has not long been the case may be inferred from the disappearance of the ruins which were visible two centuries ago. — The water of this sea is far more salt than that of the ocean; containing one fourth part of its weight of saline contents in a state of perfect desiccation, and forty-one parts in a hundred at a state of simple crystallization: that is to say, a hundred pounds by weight of water will yield forty-one pounds of salts; while the proportion of saline contents in the water of the Atlantic is not more than 1-27th part in a state of dryness, and about six pounds of salts in a hundred of the water. The specific gravity of the water is 1.211; that of common water being 1000. A vial of it having been brought to England by Mr. Gordon of Clunie, at the request of Sir Joseph Banks, was analyzed by Dr. Marcet, who gives the following results: "This water is perfectly transparent, and does not deposit any crystals on standing in close vessels. Its taste is peculiarly bitter, saline, and pungent. Solutions of silver produce from it a very copious precipitate, showing the presence of marine acid. Oxalic acid instantly discovers lime in the water. The lime being separated, both caustic and carbonated alkalies readily throw down a magnesian precipitate. Solutions of barytes produce a cloud, showing the existence of sulphuric acid. No alumine can be discovered in the water by the delicate test of sucinnic acid combined with ammonia. A small quantity of pulverized sea salt being added to a few drops of the water, cold and undiluted, the salt was readily dissolved with the assistance of a gentle trituration, showing that the Dead Sea is not saturated with common salt. None of the coloured infusions commonly used to ascertain the prevalence of an acid or an alkali, such as litmus, violet, and turmeric, were in the least altered by the water." The result of Dr. Marcet's analysis gives the following contents in 100 grains of the water:

<table>
<thead>
<tr>
<th>Salt</th>

10.22

The traveller last mentioned gives us the following account of a visit which he paid to the Dead Sea.

"About six in the morning I reached the shore, and, much against the advice of my excellent guides, I resolved on having a bath. I was desirous of ascertaining the truth of the assertion, that 'nothing sinks in the Dead Sea.' I swam a considerable distance from the shore, and about four yards from the beach I was still buoyant. The water, so uniformly warm, had never felt, and the taste of it the most detestable; it was that of a solution of nitre, mixed with an infusion of quassia. Its buoyancy I found to be far greater than that of any sea I ever swam in, not excepting the Euxine, which is extremely salt. I could lie like a log of wood on the surface, without stirring hand or foot, as long as I chose; but, with a good deal of exertion, I could just dive sufficiently deep to cover all but my head and shoulders with the mass of water, in spite of my endeavours to descend lower. On coming out, the wounds on my feet, which had been previously made, pained me excessively; the poisonous quality of the waters irritated the abraded skin, and ultimately made an ulcer of every wound, which confined me fifteen days in Jerusalem, and became so troublesome in Alexandria, that my medical attendant was apprehensive of gangrene." Dr. Madden is convinced that, "the sea abounds with fish; but as the water is saltier than the Dead Sea; and, to try whether there were any fish in it, he spent two hours in fishing. The surface of the sea, according to him, is covered with a thin pellicle of asphaltum, which issues from the fissure of the rock adjoining it. On coming out of the water he found his body covered with it, and likewise with an incrustation of salt, almost the thickness of a sixpence. The rugged aspect of the mountains, the deep ravines, and the jagged rocks, all prove that the surrounding country has once been the scene of some terrible convulsion of nature. "I have no hesitation," says Dr. Madden, "in stating my belief, that the sea which occupies the site of Sodom and Gomorra, Admah, Zebaim, and Seger, covers the crater of a volcano." We have said that this traveller was convinced that no living creature could be found in the Dead Sea: Chateaubriand, however, states that, hearing a noise on the lake at midnight, he was told by the Bethlehemists that it proceeded from regions of small fish, which come and leap about near the shore. Maundrell also observed, among the p Jebbles on the bank, shells which had once contained fish. The traveller last mentioned also saw birds flying about and over the sea with impurity, which contradicts the common belief that birds fell dead in flying above it. The deep expanse of the sea is situated far above the surface of mountains; of which those on the eastern and Arabian side are the highest and most rocky, and have much the appearance of a black perpendicular wall, throwing a dark and lengthened shadow over the water of the sea. (Monsford's Scripture Gazetteer, p. 123, seqq.) We shall close the present article with the following remarks of Dr. Clarke, which have been already in some degree anticipated. "The atmosphere was filled with a pungent and somewhat offensive smell of those clouds of smoke which, by some writers, are said to exhale from the surface of the lake. Everything about it was in the highest degree grand and awful. Its desolate, although majestic features, are well suited to the tales related concerning it by the inhabitants of the country, who, all of speak of it with terror, seeming to shrink from the narrative of its detestable allurements and deadly influence. 'Beautiful fruit, fruit, produces upon those shores, which is no sooner touched than it becomes dust and ashes.' In addition to its physical horrors, the region around is said to be more perilous, owing to the ferocious tribes wandering upon the shores of the lake, than any other part of the Holy Land. A passion for the marvellous has thus affixed, for ages, false characteristics to the sublimest associations of natural scenery in the whole.
world; for, although it be now known that the waters of this lake, instead of proving destructive of animal life, swarm with myriads of fishes (Chattautriand, vol. 1, p. 411, Lond., 1811); that, instead of failing victims to its exhalations, certain birds make it their perch and Alaret (Ozef., p. 1721); that shells abound upon its shores; that the pretended fruit containing ashes is as natural and admirable a production of nature as the rest of the vegetable kingdom, being the fruit of the Solanum Melangena, the inside of which, when the fruit is attacked by an insect (Tenoderio), turns to dust, while the skin remains entire and of a beautiful colour; notwithstanding all these and other facts are well established, yet even the evidence of them, when it is mentioned continue to fill their descriptions with awestruck wonder. Re-land, in his account of the Locus Asphalites (Pallast., vol. 1, p. 238), after inserting copious extracts from Galen concerning the properties and quality of the water, and its natural history, proceeds to account for the strange fables that have prevailed with regard to its deadly influence, by showing that certain of the ancients confounded this lake with another, bearing the same appellation of Asphalites, near Babylon; and that the true name of this lake was Lusius, which belonged to the Babylonians. An account of the properties of the Babylonian lake occurs in the writings of Vitruvius (8, 3), of Pliny (35, 15), of Athenaeus (2, 5), and of Xiphilinus (p. 252). From their various testimony it is evident, that all the phenomena supposed to belong to the Lake Asphalites near Baby- lon, were, from the similarity of their names, ulti- mately considered as the natural characteristics of the Jordan lake, the two Asphalites being confounded. (Clarke's Travels, vol. 4, p. 399, Lond. ed.)

MAREOTIS, a lake of Egypt, in the immediate vicin- ity of Alexandria. Its earlier name was Marœa (γ Μαρεία λίμνη); the later Greeks gave it the appella- tion of Mareotis (Μαρεώτις). The first writer that makes mention of it is Scylax (p. 44). "Pharos," says he, "is an uninhabited island, with a good harbour, but destitute of water. This last is obtained from the neighbouring lake Marœa (κ τῆς Μαρείας λίμνος χρυσεττόν)." The same writer informs us, that in very early times canals were cut connecting this lake with the Nile, and thus furnishing it with a constant supply of fresh water. The Lake Mareotis first rose into importance after the founding of Alexandria. From this period it is mentioned by all the geographical writers, but the most particular description is given by Strabo (799). "The Lake Mares," says Strabo, "is more than 150 stadia in breadth, and not quite 300 in length. It extends on the west as far as the fortress called Chersonesus, which is 70 stadia from Alexandria. It contains eight islands, and all the country around is well inhabited." In another part (p. 793) he informs us, that many canals connected this lake with the Nile, and that thus, in the summer season, when the lake would otherwise have been low, the inundation of the Nile afforded it an abundant supply of water, and rendered the neighbouring coun- try more fertile. This was continued, and on the south by Alexandria, and on the north by Tripolis, and on the Sariphine mountains. It now answers to the northern part of Chorassan. (Compare Plin., 6, 16 — Strabo, 515.) Strabo speaks in strong terms of the fertility of Mareotis, and states that it took two men to clasp the lower part of the stem of the vines with their arms. (Strab., 73.)

MARGIANA, a country of Asia, lying along the river Margus, from which it derived its name. According to Ptolemy, it was bounded on the west by Parthiæ, on the north by the Oxus, or Amu-Dar, on the south by Asia, and on the Sariphine mountains. It now answers to the northern part of Chorassan. (Compare Plin., 6, 16 — Strabo, 515.) Strabo speaks in strong terms of the fertility of Margiania, and states that it took two men to clasp the lower part of the stem of the vines with their arms. (Strab., 73.)

MARGITES, the title of one of the minor poems ascribed to Homer. (Vid. Homer., p. 642, col. 1.)

MARGUS, a river in Mareotis, rising on Mount Orieus, and falling into the Danube at the west of Viminacinum. It is now the Morava.—II. A river of Margiania, falling into the Oxus northwest of Nisa. It is now the Mardi. (Plin., 6, 16.)

MARIÂN, I. a city of the Caligiri, in the south- eastern part of Arabia Felix, 13 miles northeast of

Maria the triumph, Marica, Maria to the senate his Maria the influence of the senate's decision was determined by the popular vote, and Marius was elected consul for the following year (B.C. 105), in the consulship of Marius and Cæcilius Metellus. Marius had been defeated by the Cimbrians, and he was again elected consul for the fifth time, joined his forces with those of Catulus, and entirely defeated the Cimbri in the plain of Vercellæ (now Vercelli), situate to the north of the Po, near the Sesstes. In these two battles the Teutones and Ambrones are said to have lost the incredible number of 290,000 men (200,000 slain, and 90,000 taken prisoners); and the Cimbri 290,000 men (140,000 slain, and 60,000 taken prisoners). Marius again became candidate for the consulship for the following year; but, now that the fear of the Gallic invasion was removed, he was opposed by the whole strength of the patrician party. He nevertheless obtained the consulship, in great part owing to the exertions of Satur-

MARIUS.
army elected Marius emperor. It is generally sup-
poused that the Empress Victoris contributed to his
elevation, with the hope of preserving her own au-
thority; but this is denied by some modern writers,
who maintain that she took part in the conspiracy
which deprived Marius of his crown and life. (De
Boe, Dissertation sur un médaillem de Tetricus.—
Mem de l’Acad. des Inscr., vol. 26.) He reigned
only five days. After his death, his body, to which
he had refused some favour, and who, in stabbing
him, exclaimed, "Take it—it was thine thyself
that forg'd it." Marius was remarkable for personal
strength, of which historians give some accounts
that are evidently fabulous. (Treb. Pollio, Trigint.
Tyram.—Vit. Marii.)

MARMARICA, a country of Africa, to the east of Cy-
renia, lying along the Mediterranean shore. It
forms at present a part of the district of Barca. The
inhabitants are a running race, and remarkable for
their skill in taming serpents. (Sil. Ital., 3, 300.)
The ancient Marmarica was a region much less high-
ly favoured by nature than Cyrenaica. According to
Della Cella (p. 182, seqq.), the general features of the
country, however, are similar to those of the region
last mentioned. "We wound our way," says this
traveller, "among wild and rugged mountains, fre-
quently bound together by groups of serpents; among
which the cypresses, arbutus, Phoenix, tripiper, gem-
tic myrtle, carob, and laurel, were most abundant;
and as they form no long and uniform woods, but are
scattered about in a variety of forms and groups
among the rocks, they are very picturesque ornaments
of the scenery. The ground is throughout broken
and irregular, and does not slope down into pastures,
as in Cyrenaica; but the privation of that agreeable
feature has its compensation, for the want of grass-
lands secures this district from the incursions of the
vagabond hordes in its neighbourhood. The woody
and elevated nature of this country affords frequent
and copious springs of clear and most delicious wa-
ter.—This tract of border country is, as in former
times, the resort of all the thieves, miscreants, and
malefactors of the two governments of Tripoli and
Egypt. Pitching their tents in the neighbourhood of the
village, they make incursions into the ad-
sacent districts, and pillage all who have the misfor-
tune to fall in their way. They are ever on the watch
for the caravans and pilgrims who traverse this coun-
try on their way to Mecca; and this is the only
route used by the people of Morocco, above all oth-
ers the most fervently devoted to their prophet."—
M. Pacho speaks of the general aspect of Marmarica
in still less favourable terms. The soil, he says, is
rocky, of a yellowish-grey colour, and remarkable for
its fertility solely on the copious rains. The country
presents none of those verdant groves of laurel
and myrtle which crown the mountains and overshadow
the valleys of the Pentapolis. The singing-birds, vain-
ly seeking foliage and shelter, flee from this naked re-
gion; only birds of prey, the eagle, the hawk, and the
vulture, appear in numerous flights, their sinister
screams rendering the solitude more frightful. The
jacksal, the hyena, the jerboa, the hare, and the gazelle,
are the wild animals which chiefly abound; and the
existence of man is indicated merely by the bleating
of distant flocks, and the dark tent of the Arab. Yet
this country also exhibits traces of having once been
occupied by a civilized and even numerous popula-
tion, and there are marks of the extraordinary exer-
ctions which were made to supply the deficiency of wa-
ter. Canals of irrigation cross the plain in every
direction, and extend up into the mountains.
The ancient cisterns are numerous; they are fre-
quently divided into several chambers, adorned with
pillars, and coated with a cement harder than stone.
But the monuments of Marmarica possess none of
the elegant and classic character of those of Cyrene,
being ruder, and more in the Egyptian style. (Pacho,
Voyage dans la Maraviglie, p. 63, seqq.) The inhabi-
tants of this region are entirely Bedouins, chief-
ly of the great tribe of Welled Ali, and are supposed by
M. Pacho not to exceed 38,000. (Modern Trav-
eller, p. 50, p. 182, seqq.)

MARMARIDES, the inhabitants of Marmarica.

MARMARIUM, a place in the immediate vicinity of
Carystus in Ithaca, which formed the walls of a
marble for which Carystus was famed. A temple was
erected here to Apollo Marmarius. Marmarium was
exactly opposite to Hala Araphenides in Attica. (Stri-
abo, 446.—Cramer’s Anc. Greece, vol. 2, p. 142.)

MARI. Vol. Virgilius.

MARON, I a priest of Apollo in Thrace, near Mar-
onea. (Hom. Od., 9, 197.)—II. A follower of Osi-
ria, well acquainted with the art of rearing the vine.
(Diod. Strab., 1, 18.) Athenaeus (1, 25) makes
him a follower of Bacchus. He was fabled to have been
the founder of Maronea in Thrace. (Consult Wes-
selting's note, ad Diod., l. c.)

MARONEA, a town of Thrace, southeast of the Bis-
tonis Palus, on the coast. It was a place of some
note, and is mentioned by Herodotus (7, 109), Sclay-
x (p. 277), Strabo (Egit., 7, p. 331), and several other
writers. Strabo (1, 1, 1) gives another Marius (1, 18),
which was founded by Maron, a follower of Osiria (sod. Maron),
but Scymnus affirms (v. 675) that it was a colony of
Chios. Pliny states that the more ancient name was
Otrugae (4, 11). The same writer extols the ex-
cellence of its wine (14, 4), whence a comic writer,
quoted by Athenæus (8, 44), styled it a tavern. Mar-
onea, taken in the first Macedonian war by Philip,
knight of Macedon (Liv., 31, 18), and his retaining pos-
session of it was subsequently made a cause of com-
plaint against him at Rome (39, 34). According to
Mela, it was situated near a small river named Scex-
ens. Its ruins are still called Marogina. (Cramer's
Anc. Greece, vol. 1, p. 313.)

MARPESSA, daughter of Evenus, was beloved by
Apollo, whose suit was favoured by her father. Idas,
another applicant for her hand, having obtained a wing-
ed chariot from Neptune, carried off the apparently
not reluctant of her, was subsequently pursued the fugitives, but,
coming to the river Lycomaris, and finding his progress
stopped by it, he slew his horses and cast himself into
the stream, which from him derived its name Evenus.
Meantime Apollo met and took the fair prize from
Idas. The matter being referred to Jupiter, he al-
lowed the maiden to choose for herself; whereupon,
fearing that when she grew old Apollo would desert
her, she wisely chose to match with her equal, and
gave her hand to her mortal lover. (Apol., 1, 7.
Schol. ad 2., 9, 557.—Keightley & Mythology, p.
119, seq.)

MARPEBSUS, I. a town of Troas, to the north of
the Scamander, and to the west of Troja Vetus.
(Tibull., 2, 5, 67.)—II. or Marpessa (Μαρπεσσα), a mountain
in the island of Paros, containing the quarries whence
the famous Parian marble was obtained. Hence the
expression of Virgil, Marpesia causas. (En., 6, 471.)
This mountain was situate to the west of the harbour of
Marmora. Dr. Clarke gives Capasso as the modern
name. (Travels, vol. 6, p. 34, Lond. ed.)

MARRUCIN, a people of Italy, occupying a narrow
slip of territory on the right bank of the river Aturnus,
between the Vestini to the north and the Fruncani to
the south, and between the Pergus and the sea towards
the east. It was supposed that their origin from the
Marsi. (Ep. Priscian., 8.) Like that people, they
were accounted a hardy and warlike race, and with them
they made common cause against the tyranny of
Rome. An idea may be formed of the population and
force of the several petty nations in this quarter of

Digitized by Microsoft
Italy, from a statement of Polybius (2, 24), where that historian, in enumerating the different contingents which the allies of the Romans were able to furnish about the time of the second Punic war, estimates that of the Marsi, Marrucini, Vestini, and Frantani, at 20,000 foot and 4000 horse. The only city of note which we find ascribed to the Marrucini, is Teate, now Chieti, on the right bank of the Aternum. (Cramer's Anc. Italy, vol. 1, p. 328.)

**Marruvium.** I. a town of the Sabines, answering to the modern *Moro Vecchio.*—II. The capital of the Marsi, situated on the eastern shore of the Lacus Fucinus, and corresponding to the modern San Benedetto. (Strabo, 241.—Pliny, 3, 12.—Cramer's Anc. Italy, vol. 1, p. 328.)

Mars (in Greek Ἀπόστημνος), the god of war, about whose parentage different accounts are given. Homer (II., 5, 892, seqg.) and Hesiod (*Theog.,* 922) make him to have been the offspring of Jupiter and Juno. Others say that he was the son of Enyo or Bellona. (Schol. ad II., l. c.) Ovid, however, gives a different version of the fable. According to this poet, Juno wished to become a mother by herself, just as Jupiter had become a father in the case of Minerva. On applying to Flora for aid in the accomplishment of her design, the latter directed her to pluck a certain flower which grew near the city of Olenus, the touch of which would make her a mother. Enyo, an offspring of Olenus, and straightway conceived the god Mars. (Ovid, *Fast.,* 5, 227, seqg.)—The delight of Mars was in war and strife; yet his wild fury was always forced to yield to the skill and prudence of Minerva, guided by whom Diomede, in the Iliad, wounds and drives him from the battle (II., 5, 855); and in the conflict of the gods (II., 21, 391), this goddess strikes him to the earth with a stone. To give an idea of his huge size and might, the poet says, in the former case, that he roared as loud as nine or ten thousand men; and in the latter, that he covered seven plethra of ground. Terror and Fear (Δεμοκράτις καί Ψίδοκς), the sons of Mars, and Strife ('Ερος), his sister, accompany him to the field when he seeks the battle. (II., 4, 440.) Another of his companions is Enyo ('Ενυό), the daughter of Phorcys and Ceto, according to Hesiod (Theog., 273), a war-goddess answering to the Bellona of the Romans, and a personification of Mars' valor. Hesiod gives to him in the Iliad, corresponds with hers.—The figurative language, which expresses origin and resemblance by terms of paternity, gave a mortal progeny to Mars. As a person who came by sea was figuratively called a son of Neptune, so a valiant warrior was termed a *son,* or, as it is sometimes expressed by Homer, a *branch* or *shoot* of Mars (Ιππος Ἀπόστημνος). But the only tale of his amours related at any length by the poets, is that in the case of Venus. (Horn., *Od.,* 8, 266, seqg.—Ovid, *A. A.*, 2, 561.) This tale is an evident interpolation in the Odyssey, where it occurs. Its date is uncertain; though the language, the ideas, and the state of society which it supposes, might almost lead us to assign its origin to a comparatively late period. It is generally supposed to be a physical myth, or, rather, a combination of two such myths; for beauty might naturally have been made the spouse of the god, from whose workshop proceeded so many elegant productions of art; and, as we are about to show, another physical view might have led to the union of Mars and Venus. Hesiod, for example, says (Theog., 937) that Harmonia (*Order*) was the daughter of Mars and Venus. This has evidently all the appearance of a physical myth, for from Love and Strife (i.e., attraction and repulsion), arises the order or harmony of the universe. (Plut., *de Is. et Os.,* 45.—Aristot., *Pol.,* 2, 1, p. 841, vol. 1.) The same couple are also said by Hesiod (Theog., 234) to have been the offspring of Mars and Venus, of whose union with Vulcan (to whom he gives a different spouse) he seems to have known nothing. In the Iliad we may observe that Mars and Venus are spoken of as brother and sister, much in the same manner as Apollo and Diana. (II., 5, 359, seqg.—A. 21, 416, seqg.)—The best known of the children of this god by mortal women were Ascalaphus and Ialmenus, Cōnumax, king of Pisa, Diomedes of Thrace, Cycnus, Phlegyas, Dryas, Parthenopaeus, and Tereus. He was also said to be the father of the Etruscan Mars, Aterus, and of Etoile. The temples and images of Mars were not numerous. He was represented as a warrior, of a severe and menacing air, dressed in the heroic style, with a cuirass on, and a round Argive shield on his arm. His arms are sometimes borne by his attendants. (Keightley's *Mythology,* p. 104, seqg.)

**Marsiaci,** a people of Gallia Belgica, of German origin, and belonging to the great tribe of the Istevones. According to Wilhelm (*Germanicius und seine Bewohner,* Weimar, 1823), they occupied the islands between the mouths of the Maese and Scheld. These, however (*über die Völker des Alten Deutschlands,* Hannover, 1826), makes their territory correspond to the modern province of *Utrecht.* They are mentioned byTacitus (*Hist.,* 4, 56) and Pliny (*4, 29.*)

Marsi, I. a people in the northwestern part of Germany, belonging to the great tribe of the Istevones. They appear to have been originally settled on both banks of the river Weser, whence they migrated to the vicinity of Tenthchen. Weakened by the Roman arms, they retired into the interior of Germany, and from this period disappeared from history. (Mannert, *Geogr.,* vol. 3, p. 168.)—II. A nation of Italy, whose territory lay to the northeast of Latium, and southeast of the counts of the Sabines. Though inconsiderable as a people they were yet entitled to honourable notice in the page of history, for their hardihood and warlike spirit. Their origin, however, is not known. Although they are depicted as the people belonging to the Roman states, they give no distinct name to the Romans; and this is common in the Friesian tribes, as it is also in the Casesh. (Cramer's Anc. Italy, vol. 1, p. 103.)—*Remarks.*—If the Marsi, who were defeated by the Marsiaci, were called Marses, it is possible they should have been named * Marsyas.*

**Marsyas,** I. a satyr of Phrygia, son of *Timopus,* who, having found the pipe which Minerva, for fear of injuring her beauty, had thrown away, contended with
Apollo for the palm in musical skill. The Muses were the upe, and it was agreed that the victor might do what he pleased with the vanquished. Marsyas lost, and Apollo flayed him alive for his temerity. The tears of the nymphs and rural deities for the fate of their fellow, would not wash away the stain which bore his name; and his skin was said to have been hung up in the cave whence the waters of the river flowed. (Apollo, 1, 4, 2.—Pausan. 2, 7, 9.—Plut., de Dieu, 10.—Higgin. fab., 165.—Ovid, Met., 6, 382, seqq.—Xen., AnaB, 1, 2, 8.) It seems, according to the ancient mythological writers, that, in the contest above alluded to, Apollo played at first a simple air on his instrument; but Marsyas, taking up his pipe according to the custom of the Lydians, intermingled the melody of its tone and the art of his performance, that he seemed to be heard with more pleasure than his rival. Having agreed upon a second trial of skill, it is said, that the performance of Apollo, by his accompanying the lyre with his voice, was allowed greatly to excel that of Marsyas upon the pipe alone. Marsyas with indignation protested against the decision of his judges, urging that he had not been fairly vanquished according to the rules stipulated, because the dispute was concerning the excellence of their respective instruments, not their voices; and that it was unjust to employ two arts against one. Apollo denied that he had taken any unfair advantage, since Marsyas had used both his mouth and fingers in playing on his instrument, so that if he denied the use of his voice, he would be still more disqualified for the contention. On a third trial Marsyas was again vanquished, and met with the fate already mentioned. (Diod. Sic., 3, 58.)—The whole fable, however, affords a very rational explanation. The pipe as cast away by Minerva, and Marsyas as punished by Apollo, are intended merely to denote the preference given, at some particular period, by some particular Grecian race, with whom the myth originated, to the music of the lyre over that of the pipe, or, in other words, to the Citharoedus over the Aulic art. The double pipe was a Phrygian or Asiatic invention, and ascribed to a certain Marsyas. (Diod. Sic., 3, 58.) The music of this instrument was generally used in celebrating the wild and enthusiastic rites of Cybele. Hence we may explain the remark of Diodorus, that Marsyas was a companion and follower of Cybele (εκυσίως αὐτή παρακολουθείτο καὶ συμπατιώθες, 3, 58). Subsequently, the wildness of the Bacchanalian celebrations became intermingled with the phrensis delirium that characterized the processions and the cities of Cybele. The double pipe came now to be employed in the orgies of Bacchus. The worship of this god spread over Greece, and with it was disseminated the knowledge of this instrument. To the new species of music thus introduced was opposed the old and national melody of the lyre; or, in the language of mythology, Apollo, the inventor and improver of the lyre, engaged in a stubborn conflict with Marsyas, the representative of the double pipe. Apollo consequently engaged the pipe, regarded by the Greeks as a barbarian instrument, and banished from the hymns and festivals of the gods: it could only find admittance into the festivals of the vintage, in the Bacchanalian orgies, and in the chorus of the drama. (Wieland, Attisches Museum, vol. 1, p 311, seqq.)—A statute of Marsyas, representing him in the act of being flayed, stood in the Roman forum, in front of the rostra. The story of Marsyas, understood in its literal meaning, was a moral imputation inflicted on rebels; presumption and as this feeling is naturally allied to, if not actually identified with, that arrogant and ungovernable spirit which formed the besetting sin of the ancient democracies, we need not wonder that, in many of the cities of antiquity, it was customary to erect a group of Apollo and Marsyas, in the vicinity of their courts of justice, both to indicate the punishment which such conduct merited, and to denote the omnipotence of the law. Servius (ad Virg., Aen., 4, 58) alludes to the custom of which we have just made mention. His explanation, however, shows that he only half understood the nature of the allegory:—"Marsyas per civitates in terris terras victus est. Deinde fit aequora, river of Pyrgia, rising, according to Xenophon, in a cavern under the Acropolis of Cælum, and falling into the Meander. (Aen., 1, 2, 8.) Here, as the same writer informs us, Apollo contended with Marsyas, and hung up the skin of his vanquished antagonist in the cavern whence the river flowed. The following remarks of Mr. Leake appear worthy of insertion. "Apollo, according to the fable, bore two pipes; one rose in the palace of Cyrrus, flowing thence through his hands and under the city of Cælum: and the sources of the Marsyas were at the palace of the King of Persia, in a lofty situation under the Acropolis of Cælum. From Arrian (1, 29) and Quintius Curtius (3, 1) we learn, that the citadel was upon a high and precipitous hill, and that the Marsyas fell from its fountains over the rocks with a great noise; from Herodotus (7, 26) it appears, that the same river was from this circumstance called Catarrhactes; and from Strabo (572), that a lake on the mountain above Cælum was the reputed source both of the Marsyas, which rose in the ancient city, and of the Meander. Comparing these authorities with Livy (38, 38), who probably copied his account from Polybius; with Pliny (5, 29); with Maximus Tyrius (8, 8); and with the existing coins of Apames, it may be inferred, that a lake or pool on the summit of a mountain which rose above Cælum, and which was called name or Sinu, was the reputed source of the Marsyas and the Meander; but that, in fact, the two rivers issued from different parts of the mountain below the lake; that the lake was named Aulocrene, as producing reeds well adapted for flutes, and that it gave the name of Aulocrenis to a valley extending for ten miles from the lake to the eastward; that the source of the Marsyas was in a cavern on the side of a mountain in the ancient agora of Cælum, and that the Marsyas and Meander, both of which flowed through Cælum, united a little below the ancient site." (Leake's Journal, p. 158, seqq.)—III. A river of Caria, mentioned by Herodotus (5, 118) as flowing from the country of Idrias into the Meander. Idrias was one of the earlier names of the city which, under the Macedonians, assumed the name of Stratonicea. The Marsyas of Herodotus is supposed, therefore, to be the same with the modern river of Chalke, which rises in the Cusian mountains, and thence descends into the deep lake of Celasnae, and discharges itself into the river of Celaenae, on the coast of Asia Minor. It may also be called the Cælaean, or Cynus; (Strabo) a name that was very common in the ancient world. (Leake's Journal, p. 234.)—IV. A native of Pella, brother of Antigonus. He wrote, in ten books, a History of the Kings of Macedon, from the origin of the monarchy to the founding of Alexander; and also a work on the Education of Alexander, with which prince he had been brought up. The loss of both these works, but particularly the latter, is much to be regretted. Marsyas is also named among the poets in the works of Suidas, and he is mentioned by him under the title "a master of a school." (Schol, Hist. Lit. Gr., vol. 3, p. 207.) MARTA of Marcia AQUA, a name given to the water conveyed to the city by one of the Roman aqueducts. This water was considered the most wholesome of any brought to Rome. The history of the Roman aqueducts is as follows: Previous to its erection, the Romans obtained their supply of water from the Anio and Anio Veneto. At the end, however, 127 years after the erection of the two last-mentioned aqueducts, their channels had become defaced, and much of their water was abstracted by the fraud of private individuals. The praetor Quintus Marcius REX was thereupon appointed by the senate to repair the injuries sustained by the old aqueducts; in addition to which, he also constructed a new one,
which was ever after called from him the Aqua Marcia. Pliny, however, states that the Aqua Marcia was first constructed by Annianus Marcus; and that Quintus Marcus Rex merely re-established the conduits. The same writer informs us that the earlier name of the water was Saufaeia. (Plin., 31, 24.)—The Mar-
cian water was obtained from the little river Pitionius, now Giorneco. This stream entered the Lacus Fuci-
cinus on the northeast side, and was said not to mix its waters, the coldest known, with those of the lake. According to the same popular account, it afterward emerged by the stream in due season and issued into the Aqua Marcia. (Cramer's Anc. It., vol. 1, p. 327.—Burgess, Antig. of Rome, vol. 2, p. 328.)

