ENGLISH MEDALS.

GOLD.

825 Elizabeth: Large GOLD MEDAL; oval, 57 by 52 mm., with loop at top; commemorating the Defeat of the Armada, in 1588, and probably intended as a Naval Reward or for the favourites of the Queen. [Pl. XI]

Obverse: DITIOR . IN . TOTO . NON . ALTER . CIRCVLVS . ORBE. (lis before "ditior" and small rosette stop after each word): Bust of Queen, facing, crowned and wearing richly jewelled and embroidered dress with wide, lace-edged ruff open at the front and showing the bust. The crown has four arches and a circlet ornamented with lis and patée crosses; the hair is short and curly, a jewel with pearl pendant hangs in the centre; around the neck is a triple necklet, the centre chain ornamented with pearl drops. The sleeves are puffed and banded at the shoulders and have large bows on the top; the stomacher appears to be shield-shaped, with embroidery and jewelled ornaments arranged in V-shaped bands; the hands are shown at the truncation of the bust, the right holds a long, lis-headed sceptre, the left supports a jewelled orb. The field is decorated with a running scroll of flowers, engraved en pointillé.

Reverse: A Bay-tree, growing on an island placed in the centre of a tempestuous sea, remaining erect and uninjured though assailed by wind and lightning. On the island, various buildings and the inscription NON . IPSA . PERICVLA . TANGVNT; in the sea, fish and a sinking ship (?) struck by the lightning; in the distance, three ships sailing to left; above, clouds, &c. The whole design is en-circled by a wreath border. Medallic Illustrations, vol. I, page 154, No. 130.

* * Of this extremely rare and highly interesting medal only three examples are known; one of these is preserved in the National Collection at the British Museum; another is in that of Reginald Huth, Esqr.; the third—the one above described—was purchased by the late owner, some years ago. All are from the same model and by the same hand; they were probably the work of a Continental (Dutch?) goldsmith. The process of production—casting, and subsequent heavy chasing—accounts for the minor differences to be found in the three specimens by a close comparison.