Martialis, Marcus Valerius, a Latin epigrammatic poet, born at Bibilis in Spain, about A.D. 40. Rader fixes his birth at A.D. 43; while Masson (Vit. Plin., p. 112) makes him not to have died before A.D. 101.—Very few particulars of his life are ascertained, and even these are principally collected from his own writings. He was destined originally for the bar, but showed little disposition to apply himself to such a career. In order to complete his education, Martial was sent to Rome. It was at the age of about twenty-
two years, and in the sixth year of Nero's reign, that he gave himself up entirely to poetry, which he made a means of subsistence, for he was compelled to live by his own exertions. Titus and Domitian both favoured him, and the latter bestowed on him the rank of an aequus, and the office of a tribune, granting to him at the same time all the privileges connected with the Jus trium liberorum. After having passed thirty-five years at Rome, he felt desirous of visiting his native country. Pliny the younger supplied him with the ne-
cessary means for travelling. Having reached Spain, he there, according to some critics, married a rich fe-
named Marcella, who had possessions on the Bil-
bilis or Salam, and lived many years in the enjoyment of conjugal happiness. The conclusion, however, to be drawn from his writings rather favours the supposi-
tion that such an union did not take place. Martial was acquainted with most of his literary contemporaries,
Juvenal, Quintilius, Pliny the younger, and others,
as appears from his own writings. (Ep., 2, 90; 12, 18, &c.)—We have about 1200 epigrams from the pen of Martial: they form fourteen books, of which the last two are entitled Xenia and Apophoreta res-
pectively, from the circumstance of their containing motions to give presents to his friends, or distributed at the Saturnalia and other festivals. These fourteen books are preceded by one under the title of Spectacula, containing epigrams or small pieces on the spectacles given by Titus and Domitian. These are not all productions of Martial; but it is very possible that he may have made and pub-
lished the collection.—The greater part of Martial's epigrams are of a different kind from those of Catullus. They are not merely the idea of an epigram, for they terminate with a point for which the author reserves all the edge and bitterness of his sat-
tire. Among the numerous epigrams which Martial has left behind him, there are some that are excellent ; of the collection as a whole, however, we may say, in the words of the poet himself (1, 17): "Sunt bona, sunt quaedam melioria, sunt mala plura." Many of these epigrams have lost their point for us, who are inclined to regard poetry as a serious and weighty affair. A large portion, moreover, are disgustingly obscene. Besides the epigrams which form the collection here referred to, there are others ascribed to Martial, which Burmann has inserted in his Anthology, vol. 1, p. 237, 340, 470, 471.—The best editions of Martial are, that of Rader, Ingest., 1602, 1611, fol., et Mogunt., 1627; that of Scrivenerus, Lugd. Bat., 12mo, 1619; that of Smidius, Amst., 8vo, 1701; and that of Lemario, 2

Martial, a tribune of whom Plutarch makes mention in his life of Julius Caesar. Marullus and ano-
other of his colleagues, named Flavius, when the sta-
dues of Caesar were seen adorned with royal dia-
dems, went and tore them off. They also found out the persons who had saluted Caesar king, and com-
mitted them to prison. The people followed with joyful acclamations, calling the tribunes Brutesus; but Caesar, highly irritated, deposed them from office. (Plut., Life Cesar, 47.)

Masawiyli or Masarkevi, a people in the western part of Numidia, on the coast, between the river Mu-
luxa and the promontory Masulebium or Musulubium. (Polyb., 3, 33.—Dionys. Perieg., 187.—Sallust, Ju-
gurth., c. 92.—Liv., 28, 17.) They were under the dominion of Syphyx. The promontory of Tretum, now Scba-
Ka-Ke, or the Seven Cepes, separated this nation from the Massili, or subjects of Massinissa.

Masco or Macas, a river of Mesopotamia, falling into the Euphrates, and having at its mouth the city
Corosote, which it surrounded in a circular course. Mamert, after a review of the several authorities which have a bearing on the subject, charges D'An-
ville with an error in placing the Masca too far to the west of Anatho, and in fixing this latter place at too
great a distance from the Chaboras, since Isidorus makes the intervening space only 29 miles, whereas,
on D'Anville's chart, it is 35 geographical miles. D'Anville also is alleged to err in giving the Euphrates too
large a bend to the southwest of Anatho. The river Masca is termed by Ptolemy the Saecorax. Mamert thinks that the Masca was nothing more than a canal from the Euphrates. (Mannert, Anc. Geogr.,
vol. 5, p. 523.)

Massinissa, king of Numidia, was the son of Gula,
who reigned among the Massyli in the eastern portion
of that country. (Liv., 24, 48, seq.) Massinisa was
educated at Carthage, and became, though still quite
young, enamoured of Sophonisba, daughter of Has-
drubal, who promised him her hand. Urged on by
his passion, and wishing, moreover, to signalize
himself by some deed of renown, the young prince pre-
vailed upon his father to declare against Rome and in
favour of Carthage. This was at the commencement
of the second Punic war, and Massiniss was only
seventeen years of age, but even then gave great
promise of future eminence. (Liv., 24, 49.) Har-
vard, in his History of Rome, and Sophonisba, another, monarch reigning over the
western part of Numidia, and then in alliance with the
Romans, he gained over him two great victories, and
afterward, passing the straits, united his forces with
those of the Carthaginians in Spain. Hannibal was at
that time carrying all before him in Italy, while Has-
drubal his brother was defending Spain. Not
long after his arrival, Massinissa contributed essentially
to the entire defeat of Cneus and Publius Scipio, by
the charge he assumed of the Carthaginians, as narrated
in B.C. 212; but, after some other less successful cam-
paigns, both he and his allies were compelled to yield
to the superior ability of the young Scipio, afterward
named Africanus, and to abandon to him almost
the whole of the peninsula. Having retreated to-
wards the frontiers of Bactia, the Carthaginians were
reduced to the greatest extremity, when Scipio made
prisoner of Massvea, the nephew of Massiniss, and
sent him back to his uncle inclined with present host-
ity of Massiniss towards the Romans immediately
changed into the warmest admiration: he had a se-
cret conference with Scipio near Gades, which was
eventually followed by his complete defection from
the Carthaginian cause. It is more than probable that
the Numidian prince was long before secretly disposed
to this step, in consequence of the bad faith of Has-
drubal, who had offered his daughter Sophonisba in

802
MAS

MASINISSA.

MARRIAGE TO SYPHAX. However this might have been, Massinissa, before declaring openly against Carthage, made a secret treaty with the Romans, and advised Scipio, it is said, to carry the war into Africa. Returning to this country himself, he found his kingdom a prey to usurpers, his father and elder brother having both died during his absence. With the aid, however, of Bocchus, king of Mauretania, he obtained possession of his hereditary dominions, and found himself, at peace, if the Carthaginians, irritated at his open avowal for the Romans, had not incited Syphax to make war upon him. Defeated and striped of his dominions, Massinissa was compelled to take refuge near the Syrtis Minor, where he defended himself until the arrival of Scipio. The aspect of affairs immediately changed, and Massinissa, by his valour and skill, contributed greatly to the victory gained by Scipio over Hasdrubal and Syphax. Having been sent with the vanquished, he penetrated, after a march of fifteen days, to the very heart of his rival's kingdom, gained a battle against him, made himself master of Cirta, the capital of Syphax, and found in it Sophonisba, to whom, as we have said, he had been attached in early youth. The charms of the daughter of Hasdrubal proved too powerful for the Numidian king, and he married her at once, in the hope of rescuing her from slavery, and of sharing the kingdom with his Roman master. He was received to the Roman camp with that right of conquest. This indomitable union, however, with a captive whose hatred towards Rome was so deep-rooted, could not but prove displeasing to Scipio, and Massinissa was severely reprimanded in private by the Roman commander. The Numidian, in his despair, sent a cup of poison to his bride, who drank it off with the utmost heroism. (L. c. 30. 15.) To console him for his loss, Scipio bestowed upon him the title of king, and a large share of his dominions, and heaped upon him other honours; and these distinctions, together with the hope of soon seeing himself master of all Numidia, caused the ambitious monarch to forget the death of Sophonisba. Constantly attached to the fortunes of Scipio, Massinissa fought on his side at the battle of Zama, defeated the left wing of the enemy, and, though severely wounded, nevertheless went in pursuit of Hannibal himself, in the hope of gaining the hand of his own and having his own hand upon the Roman cloak of liberty. Scipio, before leaving Africa, established Massinissa in his hereditary possessions, and added to these, with the authority of the senate, all that had belonged to Syphax in Numidia. Master now of the whole country from Mauretania to Cyrene, and become the most powerful prince in Africa, Massinissa profited by the leisure which peace afforded him, and exerted himself in introducing among his semi-barbarous subjects the blessings of civilization. Neither age, however, nor the tranquil possession of such extensive territories, could damp his ardour for conquest. Emboldened by his relations with Rome, he violated the treaties subsisting between himself and the Carthaginians, and, although in his ninetieth year, placed himself at the head of a powerful army and marched into the territories of Carthage. He was preparing for a general action when Scipio Etruscus arrived at his camp, having come from Spain to visit him. Massinissa received the young Roman with distinguished honours, alluded with tears to his old benefactor Africanus, and afterward caused the elite of his troops to pass in review before the son of Paulus Eminius. The young Scipio was most struck, however, by the activity and address of the monarch himself, whose physical powers seemed but little impaired by age, who still performed all the exercises of the gymnastic with spirit and resolution, and rode on horseback with all the spirit of earlier years. On the morrow Scipio was the witness of one of the greatest conflicts that had ever taken place in Africa, which, after having been maintained for a long time on both sides with the utmost obstinacy, was decided at last in favour of Massinissa. A second battle, equally disastrous for Carthage, soon followed, and peace was concluded on such terms as it pleased Massinissa to dictate. Not long after this the third Punic war broke out; but the Numidian monarch did not live to see the downfall of Carthage, having expired a short time before its capture, at the age of ninety-seven, and after a reign of sixty years.

The residence of the Massagetae is distinguished as Massagetae (Liv., xliii. 28; &c.) — Polyb., lib. xi. 14, 15, &c. — Geogr. Unive., vol. ii. p. 286, seqq.)

MARGARET, a nation of Scythia, placed by the ancient writers to the east of the river Iaxartes. The Macedonians sought for the Massagetae in the northern regions of Asia, judging from the history of Cyrus's expedition against these barbarians, by which some definiteness was given to the position which they occupied. They missed, indeed, the true Massagetae, but the term became a general one for the northern nations of Asia, limited in the present case to the Kirghiz Tartars. (Comment. Soc. Götte, 14, p. 9. — Bähr, ad Herod. t. c.)

MASELYLI. Vid. Massylit. Massicus, Mons, a range of hills in Campania, famous for the wines produced there. Consult remarks under the article Falernus, near the beginning (p. 515, col. 2).

Massilia, by the Greeks called Massalia (Mommsen). It is celebrated as the birthplace of the Phocaeans, on the Mediterranean coast of Gaul, now Marseille. The period of its settlement appears to have been very remote. Scymnus of Chios (v. 210), Livy (5, 34), and Eusebius, agree in placing it in the 45th Olympiad, during the reign of Tarquinius Priscus. Their common authority appears to have been Timaeus; at least Scymnus mentions him. — The circumstances connected with the founding of Massilia will be seen under the article Phocaeas. The natives endeavored to prevent the establishment of this colony, but, according to Livy (5, 34), the Phocaeans were enabled to make an effectual resistance, and to fortify their position, by the aid of a body of Gauls. (Compare the account of Justin, 43, 3, 4.) Massilia soon became a powerful and flourishing city, and famed for its extensive commerce. It engaged in frequent contests with Carthage, its maritime rival, and sent out many colonies from Emporia in Spain as far as Moncusa in Italy. (Strabo, 180.) The most prosperous period in the history of Massilia would seem to have been the interval from the fall of Carthage to the commencement of the contest between Caesar and Pompey. This city was always the firm ally of Rome. The origin of its friendship with the Romans is not clearly ascertained: Justin, or, rather, Trogus Pompeius (43, 3), dates it from the reign of Tarquinius Priscus, and assigns to it no credit. (Mon- nert, Geogr., vol. ii. p. 83, seqq.) It is more than probable, that the friendship in question began about the end of the first Punic War. Before this war we hear nothing of the Massilians in Roman history, and
previous to the commencement of the second Punic contest we find them the allies of the Romans. (Livy, 21, 20.) The political importance of this city received a severe check in the civil war between Caesar and Pompey, and the consequent attachment to the party of the latter. It had to sustain a severe siege, in which its fleet was destroyed, and, after surrendering, to pay a heavy exactation. (Cass., Bell. Civ., 22.) The conqueror, it is true, left the city the title of freedom, but its power and former importance were gone. The downfall of its political consequence, however, was succeeded by distinguished eminence in another point of view, and already, in the days of Augustus, Massilia began to be famous as a school of the sciences, and the rival of Athens. Even in a much later age, though surrounded by barbarous tribes, she continued to enjoy her literary rank, and was also remarkable for the culture of philosophy and the healing art. Massilia remained a flourishing city until the inroads of the barbarians and the subjugation by them of nearly the whole of southern Gaul. The government of the place was a well-regulated aristocracy. (Maurer, Geogr., vol. 2, p. 81, seqq.)

MASSYLI, a people of Numidia, to the east of the Massaesyli and Cape Tretum. They were the subjects of Massinissa. (Liv., 24, 48.-Polyb., 3, 33.-Sil. Ital., 16, 170.)

MATINUM, a city of Messapia or Isyppia, southeast of Caliphoris. Near it was the Mous Matinus. It was here, according to Horace, that the celebrated philosopher, Archytas of Tarentum, was interred, when cast on shore after shipwreck. (Od., 1, 26.) This region was famed for its bees and honey. The modern Matinate seems to mark the site of the ancient city. (Cramer's Anc. Italy, vol. 2, p. 277.)

MATRONA, a river of Gaul, now the Marne, which formed part of the ancient boundary between Gallia Belgica and Gallia Celsia. It takes its rise at Langres, runs northwest to Chalonas, then westward, passes by Meaux, becomes navigable at Vitry, and at Charenton, a little above Paris, falls into the Sequana or Seine, after a course of about 92 leagues. (Cass., B. C., 1, 1.-Auston, Moxel, v. 461.-Ammian. Marcell., 15, 27.-Sidon., Panegyr. Marjorian., 208.)

MATRONALIA, a festival celebrated at Rome on the Calends, or first of March, and on this same occasion presents used to be given by husbands to their wives. The day is said to have been kept sacred in remembrance chiefly of the reconciliation between the Romans and the Sabines. On this same day, also, a temple had been dedicated by the Roman ladies to Juno Lucina, on the Esquiline Hill, and here they presented their annual offerings. (Ovid, Fast., 3, 170, seqq.) From this last-mentioned circumstance, and particularly from a part of the passage last referred to (v. 235, seqq.), the true reason of the celebration may perhaps be inferred. Ovid speaks of offerings of waxen maenads, in this same occasion.

MATTIACI, a nation in the western quarter of Germany: a speech of Wilhelm (Germanien und seine Bewohner, Weimar, 1823), a branch of the Catti, between the Lahn and Main, in the country between Mayence and Coblenz; but, according to Kruse, lying between the Main, the Taunus, and the Rhine (Archiv. für alte Geogr.). The Aques Mattiaci correspond to the modern Wiesbaden. (Ammian. Marcell., 28, 11.)

MATTUR, a city on the Romans, the same as the Leucothoe of the Greeks. (Vid. Ino and Leucothoe.)

MAUROSI, a name of Mars. (Vid. Mars.)

MAUVE, the inhabitants of Mauritania. Bochart derives the name from Mahr, or, as an elision of gutturals is very common in the Oriental languages, from Mair, i.e., one from the west, or an occidentalist

MAURITANIA being west of Carthage and Phoenicia (Geogr. Sacr., 1, 25.—Op., vol. 2, c. 496.)

MAURITANIA, a country of Africa, on the Mediterranean, now the empire of French Morocco, was bounded on the north by the Straits of Gibraltar and the Mediterranean, on the east by Numidia, on the south by Gétulia, and on the west by the Atlantic. It was, properly speaking, in the time of Bocchus the betrayer of Jugurtha, bounded by the river Mulucha or Molochath, now Malva, and corresponded nearly to the present kingdom of Fez; but, in the time of the Emperor Olausius, the western part of Numidia was added to this province under the name of Mauritania Cesareana. The kingdom of Mauritania being called Tingitana, from its principal city Tingis, or Old Tangier, on the west of the straits. (Plin., 5, 1.—Cass., Bell. Civ., 1, 6.—Id., Bell. Afric., 22.—Mela, 1, 5.—Id., 3, 10.—Vid. Mauri, and Maurusi.)

MAURUS TERENTIUS, a Latin grammarian, generally supposed to have been an African by birth. The time when he flourished has been made a matter of dispute. Vossius supposes him to have been the same Terentianus who is addressed by Martial as the prefect of Syene in Egypt. (Ep., 1, 87.) Terentianus declares himself a contemporary of Septimius Sertenus, which latter poet Wernsdorff refers to the age of Vespasian. (Poet. Lat. Min., vol. 2, p. 249.) He at all events lived during or before the time of St. Augustine, since he is mentioned by the latter in terms of the highest respect. (De Civ. Dei, 5, 2.—De Util. Græc., c. 17.) Terentianus, when advanced in life, wrote a poem on letters, syllables, feet, and metres ("De Literis, Syllabis, Pedibus et Metris Carmen"), in which these dry topics are handled with all the art of which they are susceptible. This poem is extremely useful for a knowledge of Latin Prosody: the author unites in it example and precept, by employing, for the explanation of the various metres, verses written in the very measures of which he treats. The most recent editions of the poem in question are that of Santen, completed by Van Lennep, Traj. ad Rhen., 1825, and that of Lachmann, Lips., 1836. It is given also among the Latin grammarians, ed. Putsch., p. 2383, seqq., and in the Corpus Poetiarum of Maittaire.

MAUWISHI, a poetical name for the people of Mauritania.

MAUSOLUS, a prince of Caria, the brother and husband of Artemisia. His death was deeply lamented by the latter, who caused a splendid monument to be erected to his memory. (Vid. Artemisia I., Halicarnassus, and Mausoleum.)

MAUSOLEUM, I. (Μαυσολέων, scil. μνημείων, "the tomb of Mausolus"); a magnificent monumental structure, raised by Artemisia in memory of her husband Mausolus, king of Caria, in the city of Halicarnassus, B. C. 352. Of this monument, once reckoned among the wonders of the world, no remains now exist; but, according to Pausanias (36, 11), it was very well preserved. Its base had been nearly square in its plan, measuring 113 feet on its sides, and 93 on each of its ends or fronts, and to have been decorated with a peristyle of 36 columns (supposed by Hardouin to have been 60 feet high or more), above which the structure was carried up in a pyramidal form, and surmounted at its apex by a marble quadriga executed by Pythis, who, according to Vitr. (3, 3, 1), was the architect with Sthenon in the building. It was further decorated with sculptures and reliefs by Scopas, Bryaxis, Timotheus, and Leochares. The entire height was 140 feet.—II. The Mausoleum erected at Babylon by Alexander the Great, in honour of Hephastion, appears to have been still more magnificent, and somewhat extravagant in its decorations, as far as can be gathered from the account given of it by Diodorus Siculus (17, 115). It
M A X

was adorned below by gilded rostra or beaks of 240 ships, and every successive tier or story was enriched with a profusion of sculpture, representing various animals, fighting centaurs, and other figures, all of which were gilded; and on the summit were statues of sires, made hollow, in order that the singers who chanted the funeral dirge might be concealed within them.—III. The Mausoleum of Augustus at Rome was a structure of great magnitude and grandeur, and circular in plan, and stood in the Campus Martius, where remains of it yet exist in the two concentric circles forming the first and second stories of the building, and the vaulted chambers between, which supported the first or lowest terrace. Of these terraces there were three; consequently, four stages in the building, gradually decreasing in diameter, the uppermost of which was crowned with a colossal statue of the emperor. The terraces themselves were planted with trees. From traces of something of the kind that yet remain, it is conjectured that there was originally an advanced portico attached to the building, in the same manner as that of the Pantheon, though considerably smaller in proportion to the rest of the plan, as it could not have been carried up higher than the first stage of the building. According to Hirt's representation of it, in his "Baukunst bei den Alteren," it was a Corinthian hexastyle, advanced one inter-column before the side-walls connecting it with the circular parts of it.—IV. The Mausoleum of Hadrian was also of great magnitude and grandeur, and, like the preceding, circular in plan. It is now converted into the Castle of St. Angelo, in which shape it is familiar to almost every one. This is a work of most massy construction, and originally presented an unbroken circular mass of building, erected upon a larger square base, lofty in itself, yet of moderate height in proportion to the superstructure, which was about two-thirds of its diameter. This nearly solid rotunda, which was originally coated with white marble, had on its summit numerous fine statues, which were broken to pieces and the fragments hurled down by the soldiers of Belisarius upon the Goths, who attempted to take the building by storm. Neither are any remains now left of the uppermost stage of the edifice, which assumed the form of a circular peripteral temple, whose diameter was about four-fifths of the large diameter of the building. In tradition, its peristyle consisted of the twenty-four beautiful marble Corinthian columns which afterward decorated the Basilica of San Paolo fuori delle Mura (partially destroyed some few years ago by fire, but now nearly restored); and its tholos or dome was surmounted by a colossal pine-apple in bronze, now placed in the gardens of the Vatican. (Encycl. Us. Knoe!, vol. 15, p. 21.)

MAXIMIANUS, MARCUS AURELIUS VALERIUS, son of Maximianus, the colleague of Diocletian in the empire, was living in obscurity, when, after his father's abduction, and the elevation of Constantine to the rank of Caesar, he became envious of the latter, and dissatisfied with the neglect which he experienced from Galerius. Accordingly, he stirred up a revolt among the pretorian soldiers at Rome, and was proclaimed emperor A.D. 306. Galerius, who was then in the East, sent orders to Severus Cesar, who had the command of Italy, to march from Mediolanum to Rome with all his forces, and put down the insurrection. In the mean time, Maximianus, who lived in retirement in Campania, came to Rome, and was proclaimed emperor and colleague with his son, A.D. 307. Severus, on arriving with his troops near Rome, was deserted by most of his officers and soldiers, who had formerly served under Maximianus, and were still attached to their old general. Upon this he retired to Ravenna, which he soon after surrendered to Maximianus, on being promised his life and liberty; but Maximianus put him to death. The latter then proceeded to Gaul, to form an alliance with Constantius, leaving Maxentius at Rome. Galerius soon after arrived in Italy with an army; but, not finding himself strong enough to attack Maxentius in Rome, and fearing the same fate as that of Severus, he made a precipitate retreat. Maxentius, returning to Rome, reigned for some months together with his son, but afterward quarrelled with him, and took refuge with Galerius, who acknowledged him as emperor. Galerius, whose territories were then so small as to have less than six emperors in his time, sent Messengers to Galerius, Maximianus, Constantine, Maxentius, Licinius, and Maxentius Daza. In the following year, A.D. 309, Maxentius was proclaimed consul at Rome, together with his son, M. Aurelius Romulus, who, in the ensuing year, was accidentally drowned in the Tiber. Maxentius possessed Italy and Africa; but Africa revolted, and the soldiers proclaimed as emperor an adventurer of the name of Alexander, who reigned at Carthage for three years. In the year 311, Maxen-
tius sent an expedition to Africa, defeated and killed Alexander, and burned Carthage. Proud of his success, for which he enjoyed a triumph, Maxentius made great preparations to attack Constantine, with whom he had till then preserved the appearance of friendship. Constantine moved from Gaul into Italy, advanced to Rome, and defeated Maxentius, who was drowned in attempting to swim his horse across the Tiber. A.D. 312. (Encycl. Us. Knowledge, vol. 15, p. 22.)

MAXIMINUS I., MARCUS VALERIUS, native of Panonia, born of obscure parents. He served in the Roman armies with distinction, and was named by Diocletian his colleague in the empire, A.D. 286. The remainder of his life is given under Diocletianus, Constantinus, and Maxentius. He was put to death by Constantine, at Massilia, for having conspired against the emperor. After his death, he was stoned at that time, and was supposed to have been driven out of the city. The events of his life are narrated under Diocletianus, Constantius, and Constantinus. According to historians, he died A.D. 311, of a loathsome disease, which was considered by his contemporaries and himself as a punishment from heaven for his persecution of the Christians. (Encycl. Us. Knoe!, vol. 15, p. 29.)

MAXIMINUS II., MAURICIUS AUGUSTUS, was originally a Tituli soldier. He was of gigantic size and great bodily strength, and, having entered the Roman army under Septimius Severus, was rapidly advanced for his bravery. Alexander Severus gave him the command of a new legion raised in Pannonia, at the head of which he followed Alexander in his campaign against the Germans, when, the army being encamped on the banks of the Rhine, he conspired against his sovereign, and induced some of his companions to murder him in his tent, as well as his mother Mammea, A.D. 235. Maximinus, being proclaimed emperor, named his son, also called Maximinus, Caesar and his colleague in the empire. He continued the war against the Germans, and devastated a large tract of country beyond the Rhine; after which he repaired to Illyricum to fight the Dacians and Sarmatians. But his cruelty and rapacity raised enemies against him in various parts of the empire. The province of Africa revolted under a man named Gordianus, who was soon after acknowledged by the senate and people of Rome, A.D. 237. But Capellianus, governor of Mauritania for Maximinus, defeated Gordianus and his son, who both fell in the struggle, after a nominal reign of little more than a month. Rome was in consternation at the news, expecting the vengeance of Maximinus. The senate proclaimed as emperor Constantius Pupienus Maximus and Decius Julius Albinus; but the people insisted on a nephew of the younger Gordianus, a boy twelve years of age, being associated with them.
Maximus marched out of Rome with troops to oppose Maximinus, who had laid siege to Aquileia. The latter, however, experienced a brave resistance from the garrison, and, as one of that city, which excited still more its natural cruelty, and the soldiers, becoming weary of him, mutinied and killed both him and his son, A.D. 238. Maximinus, the father, then 65 years old, was a ferocious soldier and nothing else, and wonderful tales are related of his voracity, and the quantity of food and drink which he swallowed daily. His son is said to have been a handsome but arrogant youth. (Jul. Capit., Vit. Maxim. Encycl. Us. Knowl., vol. 15, p. 23.)—I. Dalmatian War, an Illyrian peasant, served in the Roman armies, and was raised by Galerius, who was his relative, to the rank of military tribune, and lastly to the dignity of Caesar, A.D. 303, at the time of the abdication of Dioclesian and Maximian, when he had for his share the government of Syria and Egypt. After the death of Galerius, A.D. 311, Maximinus and Licinius divided his dominions between them, and Maximinus obtained the whole of the Asiatic provinces. Both he and Licinius behaved ungratefully towards the family of Galerius, their common benefactor. Valeria, the daughter of Diocle- sian and widow of Galerius, having escaped from Li- cinius into the dominions of Maximinus, the latter of- fered to marry her, and, on her refusal, banished her, with her mother, to the deserts of Syria. He perse- cuted the Christians, and made war against the Ar- menians. A new war having broken out between Li- cinius and Maximinus, the latter advanced as far as Adrianopolis, but was defeated, fled into Asia, and died of poison at Tarasus, A.D. 313. (Encycl. Us. Knowl., vol. 15, p. 24.)

**Maximus. I. Magnus**, a native of Spain, who pro- claimed himself emperor A.D. 383. The unpopularity of Gratian favoured his usurpation, and he was ac- knowledged by the troops. Gratian marched against him, but he was defeated, and soon after assassinated. Maximus refused the honors of burial to the re- mains of Gratian; and, when he had made himself master of Britain, Gaul, and Spain, he sent ambassa- dors into the East, and demanded of the Emperor Theodosius to acknowledge him as his associate on the throne. Theodosius endeavoured to amuse and de- lay him, but Maximus resolved to enforce his claim by arms, and, crossing the Alps, made himself master of Italy. Theodosius, however, marched against and be- sieged him in Aquileia, where he was betrayed by his own soldiers. He was defeated by St. Paulinus, a Roman senator, twice consul, and of patrician origin. He caused the Emperor Valentinian III. to be assassinated, and ascended the throne, but was stoned to death, and his body thrown into the Ti- ber by his own soldiers, A.D. 455, after a reign of only 77 days. (Procop., Bell. Vand.—Sidon., Apoll., 1, 23.)—III. Tyrius, a native of Tyre, distinguished for his eloquence, and who obtained some degree of celebrity. He was one of the first teachers of philosophy in the Western church. According to Suidas, he lived under Com- modus; but, according to Eusebius and Syncellus, un- der Antoninus Pius. The accounts of these chronolog- ers may be reconciled by supposing that Maximus flourished under Antoninus, and reached the time of Commodus. Joseph Scaliger believed that Maximus was one of the instructors of Marcus Aurelius; and that emperor, in fact, mentions Maximus among his preceptors. Judging of the circumstances, we may ask from a passage in Capitolinus. (Vit. Anton., Phil., c. 3.) Although he was frequently at Rome, Maximus Tyrius probably spent the greater part of his time in Greece. We have from him, un- der the title of Discourses (or Dissertations), Λόγοι (or Διαλέξεις), forty-one treatises or essays on various subjects of a philosophical, moral, and literary nature. That he possessed the most captivating powers of elo- quence, sufficiently appears from these elegant produc- tions; but they are of little merit on the score of ideas. They are for the most part, written upon Platonic topics, but sometimes lean towards scepticism. The following may serve as a specimen of the topics discus- sed by this writer. Of God, according to Plato's idea.—If we must return Injury for Injury.—How we may distinguish a Friend from a Flatterer.—That an Active is better than a Contemplative Life. (The con- trary position is maintained in another discourse.)— That the Farmer is no more useful to a State than the Sol- dier.—That the liberal Arts contribute to Virtue. —Of the End of Philosophy.—That there is no greater Good than a good Man.—Of the Demon of Socrates.— Of the Beneficial Effects of adverse Fortune.— Whether the Maladies of the Body or the Mind be more severe.—The best edition of Maximus Tyrius is that of Davis, Lond., 1740, 4to, enlivened with some excellent observations by Markland. It had been pre- ceded by a smaller edition in 8vo, Cantab., 1703, also by Davis. The larger edition was reprinted at Leip- zic in 1774, in 2 vols. 8vo, under the editorial care of Reiske. (Scholl, Hist. Lit. Gr., vol. 4, p. 285, seqq.)—IV. A native of Ephesus, and philosopher of the New-Platonic school. According to Eunapius (p. 86, seqq.), he was, through the recommendation of his master Zédesius, appointed by Constantinian preceptor to Julian. According to the Christian historians, how- ever, he introduced himself to Julian, during his Asi- tic expedition, at Nicomedia. By accommodating his predictions to the wishes and hopes of the emperor, and by other parasitical arts, he gained entire posses- sion of his confidence. The courtiers, as usual, fol- lowed the example of their master, and Maximus was daily loaded with new honours. He accompanied Ju- lian in his expedition into Persia, and there, by the as- sistance of divination and flattery, persuaded him that he would rival Alexander in the glory of conquest. The event, however, proved as unfortunate to the phi- losopher as to the hero; for, Julian being slain by a wound received in battle, after the short reign of Jo- vian Maximus fell under the displeasure of the emper- ors Valentinian and Valens, and, for the imaginary crime of magic, underwent a long course of confine- ment and suffering, which was not the less truly perse- cution because they were inflicted upon a pagan. At last Maximus was sent into his native country, and there fell a sacrifice to the cruelty of the proconsul Festus. (Ammian. Marcell., 29, 1.—Socr., Hist. Exect., 3, 25.—Cod. Theod. 2, 16.—Hist. Pers., vol. 2, p. 70, seqq.)—V. An ecclesiastical writer, at first chief se- cretary to the Emperor Heraclius, and afterward abbot of a monastery at Chrysopolis, near Constantinople. The Greek church has numbered him among the con- fessors, from his having resisted all the attempts that were made to draw him over to the Monothelites, for which he was banished to Colchis, where he died A.D. 682. Among other works, we have from him a spec- tacle of the triumphs of Plautus, which are called κεφάλια θεολογίας, ήτοι κεφάλαια εις διάφορων βιβλίων τον τε καθ’ ημας κατ’ των διάφων. It differs from the Anthology of Stobaeus in containing selec- tions also from the scriptures and from ecclesiastical writers. The works of Maximus were edited by Com- bef, Paris, 1675, 2 vols. fol.—VI. An ecclesiastical, writer, a bishop of Turin (Augusta Taurinorum), who died subsequently to 465 A.D. He was one of the most eloquent, if not the most celebrated, of the Western Church. Many of his homilies remain.

**Maxica.** Vid. Cesareas ad Argemum.

**Maxicæs, a people of Sarmatia, in the vicinity of the Pulsus Moris.** (Plin., 6, 7.)

**Maxicæs, a people of Mauritania Caesariensis,** also called, by some writers, Maxyes, and Machines. (Steph. Byz., v. —Ammian. Marcell., 29, 25.— Suci., Ner., c. 91.)
and resolved to put her children (seven of each sex) to death. The children fled to the temple of Juno, but were pursued and slain at the altar. The anger of heaven was manifested by a plague, and, by the advice of an oracle, the expiatory rite just mentioned was instituted. (Pausanias, ap. Schol. ad Epip., Med. 7, 2. 3, 7.) It was even said that the Corinthians, by a bribe of 6 talents to Euripides, laid the guilt of the murder of her children on Medea herself. (Schol., l. c.) There was also a tradition that Medea resided at Corinth, and that she caused a famine to cease by sacrificing to Ceres and the Lemnian nymphs, and that Jupiter made love to her, but she would not hearken to his suit, fearing the anger of Juno, who therefore rewarded her by making her children immortal. It is said that she had vainly attempted to do herself, by biting them to death, as a devoted goddess, whose priestess she probably was in this myth. (Schol. ad Pind., Ol., 13, 74. — Pausan., 2, 3, 11.) It is also remarkable, that the only place besides Corinth in which there were legends of Medea was Corcyra, an island which had been colonized by the Corinthians. (Hes. Fr., 137.) Medea himself was, according to Eudemos (ap. Schol. ad Pind., l. c.), the son of Helius, a king of Corinth, whom Medea was supposed to have killed in his sire's temple, and to have crawled into the arms of Juno, who rewarded her with immortality, and made her a devotee of the goddess. (Ap. Pau., 1, 31.)

Medea, a country of Upper Asia, the boundaries of which are difficult to determine, as they differed at various times. In the time of Strabo, it was divided into Great Media and Atropatene. Great Media, which is a high table-land, is said by ancient writers to have had a good climate and a fertile soil; an account which is fully confirmed by modern travellers. It was separated on the west and southwest from the low country, watered by the Tigris and Euphrates, by a range of mountains known to the ancients under the name of Zagros and Parachortas. Xenophon, however, appears to include in Medea all the country between the Tigris and Mount Zagrus. (Strabo, 2, 4, 27.) On the east it was bounded by a desert and the Caspian Mountains (the modern Elburz range), and on the north and northwest by the Cadusii, Atropatene, and the Maïtieni, thus answering, for the most part, to the modern Irak Ajemi. Atropatene, on the other hand, which corresponds to the modern Azerbijejan, extended as far north as the Araxes (now Araz). It was much less fertile than Great Media, and does not appear to have had been included in the Medean territory. It derived its name from Atropatene, who successfully opposed the Macedonians, and established an independent monarchy, which continued till the time of Strabo, notwithstanding its proximity to the Armenian and Parthian dominions. The principal town of Great Media was Agbatana or Ecbatana, the summer residence of the Persian kings. (ap. Pausan., 1, 7.) In Great Media also was the Nymph of the plain, celebrated for her wonderful beauty, and who was considered in ancient times the best in Asia. Arrian informs us, that there were 50,000 horses reared in this plain in the time of Alexander, and that there were formerly as many as 150,000. (Herod., 3, 106. — Id., 7, 40. — Arrian, Exp. Al., 7, 13. — Strabo, 555. — Ammian. Marcell., 23, 6.) The mountainous country in the southwestern part of Great Media was inhabited by several warlike tribes, who maintained a direct war against the Persian monarchy. Strabo mentions four tribes in particular; the Mardi, bordering on the northwest of Persia; the Usii and Elymaei, east of Susiana; and the Cossaei, south of Great Media. The King of Persia was obliged to pass through the country of the latter whenever he visited Ecbatana, and could only obtain a free passage by the payment of a considerable sum of
money. The Cossæi were defeated by Alexander, but they never appear to have been completely subdued by the Macedonians.—According to Herodotus (1, 101), the Medes were originally divided into six tribes, the Basm, Paretacme, Arzhang, Arzanti, Butulis, and Magi. They were originally called Arii (Herod., 7, 62); which word appears to contain the same root as Ar-ti, the ancient name of the Persians. (Herod., 7, 61.) It is not improbable that this name was originally applied to most of the Indo-Germanic nations. Tacitus speaks of the Arii as one of the most powerful of the German tribes (Germ., 43); and India proper is called in the most ancient Sanscrit works, and appears to be located in the province of the Aryans contained in the province of Arians, and is still employed in the East as the proper name of Persia, namely, Iran. (Vid. Aria.)—Media originally formed part of the Assyrian empire, but its history as an independent kingdom is given so differently by Herodotus and Ctesias, as to render it probable that the narrative of Ctesias must refer to a different dynasty in eastern Asia. Ctesias makes the Median monarchy last 322 years; and, as Media was conquered by Cyrus about B.C. 560, it follows that the Median monarchy would commence, according to his account, about B.C. 842. Herodotus, on the contrary, assigns to the Median monarchy a period of 128 years, which, including the 28 years during which the Scyths had possession of the country, would place the commencement of the Median monarchy B.C. 716. The founder of this monarchy was Araxes, according to Ctesias, who reckons eight kings from him to Astyages. According to the account of Herodotus, however, there were four kings of Media: 1. Dejoces, who reigned B.C. 716-657. —2. Phraortes, B.C. 657-635, greatly extended the Median empire, subdued the Persians and many other nations, but fell in an expedition against the Assyrans of Nineveh (Nineveh).—3. Cyaxares, B.C. 633-585, completely organized the military force of the empire, and extended its boundaries as far west as the Halys. In an expedition against Nineveh, he was defeated by the Scyths, who had made an irruption into the western Asia, and were deprived of his kingdom for 28 years. After the expulsion of the Scyths, he took Nineveh, and subdued the Assyrian empire, with the exception of the Babylonian district (Βαβυλωνία μοίρη).—4. Astyages, B.C. 595-560, who was dethroned by his grandson Cyrus, and Media reduced to a Persian province. The history of the rise of the Persian monarchy is related differently by Xenophon, who also makes a fifth Median king, Cyaxares II., succeed Astyages.—The Medes revolted during the reign of Darius II., the father of the younger Cyrus, about B.C. 408, but were again subdued. (Herod., 1, 130.—Xen., Hist. Gr., 1, 2, 19.) They do not appear, after this time, to have made any farther attempts at recovering their independence. On the downfall of the Persian empire they formed a part of the kingdom of the Medes and Persians, and subsequently subject to the Parthians. (Encycl. ü. Kriegs-u. Staatsw., vol. 1, p. 54.)

MEDiolinum, I. a city of Cisalpine Gaul, among the Insubres, now Milan. According to Livy (5, 34), it was founded by the Insubres, and called by them Mediolanum, from a place of the same name among the Ædui in Gaul. (Compare Pliny, 3, 17.—Ptol., p. 63.) This city is named for the first time in history by Polybius (2, 34), in his account of the Gallic war, as the island of Ægiali in the bay of Cn. In 1, 10, 22, it was described to be a city of the Ægiali, which was followed by the submission of the Insubres themselves. (Oros., 4, 13.—Plut., Vit. Marcell.) It was situate on a small river, now the Olona, in a beautiful plain between the Ticinum and Tresino, and the Adda or Adda. In the vicinity of this city, to the west, D'Avillo and others locate the Raudic Campi, where Marius defeated the Cimbri; but Mannert places them near Verona. In Strabo's time, Mediolanum was con- sidered a most flourishing city. (Strabo, 213.—Compare Tacit., Hist., 1, 70.—Suet., Aug., c. 20.—Plin., Ep., 4, 13.) But its splendour seems to have been greatest in the time of Ausonius, who flourished towards the end of the 4th century. According to him, it was the rank of the sixth city in the Roman empire. Propocius, who wrote a century and a half later, speaks of Mediolanum as one of the first cities of the west, and as inferior only to Rome in population and extent. (Rer. Got., 2, 8.) In it was also established the gold and silver coinage of the north of Italy. At a later period, the frequent inroads of the barbarians of the north compelled the emperors to select, as a place of refuge, a city which was the strongest and best situated. The choice fell on Mediolanum. Here, too, Maximian resigned the imperial diadem (Eutrop., 9, 27), and the famous St. Ambrose established the see of a bishopric. Although subsequently plundered by Attila (Jornandes, c. 42), it soon revived, and under Odoacer became the imperial residence. In its vicinity was fought the battle which put Theodoric, king of the Ostrogoths, in possession of Italy, and Mediolanum under this prince became second only to Rome. (Procop., Rer. Got., 2, 8.) It met with its downfall, however, when, having sided with Belisarius, and having been besieged by the Goths and Burgundians, it was taken by the latter, and 300,000 of the inhabitants, according to Procopius, were put to the sword (2, 21). It never, after this severe blow, regained its former eminence, although in the middle ages it became a flourishing and opulent place of trade. (Mannert, Gespr., vol. 1, p. 176, sqq.—Cromer's Anc. Italy, vol. 1, p. 51.)—II. A town of the Gugerni in Germania Inferior, corresponding, as is thought by Olver and Cellarius, to the present village of Meudon.—III. A city in Moesia Superior. (Cod. Theod., 1, 8, de jur. fasc.)—IV. A town of the Ordovices in Britain, near the present town of Ellesmere.

Mediomatrici, a people of Gallia Belgica on the Mosella or Moselle. The Treviri were their neighbours on the north. Their chief town was Divodurum, afterward Mediomatrici, now Metz. They were a powerful nation previous to their reduction by the Romans, and their territory corresponded to what is now le pays Messein. (Caes., B. G., 4, 10.—Plin., 4, 17.—Tacit., Ann., 1, 63.—Id., Hist., 4, 1.)

Mediterraneum Mare (or Midland Sea), the Mediterranean, a sea between the Straits of Gibraltar to the west and the Dardanelles and Syria to the east. It was anciently called "The Sea," or "The Great Sea," by the Greeks. The Greeks on the other hand, do not appear to have had any general name for it. Herodotus calls it "this sea" (1, 185); and Strabo, "the sea within the columns," that is, within the Straits of Gibraltar (Strab., 401.). Mela calls the whole sea "mare nostrum," "our sea," and observes that different parts had their several names. Pliny appears to have no general appellation for it. The term Mediterranean is not applied to this sea by any classical Latin writer, but, instead of it, the term "Mediterranean," on the other hand, do not Mela elsewhere, with Mela, call it nostrum. We will return to this subject at the close of the article.—The Mediterranean is comprised between the parallels of 30° 15' and 45° 50', and the meridians of 5° 30' W. and 30° 10' E. The distance from Gibraltar to the farthest shore of Syria is 2000 miles, and the narrowest part from Sicily to Africa is 70 miles across. Including the islands of the Mediterranean, it is 30,000 to 35,000 square miles. On the shores of this sea have been transacted the most important events in the history of mankind, and its character seems to mark it as the theatre best adapted to the complete and rapid civilization of the race. From the great diversity of soil and productions, under a varied and favourable climate, the colonists, from whatever points they first proceeded, would soon acquire those different habits under which their
several energies and capabilities would be developed. The comparative shortness of the distances of the several places, rendering navigation easy and pleasant in small and imperfect vessels, would, by facilitating intercourse from an early period, tend to diffuse and promote civilization; while commerce, by bringing together men of different habits, manners, and languages, and thus circulating practical information, would supply the materials for the perfection of the arts and sciences. The navigation of the Mediterraneans must no doubt be of very early date. The story of Minos destroying pirates (Thucyd., 1, 4) takes for granted the fact, that there must have been merchant vessels carrying something worth plundering from the earliest recorded period. If, with Strabo, we allow the accuracy of Homer's descriptions, it by no means follows that the Greeks knew everything that could have been known to every other nation at that time; and this is particularly the case in the columns of Sicily, and Syria, a distance of upward of 1200 miles; and we may conclude that occasional voyages of that enterprising people had already extended the bounds of knowledge far beyond these limits. If the precise time of the discovery of places, lying, as it were, in the thoroughfare of this sea, is so uncertain, the history of the places in the deep bays of the northern shores must be still more obscure: we shall therefore give at a slight sketch of the geography of this sea from Strabo, who wrote in the first century of our era.—The stadium adopted by Strabo was that of Eratosthenes, 700 stadia making 1° of latitude or longitude on the equator, or 60 nautical miles; hence a stadium is 0.0857 of a nautical mile, the mile being about 6082 feet. The Mediterranean was divided into three basins: the first comprised the sea between the Columns of Hercules and Sicily; the second, between Sicily and the coast of the Euxine, which extends the third, between the shores of Syria. Strabo supposed that the parallel of latitude of 36° passed through the Sacred Promontory (Capo St. Vincent) between the Pillars of Hercules, dividing this part of the Mediterranean in the middle of its breadth, which was believed by navigators to be 5000 stadia, or 4281 nautical miles, from the Gulf of Lyons to the shores of Africa, but which measures only 300. The sea between Sicily and Syra lies altogether to the north of this parallel; and hence, as the configuration of the European shores seems to have been tolerably good, the coast of Africa must have been proportionately distorted. This parallel was carried through the straits of Sicily, Rhodes, and the Gulf of Issus, now the Gulf of Scanderoon. In consequence of the above supposition, he placed Massilia (Marseilles) to the southwest instead of the northward of Byzantium. He supposed Sardinia and Corsica to lie north and south instead of north and south, and made the distance of Sardinia from the coast of Africa 2400 stadia, or 206 miles instead of 100, which is the true distance. From the Columns of Hercules to the Straits of Sicily he considers to be 12,000 stadia, or 1028 miles: it is only about 800. From Pachynum (Cape Passaro) to the western extremity of Crete he reckoned 4500 stadia, or 390 miles: it measures 405; and he supposed the length of Crete 2000 stadia, or 171 miles; the true length being 140. He supposed that a line drawn through Byzantium, the middle of the Propontis, the Hellespont, and along the capes of the coast of Asia Minor, would coincide with the meridian: this error placed Byzantium too far to the north, and not far enough to the east. From Alexandria to the east end of Crete he considered 3000 stadia, or 257 miles; it measures about 290. From Alexandria to Rhodes he made 3600 stadia, or 308 miles: it measures 320.—Many of the latitudes given by Strabo are very near that, in which those of Massilia and Byzantium excepted, the former being 3° 43' too little, and the latter 2° 10' too much. The longitudes, which were at that time referred to the Sacred Promontory as the first meridian, and the extreme western point, as was believed, of the known world, are without exception too small; that of Carthage, the nearest to the truth, being 1° 9', and Alexandria, the most erroneous, 6° 40' too small. (Encycl. Useful Knowl., vol. 15, p. 59, seqq.)—The Mediterranean Sea afforded a very frequent topic of consideration to the ancient writers. Democritus, Diogenes, and other philosophers, have extended the numerous seas, which are mentioned, to the number of 140. Homer's ships were the ancient vessels of the Mediterranean; the only vessels of the same name which are now known are those used in the Mediterranean as far as the temple of Jupiter Ammon. This doctrine was maintained also by Xanthus the Lydian, Strabo, and Eratosthenes. The ancients appear to have been led to this conclusion by observing in various parts of the Mediteranean, that the ships of navigation, which ventured beyond the mouth of the sea. They found here shells, pebbles evidently rounded or worn smooth by the action of water, incrustations of salt, and many salt lakes. Some of these appearances were particularly frequent on the route through the desert to the temple of Ammon. (Herod., 2, 12.—Plut., de Is. et Os. —Strab., 809.—Mela, 1, 6.—Solin., 26.—Seidel., ad Eratost., fragm., p. 29.) The ancient writers mainly, which have been given to the commerce of the ancients, could have become so famous if the only approach to them had always been over vast and dangerous deserts. They insisted that the Oases had all originally been islands in the earlier and more widely extended Mediterranean. In this remote period, according to them, there existed as yet no communication between the Pontus Euxinus and the Mediterranean Sea (vid. Lectionis, nor between the latter and the Atlantic. The waters of the Euxine were greatly mistaken, and the region of the Hesperides was supposed to exist beyond the Strait of Gibraltar, and Eratosthenes believed that Menelaus had sailed over this narrow passage, which is now the Isthmus of Suez. When the waters of the Euxine forced a passage into the Mediterranean (vid. Cynae), the great influx of water opened another outlet for itself through what were called by the ancients the Pillars of Hercules, Spain and Africa having been previously joined. In this tremendous convulsion, the ancient land of Lectionis is thought to have been inundated, and to have sunk in the sea, leaving merely the islands of the Archipelago, its mountain-tops, to attest its former existence. According to Diodorus Siculus (5, 47), the inhabitants of Samothrace had a tradition that a great part of their island, as well as of Asia, was ravaged and laid under water by this inundation, and that, in fishing near their island, fragments of temples and other buildings were frequently rescued from the waves. (Compare Diod. Sic., 5, 82.—Strab., 85.—Platt., de Leg., 3, p. 677, Opp., ed. Bip., vol. 8, p. 106.—Plin., 2, 80.—Philon., de Mund. non corrupt., p. 959.—Lyell's Principles of Geology, vol. 1, p. 25, seqq.)—Before bringing the present article to a close, it may not be amiss to enter more fully into one part of the subject, on which we are merely touched at the commencement, the different appellations, namely, the number of seas, which are applied to this sea. Herodotus, as we have already remarked, calls it “this sea,” γενέ να τῶν Ἡλεοῦσαν (4, 39).—Compare Arist., Meteor., 2, 2.—Appian, Schweigh. ad Pref., c. 1.—Wesseling, ad Diod. Sic., 4, 18). Polybius, ἡ δὲ Ἡλεοῦσα (3, 5 K

809
MEG

39.—Compare Aristot., de Mundo, c. 3—Gellius, N. A., 10, 7.) Diodorus Siculus, ἐὰν καθ᾽ ὅψιν θάλασσα (4, 18.—Compare Polyb., 3, 37.—Strab., 83.—Appian, Bell. Mithradat., c. 93.—Maximus Tyrius, 14, 2.) Maximus Tyrius, ἔδει τὰς θάλασσας (41, 1.) Strabo, Gorg., 365. Compare Marc. Hild. de Piscis. Perpl., p. 65.—Agath., 2, 4.) Aristotle, ἵνα τοῖς Ἱππαλκείοις συνόν θάλασσα (Meteor., 2, 1.—Compare Dion. Hal., 3, 1.—Plut., Vit. Pompe., c. 25.) The Latin writers in general, as we have already said, give it the appellation of Nonstrum Mare (Sallust., Jug., c. 17.—Mein, 1, 1, 5.—Liv., 26, 4.—Cas., B. G., 5, 1.) Avien. Or. Marit., v. 36.—Compare Duker, ad Flor., 3, 6, 9.—Curt. ad Sallust., B. Jug., c. 18.) Pliny says, "There are four Medes, (cf. Mag., 3.) pillars, Mare integundum (4, 2.) Later writers, not classical, have Mare Mediterraneum. (Solin., c. 22.) Isidors gives the following explanation of this name: "Quia per medium terram usque ad Orientem perpetuit, Europam et Africam Asiæque distans." (Orig., 13, 13.—Compare Prazian, Peregr., 52.) Orosius says, "Mare nostrum quod Magnum generaliter dicius;" and Isidors remarks, "quia extera maria in continuo et quatuor " (Orig., 13, 16.—Compare Hardouin, ad Plin., 9, 18.—Burman, ad Val. Place, Arg., 1, 50.) According to Polybius (3, 42), that part of the Mediterranean which lay between the Pillars of Hercules and the Rhone was called Σαρδόνιον πέλαγος, while Aristotle calls the part between the Pillars and the Sardinia Σαρδόνιος (Meteor., 2, 1.—Id. de Mund., 3.—Eratost., ap. Plin., 3, 10.) Strabo gives the part between the Pillars and the Pyrenees the name of Ἡπόποτος πέλαγος (122.—Compare Agathem., 1, 3.—Dinys. Peregr., v. 69.—Nisich, Blm., ed. Spmhn., p. 3.) Pliny remarks, "Hispanum mare, quatenus Hispanias aliis; ab aliis Ibericum aut Balericum" (3, 2.—Id. ibid., 4, 34.—Compare Solin., c. 23.—Ampel., c. 7.—Plut., 2, 6.) According to Zonaras (Annal., 8, p. 406), the sea to the east of the Pyrenees was called the Sea of the Bebrycians. (Compare Marshall, ad Muz. Tyri., 32, 3.—Ubert., Geogr., vol. 2, p. 247, seqq., in nota.) 

Meditriana, the goddess of healing, whose festival, called Meditriaiia, was celebrated at Rome and throughout Latium on the 5th day before the Ides of October. (Compare: the Ancient Calendar given by Gruter, p. 133.) On this occasion new and old wine were poured out in libation, and tasted, "medicamenti causa." Compare the explanatory remarks of Festus: "Meditriaiia dicta haec de causa. Mos erat " αὐτῆς, quo die quis primum gustaret medicum, diece omnium gratia; veteri novum vinum bibere; veteri morbo medicum. " A quisibus verba Meditriaiiae de nomen captum, ejusque sacra Meditriaiia dicta sunt." (Festus, s. v.—Consult Dacier, ad loc.) 

Medoici, a people of Venetia, in Cisalpine Gaul, noticed only by Strabo (216.) From the affinity which their names bear to that of the Meducus or Brinta, it seems reasonable to place them near the source of that river, and to place them in the district of Bassocca. (Cramer's Anc. Italy, vol. 1, p. 125.) 

Medoicus or Meducus, I. Major, a river of Venetia, now the Brenta.—II. Minor, a river of Venetia, now the Bachiglione.—Both these rivers rise in the territory of the Euganei, and fall into the Adriatic below Venice. Patavium was situated between these two streams, but nearer the Medoicus Minor. (Plin., 3, 16.—Liv., 10, 2.) 

Medontiaca, the capital of Lusitania, southwest of Norba Casara; now Marvao, on the confines of Portugal. (Cas., Bell. Afric., c. 48.) 

Medon, son of Crodrus, the 17th and last king of Athens, was the first of the perpetual archons. He held the office for life, and transmitted it to his posterity: but still it would appear that, within the house of the Medontida, the succession was determined by the choice of the nobles. It is added, that the archon at this period, though holding the office for life, was nevertheless deemed a responsible magistrate, which implies that those who elected had the power of deposing him; and, consequently, though the range of his functions may not have been narrower than that of the king's, he was more subject to control in the exercise of them. This indirect kind of sway, however, did not satisfy the more ambitious spirits; and we find them steadily, though gradually, advancing towards the accomplishment of their final object—a complete and equal participation of the sovereignty. After twelve perpetual archonships, ending with that of Alcmæon, the duration of the office was limited to ten years; and it was thus divided among a wide variety of Hippiomenes, the fourth decennial archon, the house of Medon was deprived of its privilege, and the supreme magistracy was thrown open to the whole body of the nobles. This change was speedily followed by one much more important: the archonship was reduced to a single year; and, at the same time, its branches were severed, and were distributed among nine new magistrates. (Vid. Archontes.—Thirteenth History of Greece, vol. 2, p. 83.—Compare Clinton, Fast. Hell., vol. 1, p. ix., seqq.) 

Medoicus, Vid. Medoacus. 

Meduana, a river of Gallia Belgica, flowing into the Ligeris or Loire. Now the Mayenne. (Lucan, 1, 438.—Theod. Aurel., 4, carm. 6.) 

Medus, I. a river of Persia, falling into the Rogo- manes; now the Abi-Kuren. (Strabo, 729.)—By the Medium flumen in Horace (Od., 2, 9, 21) is meant the Euphrates.—II. A son of Argus and Medusa, who was famed to have given name to Media, in Upper Asia. (Vid. Medea.) 

Medusa, one of the three Gorgons, daughter of Phorcys and Ceto, and the only one of the number that was not immortal. (Apollo., 2, 4, 2.) According to one legend, Medusa was remarkable for personal beauty, and captivated by her charms the monarch of the sea. Minerva, however, incensed at their having converted her sanctuary into a place of meeting, changed the beautiful locks of Medusa into serpents, and made her in other respects hideous to the view. Some accounts make this punishment to have beenfallen her because she presumed to vie in personal attractions with Minerva, and to consider her tresses as far superior to the locks of the former. (Serc., ad Virg., Æn., 6, 289.) Apollodorus, however, gives the Gorgons snaky tresses from their birth. (Vid. Gorgones.) Medusa had, in common with her sisters, the power of converting every object into stone on which she fixed her eyes. Perseus slew her (vid. Perseus), and cut off her head; and the blood that flowed from it produced, say the poets, the serpents of Africa, since Perseus, on his return, winged his way over that country with the Gorgon's head. The conqueror gave the head to the goddess Minerva, who placed it in the centre of her aegis or shield. (Vid. Aeg.) 

Medusa, one of the Furies. (Vid. Furiae.) 

Megaleia, games in honour of Cybele. (Vid. Ludi Megalenses.) 

Megalia or Megaris, a small island in the Bay of Naples, near Neapolis, on which the Castle del Oeo now stands. (Plin., 3, 6.—Colum., R. R., 10.) 

Megalopolis, the most recent of all the Arcadian cities, and also the most extensive, situate in the southern part of the mountainous country, in fertile and fertile plains, watered by the Heliusan, which flowed from the central parts of Arcadia, and nearly divided the town into two equal parts. Pausanias informs us, that the Arcadians, having, by the advice of Epaminondas, resolved on laying the foundations of a city, which was to be the capital of their nation, deputed ten commissioners, selected from the principal states, to make the
MEGALOPOLIS.

necessary arrangements for conducting the new col-
ony. (Pausan., 8, 37.) This event took place in the 102d Olympiad, or 370-1 B.C. The territory as-
gigned to Megalopolis was extensive, since it reached as far as the little states of Orchomenus and Capylas on the northeast, while to the south and southwest it adjoined Lacoa and Messenia. (Pausan., 8, 32.) During these disturbances, the city contained about 15,000 men capable of bearing arms, according to which cal-
culation we may compute the whole population at 65,000. (Diod. Sic., 18, 70.) The Megalopolitans experienced no molestation from the Lacedaemonians as long as Thebes was able to protect them; but, on the decline of that city, and when it also became en-
gaged in the sacred war against the Phocians, they were assaulted by the Spartans, who endeavored to obtain Megalopolis as a strong point to protect their townships, but, how-
ever, were easily repelled by the aid of the Argives and Messenians. (Pausan., 8, 37.) To the Athe-
ians the Megalopolitans were likewise indebted for their protection against the attempts of Sparta, as well as for their assistance in settling some dissenions in their republic, which had led to the secession of several townships that originally contributed to the foundation of the city. (Demost., Orat. pro Megalop., p. 392.) In order to strengthen their towns, about 132 B.C., the Lacedaemonians, in league with Philip, son of Amyntas, who conciliated the favour of the Arcadians not only towards himself, but towards all his successors. (Pausan., 8, 27-28, 48.) On the death of Alexander, Megalopolis had to defend itself against the army of Polyperchon, who was en-
gaged in war with Cassander. This general vigor-
ously assaulted the city, but, owing to the bravery of the inhabitants, headed by Damis, who had served under Alexander, his attacks were constantly repulsed. (Diod. Sic., 18, 70.) Subsequently we find Megal-
opolis governed by tyrants, the first of whom was Ari-
todemus of Phigalea, whose excellent character ob-
tained for him the surname of Xiphios. Under his reign the Spartans again invaded Megalopolis, but were defeated after an obstinate conflict; Acrotatus, the son of Cleomenes, who commanded the army, be-
ing among the slain. (Pausan., 8, 27.) Some time after the death of Aristodemus, the sovereignty was again usurped by Lydiades, a man of ignoble birth, but of worthy character, since he voluntarily abdicated his authority for the benefit of his countrymen, in order that he might unite them with the Achaean confederacy. (Pausan., 8, 27-28, 44.) At this period Meg-
opolis was assailed for the third time by the Spar-
tans; who, having defeated the inhabitants, laid siege to the city, of which they would have made themselves masters but for a violent wind, which overthrew and demolishing their engines. (Pausan., 8, 27.) Not long, however, after this failure, Cleomenes, the son of Leonidas, in violation of the existing treaty, sur-
prised the Megalopolitans by night, and, putting to the sword all who offered any resistance, destroyed the city. Philopomen, with a considerable part of the population, withdrew into Messenia. (Poliy., 56-57.)—
Pausan., 8, 27.) Megalopolis was restored by the Achaean after the battle of Sellasia; but it never again rose to its former flourishing condition. The virtues and talents of its great general Philopomen added materially to its celebrity and influence in the Achaean councils, and after his death its fame was upheld by the abilities of Lycortas and Polybius, who trow in the steps of their gifted countryman, and were worthy of sharing in the lustre which had reposed on his native city. (Pausan., 8, 49-50, Polyb., 2, 40. — Id., 10, 24. — Id., 24, 9.— Plut., Vit. Philopam.) In the time of Polybius, Megalopolis was fifty city in circumference, but its population was only equal to half that of Sparta; and when Strabo wrote, it was so reduced that a comic poet was justified in saying:

'Eρμηνευ μεγάλη λατή την Μεγαλόπολις. (Strabo, 388.)

—The village of Sinano has been built on the site, and amid the ruins of Megalopolis. (Dodwell, Tour, vol. 2, p. 375.—Pouqueville, Voyage de la Grèce, vol. 5, p. 494.) Dodwell says that Sinano, which consis-
tists of an agra pyrgo and a few cottages, is situated "just without the ancient walls." Pouqueville, how-
never, has been rendered more precise by the chance discovery of a column and the ruins of Megalopolis. The former is undoubt-
edly the more accurate statement. Leonardi has been erroneously regarded by some as occupying the site of this ancient city. (Cramer's Anc. Greece, vol. 3, p. 329. seqq.)

MEGANIRA, the wife of Celeus, king of Eleusis in Attica. She was mother of Triptolemus, to whom Ceres taught agriculture. Meganira received divine honours at Eleusis, where her temple stood near the fountain where Ceres had first been seen when she arrived in Attica. (Pausan., 1, 39.)

MEGARA, a daughter of Creon, king of Thebes, given in marriage to Hercules, because he had delivered the Thebans from the tribute they had bound themselves to pay to the Orphicarians. Subsequently, having been rendered insane by Jove, Hercules threw into the fire the children of whom he had become the father by Meganira, who afterwards gave her in marriage to Iolaus. (Apollod., 2, 6, 1.)

MEGARA (gen. -ες; and also, as a neuter plural, -ες, -orums: in Greek, τα Μεγαρά), a city of Greece, the capital of a district called Megaris, about 210 stadia northwest of Athens. It was situated at the foot of two hills, on each of which stood a citadel: these were named Caria and Alcathois. It was connected with the port of Nissa by two walls, the length of which was about eight stadia. (Thucyd., 3, 4, 66,) or eighteen according to Strabo (391.) They were erected by the Athenians, at the time that the Megareans placed them-
selves under their protection. (Thucyd., 1, 103.) The distance from Athens, as has been already stated, was 210 stadia. (Procop., Bell. Vandal., 1, 1.) Dio Chrys-
ostom calls it a day's journey. (Orat., 6.) Modern travellers reckon eight hours. (Dodwell, vol. 2, p. 177.) The writer just referred to states that Megara is now but a miserable place; the houses small, and flat roofed. One only of the hills is occupied by the modern town; but on the other, which is the more eastern of the two, are some remains of the ancient walls, which appear to have been massive and of great strength. Not an of the numerous temples described by Pausanias can now be identified with certainty. Altogether, there are few places in Greece where the ancient monuments are so totally disarranged. (Diodor., 2, vol. 2, p. 177.—Compare Grütz's lit., p. 16.)—

Tradition, as Pausanias affirms, represented Megara as already existing under that name in the time of Cæsar, the son of Phoronæus; while others have derived it from Megarus, a Boeotian chief, and son of Apollo or Neptune. (Pausan., 1, 39.—Steph. Byz., s. v. Μι-
appa.) Car was succeeded by Lelex, who, as was re-
ported, came from Egypt, and transmitted his name to the ancient race of the Lelges, who were supposed to have traced their origin from the Achelous to the Araxes of the Sarmatian Gulf. Lelex was followed by Cleon, and Pylas, who abdica-
ted his crown in favour of Pandion, the son of Ce-
crops, king of Athens, by which event Megara became annexed to the latter state. (Pausan., 1, 39.) Nius, the son of Pandion, received Megaric as his share of his father's dominions. (Strabo, 392.) The history of this prince and his daughter Scylla, and also the cap-
itans of Megaric by Minos, has been found in all the mytho-
logic histories of Greece; but Pausanias observes (1, 39) that these accounts were disown by the Megas-
reans. Nius is said to have founded Nissa, the port of Megara; whence the inhabitants of that city were named Nissi, to distinguish them from the Meg-
reans of Sicily, their colonists. (Theoc. Idyl., 12,
MEGARA

MEG

27.) The walls of Megara, which had been destroyed by Minos, were rebuilt by Alcathoüs, the son of Pelops, who came from Elis. (Pausan., 1, 41.) In this undertaking, Apollo was said to have assisted him. (Theog., 771. — Ovid, Met., 8, 14.) Hyperion, the son of Agamemnon, according to Pausanias, was the last sovereign of Megara; after his death, the government of the city was divided into two parties, one democratic, the other hétéronomique. (Pausan., 1, 43.) As a republic, however, it remained still subject to Athens. Strabo indeed affirms, that, till the reign of Codrus, Megarids had always been included within the limits of Attica; and he thus accounts for Homer’s making no special mention of its inhabitants, from his comprehending them with the Athenians under the general denomination of Ionians. (Strab., 392.) In the reign of Codrus, Megara was wrested from the Athenians by a Peloponnesian force; and a colony having been established there by the Corinthians and Messenians, it ceased to be considered as of Ionian origin, but thenceforth became a Dorian city, both in its language and political institutions. The pillar, also, which marked the boundaries of Ionia and the Peloponnesus, was on that occasion destroyed. (Strab., 393. — Pausan., 1, 39.) The scholiast on Pindar (Nem. 7) informs us, that the Corinthians, having assailed Megara, wrote a war against Megara, as their colony, exercised a sort of jurisdiction over the city. Not long after, however, Theagenes, one of its citizens, usurped the sovereign power by the same method, apparently, which was afterward adopted by Pisistratus at Athens. (Aristot., Rhet., 1, 2. — Id., Pol., 5, 5. — Thucyd., 1, 126.) He was finally expelled by his countrymen; after which event a moderate republican form of government was established, though afterward it deteriorated into a violént democracy. (Plut., Quest. Gr., 18.) This should probably be considered as the period of Megara’s greatest prosperity, since it then founded the cities of Selymbria, Mesembria, and Byzantium, on the shores of the Euxine, and Megara Hyblea in Sicily. (Strabo., 319.) It was at this time also that its inhabitants were engaged in war with the Athenians for the possession of Salamin, which, after an obstinate contest, finally remained in the hands of the Athenians. (Aristot., Rhet., 1, 2.; Strabo., 394.) The Megareans fought at Amphissa with twenty ships, and at Salamis with the same number. (Herod., 8, 1, 45.) They also gained some advantage over the Persians under Mardonius, in an inroad which he made into their territory (Pausan., 1, 40); and, lastly, they sent 3000 soldiers to Platea, who deserved well of their country in the memorable battle fought in its plains. (Herod., 9, 21. — Plut., de defect. Orac., p. 185.) After the Persian war, we find Megara engaged in hostilities with Corinth, and renouncing the Peloponnesian confederacy to ally itself with Athens. (Thucyd., 1, 103. — Dios. Sic., 2, 60.) This state of things was not, however, of long duration; for the Corinthians, after effecting a reconciliation with the oligarchical party in Megara, persuaded the inhabitants to declare against the Athenians who garrisoned their city. These were presently attacked and put to the sword, with the exception of a small number who escaped to Nisaea. (Thucyd., 1, 114.) The Athenians, justly incensed at this treacherous conduct, renounced all intercourse with the Megareans, and issued a decree excluding them from their ports and markets; a measure which appears to have been severely felt by the latter, and was made a pretence for war on the part of their Peloponnesian allies. (Thucyd., 1, 67, 139.) Megara was, during the Peloponnesian war, exposed, with all the rest of Greece, to the sults of factions engendered by violent party spirit. The partisans of the democracy favoured, it is true, the Peloponnesian cause; but, dreading the efforts of the adverse faction, which might naturally look for support from the Lacedaemonians in restoring the government to the form of an oligarchy, they formed a plan of giving up the city to the Athenians in the seventh year of the war. An Athenian force was accordingly despatched, which appeared suddenly before Nisaea, the port of Megara, and, having cut off the Peloponnesian troops which garrisoned the place, compelled them to surrender. Megara itself would also have fallen into the hands of the Athenians, if it had not been relieved with a Spartan army before the walls of that city, where it was presently joined by the Boeotians and other allies. On his arrival, the Athenians, not feeling sufficiently strong to hazard an action, withdrew to Nisaea, and, after leaving a garrison in that port, returned to Athens. The leaders of the democratic party in Megara, now fearing that a reaction would ensue, voluntarily quit the city, which then returned to an oligarchical form of government. (Thucyd., 4, 66, 1.) From this period we hear but little of Megara in Greek history; but we are told that its citizens remained undisturbed by the contest in which their more powerful neighbours were engaged, and in the tranquil enjoyment of their independence. "The Megareans," says Isocrates, "from a small and scanty commencement, having neither harbours nor mines, but cultivating rocks, nevertheless possess the largest houses of any city in Greece. It is the only city in Greece which they possess by small force, and are placed between the Peloponnesians, the Thebans, and our own city, yet they retain their independence and live in peace" (de Pace, p. 183.) — Philosophy also flourished in this city, Euclid, a disciple of Socrates, having founded there a school of some celebrity, known by the name of the Megaric sect. (Strab., 393. — Cic., Orat., 3, 17. — Id., Acad., 2, 42.) — Plutarch reports, that the Megareans offered to make Alexander the Great a residence of his own, on honour which that prince was inclined to ridicule, though they asserted it had never been granted to any foreigner except Hercules. (Plut., de March., p. 238.) After the death of that monarch, Megara fell successively into the hands of Demetrius Poliorcetes, Ptolomy Soter, and Demetrius, son of Antigonus Gonatas, by whom, according to Plutarch, the city was destroyed (de Instit. Puer., p. 3); but, as Pausanias mentions a war waged by the Athenians against them by the command of the Achaeans, we may infer that it was subsequently restored (8, 50), and we know that it was taken by the Romans under Metellus (Pausan., 7, 15) and Calenus. (Plut., Vit. Brut.) Strabo also affirms (393), that Megara still existed in his time, though much reduced, as we are assured by Sulpicius, in the well-known passage of his letter to Cicero (ad Fam., 4, 5). "Post me erat Lignia, ante Megara, destra Piraeus, sinistra Corinthus; qua oppida yuclam tempore florentissima fuerunt, nunc prostrata et diflra ante occulos jacent." Pausanias affirms, that Megara was the only city of Greece which was not restored by Hadrian, in consequence of its inhabitants having murdered Anthemocritus, the Athenian herald (1, 36). Alaric completed the destruction of this once flourishing city. (Procop., Bell. Vand., 1, 1. — Cramer’s Anc. Greece, vol. 2, p. 424, seqq.) — A city of Sicily founded by a colony from Megara in Greece. (Vid. Hyb1a, III.)

MEGARIÀ, a small territory of Greece, lying to the west and northwest of Attica. Its capital was Me- gara. (Vid. Megara; under which head an historical sketch is given.) It was separated from Boeotia, on the north, by the range of Mount Citharon; and from Attica by the high land which descends from the northwestern boundary of the latter country, and terminates in the Gulf of the Saron. The two points marked by the highest summits, formerly called Kerata, or the Horns, and now Kandali. Megaris was divided from the Corinthian territory on the west by the Oeané range of mountains, through which there were only two roads from Corinth into Megaris: one of these, called
the Scironian Pass, which is the steep escarpment of the mountains that terminate on the coast of the Saronic Gulf, passed by Crommyon (Strabo, 391); and along the side of the escarpment was the direct road from Corinth to Athens. This road was made wide enough, by the Emperor Hadrian, for two vehicles abreast (Pausan., 1, 40, 10), but at present it only admits of a single vehicle, except in a few places. (Pausan., 1, 3, 14; D. L. 17, 17. 39); yet the road, on the whole, is in good condition. The other road, following the coast of the Corinthian Gulf, crossed the Ceresa Mountains, which belong to the Oenian range, and led to Pegæ, on the Corinthian Gulf, and thence to Bootea.—The extreme breadth of Megarís, from Pegæ to Nísse on the Corinthian Gulf, is reckoned by Strabo at 120 stadia; and the area of the country is estimated by Mr. Clinton, which is from 720 square miles. (Fast. Hel., vol. 2, p. 385.) Megarís is a rugged and mountainous territory, and contains only one plain of small extent, in which the capital Megarís was situated. The rocks are chiefly, if not entirely, calcareous. The country is very deficient in springs. (Encycl. U. S. N. A., vol. 15, p. 64.)

Megaþenes, a Greek historian and geographical writer, probably from Ætolia or Pallæotis (Lit. de Vos, p. 392), king of Ætolia, about 300 years before Christ. He was sent by Strabo to Pallæotis in India, to renew and confirm a previous treaty with Sandrocottus, monarch of the Præsii. He remained there many years, and after his return he wrote, under the title of Indica (/mdkx), an account of whatever he had seen or heard during his travels. His work is lost; but Strabo, Arrian, and Ælian have preserved some fragments of it. He was the first who made the western nations acquainted with the countries beyond the Ganges, and with the manners of their inhabitants. Strabo has on several occasions expressed an unfavourable opinion of the trustworthiness of Megaþenes; but still it is quite certain, that the work of the latter contained much valuable information, which was then entirely new to the Greeks. Megaþenes gave the first account of Térapbore or Cecylon. (Schœl., Hist. Lit. Gr., vol. 3, p. 393.)

Mela, Pomponius, a geographical writer, the first Latin author of a general work on this subject, and who flourished during the reign of the Emperor Claudiu.s. He was born in Spain, of an illustrious Roman family, the Pomponii, who pretended to trace up their lineage to Numa. Some critics have thought that Mela only belonged to this family by adoption, and that he was that third son of the rhetorician Marcus Seneca, whom his writings predicted his works; while others are inclined to regard him as the grandson of Seneca the philosopher. (Consult Tschachke, Diss. de Pomp. Mela., c. 1.) In either of these cases, however, the word Annæus would most probably have been added to his name.—There is reason to believe that his true name was not Mela, but Mella. (Compare Voss., de Hist. Lat., 1, 25. — Fabriciuis, Bibl. Lat., vol. 1, p. 157. — Seiss, Onomat., 1, p. 243. — Tschachke, Diss. de Pomp. Mela.) Mella names his native city in one passage of his work (2, 6), but the text unfortunately is so corrupt, that it is uncertain whether we ought to read Tingentera, Melaria, Tartessus, or Tingisbera. He lived, as has already been stated, under Emperor Claudius, for the passage (3, 6) in which he speaks of a triumph which the emperor was upon the point of celebrating over the Britons, can only apply to that monarch. Pomponius Mella is also, in some geographical outlines or abridgments, entitled "De Situ Orbis," or, as some manuscripts read, "De Chorographia." This work is divided into three books. After having spoken of the world in general, and given a sketch of the geography of Asia, Europe, and Africa, the writer commences his more particular description with this latter country. Mauritania, as being the westernmost quarter, is treated of first; from this he proceeds in an eastern direction, traverses Numidia, Africa Præpria, and Cyreneca, and then describes Egypt, which latter country he regards as forming part of Asia. From Egypt he passes into Arabia, Syria, Phœnicia, Cilicia, and the different provinces of Asia Minor. The third book opens with European Scythia. Mela then treats of Thrace, Macedonia, and Greece. He next passes into Illyria, and from Illyria into Italy. From Italy he proceeds to Gaul, and from Gaul to Spain. He finally describes the Isles of the Mediterranean. — In the third book he returns to Spain, of which he had in the previous book described merely the westernmost part; he then gives an account of the Atlantic coast of Africa. The reader, however, generally visits a large portion of the countries which he describes: he has followed, however, though often without citing them, the best Greek and Roman authorities, and, above all, the geographical writings of Eratosthenes: he has consulted and followed these authorities with judgment and care, and has admitted into his work only a comparatively small number of fables, which must be set down to the account of the age in which he lived, when great ignorance still prevailed in relation to some of the simplest laws of nature. The style of his narrative is marked by conciseness and precision; he has been successful, at the same time, in avoiding the dryness of a mere nomenclature, by intermitting agreeable descriptions, physical discussions, and notices of remarkable events of which the places that he describes have been the theatre. His work, however, is not exempt from errors: sometimes, from not paying sufficient attention to the periods when the writers whom he follows respectively flourished, he describes things as existing which had ceased to exist; various omissions also occur in the course of his work: no mention, for example, is made of Canana, Munda, Pharsalia, Leuctra, and Mantinea, all famous in the annals of warfare; nor of Ecbatana and Persepolis, the capitals of great empires; nor of Jerusalem, to which a high religious importance is attached; nor of Stagira, the native place of one of the greatest philosophers of antiquity. Like Strabo, he considers the earth as penetrated by four great inlets of the ocean, of which the Mediterranean, the Red Sea, and the Persian Gulf were three; the fourth was the Caspian Sea. This singular error as to the Caspian is the more remarkable, when contrasted with the fact that Herodotus knew the Caspian to be a lake. (Herod., 1, 205.) — Id. 3, 6.) The best editions of Mela are, that of Gronovius, Lugd. Bat., 1685, 8vo, frequently reprinted, and that of Tschachke, Lips., 1807, 7 vols. 8vo (in 3).

Melampus, I. a celebrated soothsayer of Argos, son of Amythaon and Idomene, and famed also for skill in the healing art. His father resided at Pylos, but he himself lived in the country near that place. Before his house stood an oak-tree, in a hole of which His servants finding these animals, killed the old ones, whose bodies Melampus burned, but he saved and reared the young ones. As he was sleeping one day, these serpents, which were now grown to full size, came, and getting each on one of his shoulders, licked his ears with their tongues.
He awoke in some terror; and, to his astonishment, found that he understood the voices of the birds which were flying around him; and, learning from their tongues the future, he was enabled to declare it to mankind. Meeting Apollo on the banks of the Alpheus, he was taught by him the art of reading futurity in the entrails of victims, and he thus became an executed soothsayer. (Apoll. Rhod., i, 118.) Meanwhile, his brother Bias fell in love with Peri, the daughter of Neleus. As the hand of this beautiful maiden was sought by most of the neighbouring princes, her father declared that he would give her only to him who should bring from Thessaly the cows of his mother Tyro, which Iphicles of Phylace detained, and which he guarded by means of a dog whom neither man nor beast could venture to approach. Bias, relying on the aid of his brother, undertook the adventure. Melampus, previously declaring that he knew he should be caught and confined for a year, but then get the cattle, set out for Phylace. Every thing fell out as he said—

The herdsman of Iphicleus took him, and he was thrown into prison, where he was attended by a man and a woman. The man served him well, the woman badly. Towards the end of the year he heard the woman in the darkness conversing with one another. One asked how much of the beard of the captive was through; the others replied that there was little remaining. Melampus immediately desired to be removed to some other place; the man took up the bed at the head, the woman at the foot, Melampus himself at the middle. They had not got quite out of the house, when the roof fell in and killed the woman. This coming to the ears of Iphicleus, he inquired, and learned that Melampus was either a Thesprotian or a Mantian. He therefore, being childless, consulted the woman about having offspring. Melampus agreed to tell him on condition of his giving him the cows. The seer, on Iphicleus assenting to his terms; then sacrificed an ox to Jupiter, and, having divided it, called all the birds to the feast. All came but the vulture; but no one of them was able to tell how Iphicles might have children. They therefore brought the vulture, who gave the requisite information. Iphicleus became the father of a son, whom he named Melanippus. Envy of the kine to Pylos, whereupon Peri was given to his brother. (Od., i, 287.—Schol.; ad loc.—Od., 15, 225.—Apoll., i, 9, 11.—Schol. ad Theoc., 3, 43.)—

Melampus was also famous for the cure of the daughters of Prexus, who were afflicted with insanity. For an account of this legend, consult the article Prexus. (Keithley's Mythology, p. 436, sec. II.) A writer on divination, who lived in the time of Ptolemy Philadelphus. He was the author of a treatise entitled Μαντικης περι παλαιων, "Divination from vibrations of the muscles," and of another styled Περι ηλιων των σωματος, "Art of divining from marks on the body." We have only fragments remaining of these two works. The library at Vienna contains another work of this same writer's, in manuscript, on the Art of predicting from the phases of the moon. The fragments of Melampus were edited by Periplus, at the end of his Ελλαν, Rome, 1545, 410, and subsequently by Sylburgius, who, in his edition of Aristotle, reunited them to the physiological works of that philosopher. They are to be found also in the Scriptores Physiognomica Vetere of Franz, Allenb., 1780, 8vo.

Melampygus, an epitaph applied to Hercules in the Greek mythology, and connecting him with the legend of the Cercopes. These last, according to Diodorus Siculus, were black slaves who had ravaged the country far and wide, while Hercules was leading with Omphale a life of voluptuous repose. Their mother had cautioned them against one to whom the name Melampygus should apply, but they disregarded her warning, and the hero, having at length been roused from his inactivity, proceeded against them by order of Omphale, and, having overcome them, brought them to her in chains.—A different tradition placed the Cercopes in the islands facing the coast of Campania. Jupiter, according to this latter account, being engaged in his war with the Titans, cast the two islands to demand special sacrifice to the Arim. They promised him their aid, but afterward made sport of him, whereupon the irritated deity changed them into asps (πιθηκοι), and from that period the islands of Inarime and Prochtya were called Pithecussae (Πιθηκοθαυασι), from πιθη- κος.—Vid., however, another explanation under the article Pithecussae.—The legend of the Cercopes appears to be an astronomical one. The Lydian Heracles is the sun, pale and enfeebled at the winter solstice, and which in some sense may be said to turn its obscurer parts upon the earth; while the Cercopes, as symbols of this period of languor, crowd around and insult him. On the approach, however, of the vernal equinox, the god resumes his former energies and subjugates his foes. In like manner Jupiter, the sun of springs, overcomes and dissipates all things that tend to obscure the light and disturb the repose of the universe. (Guigniau, vol. 2, 191.)

Melampus, also known as Melampus the Aelian, or the Cimmerian Bosporus, so called from their black garments. Mannert conjectures them to have been the progenitors of the modern Russians. By later writers they are called Rhoxolani. (Mannert, Geogr., vol. 4, p. 194, 167.)

Melanippides, I. a lyric poet, who flourished about 500 B.C. He was either, as some suppose, a native of the island of Melos, or, as others think, of the city of Miletus. (Apoll. Rhod., i, 227, 974.) He was at the court of Perdiccas II., king of Macedonia. He was the grandson of the former. Various poems are ascribed to these two individuals, and it is a difficult matter to make a division between them. They composed dithyrambs, epoepes, elegies, and songs. The younger Melanippides is placed by Plutarch in the number of those who corrupted the ancient music by the new novelties which they introduced. He also composed some tragedies. (Scholl, Hist. Lit. Gr. vol. 1, p. 289.)

Melanippus, a son of Astacus, one of the Theban chiefs who defended the gates of Thebes against the army of Adrastus, king of Argos. He was opposed by Tydeus, whom he wounded mortally. As Tydeus lay expiring, Minerva hastened to him with a remedy which she had obtained from Jupiter, and which would make him immortal; but Amphiaraus, who hated Tydeus as the chief cause of the war, perceiving what the goddess was about, cut off the head of Melanippus, whom Tydeus, though wounded, had slain, and brought it to him. The savage warrior opened it and devoured the brain, and Minerva, in disgust, withheld her aid. (Bacchyl., ap. Schol. ad Aristoph., Av., 1536. —Europ.; Frag. Melag., 18.—Keithley's Mythology, p. 479.)

Melanthius, I. an Athenian tragic poet, of inferior reputation, a contemporary of Aristophanes. He was afflicted with the leprous, to which the comic poet alludes in the Aves (p. 151). In the Pox (v. 974) he is ridiculed for his gluttony.— II. A painter, whose native country is uncertain. He was a contemporary of Apelles, and received, in connexion with him, the instructions of Pamphilus in the art of painting. (Plin., 35, 10, 36.) Quintilian particularly mentions his skill in the designs of his pictures. He was employed by the greatest painters who, with only four colours, produced pieces worthy of immortality. Even Apelles conceded to him the palm in the arrangement or grouping of his figures. (Plin., l. c.) That his pictures were held in high estimation, is evident from the text.
the circumstance that Aratus, no mean judge of works of art, collected from every quarter the productions of Melanthius along with those of Pamphilus, and made a present of them to Ptolemy III., king of Egypt. (Plut., Vit. Arat., c. 21.) He left a treatise on Painting, a fragment of which has been preserved by Diogenes Laertius (4, 19), and of which Pliny availed himself in his famous fifth book of his Natural History (Silig., Dict. Ant., s. v. MELANTHIUS). MELEAGRIUS, a son of Andropompus, whose ancestors were kings of Pylos, in Messenia. Having been driven by the Heraclids from his paternal kingdom, he came to Athens, where Thymoetes, monarch of Attica, gave him a friendly reception. Some time after this, the Boeotians, under Xanthus, having invaded Attica, Thymoetes marched forth to meet them. Xanthus was defeated and slain, and Thymoetes transmitted the crown to his son Codrus. (Pausan., 2, 18.—Thrissalos’ Greece, vol. I, p. 274.) MELAS (gen. —ester), I. a deep gulf formed by the Thracian coast on the northwest, and the shore of the Chersonese on the southeast; its appellation in modern geography is the Gulf of Saros.—II. A river of Thrace, now the Cavesatcha, emptying into the Sinus Melas at its northeastern extremity. (Herod., 7, 58.—Strab., 6, 38, 40.—Plin., 4, 11.)—III. A river of Thrasybula, in the vicinity of the town of Trachis. (Herod., 7, 199.—Liv., 37, 24.)—IV. A small river of Boeotia, near Orbomenus, emptying into the Lake Copais. (Pausan., 9, 33.) Plutarch says that it rose close to the city, and very soon became navigable, but that part of it was lost in the marshes, while the remainder joined the Cephissus. (Vit. Syll.—Strab., 6, 415.) Pliny remarks of its waters, that they had the property of dying the fleeces of sheep black (2, 104.) In the marshes formed near the junction of this river with the Cephissus grew the reeds so much esteemed by the ancient Greeks for making pipes and other wind-instruments. (Pindar, Pyth., 12, 42.—Cramer’s Anc. Greece, vol. 2, p. 249.)—V. A river of Cappadocia, rising near Cesarée ad Araeum, and falling into the Euphrates near the city of Melitene. Schüllinger (Reise., p. 68) calls it the Genain; but on D’Anville’s map it bears in the beginning of its course the name of Kormoz, and near its mouth that of Kirkhehöld. (Mannert, Geogr., vol. 6, pt. 2, p. 296.)—VI. A river of Pamphylia, rising in the range of Mount Taurus, to the west of Homonada, and running into the sea between Side and Coracesium. (Strabo, 667.) It formed originally the boundary between Pamphylia and Cilicia. (Plin., 5, 27.) According to Leake, there can be no doubt that the Melas is the river now called Menemadus; for Zosimus (5, 16) and Mela (1, 14) agree in showing its proximity to Side. Strabo, Mela, and the Stadiasmus, all place it to the eastward of Side, and the distance of 50 stadia in the Stadiasmus between the Melas and Side is precisely that which occurs between the ruins of Side and the mouth of the river of Menemadus. (Leake’s Tour, p. 196.) MELEAGER. MELAGDORUM urbs, a city of Gaul, now Moulins. (Cass., B. G., 5, 6.—Plin., 4, 13.) MELEAGER, I. a celebrated hero of antiquity, son of Ceneus, king of Elata, by Altha, daughter of Theseus. When he was seven days old, the Moiræ or Fates came to the dwelling of his parents, and declared that when the billet which was burning on the hearth should be consumed, the babe would die. Altha, on hearing this, snatched the billet from the fire, and laid it carefully away in a coffers. The fame of Meleager increased with his years; he signalized himself in the Argonautic expedition, and subsequently in the Calydonian boar-hunt. Of this latter event there appear to have been two legends, an earlier and a later one. The former appears to have been a tale of great antiquity, which Strabo (4, 4, 1) relates. According to this version of the story, Ceneus, in the celebration of his harvest-home feast (θάλανθος), had treated Diana with neglect, and the goddess took vengeance upon him by sending a wild boar of surpassing size and strength to ravage the territory of Calydon. Hunters and dogs were collected from all sides, and the boar was, with the loss of several lives, at length mastered. The great issue, however, between the Curetes and the Aetolians about the head and hide of the boar was the consequence. As long as Meleager fought, the Curetes had the worst of it, and could not keep the field; but when, enraged at his mother Altha, he remained with his wife the fair Cleopatra, and abstained from the war, noise and clamour rose about the gates, and the towers of Calydon were shaken by the victorious Curetes: for Altha, grieved at the separation of her children, in the ardour of her grief, fell on a boar with tears invoked Pluto and Proserpina to send death to her son. The elders of the Aetolians supplicated Meleager: they sent the priests of the gods to entreat him to come forth and defend them; they offered him a piece of land (τέμενος) of his own selection. His aged father Ceneus ascended to his chamber and implored him, his sisters and his mother supplicated him, but in vain. He remained inexorable, till his very chamber was shaken, when the Curetes had mounted the towers and set fire to the town. Then his wife besought him with tears, picturing to him the evils of a captured town, the slaughter of the men, the dragging away into captivity of the women and children. Moved by this last appeal, he arrayed himself in arms, went forth and repelled the enemy; but, not having done it out of regard for them, the Aetolians did not give him the proffered recompense.—Such is the more ancient form of the legend, in which it would appear that the Aetolians of Calydon and the Curetes of Pleuron alone took part in the hunt. In after times, when the vanity of the different states of Greece made them send their national heroes to every war and expedition of the mycian ages, it underwent various modifications. Meleager, it is said (Nicand., ap. Anton. Lib., 2.—Apollod., 1, 8, 2.—Ovid, Met., 9, 276, seq.—Hygin., fab., 191, 5), invited all the heroes of Greece to the hunt of the boar, proportioning the bide of the animal as the prize of whoever should slay him. Of the Aetolians there were Meleager, and Dryas son of Mars; of the Curetes, the sons of Theseus; Idas and Lyneactus, sons of Aphareus, came from Messene; Castor and Pollux, sons of Jupiter and Leoda; from Laconia; Atalanta, daughter of Iasus, and Anceus and Cepheus, sons of Lycurgus, from Arcadia; Amphirion, son of Oicles, from Argos; Alacon, son of Aeneas; from Attica; Theseus, son of Egeus, from Athens; Iphicles, son of Amphirion, from Thebes; Pheidas, son of Aeneas, and Eurytion, son of Actor, from Pithia; Jason, son of Eson, from Iolkos; Admetus, son of Phereus, from Phere; and Perithous, son of Ixion, from Larissa.—These chiefs were entertained during nine days in the house of Ceneus. On the tenth, Cepheus and Anceus, and some others, refused to hunt in company with a maiden; but Aphareus, who was in love with Atalanta, obliged them to give over their opposition. The hunt began; Anceus and Cepheus speedily met their fate from the tusks of the boar: Pheidas accidentally killed Eurytion: Atalanta, with an arrow, gave the monster the first wound: Amphirion shot him in the eye; and
MEL

Meleager ran him through the flanks and killed him. He presented the skin and head to Atalanta; but the sons of Thestius, his two uncles, offended at this preference of a woman, took the skin from her, saying that it fell to them by right, on account of their family, if Meleager had sued his claim. (Lyc., 45, 2.)—II. A city of Thessaly, in the district of Magnesia. According to Livy (44, 13), it stood at the base of Mount Ossa, in that part which stretches towards the plains of Thessaly, above Demetrias. Homer assigns it to the domains of Philectetes (II, 2, 716), hence called "Meleaeus dusx" by Virgil. (Én., 3, 401.) Meliboea was attacked in the Macedonian war by M. Popilius, a Roman commander, at the head of five thousand men; but the garrison being re-enforced by a detachment from the army of Perseus, the enterprise was abandoned. (Livy, 1, c.) We know from Apollonius (Arg., 1, 592) that it was a maritime town. (Cramer's Anc. Greece, vol. 1, p. 423.) According to Pouqueville (Voyage, vol. 3, p. 404), the village of Daoukítis indicates the site of the ancient Meliboea. (Compare Paul Lucas's map, appended to his Travels, 1704.)

Melicertes or Melicertes, a son of Athamas and Ino, was the father of Achilles. He was discovered as a child from the fury of the mother, who prepared to dash him against a wall as he had done his brother Leuctrus. The mother was so terrified that she threw herself into the sea, with Melicertes in her arms. Neptune had compassion on Ino and her son, and changed them both into sea-deities. Ino was called Leucothoë or Matuta, and Melicertes was known among the Greeks by the name of Palæmon, and among the Latins by that of Portumnus. (Vid. Leucothoë and Matuta, Apollod., 1, 9; 3, 4.—Pausan., 1, 44.—Ovid., Met., 4, 529.)

MELIGNIUS, one of the earlier names of Lipara. (Vid. Lipara.)

MELIL, Vid. Mali.

MELISSA, I. a daughter of Melissus, king of Crete, who, with her sister Amalthia, fed Jupiter with the milk of goats. According to the account quoted by Lactantius, she was appointed by her father the first priestess of Cybele. (Lactant., 1, 22.)—II. A nymph, who first discovered the means of obtaining honey through the aid of bees. She was fabled to have been herself changed into one of these little creatures. (Columella, 9, 2.)—III. One of the Oceanides, who married Inachus, by whom she had Phoroneus and Egialeus.—IV. A daughter of Procles, who married Periander, the son of Cypselus, by whom, in her pregnancy, she was killed with a blow of his foot, by the false accusation of his concubines. (Diog. Laert., 1, 100.—Herod., 3, 50.—Bühn, ad Herod., 1, c.—Pausan., 1, 28.)

MELISSUS, a philosopher of Samos, of the Eleatic sect, who flourished about 440 B.C. He was a disciple of Parmenides, to whose doctrines he closely adhered. As a public man, he was conversant with affairs of state, and acquired great influence among his countrymen, who had a high veneration for his talents and virtues. Being appointed by them to the command of a fleet, he obtained a great naval victory over the Athenians. As a philosopher, he maintained that the principle of all things is one and immutable, or that whatever exists is one being; that this one being includes all things, and is infinite, without beginning or end; that there is neither vacuum nor motion in the universe, nor any such thing as production or decay; that the changes which it seems to suffer are only the species of a permanent order; and that it is not to lay down anything positive concerning the gods, since our knowledge of them is so uncertain. The mistakes is said to have been one of his pupils. (Enfield's History of Philosophy, vol. 1, p. 418, seqq.)

MELIȚA, I. an island in the Mediterranean, sixty miles southeast of Sicily, now Malta. It is first mentioned by Sclavus (p. 50), but is considered by him as
belonging to Africa, from its having Punic inhabitants, and being no farther from Africa than from Sicily. The earlier Greek historians do not mention it, since it was regarded as a Carthaginian island, and lay without the sphere of their knowledge. Diodorus Siculus was the first that gives us any account of it. "There are," he says, "over against that part of Sicily which lies to the south, three islands at a distance in the sea, each of which has a town and safe ports for ships overthrown by tempests. The first, called Melite, is about 800 stadia from Syracuse, and has several excellent harbours. The inhabitants are very rich, inasmuch as they exercise many trades, and, in particular, manufacture cloths remarkable for their softness and fineness. Their houses are large, and splendidly ornamented with projections and stubco (χειστον και κονιουματι). The island is a colony of the Phoenicians, who, trading to the Western Ocean, use it as a place of refuge, because it has excellent ports, and lies in the midst of the sea. Next to this island is another named Gaius (Gozo), with convenient harbours, which is also a colony of Phoenicians." (Diod. Sic., 5, 12.) Melita is said to have been subsequently occupied by the Greeks; but, however this may be, the Carthaginians obtained possession of it B.C. 402. In the first Punic war it was plundered by the Roman consul Attilius. (Orosius, 4, 8.) In the second Punic war it surrendered to the Romans, and was regarded henceforth as an appendage to the province of Sicily. Its commerce declined under its new masters, and the island became not a frequent haunt of pirates. It appears, however, that its temple of Juno was rich enough to be an object of plunder to the rapacious Verres when he was pretor of Sicily. (Cic. in Verr., 4, 46.) The linen cloth of Malta was considered an article of luxury at Rome. After the division of the Roman empire at the death of Constantine, this island was included in the share allotted to Constantinus. It fell subsequently into the hands of the Goths, who were expelled by Belisarius, A.D. 533. The Arabs conquered it in 870, and though it was recovered, and held by the Eastern empire for the space of 34 years, it was retaken by the Arabs, and the Greek inhabitants were exterminated. In 1120, Count Roger, the Norman conqueror of Sicily, took possession of Malta and expelled the Arabs. Malta was thus again attached to the island of Sicily, and it became subject to the different dynasties which successively governed that island. In 1516, Sicily, with the Maltese islands, passed to the Emperor Charles V., and thus became part of Aragon again.

On the 4th March, 1550, Charles granted to the Knights of St. John, who had been recently expelled from Rhodes by the Turks, the ownership of all the castles, fortresses, and isles of Tripoli, Malta, and Gozo, with complete jurisdiction. The sovereignty of Malta was by this grant, in effect, surrendered to the knights, though the form of tenure from the crown of Sicily was maintained by the reservation of the annual payment of a falcon and the privilege of hunting on certain days per annum.

It was soon fortified by the knights, and underwent several memorable sieges. In 1798, Bonaparte took possession of it on his expedition to Egypt; and in 1800, the French garrison was obliged by famine to capitulate to a British force. In 1814, the possession of it was confirmed to Great Britain by the treaty of Paris.—The cotton manufactories of Malta have been celebrated for many ages, and would seem to trace their origin here. The wool manufactured on the island consists of a thin covering of earth on a sober, calcareous rock, and is increased by breaking up the surface of the stone into a sort of gravel, and mixing it through the earth. It is no uncommon thing, however, for soil to be transported from Sicily, especially when a proprietor wishes to make a new garden; a fact that could hardly be inferred from the number and excellence of the Maltese oranges, from its beautiful roses, and the exhalations of a thousand flowers. —The city of Melita, the ancient capital, lay some distance inland, where Citta Pinto is at present situated. —Two questions are connected with this island. The first refers to the connexion of the Aegina or Selinus (at present called Selingone) with Siculo, the name under Melita II.; the other is of a more trivial nature, namely, which island, this or the Ilyrian Melita (now Meleda), furnished the Catuli Melitenses, so much esteemed by the Roman ladies. Pliny, on the authority of Callimachus and Stephanus of Byzantium, pronounces in favour of Melita, Strabo of Malta (280).—II. An island in the Adriatic, northwest of Epidaurus, and lying off the coast of Dalmatia. Its modern name is Melita. The question has often been agitated, whether it was on this island, or Melita (now Malta) below Sicily, that St. Paul was shipwrecked. (Acts 27 and 28.) Upon a fair review of the whole subject, it will be found that the Ilyrian island presents the better claim to this distinction. The following reasons may be alleged in favour of this side of the question: I. The vessel, when lost, was in "Adria," the Adriatic Gulf, which cannot by any geographical contrivance be made to extend, as some would wish to have it, to the coast of Africa. —2. The island on which the Apostle was wrecked was an obscure one in the Adriatic sea, formerly called Melita, and now known by the name of Meleda. This island lies confessedly in the Adriatic, off the coast of Ilyricum; it lies, too, nearer the mouth of the Adria than any other island of that sea, and would, of course, be more likely to receive the wreck of any vessel that would be driven by tempests to that quarter. Moreover, nearly N.W. by N. of the southwest promontory of Crete, and nearly in the direction of a storm from the southeast quarter. —4. The manner likewise in which Melita is described by St. Luke agrees with the idea of an obscure place, but not with the celebrity of Malta at that time. Cicero speaks of Melita (Malta) as abounding in curiosities and riches, and possessing a remarkable manufacture of the finest linen. (Orat. in Verr., 4, 18, 16.) Malta, according to Diodorus Siculus (6, 1), was furnished with many and very good harbours, and the inhabitants were very rich; for it was full of all sorts of artificers, among whom were excellent weavers of fine linen. The houses were state-like and beautiful, and the inhabitants, a colony of Phoenicians, famous for the extent and lucrative nature of their commerce. It is difficult to suppose that a place of this description could be meant by such an expression as "an island called Melita,""island of Melita," with any propriety, of an atoll, especially, as there are now no serpents in Malta, and as it should seem there were none in the time of Pliny, there never were any there, the country being dry and rocky, and not affording shelter or proper nourishment for animals of this description. But Melita abounds with these reptiles, being woody and damp, and favourable to their way of life and propagation. —6. The disease with which the father of St. Paul (Saul) was affected (probably intermittent) affords a presumptive evidence of the nature of the island. Such a place as Malta, dry, and rocky, and remarkably healthy, was not likely to produce such a disease, which is almost peculiar to moist situations and stagnant waters, but might well suit a country woody and damp, and, probably for want of draining, exposed to the putrid effluvia of confined moisture. —7. It has been alleged, however, in favour
of Malta's having been the island in question, that, had Melida been the one, St. Paul would not have called at Syracusae in his way to Rhegium, "which is so far out of the mouth of the strait," says a writer who advocates the opinion that "no example can be produced in the history of navigation of any ship going so far out of her course, except it was driven by a violent tempest." This argument tends principally to show that the writer had a very incorrect idea of the relative situations of the places to which he refers. The ship which carried St. Paul from the Adriatic to Rhegium would not deviate from its course more than half a day's sail by touching at Syracusae; and the day so occasioned would probably be but a few hours more than it would have been had they proceeded to Syracuse in their way to the Straits of Messina from Malta. Besides, the master of the ship might have, and probably had, some business at Syracuse, which had originated at Alexandria, from which place it must have been originally intended that the ship should commence her voyage to Puteoli; and in this course the calling at Syracusae would have been the smallest deviation possible. A ship that had passed Malta it must have been on account of some business, probably commercial, that they touched at Syracuse in their way to Puteoli, as Malta is scarcely more than one day and night's sail from Syracuse; whereas there might be some reasons respecting the voyage, had the ship come from Melida, which is more than five times that distance, and probably a more uncertain navigation.—9. As regards the wind Euroclydon, it may be observed, that the word evidently implies a southeast wind. It is composed of Ευρος, the southeast wind, and κλυδων, the wave, an additional highly expressive of the character and effects of this wind, but probably chiefly applied to it when it became typhonic or tempestuous. Typhon is described by Pliny (2, 43) as præcipio navigantium pestis, non annimas modo, verum ipsa navigia contorta frangens. The course of the wind from the southeast would impel the ship towards the island of Crete, though not so directly but that they might weather it, as they in fact did, and got clear, though it appears they encountered some risk of being wrecked while running under, or to the south of, the island of Clauda or Gaudos, which lies opposite to the port of Phocice, the place where they proposed to winter. A circumstance occurs in this part of the narrative which creates some difficulty. They who navigated the ship were apprehensive of falling among the Syrtis, which lay on the coast of Africa, nearly to the southwest of the western point of Crete. But we should consider that this danger lay only in the fears of the mariners, who, knowing the Syrtis to be the great terror of those seas, and probably not being able to ascertain from what quarter the wind blew, neither sun nor stars having been visible for several days, and as these violent typhonic Levanters are apt to change their direction, might entertain apprehension that they might be in those dangerous quicksands. The event, however, proved that the place of their danger was mistaken. (Classical Journal, vol. 19, p. 212, seqq.—Hale's Analysis of Chronology, vol. 1, p. 464, seqq., ed. 2d, 1830.)

MELITENIA, a district of Asia Minor, in the south-eastern part of Armenia Minor, and lying along the right bank of the Euphrates. The soil was fertile, and yielded all kinds of grain, wine, and oil. It lay in front of the rest of Cappadocia, of which Armenia Minor was a part. The chief product was oil, and a wine called Monarites, which equalled the best of Greek growth. (Strab., 535.—Plin., 6, 3.) Its capital was Melitene, now Malatia, on a branch of the river Melas. (Plin., 5, 24.—Steph. Byz., s. v.—Procop., de Edif., 3, 5.)

MELITUS, one of the accusers of Socrates. After he had prevailed, and Socrates had been ignominiously put to death, the Athenians repented of their severity to the philosopher. Melitus was condemned to death; and Anytus, another of the accusers, to escape a similar fate, went into voluntary exile. (Diog. Laert., 2.)

MELITS or MELIIUS, Spurius, a Roman knight, suspected of aiming at kingly power, in consequence of his uncommon liberality in supplying the populace with corn. He was summoned by the dictator L. Q. Cincinatus to appear before him; and, having refused so to do, was slain on the spot by Alaha, the master of the horse. (Liv., 18, 13, seqq.—Var. Ascidinimum.)

MELIA or MELIA, a small river of Cissipian Gaul near Brixia. It retains its ancient name. (Verg., Georg., 4, 278.—Catullus, 66, 32.)

MELIOS, now Milo, an island in the Ægean Sea, forming one of the group of the Cyclades. It was situated, according to Strabo (84), about 700 stadia to the southeast of Cape Scyllaum, and nearly as many, in a northeastern direction, from the Diocynemian promontory in Crete. It was first inhabited by Phoenicians (Ptolemy, vi., 31, § 11, 3). It was thence colonized by Lacedemonians, nearly 700 years ago, by Thyridies relates, before the Peloponnesian war. This island ad- hered to the interest of that state against the Athenians, and successfully resisted at first an attempt made by the latter to reduce it. (Thucyd., 3, 91.) But some years after, the Athenians returned with a greater force; and, on the rejection of all their overtures, in a conference which the historian has preserved to us, they proceeded to besiege the principal town, which they at length captured after a brave and obstinate re- sistance. Having thus gained possession of the city, they, with a degree of barbarity peculiar to that age, put all the males to death, enslaved the women and children, and sent 600 colonists into the island. (Cra- mer's Anc. Greece, vol. 3, p. 404.)

MELPES, a river of Lucania, flowing into the sea to the southeast of the promontory of Palinurus. (Plin., 3, 5.) It is now the Molpa, and is probably the same stream which Lycochrus (v. 1883) calls the Membles.

MELPOMENÊ, one of the Muses, daughter of Jupiter and Mnemosyne. Her name is derived from μῆλον, to celebrate in song. She presided over tragedy, of which the poets made her the inventress. Hence the language of Ausonius, "Melpomene tragico proclamat moesta boatu." (Auson., Idyll. ult., v. 2.) She was commonly represented as veiled, and holding in her hand a tragic mask. Her instrument was the lyre. Melpomene became, by the river-god Achelous, the mother of the Sirens. (Vid. Musae.)

MEMMIA (more correctly REMMIA) LEX, a law, by whom proposed, or in what year, is uncertain. It ordained, that an accusation should not be admitted against those who were absent in the service of the public. (Val. Max., 3, 7, 9.—Suet., Vit. Jul., 23); and if any one was convicted of false accusation, that he should be branded on the forehead with a letter; and his property was confiscated, and part of it to be written KALUMNIA.—As regards the correct form of the name of this law, consult Hicceccius, Ant. Rom., p. 731, ed. Haubold.

MEMMIA, the name of one of the branches of an old plebeian house, who were themselves subdivided into the families of the Galli and Gemelli. The most remark- able of the Memmii were the following—L. C. Memmius Gallus, who was afterwards ambassador to the Etolians.—II. C. Memmius Gallus, son of the preceding, was tribune of the commons, and a bold and popular speaker. He it was who induced the people to summon Jugurtha, king of Numidia, to Rome, in order to expose, if possible, by his means, the corruption of the Roman nobility. (Vid. Jugurtha.) He was afterward elected consul, B.C. 106, but was assassinated by Glaucia, a dis
MENNON. I. a personage frequently mentioned by the Greek writers. He is first spoken of in the Odyssey as the son of Eos, or the morning, as a hero remarkable for his beauty, and as the vanquisher of Antilocho (4, 188; 11, 521) Hesiod calls him the King of the Ethiopians, and represents him as the son of Tithonus. (Theog., 986) He is supposed to have fought against the Greeks in the Trojan war, and to have been slain by Achilles. In the Υφοστασια, a lost drama of Aeschylus, the dead body of Mennon is carried away by his mother Eos. (Fragm. No. 261, ed. Dindorf.) He is represented by most Greek writers as the King of the Ethiopians, and is also said to have been connected with Persia. According to Diodorus (2, 22), Tithonus, the father of Mennon, governed Persia, at the time of the Trojan war, as the viceroy of Teutam, the Assyrian king; and Mennon erected at Susa the palace which was afterwards known by the name of Mennonium. Diodorus also adds, that the Ethiopians claimed Mennon as a native of their country. Pausanias combines the two accounts: he represents Mennon as king of the Ethiopians, but also says, that he came to Troy from Susa, and not from Ethiopia, subduing all the nations in his way. (Pausan., 10, 31, 6—Id., 1, 42, 2.) Aeschylus also, according to Strabo, spoke of the Cissian, that is, Susian, parentage of Mennon (Strabo, 720); and Herodotus mentions the palace at Susa, called Mennonia, and also says, that the city itself was sometimes described by the same name. (Herod., 5, 53, seq.—Id., 7, 151.) This was the most celebrated of the royal tombs of the origin of Mennon to Egypt or Ethiopia; and it is not improbable that the name of Mennon was not known in Susa till after the Persian conquest of Egypt. and that the buildings there called Mennonian by the Greeks were, in name, at least, the representative of those in Egypt. The partial deciphering of the Egyptian proper names affords us sufficient reason for believing, with Pausanias (1, 42, 2), that the Mennon of the Greeks may be identified with the Egyptian Phamenoth, Phamenon, Amomphis, or Amenhoph, of which name the Greek one is probably only a corruption. Phamenoph is said to mean "the guardian of the city of Ammon," or "devoted to Ammon," "belonging to Ammon."—Mennon, then, must be regarded as one of the early heroes or kings of Egypt, whose fame reached Greece in very early times. In the eighteenth dynasty of Manetho the name of Amenophis occurs, which may be identical with the Egyptian Phameno, Phamen, Amomphis, or Amenhoph, of which name the Greek one is probably only a corruption. Amenhoph is supposed to be the Mennon and the vocal stone." He is Amenhoph II., and the son of Thutmose, who is said to have driven the shepherds out of Egypt. —As regards the vocal statue of Mennon, consult the article Memnonium II. (Encycl. Us. Knovel., vol. 15, p. 89, seq.) —II. A native of Rhodes, the brother of the wife of Aratus, satrap of Lower Phrygia. He was advanced, together with his brother Mentor, to offices of great trust and power by Darius Ochos, king of Persia. We are ignorant of the time of Mennon's birth, but he is mentioned by Demostrenus as a young man in B.C. 352. (Aristot., p. 672.) Mennon possessed great wealth, and was recommended by Darius Codomannus, the last king of Persa, for the invasion of Asia by Alexander, with an extensive command in Western Asia; but his plans were thwarted and opposed by the satraps, and it was contrary to his advice that the Persians offered battle to the Macedonians at the Granicus. After the defeat of the Persians on this occasion, Mennon was appointed to the chief command in Western Asia, as the only general who was able to oppose the Maccabees. He first retired to Miletus, and afterward withdrew to Halicarnassus in Caria, which he defended against Alexander, and only abandoned it at last when it was no longer possible to hold out. After the fall of Halicarnassus, Mennon entered into negotiations with the Lacedaemonians, with the view of attacking Macedonia. He was now completely master of the sea, and proceeded to subdue the islands in the Ægean. He took Chios, and obtained possession of the whole of Lesbos, with the exception of Mytilene, before which place he died, B.C. 339. The loss of Mennon was fatal to the Persian cause: if he had lived, he would probably have invaded Macedonia, and thus have compelled Alexander to give up his prospects of Asiatic conquest, in order to defend his own dominions. (Arrian, Exp. At., 1, 20, seq.—Id., 2, 1, seqq.—Diod. Sic., 16, 52.—Id., 17, 23, seqq.—Encycl. Us. Knovel., vol. 15, p. 89.) III. A native of Athens, and supposed by some to be a contemporary of Agrippa, who was regarded as contemporary with Augustus, but who, in the opinion of some critics, ought to be placed in a later period. He wrote a history of his native city, and of the tyrants who had ruled over it, in twenty-four books. Photius has preserved for us an abridgment, or, rather, an extract from the 9th to the 16th book; for already, in his time, the first eight, as also the last eight books, were lost; and it is precisely from this circumstance that we are enabled to fix the period at which the history terminated, and which would give us some idea of the time when the author flourished. The extracts preserved by Photius are more interesting from the fact of Mennon's speaking, in the course of them, by way of digression, of other nations and communities with whom his townsmen had at any time political intercourse or relations. These extracts extend from the first year of the 104th Olympiad (B.C. 364) to the first of the 107th Olympiad (B.C. 351). He first mentions the name of Mennon is that of Orellius, Lips., 1816, 8vo, containing fragments of the works of other writers of Heracleas. (Schöttl Hist. Lit. Gr., vol. 4, p. 105.) Memnonium, I. the citadel of Susa. The city also bore the epithet of "Memnonian." (Herod., 5, 54; 7, 151.—Compare remarks under the article Memnon I.)—II. A splendid structure at Thebes, in Egypt, on the western side of the river. The ruins of the Memnonium are regarded at the present day as belonging to ancient Thebes. This beautiful relic of antiquity looks to the east, and is fronted by a vast propylon, of which 324 feet in length are still remaining. The main edifice has been about 200 feet wide and 600 feet long, containing six courts and chambers, passing from side to side, with about 160 columns thirty feet high. All the sidewalks have been broken down, and the materials of which they were composed carried away; but a portion of the inner chambers, to testify to the traveller what a noble structure once occupied this interesting spot. Chappel considers the Memnonium to be the same with the tomb of Osymandias, described by Diodorus Siculus (1, 47). In the Memnonium is still to be seen the statue of Osymandias. It is pronounced to be one of the finest sculptured works of art which the place contains, and to have been thrown down from its pedestal, laid prostrate on the
MEMNONIUM.

ground, and shattered into a thousand pieces. It is about 26 feet broad between the shoulders, 54 feet round the chest, and 13 feet from the shoulder to the elbow. There are on the back and on both arms hieroglyphical tablets, extremely well executed, which identify this enormous statue with the hero whose achievements are sculptured on the walls of the temple. This figure has sometimes been confounded with that which bears the name of Memnon, and which has so long been celebrated for its vocal qualities. The latter, however, is one of the two statues vulgarly called Memnon and Damiad which stand a little distance from Medinet Abou towards the Nile. These, we are told, are nearly equal in magnitude, being about 52 feet in height. The thrones on which they respectively rest are 30 feet long, 18 broad, and between seven and eight feet high. They are placed about 40 feet asunder; are in a line with each other, and look towards the east, directly opposite to the temple of Luxor. If there be any difference of size, the southern one is the smaller. It appears to be of one entire stone. The face, arms, and front of the body have suffered so much from studied violence, that not a feature of the countenance remains. The head-dress is beautifully wrought, as are also the shoulders, which, with the back, continue quite uninjured. The massy hair projects from behind the ears like that of the sphinx. The sides of the throne are highly ornamented with the elegant device of two bearded figures tying the stem of the flexible lotus round the ligula. The colossus is in a sitting posture, with the hands resting on the knees. The other statue, which stands on the north side, appears to be that of the vocal Memnon. It presents the same attitude as its companion. This famous statue was said to utter, when it was struck by the first beams of the sun, a sound like the snapping asunder of a musical string. (Pausan., 1, 42. 3.) Cambyses, who spared not the Egyptian god Apis, suspecting some imposture, broke the statue with a sledge, to bring it to the Arabian Sea, but discovered nothing. Strabo (816), who visited the spot in a later age, states that he saw two colossal figures, one of them erect, and the other broken off from above, and the fragments lying on the ground. He adds, however, a tradition, that this had been occasioned by an earthquake. The geographer says that he and Apollonius Gallus, with many other friends and a large number of soldiers, were standing by these statues when it fell, and the old soldier directed a certain sound, but could not determine whether it came from the colossus, or the base, or from the surrounding multitude. He mentions also that it was a current belief that the sound came from that part of the statue which remained on the base. Pliny and Tacitus mention the sound produced from the statue without having themselves heard it (Plin., 36. 11. Tacit., Ann., 2, 61. — Compare Jeeveal, 15, 3), and Lucian indeed seems to hint that he had seen persons able to see the pyramids and Memnon's statue, from which a voice proceeded at the rising of the sun. (Toxariai, 6, 27.) It was a general persuasion, indeed, among the Egyptians as well as others, that before Cambyses broke this colossal statue, it uttered the seven mysterious vowels. What characterizes, however, in a particular degree, the statue of vocal celebrity, are the inscriptions, both in Greek and Latin, in which a most impressive appeal and a reference to the voice of Memnon are expressed. Most of these inscriptions belong to the period of the early Roman emperors, and all attest that the writers had heard the heavenly voice of Memnon at the first dawn of day. Translation of two of these inscriptions follow: "I, Publius Balbinus, heard the divine voice of Memnon or Phamenoph. I came in company with the Emperor Sabina, at the first hour of the sun's course, the 15th year of the reign of Hadrian, the 24th day of Athyr, the 23rd of the month of November." The other inscription is as follows: "I write after having heard Memnon. Cambyses hath wounded me, a stone cut into an image of the Sun-god. I had formerly the voice of Memnon, but Cambyses has deprived me of the accents which express joy and grief. You relate grievous things. Your voice is now obscure. Oh wretched statue! I deplore your fate." (American Quarterly Review, No. 9, p. 32. — Compare Champollion, Précis du Système Hieroglyphique, vol. 1, p. 236.) It will be perceived, from the first of these inscriptions, that Memnon, as we have already remarked in a previous volume (MEMNONIUM 1), is made identical with the Egyptian Phamenop; and, in fact, the hieroglyphic legend on the statue, as deciphered by Champollion, shows it to have been the effigy of Amenophis. There is some difficulty, however, notwithstanding these inscriptions, in identifying this statue with the one described by Strabo and Pausanias. These writers say that the upper part had in their time fallen down or been broken off; but at present the upper part exists in its proper position, though not in a single piece, being adapted to the lower portion of the body by courses of the common sandstone used so generally in the buildings of Thebes. Heeren conjectures that the broken statue might have been repaired after the time of Strabo. — Of the fact that the statue of Memnon uttered sounds when the sun shone upon it, there can be no doubt: as to the mode, however, in which this was effected, great diversity of opinion exists. It has been thought by some, that the priests of Thebes might have fabricated, by mechanical art, a kind of speaking head, the springs of which were so arranged that it sent forth sounds at the rising of the sun. Such an explanation, however, is altogether unsatisfactory; the circumstances of the case are directly against it. The more generally received opinion ascribes the sound to some peculiar property in the stone itself, of which the Egyptian priests artfully took advantage, though in what manner it was produced, and whether there is any question of certain sounds that are heard to proceed from the rocks on the banks of the Oronoko, in South America, at sunrise: these he attributed to confined air making its escape from crevices or caverns, where the difference of the internal and external temperature is considerable. The French savans attest to their having heard such sounds at Carnak, on the east bank of the Nile: and hence it has been conjectured that the priests of Thebes took advantage of the advantage of their knowledge, and contrived, by what means we know not, to make the credulous believe that a similar sound proceeded from the colossal statue of Phamenop. — (British Museum, Egypt. Ant., vol. 1, p. 266.) Mr. Wilkinson, however, in his work on the "Topography of Thebes" (Lond., 1855), gives a far more satisfactory solution of the difficulty. "The sound which this statue uttered," observed this learned antiquary, "resembled that of a harp-string, or, according to the preferable authority of a witness, a metallic ring (one of the inscriptions says, 'like brass when struck'), and the memory of its daily performance is still retained in the traditional appellation of Salamat, 'salutations,' by the modern inhabitants of Thebes. In the lap of the statue is a stone, which, on being struck, emits a metallic sound; and it might still be made use of to deceive a visitor, who was not acquainted with its powers, in its powers; and from its position, and a square space cut in the block behind, as if to admit a person who might thus lie concealed from the most scrutinious observer in the plain below, it seems to have been used after the restoration of the statue; and another similar recess exists beneath the present site of this stone, which might have been intended for the same purpose when the statue was in its mutilated state. Mr. Burton and I first remarked the metallic sound of this.
stone in the lap of the statue in the year 1824, and conjectured that it might have been used to decorate the Roman visitors; but the nature of the sound, which did not agree with the accounts given by ancient authors, seemed to present an insuperable objection. In a subsequent visit to Thebes in 1830, on again examining the statue, I found that one Ballilla had compared it to the striking of brass; and feeling convinced that this authority was more decisive than the vague accounts of those writers who had never heard it, I determined on posing some peasants below and ascending myself to the lap of the statue, with a view of hearing from them the impression made by the sound. Having struck the sonorous block with a small hammer, I inquired what they thought it was. However, Edward: 'You are striking brass,' convinced me that the sound was the same that deceived the Romans, and led Strabo to observe that it appeared to him as the effect of a slight blow." (Wilkinson's Topography of Thebes, p. 36, seq.)—The head of the colossal Memnon in the British Museum has no claim to be considered the vocal Memnon described by Strabo, Tacitus, and Pausanias. The height of the figure to which the name is applicable, it seems to me, is 20 feet. There is also an entire colossal Memnon in the British Museum 9 feet 6 inches high, which is a copy of the great Memnon at Thebes. (Hamilton's Egyptiaca. —Philological Museum, No. 4, art. Memnon. —Encycl. Us. Knowl., vol. 15, p. 88, seqq.)

Memphis, a famous city of Egypt, on the left side of the Nile. Concerning the epoch of its foundation and its precise situation, writers are not agreed. With regard to its position, it would seem, from a review of all the authorities which bear upon the subject, that Memphis stood about 15 miles south of the Apex of the Delta: this, at least, is D'Anville's opinion. Herodotus (2, 99) assigns the founding of Memphis to Menes, and Diodorus (1, 50) to Uchoreus. From the account given by the former of these writers, it would seem that the Nile originally ran nearer the Libyan mountains, and that Menes, having erected a large dam about a hundred stadia south of the spot where Memphis afterward stood, caused the river to pursue a more easterly course. After he had thus diverted the current of the stream, he built Memphis within the ancient bed of the Nile. The great embankment was always an object of attention, and Herodotus states that under the Persian dominion it was annually repaired; for if the river had at any time broken through it, they secured against its attack. He differs from Herodotus, however, in making, as has already been remarked, Uchoreus to have been its founder. On this point, indeed, there appears to have been a great diversity of opinion among the ancient writers, for we find the building of Memphis ascribed also to Epaphus (Schol. in Stat., Theb., 4, 737) and to Apis. (Synecellus, p. 149.—Compare Wilkinson's Mon. Sic., 1, c.)

It is more than probable, that the Egyptian priests were possessed of no definite information on this head, and that Memphis was the capital of Lower Egypt, as Thebes was of Upper Egypt, at a very early period, when the land was under the sway of many contemporaneous monarchs. When, however, the whole country was united under one king, the royal residence would seem to have been transferred to Memphis, in order to enjoy, probably, the cool breezes from the sea, and Thebes would then appear to have declined in importance. The circuit of Memphis is given by Diodorus at 160 stadia, from which we should see that it was still larger in compass than the city of Thebes. Memphis is supposed to have suffered much in the inroads of the Arabs and the Persians. In the latter period they were, however, under the Ptolomies; and, about the time of our Saviour, was the second city of Egypt, Alexandria being the capital: but its decay had already begun. Strabo, who visited it about this time, describes the temple of Vulcan, another of Venus, and a third of Osiris, where the Apis, a sacred bull, was worshipped (vuln. Apsi); and also a Serapeum and a large circus. But many of its palaces were in ruins; and the serpents of the immense edifice which stood in the front of the circus; and among a number of sphinxes near the Serapeum, some were covered with sand to the middle of the body, and others were so nearly buried as to leave only their heads visible—melancholy and certain presages of its future fate. In the seventh century the Saracen or Arabian conquest of Egypt occurred. Memphis was not indeed destroyed by the victors, and yet it had to supply abundant materials for the construction of the Serapeum of Alexandria, as well as for the temple of Vulcan at Memphis, and for the building of the Serapeum of Alexandria. Notwithstanding this gradual dilapidation was actively carried on, and most of the former inhabitants had taken up their residence in the new capital of Cairo. This latter city he calls "New Memphis," and Memphis "Old Memphis" (c. 21). The first modern traveller who seems to have discovered the true site of Memphis is Fourmont (Description des ruines d'Heliopolis et de Memphis, Paris, 1755, 8vo.). The whole subject is now clearly elucidated by the researches of the French in Egypt. The ruins of the ancient city extend, on the western side of the Nile, for more than one geographical mile in a southern direction from Old Cairo. In the vicinity of Saccara is to be seen the spot where once stood the temple of Vulcan. The village which occupies a part of the site of Memphis is called by Fourmont Mau- nef, while more modern authorities name it Mty-Rahynch. Both are, in fact, right: along the side of Memphis many villages rise, but the largest masses of ruins show themselves principally at Mty-Rahynch, on the southern side of the city. —The following description of Memphis, as it appeared in the twelfth century, is from the Oriens Antiquus of Abulpharagius Agha (Abdelliteh's Abridgment of Edrisi, translated by De Sacy.—Encyclopaedia Metropolitana, art. Egypt.) "Among the monuments of the power and genius of the ancients are the remains still extant in old Misr or Memphis. That city, a little above Fostat, in the province of Djiweh, was inhabited by the Pharaohs, and is the ancient capital of the kingdom of Egypt. Such it continued to be until ruined by Bokhtnasa and Nebuchadnezzar (Nebuchadnezzar), but it was afterwards often restored when Alexander had built it. Iskanderyeh (Alexandria), that latter place was made the metropolis of Egypt, and retained that pre-eminence till the Moslems conquered the country under Amru-ebn-el-Aasi, who transferred the seat of government to Fostat. At last El Moze came from the west and built El Cahahirah (Cairo), which has ever since been the royal place of residence. But let us return to the description of Memphis. Soon after Bokhtnasa it had been called old Misr or Memphis, which was the name by which that remote period at which it was built, the change of dynasties to which it has been subjected, the attempts made by various nations to destroy even the vestiges, and to obliterate every trace of it, by removing the stones and materials of which it was formed—ruining its houses and defacing its sculptures—notwithstanding all this, combined with what more than four thou-

821
sand years must have done towards its destruction, there are yet found in it works so wonderful that they confound even a reflecting mind, and are such as the most eloquent would not be able to describe. The more you consider them, the more does your astonishment increase; and the more you look at them, the more pleasure you experience. Every idea which they suggest is infinitely exceeding all that has been before. Of their proportion, and perfect resemblance to nature, than for their truly astonishing dimensions. We measured one of them, he says, which, without including the pedestal, was 45 feet in length, 15 feet from side to side, and from back to front in the same proportion. It was of one block of red granite, covered with a coating of red varnish, the antiquity of which seemed only to increase its lustre. The ruins of Memphis, in a time, extended to the distance of half a day's journey; comprehending the different accidents of the work of destruction proceeded since the twelfth century, that few points have been more debated by modern travellers than the site of this celebrated metropolis. The investigations of the French, as nas already been remarked, appear to have decided the question. "At Myt-Rahyntch (Metrahaine), one league from Saccara, we found," says General Dugua, "so many blocks of granite covered with hieroglyphics and sculptures around and within its temples, that we at length, in circumserence, enclosed by heaps of rubbish, that we were convinced must be the ruins of Memphis. The sight of some fragments of one of those colossal-susses, which Herodotus says were erected by Sesos ris at the entrance of the temple of Vulcan, would, indeed, have been sufficient to dispel our doubts had any remained. The want of this colossus shows that it must have been 45 feet high." (Russell's Egypt, p. 216, seqq.)—Mendelssohn thought he had seen the Neph of Scripture. *Isaiah, 19, 13—Jer., 2, 16.— Ezek., 30, 13-16.)

Menander (Μηνάνδρος). I. A celebrated comic poet of Athens, born B.C. 342. According to Suidas, he was the son of Diophites and Hegistrate, was crossed, and yet clear-headed enough (σπάραξε τας φύσεις δόξες ἐκ τῶν νοειν). His father was at this time commandant of forces stationed by the Athenians at the Hellespont, and must therefore have been a man of some consequence. Alexias, the comic poet, was his uncle and instructor in the drama. (Proleg., Aristoph., p. 30.) Theophrastus was his tutor in philosophy and literature, and he may have derived from the latter the knowledge of character for which he was so eminent. (Diog. Laert., 5, 36.) The merit of his pieces for him to the title of Chief of the New Comedy. His comedies, Marius was remarkable for their elegance, refined wit, and knowledge of human nature. In his 21st year he brought out the Ophye, his first drama. (Proleg., Aristoph., p. xxx.) He lived 29 years more, dying B.C. 292, after having composed 105 plays, according to some authorities (Apollod., ap. Aul. Gell., 17, 4), and according to others 108. (Suidas.—γέγραψε καμνιδας πυ.) He gained the prize, however, only eight times, notwithstanding the number of his other productions, and although he was the most admired writer of his time. One hundred and fifteen titles of comedies ascribed to him have come down to us; but it is clear, of course, that all these are not correctly attributed to him. (Fabric., Biblioth. Gr., vol. 2, p. 460, 468, ed. Hariles.) Menander is said to have been drowned while bathing in the harbour of Piraeus, and a line in the Ibis of Ovid is supposed by some to allude to this: "Comicius ut medici per itur nambat in undas." (ib., 591.) According to another account, he drowned himself because his rival Philemon obtained the prize in a dramatic contest. All antiquity approves in praise of Menander. We learn from Ovid that all his plots turned to love, and that the triumvirate of Menander, Terence, and Plautus was established for the performance of their comedies. (Ovid, Trist., 2, 370.) Julius Caesar called Terence a "dimidiatus Menander," or "halved Menander," having reference to his professed imitation of the Athenian dramatist. Terence, indeed, was but a translator of his dramas. Plutarch preferred Menander to Aristophanes, and Dio Chrysostom ranked him above all the writers of the Old Comedy. Quintilian (10, 1, 69) gives him unqualified praise, as a delineator of manners. From these notices, from the plays of Terence, and from an awkward compliment passed upon him by Aristophanes the grammarians, we may infer that Menander was an admirable painter of real life. He was a man, however, of licentious principles; and his effeminate and immoral habits, and that carelessness in his verses which subjected him to the charge of plagiarism, or, at least, of copying, all point to the man of fashion rather than the true poet. It is certain that there is very little of the humorous in the fragments of Menander which remain; but we cannot judge of a play by fragments. Sheridan's plays, if reduced to the same state, would be open to a similar charge, although he is perhaps the most witty writer of any age or country. The essential aim of the comedy of manners is to excite interest and smiles, not laughter. The plays of Menander were probably very simple in dramatic action, which simplicity, but, as he tells us himself, added to the main plot some subordinate one taken from a different piece of Menander; thus making, as he says, one piece out of two. Between the time of Aristophanes and that of Menander, a great change must have taken place in the Athenian character, which, in all probability, was mainly brought about by the change in the political condition of the Athenian state. The spirit of the people had changed from that which characterized the plays of Aristophanes at a time when Athens was struggling for supremacy in Greece; and, in the time of Menander, Macedonian influence had nearly extinguished the spirit that once animated the conquerors of Marathon and Plataea. Manners probably had not changed for the better in Athens; though the obscenity and ribaldry of Aristophanes would no longer have been tolerated. The transition from freedom of expression to a decent propriety of language marks the history of literature in every country. Thus the personal satire and the coarseness, which characterized the old comedy, were no longer adapted to the age and circumstances in which Menander lived, and there remained nothing for him to attempt as a dramatist but the new species of comedy, in which, by the unanimous judgment of all antiquity, he attained to the highest excellence. The fragments of Menander are principally preserved in the works of Plutarch, Suidas, and the Greek lexicographers and grammarians. They were published along with those of Philemon by Le Clerc (Clericus), in 1709, 8vo. This edition, executed with very little care, gave occasion to a very disgraceful literary warfare, in which Bentley, Burmann, Gronovius, De Pauw, and D'Orville took an active part. (Fabric., Bibl. Gr., vol. 4, p. 487, 488, 489.) The best edition is that of Meineke, Berol., 1823, 8vo.—It seems possible that some of the plays of Menander may yet exist; at least there is evidence to the fact of some of the plays having been in existence in the seventeenth century. (Encyclopaedia, Us. Knackel, vol. 15, p. 92.—Theatre of the Greeks, 4th ed., p. 122.) II. A native of Laodicea, who lived
about 470 B.C. He was the author of a treatise termed "Επιστημονικήν," "Concerning discourse delivered for mere display."—III. Surmamed "Protector," a German word, lived at Constantinople during the latter half of the sixth century. He was one of the emperor's body-guard, whence he derived the name of "Protector." (Cod. Theod. 6, 24.) He wrote a history of the Eastern empire, from A.D. 559 to A.D. 582, in eight books, of which considerable extracts have been preserved in the "Eclogae Legationum," attributed to Constantine Porphyrogenitus. The best edition of Menander is by Bekker and Niebuhr, Bonn., 1830, together with the fragments of Dexitius, Eunapius, Patricius, &c. (Encyc. U. S. Knoefel, vol. 15, p. 92.)

5. MENAPHI. A powerful tribe of Belgic Gaul, occupying originally all the country between the Rhemen and Mosse (Rhine and Meuse) as far nearly as the territory of Julich. In Caesar's time they had even possessed sessions on the eastern side of the Rhine, until driven thence by the German tribes. (Cass. B. G. 4, 4.) At a later period they removed from the banks of the Rhine, when the Ubii and Sigambri, from Germany, established themselves on the western bank of the river. From a passage in Tacitus (Hist., 4, 29), it appears that the territory of this tribe was subsequently to be found along the lower Meuse. They had a fortress on this last-mentioned stream, whose name of Castellum still subsists in Kessel. In Caesar's days the Menapii had no city, but lived after the German fashion, divided among themselves. (Mannert, Geogr., vol. 1, p. 201.)—II. A Gallic tribe who migrated into Hibernia (Ireland), and settled in part of the modern province of Leinster. (Mannert, Geogr., vol. 2, p. 218.)

5. MENAS, a freedman of Pompey the Great, noted for frequently changing sides in the war between Sextus Pompeius and the triumvirs. He first deserted the party of Sextus, under whom he held an important naval command, and then deserted to Augustus; then he returned to his former side; and again abandoned it and joined the forces of the enemy. (Compare Appian, B. C., 5, 78, seqq.) The historian just quoted applies to him the very appropriate title of παραπορο- δήγη. Horace has been thought to allude to him in his 4th Epode; but this opinion, though countenanced by the earlier commentators, has been rejected by more recent scholars. (Döring, ad Horat. Epod., 4, 47.)

5. MENDES, a city of Egypt, in the Delta Parvum, northeast of Sebennytos, and near the coast. It was the chief city of, and gave name to, the Mendesian nome. From it also the Mendesian mouth of the Nile (Ostium Mendesium), now the canal of Achmus, derived its appellation. The goat was here an object of adoration, and Herodotus states (2, 46) that both this animal and the god Pan were called in the Egyptian language Menes. Pan was worshipped at this place with the visage and feet of a goat; though what the Greek writers here call Pan answers more correctly to the deity Priapos, or the generative attribute considered abstractly. At Mendes, female goats were also held sacred. The fable of Jupiter being suckled by a goat probably arose from some emblematic composition, the true explanation of which was known only to the initiated. The city of Mendes gradually disappeared from history, and when it was immediately rose the city of Thmus, where the goat was still worshipped as at Mendes. —Jablonski (Panth. Egypt., 1, 2, 7) makes Menes signify "fertile" or "propitious," and regards it as expressive of the fertilizing and productive energies of nature, especially of the sun. In like manner, we find it stated that Thmu- sis, the Egyptian tongue also signified "a goat." (Hieron., ad Iovin., 2, 6.) Lacrosse, on the contrary, makes Thmu- sis equivalent to "the city of Lions."
able means of subsistence, and, according to a law of Solon's, they were cited before the court of Areopagus, to give an account of the manner in which they were supported. The master of one of the public prisons was, at their request, sent for, and attested, that every night these two youths went among the criminals, and, by grilling with them, earned two drachmas, which enabled them to spend the day in the study of philosophy. The magistrates, struck with admiration at such an extraordinary proof of an indefatigable thirst after knowledge, dismissed them with high applause, and presented them with two hundred drachmas. (Athenaeus, 4, p. 168.) They met with several other friends, who liberally supplied them with whatever was necessary to enable them to prosecute their studies. By the advice of his friend, and probably in his society, Menedemus went from Athens to Megara, to attend upon the instructions of Stilpo. He expressed his approbation of the manner in which this philosopher taught, by giving him the appellation of "the Liber-al." He next visited Elis, where he became a disciple of Phrado, and afterward his successor. Transferring the Eleic school from Elis to his native city, he gave it the name of Eretrian. In his school he neglected those forms which were commonly observed in places of this kind; his hearers were not, as usual, placed on circular benches around him; but every one attended him in whatever posture he pleased, standing, or sitting, or lying upon the softest Mattresses, as the Eretrians used to be supported by the Eretrians with contempt, and, on account of the vehemence with which he disputed, he was often branded with the appellation ofeur and madman. But afterward he rose into high esteem, and was intrusted with a public office, to which was affixed an annual stipend of 200 talents. He discharged the trust with fidelity and reputation, but would only accept a fourth part of the salary. He was afterward sent as ambassador to Bithynia, and on his return in, and to his countrymen several important services. Antigonus entertained a personal respect for him, and professed himself one of his disciples. His intimacy with this prince made the Eretrians suspect him of a design to betray their city to Antigonus. To save himself, he fled to Antigonus, and soon after died, in the 84th year of his age. It is thought he precipitated his death by abstaining from food, being oppressed with grief at the impiety of his countrymen, and on being unable to persuade Antigonus to restore the lost liberties of his country. (Diog. Laert., 2, § 125, seqq.—Engel's History of Philosophy, vol. 1, p. 204, seqq.—II. A native of Lampsacus, in whom the spirit of the Cynic sect degenerated into downright madness. Dressed in a black cloak, with an Arcadian cap upon his head, on which were drawn the figures of the twelve signs of the zodiac, with tragic buskins on his legs, with a long beard, and with an ashen staff in his hand, he went about like a maniac, saying that he was a spirit, returned from the lower world to admonish the living. He lived in the reign of Antigonus, king of Macedon. (Diog. Laert., 6, § 102.—Suid., s. v. φάος—Engel's History of Philosophy, vol. 1, p. 314.)

MENELAIUS (Μένελας).—Menelaus, a range of hills on the left bank of the Eurotas, stretching to the south-east of the city, and rising abruptly from the river. Polybius (8, 21, 3) says that this was his (καταφυγος pηλαος), but modern travellers assure us that this is not the case, and that they are mere hillocks when compared to Taygetus (Dodwell, vol. 2, p. 409.—Gell, Itin. of the Morus, p. 229), so that perhaps we should read, in the text of Polybius, καταφυγος τηλαος. (Cramer's Anc. Greece, vol. 3, p. 210.)

MENELAIUS, king of Sparta, and brother of Agamemnon. He was the son of Plistothenes; but his father dying young, and his mother Areope having been taken in marriage by Atreus, her father-in-law, both Menelaus and Agamemnon received the common name of Atride, as if they had been the sons of Atreus. After the murder of Atreus, Thyestes his brother ascended the throne, and compelled Menelaus and Agamemnon to flee from Argolis. They found an asylum, first with Polyphides, king of Sicyon, and then with Ceneus, king of Calydon. From the latter court they proceeded to Sparta, where Menelaus became the successful candidate for the hand of Helen (Vid. Helena); and, at the death of his father-in-law, succeeded to the vacant throne. His conjugal fecility, however, was not destined to be of long continuance. Paris, the son of Priam, king of Troy, came on a visit to Sparta, accompanied by Eneas. Here he was hospitably entertained by Menelaus. The Trojan prince, at the banquet, bestowed gifts on his hostess Helen, and shortly after Menelaus sailed to Crete, directing his queen to entertain the guests as long as they stayed. Venus, however, inspired Paris and Helen with mutual love, and, filling a vessel with the love-potion, sent them to Menelaus during his absence. A tempest sent by Jove drove them to Sidon, which city Paris took and plundered, and, sailing thence to Ilissus, there he celebrated his union with Helen. Menelaus, being informed by Iris of what had occurred, returned home and consulted with his brother Agamemnon, king of Mycene, about an expedition to Ilissus; he then repaired to Nestor at Pylus, and, going through Greece, they assembled the forces of the Greek nations. At the time of his assembling the fleet, an earthquake was caused by an oath to lend such aid whenever it might be demanded of them. After the destruction of Troy (vid. Troja) and the recovery of Helen (vid. Helena and Deiphobus), Menelaus, who had commanded the Spartan forces in that memorable war, kept company with Nestor, on his return to Greece, until they reached the promontory of Sunium in Attica. Apollo here slew Phronius, the pilot of Menelaus' ship, and, by his death, caused the Spartan fleet to leave the land. After the funeral rites had been observed, he setting performed the funeral rites, he again put to sea; but, as he approached Cape Malea, Jupiter sent forth a storm, which drove some of his vessels to Crete, where they went to pieces against the rocks. Five, on board of one of which was Menelaus himself, were carried by the wind and waves to Egypt. (Od., 3, 276, seqq.) During the eight-years of his absence, Menelaus visited all the adjacent coasts, Cyprus, Phoenicia, Egypt, the Ethiopians, Sidonians, and Erembians, and also Libya (Od., 4, 81, seqq.), where the lambs are born horned, and the sheep year three times a year, and milk, cheese, and flesh are in the utmost abundance, for king and shepherd alike. In these various countries he collected much wealth; but, leaving Egypt on his voyage homeward, he neglected offering sacrifices to the gods, and was, in consequence, detained by want of wind at the islands of Cythera. They were thirty-two days, and their stock of provisations were nearly exhausted, when Menelaus was informed of what he ought to do by Proteus, whom he had sought for that purpose by the advice of the seynymph Idothes. Having offered due sacrifices to the immortal gods, a favourable wind was sent, which speedily carried him homeward; and he arrived in his native country on the very day that Orestes was given by the king of Sparta to the suitors, and had slain. (Od., 4, 351, seqq.) Such is the narrative of Homer. Helena, according to this same poet, was the companion of all the wanderings of
MEN

MEN

MEN

Menelaus; but the Egyptian priests pretended that Paris was driven by adverse winds to Egypt, where Proteus, who was then king, learning the truth, kept Helen and dismissed Paris; but the Greeks would not believe the Trojans, that she was in their city, till they had taken it. But that Menelaus sailed to Egypt, where his wife was restored to him. (He-

Rod., 2, 113, seqq.—Vid. Helena.—Keightley's My-

thology, p. 492, seqq.)—As regards the reconciliation of Menelaus and Helen, Virgil follows the account which makes the latter to have ingratiated herself into the favor of her first husband by betraying Deiphobus into his hands on the night when Troy was taken. (Liv., 6, 494, seqq.—Compare Quint. Cis., 13, 394, seqq.)

Menenius, I. Agrippa, a celebrated Roman, who obtained the consulship B.C. 501, and who afterward prevailed upon the people, when they had seceded to the Mons Sacer, to return to the city. He related on this occasion the well-known fable of the stomach and the limbs. (Liv., 2, 16.—Id., 2, 32.)—II. Titus, son of the preceding, was chosen consul with C. Horatius, B.C. 475, when he was defeated by the Tusci, and being called to an account by the tribunes for this failure, was sentenced to pay a heavy fine. He died of grief soon after. (Liv., 51, seqq.)

Menes, the first king mentioned as having reigned over Egypt, and who is supposed to have lived above 2000 B.C., about the time fixed by biblical chronolo-

gists for the foundation of the kingdom of Assyria by Nimrod, and corresponding also with the era of the Old Empire of Yaw, with whom the historical pe-

riod of China begins. All inquireings concerning the history of nations previous to this epoch are mere speculative unsupported by evidence. The records of the Egyptian priests, as handed down to us by Her-

rodotus, Manetho, Eratothenes, and others, place the era of Menes several thousand years farther back, reckoning a great number of kings and dynasties after him, with remarks on the gigantic stature of some of the kings, and on their wonderful exploits, and other characteristics of mystical and confused tradition. (Consult Eutychius, Chron. Canon., ed. Maii et Zoh-

reb, Mediol., 1818.) It has been conjectured that several of Menes' dynasties were not successive, but contemporaneous, reigning over various parts of the country. From the time of Menes, however, something like a chronological series has been made out by Champollion, Wilkinson, and other Egyptian chronologists, partly from the list of Manetho, and partly from the Phonic inscriptions on the monu-

ments of the country.—Menes, it is said by some (Herod., 2, 99), built the city of Memphis, and, in the prosecution of his work, stopped the course of the Nile near it, by constructing a causeway several miles broad, and caused it to run through the mountains. (Vid. Nilus.) Diodorus Siculus, however (1, 50), as-

signs the foundation of Memphis to Uchoreus, Bishop on Copt., who was the first son of Menes, king of Egypt, but that he only transferred the seat of empire from Thebes to Memphis. (Vid. remarks under the article Memphis.) Zozga finds an analogy be-

tween the names Menes and Mnevis; to which may be added those of the Indian Menus and the Cretan Mina, to say nothing of the German Mannus. (Zoeg-

a, de Odeiac, p. 11.)

Menelaus is a harbour not far from Gades, on the coast of Spain, in the territory of Batica. An oracle of Menestheus was said to have been in or near the place. The modern Puerto de Santa Maria is thought to correspond to the ancient spot. (Ubert., Geogr., vol. 2, p. 342.)

Menestheus or Menneheus, a son of Petenus, and great-grandson of Erochitheus, who so insinuated him-

self into the favour of the people of Athens, that, during the long absence of Theseus, who was engaged in per-

forming his various adventures, he was elected king. The lawful monarch, at his return home, was expelled, and Menestheus established his usurpation by his popu-

lar manners and great moderation. As he had been one of Helen's suitors, he went to the Trojan war at the head of the people of Athens, and died in his turn in the island of Melos. He was succeeded by Demophon, the son of Theseus. (Plut., Vit. These.)

Meninx, or Lophotagitis Insula, an island off the coast of Africa, in the vicinity of the Syrtis Minor, and forming part of its southern side. Its name of Lophotagitis (Αυροφαγητής) or Lophagogorum insula (Αυροφότητος νήσος) was given it by the Greeks, from the horns of the island. Its more correct name, it was thought, was its insubstantial and compact,

and also the adjacent country along the coast of the Syrtis, produced abundance of this sweet and tempting fruit. (Herod., 2, 92.—Id., 4, 177, Polymb., 12, 2.—Eustath. ad Hom., Od., 10, 84, p. 1616.) In our editions of Sclavus, the island is called Brachion (Βραχίων), a manifest interpolation, which has found its way into the text from the note or gloss of some in-

dividual, who wished to convey the information that there were many shallows in the neighbourhood (Mannert, Geogr., vol. 10, pt. 2, p. 144.)—The island fell into the hands of the Romans during the first Punic war, and then, for the first time, we learn that the true name, and the one used among the natives themselves, was Meninx (Μενίγυς).—Polymb., 1, 39.—Compare Di-

oys. Perieg., v. 480.) From this time forward, Meninx remained the more usual appellation among the geographical writers, that is (534) in insula, so that the chief city bore the same name with the island. Pliney (5, 4) speaks of the city of Meninx towards Af-

rica, and of another named Thoer. Ptolemy likewise mentions two cities, Meninx and Gerza, the former of which he places to the northeast, and the latter to the southwest. It is more than probable, that the chief city of the island was not called Meninx, but only re-

ceived this name from those who traded thither, and that the true appellation was Gerba, which was given at a later period to the whole island. (Aurel. Vlct., Epit., c. 31. "Createi in insula Meninge, qua nunc Girba dictur.") The Arabs still give it the name of Gerbo or Gerza.—Meninx was famed for its purple dye, obtained from the shellfish along its shores, and Pliney ranks it next in value to the Tyrian.

Menippus, a cynic philosopher, born at Sinope in Asia Minor, but whose family were originally from Cadyras, in Palestine; and, in fact, by the testimony of Diogenes Laertius, he was at first a slave, but after-

ward obtained his freedom by purchase, and eventu-

ally succeeded, by dint of money, in obtaining citi-

zenship at Thebes. Here he pursued the employment of a money-lender or usurer, and obtained from this circum-

stance the appellation of Ημεροδαυάτης ("one who lends money at daily interest"). Having been defrauded, and having lost, in consequence, all his property, he was en-

trusted with the business of a shop in Thebes, and he was, in fact, the author of several works, and his satiric style was imitated by Varro. (Vid. remarks on the Menippian Sa-

tire, under the article Varro.) Among other produc-

tions, he wrote a piece entitled Διαργής πράξεις, "The Sale of Diogenes," and another called Nixosia, "Necromancy." It is thought by some, that this latter performance suggested some imitation of Lucian in the "Vates," or "Oracle of the Dead," which is found among the works of the native of Samosata. (Scholl, Hist. Lit. Gr., vol. 2, p. 363.)

Mennis, a city of Assyria, in the district of Adiabene, to the south of Arbela. The adjacent country aboun-

ded with bitumen. Mannert supposes it to have been near the modern Das-Charmal. (Mannert, Geogr., vol. 5, p. 458.) Curtius calls it Memnium (5, 1).

Menodōtus, a physician of the emporie school, born

825
at Nicomedia. He was a disciple of Antiochus of Laodicea in Asia, and lived during the reigns of Trajan and Hadrian. Pytheus Empiricus ranks him among the Seven Sages of Greece.

He banished analogy from the Empiric system, and substituted what was called epilogism. The hatred which he bore towards the dogmatists was so great, that he never designated them by any other but the most derisory epithets, such as τροπομοιοί, "old-fashioned," ὑπομυγελόημενοι, "buried alive," and ἱσταμένοι, "contemptible fools," &c. (Galen, de subj. empir., c. 9, p. 65.—Sprengel, Hist. Med., vol. 1, p. 194.)

MENNECIUS (three syllables), the father of Jocasta.

MENNETES, I. the pilot of the ship Gys, at the naval games exhibited at Aeneas at the anniversary of his father's death. He was thrown into the sea by his commander for having so unskilfully steered his vessel as to prevent his obtaining the prize in the contest. He saved himself by swimming to a rock. (Vitr., Enn., 5, 161.)—II. An Arcadian, killed by Turms in the war of Aeneas. (Id., 12, 517.)

MENENITIDES. Vid. Menenetus.

MENENIUS, a son of Actor and Eginna after her marriage with Jupiter. He left his mother and went to Opus, where he had, by Sthenile, Patroclus, often called from him Menenitades. Menenetus was one of the Argonauts. (Apollod., 3, 14.—Hom., II., 1, 307.—Hygin., fab., 97.)

MENON, a Thessalian commander in the expedition of Cyrus the Younger against his brother Artaxerxes. He commanded the left wing in the battle of Cunaxa. He was enrolled among the other generals after the battle by Tissaphernes, but was not put to death with them. Xenophon states that he lived an entire year after having had some personal punishment inflicted, and then met with an end of his existence. (Anab., 2, 6, 29.) Diodorus states that he was not punished with the other generals, but that it was thought that he was inclined to betray the Greeks, and he was therefore allowed to escape unhurt. (Diod. Sic., 14, 27.) Marcellinus, in his life of Thucydides, accuses Xenon of calumniating Menon, on account of his enmity towards Plato, who was a friend of Menon. (Vit. Thucyd., p. 14, ed. Bip.—Schneider, ad Xen., Anab., loc. cit.)

MENTOR, I. one of the most faithful friends of Ulysses, and the person to whom, before his departure for Troy, he consigned the charge of his domestic affairs. Many species of his character are attributed to Telemaeus, not to degenerate from the valour and wisdom of his sire. (Od., 2, 268.) The goddess, under the same form, accompanied him to Pylus. (Od., 3, 21, seqq.)—II. A very eminent engraver on silver, whose country is uncertain. He flourished before the burning of the temple of Ephesus, in B.C. 356, as several of his productions were consumed in this conflagration. (Plin., 32, 12, 55.—Martial, Ep., 3, 28.—Codinus, s. 7, 23.)

MERA or MERA, a dog of Icarus, by whose cries showed Erigone where her murdered father had been thrown. Immediately after this discovery the daughter hung herself in despair, and the dog pined away, and was made a constellation in the heavens, known by the name of Canis. (Ovid., Met., 7, 363.—Hygin., fab., 130.—Elian, H. A., 7, 28.)

MERCURY, Promontorium, the same with the Hermaion Promontorium. A promontory of Africa, on the coast of Zeugitana, now Cape Bon.

MERCURY, I. a celebrated god of antiquity, called Hermes (Ἑρμῆς) by the Greeks. Homer and Hesiod, however, style him Hermeis (Ἑρμεῖας); and wherever the form Ἑρμῆς occurs in these poets, the passage may be regarded as an interpolation. Mercury was the messenger of the gods, and of Jupiter in particular; he was the god of speech, of eloquence; the patron of orators, of merchants, of all dishonest persons, and particularly thieves, of travellers, and of shepherds. He also presided over highways and crossways, and conducted the souls of the dead to Hades. He was a herdsman, and was also the god of the shepherds, and the inventor of the lyre, of letters, of commerce, and of gymnastic exercises; and they placed his birth either on Mount Cerycus in Boeotia, or on Mount Cyllene in Arcadia. In the Iliad he is called the son of Jupiter (24, 333), but his mother is unnoticed. In the later legends, however, he is styled the offspring of Jupiter and Maia. His infancy was intrusted to the Seasons or Hora; but he had hardly been laid in his cradle, when he gave a proof of his skill in abstracting the property of others, by stealing away the oxen of Admetus, which Apollo was tending on the banks of the Amphyrite. He displayed his thievish propensities on other occasions also, by depriving Neptune of his trident, Venus of her girdle, Mars of his sword, Jupiter of his sceptre, and Vulcan of many of the implements of his art. It was his dexterity that recommended him to the notice of the gods, and that procured for him the office of cup-bearer to Jupiter, in which station he was succeeded by Hebe. Jupiter presented him with a winged cap (patēsas), winged sandals (talaria), and a short sword (harpē) bent like a scythe. This last he lent on one occasion to Perseus, to enable him to destroy the Gorgon Medusa. (Vid. Perseus and Gorgones.) By means of his cap and sandals he was enabled to go into whatever part of the universe he pleased with the greatest celerity, and, besides, he was permitted to make himself invisible, and to assume whatever shape he pleased. He was the ambassador and plenipotentiary of the gods, and was concerned in all alliances and treaties. He was the confidant of Jupiter also in his erotic relations with the fair ones of earth, and was often set to watch and baffle the jealous schemes of Juno. After inventing the lyre, he gave it to Apollo, and received from him in exchange the "golden three-leaved rod," the symbol of wealth and riches. (Vid. Caduceus.) In the wars of the giants against the gods, Mercury showed himself brave, spirited, and active.—He delivered Mars from the long confinement which he had suffered from the Aloids; he tied Ixion to his wheel in the infernal regions; he destroyed the hundred-eyed Argus; he sold Hercules to Omphale, the queen of Lydia; he conducted Priam to the tent of Aechicle, to redeem the body of his son Hector; he was received by Bacchus into his society, by Jupiter and Juno, and, besides, he was permitted to make himself invisible, and to assume whatever shape he pleased. He was father of Autolycus, by Chione; Myrrtilus, by Cleobula; Libya, by Libya; Echion and Eurytos, by Antianira; Ocephalus, by Grettis; Pryllis, by Asis; Hermodora, by Nysa. Mercury had many surnames and epithets. He was called Cyllenius, Caduceator, Argiphontes (or the slayer of Argos), Chthonius (or the god who guides the dead to the world below), Agoneus (or the god who presides over gymnastic exercises), &c. He was a Thracian, by Mytilene, by Clurus, by Cleobula, by Cleobulina, by Libya, by Libya. He was invoked by Echion and Eurytos, by Antianira; Ocephalus, by Grettis; Pryllis, by Asis; Hermodora, by Nysa. The Roman merchants yearly celebrated a festival on the 13th of May, in honour of Mercury, in a temple near the Circus Maximus. A pregnant sow was then sacrificed, and sometimes a calf, and particularly the tongues of animals were offered. After the votaries had sprinkled themselves with lustral water, they offered praying to the divinity, and entreated him to be favourable to them, and to forget whatever wrongs they had done him in the pursuit of gain. —Mercury is usually represented with a chlamys or cloak neatly arranged on his person, with his patēsas or winged cap, and the talaria or winged sandals. In his hand he bears his caduceus or staff, with two serpents twined about it, and which sometimes has wings at its extremity. The more ancient statues of Mercury were nothing more than wooden posts, with a rude head and a pointed beard carried on it. They were set up on the roads and

896
footpaths, and in the fields and gardens. The Hermēs were pillars of stone; and the heads of some other deity at times took the place of that of Hermēs; such were the Hermathenes, Hermαρεκαρας, and others. The veneration in which these Hermēs were held by the Athenians differed from that manifested against Alcibiades when suspected of having disfigured these images.—Hermēs or Mercury may be regarded as in some degree a personification of the Egyptian priesthood. It is in this sense, therefore, that he was regarded as the confidant of the gods, their messenger, the interpreter of their decrees, the genius who presided over science, the conductor of souls; elevated indeed above the human race, but the minister and the agent of the Deity. He was designated by the name Thoth. According to Jablonski (Panth. Eγυτ., 5, 5, 2), the word Θοτ, Θετ, Θατ, or Θαυτ, signified in the Egyptian language an assembly, and more particularly one composed of sages and educated persons, the sacerdotal college of a city or temple. Thus the collective priesthood of Egypt, personified and considered as unity, was represented by an imaginary being, to whom was ascribed the invention of language and writing, which he had brought from the skies and imparted to man, as well as the origin of geometry, arithmetic, astronomy, medicine, music, rhythm: the institution of religion, sacred processions, the introduction of gymnastic exercises, and, finally, the less indispensable, though not less valuable, arts of architecture, sculpture, and painting. So many volumes were attributed to him, that no human being could possibly have composed them. (Fabric, Biblioθ. Grec., 1, 12, 85—94.) To him was even accorded the honour of discoveries made long subsequent to his appearance on earth. All the successive improvements in astronomy, and, generally speaking, the labours of every age, became his peculiar property, and added to his glory. In this way, the names of individuals were lost in the numerous order of priests, and the merit which each one had acquired by his observations and labours turned to the advantage of the whole sacerdotal association, in being ascribed to its tutelary genius; a genius who, by his double figure, indicated the necessity of a double doctrine, of which the more important part was to be confined exclusively to the priests. An individual of this order, therefore; found his only remuneration in the reputation which he obtained for the entire caste. To these leading attributes of Thoth was joined another, that of protector of commerce, and this, in like manner, was intended to express the exalted nature of the priesthood of commerce. Our limits will not permit any farther development of the various ideas which, besides those already mentioned, were combined in the imaginary character of Hermēs: his identity, namely, with Sirius, the star which served as the precursor of the inundation of the Nile, and the terrestrial symbol of which was the gazelle, that flies to the desert on the rising of the stream; his rank in demonology, as the father of spirits and god of the place of his incor nutrient godhead, subject to death; and his cosmogonical alliance with the generative fire, the light, the source of all knowledge, and with water, the principle of all fecundity. It is surprising, however, to observe how strangely the Grecian spirit modified the Egyptian Hermēs, to produce the Hermēs or Mercury of Hellenic mythology. The Grecian Hermēs is quite a different being from the Egyptian. He neither presides over agriculture, nor is he the interpreter of the gods in Egypt, he is in Greece only their messenger; and it is by virtue of this latter title that he preserves his wings, which were among the Egyptians merely an astronomical symbol. For the shackles on the feet of Saturn serve to explain the wings of Mer cury. Saturn is represented in this state, because it requires thirty years nearly to complete its revolution round the sun; while Mercury has wings, because this planet accomplishes the same revolution in little less than three months. Again, if, in memory of the directions of the sacred procession, the priests of Hermēs that traversed the desert, the Egyptian Hermēs becomes the protector of commerce, the Greeks managed to deprive this peculiar attribute of all its gravity. With them Hermes or Mercury, by a ludicrous analogy, is made the god of fraud and falsehood. Is this a reaction of the Grecian spirit against the pretensions of a sacerdotal order, and one which preserves, at the same time, the utility of its pretended excellence? The Egyptian Hermēs was 1—It is worthy of remark, moreover, how, even when all the sacerdotal attributes of this deity have disappeared from the popular belief, they again appear in the mystic portion of the early Greek religion which the Orphic and Homeric hymns have preserved to us. The Hermēs of these hymns has nothing in common with the Hermēs of the Iliad, or even of the Odyssey. At one time he recalls to our minds all the peculiar qualities of the Egyptian Hermēs, at another he seems to be involved in the strange legends of the Hindoo avatars. The difference between the sacerdotal and the Greek Hermes becomes very perceptible among the Romans. This people first received the sacerdotal Hermes, whose worship had been brought into Etruria by the Pelasgi previous to the time of Homer; and as the earlier Hermes was represented by a column (Jablonski, Panth. Eγυτ., 5, 5, 15), he became with them the god Thamus, i.e., Hermes. Wherever, however, the Romans were made acquainted with the twelve great deities of the Athenians, they adopted the Grecian Hermes under the name of Mercury, preserving at the same time the remembrance of their previous traditions. (Compare Constant, de la Religion, vol. 2, p. 122, in notis, ibid., p. 409.—Crescier's Symbolik, par Guignini, vol. 1, pt. 1, p. 453, id., pt. 2, p. 851.)—II. Trismegistus, a celebrated Egyptian priest and philosopher. Manetho distinguishes him from the first Hermes or Thot, and says of him (ap. Syncell., p. 40), that from engraved tables of stone, which had been buried in the earth, he translated the sacred characters written by the first Mercury, and wrote the explanations in books, which were deposited in the Egyptian temples. He calls him the son of Agathodæmon, and adds, that to him are ascribed the restoration of the wisdom taught by the first Mercury, and the revival of the arts and sciences by the connexion of the Egyptians. The written monuments of the first Hermes having been lost or neglected in certain civil revolutions or natural calamities, the second Hermes recovered them, and made use of them as means of establishing his authority. (Herod., 2, 82.—Marsham, Chron., p. 241.—Ciem. Aex. Strom., 5, p. 242.) By an ingenious interpretation of the symbols inscribed upon the ancient columns, he impressed the sacred names of the planets upon his memory; and, to perpetuate their influence upon the minds of the people, he committed the columns, with his own interpretations, to the care of the priesthood. Hence he obtained a high degree of respect among the people, and was long revered as the restorer of learning. From the tables of the first Hermes he is said to have written, as commentaries and explanations, an incredible number of books. It has been calculated that he has written between 20,000 volumes, which treated of universal principles, of the nature and orders of celestial beings, of astrology, medicine, and other topics. For an account of his pretended works, consult the article Triamægistor.
against Troy. Meriones assisted Idomenoe in the conduct of the Cretan troops, under the character of charioteer, and not only distinguished himself by his valour, but gained a place in the lists of ancient heroes. In 4,264; Clus., he obtained the prize for archery. (II. 2, 661; 4, 254; 5, 59, c.)

Meriones, the name of a dynasty of kings in Lydia, of whom Gyges was the first. The line ended with Creesus. They claimed descent from Hercules. (Vid. Lydia.)

Merôë, according to the ancient writers, an island and state near the Nile. Herodotus only mentions the city of Merôë. All other writers, however, describe Merôë as an island, with a city of the same name. It was situated between the Astaboras and Astapous. "The Astaboras," says Agatharchides, "which flows through Ethiopia, unites its stream with the greater Nile, and thereby forms the island of Merôë by flowing round it. (Huda., Geogr. Min., 1, p. 37.) Strabo is still more precise. "The Nile," says this geographer, "receives two great rivers, which run from the east out of some lakes, and encompass the great island of Merôë. One is called the Astaboras, which flows on the eastern side; the other the Astapous. Seven hundred stadia above the junction of the Nile and the Astaboras is the city of Merôë, bearing the same name as the island." (Strab., 786.) A glance at the map, remarks Heeren (Ideen, vol. 4, p. 397; vol. 1, p. 385, Oxford transl.), will immediately show where the ancient Merôë may be found. The Astaboras, which flows round it on the eastern side, is the present Atbar or Tacazze; the Astapous, which bounds it on the left, and runs parallel with the Nile, is the Bahr el Abiad, or White River. From these and other statements, Heeren comes to the following conclusions: First: that the ancient island of Merôë is the present province of Atbar, between the river of the same name, or the Tacazze, on the right, and the White stream and the Nile on the left. The point where the island begins is at the junction of the Tacazze and the Nile; in the south it is enclosed by a branch of the above-mentioned river, the Waldubba, and a branch of the Nile, the Bahad, whose sources are nearly in the same district, although they flow in different directions. It lies between 13° and 18° N. lat. In recent times a great part is included in the kingdom of Sinnam, while the southern part belongs to Abyssinia. - Secondly: Merôë was, therefore, an extensive island, surrounded by rivers; whose superficial contents exceeded those of many rivers more than one half. It cannot be called an island in the strictest sense of the word, because, although it very nearly is, it is not completely enclosed by rivers; but it was taken for an island of the Nile, because, as Pliny (5, 9) expressly observes, the various rivers which flow round it were all considered as branches of that stream. It becomes, moreover, as we are told by Herodotus, the resort of people who lived in the rainy season, in consequence of the overflowing of the river. Upon this island stood the city of the same name. It is impossible, from the statements of Herodotus, to determine precisely its site. Fortunately, other writers give us more assistance. According to Eratosthenes (ap. Strab., l. c.), it lay 700 stadia (about 80 English miles) above the junction of the Tacazze or Astaboras and the Nile. Pliny (6, 29), following the statements of Ptolemy, mentions the course of the river Thacazze,reckons 70 millia (63 English miles); and adds the important fact, that near it, in the river on the right side going up stream, is the small island Tutu, which serves the city as a port. From this it may be concluded with certainty, that the city of Merôë was not on the Tacazze, as might otherwise be conjectured from the names of those rivers being so unsettled, but on the proper Nile; and its situation, notwithstanding the little difference between Pliny and Eratosthenes, may be determined with the nicest accuracy by the small island just mentioned, which Bruce has not omitted to note upon his map. The ancient city of Merôë was situated, according to Herodotus, between 17° N. lat., 54° E. long. Bruce saw its ruins from a distance. What Bruce and Buckerhard, however, only saw at a distance and hastily, has now been carefully examined by later travellers, especially Caillaud, and placed before our eyes by their drawings. But, although it is probable that the true site of Merôë has here been indicated, yet it is proper to remark, that antiquaries have differed on the subject; some considering the ruins of Mount Berkel, considerably farther down the river, to point to the spot. (Edinb. Review, vol. 41, p. 181.) Mount Berkel is situated in Dar Shegga, near a village called Merawey, at about 18° 31' N. lat., and the ruins are nearly of equal extent with those near Shandy. The circumstance of the name Merawe has doubtless led partly to this idea, but the argument is rendered null by the fact mentioned by Caillaud, that a place not far from Shandy, covered with remains of ancient buildings, is called El Merawey, and similar names are by no means uncommon in many of the provinces of the Nile. The ruins at Mount Berkel, according to Caillaud, are probably those of Napata, originally the second city, and latterly the capital, of Ethiopia. (Long's Anc. Geogr., p. 78.) The site of the ancient city of Merôë is still indicated by the remains of a few temples, and of many other edifices of sandstone. The whole extent, according to Caillaud, amounts to nearly 4000 feet. The plain allowed sufficient room for a much larger city, and that the city itself was larger than what is here stated cannot for a moment be doubted.

1. Religion of Merôë.

From the observations of travellers who have carefully examined the ruins of Merôë, we arrive at the important conclusion that ancient Merôë was inhabited by a people equally as far advanced in refinement as the Egyptians, and whose style of architecture and religious ceremonies, as portrayed on the remains of that architecture, bear a close resemblance to those of Egypt. All this becomes extremely interesting when we call to mind what is stated by many of the ancient writers, that Merôë was the cradle of the religious and political institutions of Egypt; that here the arts and sciences, in which our alphabet was discovered, and that temples and pyramids had already sprung up in this quarter, while Egypt still remained ignorant of their existence. It stands as an incontrovertible fact, remarks Heeren (Ideen, vol. 4, p. 419; vol. 1, p. 406, Oxford transl.), that, besides the pastoral and hunting tribes, which led a nomadic life to the west of the Nile, and still more to the east, as far as the Arabian Gulf, there existed a cultivated people near this stream, in the valley through which it flows, who had fixed abodes, built cities, temples, and sepulchres, and whose remains even now, after the lapse of so many centuries, still excite our astonishment. It may farther be stated as a certainty, that the civilization of this people was, in a especial manner, connected with their religion; that is, with the worship of certain deities. The remains of their foundation prove this too clearly. Beginning farther back, the history of their religion, upon the whole, is still uncertain. It was the worship of Ammon and his kindred gods. The circle of these deities was very nearly of the same extent as that of Olympus among the Greeks; it might, possibly, be somewhat larger. It became extended by the appearance of the same deity in different relations, and consequently with changed attributes, especially with different head-ornaments, and also under various forms. Without digressing into a detailed
description of particular deities, we may venture a step farther, adds the same writer, without fear of contradiction, and assert that this worship had its origin in natural religion connected with agriculture. The great works of nature were revered accordingly as they promoted or retarded and hindered this. It seems natural that the sun and moon, so far as they determined the seasons and the year, the Nile and the earth as sources of fruitfulness, the sandy deserts as the opposers of it, should all be personified. One thing is remarkable, namely, that of all the representations of Nubia yet known, there is not one which, according to our notions, is offensive to decency. But this worship had, besides, as we know with certainty, a second element, oracles. Ammon was the original oracle-god of Africa: if afterward, as was the case in Egypt, other deities delivered oracles, yet they were of his race, of his kindred. Even beyond Egypt we hear of such persons as, from the time of the monarchs of the chief of which the priests had well under their command, the omens were gathered, according to which the high-priest then delivered the oracle. This ship is often represented, both upon the Nubian and Egyptian monuments, sometimes standing still, and sometimes carried in procession; but never anywhere except in the innermost sanctuary, which was its resting-place. Upon the Nubian monuments hitherto made known we discover this in two places: Asseboa and Dempas, girt with ornament twice. Those of Asseboa are both standing. In one the tabernacle is veiled, but upon the other it is without a curtain. (Gau, plate xiv, B.) Ammon appears in the same sitting upon a couch; before him an altar with gifts. (Gau, plate xiv, A.) Upon one the king is kneeling before the ship at his devotions; in the other he is coming towards it with an offering of frankincense. In the sanctuary of the rock monument at Derar we also discover it twice. One in procession, borne by a number of priests (Gau, plate lii, C.); the tabernacle is veiled, the king meets it, bringing frankincense: the other time at rest. (Ibid., plate lii.) These processions are not only seen upon the great Egyptian temples at Philae, Elephantis, and Thebes, but also in the great Oasis. (Description de L'Egypte, pl. xiii., xxxvii., xix.) These oracles were the main support of this religion; and if we consider what portable tabernacles of oracles the Egyptians had, it will at once throw a strong light upon its origin. Fertility is here, as well as in Egypt, confined to the borders of the Nile. At a very short distance from it the desert begins. How could it, then, otherwise than that crowds of men should congregate on the borders of the stream where the inundation almost the only corn here cultivated, would grow? And if they could satisfy their first cravings with the produce of this scanty space, was not the rise of a natural religion, referring to it, just what might be expected? Add to all this, however, another circumstance highly important. Meroe was, besides, the chief mart for the trade of these regions. It was the grand emporium of the caravan trade between Ethiopia, the north of Africa, and Egypt, as well as of Arabia Felix and even India. (Heeren, Ideen, vol. 4, p. 423; vol. 1, p. 411, Oxford trans.)

Meroe, according to the accounts of the ancient writers, was a city which had its settled constitution and laws, its ruler and government. But the form of the grand emporium of the caravan trade between Ethiopia, the north of Africa, and Egypt, as well as of Arabia Felix and even India. (Heeren, Ideen, vol. 4, p. 423; vol. 1, p. 411, Oxford trans.)

Meroe, according to the accounts of the ancient writers, was a city which had its settled constitution and laws, its ruler and government. But the form of the grand emporium of the caravan trade between Ethiopia, the north of Africa, and Egypt, as well as of Arabia Felix and even India. (Heeren, Ideen, vol. 4, p. 423; vol. 1, p. 411, Oxford trans.)

Thus far Diodorus. The government continued in this original state till the period of the second Ptolemy, and its laws were, at least, as remarkable as they were, in its deserts, the light of Grecian philosophy penetrated into the interior of Africa. Argemni, at that time king of Meroe, tired of being priest-ridden, fell upon the priests in their sanctuary, put them to death, and became effectually a sovereign. (Diodorus, 3, 6.)—Of the history of this state previous to the revolution just mentioned, but very scanty information has been preserved; but yet enough to show its great internal prosperity, and its early aggrandizement. Pliny tells us (6, 35) that "Ethiopia was ruined by its wars with Egypt, which it sometimes subdued and sometimes served; it was powerful and illustrious even as far back as the Trojan war, when Memnon reigned."
At the time of his sovereignty, he continues, "Meroë is said to have contained 250,000 soldiers and 400,000 artificers. They still reckon them forty-five kings." 

Though these accounts lose themselves in the darkness of tradition, yet we may, by tracing history upward, discover some certain chronological data. In the Persian period Meroë was certainly free and independent, and an important state; otherwise Cambyses would hardly have made so great preparations for his unfortunate expedition. (Herod., 2, 25.) The statement of Strabo, according to which Cambyses reached Meroë, may perhaps be brought to accord with that of Herodotus, if we understand him to mean northern Meroë, near Mount Berkel.—During the last dynasty of the Pharaohs of Sais, under Psammetichus and his successors, the kingdom of Meroë not only resisted his yoke, although his son Psammis undertook an expedition against Ethiopia; but we have an important fact, which gives a clue to the extent of the empire at that time towards the south—the emigration of the Egyptian warrior-caste. These migrated towards Meroë, whose ruler assigned them dwellings about the sources of the Nile, in the province of Gojam, whose restless inhabitants were expelled their country. (Herod., 2, 30.) The dominions of the ruler of Meroë, therefore, certainly reached so far at that time, though his authority on the borders fluctuated in consequence of the pastoral hordes roaming thereabout, and could only be fixed by colonies. Let us go a century farther back, between 600 and 700 B.C., and we shall mount to the flourishing periods of this empire, contemporaneous with the divided kingdoms of Israel and Judah; especially with the reign of Hezekiah, and the time of Isaiah, 750—700, where we shall consequently have a light from the Jewish annals, and the oracles of the prophets, in connexion with Herodotus. This is the period in which the three mighty rulers, Sabaco, Setechus, and Tarhaco started up as conquerors, and directed their weapons against Egypt, which, at least Upper Egypt, became an easy prey, from the unfortunate troubles preceding the dodecarchy having just taken place. According to Eusebius (Chron., vol. 2, p. 181.)—Compare Marshall, p. 435), Sabaco reigned twelve, Setechus also twelve, and Tarhaco twenty years; but by Herodotus, who only mentions Sabaco, to whom he gives a reign of fifty years, this name seems to designate the whole dynasty, which not unfrequently follows that of its founder. Herodotus expressly says that he learned the facts at the time of his oracle in Ethiopia (2, 137, seqq.). It may therefore be seen, by the example of this conqueror, how great their dependance must have been, in their native country, upon the oracle of Ammon, when even the absent monarch, as ruler of a conquered state, yielded obedience to it. Sabaco, however, is not represented by him as a barbarian or tyrant, but as a benefactor to the community by the construction of dams. The chronology of Setechus and Tarhaco is determined by the Jewish annals. Setechus was contemporary with Hosea, king of Israel, whose reign ended in 722, and of Samanassar (2 Kings, 17, 4; 19, 9). Tarhaco was the contemporary of his successor Sennacherib, and dethroned him, in the year 714 B.C., from the invasion of Egypt merely by the rumour of his advance against him. (2 Kings, 19, 9.) His name, however, does not seem to have been unknown to the Greeks. Eratosthenes (ap. Strabo, 680) mentions him as a conquered into Greece, and as a stranger at the Pillars of Hercules; that is, as a great conqueror. Certainly, therefore, the kingdom of Meroë must have ranked about this time as an important state. We shall find this to be the case if we go about 200 years farther back, to the time of Ass, the great-grandson of Solomon, but who nevertheless mounted the throne of Judah within twenty years after his grandfather's death, 955 B.C. Against him, it is said in the Jewish annals, went out Zerah, the Ethiopian, with a host of a hundred thousand men and three hundred chariots. (2 Chron., 14, 9.) Although this number signifies nothing more than a mighty army, it yet affords a proof of the mightiness of the empire, which at that time probably comprised Arabia Felix; but the chariots of war, which were never in use in Arabia, prove that the passage refers to Ethiopia. Zerah's expedition took place in the early part of Ass's reign; consequently, about 900 B.C.; and as such an empire could not be quite a new one, we are led by undoubted historical statements up to the period of Solomon, about 1000 B.C.; and, as this comes near to the Trojan period, Pliney's statements, though only resting on myth, obtain historical weight. Farther back than this, the annals of history are silent; but the monuments now begin to speak, and confirm that high antiquity which general opinion and the traditions of Meroë attribute to this state. The name of Ramesses or Sequosiris has already been found upon many of the Nubian monuments, and that he was the conqueror of Ethiopia is known from history. (Herod., 2, 110.—Strabo, 791.) The period in which he flourished cannot be placed later than 1500 years before the Christian era. But the name of Thutmosis, belonging to the preceding dynasty, has also been found in Nubia, and that assuredly upon one of the most ancient monuments of Armada. But in this sculpture, as well as in the procession, representing the victory over Ethiopia in the offering of the host, there appears a degree of civilization which shows an acquaintance with the peaceful arts; they must consequently be attributed to a nation that had long been formed. We thus approach the Mosaic period, in which the Jewish traditions ascribe the conquest of Meroë to no less a person than Moses himself. (Joseph. Ant. Jud., 2, 10.) The traditions of the Egyptian priesthood also agree in this; that Meroë, in Ethiopia, laid the foundation of the most ancient states. In a state whose government differed so widely from anything that we have been accustomed to, it is reasonable to suppose that the same would happen with regard to the people or subjects. We cannot expect a picture here that will bear any similarity to the civilized nations of Europe. Meroë rather resembled in appearance the larger states of interior Africa at the present day; a number of small nations, of the most opposite habits and manners—some with, and some without settled abodes—form there what is called an empire; and although the general political body which holds them together appears the most often scarcely perceptible. In Meroë this band was of a twofold nature; religion, that is, a certain worship, principally resting upon oracles, and commerce; unquestionably the strongest chains by which barbarians could be fettered, except forcible subjugation. The rites of that religion, connected with oracles, satisfied the curious and superstitious, as did trade the cravings of their sensual appetites. Eratosthenes has handed down how Sabaco, with the consent of the citizens, held a grand festival in his time (ap. Strab., 821). According to his account, the island comprised a variety of people, of whom some followed agriculture, some a nomade, pastoral life, and others hunting; all of them choosing that which was best adapted to the district in which they lived. (Herren, Ideen, vol. 4, p. 433; Oxford translat., vol. 1, p. 420.)
from their own body. Ammonium served as a resting-place for the caravans passing from northern Africa to Meroë. Another still earlier settlement of this kind was very probably Thebes in Upper Egypt. The circumstances of a town flourishing to such an extent in the midst of a desert, of the same worship of Ammon, of the all-powerful priest-caste, and its permanent connexion with Meroë (united with which it formed Ammonium), conjoined with the express assertion of the Ethiopians that they were the founders (Did., 3, 3), gives to this idea a degree of probability bordering on certainty. The whole aspect of the circumstances connected with this wide-spread priest-caste is clearer light, if we consider Ammonium, Thebes, and Meroë the chief places of the African carvan trade; in this view of the subject, the darkness of _Egypto-Ethiopian_ antiquity is cleared up, as in the hands of this priest-caste the southern carvan trade was placed, and they founded the proud temples and palaces along the banks of the Nile, and the great trading edifices, which served their gods for sanctuaries, themselves for dwellings, and their caravans for places of rest. To this caste, the states of Meroë and Egypt alone owed their foundation; except, indeed, that Egypt was much more exposed to the crowding in of foreign relations from Asia, than Meroë, separated as this last was from other countries by deserts, seas, and mountains. The close connexion, in high antiquity, between Ethiopia and upper Egypt, is shown by the circumstance that the oldest Egyptian states derived their origin partly from Abyssinia; that Thebes and Meroë founded, in common, a country in Libya; that the Egyptians, several times advanced into Egypt, and, on the other hand, that Egyptian kings undertook expeditions to Ethiopia; that in both countries a similar worship, similar manners and customs, and similar symbolical writing; and that the discontented soldier-caste, when offended by Psammetichus, emigrated into Ethiopia. By the Ethiopians Egypt was likewise profusely supplied with the productions of the southern countries. Where else, indeed, could it have obtained those aromatics and spices with which so many thousands of its dead were annually embalmed! Whence those perfumes which burned upon its altars? Whence that immense quantity of cotton in which the inhabitants clothed themselves, and which Egypt itself furnished but sparingly? Whence, again, that early report in Egypt of the Ethiopian gold-countries, which Cambyses sought after, and lost half his army in the fruitless speculation? Whence the quantity of ivory and ebony which adorned the oldest works of art of the Greeks as well as of the Hebrews! Whence, especially, that early extension of the Ethiopian name, which shines in the traditional history of so many nations, and which the Jewish poets as well as the oldest Greek bards have celebrated! Whence all this, if the deserts which bordered on Egypt had always kept the inhabitants isolated from those of more northern countries?—At a later period, in the time of Ptolemy I., it is astonishing how completely that same principle has established the trade between his own country, India, Ethiopia, and Arabia. The series of magnificent and similar monuments, interrupted on the frontiers of Egypt, near Elephantine, and recommencing on the southern side of the African desert, at Mount Berkel, and especially at Meroë, to be continued to Axum and Azab, certainly denote a people of similar civilization and activity. Meroë was the first fertile country after crossing the Libyan desert, and formed an attractive residence for adventurers. It was likewise the natural mart for the productions of inner Africa, which were brought for the use of the northern portion, and was reckoned the outermost of the countries which produced gold, while by the navigable rivers surrounding it on all sides, had a ready communication with the more southern countries (Did., 1, 33). As ready, owing to the moderate distance, was its connexion with Arabia Felix; and so long as Yemen remained in possession of the Arabian and Indian trade, Meroë was the best market-place for the Arabian and Indian wares in Africa. The route which led in antiquity from Meroë to the Arabian Gulf and Yemen, is not designated by any historian: the commerce between those nations being indicated only by monumental traces which the hand of time has not been able to destroy. Immediately between Meroë and the gulf are situated the ruins of Axum, and at the termination of the route, on the coast opposite to Arabia Felix, are those of Azab or Saba. Heeram, from whose above ideas are principally borrowed, deduces the following conclusions from a review of the entire subject.—1. That in the earlier ages, a commercial intercourse existed here between the countries of southern Asia and Africa; between India and Arabia, Ethiopia, Libya, and Egypt, which was founded upon their mutual necessities, and became the parent of the civilization of these nations.—2. That the principal seat of this international commerce was Meroë, and the part of the desert is distinguished by a chain of ruins reaching from the shores of the Indian Ocean to the Mediterranean: Axum and Azab being links in this chain between Arabia Felix and Meroë; Thebes and Ammonium between Meroë, Egypt, and Carthage.—3. That chief places for trade were at the same time settlements of that priest-caste, which, as the ruling tribe, had its chief residence at Meroë, and sent out colonies thence, who became builders of towns and temples, and, at the same time, founders of new states.—The conductors of this carvan trade in Africa, as in Asia, were the Nomadic shepherd-nations. Men accustomed to fixed residences and to dwellings in towns were not adapted for the restless carvan-life, especially on account of the attention necessary for the camels, and for the loading and unloading of wares. It was better suited to Nomadic nations. In the case of the Carthaginian caravans, we know that they were managed by the Nomadic Lophotapi and Nasamones, as the caravans were by the Midianites and Edomites in Arabia: this is historically proved, and it is probable that it was the case on the great commercial road from Ammonium to Azab, as similar Nomadic tribes are still found on the coast of the Arabian Gulf.—Meroë had mines not only of silver and gold, but also of copper and even of iron itself. (Did., 1, 33.)

4. Influence of Meroë on Egyptian civilization.

Everything seems to favour the supposition that Meroë gave religion and the arts of civilized life to the valley of the Nile. The following are some of the principal arguments in support of this opinion: 1. The concurrent testimony of the ancient writers.—2. The progress of civilization in Egypt from south to north; for the Delta, the part of Egypt contiguous to Arabia, appears to have been originally uninhabitable, except a small space about the Delta alone, the rest of the inhabitants of upper Egypt descended and drained the country.—3. The improbability that an Arabian colony would have crossed Syria from Babylon to Suez, and wandered so far south as Thebes to found its first settlement.—4. The radical difference between the Coptic and Arabic languages, which existed even in the days of Abrah—um. (Murray, Appendix to Bruce's Book 2, p. 47; also, Suppletions.)—5. The trade from the coast of the Red Sea to Babylonia and Upper Egypt. If this trade had been as old as from the remarks previously made it would seem to be, we may consider Ethiopia as one of the first seats of international trade, or, in other words, of civilization; for an exchange of wares would lead to an exchange of ideas, and this reciprocal...
MEROE.

M E S

cal communication would necessarily give rise to moral and intellectual improvements. — 8. The curious fact, that the images of some of the Egyptian goddesses were at certain times conveyed up the Nile, from their temples to others in Ethiopia; and, after the conclusion of a festival, were brought back again into Egypt. (Euseb., ad II., 1, 424.)—7. The very remarkable character of some of the Egyptian paintings, in which black (or, more correctly, dark-coloured) men are represented in the costume of priests, as conferring on certain red figures, similarly habited, the instruments and symbols of the Gnostic offices. "This singular representation," says Mr. Hamilton, "which is often repeated in all the Egyptian temples, but only here at Philae and at Elephantine with this distinction of colour, may very naturally be supposed to commemorate the transmission of religious fables and the social institutions from the tawny Ethiopians to the comparatively fair Egyptians."—8. Other paintings of nearly the same purport. In the temple of Philae, the sculptures frequently depict two persons, who equally represent the characters and symbols of Osiris, and two persons equally answering to those of Isis; but in both cases one is invariably much older than the other, and appears to be the superior divinity. Mr. Hamilton conjectures that such figures represent the communication of religious rites from Ethiopia to Egypt, and the inferiority of the Egyptian Osiris. In these delineations there is a very marked and positive distinction between the dark figures and those of fairer complexion; the former are most frequently conferring the symbols of divinity and sovereignty on the other.—9. The very interesting fact recorded by Diodorus, namely, that the knowledge of picture-writing in Ethiopia was not a privilege confined solely to the caste of priests as in Egypt, but that every one might attain it as freely as they might in Egypt the writing in common use. A proof at once of the earlier use of picture-writing, or hieroglyphics, in Meroë than in Egypt, and also of its being applied to the purposes of trade.—10. The more ancient form of the pyramid, approaching that of the primeval mound, occurs more to the south than the rectilinear form. Thus the pyramids of Saccara are older in form than those of Djizza, another proof of architecture's having come in from the countries to the south. (Clarke's Travels, vol. 5, p. 220, Lond. ed.)—From this body of evidence, then, we come to the conclusion, that the same race which ruled over the Euphrates, and the river Minya, inhabited Egypt by colonies, in the first instance, to Upper Egypt; that these latter colonies, in consequence of their great prosperity, became in their turn the parents of others; and as in all this they followed the course of the river, there gradually became founded a succession of colonies in the valley of the Nile, which, according to the usual custom of the ancient world, were probably, at first, independent of each other, and therefore formed independent states. Though, with the promulgation of their religion, either by the universal admission of its divinity, or of his kindred deities and temple-companions, upon whom even the settlements were named, the extension of trade was the principal motive which tempted colonists from Meroë to the countries beyond the desert; yet there were many other causes, such as the fertility of the land, and the facility of making the rude native tribes subservient to themselves, which, in a period of several centuries, may have procured and accelerated the gradual progress of this colonization. The advantages which a large stream offers, by facilitating the means of communication, are so great, that it is a common occurrence in the history of the world to see civilization spreading on their banks. The shores of the Euphrates and Tigris, of the Indus and Ganges, of the Ganges and Hoangho, afford us as plain proofs of this as the banks of the Nile. (Herren, Ideen, vol. 5, p. 109, seqq.; Oxford trans., vol. 2, p. 110.)

As to the origin of the civilization of Meroë itself, all is complete uncertainty; though it is generally supposed that it is, at least in part, derived from the people of Egypt. The reader may consult on this subject the work of Von Bohlen, Das alte Indien, mit besonderer Rücksicht auf Ägypten, vol. 1, p. 119, seqq. MEROE, 1. one of the Pliedaeas. She married Sisiphus, son of Aelous, before her transformation into a star; and it was fabled that, in the constellation of the Pliedaeas, Merope appears less luminous than her sisters, through shame at having been the only one of the number that had warded a mortal. Other mythologists relate the same of Electra. Schweneck sees in the union of Merope with Sisyphus a symbolical allusion to Corinthian navigation. (Schwenck, Skizzen, p. 19.—Compare Wercker, Arch. Tril., p. 555.—Id. ib., p. 573.)—II. A daughter of Cypselus, who married Crespontes, king of Messenia, by whom she had three children. Her husband and two of her children were murdered by Polyphontes. The murderer wished her to marry him, and she would have been obliged to comply had not Egyptus or Telephonetes, her third son, avenged his father's death by assassinating Polyphontes. (Apollod., 2, 6.—Pausan., 4, 3.)

MEROE, a king of the island of Cos, who married Clymene, one of the Oceanides. He was changed into an eagle, and placed among the constellations. (Ovid, Met., 1, 783.)

MEROE, a mountain of India sacred to Jupiter. It is said to have been the name of the neighbourhood of Nysa, and to have been named from the circumstance of Bacchus being enclosed in the thigh (μυχὸς) of Jupiter. This attempt at etymology, however, is characteristic of the Grecian spirit, which found traces of their nation and language in every quarter of the world. The mountain in question is the famous Meru of Indian mythology. (Cruzer's Symbolik, vol. 1, p. 537.)

MESCENBRI, a maritime town of Thrace, east of the mouth of the Nessus, now Messeria or Mesera. According to Herodotus (7, 108), it was a settlement of the Samothracians. Von Humboldt notices the terminations of magus, briga, and briva, appended to the names of towns, as undoubtedly Celtic. He refers to the same source the termination bria, which is met with in the geography of Thrace, as, for example, in the cities of Selymbria and Mesembria. He thinks that the Basque iri and uri are also connected with this; and that we can go no farther than to say that there must have stood root br or br, expressing land, habitation, settlement, with which the Teutonic burg and the Greek βηγγος may have been originally connected. In the Welsh and Breton languages, brô is still, he says, not only a cultivated field, but generally a country or district; and the scholiast on Juvenal (Sat., 8, 234) explains the name of Allobroges as signifying strangers, men from another land, "quoniam broga Galti agrum dicent; alla autem alitud.1" (Vid., however, Allobroges. Les noms de Arnold's Antiq., 1, 82.)

MESCENBRI is an island in the Tigris, where Apamea was built. It is now Digel. (Strab., in Huds., G. M., 2, p. 146.—Plin., 6, 31.—Steph. Byz., p. 91, n. 8.)—II. Another, enclosed between the canal of Basra and the Pastigiris, and which is called in the Oriental writers Perat-Miscan, or "the Mesene of the Euphrates," to distinguish it from the Mesene of the Tigris. The term Mesene is a Greek one, and refers to the country and empire of Mesopotamia. (Colloqugiue, 3, 7.—Cellarius, Geogr. Antiq., vol. 1, 641, ed. Schweinitz.)

MESOMBRES, a poet, a native of Crete. He was a freedman of the Emperor Hadrian's, and one of his favourites, and wrote a eulogium on Antoninus. Hadrian's successor, the philosophic Antoninus, made it a duty to restore order and economy into the finances of the empire; and, among other things, he stopped the salaries which had been allowed to the useless
courtiers with whom the palace of Hadrian had swarmed. It was on this occasion that the stipend allowed to Mesomedes suffered a reduction. (Jul. Cap., Vit. Atax., p. 72.) We have two fragments of this poet's in the Anthology, and also a piece of a higher character, a Hymn to Nemesis. Judging from this last specimen, Mesomedes must have possessed talents of no mean order. The Hymn to Nemesis was published for the first time, with ancient musical notes, by Fell, at the end of his edition of Aratus, Oxon., 1762, 8vo. It was subsequently given by Durette in the 5th vol. of the Mem. de l'Acad. des Ins., 1774, 8vo. and by Dr. Brunner in his Analekta, and by Snedorff in his work, "De Hymn. veterum Graecorum," Hafn., 1786, 8vo. (Scholl, Hist. Lit. Gr., vol. 4, p. 51.)

Mesopotamia, an extensive province of Asia, the Greek name of which denotes between the rivers (from μέσος and ποταμός.) It was situate between the Euphrates and the Tigris. The name itself, however, does not appear to have been given to this tract prior to the Macedonian conquest. The southern part of Mesopotamia Xenophon calls Arabia (Arab., 1, 5, 1); and other writers included this country, especially the northern part, under the general name of Syria. (Strabo, 737.) The Romans always regarded Mesopotamia as a mere division of Syria. (Mela, 1, 11.—Plin., 5, 13.) It is called by the Arabs at the present day Al Jezira, or "the island." In scripture it is styled Aram and Aramaz; but as Aram also signifies Syria, it is difficult to determine whether Aram means Aramaeum, or the "Syria of the rivers." It was first peopled by Aram, the father of the Syrians, though little is known of his history till it became a province of the Persian empire. Cusan-rishthahaim, who is mentioned in Judges (3, 8, 10) as king of Mesopotamia, appears to have been only a petty prince of a district east of the Euphrates. In the time of Hezekiah, the different Arami are divided into those of the upper Assyrians (2 Kings, 19, 13), and subsequently belonged in succession to the Chaldaean, Persian, and Syro-Macedonian monarchies.—Mesopotamia, which inclines from the southeast to the northwest, commenced at lat. 33° 20' N., and terminated near lat. 37° 30'. Towards the south it extended as far as the bend formed by the Euphrates at Cunaxa, and to the wall of Semiramis, which separated it from Mesene. Towards the north it was bounded by the western range of the Taurus. The northern part of Mesopotamia, which extended as far as the Chaboras, a tributary of the Euphrates, is mountainous, and for the most part fruitful. The southern portion consists chiefly of reddish hills, and deserts without any trees, except liquorice-wood; and, like the desert of Arabia, suffers, at a distance from the rivers, a dearth of food and water. Here, on the parched steppes or table-lands, where the simoom often breathes destruction, borders of Arabia have from the earliest times wandered. When history, therefore, speaks of the Romans and Persians as possessing Mesopotamia, we must understand the northern part, which abounded in all the necessaries of life. The inhabitants of this portion, who still speak an Armeno-Syrian dialect, were called among themselves Mygdonians, and their district was known by the name of Mygodia. (Polyb., 6, 51.—Steph. Byz., s. v.) Subsequently, under the Syro-Macedonian monarchies, it took the name of Anthemusia. (Amm. Marcell., 14, 9—Eutrop., 8, 2.—Sextus Rufus, c. 29.) In the time of the Parthian war, about 120 B.C., an Arab sheik, Oroses, took possession of the northwestern part of the land, wresting a principality in this quarter from the Seleucidae of Syria. This district then assumed the name of Osozoe. (Steph. Byz., s. v.—Procop., Pers., 1, 14.) This was frequently the scene of warlike operations, especially between the Parthians and Romans, who here lost Crassus, and between the latter nation and the new Persian province. After remaining for some time a Roman province, it fell under the power of the new Persian kingdom, and then successively under the Saracens and Turks. The oppression of the Turkish conqueror has so altered the appearance of this large tract of country, that these fruitful plains, which once were covered with cities, now scarcely exhibit more than a few miserable villages. The lower part of Mesopotamia is now called Irak Arabi, the upper Diar-Bekr. (Laurent's Anc. Geogr., p. 286.—Kennell, Geog. of Western Asia, vol. 1, p. 432.)

Mesalla Valerius, Messala Corvinus, a Roman nobleman of ancient family. In the Eusebian Chronicle he is said to have been born A.U.C. 694; but if that date be correct, he would have been 17 when he joined the republican standard at Philippi. He acted a prominent part in that battle, and, after it was lost, was offered the command of the dispersed forces of the commonwealth. It is not, therefore, likely that he was younger than 21 at this period, and his birth, consequently, ought not to be fixed later than the year 690. In his youth he studied for a short time at Athens, along with the son of Cicero. After his return to Rome, his name having appeared in the roll of the proscribed by the nomination of Antony, he fled from Italy, and sought refuge with the army of Brutus and Cassius. Previous, however, to the battle of Philippi, his name, along with that of Varro, was erased from the fatal list, on the plea that he had been a proscribed man. After the battle of Philippi, Varro accepted the proffered pension, and retired to his studies and his books, among which he afterward died in the nineteenth year of his age; but it was indignantly rejected by Messalla, who steadily adhered to the cause of the commonwealth. The night before the battle of Philippi he supped in private with Cassius in his tent. That chief had wished to protract the war, and obtain his promises that he would call in the army to hazard the fortunes of the republic on one decisive battle. At parting for the night, he grasped Messala by the hand, and, addressing him in Greek, called him to bear witness that he was reduced to the same painful necessity as the great Pompey, who had been reluctantly forced to stake on one throw the safety of his country. On the following day, so fatal to the liberties of Rome, he issued an edict threatening the lives of all who should surrender under his command. Antony passed over to Thasus, and, with great appearance of cordiality, received Messala, as well as some of his friends, into favour, and, in return, was put in possession of the stores which had been amassed in that island for the wreck of the republican forces. Having now joined the arms of Antony, Messala accompanied him in the disagreeable progress which he made through the Roman dominions in Asia, where, with great success, he retained the command of the tributary kings and settled their disputes. Messala, from his earliest youth, had been distinguished for his powers in speaking, and he sometimes pleaded before Antony in favour of an accused tetrarch or of an injured people. At length, however, the scandalous and intemperate conduct of Antony, and the comparative moderation of Augustus, induced him to transfer his services to the latter, and that he continued to support the life and the cause of his master. In the naval war with Sextus Pompey, he was second in command under Agrippa, and, on one occasion during his absence, had the supreme direction of the
MESSALA.

fleed. In the course of this contest he was also for some time stationed with an army on the Neapolitan shore; and Augustus having the success of his schemes, but shipwrecked in one of the many naval engagements which he fought with Pompey, sought shelter in the most wretched condition in the camp of Messala, by whom he was received as a friend and master, and treated with the tenderest care. The death of Sextus Pompey at length opened both sea and land to his successful adversary, and it was quickly followed by the long-expected struggle for superiority between Antony and Augustus. Messala was consul in A.U.C. 721, the year of the battle of Actium, in which he bore a distinguished part. After that decisive victory and the firm establishment of the throne of Augustus, he lived the general favour of all parties, and the chief ornament of a court where he still asserted his freedom and dignity. While at Rome he resided in a house on the Palatine Hill, which had formerly belonged to Marc Antony; but he was frequently absent from the capital on the service of the state. War after war was intrusted to his conduct, and province after province was committed to his administration. In some of his foreign expeditions he was accompanied by the poet Tibullus, who has celebrated the military exploits of Messala in his famed panegyric, and his own friendship and attachment to his patron in his elegies. The triumph which Messala obtained in 727, for his victories in a Gallic campaign, completed the measure of his military honours; and he filled in succession all the most important civil offices in the state. Besides holding the consulship in 721, he was elected into the college of Augurs, and was intrusted with the superintendence of the aqueducts, one of those great public works for which Rome has been so justly celebrated. In 736, on account of the absence of Augustus and Maecenas from the capital, he was nominated prefect of the city; but he resigned that situation a few days after his appointment, regarding it as inconsistent with the ancient constitution of his country. He is also believed to have been the person who, by command of the Consular fathers, first saluted Augustus in the senate-house as the "Father of his country," a distinction which was bestowed in a manner that drew tears from the master of the Roman world (Suet., Aug., 59), and a reply, in which he declared that, having attained the summit of his wishes, he had nothing more to desire from the gods, except a continuance of the same attachment till the last moment of his life. From this period the name of Messala is scarcely once mentioned by any contemporary writer. He survived, however, ten or twelve years longer. Tiberius Caesar, who was then a youth, fond of the liberal arts, and by no means ignorant of literature, paid Messala, when in his old age, muchdeference and attention, and attempted to imitate his style of oratory. (Suet., Tiber., 31.) The last days of his life were dreadfully afflicted with fever, which consumed him. It is said that, two years before his death, he was deprived of both sense and memory. He died in the month of Plinna, 7, 24, and became incapable of putting two words together with meaning. It is mentioned in the Eusebian Chronicle that he perished by abstaining from food when he had reached the age of seventy-two; but if he were born in 690, and died in the year 636, which would bring his residence till the close of the reign of Augustus, which is inconsistent with a passage of the dialogue "De causis corruptae eloquentiae," where it is said, "Corpus in medium usque Augusti principatum, Aenus pane ad extremum duravit." Now the middle of the reign of Augustus cannot be fixed later than the year 746, when Messala could only have attained the age of fifty-six. His death was deeply lamented, and his funeral elegy was written by Ovid. (Ep. ex. Pont., 1, 7.)—Though Messala had attained the highest point of exaltation, in an age of the most violent political storms and the most flagrant moral corruption, he left behind him no impure or dishonourable character, known as a disinterested patron of learning, and a steady supporter, so far as was then possible, of the principles of the ancient constitution. "Messala," says Berwick, "had the singular merit of supporting an unblemished character in a most despotic court, without making a sacrifice of those principles for which he had fought in the fields of Philippi; and the genuine integrity of his character was so deeply impressed on all posterity, that it excited a general admiration in a most corrupt age. He was brave, eloquent, and virtuous; he was liberal, attached to letters, and his patronage was considered as the surest passport to the gates of fame, and extended to every man who was at all conversant with letters. This character is supported by history, is not contradicted by contemporary writers, and is sealed by the impartial judgment of posterity. No writer, either ancient or modern, has ever named Messala without some tribute of praise. Cicero soon perceived that he possessed an assemblage of excellent qualities, which he would have more admired had he lived to see them expanded and matured to perfection. Messala was his disciple, and rivalled his master in eloquence. In the opinion of the judicious Quintilian, his style was neat and elegant, and in all his speeches he displayed a superior nobility. In the Dialogue of Orators, he is said to have excelled Cicero in the sweetness and correctness of his style. His taste for poetry and polite literature will admit of little doubt, when we call to mind that he was protected by Cæsar, favoured by Maecenas, esteemed by Horace, and loved by Tibullus. Horace, in one of his beautiful odes, praises Messala in the happiest strains of poetry, calls the day he intended to pass with him propitious, and promises to treat with some of his most excellent writers. 'For,' says the poet, "he is in continual conversation with all the philosophy of Socrates and the Academy, he will not decline such entertainment as my humble board can supply." (Od., 3, 21.) The modest Tibullus flattered himself with the pleasing hope of Messala's paying him a visit in the country, 'where,' says he, 'my beloved Delia shall assist in doing the honours for so noble a guest' (1, 5). The rising genius of Ovid was admired and encouraged by Messala, who was much pleased with an inscription he lodged in an epitaph to his son Messalinus, dated from the cold shores of the Euxine. In this letter Ovid calls Messala his friend, the light and director of all his literary pursuits. It is natural to suppose that an intimacy subsisted between Messala and Virgil, and yet no historical circumstance has come to our knowledge sufficient to evince it. The poem called Ciris, which is dedicated to Messala, and has been ascribed to Virgil, contains no grand and magnificent passages, which judgment of mankind is indisputable, and whose decision is not always in the most favourable point of view, seems fond of praising Messala; and in a speech given to Silius, the consul-elect, he considers him among the few great characters who have risen to the highest honours by their integrity and eloquence. (Ann., 11, 6.) Even Tiberius himself, when a youth, took care to converse with Messala, and was happy it would have been for the Roman people had he also taken him for his guide and pattern in virtue." (Berwick's Lives, p. 59, seqq.)—Messala was united to Terentia, who had been first married to Cicero, and subsequently to Sallust, the historian. After the death of Messala, she entered, in extreme old age, into a fourth marriage, with a Roman senator, who used to say that he possessed the two greatest curiosities in Rome, the widow of Cicero, and the chair.
in which Julius Caesar had been assassinated. Messala, left by her husband, Marcus and Lucius. Two sons of the family, too, took care of the name of Messalina; he greatly distinguished himself under Tiberius, when that prince commanded, before his accession to the empire, in the war of Pannonia. (Vell. Paterc., 2, 112.) Messalina inherited his father's eloquence, and also followed the example he had set in devoted attachment to Augustus, and the patronage he extended to literature. But, during the reign of Tiberius, he was chiefly noted as one of the most servile flatterers of that tyrant. (Tacit., Ann., 3, 18.) The younger son of Messala assumed the name of Cotta, from his maternal family, and acted a conspicuous, though by no means reputable part in the first years of Tiberius. Both brothers were friends and protectors of Ovid, who addressed to Messalina two of his epistles from Pontus, which are full of respect for the memory of his illustrious father. (Dunlop's Roman Lit., vol. 3, p. 53, sqq., Lond. ed.)

Messala, L. Valeria, the first wife of the Emperor Claudius, dishonoured his throne by her unbridled and disgusting incontinence. Her cruelty equalled her licentiousness. After a long career of guilt, she openly married a young patrician named Silius, during the absence of the emperor, who had gone on a visit to Ostia. Narcissus, the freedman of Claudius, was the only one who dared to inform Claudius of the fact, and, when he had roused the sluggish resentment of that tyrant, embarked for Britain. On his arrival, Claudius dispersed in an instant all who had thronged around Messalina; but still, though thus deserted, she resolved to brave the storm, and sent to the emperor demanding to be heard. Narcissus, however, fearing the effect of her presence on the feeble spirit of his husband, despatched an order, as if coming from him, for her immediate punishment. The order found her in the gardens of Lucullus. She endeavoured to save her own life, but her courage failing, she was put to death by a tribune who had been sent for that purpose, A.D. 48. (Tacit., Ann., 11 et 12. —Suetonius, Vit. Claud.) II. Called also Statilla, the grand-daughter of Statilius Taurus, who had been consul, and had enjoyed a triumph during the reign of Augustus. She was married four times before she came to the imperial throne. The last of her four husbands was Vestinus, a man of capricious character, who had ventured to aspire to the hand of Messalina, though he was ignorant that he had Nero for a rival. The tyrant, who had long favoured Vestinus as one of the companions of his debaucheries, now resolved to destroy him, and accordingly compelled him to open his veins. Messalina was transferred to the imperial bed. After the death of Nero she endeavoured to regain her former rank, as empress, by means of Otho, whom she had captivated by her beauty, and hoped to exposs. But Otbo's fall having destroyed all these expectations, she turned her attention to literary subjects, and obtained applause by some public discourses which she delivered. (Biogr. Univ., vol. 28, p. 431.)

Messalina, M. Valeria, son of Valerius Messalla Corvinus. (Consult remarks at the close of the article Messala.) Messina, an ancient and celebrated city of Sicily, situated on the straits which separate Italy from that island. The first settlers in this quarter would seem to have been a body of wandering Siculi, who gave the place, from the scythelike form of its harbour, the name of Zancle (Zyikyn, "a scythe"). The Siculi were not a commercial race, and therefore could not avail themselves of the superior advantages for trade which the spot afforded; they, in consequence, finally left it. To them succeeded a band of pirates from Cumae in Campania. (Thucyd., 6, 4.) These settled in the place, and, to give the new colony more stability, formed a union with the parent city of Chalcis in Euboea, in consequence of which a considerable body of colonists were sent to Chalcis and the rest of Euboea, and participated in the distribution of the lands. (Thucyd., l. c.) Chalcis had previously founded the city of Naxos on the eastern coast below; and it is probable that a part of the new population came from this latter place. On this supposition, at least, we can reconcile with the statement of Thucydides the account of Strabo, who informs us that Zancle was a settlement of the Naxians who dwelt near Catana (Naxian etraicai toipic Karrus — Strabo, 6, 565). Zancle went on altering increasingly in strength, and was found powerful enough to found the city of Himera (Thucy., 6, 5), and to carry on a successful warfare against the neighbouring Siculi in the interior. As it was, however, the only Greek city in this corner of the island, it sought to strengthen itself by new acquisitions from abroad; and accordingly, the Ionians of Asia Minor were invited to send a colony to the "Beautiful Shore" (Kal'c Atrgo), which lay along the coast of Sicily on the Tyrhenian Sea. (Herod., 6, 22.) This happened about the period when Miletus was destroyed by the Persians, and when the other Greek cities of Lower Asia had either to submit to the yoke of Darius, or imitate the example which the Phocæans had set in the time of Cyrus. The Samians, therefore, and a body of Milesians who had escaped being led into captivity, embraced the offer of the people of Zancle. They landed at Zancle, where a tyrant, or tyrants, would seem to have made no preparations whatever for receiving them, being engaged at the time in besieging one of the cities of the Siculi. Anaxilaus, tyrant of Rhegium, who was on friendly footing with his neighbours in Zancle, took advantage of this circumstance. He proceeded to Locri, told the newcomers to give up all thought of a settlement in this quarter, that Zancle was undefended and might easily be taken, so that he would aid them in the attempt. The enterprise succeeded, Zancle was taken, and the inhabitants became united as one common people with their new invaders. The Samians, however, were not long after driven out by the same Anaxilaus who had aided in their attempt on Zancle. He established here, according to Thucydides (6, 5), "a mixed race," and called the city by a new name, "Messana" (Me- σανα), as well from the country (Messenia) whence many of its inhabitants were expelled by Messenian exiles whom he settled here. Messana (or, as the Attic writers call it, Messene, Μεσσηνη), soon became a very flourishing city, both by reason of its very fruitful territory and its advantageous situation for commerce. It was also a place of some strength, and the citadel of Messana is often mentioned in history. (Diod., 14, 87. — Polyb., 1, 10.) Messana was represented also by the Greeks as the key of Sicily (Thucyd., 4, 1), as being the place, namely, to which vessels cruising from Greece to Sicily directed their course on leaving the Iapygian promontory. (Bloomfield, ad Thucy., l. c.) And yet, notwithstanding all these advantages, it was never other than an unburly place, always undergoing changes, and unable at any time to play an important part in the affairs of Sicily; for its wealth, and its advantageous situation as regarded the passage from Italy into the island, always made it a tempting object to the ambitious and powerful princes around. No Greek city, therefore, experienced: more frequent changes of rulers than this, and none contained within its walls a more mixed population. — At a later period (ol. 96, 1), Messana fell into the hands of the Carthaginians, who destroyed it (Diod., 14, 66, sqq.), being aware of its inability at that time to retain a place so far distant from the other strongholds, and not wishing it to come again into the possession of their opponents. Dionysius of Syracuse, however, began to rebuild it in the same year, and,
besides establishing in it the remnant of the former inhabitants, added a considerable number of Locrians, Methymneans, and Messenian exiles. The latter, however, through fear of offending the Lacedaemonians, were afterward transferred to the district of Abaeene, and there founded Tyndaris. Messana thus came to contain as mixed a population as before. (Diod., 14, 79.) But when the Peloponnesians had driven out his son; and subsequently, after enjoying a short period of freedom, it passed into the hands of Agathocles. (Diod., 19, 102.) The following year the inhabitants revolted from the sway, and put themselves under the protection of the Carthaginians. (Diod., 19, 110.) Soon, however, a new misfortune befell the unlucky city. It was seized by the Mamertini (id. Mamertini), its male inhabitants were either slaughtered or driven out, and their wives and children became the property of the conquerors. Messana now took the name of Mamertina, though in process of time the other appellation once more gained the ascendency. (Ptol., 1, 7.—Plin., 3, 7.) This act of perjury and cruelty passed unpunished. Syracuse was too much occupied with intestine commotions to attend to it, and the Carthaginians gladly made a league with the Mamertini, since by them Pyrrhus would be prevented from entering into Sicily. This event was postponed so important to his future operations. (Diod., 22, 8.) The Mamertini, however, could not lay aside their old habits of robbery. They harassed all their neighbours, and even became troublesome to Syracuse, where King Hiero had at last succeeded in establishing order and tranquillity. This monarch defeated the lawless banditti, and would have taken their city, had not the Carthaginians interposed to defend it. A body of these, with the approbation of part of the inhabitants, took possession of the citadel; while another portion of the inhabitants called in the assistance of the Romans, and thus the first of the Punic wars had its origin. (Vid. Punicum Bellum, and compare Ptol., 1, 9, seqq.—Diod., 22, 15, Id. 23, 2, seqq.) Messana and the Mamertines remained from henceforward under the Roman power; but the city, as before, could never enjoy any long period of repose. It suffered from the forty civil wars between Marius and Sulla, in the war of the slaves in Sicily, and, more particularly, in the contest between Sextus Pompey and the Triumvir Octavianus. Messana formed during this war the chief station of Pompey's fleet, and his principal place of supply, and the city was plundered at its close. (Appian, B. Civ., 5, 122.) A Roman colony was afterward planted here. (Mannert, Geogr., vol. 9, pt. 2, p. 267, seqq.) The modern Messina corresponds to the ancient city. Even in later times, the fates seem to have conspired against this unfortunate place. A plague swept away a great part of the inhabitants; then rebellion spread its ravages; and finally, the dreadful earthquake in 1783 completed the downfall of a city which rivalled, if it did not surpass, Palermo. (Hoare's Classical Tour, vol. 2, p. 203.) Although the town has since been rebuilt according to a regular plan and although it has been declared a free port, Messina is not so important as it once was. It remained before the last catastrophe a hundred thousand inhabitants: the present population does not amount to seventy thousand. (Malte Brun, Geogr., vol. 7, p. 732, Am. ed.)

Messaia, a country of Italy in Magna Graecia, commonly supposed to have been the same with Iapygia, but forming, in strictness, the interior of that part of Italy. The town of Messapia, mentioned by Pliny (3, 41), is said to have come from the Messapian nation. The nationality of Italian topographers identify the site of this ancient town with that of Messana, between Oria and Brindisi. (Pratili, Via Appia, 4, 8.—Romanelli, vol. 2, p. 127.—Cramér's Anc. Italy, vol. 2, p. 312.)
